The admission decision will be based on a composite profile of the applicant including test scores, academic background, grades, work experience, letters of reference, and also the statement of purpose. The typical admitted student in the M.A.B.A. program has at least a 2.7 undergraduate GPA and 500 on the GMAT or equivalent score in the GRE. Additional requirements include proficiency in spreadsheets and a programming language, a calculus course with C or better both of which may be met by taking courses if necessary after a provisional admission. The following documents are required for admission to the program:

1. Official transcripts from each post-secondary institution attended.
2. Official GMAT scores sent directly from the Graduate Management Admissions Council (GMAC) or GRE score sent directly by educational testing service to the College of Graduate Studies. The minimum GMAT score is 500 (equivalent score in the GRE), must be no more than five years old.
3. The GMAT may be waived for applicants who have earned:
 - a. An undergraduate degree or MBA from UToledo (minimum 3.0 GPA) within the last ten years or
 - b. A Master in Economics, Statistics, Mathematics or Engineering (minimum 3.00 GPA) within the last ten years,
4. Most recent resume or curriculum vitae including contact information for two references (name, title, place of employment, phone number and e-mail address).
5. A 400 word essay on statement of purpose.

In the case of students whose native language is not English, a score of 80 or above on the TOEFL IBT, PTE equal to 58 or above, Duolingo equal to 105 or above, or a 6.5 or above on the International English Language Testing System (IELTS) is mandatory.

Applications for admission are considered on a rolling basis. However, students are encouraged to submit their applications by the following dates:

Domestic students:

Fall semester	August 1
Spring semester	November 15
Summer semester	April 15

International students:

Fall semester	May 1
Spring semester	October 1
Summer semester	March 1

Final admissions decisions will be withheld until the application for admission is complete. No materials submitted to the University will be returned to the applicant. The M.A.B.A. admits students to the program on a rolling admissions basis.

admission to master of science in applied business analytics

All decisions regarding admissions to the M.S. program is made through the academic director of the M.S. ABA program.

The admission decision will be based on a composite profile of the applicant including test scores, academic background, grades, work experience, letters of reference, and also the statement of purpose. The typical admitted student in the MS. program has at least a 2.8 undergraduate GPA and 480 on the GMAT or equivalent score in the GRE (minimum of 25 in verbal and 28 in quantitative reasoning is expected). Additional requirements include proficiency in spreadsheets and a programming language, a calculus course with C or better both of which may be met by taking courses if necessary after a provisional admission. The following documents are required for admission to the program:

1. Official transcripts from each post-secondary institution attended.
2. Official GMAT scores sent directly from the Graduate Management Admissions Council (GMAC) or GRE score sent directly by educational testing service to the College of Graduate Studies. The minimum GMAT score is 480 (equivalent score in the GRE), must be no more than five years old.
3. Exceptionally qualified applicants who meet at least one of the following criteria may apply for a GMAT waiver. The decision on waiver is made by evaluating each applicant individually based on the following criteria:
 - Very high Undergraduate or graduate GPA
 - Recent graduates or post-graduates (3 years or less) with high GPA
 - Possess significant, relevant work experience (deemed acceptable to the Program Chair for the applied business analytics)

4. Most recent resume or curriculum vitae including contact information for two references (name, title, place of employment, phone number and e-mail address).
5. A 400 word essay on statement of purpose.

In the case of students whose native language is not English, a score of 80 or above on the TOEFL IBT, PTE equal to 58 or above, Duolingo equal to 105 or above, or a 6.5 or above on the International English Language Testing System (IELTS) is mandatory.

Applications for admission are considered on a rolling basis. However, students are encouraged to submit their applications by the following dates:

Domestic students:

Fall semester	August 1
Spring semester	November 15
Summer semester	April 15

International students:

Fall semester	May 1
Spring semester	October 1
Summer semester	March 1

Final admissions decisions will be withheld until the application for admission is complete. No materials submitted to the University will be returned to the applicant. The MS admits students to the program on a rolling admissions basis.

Admission to Doctor of Philosophy in Manufacturing and Technology Management (Ph.D.) Program

Application period is closed for Fall 2021.

Application review for admission will not take place for Fall 2022.

Application deadline for Fall 2023: March 1, 2023

Applicants with a master's degree in a technical field or business are preferred. Applicants with a bachelor's degree in a technical field or business may also be considered. Letters of reference from college faculty or employers acquainted with the student's character and ability, and official transcripts of all prior college work must be supplied. Applicants are expected to demonstrate preparation for, and a high promise of, success in the doctoral program.

The following will be considered in evaluating an application to the Ph.D. program on an individual basis:

- The student's undergraduate and graduate record with general academic performance, as well as the trend and comparison of grades over a period of time;
- The student's verbal, quantitative and total scores on the GMAT (in certain cases, depending on the academic background of the student, GRE scores may be substituted for GMAT scores);

- Evidence of the ability to do research (publications, presentations, etc.);
- Statement of purpose explaining why the student wants to pursue a Ph.D. in manufacturing and technology management;
- Three letters of reference;
- Appropriate experience;
- And, in the case of students whose native language is not English, a score of 80 or above on the TOEFL IBT, PTE equal to 58 or above, Duolingo equal to 105 or above, or a 6.5 or above on the International English Language Testing System (IELTS) is mandatory.

It is to be stressed that, although GMAT and GPA are important, they alone will not be the basis of admissions decisions. While students may come from many academic disciplines, those students with bachelor's degrees in fields other than business may require more than 79 semester hours in order to satisfy prerequisite (19 credit hours) and business program course (60 credit hours) requirements. A student may need additional calculus, statistics, and economic prerequisite requirements depending on the students previous academic discipline. **Students admitted to the Ph.D. program will not receive graduate credit for any undergraduate courses they take.**

A student should take the Ph.D. comprehensive examination as soon as the student and the student's advisor believes the student has mastered all the required subject areas and completed all course work. The format and other details of the examination are given in the handbook for Ph.D. students and are available on-line. Following successful completion of the comprehensive examination, the student is admitted to candidacy for the Ph.D. and undertakes dissertation research. The student is responsible for initiating the application to candidacy on a form available from the College of Graduate Studies.

When a student enters the program, the Ph.D. program director will help the student in preparing a plan of study. The Ph.D. program director will serve as the faculty advisor at the time of admission into the program. Each student will get a dissertation advisor after passing the comprehensive exam who will assist the student in choosing a dissertation topic, forming a dissertation committee and in other matters concerning the program. More information is available at: <http://www.utoledo.edu/business/PHD/index.html> (<http://www.utoledo.edu/business/PHD/>).

Degree Requirements

GPA and Grade Requirements

Students in all graduate degree programs at the University of Toledo must complete all requirements for their program of study with at least a 3.0 (4.0 scale) cumulative GPA at the graduate level. All courses that count towards a graduate degree must be passed with a grade of C or better. There are no grade re-calculations at the graduate level; as such, repeated courses will have both grades included in the cumulative GPA calculation.

Master of Business Administration (M.B.A.)

The M.B.A. degree is granted to students who satisfactorily complete a minimum of 33 semester hours at the 6000-level in the Neff College of

Business and Innovation. The length of the program will vary depending upon the nature of the undergraduate degree. The program consists of a common body of knowledge (18 hours), business core (24 hours) and elective (9 -12 hours) courses determined by the student's major.

If a student can demonstrate that they have completed equivalent course work at the undergraduate level prior to admission to the M.B.A. program and has earned a grade of C (2.0) or better in the course(s), the corresponding 5000-level course may be waived. Once admitted to the M.B.A. program, students may not take an undergraduate course and apply that course towards credit for 5000-level requirements.

Students who complete three or more undergraduate level courses in a functional area at an AACSB-accredited business school are eligible and encouraged to replace the corresponding 6000-level business core course(s) with an M.B.A. 6000 level elective of their choice. These course substitutions may not meet major elective requirements. Students may select up to two majors and no more than one course will be allowed to count towards two majors in the M.B.A. program.

Master of Science in Accountancy (M.S.A.)

The Master of Science in Accountancy degree is granted to students who satisfactorily complete a minimum of 30 semester hours at the 6000-level in the Neff College of Business and Innovation. The M.S.A. program is designed to prepare students for a professional career in accounting and to fulfill the requirements to sit for the Uniform CPA Exam in the state of Ohio. Candidates without a background in accounting can be admitted to the program but will be required to take additional courses.

master of applied business analytics

The Master of Applied Business Analytics (M.A.B.A.) degree is granted to students who satisfactorily complete a minimum of 30 semester hours at the 6000- level in the Neff College of Business and Innovation meeting the program requirements. In addition, most non-business students and even some business students may need up to 12 credit hours of 5000 level pre-requisites.

master of science in applied business analytics

The Master of Science in Applied Business Analytics (M.S. ABA) degree is granted to students who satisfactorily complete a minimum of 24 semester hours at the 6000- level course work and a 6 credit hour Master's thesis in the Neff College of Business and Innovation meeting the program requirements. In addition, most non-business students and even some business students may need up to 12 credit hours of 5000 level pre-requisites.

Doctor of Philosophy in Manufacturing and Technology Management (Ph.D.)

The application period for Fall 2021 is closed. The next application period is for Fall 2023 with a deadline date of March 1, 2023.

The program requires at least 93 semester hours of study beyond the baccalaureate. For a full-time student with only a bachelor's degree,

the course requirements before entering the dissertation stage can be completed in three years. Full-time students with an M.B.A. or a relevant M.S. degree should be able to complete the course work in two years before entering the dissertation stage. During the first year, the students without prior appropriate undergraduate or graduate work in business or engineering will acquire the foundation knowledge in business, engineering and manufacturing technology. Course waivers are possible at the foundation stage by passing competency examinations in appropriate areas.

mission

The John B. and Lillian E. Neff College of Business and Innovation provides innovative and relevant learning experiences and engages in high-quality research and teaching to prepare students to become life-long, ethical business and academic leaders who are prepared for global challenges.

The objective of the Master of Science in Accountancy (MSA) degree program is to provide an opportunity for students to achieve greater breadth and depth in the study of Accountancy than is possible in the baccalaureate program. The MSA program gives student the advanced accounting topics, data analytics, and business electives to be a successful accountant and business leader. Skills such as critical and analytical thinking, leadership, teamwork, effective communication, and the ability to deal with big data and data analytics are important skills for short- and long-term career success in a dynamic environment.

Accreditations

The Accounting Department and the John B. and Lillian E. Neff College of Business and Innovation are accredited by the AACSB and the HLC.

Degrees Offered

The Master of Science in Accountancy degree is granted to students who satisfactorily complete a minimum of 30 semester hours at the 6000-level in the College of Business and Innovation. Candidates without a background in accounting can be admitted to the program but will be required to take additional courses.

The MSA program is designed to fulfill the requirements for CPA licensure in the state of Ohio and many other states. Nationally, candidates who

qualify to sit for the CPA exam with an MSA degree have the highest pass rates.

The MSA program gives students the advanced skills to be a successful accountant and business leader. Skills such as critical and analytical thinking, leadership, teamwork, effective communication, and the ability to deal with big data and data analytics are important skills for short and long-term career success in a dynamic environment.

MSA Accounting

The objective of the Master of Science in Accountancy (MSA) degree program is to provide an opportunity for students to achieve greater breadth and depth in the study of Accountancy than is possible in the baccalaureate program. The MSA program gives student the advanced skills to be a successful accountant and business leader. Skills such as critical and analytical thinking, leadership, teamwork, effective communication, and the ability to deal with big data and data

analytics are important skills for short and long-term career success in a dynamic environment. The MSA program is also designed to fulfill the requirements to sit for the Uniform CPA Exam in the state of Ohio and other states. Nationwide, the CPA candidates who qualify to sit for the CPA exam with an MSA degree have the highest pass rates.

All decisions regarding admissions to the M.S.A. program are made by the program director for accounting. Admission to the M.S.A. program is available for those students who demonstrate high promise of success in a graduate program. All applicants are considered on the basis of their merit with weight given to the quality of prior academic achievement, GMAT test scores (if required), professional experience, and other relevant information. The following documents are required for admission to the program:

1. Official transcripts from each post-secondary institution attended.
2. Official GMAT scores sent directly from the Graduate Management Admissions Council (GMAC) to the College of Graduate Studies. The minimum GMAT score is 500, must be no more than five years old.¹
3. The GMAT may be waived for applicant who have:
 - a. Completed GRE within the last five years; official GRE scores must be sent directly to the College of Graduate Studies, or
 - b. An undergraduate degree from the University of Toledo (minimum 3.0 GPA) within the last ten years, or M.B.A. or
 - c. A Master in Economics (minimum 3.00 GPA) within the last ten years, or
 - d. An active practicing CPA/CMA, or passed the CPA/CMA exam within the last five years
4. Most recent resume or curriculum vitae including contact information for two references (name, title, place of employment, phone number and e-mail address).

In the case of students whose native language is not English, a score of at least 550 (paper based), 213 (computer based), or 80 (internet based) on the Test of English as a Foreign Language (TOEFL) or a 6.5 on the International English Language Testing System (IELTS) is mandatory.

Applications for admission are considered on a rolling basis. However, students are encouraged to submit their applications by the following dates:

Domestic students:

Fall Semester	August 1
Spring Semester	November 15
Summer Semester	April 15

International students:

Fall Semester	May 1
Spring Semester	October 1
Summer Semester	March 1

Final admissions decisions will be withheld until the application for admission is complete. No materials submitted to the University will be returned to the applicant. The M.S.A. program admits students to the program on a rolling admissions basis.

The Master of Science in Accountancy degree is granted to students who satisfactorily complete a minimum of 30 semester hours at the 6000-level in the College of Business and Innovation.

OSCM 6690	Supply Chain Resources Management	
Total Hours		24

¹ ACCT 4130 at the undergraduate level

² MSA 4 Core courses (12 hours) above required for all MSA students.

³ MSA Elective courses for the "General MSA" and the "Specialized MSA Tracks": 18 hours (6 courses) - at least 12 credit hours (4 courses) of Accounting Electives.

Other UT graduate courses are allowed as electives with pre-approval from the MSA academic advisor. If a student takes one of the courses above at the undergraduate level (specifically ACCT 4130, ACCT 4250 and ACCT 4410), these courses may not be taken at the graduate level. This does not reduce the number of credit hours or courses required to earn the MSA degree. The student will select a different option with the Accounting Department Chair and MSA Program Advisor. Other courses from the College of Business and Innovation (or, in the case of a JD/MSA student, a course from the College of Law) may also be approved for the three areas above, with good cause shown, by the Accounting Department Chair and/or MSA Program Advisor.

MSA Common Body of Knowledge

Based on the candidate's prior course work, any or all of the MSA Common Body of Knowledge may be waived (each course is three semester hours):

If a student can demonstrate that he/she has completed equivalent course work at the undergraduate level prior to admission to the M.S.A. program and has earned a grade of C (2.0) or better in the course(s), the corresponding **course below** may be waived. The undergraduate and graduate equivalents are below.

³ BUAD 3040

⁴ BUAD 2060 or MATH 2600

Students must have an average GPA of 3.0 or higher in the common body of knowledge courses in order to proceed into 6000 level accounting classes.

