DEPARTMENT OF PHYSICS AND ASTRONOMY

Sanjay Khare, chair
Rupali Chandar, associate chair
Song Cheng, graduate advisor

Mission: The University of Toledo graduate programs in Physics and Astronomy aim to develop exceptional personal and professional scientific skills, and engage students in cutting edge research with a world-class faculty, all within a supportive and creative learning environment.

General Description: The graduate programs offer specialization in the following areas: Astronomy and Astrophysics, Photovoltaics and condensed-matter physics consisting of theory and experiment, Atomic and molecular physics, Medical physics, Biophysics, Photonics. The coursework is tailored to a specific area of research concentration, with flexibility to acquire the skills necessary to complete an innovative, important, and original thesis research project. The PhD program consists of courses from the core curriculum during the first and second years. While students may begin research immediately (oftentimes in addition to coursework and teaching assistant duties), a student will typically join a research group starting the summer following the first year. Following the 2nd year, the focus will be primarily on thesis research with a faculty advisor. The thesis defense is scheduled once a substantial body of innovative research has been completed. A M.S. in Physics is offered which may be course work or research intensive. A professional M.S. degree in photovoltaics is offered for which an industrial internship is required.

Accreditation: The Ph.D. in Medical Physics program is accredited by CAMPEP.

Number of Credit Hours: The Ph.D. program requires 90 credit hours with a minimum of 48 research credits for a thesis.

Outcomes: The graduate programs in physics and astronomy prepares students for jobs in research and development settings. These include private industry, government laboratories, academia and other non-profit organizations. The graduate programs develop a strong and broad foundation in fundamental physics, while simultaneously teaching mathematical and problem-solving skills necessary to advance knowledge of our physical world. The program trains students in state of the art theory, computing and laboratory skills relevant to their area of expertise.