Early admission/bridge program - BBA - MSA

Undergraduate students accepted in the BBA-MSA option will be admitted to the Master of Science in Accountancy program and allowed to complete up to three **graduate level classes** (nine credit hours) during their final academic year of **undergraduate studies**. Students admitted into the pipeline program must apply for admission to the College of Graduate Studies for the semester that they intend to matriculate. They will then continue in the MSA program upon completion of the undergraduate degree requirements. The graduate coursework (up to nine hours) may be applied **to completion of both undergraduate and MSA degree requirements**. The following provisions apply for classes taken for graduate credit: 1) graduate classes taken at The University of Toledo only after the student is accepted in the MBA joint program, 2) only BUAD 6200, BUAD 6300, BUAD 6400, BUAD 6500, BUAD 6800, ACCT 6130, ACCT 6190, ACCT 6250, OSCM 6250 may be included in the approved nine semester hours of graduate credit taken as an undergraduate. Students must have at the time of application 1) a minimum of 3.0 cumulative undergraduate grade point average that will include undergraduate credits earned at other institutions and transferred to UT, 2) undergraduate advisor's approval, and 3) graduate advisor's approval. Students interested in the joint BBA / MSA program must submit 1) a letter of interest, 2) a completed graduate admission application, 3) at least 2 letter(s) of recommendation from faculty members. After successful completion of the application process, students will apply to the graduate program.

Propose a well-formulated solution, including its contingencies and future implications to a professional or enterprise

Apply advanced concepts to prepare the general purpose financial statements

Evaluate business risks, related to data collection, storage and use
Demonstrate ability to collect, clean, analyze and interpret data for decision-making

Identify ethical implications of accounting decisions on firm and capital markets

Locate areas of risk within an enterprise and suggest appropriate responses

Identify and evaluate current accounting issues

Graduate Certificate in Financial Accounting - available 100% online

A Graduate Certificate in Business is a program of study designed to help students understand a specific area of business and applications within the field. Ideal for both graduate students who seek to explore a specific area of concentration in business as well as working professionals seeking business education credentials to potentially advance in a current career or to build a foundation for a new career. Admissions to a graduate certificate does not guarantee admissions to a Neff College of Business and Innovation master's program. In order for courses to count toward a Neff College of Business and Innovation master's degree, a grade of "C" or better is required.

ADD A GRADUATE CERTIFICATE

If you are currently enrolled in a degree seeking program and wish to earn a certificate while pursuing this degree, please complete the Request to Add a Graduate Certificate form. Click here (https://www.utoledo.edu/graduate/files/Request_to_add_a_grad_certific.pdf) for complete instructions and form.

If you are not currently enrolled in a degree seeking program but wish to earn a certificate, please complete the Graduate Online application. Click here (<http://apply.utoledo.edu/>) to apply online.

Applicants Will Submit the Following:

- Transcripts showing evidence of a Bachelor's degree with at least a 2.7 cumulative G.P.A.
- Resume
- Application and Fee (if required)

for International Students:

- International Students currently pursuing a graduate degree (masters, Ph.D., MD, JD) at The University of Toledo are eligible to apply for graduate certificates in business.
- International students not currently enrolled in a graduate degree-seeking program with The University of Toledo are not eligible to apply for a graduate certificate program.

No GMAT or GRE will be required for admission to a Neff COBI graduate certificate, however if the student later applies to a graduate program in Neff COBI, a GMAT/GRE score may be required.

Notes: Admissions to a Neff COBI graduate certificate program does not guarantee admissions to a Neff COBI master's program. For courses

to count toward a Neff COBI master's degree, a grade of "C" or better is required.

Take the following three courses:

Code	Title	Hours
ACCT 5100	Financial Accounting and Analysis	3
ACCT 5110	Intermediate Financial I	3
ACCT 5120	External Financial Reporting II	3

Prerequisite for ACCT 5100 is ACCT 5000 for Level GR with minimum grade of C or equivalent UG/GR course from accredited University or equivalent experience (department chair signoff required). The prerequisite to ACCT 5110 is ACCT 5100 for level GR with a minimum grade of C or equivalent UG/GR course from accredited university. The prerequisite to ACCT 5120 is ACCT 5110 for level GR with a minimum grade of C or equivalent UG/GR course from accredited university.

By successfully completing the Graduate Certificate in Financial Accounting, students should have:

- Acquired accounting concepts, terminology, and principles related to financial statements.
- Will be able to describe the effect of transaction on the financial statement.
- Will be able to analyze financial statements.
- Apply data analytics concepts to financial accounting issues.

Department of Finance

Alexey Petkevich, Chair
Alexey.Petkevich@utoledo.edu

Academic Advising provided by Stacy Jenkins
Stacy.Jenkins@Utoledo.edu

Mission

The John B. and Lillian E. Neff College of Business and Innovation provides innovative and relevant learning experiences and engages in high-quality research and teaching to prepare students to become life-long, ethical business and academic leaders who are prepared for global challenges.

The Finance Department accomplishes this by:

- Preparing our students to create innovative solutions to relevant business problems
- Helping our students to understand and make ethical choices
- Connecting our students with organizations to help begin and advance their careers
- Engaging in a faculty-driven process to identify and support publishing in high-impact research outlets
- Mentoring faculty, collaboration with colleagues inside and outside of COBI, and providing a formal peer feedback process to improve teaching and research
- Engaging and involving the regional and international business community in opportunities for student experiential learning, career exploration and development, consulting, and research projects
- Engaging business and alumni advisory boards and focus groups to develop and improve curricula and programs

The Master of Business Administration (M.B.A.) program with the major in Finance at the University of Toledo (UToledo) is designed to take students with the B.B.A. degree to the next level in order to meet the increasing requirements of the business environment. The program provides background and prepares students to careers in investment, banking, and corporate finance. The program is designed to be flexible, sharpen your skills, and boost your career to the next level.

Accreditations

The Master of Business Administration (M.B.A.) is accredited by the Association to Advance Collegiate Schools of Business (AACSB).

Degrees Offered

The minimum number of credit hours required to graduate with an M.B.A. in finance is 33 credit hours. The M.B.A. in Finance includes 11 courses: Eight courses are from the M.B.A. business core and three courses in finance electives. Students without the Common Body of Knowledge courses from undergraduate preparation will be required to take up to six additional courses at the graduate level.

- MBA Finance (p. 419)
- Graduate Certificate in Corporate Finance (p. 404)
- Graduate Certificate in Investments

MBA Finance

Overview of Program

As a finance M.B.A. student at the University of Toledo, you will embark on a high-quality educational experience that is based on a strong theoretical foundation and relevant practice cases. You may create your own path to graduation and, more importantly, find opportunities, mentors, and guidance to enrich your learning experience.

Specifically, you will learn how to:

- Understand, plan, and make decisions about a wide range of financial management issues. In particular, students will learn how to make corporate decisions about investment, financing, and payouts. Make advanced capital budgeting decisions, manage the cost of capital,

provide enterprise valuation, evaluate mergers and acquisitions deals, and estimate the value of real options.

- Examine bond and stock valuations and make investment decisions. Students will also learn investment characteristics of individual securities and markets as well as performance evaluation of portfolios. The curriculum features the student-managed portfolio (SMP) class. The students will get an opportunity to participate in the active portfolio management training in the state of art Lillian E. and John B. Neff trading facility. In this class, students will apply the equity valuation concepts and portfolio risk analysis to manage the endowed fund, which is currently valued at 2.8 million dollars.
- Make financial decisions in the context of financial markets and institutions. Students will learn interest rate theory, the monetary policy of the Federal Reserve, financial instruments characteristics, banking management.

Finance

The Finance major provides students with a background in all major areas of finance including corporate finance, investments and portfolio management, and financial institutions and markets. Students majoring in Finance must choose three of the following courses.

Code	Title	Hours
Must complete the MBA core course requirements in addition to the following: (p. 394)		
Select three of the following:		9
FINA 6130	Advanced Corporate Finance	
FINA 6140	Investments And Security Analysis	
FINA 6150	Financial Institutions And Markets	
FINA 6340	Derivative Securities	
FINA 6370	MBA International Financial Management	
FINA 6480	Student Managed Portfolio	
Total Hours		9

Department of Information Operations & Technology Management

Interim Chair: Dr. Paul Hong
Paul.Hong@utoledo.edu, (<https://www.utoledo.edu/edirectory/DirectoryResults.aspx?txtFirstName=paul&txtLastName=hong&txtDept=#>) 419.530.2054

Interim Vice Chair: Dr. Bassam Hasan
Bassam.Hasan@utoledo.edu, 419.530.2431

Academic Director: Dr. Yue Zhang
Yue.Zhang@UToledo.edu, 419.530.2380

Academic Advising for MBA provided by Stacy Jenkins
Stacy.Jenkins@Utoledo.edu

Academic Advising for MABA, MS ABA, and Ph.D. in Manufacturing and Technology Management provided by Yue Zhang
Yue.Zhang@utoledo.edu

Mission

The John B. and Lillian E. Neff College of Business and Innovation provides innovative and relevant learning experiences and engages in high-quality research and teaching to prepare students to become life-long, ethical business and academic leaders who are prepared for global challenges.

Accreditations

The Master of Business Administration (M.B.A.), Master of Applied Business Analytics, Master of Science in Applied Business Analytics, and the Ph.D. in Manufacturing and Technology Management are accredited by Association to Advance Collegiate Schools of Business (AACSB).

Information, Operations and Technology Management Department offers programs in Operations and Supply Chain Management, Information Systems, Applied Business Analytics, and Manufacturing and Technology Management. Faculty members hold terminal degrees in information systems, operations and supply chain management, management science, statistics and industrial engineering. The department also is home to many lecturers, some with terminal degrees. It is also home to Distinguished University lecturer, Distinguished University professor and many faculty members with significant research contributions.

The department hosts two student chapters of national associations (UT-APICS (society serving Operations and supply chain majors) and AITP (Association for information Technology professionals)). The associations are very active hosting monthly or weekly meetings with professional presentations, factory visits, and other programs.

The department has fielded teams for case competitions (General Motors-Wayne State supply chain case competition in October and Ball State University Information Systems case competition in April) every year since their inceptions and has won awards in every Ball State competition and one GM-Wayne State competition.

Degrees Offered

MBA in Operations and supply chain management (p. 422)

Information, Operations and Technology Management Department offers the MBA in Operations and Supply Chain Management. As all MBA programs, it has a large core with three courses specializing in the Operations and Supply Chain Management. The three specialization courses along with the required core course and a pre-requisite course in analysis of manufacturing and service systems gives a good overview and an in-depth coverage on production planning and quality management. This program is ranked by Eduniversal as one of the best 100 programs in the country. Supply chain management research output of the department faculty was ranked well for supply chain research (SCM Journal List).

MBA in Information Systems - STEMM (p. 423)

Information, Operations and Technology Management Department offers MBA in Information Systems. As all MBA programs, it has a large core with four required elective courses to earn a specialization in Information systems. The recently introduced fundamentals of Information systems course acts as bridge for students who have a different undergraduate specialization. Students with undergraduate specialization in information

systems or computer science are waived out of this course. The program gives opportunity to learn ERP with special emphasis on configuration using SAP. Recent addition of courses in big data, data mining and business analytics makes this an attractive major.

MS Applied Business Analytics - STEMM (p. 398)

The goal of this Master of Science in Applied Business Analytics (MSABA) program is to address the growing demand for analytical capabilities in solving business problems that are demanded by a variety of employers within the United States. Research results from public and private sectors show that there are substantially fewer experts in the field of business analytics than there are opportunities for them.

This program prepares students not only to be able to analyze and interpret data, but also to translate this into effective decision-making for complex business problems. The program is a unique combination of one functional area of business and a breadth of courses in business analytics capped by a Master's thesis. In the Master's thesis, students are expected to study a research problem in depth and solve the problem and write an academic or scholarly paper or develop a teaching instrument such as case or game based on the research.

The Master of Science in Applied Business Analytics (M.S) degree can be earned by completing a minimum of 24 semester hours of required coursework at the 6000 level and a 6 credit hour Master's thesis in the College of Business and Innovation meeting the program requirements. Additional coursework at the 5000 level, of up to 12 hours, may be required to satisfy prerequisites.

MABA (Applied Business Analytics) - STEMM (p. 399)

The goal of this Master of Applied Business Analytics (MABA) program is to address the growing demand for analytical capabilities in solving business problems that are demanded by a variety of employers within the United States. Research results from public and private sectors show that there are substantially fewer experts in the field of business analytics than there are opportunities for them.

This program prepares students not only to be able to analyze and interpret data, but also to translate this into effective decision-making for complex business problems. The program is a unique combination of one functional area of business and a breadth of courses in business analytics capped by an internship at your place of work or in another organization.

The Master of Applied Business Analytics degree is granted to students who satisfactorily complete a minimum of 30 semester hours at the 6000- level in the College of Business and Innovation meeting the program requirements. In addition, most non-business students and even some business students may need up to 12 credit hours of 5000-level pre-requisites.

Ph.D. Manufacturing and Technology Management - STEMM (p. 400)

The basic philosophy underlying the doctoral program is that researchers in manufacturing and technology management require a careful and creative mix of functional management specialties, economics, technology, supply chain management, manufacturing, commercialization, and information technologies. Regardless of track, students must become experts in applying analytical tools such as

statistics, optimization and research methodology. Therefore, the program is designed to provide students with abilities and skills to integrate and synthesize these diverse yet important related areas. Next admission is Fall 2023 with a March 1, 2023 deadline date.

Graduate Certificate in Business Analytics (p. 402)- STEMM (p. 400)

Graduate Certificate in Information Systems ERP/SAP (p. 405)- STEMM (p. 400)

Graduate Certificate in Operations and Supply Chain Management (p. 407)

MBA Operations and Supply Chain Management

overview

Information, Operations and Technology Management Department offers the MBA in Operations and Supply Chain Management. As all MBA programs, it has a business core with three courses specializing in the Operations and Supply Chain Management. The three specialization courses along with the required core course and a pre-requisite course in analysis of manufacturing and service systems gives a good overview and an in-depth coverage on production planning and quality management. This program is ranked by Eduniversal as one of the best 100 programs in the country. Supply chain management research output of the department faculty was ranked well for supply chain research (SCM Journal List).

Admission to the M.B.A. program is available to those students who have completed a four year undergraduate degree and can demonstrate high promise of success in a graduate business degree program. The college has adopted qualitative admissions standards in which applicants are considered on the basis of their merits, with weight given to the quality of prior academic achievement, the Graduate Management Admissions Test (GMAT) scores, professional experience indicating increased levels of responsibility, a writing sample (statement of purpose) and other relevant information that the candidate may share with the admissions committee.

The typical admitted student in the M.B.A. program has at least a 2.7 undergraduate GPA and 450 on the GMAT. However, for admission to the M.B.A. GMAT scores and undergraduate GPA will not be the sole basis for admissions decisions.

The following documents are required for admission to the program:

1. Official transcripts from each post-secondary institution attended.
2. Official GMAT scores sent directly from the Graduate Management Admissions Council (GMAC) to the College of Graduate Studies. GMAT scores must be no more than five years old.
 - a. GMAT Waivers
 - i. Who is eligible for **consideration** for a GMAT waiver?
 1. Neff COBI alumni or AACSB accredited school applicants who graduated from undergraduate or graduate school within the last three years with a competitive GPA (deemed competitive by Neff COBI Office of Graduate Programs and Neff COBI Dean).
 2. Non-Neff COBI, yet the University of Toledo alumni applicants who graduated from undergraduate or graduate school within the last three years with a competitive GPA (deemed competitive by Neff COBI Office of Graduate Programs and Neff COBI Dean).
 3. Applicants who can demonstrate significant, relevant, and progressive work experience (deemed acceptable by Neff COBI Office of Graduate Programs and Neff COBI Dean).
 4. For students applying to the J.D./M.B.A. dual degree program, applicants who have successfully completed the LSAT within the last three years; for students applying to the PharmD/M.B.A. dual degree program, applicants who have successfully completed the PCAT; for students applying to the M.D./M.B.A., applicants who have successfully completed the MCAT; for students applying to the M.P.H./M.B.A., applicants who have successfully completed the GRE. For students whose program waived or no longer requires testing, GMAT will be waived.
 5. Applicants who have obtained a graduate level degree or higher.
 - ii. Inquirers must have completed the online application for enrollment in the term in which they are requesting the GMAT waiver.
 - iii. Applicants must provided an updated resume for consideration of a GMAT waiver.
 - iv. The GMAT waiver will be valid for the term of admission per the online application.
 1. If the student does not enroll in the original term of admission, they may request that the Neff COBI Office of Graduate Programs re-evaluate their GMAT waiver request for the new term of admission.
 - v. The minimum requirements for a graduate assistantship can be found on the Graduate Assistantship website (<https://www.utoledo.edu/business/graduate/mba/GraduateAssistantships.html>). While GMAT can be waived for graduate assistantship awards, strong academics, progressive leadership experience either collegiately or in the community, and scoring well on the GMAT is the best way of increasing likelihood of being selected for a graduate assistantship award.
 - vi. The above waiver criteria applies to the MBA program. Each graduate program will determine GMAT waiver eligibility.
3. At least one letter of recommendation from an individual who knows the applicant in a professional capacity.

- a. All pipeline student applications will require two letters of recommendation.
4. The statement of purpose is required on the application for admission.
5. Applicants with below a 2.7 undergraduate cumulative GPA must submit a GMAT unless they meet one of the following criteria for a waiver:
 - a. 3-5 years of relevant, significant, and progressive work experience as determined by the Associate Dean of the Neff College of Business and Innovation.
 - b. Already has completed a graduate degree from a USA institution.
 - c. Similar passing test is substituted, such as GRE, MCAT, PCAT, or LSAT.
 - d. A Neff College of Business and Innovation Office of Graduate Programs admission committee determine eligibility for admission based on an admission interview on a case by case bases.

In the case of students whose native language is not English, a score of 80 or above on the TOEFL IBT, PTE equal to 58 or above, Duolingo equal to 105 or above, or a 6.5 or above on the International English Language Testing System (IELTS) is mandatory.

Applications for admission are considered on a rolling basis. However, students are encouraged to submit their applications by the following dates:

Domestic students:

Fall Semesters	July 15th
Spring Semesters	November 15th
Summer Semesters	April 15th

International students:

Fall Semesters	May 1st
Spring Semesters	October 1st
Summer Semesters	March 1st

Final admissions decisions will be withheld until the application for admission is complete. No materials submitted to the University will be returned to the applicant.

Program Requirements

Operations and supply chain Management

The Operations and Supply Chain Management major provides the student with the decision-making and problem-solving skills required for managing people and resources more effectively, whether in manufacturing firms, service industries, nonprofit organizations or government operations. Students acquire the knowledge and skills to manage people, resources, and research operations from product design, process evaluation, TQM, facility layout, and planning and schedule perspective.

Code	Title	Hours
Must complete the MBA core course requirements in addition to the following: (p. 394)		

OSCM 6680	Quality Management and Six Sigma	3
OSCM 6690	Supply Chain Resources Management	3
And one of the following:		3
OSCM 6250	Essentials of Business Analytics	3
OSCM 6270	Simulation and Waiting Lines	3
OSCM 6350	Prescriptive Analytics	3
OSCM 6550	Business Analytics and Cases	3
OSCM 6780	ERP Systems Process Management	3
OSCM 6980	Special Topics in Operations and Supply Chain Management	3

MBA Information Systems

overview

The Information Systems major provides the student with a managerial overview of computers and information systems. Emphasis is placed on the role and function of the computer as a managerial tool to store, process, analyze and present information. This is a STEM program.

Information Systems

The Information Systems major provides the student with a managerial overview of computers and information systems. Emphasis is placed on the role and function of the computer as a managerial tool to store, process, analyze and present information. Students are required to successfully complete INFS 6050 or its equivalent, by completing either an undergraduate degree in Information Systems or Computer Science from an accredited school. In addition to INFS 6050 (typically offered fall terms), students majoring in Information Systems must choose three additional courses of the following.

Electives

Code	Title	Hours
Must complete the MBA core course requirements in addition to the following: (p. 394)		
INFS 6050	Information Systems Fundamentals (Required for non IS/CS undergraduate majors)	3
Select three of the following:		9
INFS 6150	Business Intelligence Management

Master of Science in Applied Business Analytics

The goal of this Master of Science in Applied Business Analytics (MS ABA) program is to address the growing demand for analytical

capabilities in solving business problems that are demanded by a variety of employers within the United States. Research results from public and private sectors show that there are substantially fewer experts in the field of business analytics than there are opportunities for them.

This program prepares students not only to be able to analyze and interpret data, but also to translate this into effective decision-making for complex business problems. The program is a unique combination of one functional area of business and a breadth of courses in business analytics capped by a Master's thesis. In the Master's thesis, students are expected to study a research problem in depth and solve the problem and write an academic or scholarly paper or develop a teaching instrument such as case or game based on the research.

The Master of Science in Applied Business Analytics (M.S. ABA) degree can be earned by completing a minimum of 24 semester hours of required coursework at the 6000- level and a 6 credit hour Master's thesis in the College of Business and Innovation meeting the program requirements. Additional coursework at the 5000 level, of up to 12 hours, may be required to satisfy prerequisites. This is a STEM program.

All decisions regarding admissions to the M.S. program are made through the academic director of the M.S. ABA program.

The admission decision will be based on a composite profile of the applicant including test scores, academic background, grades, work experience, letters of reference, and also the statement of purpose. The typical admitted student in the M.S. program has at least a 2.8 undergraduate GPA and 480 on the GMAT or equivalent score in the GRE (minimum of 25 in verbal and 28 in quantitative reasoning is expected). Additional requirements include proficiency in spreadsheets and a programming language and a calculus course with C or better, both of which may be met by taking courses if necessary after a provisional admission. The following documents are required for admission to the program:

1. Official transcripts from each post-secondary institution attended.
2. Official GMAT scores sent directly from the Graduate Management Admissions Council (GMAC) or GRE score sent directly by educational testing service to the College of Graduate Studies. The minimum GMAT score is 480 (equivalent score in the GRE), must be no more than five years old.
3. Exceptionally qualified applicants who meet at least one of the following criteria may apply for a GMAT waiver. The decision on waiver is made by evaluating each applicant individually based on the following criteria:
 - Very high Undergraduate or graduate GPA
 - Recent graduates or post-graduates (3 years or less) with high GPA
 - Possess significant, relevant work experience (deemed acceptable to the Program Chair for the applied business analytics)
4. Most recent resume or curriculum vitae including contact information for two references (name, title, place of employment, phone number and e-mail address).

5. A 400-word essay on statement of purpose.

In the case of students whose native language is not English, a score of 80 or above on the TOEFL IBT, PTE equal to 58 or above, Duolingo equal to 105 or above, or a 6.5 or above on the International English Language Testing System (IELTS) is mandatory.

Applications for admission are considered on a rolling basis. However, students are encouraged to submit their applications by the following dates:

Domestic students:

Fall Semesters	July 15th
Spring Semesters	November 15th
Summer Semesters	April 15th

International students:

Fall Semesters	May 1st
Spring Semesters	October 1st
Summer Semesters	March 1st

Final admissions decisions will be withheld until the application for admission is complete. No materials submitted to the University will be returned to the applicant. The MS admits students to the program on a rolling admissions basis.

OSCM 6780	ERP Systems Process Management	3

Required thesis

The program is capped by a required 6 credit hour Master's thesis.

Code	Title	Hours
OSCM 6960	Masters Thesis	1-6

1. Reasonable mastery of business analytics covering concepts in statistics and modeling in the analysis of data for business decision making
2. Mastery of one area of applied business area.
3. Produce new knowledge by applying the tools and techniques of predictive and prescriptive analytics in the solving a business problem as codified in a Master's thesis.

Master of Applied Business Analytics

The goal of this Master of Applied Business Analytics (MABA) program is to address the growing demand for analytical capabilities in solving business problems that are demanded by a variety of employers within the United States. Research results from public and private sectors show

that there are substantially fewer experts in the field of business analytics than there are opportunities for them.

This program prepares students not only to be able to analyze and interpret data, but also to translate this into effective decision-making for complex business problems. The program is a unique combination of one functional area of business and a breadth of courses in business analytics capped by an internship at your place of work or in another organization.

The Master of Applied Business Analytics degree is granted to students who satisfactorily complete a minimum of 30 semester hours at the 6000 level in the College of Business and Innovation meeting the program requirements. In addition, most non-business students and even some business students may need up to 12 credit hours of 5000-level pre-requisites. This is a STEM program.

All decisions regarding admissions to the MABA program are made through the academic director for the MABA program.

The admission decision will be based on a composite profile of the applicant including test scores, academic background, grades, work experience, letters of reference, and also the statement of purpose. The typical admitted student in the MABA program has at least a 2.7 undergraduate GPA and 500 on the GMAT or equivalent score in the GRE. Additional requirements include proficiency in spreadsheets and a programming language and a calculus course with C or better, both of which may be met by taking courses if necessary after a provisional admission. The following documents are required for admission to the program:

1. Official transcripts from each post-secondary institution attended.
2. Official GMAT scores sent directly from the Graduate Management Admissions Council (GMAC) or GRE score sent directly by the educational testing service to the College of Graduate Studies. The minimum GMAT score is 500 (equivalent score in the GRE) and must be no more than five years old.
3. The GMAT may be waived for applicants who have earned:
 - a. An undergraduate degree or MBA from UToledo (minimum 3.0 GPA) within the last ten years
 - or
 - b. A Master in Economics, Statistics, Mathematics or Engineering (minimum 3.00 GPA) within the last ten years
4. Most recent resume or curriculum vitae including contact information for two references (name, title, place of employment, phone number and e-mail address).
5. A 400-word essay on statement of purpose.

In the case of students whose native language is not English, a score of 80 or above on the TOEFL IBT, PTE equal to 58 or above, Duolingo equal to 105 or above, or a 6.5 or above on the International English Language Testing System (IELTS) is mandatory.

Applications for admission are considered on a rolling basis. However, students are encouraged to submit their applications by the following dates:

1. Reasonable mastery of business analytics covering concepts in statistics and modeling in the analysis of data for business decision making
2. Mastery of one area of applied business area.
3. Gain experience in applying the tools and techniques of predictive and prescriptive analytics in the chosen area of applied business for improving business decision making.

Ph.D. in Manufacturing and Technology Management

The purpose of the Ph.D. program is to train scholars to meet traditional standards of excellence in, and contribute to, the manufacturing and technology management field through research, teaching and publication in academic and professional journals. Within this broad field, students can specialize in either (i) operations and supply chain management or (ii) information systems. The program is designed for individuals who seek to contribute to the advancement and dissemination of knowledge in manufacturing and technology management through an integrative

approach with sound foundations in business, technology, and research methodology. Graduates are expected to pursue careers in academia, consulting, research or manufacturing organizations.

The basic philosophy underlying the doctoral program is that researchers in manufacturing and technology management require a careful and creative mix of functional management specialties, economics, technology, supply chain management, manufacturing, commercialization, and information technologies. Regardless of track, students must become experts in applying analytical tools such as statistics, optimization and research methodology. Therefore, the program is designed to provide students with abilities and skills to integrate and synthesize these diverse yet important related areas.

Doctor of Philosophy in Manufacturing and Technology Management (Ph.D.)

Students in all graduate degree programs at the University of Toledo must complete all requirements for their program of study with at least a 3.0 (4.0 scale) cumulative GPA at the graduate level. All courses that count towards a graduate degree must be passed with a grade of C or better. There are no grade re-calculations at the graduate level; as such, repeated courses will have both grades included in the cumulative GPA calculation.

The program requires at least 60 hours of study beyond an MBA or relevant MS degree. Full-time students with an M.B.A. or a relevant M.S. degree should be able to complete the course work in two years before entering the dissertation stage. For a full-time student with only a bachelor's degree, the course requirements before entering the dissertation stage can be completed in three years. During the first year, the students without prior appropriate undergraduate or graduate work in business or engineering will acquire the foundation knowledge in business, engineering and manufacturing technology. Course waivers are possible at the foundation stage by passing competency examinations in appropriate areas. This is a STEM program.

Application period is closed for Fall 2021.

Application review for admission will not take place for Fall 2022.

Application deadline for Fall 2023: March 1, 2023

Applicants with a master's degree in a technical field or business are preferred. Applicants with a bachelor's degree in a technical field or business may also be considered. Letters of reference from college faculty or employers acquainted with the student's character and ability, and official transcripts of all prior college work must be supplied. Applicants are expected to demonstrate preparation for, and a high promise of, success in the doctoral program.

The following will be considered in evaluating an application to the Ph.D. program on an individual basis:

- The student's undergraduate and graduate record with general academic performance, as well as the trend and comparison of grades over a period of time;
- The student's verbal, quantitative and total scores on the GMAT (in certain cases, depending on the academic background of the student, GRE scores may be substituted for GMAT scores);

- Evidence of the ability to do research (publications, presentations, etc.);
- Statement of purpose explaining why the student wants to pursue a Ph.D. in manufacturing and technology management;
- Three letters of reference;
- Appropriate experience;
- And, in the case of students whose native language is not English, a score of 80 or above on the TOEFL IBT, PTE equal to 58 or above, Duolingo equal to 105 or above, or a 6.5 or above on the International English Language Testing System (IELTS) is mandatory.

It is to be stressed that, although GMAT and GPA are important, they alone will not be the basis of admissions decisions. While students may come from many academic disciplines, those students with bachelor's degrees in fields other than business may require more than 79 semester hours in order to satisfy prerequisite (19 credit hours) and business program course (60 credit hours) requirements. A student may need additional calculus, statistics, and economic prerequisite requirements depending on the students previous academic discipline. **Students admitted to the Ph.D. program will not receive graduate credit for any undergraduate courses they take.**

A student should take the Ph.D. comprehensive examination as soon as the student and the student's advisor believes the student has mastered all the required subject areas and completed all course work. The format and other details of the examination are given in the handbook for Ph.D. students and are available on-line. Following successful completion of the comprehensive examination, the student is admitted to candidacy for the Ph.D. and undertakes dissertation research. The student is responsible for initiating the application to candidacy on a form available from the College of Graduate Studies.

When a student enters the program, the Ph.D. program director will help the student in preparing a plan of study. The Ph.D. program director will serve as the faculty advisor at the time of admission into the program. Each student will get a dissertation advisor after passing the comprehensive exam who will assist the student in choosing a dissertation topic, forming a dissertation committee and in other matters concerning the program. More information is available here (<http://www.utoledo.edu/business/PHD/>).

Prerequisites

- One year of calculus
- Statistics that include regression and analysis of variance
- One academic term of computer systems with applications
- Micro- and Macro-economics
- Some knowledge of computer programming for IS-track candidates

Prerequisites should be completed before starting the Ph.D. program.

Business Foundation Courses

(19 hours)

Code	Title	Hours
ACCT 5000	Financial And Managerial Accounting	3

Ph.D. Program Curriculum

Code	Title	Hours
------	-------	-------

Quantitative and Research Methods

MFGM 8630	Management Science
MFGM 8860	Advanced Statistics
MFGM 8880	Research Methods-Theory Bldg
MFGM 8870	Seminar in Statistics/ Research Method

Plus two from the following:

RESM 6150/8150	Structural Equation Modeling
MFGM 8640	Advanced Management Science
MFGM 8650	Stochastic Modeling
MFGM 8660	Qualitative Research Methodology
MFGM 8670	Special Topics in Research Methods

Major Field: Integrative Seminars

MFGM 8480	Management of Technology
MFGM 8980	Special Topics Seminar
INFS 8990	Integrative Seminar in IT

The students can choose one of the two tracks: 1) Operations and Supply Chain Management, or 2) Information Systems. These are graduate level courses and seminars.

Operations and Supply Chain Management Track

MFGM 8490	Supply Chain and E-Business Issues in Manufacturing
MFGM 8890	Advanced Manufacturing Systems
OSCM 6680/8690	Quality Management and Six Sigma
OSCM 6690	Supply Chain Resources Management

Information Systems Track

INFS 6560	Systems Analysis And Design
INFS 6150/8150	Business Intelligence Management
INFS 6710/8710	Management of Information Systems Security
INFS 8760	IS Research Seminar I
INFS 8770	IS Research Seminar II

Dissertation

MFGM 8960	Dissertation
-----------	--------------

¹ The minor will be a supporting field of three courses at the master's (M.B.A.) level, and a related advanced seminar with the objective of integrating the Manufacturing and Technology Management major field with developments in the minor field of interest.

Dissertation Research

The dissertation must be based on work initiated and undertaken specifically for that purpose. It must reflect a high level of scholarship,

must constitute a substantial piece of work, and must indicate and document its claim to be a significant contribution to knowledge in its subject area.

Details regarding the dissertation research, starting with the dissertation proposal and ending with the final defense, are available in the handbook for Ph.D. students, which is available on the Ph.D. website.

<http://www.utoledo.edu/business/PHD/index.html> (<http://www.utoledo.edu/business/PHD/>).

Demonstrate the ability to do quality research

Demonstrate the ability to teach

Provide service to the institution and professional community

Graduate Certificate in Business Analytics - STEM

A Graduate Certificate in Business is a program of study designed to help students understand a specific area of business and applications within the field. Ideal for both graduate students who seek to explore a specific area of concentration in business as well as working professionals seeking business education credentials to potentially advance in a current career or to build a foundation for a new career. Admissions to a graduate certificate does not guarantee admissions to a Neff College of Business and Innovation master's program. In order for courses to count toward a Neff College of Business and Innovation master's degree, a grade of "C" or better is required. This is a STEM program.

ADD A GRADUATE CERTIFICATE

If you are currently enrolled in a degree seeking program and wish to earn a certificate while pursuing this degree, please complete the Request to Add a Graduate Certificate form. Click here (https://www.utoledo.edu/graduate/files/Request_to_add_a_grad_certific.pdf) for complete instructions and form.

If you are not currently enrolled in a degree seeking program but wish to earn a certificate, please complete the Graduate Online application. Click here (<http://apply.utoledo.edu/>) to apply online.

Applicants Will Submit the Following:

- Transcripts showing evidence of a Bachelor's degree with at least a 2.7 cumulative G.P.A.
- Resume
- Application and Fee (if required)

for International Students:

- International Students currently pursuing a graduate degree (masters, Ph.D., MD, JD) at The University of Toledo are eligible to apply for graduate certificates in business.
- International students not currently enrolled in a graduate degree-seeking program with The University of Toledo are not eligible to apply for a graduate certificate program.

No GMAT or GRE will be required for admission to a Neff COBI graduate certificate, however if the student later applies to a graduate program in Neff COBI, a GMAT/GRE score may be required.

Notes: Admissions to a Neff COBI graduate certificate program does not guarantee admissions to a Neff COBI master's program. For courses

to count toward a Neff COBI master's degree, a grade of "C" or better is required.

Take the following four courses:

Code	Title	Hours
INFS 6150	Business Intelligence Management	3
INFS 6450	Data Mining	3
OSCM 6250	Essentials of Business Analytics	3
OSCM 6550	Business Analytics and Cases	3

Prerequisite: OSCM 5520 for Level GR with a minimum grade of D- or equivalent UG/GR course from accredited University or equivalent experience (department chair signoff required). The prerequisite to OSCM 5520 is OSCM 5510.

By successfully completing the Graduate certificate in Business Analytics, students should be able to:

1. Gain an understanding of tools and techniques widely used in business analytics.
2. Apply business analytics tools and techniques for improving business decision making.
3. Develop communication and presentation skills in reporting results of business analytics effectively.
4. Gain practical experience in applying business analytics tools and techniques in real word problems.

Graduate Certificate in Information Systems ERP/SAP - STEMM

A Graduate Certificate in Business is a program of study designed to help students understand a specific area of business and applications within the field. Ideal for both graduate students who seek to explore a specific area of concentration in business as well as working professionals seeking business education credentials to potentially advance in a current career or to build a foundation for a new career. Admissions to a graduate certificate does not guarantee admissions to a Neff College of Business and Innovation master's program. In order for courses to count toward a Neff College of Business and Innovation master's degree, a grade of "C" or better is required. This is a STEMM program.

ADD A GRADUATE CERTIFICATE

If you are currently enrolled in a degree seeking program and wish to earn a certificate while pursuing this degree, please complete the Request to Add a Graduate Certificate form. Click here (https://www.utoledo.edu/graduate/files/Request_to_add_a_grad_certific.pdf) for complete instructions and form.

If you are not currently enrolled in a degree seeking program but wish to earn a certificate, please complete the Graduate Online application. Click here (<http://apply.utoledo.edu/>) to apply online.

Applicants Will Submit the Following:

- Transcripts showing evidence of a Bachelor's degree with at least a 2.7 cumulative G.P.A.
- Resume
- Application and Fee (if required)

for International Students:

- International Students currently pursuing a graduate degree (masters, Ph.D., MD, JD) at The University of Toledo are eligible to apply for graduate certificates in business.
- International students not currently enrolled in a graduate degree-seeking program with The University of Toledo are not eligible to apply for a graduate certificate program.

No GMAT or GRE will be required for admission to a Neff COBI graduate certificate, however if the student later applies to a graduate program in Neff COBI, a GMAT/GRE score may be required.

Notes: Admissions to a Neff COBI graduate certificate program does not guarantee admissions to a Neff COBI master's program. For courses to count toward a Neff COBI master's degree, a grade of "C" or better is required.

Take the Following three courses:

Code	Title	Hours
INFS 6150	Business Intelligence Management	3
INFS 6790	ERP Systems Configuration and Integration	3
OSCM 6780	ERP Systems Process Management	3

By successfully completing the Information Systems with ERP/SAP, students should be able to:

1. Gain an understanding of the concepts of ERP (Enterprise Resource Planning) and be able to contrast it to traditional functionally oriented information systems
2. Develop systematic analysis of the current ERP software
3. Gain hands-on experiences with ERP software including core business processes and their integration.
4. Develop skills of ERP software to business reengineering and business workflow
5. Apply business components and applications modules included in SAP ECC and relate them to common business processes

Take the following three courses:

Code	Title	Hours
BUAD 6600	Supply Chain Management	3
OSCM 6680	Quality Management and Six Sigma	3
OSCM 6690	Supply Chain Resources Management	3

Prerequisite: OSCM 5520 for Level GR with a minimum grade of C or equivalent UG/GR course from accredited university or equivalent experience (department chair signoff required). The prerequisite to OSCM 5520 is OSCM 5510 with a minimum grade of C or equivalent UG/GR course from an accredited university.

1. Gain an understanding of the basic concepts and principles of operations and supply chain management.
2. Develop decision-making and problem-solving skills required for managing people and resources.
3. Apply current and emerging technology to improve business competitiveness and productivity.
4. Develop effective written and oral communications, critical thinking, team collaboration, and presentation skills as applied to business problems.

Department of Management

Interim Chair: Dr. Laurence Fink
laurence.fink@utoledo.edu (), 419.530.2266

Academic Advising provided by Stacy Jenkins
Stacy.Jenkins@utoledo.edu ()

mission

The John B. and Lillian E. Neff College of Business and Innovation provides innovative and relevant learning experiences and engages in high-quality research and teaching to prepare students to become life-long, ethical business and academic leaders who are prepared for global challenges.

The Department of Management in Neff COBI is a growing department that houses the Leadership and the Human Resources majors. It provides cutting-edge programs and resources for students, faculty, and practitioners to develop the leadership and management and human resource expertise required of organizations in the 21st century. The department is committed to excellence in all programs, practices, and research activities. We believe in collaborating with other departments, colleges, community, and business organizations to keep our programs viable and relevant. The department prides itself on having an outstanding reputation for excellence in teaching because of our dedication to providing the best service to our students. Our faculty and staff are dedicated to providing students with an excellent educational experience while simultaneously contributing to the management domain through research-based scholarship.

accreditation

The Master of Business Administration (M.B.A.) is accredited by the Association to Advance Collegiate Schools of Business (AACSB) and the Higher Learning Commission (HLC).

Degrees Offered

The length of the program will vary depending upon the nature of the undergraduate degree and the major selected. The program consists of a common body of knowledge (18 hours), core (24 hours) and elective (9 - 12 hours) courses. Any or all common body of knowledge courses may be waived for equivalent coverage at the undergraduate or graduate level with a grade of C or better. Any course subs for the core cannot also be utilized to meet major (elective) requirements.

We offer courses and experiences focused on action-oriented opportunities to help graduate students understand the field of management. This approach gives students a strong foundational knowledge that could be applied immediately after graduation.

MBA in Human Resource Management (p. 431)

The Human Resource Management major is designed both for students who intend to seek or continue managerial careers in human resources, and for those who are seeking more general leadership positions, but need to understand approaches to attracting, retaining, compensating, motivating and managing employees in contemporary organizations. This program is built around the view that human resource specialists must also have good acumen to manage an organization's most valuable assets: Its employees.

Our program provides students a strong foundation in this field. The program teaches students about a wide variety of HR issues – selection,

training, compensation, benefits, legal issues, employee relations, and safety.

This concentration is designed to prepare candidates to assume positions as human resource practitioners in domestic and international business organizations, hospitals, nonprofits organizations, and local, state and federal government agencies.

MBA in Leadership (p. 431)

The Leadership major provides students with the background necessary to motivate and inspire employees to work towards a common goal, plan for the future and focus on organizational goals, evaluate and counsel individual and group performance, manage and resolve conflicts, and improve oral and written communication. A leadership career involves taking your organization into a better direction, or to surpass previous limits by building and working in a team to transform a group or business.

This concentration provides a foundation in a number of areas that are crucial to a managers' success – planning, ethical decision-making, interpersonal skills, team-building, performance development and evaluation, conflict management, motivation and leading change.

A specialization in leadership prepares students to enter a variety of organizations, both for profit and not-for-profit or to potentially work as an organizational development consultant.

Additionally, the department offers a graduate certificate in Leadership.

- Graduate certificate in Leadership (p. 406)

Academic Advising for the MBA program provided by Stacy Jenkins
Stacy.Jenkins@Utoledo.edu

mission

The John B. and Lillian E. Neff College of Business and Innovation provides innovative and relevant learning experiences and engages in high-quality research and teaching to prepare students to become life-long, ethical business and academic leaders who are prepared for global challenges.

The Marketing and International Business Department offers areas of specialization and courses in Marketing and International Business. Each of these areas of specialization offer an opportunity to learn and develop skills in areas that are important to firms. Our marketing program provides students with the opportunity to develop a knowledge in advertising, product management, digital marketing and marketing research. International business provides student with opportunity to learn about exporting, foreign direct investment and managing and marketing in different cultures.

accreditation

The Master of Business Administration (M.B.A.) is accredited by the Association to Advance Collegiate Schools of Business (AACSB) and the Higher Learning Commission (HLC).

Degrees Offered

The length of the program will vary depending upon the nature of the undergraduate degree and the major selected. The program consists of a common body of knowledge (18 hours), core (24 hours) and elective (9 - 12 hours) courses. Any or all common body of knowledge courses may be waived for equivalent coverage at the undergraduate or graduate level with a grade of C or better. Any course subs for the core cannot also be utilized to meet major (elective) requirements.

The Marketing and International Business Department offers two areas of specialization: Marketing and International Business.

Marketing - available 100% online (p. 434)

Marketing is one of the primary business functions that adds value to organizations of all types. Important areas of marketing include environmental scanning, planning, using social media, consumer behavior, global marketing, segmentation, marketing research, product and pricing strategies and brand management.

The curriculum prepares you for jobs, such as, marketing and development specialist, advertising account executive, marketing manager, and social media manager.

International Business (p. 433)

International business is the study of how firms operate in the global market place. It covers both macro topics like trade and micro topics such as international accounting. It includes studying exporting and importing, foreign direct investment, international finance, and international marketing.

The curriculum prepares you for jobs like international business manager, import/export compliance specialist, international banker, and international logistics manager.

Additionally, the department offers a graduate certificate in Marketing.

MBA International Business

The International Business major provides training for entry in careers in corporations with a global orientation, particularly multinational corporations, export-import firms, banks, transportation and logistics, and government and international agencies involved in international trade, finance and economic development.

International Business

The International Business major provides training for entry in careers in corporations with a global orientation, particularly multinational corporations, export-import firms, banks, transportation and logistics, and government and international agencies involved in international trade, finance and economic development. Students majoring in International Business must complete:

Code	Title	Hours
Must complete the MBA core course requirements in addition to the following: (p. 394)		
Choose any three courses listed below		
IBUS 6100	Study Abroad Program (Spring)	

MKTG 6400	International Marketing (Spring) ¹
MKTG 6250	Global Sales and Strategic Customer Management (Spring) ¹
FINA 6370	MBA International Financial Management
MKTG 6980	Special Topics (Varies; please consult an advisor as to appropriateness of topic in international setting)

¹ Offered online section only.

MBA Marketing

The Marketing major provides the student with the skills to make decisions about product design and quality, pricing, channels of distribution, advertising, and personal selling in ways that enhance consumer satisfaction and further the goals of the organization. The student learns to approach problems with a clear understanding of the relationship between marketing and other business functions. There are two areas of concentration: Marketing Management and Professional Sales. While is not possible for a specific concentration to be listed on the official transcript, students majoring in Marketing must complete one of two tracks.

Graduate Certificate in Marketing - available 100% online

A Graduate Certificate in Marketing is a program of study designed to help students understand a specific area of business and applications within the field. Ideal for both graduate students who seek to explore a specific area of concentration in business as well as working professionals seeking business education credentials to potentially advance in a current career or to build a foundation for a new career. Admissions to a graduate certificate does not guarantee admissions to a Neff College of Business and Innovation master's program. In order for courses to count toward a Neff College of Business and Innovation master's degree, a grade of "C" or better is required.

ADD A GRADUATE CERTIFICATE

If you are currently enrolled in a degree-seeking program and wish to earn a certificate while pursuing this degree, please complete the Request to Add a Graduate Certificate form. Click here (https://www.utoledo.edu/graduate/files/Request_to_add_a_grad_certific.pdf) for complete instructions and form.

If you are not currently enrolled in a degree seeking program but wish to earn a certificate, please complete the Graduate Online application. Click here (<http://apply.utoledo.edu/>) to apply online.

Applicants Will Submit the Following:

- Transcripts showing evidence of a Bachelor's degree with at least a 2.7 cumulative G.P.A.
- Resume
- Application and Fee (if required)

for International Students:

- International Students currently pursuing a graduate degree (masters, Ph.D., MD, JD) at The University of Toledo are eligible to apply for graduate certificates in business.
- International students not currently enrolled in a graduate degree-seeking program with The University of Toledo are not eligible to apply for a graduate certificate program.

No GMAT or GRE will be required for admission to a Neff COBI graduate certificate, however if the student later applies to a graduate program in Neff COBI, a GMAT/GRE score may be required.

Notes: Admissions to a Neff COBI graduate certificate program does not guarantee admissions to a Neff COBI master's program. For courses to count toward a Neff COBI master's degree, a grade of "C" or better is required.

Take both of the following:

Code	Title	Hours
MKTG 6140	Customer Relationship Marketing	3
MKTG 6220	Integrated Marketing Communications	3

AND Choose one of the following:

Code	Title	Hours
MKTG 6320	Strategic Brand Management	3
MKTG 6980	Special Topics	3

Prerequisite: BUAD3010 (Principles of Marketing) for Level UG with minimum grade of C or MKTG 5410 for level GR with minimum grade of C or equivalent UG/GR course from accredited University or equivalent experience (department chair sign off required).

By successfully completing the Graduate Certificate in Marketing, students should be able to:

1. Solve business problems using their knowledge of the relationship between marketing and other business functions.
2. Determine the appropriate product, pricing, channels of distribution, and promotion strategies to meet consumer expectations and further the goals of the organization.
3. Evaluate when and why relationship marketing practices can be advantageous or detrimental to marketing and organizational performance.
4. Apply strategic planning across the functional areas of marketing communications.
5. Create an integrated marketing communication proposal that would synergistically combine pertinent tools to reach selected audiences.

Dual Degrees

Degrees Offered

- B.A./M.B.A. Dual Degree (p. 435)
- B.S./M.B.A. Dual Degree (p. 435)
- J.D./M.B.A. Dual Degree (p. 436)
- M.P.H./M.B.A. Dual Degree (p. 436)
- PharmD./M.B.A. Dual Degree (p. 437)
- MD/MBA (p. 395)

B.A./M.B.A. Dual Degree

The John B. and Lillian E. Neff College of Business and Innovation in conjunction with the College of Arts and Letters offers a plan of study for students wishing to major in Disability Studies (DST), minor in Business, and transition into the M.B.A program. This program provides a unique opportunity to combine undergraduate studies in business and social science in preparation for further graduate studies in business. This

plan of study will guide student toward completing their undergraduate studies (major in DST/minor in business) by the end of their 7th semester and completing their M.B.A. by their 10th semester.

Students who wish to pursue this plan of study should meet with both their undergraduate College of Arts and Letters Academic Advisor and the Neff COBI Undergraduate Student Service Office as early as possible to plan a course sequence to fit the recommended timelines of this plan of study to meet the business minor and apply toward the MBA program. Interested students will take the GMAT at the end of their junior year and should apply for admission to the program to the College of Graduate Studies before the fall of their senior year. To be admitted to the program, students must have senior standing, score a minimum of 450 on the GMAT, and have at least a 2.7 cumulative GPA. Undergraduate requirements for the general business minor must also be completed. Interested students will also be working with the Neff COBI Office of Graduate Programs to assist with the transition process.

B.S./M.B.A. Dual Degree

The B.S./M.B.A. program provides an opportunity to earn a dual degree through an integrated curriculum. Successful completion of the dual degree program leads to the awarding of two degrees. The B.S. in Engineering or Engineering Technology degree is awarded by the College of Engineering and the M.B.A. degree is awarded by the John B. and Lillian E. Neff College of Business and Innovation. Students enrolled in the dual degree program will receive the B.S. and M.B.A. degrees independently. Students must complete their B.S. degree prior to graduating with their M.B.A. It is anticipated that by enrolling in the two programs simultaneously, a total of five years will be required for completion of both degrees.

Students who wish to pursue the program should make this known to the senior associate dean for undergraduate studies in the College of Engineering by the end of their sophomore year. Interested students will take the GMAT at the end of their junior year and should apply for admission to the program to the College of Graduate Studies before the fall of their senior year. To be admitted to the program, students must have senior standing, score a minimum of 450 on the GMAT, and have at least a 3.0 cumulative GPA. Undergraduate requirements for the general business minor must also be completed. Upon admission to the program by the College of Graduate Studies, the John B. and Lillian E. Neff College of Business and Innovation and the College of Engineering, students will be taking graduate courses while simultaneously completing the requirements for the B.S. in engineering.

Students' special statuses must be tracked by the Office of Student Retention and Academic Success to assure AACSB compliance and to ensure the B.S. degree is granted prior to graduating with the M.B.A.

To fulfill requirements for the M.B.A. degree, students must complete 33 semester hours at the 6000 level or above. Up to an additional 18 credit hours may be required if a student does not have an academic background in business. Students in the joint program may apply up to 18 hours of Common Body of Knowledge course work from the College of Engineering with a business minor toward satisfaction of the M.B.A. program requirements. The business minor courses should be chosen carefully to be used specifically toward the M.B.A. Common Body of Knowledge courses. All courses taken in the College of Engineering that are applied towards the M.B.A. program requirements must be earned

with a grade of C (2.0) or higher. Students may opt for MIME 2600 to satisfy FINA 5210.

J.D./M.B.A. Dual Degree

The J.D./M.B.A. program provides an opportunity to earn a dual degree through an integrated curriculum. Successful completion of the dual degree leads to the awarding of two degrees. The Juris Doctor degree is awarded by the College of Law, and the M.B.A. degree is awarded by the John B. and Lillian E. Neff College of Business and Innovation. Students enrolled in the dual degree program will not receive the J.D. or M.B.A. degree until all work required for both degrees have been completed.

Students must apply and be admitted to both programs separately. Admission to one program does not guarantee admission to the other program. There are separate applications and fees for each program. The LSAT will be accepted by the John B. and Lillian E. Neff College of Business and Innovation in lieu of a GMAT score. If LSAT is waived for the admission process with the College of Law, the GMAT will be waived for the admission process with Neff COBI. It is recommended that students speak to the College of Law prior to enrolling in the dual degree program as some courses have to be taken in sequence to meet the J.D. program degree requirements.

Juris Doctor (J.D.)

The College of Law requires the successful completion of 89 credit hours. A maximum of 15 credit hours can be online course work. The dual degree program would permit up to 12 credit hours of M.B.A. courses from the College of Business and Innovation to be applied toward the satisfaction of the 89 credit hour requirement. All courses taken in the College of Business that are to be applied towards J.D. program requirements must be earned with a grade of B (3.0) or higher. The 12 hours of approved courses from the College of Business and Innovation are:

Code	Title	Hours
Select 12 hours of the following:		12
BUAD 6100	Accounting For Decision Making	3
BUAD 6200	Corporate Finance	3
BUAD 6300	Strategic Marketing And Analysis	3
BUAD 6500	International Business	3
BUAD 6800	Information Technology And E-Business	3
BUAD 6900	Strategic Management Capstone	3
EFSB 6590	New Venture Creation	3
EFSB 6790	Venture Capital Finance	3
FINA 6130	Advanced Corporate Finance	3
FINA 6140	Investments And Security Analysis	3
FINA 6150	Financial Institutions And Markets	3
FINA 6370	MBA International Financial Management	3
IBUS 6360	Management Of Multinational Firms	3
MGMT 6160	Leading With Power and Influence	3
HURM 6720	Advanced Negotiation and Conflict Management	3
HURM 6760	Talent Management	3
INFS 6810	Network Communications	3

MKTG 6140	Customer Relationship Marketing	3
MKTG 6400	International Marketing	3

On written application by the student, and for good cause shown, the Associate Dean for Academic Affairs of the College of Law may substitute another College of Business course for one on the approved list.

M.B.A. Degree

Students in the J.D./M.B.A. will be majoring in Administration. If students opt to double major, all courses needed for the double major will need to be successfully completed. To fulfill requirements for the M.B.A. degree, students must complete 33 semester hours at the 6000 level or above. Up to an additional 18 credit hours may be required if a student does not have an academic background in business. Students in the joint program may apply up to 12 hours of course work at the College of Law toward satisfaction of the M.B.A. program requirements. The College of Law courses must have business application. All courses taken in the College of Law that are to be applied towards M.B.A. program requirements must be earned with a grade of C (2.0) or higher. All grades earned in College of Law courses that are applied towards M.B.A. program requirements will impact the overall graduate GPA.

One M.B.A. Core course (BUAD 6500 (<https://catalog.utoledo.edu/search/?P=BUAD%206500>)) can be replaced with one College of Law elective (LAWI 9480 (<https://catalog.utoledo.edu/search/?P=LAWI%209480>)).

Up to three College of Law courses listed below will serve as M.B.A. electives. Other College of Law courses may be approved by the College of Business and Innovation Associate Dean for Graduate Programs, to serve as M.B.A. electives. Students in the dual degree program will earn their MBA in Administration since the MBA electives are replaced with College of Law courses.

Code	Title	Hours
Select up to three of the following:		9
LAWG 9010	Business Associations	4
LAWG 9610	Secured Transactions	3
LAWI 9060	Sales and Leases of Goods	2-3
LAWI 9300	Employment Discrimination	3
LAWI 9110	Commercial Paper	3
LAWI 9310	Employment Law	2-3

LAWD 9210	Contracts I	3
LAWD 9220	Contracts II	3

M.P.H./M.B.A. Dual Degree

The M.P.H./M.B.A. program provides an opportunity to earn a dual degree through an integrated curriculum. The joint M.B.A./MPH degree is designed to prepare graduates with managerial and executive level career aspirations at the interface of healthcare delivery and business. The successful completion of the dual degree leads to the awarding of two degrees. The Master of Public Health degree is awarded by the College of Health and Human Services and the M.B.A. is awarded by the John B.

and Lillian E. Neff College of Business and Innovation. Students enrolled in the dual degree program can receive the M.P.H. or M.B.A. degree independently. The M.B.A. degree requires a minimum of 33 credit hours at the 6000-level. Up to an additional 18 credit hours may be required if a student does not have an academic background in business. The College of Business and Innovation will allow up to 9 credit hours of appropriate M.P.H. coursework to be credited toward the M.B.A. degree.

Students applying for the Master of Public Health/M.B.A. dual degree program must have earned a bachelor's degree. A student must apply and be admitted to the College of Health and Human Services and the John B. and Lillian E. Neff College of Business and Innovation separately to be admitted to the MPH/M.B.A dual degree program. If the applicant is required to take the GRE by the MPH Admission Committee, the College of Business and Innovation will accept GRE scores in lieu of the GMAT. If the applicant does not need to take the GRE for admission to the MPH program, the applicant will be waived GMAT for admission to the M.B.A. Program.

Admission to one program does not guarantee admission to the other program. Refer to the College of Health and Human Services (<https://catalog.utoledo.edu/graduate/health-human-services/graduate-degrees-certificates-offered/>) and M.B.A. sections of this catalog for specific admission standards for each program.

Appropriate M.P.H. courses listed under the Public Health Management major of this catalog will be applied towards the M.B.A. elective area. Up to a maximum of 12 credit hours of 6000-level BUAD courses will apply towards the M.P.H. elective requirement.

Please refer to the College of Health and Human Services (<https://catalog.utoledo.edu/graduate/health-human-services/graduate-programs-schools/population-health/#programstext>) catalog for more information regarding the program requirements for the M.P.H. degree.

Pharm D./M.B.A. Dual Degree

The PharmD./M.B.A. program provides an opportunity to earn a dual degree through an integrated curriculum. Successful completion of the dual degree program leads to the awarding of two degrees. The PharmD. Degree is awarded by the College of Pharmacy and Pharmaceutical Sciences, and the M.B.A. degree is awarded by the John B. and Lillian E. Neff College of Business and Innovation. Students enrolled in the dual degree program can receive the PharmD. or M.B.A. degree independently. The M.B.A. degree requires a minimum of 33 credit hours at the 6000 level. Up to an additional 18 credit hours may be required if a student does not have an academic background in business.

Students applying for the PharmD./M.B.A. program must have earned a bachelor's degree. A student must apply and be admitted to the College of Pharmacy and Pharmaceutical Sciences and the John B. and Lillian E. Neff College of Business and Innovation separately to be admitted to the PharmD./M.B.A dual degree program. The PCAT will be accepted by the College of Business and Innovation in lieu of GMAT scores. If the PCAT is waived, the GMAT will also be waived.

Admission to one program does not guarantee admission to the other program. Refer to the College of Pharmacy and Pharmaceutical Science

(p. 368) and M.B.A. sections of this catalog for specific admission standards for each program.

Admission to one program does not guarantee admission to the other program. There are separate applications and fees for each program. Students apply and are admitted to the PharmD program after two years of preparatory course work in chemistry, calculus, biology, organic chemistry, physics, and physiology. Students apply for entry into the 4-year professional PharmD program in their Sophomore year. In the first year in the PharmD program, the student's junior year, they would begin their coursework towards the M.B.A. by completing the undergraduate level equivalent Common Body of Knowledge course requirements. Students interested in declaring a business minor would contact the COBI Undergraduate Advisors in the Undergraduate Student Services Center. Students in the PharmD program graduate after the first two professional years, four years of higher education, with a BS in Pharmaceutical Sciences.

PharmD students complete their last two years of the PharmD program at the graduate level. Up to 18 additional credit hours may be required if a student does not have the Common Body of Knowledge courses completed with a grade of C or higher. Once a student is admitted and enrolls at the graduate level, the Common Body of Knowledge courses must be taken at the Graduate level. Students are not permitted to enroll in and apply undergraduate courses toward MBA degree requirements. Up to three College of Pharmacy and Pharmaceutical Science courses will serve as M.B.A. electives. The nine credit hours of elective course work will be fulfilled by (3) AAPE rotations from the Management and Administration Track. Students in the dual degree program will earn their MBA in Administration. The following table identifies each M.B.A. course and describes how the student will complete the work.

M.B.A. Pre-requisites

Code	Title	Hours
Common Body of Knowledge		
Courses Take by Pharm D Students		
BUAD 2040 & BUAD 2050	Financial Accounting Information and Accounting For Business Decision-Making	3
BUAD 3040	Principles Of Financial Management	3

6	APPE Experiences	APPE Experiences	

¹ Students graduate with BSPS degree after the Spring semester year 2 (Fourth Term).

BBA - Bachelors of Business Administration

M.B.A. - Masters of Business Administration

M.D./M.B.A. Dual Degree

The M.D./M.B.A. program provides an opportunity to earn a dual degree through an integrated curriculum. Successful completion of the dual degree program leads to the awarding of two degrees. The Doctor of Medicine is awarded by the College of Medicine and Life Sciences and the M.B.A. is awarded by the John B. and Lillian E. Neff College of Business and Innovation. Students enrolled in the dual degree program will not receive the M.D. or M.B.A. degree until all work required for both degrees have been completed. The M.B.A. degree requires a minimum of 33 credit hours at the 6000-level. Up to an additional 18 credit hours may be required if a student does not have an academic background in business. The Neff College of Business and Innovation will allow up to

9 credit hours of approved M.D. coursework to be credited toward the M.B.A. degree.

Students applying for the M.D./M.B.A. program must have earned a bachelor's degree. A student must apply and be admitted to the College of Medicine and Life Sciences and the John B. and Lillian E. Neff College of Business and Innovation separately to be admitted to the M.D./M.B.A. dual degree program. The MCAT will be accepted by the College of Business and Innovation in lieu of GMAT scores.

Admission to one program does not guarantee admission to the other program. Refer to the College of Medicine (p. 248) and M.B.A. sections of this catalog for specific admission standards for each program. Applications for admission to the M.D. program are accepted for fall entry only.

It is recommended that M.D./M.B.A. students take 2 of the 3 Medical School courses below to serve as M.B.A. electives. PCOM 785 is already part of the MD curriculum will serve to fulfill two of the three elective requirements when taken over multiple semesters for the required number of credit hours when a satisfactory grade is earned.

Code	Title	Hours
Students must take:		
PCOM 785	Principles of Clinical Med	7
Select one of the following:		
SOMN 607	Administration in Medicine	0
SOMN 723	Health Policy/Bus. of Medicine	0

Another option is for M.D. /M.B.A. students to complete 1 of the 3 Medical School courses listed above, along with 1 elective from the list below. The courses below are semester long courses (subject to availability) and cannot be taken during a medial student's required clerkship or clinical elective time. The course would have to be taken during the dedicated year of M.B.A. study (typically the 3rd year of the M.D./M.B.A. program).

This option does allow M.D./M.B.A. students the opportunity to fulfill the 4 week basic science elective required for medical school. Students should consult with their M.D. and M.B.A. Academic Advisors to determine the best approach for completing the dual degree based on their academic background and individual plan of study.

MBA Administration - available 100% online

Master of Business Administration (M.B.A.)

The John B. and Lillian E. Neff College of Business and Innovation's flexible Master of Business Administration (M.B.A.) program is the ideal graduate program for those that strive to challenge themselves and progress in their career. All of our graduate students have hands-on opportunities to learn practical business applications and network with professionals from all industries and fields.

UToledo's AACSB-accredited M.B.A. program has a market-relevant curriculum and a variety of specializations. Expert faculty members give students an in-depth, well-rounded knowledge of business analysis and strategy. Recognized by the Princeton Review as One of the "Best Business Schools," the University of Toledo Will Help You Reach New Career Heights and Fuel Your Tomorrows.

Flexibility

Begin the program in the Fall, Spring or Summer and progress at your own pace. Courses are offered in-class, online and a blend of the two learning modes enabling multiple options to suit your busy life and work schedule.

Affordability

One of the best values in the Midwest, the UToledo M.B.A. offers affordable tuition and opportunities for scholarships. Many students take advantage of employer-sponsored tuition assistance to subsidize their graduate education costs.

Work/Life Balance

Courses are offered in-class during the evenings, fully online, or a hybrid blend of the two learning modes. Students typically schedule classes to facilitate maximum work/life balance.

Pipeline Program

Our pipeline program permits UToledo John B. and Lillian E. Neff College of Business and Innovation undergraduate students to take graduate degree program courses at the undergraduate price. These classes may "double-dip," counting towards the completion of both a B.B.A. and graduate degree.

Speed to Degree Completion

Earn your UToledo M.B.A. in as little as 12 months. The typical working professional, taking 2 courses per semester, can complete the degree in as little as six semesters.

Academic Reputation

The UToledo M.B.A. program is fully accredited by the Association to Advance Collegiate Schools of Business (AACSB), which represents one of the highest standards of achievement for business schools worldwide. The program is a member of the Graduate Management Admission Council (GMAC), an international association of business schools distinguished by their commitment to excellence in graduate management education.

Employer Connections

The John B. and Lillian E. Neff College of Business and Innovation consistently builds its relationships with local and national companies, forming valuable partnerships to provide our M.B.A. students with employment and career-building opportunities.

For a MBA Administration, you must complete the MBA core course requirements (p. 392) in addition to the following:

Administration

The MBA Administration concentration/major is designed for students who want the added flexibility of taking courses in a variety of areas. The Administration major is completed by taking three 6000-level M.B.A. electives within the College of Business and Innovation. Students are not permitted to take PUBH courses from the Public Health Management major toward the Administration major. However, students are permitted to complete BLAW 6100 Business, Government and Society, EFSB 6590 New Venture Creation, or EFSB 6690 Technology Commercialization.

Professionalism – Each student can demonstrate effective oral and written communication, interpersonal collaboration, responsibility, accountability, and professional behavior

Leadership – Each student can practice reflective thinking to assess personal strengths and challenges and can formulate strategies for lifetime development of leadership

Ethics and Social Responsibility – Each student can analyze and resolve ethical issues in decision-making and recognize their impact on the larger community

Innovation and Creativity – Each student can examine problems, opportunities, relationships, and situation from different and unique perspectives and develop creative solutions.

Critical Thinking and Analysis – Each student can think critically to identify problems, research, analyze and make sound inferences from and use effective problem-solving and decision-making techniques

Business Acumen – Each student can identify, interpret, evaluate, and suggest solutions within the legal, global, financial, marketing, and operational dimensions of business

Technology – Each student can understand and utilize current and emerging technology to improve business competitiveness and personal productivity

MBA Public Health Management

The Public Health Management major is designed for students who intend to seek or continue managerial careers in healthcare administration. This is different that the dual degree MPH/MBA program option. The joint MPH/MBA degree is designed to prepare graduates with managerial and executive-level career aspirations at the interface of healthcare delivery and business.

Students are not able to apply any of the courses required for the Public Health Management major towards open electives or the MBA in Administration major.

Public Health Management

The Public Health Management major is designed for students who intend to seek or continue managerial careers in healthcare administration. Students are not able to apply any of these courses towards the MBA Administration major. Students majoring in Public Health Management must complete all of the following courses.

Code	Title	Hours
Must complete the MBA core course requirements in addition to the following: (p. 394)		
PUBH 6010	Public Health Epidemiology	3
PUBH 6020	Management and Leadership in Public Health	3
PUBH 6090	Issues in Public Health	3
PUBH 6050	Concepts and Issues in Environmental Health	3

Judith Herb College of Education

2021-2022 Graduate Catalog

COLLEGE MISSION AND VISION

The mission of the Judith Herb College of Education is to prepare educators, instructional leaders, and scholars who are capable of constructing and sustaining effective learning environments through the development and practice of innovative educational theories and pedagogical approaches.

Vision: Shaping the future of education for an ever-changing world.

Our graduates go on to serve as leaders in a variety of fields, both academic and professional. While our students and alumni may appear to have diverse interests, they have one thing in common – they are deeply committed to serving others and to making their communities, their state, their nation, and their world a better place. Our faculty has much to offer and they are committed to supporting our students and the larger community.

ACCREDITATION

The Judith Herb College of Education is fully accredited by the Council for Accreditation of Educator Preparation (CAEP). This accreditation status is effective between fall 2016 and fall of 2023. The next on-site visit will take place in spring 2023.

Degrees and Certificates Offered

Master's Degrees

Master of Arts and Education (p. 442)

Master of Education in Art Education (p. 443)

Master of Education in Career and Technical Education (p. 444)

Master of Education in Curriculum and Instruction (p. 446)

Master of Education in Early Childhood Education (p. 448)

Master of Education in Educational Administration and Supervision (p. 449)

Master of Education in Educational Psychology (p. 451)

Master of Education in Educational Research and Measurement (p. 452)

Master of Education in Educational Technology (p. 453)

Master of Education in Educational Theory and Social Foundations (p. 455)

Master of Education in Higher Education (p. 456)

Master of Education in Middle Childhood Education (p. 457)

Master of Education in Secondary Education (p. 459)

Master of Education in Special Education (p. 461)

Master of Music in Music Education (p. 463)

Master of Science and Education (p. 464)

Education Specialist Degrees

Education Specialist in Administration and Supervision (p. 466)

Education Specialist in Curriculum and Instruction (p. 467)

- Concentrations: Curriculum and Instruction, Early Childhood, and Special Education

Doctoral Degrees

Doctor of Education in Educational Administration and Supervision (p. 469)

Doctor of Philosophy in Curriculum and Instruction (p. 471)

- Concentrations: Curriculum and Instruction, Early Childhood, Educational Technology, Gifted and Talented, Secondary Education, Special Education

Doctor of Philosophy in Foundations of Education (p. 479)

- Concentrations: Educational Psychology, Educational Sociology, Foundations of Education, History of Education, Philosophy of Education, and Research and Measurement

Doctor of Philosophy in Higher Education (p. 488)

Graduate Certificates

Certificate in Advanced Reading and Literacy Instruction (p. 490)

Certificate in Culture and Change in Institutions (p. 491)

Certificate in Educational Assessment Specialist (p. 492)

Certificate in Foundations of Peace Education (p. 492)

Certificate in Higher Education Administration (p. 494)

Certificate in Interprofessional Teaming in Early Childhood (p. 494)

Certificate for Principal Licensure (p. 496)

Endorsement Programs

Endorsement in Career-based Intervention (p. 547)

Endorsement in Early Childhood Generalist (grades 4-5) (p. 547)

Endorsement in Gifted Intervention Specialist Education (p. 547)

Endorsement in Reading Education (preK-12) (p. 547)

Endorsement in Pre-school Special Needs (p. 547)

Endorsement in Transition to Work (p. 547)

Master of Arts and Education

The Master of Arts and Education is a combined master's degree program offered by the Judith Herb College of Education in collaboration with the College of Arts and Letters and the College of Natural Sciences and Mathematics. This degree is designed for students who wish to enhance their knowledge in a humanities or social sciences field and in education. As a general rule, students will have an advisor in the Judith Herb College of Education and in the collaborative college who will jointly plan and direct the program. Students who wish to complete their culminating experience in education will work with their Judith Herb College of Education advisor. Students who wish to complete their culminating experience in their humanities or social sciences field will work with their collaborative College advisor.

Areas of concentration include: economics, English, English as a second language (ESL), French, geography, German, history, mathematics, political science, sociology, Spanish. This program does not lead to a teaching license. Students interested in licensure should apply to one of the Licensure and Master's Programs (LAMP).

The MAE is a 36 semester hour program. Students take courses in curriculum and instruction along with courses selected with a faculty adviser based on the student's area of concentration. The program culminates with a theory and research course and the completion of a master's research seminar, research-based project, or thesis depending on the student's interest. Coursework is completed through a combination of on-campus, online, and field-based courses.

Admission to the Master of Arts and Education

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program
- A content area grade point average (GPA) of at least 2.7 on a 4.0 scale for coursework in the selected concentration is preferred
- Undergraduate content area coursework in preparation for graduate work in the selected concentration

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

REQUIREMENTS FOR THE MAE

For the Master of Arts and Education degree, students must complete the following program requirements:

- A minimum of 36 semester hours of approved graduate course work
- An area of specialization in curriculum and instruction of a minimum of 12 semester hours with courses pre-approved by the faculty advisor
- An area of specialization in the selected concentration of a minimum of 15 semester hours with courses pre-approved by the faculty advisor
- A course to complete the specialization in curriculum and instruction or the selected concentration
- A course in theory and research
- A thesis, project, or research seminar

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

PLAN OF STUDY

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 36-semester hour minimum:

- 12 credits of specialization in curriculum and instruction
- 15 credits of specialization in the selected concentration
- 3 credits in curriculum and instruction or the selected concentration
- 3 credits of theory and research

- 3 credits of thesis, project or research seminar

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Arts and Education. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Curriculum and Instruction		
Select 12 credits in curriculum and instruction as approved by faculty advisor		12
Specialization in Area of Concentration		
Select 15 credits in the concentration as approved by faculty advisor		15
Education or Concentration Elective		
Select 3 credits as approved by faculty advisor		3
Theory and Research		
Select one of the following:		3
CI 6490	Theory And Research In Literacy (Recommended)	
CI 6590	Theory And Research In Mathematics Education (Recommended)	
CI 6690	Theory And Research In Science Education	
CI 6790	Theory And Research In Social Studies (Recommended)	
CI 6890	Theory and Research in Learning and Teaching Content	
Master's Thesis, Project, or Research Seminar		
Select one of the following:		3
CI 6900	Masters Research Seminar In Curriculum And Instruction	
CI 6920	Masters Research Project In Curriculum And Instruction	
CI 6960	Masters Thesis In Curriculum And Instruction	
Total Hours		36

Demonstrate knowledge of core ideas in curriculum and instruction including current ideas and issues in a thoughtful and substantive manner.

Demonstrate knowledge of core ideas in a subject matter discipline including concepts and processes in a thoughtful and substantive manner.

Design a plan for studying learning that integrates core ideas and develops pedagogical content knowledge.

Reflect on his or her own thinking, learning, and pedagogical content knowledge.

Communicate professionally in formal writing using language style and conventions of academic English and APA guidelines.

Participate in the roles of author, reviewer, and editor in the professional publication process.

Write a focused manuscript that illustrates their knowledge of content specific education.

Master of Education in Art Education

The Master of Education in Art Education degree is designed for those who hold a bachelor's degree and wish to earn an Ohio teaching license in conjunction with a master's degree. Students in this program earn

a master's degree and an initial Ohio educator license for grades PreK through 12 in the visual arts.

The ME in Art Education is a 30 semester hour program with additional semester hours of coursework required for licensure. Students take courses in art education along with education and art courses selected with a faculty adviser based on the student's intended licensure area. The program culminates with a theory and research course and the completion of a research-based project or thesis depending on the student's interest. Coursework is completed through a combination of on-campus, online, and field-based courses.

Admission to the ME in Art Education

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- An overall grade point average (GPA) of at least 2.7 on a 4.0 scale in all undergraduate work is preferred
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program
- A content area grade point average (GPA) of at least 2.7 on a 4.0 scale for coursework in the selected licensure area is preferred
- Undergraduate content area coursework for the selected licensure area

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation
- Portfolio of artwork, digital or physical
- Course review worksheet

REQUIREMENTS FOR THE ME IN ART EDUCATION

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- An area of specialization in art education with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A thesis, project, or research seminar

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 21 credits of specialization in art education
- 6 credits of a supporting area
- 3 credits of thesis, project or research seminar

Licensure or endorsement may require additional semester hours to fulfill the credential requirements as well as degree requirements. Students should consult their advisor for detailed information.

OTHER REQUIREMENTS

PRIOR TO BEGINNING CLASSROOM EXPERIENCES

- Criminal background check
- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com/>) (OAE) Content Assessment(s) for the licensure area
- All undergraduate content area courses

PRIOR TO APPLYING FOR OHIO TEACHING LICENSE

- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com/>) (OAE) Pedagogy Assessment for the licensure area
- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com/>) (OAE) Foundations of Reading Assessment for the licensure area

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Art Education. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Additional hours may be required to fulfill licensure requirements.

Code	Title	Hours
Specialization in Art Education		21-26
<i>For students not seeking licensure</i>		
Select 21 credits as approved by advisor		
<i>For students seeking licensure</i>		
Select the following:		
AED 5140	Art Education For The Special Child	
AED 5200	Computer Graphics In Art Education	
AED 5990	Individual Study Of Art For The Graduate Student (12 credits as approved by advisor)	
AED 6940	Internship	
Other art education courses as approved by advisor		
Supporting Area		
Select 6 credits as approved by advisor		6
CI 6410	Content Area Literacy (Recommended)	
EDP 5210	Child Behavior And Development (Recommended)	
Other education courses as approved by faculty advisor		
Master's Thesis, Project, or Internship		
Select one of the following:		3-4
AED 5000	Research In Art Education	
AED 6920	Masters Research Project In Art Education	
AED 6960	Master's Research Thesis In Art Education	
Total Hours		30-36

1. Students apply their understandings of student learning and diversity to their creation of visual Arts lesson plans.
2. Students demonstrate their competence in visual art techniques, history, and applications.
3. Students design and apply varied and effective assessments to their evaluation of their students learning.
4. Students plan and organize educational environments that promote learning and empathy.
5. Students maintain professionalism in their self-presentation and in their relationships with colleagues.

Master of Education in Career-Tech Education

The Master of Education in Career-Tech Education is designed for individuals seeking or who hold licensure for teaching in an approved career-tech workforce development program. Pathways include agriculture, health careers, business, family and consumer science careers, marketing, or career-technical.

The ME in Career-Tech Education is a 30 semester hour program that may include the 15 of the 27 hours required for the supplemental license. Students may pursue both the license and the Master of Education degree at the same time. The program culminates with a theory and research course and the completion of a master's research seminar, research-based project, or thesis depending on the student's interest. Coursework is completed through a combination of on-campus, online, and field-based courses.

Admission to the ME in Career-Tech Education

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Three letters of recommendation
- Statement of purpose

Requirements for the ME in Career-Tech Education

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- An area of specialization in career-tech education that includes CTE 5160 and 5830, with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A course in theory and research
- A thesis, project, research seminar, or field experience (practicum)

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 15 credits of specialization in career-tech education
 - CTE 5160 and 5830 are required
- 9 credits of a supporting area
- 3 credits of theory and research
- 3 credits of thesis, project or research seminar

Licensure or endorsement may require additional semester hours to fulfill the credential requirements as well as degree requirements. Students should consult their advisor for detailed information.

Total Hours		30

SLO 1 CLASSROOM ENVIRONMENT: Create a learning environment that encourages student motivation, positive behavior and collaborative social interaction.

1.1. Create safe and respectful learning environments where teachers and students safely operate equipment and follow emergency protocols (e.g., local and OSHA regulations, equipment operation and proper disposal of hazardous waste.)

1.2. Model respect for students diverse cultures, language skills and experiences.

1.3. Motivate students to work productively and assume responsibility for their learning.

SLO 2 CURRICULUM: Create short-term and long-term, standards-based, instructional plans based on the varying learning needs of students.

- 2.1. Collaborate with postsecondary institutions to create in-demand career pathways and inform students of college credit opportunities.
- 2.2. Inform and encourage students to obtain and maintain industry credentials related to their career pathways.
- 2.3. Develop curriculum documents (e.g., course syllabus, course of study, unit plans and lesson plans) that meet the needs of all students by utilizing Depth of Knowledge (DOK) Levels.
- 2.4. Integrate competencies for relevant industry-recognized credentials into lesson plans.
- 2.5. Develop intellectually challenging projects that require higher-order reasoning and problem-solving skills.
- 2.6. Utilize career-technical student organizations to reinforce in-class instruction and promote 21st century skills.
- 2.7. Modify instruction to support all students in achieving their full learning potential.
- 2.8. Integrate employability skills as well as challenging technical content and knowledge into daily instruction.
- 2.9. Integrate challenging academic content and knowledge into daily instruction.

SLO 3 INSTRUCTION: Use instructional strategies that actively engage students in developing problem-solving, critical-thinking and teamwork skills.

- 3.1. Use content-specific instructional strategies to teach main concepts and skills effectively.
- 3.2. Create learning situations where students work independently, collaboratively and as a whole class, while providing opportunities for individual assessment.
- 3.3. Integrate the main components of a career-technical education program into instruction (i.e., laboratory, classroom and career-technical student organizations).
- 3.4. Identify the domains of learning (i.e., cognitive, affective and psychomotor) and how they relate to the career-technical education classroom and laboratory.
- 3.5. Demonstrate instructional strategies that foster positive relationships with students.
- 3.6. Utilize business and industry to develop and implement experiential and work-based learning opportunities for students that enhance classroom and laboratory learning.
- 3.7. Demonstrate how inquiry-based instructional strategies are a prominent part of teaching practices.

SLO 4 ASSESSMENT: Utilize formal and informal assessment strategies to evaluate students progress toward learning goals, provide feedback to improve student learning and improve instruction.

- 4.1. Select, develop and use a variety of diagnostic, formative and summative assessments to monitor student learning and progress.
- 4.2. Provide opportunities for students to self-assess their learning and set individual goals.
- 4.3. Analyze student data to reflect, self-assess and modify the teaching-learning cycle (e.g., plan, teach, assess, revise and reteach).
- 4.4. Make assessment results available to students and stakeholders in a format that is understandable

and maintains appropriate privacy requirements.

SLO 5 PROGRAM REVIEW: Utilize data for continual program improvement.

- 5.1. Use Quality Program Standards and program-level data to review the career-technical education program and recommend improvements.
 - 5.2. Establish, implement and maintain a required advisory committee aligned with the program pathway.
 - 5.3. Utilize the advisory committee's recommendations to assist with program review and improvement.
- Competency 6. RECRUITMENT:** Engage all stakeholders in the development and support of the career-technical program.
- 6.1. Articulate to stakeholders (e.g., parents, students, business leaders and associated school personnel) how career-technical education prepares students for successful employment and ongoing education.
 - 6.2. Actively recruit for and market the career-technical education program to all populations, including non-traditional students (e.g., recruit males for predominantly female occupations and vice versa).
 - 6.3. Collaborate with business and other community organizations to promote positive student learning and work-based learning experiences.

SLO 7 PROFESSIONALISM: Continue to develop as professionals.

- 7.1. Adhere to established ethics, policies and legal codes of professional conduct.
- 7.2. Participate in ongoing education and professional development to stay current and obtain advanced training, industry credentials and licensure requirements.
- 7.3. Communicate professionally, clearly and effectively.
- 7.4. Collaborate with district teachers and administrators on non-teaching responsibilities (e.g., serving on committees, attending staff and individualized education program meetings, supervising students during non-teaching times.)
- 7.5. Participate in related local, state and national professional associations.

Master of Education in Curriculum and Instruction

The Master of Education in Curriculum and Instruction degree is designed for those who wish to become more effective educators. Students in this program develop greater expertise in developing curriculum, designing instruction, assessing, and understanding the needs of learners. Students work with faculty to choose a range of courses focused on their particular interest within curriculum and instruction.

The ME in Curriculum and Instruction is a 30 semester hour program. Students take courses in curriculum and instruction along with education courses selected with a faculty adviser based on the student's interests and goals. The program culminates with a theory and research course and the completion of a master's research seminar, research-based project, or thesis depending on the student's interest. Coursework is completed through a combination of on-campus and online courses.

Admission to the ME in Curriculum and Instruction

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

Requirements for the ME in Curriculum and Instruction

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- A curriculum and instruction core that includes two of CI 5650, 6800, 6810, or 6830, with courses pre-approved by the faculty advisor
- An area of specialization in curriculum and instruction with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A course in theory and research
- A thesis, project, research seminar, or field experience (practicum)

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 6 credits of curriculum and instruction core
 - Two of CI 5650, 6800, 6810, or 6830 are required
- 12 credits of specialization in curriculum and instruction
- 6 credits of a supporting area
- 3 credits of theory and research
- 3 credits of thesis, project or research seminar

Licensure or endorsement may require additional semester hours to fulfill the credential requirements as well as degree requirements. Students should consult their advisor for detailed information.

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Curriculum and Instruction. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Additional hours may be required to fulfill licensure or endorsement requirements.

Code	Title	Hours
Curriculum and Instruction Core		
Select two of the following:		6
CI 5650	Mentoring a Preservice Teacher	
CI 6800	Foundations Of Curriculum & Instruction	
CI 6810	Curriculum Development: K-12	
CI 6830	Curriculum Trends And Issues	
Specialization in Curriculum and Instruction		
Select 12 credits as approved by faculty advisor		12
Supporting Area		
Select 6 credits as approved by advisor		6
Theory and Research		
Select one of the following:		3
CI 6490	Theory And Research In Literacy	
CI 6590	Theory And Research In Mathematics Education	
CI 6690	Theory And Research In Science Education	
CI 6790	Theory And Research In Social Studies	
CI 6890	Theory and Research in Learning and Teaching Content	
Master's Thesis, Project, or Research Seminar		
Select one of the following:		3
CI 6900	Masters Research Seminar In Curriculum And Instruction	
CI 6920	Masters Research Project In Curriculum And Instruction	
CI 6960	Masters Thesis In Curriculum And Instruction	
Total Hours		30

Plan and successfully complete a culminating project or publishable article/fundable grant.

Identify effective assessment strategies and link them to their curriculum and instructional designs.

Determine how social foundations concepts and social forces influence educational decisions.

Identify major concepts in teaching and learning that are applicable to P-12 classrooms.

Utilize best instructional practice in their classrooms.

Create curriculum designs and apply them in their own classrooms.

Use content standards from their teaching field(s) in both their curriculum and instructional designs.

Utilize technology appropriately in their classrooms.

Differentiate instruction to meet individual learner needs.

Master of Education in Early Childhood Education

The Master of Education in Early Childhood Education degree is designed for those who wish to become more effective educators. Students in this program develop expertise in the theory, research and practice of working with young children. The ME in Early Childhood Education has an online option and a licensure option.

The ME in Early Childhood Education is a 30 semester hour program. Students take courses in early childhood along with education courses selected with a faculty adviser based on the student's interest. The program culminates with a theory and research course and the completion of a master's research seminar, research-based project, or thesis depending on the student's interest. Coursework is completed through a combination of on-campus, online, and field-based courses.

For those who do not need to earn a teaching license, the ME in Early Childhood Education may be completed completely online.

For those who hold a bachelor's degree in a major other than education and wish to earn an Ohio teaching license, this program includes coursework that will lead toward initial PreK through grade 5 teacher licensing in the State of Ohio and, at the same time, meet the requirements for a Masters Degree in Education. Coursework is completed through a combination of on-campus, online, and field-based courses. Additional semester hours of course work are required for licensure.

Admission to the ME in Early Childhood Education

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program

Additionally, for prospective students interested in the Licensure and Master's Program (LAMP):

- An overall grade point average (GPA) of at least 2.7 on a 4.0 scale in all undergraduate work is preferred

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation
- Goals and background worksheet

Requirements for the ME in Early Childhood Education

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- An area of specialization in early childhood education with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A course in theory and research
- A thesis, project, research seminar, or field experience (practicum)

For the Ohio licensure, students must complete:

- Additional semester hours to fulfill the credential requirements as well as the degree requirements

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

PLAN OF STUDY

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 18 credits of specialization in early childhood education
- 6 credits of a supporting area

- 3 credits of theory and research
- 3 credits of thesis, project or research seminar

Licensure or endorsement requires additional semester hours to fulfill the credential requirements as well as degree requirements. Students should consult their advisor for detailed information.

OTHER REQUIREMENTS

PRIOR TO BEGINNING CLASSROOM EXPERIENCES:

- Criminal background check

PRIOR TO APPLYING FOR OHIO TEACHING LICENSE

- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com/>) (OAE) Pedagogy Assessment for the licensure area
- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com/>) (OAE) Foundations of Reading Assessment for the licensure area

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Early Childhood Education. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Additional hours may be required to fulfill licensure requirements.

Code	Title	Hours
Specialization in Early Childhood Education		18
<i>For students seeking licensure (on-campus)</i>		
Select the following:		
CIEC 5070	Effective Teaching Practices: Pre-K To 3rd Grade	
CIEC 5460	Science Methods For Early Childhood Education	
CIEC 5550	Teaching Methods For Early Childhood Social Studies	
CIEC 6750	Developmental And Classroom Assessment	
CI 5470	Literacy Assessment and Remediation	
CI 5510	Mathematics For The Young Child	
Other early childhood education courses as approved by faculty advisor		
<i>For students not seeking licensure (online)</i>		
Select the following:		
CIEC 5340	Infant/Toddler Curriculum	
CIEC 6310	Pre-K/Primary Curriculum	
CIEC 6320	Meaning And Development Of Play Behavior	
CIEC 6330	Language And Concept Development	
Other early childhood education courses as approved by advisor		
Supporting Area		3
Select one of the following:		
EDP 5240	Applied Child and Adolescent Development (Recommended for licensure)	
EDP 5310	Issues And Innovations In Learning And Instruction (Recommended for online students)	

EDP 5330	Behavior Management	
Other educational psychology course as approved by faculty advisor		
Select one of the following:		3
SPED 5080	Curriculum Adaptations and Strategies in Early Childhood Education (Recommended for licensure)	
Other research and measurement or theory and social foundations course as approved by faculty advisor		
Theory and Research		3
CIEC 6950	Theory And Research In Early Childhood	
Master's Thesis, Project, or Research Seminar		3
Select one of the following:		3
CIEC 6900	Masters Research Seminar In Early Childhood Education	
CIEC 6920	Masters Research Project In Early Childhood Education	
CIEC 6960	Masters Thesis In Early Childhood Education	
CI 6900	Masters Research Seminar In Curriculum And Instruction	
Total Hours		30

Candidates use their understanding of young children's characteristics and needs, and of multiple interacting influences on children's development and learning, to create environments that are healthy, respectful, supportive, and challenging for all children.

Candidates know about, understand, and value the importance and complex characteristics of children's families and communities. They use this understanding to create respectful, reciprocal relationships that support and empower families, and to involve all families in their children's development and learning. Candidates know about and understand the goals, benefits, and uses of assessment.

Candidates know about and understand the goals, benefits, and uses of assessment. They know about and use systematic observations, documentation, and other effective assessment strategies in a responsible way, in partnership with families and other professionals, to positively influence children's development and learning.

Candidates integrate their understanding of and relationships with children and families; their understanding of developmentally effective approaches to teaching and learning; and their knowledge of academic disciplines to design, implement, and evaluate experiences that promote positive development and learning for all children.

Candidates identify and conduct themselves as members of the early childhood profession. They know and use ethical guidelines and other professional standards related to early childhood practice. They are continuous, collaborative learners who demonstrate knowledgeable, reflective, and critical perspectives on their work, making informed decisions that integrate knowledge from a variety of sources.

Master of Education in Educational Administration and Supervision

The Master of Education in Educational Administration and Supervision is designed to develop instructional leaders who can use data for school improvement to enhance student learning. Students are prepared for

practice by mastering knowledge, practicing skills and developing moral and ethical standards for leadership.

The ME in Educational Administration and Supervision is a 30 semester hour program. Students take courses in educational administration along with education courses selected with a faculty adviser based on the student's interests and goals. The program culminates with the completion of a master's research seminar, research-based project, thesis, or practicum experience depending on the student's interest. Coursework is completed through a combination of on-campus and online courses.

For students who wish to earn a license as building level administrator, this program includes coursework that will lead toward initial administrative license in grades PreK to 6, grades 4 to 8, or grades 5 to 12 for Ohio and, at the same time, meet the requirements for a Master of Education degree.

Admission to the ME in Educational Administration and Supervision

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- One letter of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- One letter of recommendation
- Resume

Requirements for the ME in Educational Administration and Supervision

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- An area of specialization in administration and supervision that includes EDAS 6000, 6010, 6020, 6110, 6150, 6230, and 6440, with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A thesis, project, research seminar, or practicum

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 21 credits of specialization in administration and supervision
 - EDAS 6000, 6010, 6020, 6110, 6150, 6230, and 6440 are required
- 6 credits of a supporting area
- 3 credits of thesis, project, research seminar, or practicum

Licensure or endorsement requires documentation of teaching experience to fulfill the credential requirements as well as degree requirements. Students should consult their advisor for detailed information.

Other Requirements

Prior to Applying for Ohio Administrator License

- Two years of successful teaching experience for your licensure area
- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com/>) (OAE) Content Assessment for the licensure area

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Administration and Supervision. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Administration and Supervision		
Select the following:		21
EDAS 6000	The Individual In Organizations	
EDAS 6010	Leadership in School Curriculum	
EDAS 6020	Instructional Leadership and Supervision	
EDAS 6110	Legal Aspects Of School Administration	

EDAS 6150	The Administrative Experience	
EDAS 6230	Community And Schools	
EDAS 6440	Equity Issues In Educational Finance And Economics	
Supporting Area		
Select one of the following:		3
RESM 5110	Quantitative Methods I	
RESM 5210	Educational Testing And Grading	
RESM 5310	Understanding and Consuming Research	
RESM 5330	Qualitative Research I: Introduction And Basic Methods	
Select 3 credits of educational psychology or theory and social foundations as approved by advisor		3
Master's Thesis, Project, or Research Seminar		
Select one of the following:		3
EDAS 6190	Integrated Experiences: Practicum (Required for Licensure)	
EDAS 6900	Master's Seminar In Educational Administration And Supervision	
EDAS 6920	Master's Project In Educational Administration	
EDAS 6960	Master's Thesis In Educational Administration	
Total Hours		30

1. Develop personal understandings of leadership as it pertains to self
2. Develop a shared vision for learning in a school
3. Create a school culture that promotes student learning and professional growth
4. Demonstrate the ability to engage and collaborate with families and the community
5. Complete a teacher evaluation process
6. Analyze multiple forms of school data in order to lead school improvement efforts
7. Demonstrate knowledge of effective management strategies for school building operations
8. Demonstrate leadership theories and reflective practice in the decision making process
9. Demonstrate practices of integrity and ethical behavior that support the academic success for students

Master of Education in Educational Psychology

The Master of Education in Educational Psychology is designed for students who are interested in the study and application of the psychological dimensions of education including teaching, learning, and human development. Students work with faculty to choose a range of courses focused on their particular interest within educational psychology.

The ME in Educational Psychology is a 30 semester hour program. Students take courses in educational psychology along with education courses selected with a faculty adviser based on the student's interests and goals. The program culminates with the completion of a research-based project or thesis depending on the student's interest. Coursework is completed through a combination of on-campus and online courses.

Admission to the ME in Educational Psychology

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

Requirements for the ME in Educational Psychology

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- An area of specialization in educational psychology that includes EDP 5110, with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A thesis or project

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

PLAN OF STUDY

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 18 credits of specialization in educational psychology
 - EDP 5110 is required
- 9 credits of a supporting area
- 3 credits of thesis, project, or research seminar

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Educational Psychology. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Educational Psychology		
Select the following:		18
EDP 5110	Advanced Educational Psychology	
Select 15 credits as approved by faculty advisor		
Supporting Area		
Select 9 credits as approved by advisor		9
Master's Thesis or Project		
Select one of the following:		3
EDP 6960	Master's Thesis In Educational Psychology	
EDP 6980	Master's Project In Educational Psychology	
Total Hours		30

1. Describe, interpret, compare, and explain the theoretical foundations of human learning, cognition, motivation and development.
2. Summarize and describe specific quantitative and qualitative research methodologies.
3. Identify and evaluate research methodologies appropriate for examining different kinds of research questions.
4. Demonstrate expertise (in-depth knowledge, criticize and analyze, evaluate and question existing literature) within a particular area in educational psychology that is of interest to them.
5. Propose, design and conduct independent research in their chosen area of interest and expertise. 5. That is, students will integrate theoretical knowledge and research expertise to conduct research.
 - i. Use appropriate quantitative statistical methods, or qualitative methods for the investigation.
 - ii. Articulate conclusions drawn from the data produced by the investigation.
 - iii. Defend the conclusions drawn from the data by relating the conclusions to the theoretical perspective used to conduct the investigation.
6. Appreciate the interconnections between the multiple theoretical frameworks within educational psychology
7. Appreciate the importance interdisciplinary considerations (e.g., links between educational psychology, educational sociology, curricular issues) in addressing educational issues

Master of Education in Educational Research and Measurement

The Master of Education in Educational Research and Measurement is designed for students who are interested in the development of expertise

in the design, execution, and interpretation of applied research, both quantitative and qualitative, and a deep understanding of the theoretical foundations of research and measurement. Students work with faculty to choose a range of courses focused on their particular interest within educational research and measurement. Areas of focus include statistics, measurement, or evaluation.

The ME in Educational Research and Measurement is a 30 semester hour program. Students take courses in research and measurement along with education course selected with a faculty adviser based on the student's interests and goals. The program culminates with the completion of a master's portfolio, master's internship, research-based project, or thesis depending on the student's interest. Coursework is completed through a combination of on-campus and online courses.

Admission to the ME in Educational Research and Measurement

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

Requirements for the ME in Educational Research and Measurement

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- A core in research and measurement that includes RESM 5110, 5330, and 5550, with courses approved by faculty advisor
- An area of specialization in research and measurement that includes RESM 5310, 6120, 6220, and 6350, with courses pre-approved by the faculty advisor

- A supporting area with courses pre-approved by the faculty advisor
- A thesis, project, internship, or portfolio

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

PLAN OF STUDY

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 9 credits of research and measurement core
 - RESM 5110, 5330, and 5550 are required
- 12 credits of specialization in research and measurement
 - RESM 5310, 6120, 6220, and 6350 are required
- 6 credits of a supporting area
- 3 credits of thesis, project, internship, or portfolio

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Educational Research and Measurement. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Research and Measurement Core		
Select the following:		9
RESM 5110	Quantitative Methods I	
RESM 5330	Qualitative Research I: Introduction And Basic Methods	
RESM 5550	Introduction to Research and Measurement (RESM) and Graduate Studies	
Specialization in Educational Research and Measurement		
Select the following:		12
RESM 5310	Understanding and Consuming Research	
RESM 6120	Quantitative Methods II	
RESM 6220	Measurement I	
RESM 6350	Methods Of Survey Research	
Supporting Area		
Select 6 credits as approved by advisor		6
Master's Thesis, Project, Internship, or Portfolio		
Select one of the following:		3
RESM 6900	Research and Measurement Master's Portfolio (Portfolio)	

RESM 6940	Internships In Measurement, Evaluation, Research & Statistics
RESM 6960	Master's Thesis In Educational Research
RESM 6980	Master's Project In Educational Research

Total Hours **30**

Students in the RESM master's program will be prepared in the following areas:

1. Research Foundations (Quantitative and Qualitative)
2. Research Design
3. Data Analysis and Interpretation
4. Computer-Supported Data Analysis (Quantitative and Qualitative)
5. Development and Validation of Measures
6. Communication and Collaboration

Master of Education in Educational Technology

The Master of Education in Educational Technology degree is designed to meet the needs of those desiring to become specialists in the field of educational technology in positions at school, district, college and university levels as well as non-academic environments in industry.

The ME in Educational Technology is a 30 semester hour program. Students take courses in educational technology along with education courses selected with a faculty adviser based on the student's interests and goals. The program culminates with the completion of a master's research seminar, research-based project, or thesis depending on the student's interest. Coursework is completed online.

Admission to the ME in Educational Technology

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Three letters of recommendation
- Statement of purpose

- Resume or Curriculum Vitae

REQUIREMENTS FOR THE ME IN EDUCATIONAL TECHNOLOGY

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- An area of specialization in educational technology that includes ETPT 5000, 5100, 5210, 6300, and three of 5550, 6230, 6150, 6510, or 6810, with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A thesis, project, research seminar, or field experience (practicum)

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

PLAN OF STUDY

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full time study. The master's plan of study must include the following within the 30 semester hour minimum:

- 21 credits of specialization
 - ETPT 5000, 5100, 5210, 6300, and three of 5550, 6230, 6150, 6510, or 6810 are required
- 6 credits of a supporting area
- 3 credits of thesis, project or research seminar

Licensure or endorsement may require additional semester hours to fulfill the credential requirements as well as degree requirements.

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Educational Technology. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Educational Technology		
Select the following:		12
ETPT 5000	Introduction To Educational Technology	
ETPT 5100	Instructional Systems Design Principles	
ETPT 5210	Introduction To Multimedia And Web Design	
ETPT 6300	Technology Management In K-16 Education	

Select three of the following:

9

ETPT 5550	Using The Internet In The Classroom
ETPT 6150	Designing Instruction For Diverse Learner Populations
ETPT 6230	Developing Web-Based Instructional Materials
ETPT 6510	Teaching And Learning At A Distance
ETPT 6810	Research And Theory In Educational Technology And Performance Technology

Supporting Area

Select 6 credits as approved by faculty advisor 6

Master's Thesis, Project, or Research Seminar

Select one of the following: 3

ETPT 6900	Master's Seminar In Educational Technology And Performance Technology (Recommended)
ETPT 6930	Master's Research Project In Educational Technology And Performance Technology
ETPT 6940	Practicum In Educational Technology And Performance Technology
ETPT 6960	Master's Thesis In Educational Technology And Performance Technology

Total Hours 30

AECT Standard 1 (Content Knowledge): Candidates demonstrate the knowledge necessary to create, use, assess, and manage theoretical and practical applications of educational technologies and processes.

- Candidates create instructional materials and learning environments using a variety of systems approaches.
- Candidates select and use technological resources and processes to support student learning and to enhance their pedagogy.
- Candidates assess and evaluate the effective integration of appropriate technologies and instructional materials.
- Candidates effectively manage people, processes, physical infrastructures, and financial resources to achieve predetermined goals.
- Candidates demonstrate the contemporary professional ethics of the field as defined and developed by the Association for Educational Communications and Technology

AECT Standard 2 (Content Pedagogy): Candidates develop as reflective practitioners able to demonstrate effective implementation of educational technologies and processes based on contemporary content and pedagogy.

- Candidates apply content pedagogy to create appropriate applications of processes and technologies to improve learning and performance outcomes.
- Candidates implement appropriate educational technologies and processes based on appropriate content pedagogy.
- Candidates demonstrate an inquiry process that assesses the adequacy of learning and evaluates the instruction and implementation of educational technologies and processes grounded in reflective practice.
- Candidates manage appropriate technological processes and resources to provide supportive learning communities, create flexible and diverse learning environments, and develop and demonstrate appropriate content pedagogy.
- Candidates design and select media, technology, and processes that emphasize the diversity of our society as a multicultural community.

AECT Standard 3 (Learning Environments): Candidates facilitate learning by creating, using, evaluating, and managing effective learning environments.

- a. Candidates create instructional design products based on learning principles and research-based best practices.
- b. Candidates make professionally sound decisions in selecting appropriate processes and resources to provide optimal conditions for learning based on principles, theories, and effective practices.
- c. Candidates use multiple assessment strategies to collect data for informing decisions to improve instructional practice, learner outcomes, and the learning environment.
- d. Candidates establish mechanisms for maintaining the technology infrastructure to improve learning and performance.
- e. Candidates foster a learning environment in which ethics guide practice that promotes health, safety, best practice and respect for copyright, Fair Use, and appropriate open access to resources.
- f. Candidates foster a learning community that empowers learners with diverse backgrounds, characteristics, and abilities.

AECT Standard 4 (Professional Knowledge and Skills): Candidates design, develop, implement, and evaluate technology-rich learning environments within a supportive community of practice.

- a. Candidates collaborate with their peers and subject matter experts to analyze learners, develop and design instruction, and evaluate its impact on learners.
- b. Candidates lead their peers in designing and implementing technology-supported learning.
- c. Candidates analyze and interpret data and artifacts and reflect on the effectiveness of the design, development and implementation of technology-supported instruction and learning to enhance their professional growth.
- d. Candidates design and implement assessment and evaluation plans that align with learning goals and instructional activities.
- e. Candidates demonstrate ethical behavior within the applicable cultural context during all aspects of their work and with respect for the diversity of learners in each setting.

AECT Standard 5 (Research): Candidates explore, evaluate, synthesize, and apply methods of inquiry to enhance learning and improve performance.

- a. Candidates demonstrate foundational knowledge of the contribution of research to the past and current theory of educational communications and technology.
- b. Candidates apply research methodologies to solve problems and enhance practice.
- c. Candidates apply formal inquiry strategies in assessing and evaluating processes and resources for learning and performance.
- d. Candidates conduct research and practice using accepted professional and institutional guidelines and procedures.

Master of Education in Educational Theory and Social Foundations

The Master of Education in Educational Theory and Social Foundations is designed for students who are interested in exploring issues of democracy, peace, and social justice in institutions throughout society, including, but not limited to, PreK-12 schools and institutions of higher education. Coursework is based in praxis, i.e. the merger of theory with practice. Students work with faculty to apply ideas from the social sciences and humanities to affect positive change in local and global

contexts. Students will have opportunities to work with the Center for Nonviolence and Democratic Education.

The ME in Educational Theory and Social Foundations is a 30 semester hour program. Students take courses in theory and social foundations along with education courses selected with a faculty adviser based on the student's interests and goals. Students may concurrently earn a graduate certificate in areas such as Foundations of Peace Education or Culture and Change in Institutions. The program culminates with the completion of a master's research seminar, research-based project, or thesis depending on the student's interest. Coursework is completed through a combination of on-campus and online courses.

Admission to the ME in Educational Theory and Social Foundations

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

Requirements for the ME in Educational Theory and Social Foundations

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- An area of specialization in educational theory and social foundations that includes TSOC 5000, with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A thesis, project or research seminar

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses

(5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

PLAN OF STUDY

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 18 credits of specialization in theory and social foundations
 - TSOC 5000 is required
- 9 credits of a supporting area
- 3 credits of thesis, project, or research seminar

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Educational Theory and Social Foundations. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Educational Theory and Social Foundations		
Select the following:		18
TSOC 5000	Introduction to Educational Theory and Social Foundations	
Select 15 credits as approved by faculty advisor		
Supporting Area		
Select 9 credits as approved by advisor		9
Master's Thesis, Project, or Research Seminar		
Select one of the following:		3
TSOC 6900	Master's Seminar in Educational Theory and Social Foundations	
TSOC 6960	Master's Thesis In Educational Theory And Social Foundations	
TSOC 6980	Master's Project In Educational Theory And Social Foundations	
Total Hours		30

1. Comprehend the disciplinary content of educational theory and social foundations through citation of major scholarship in the field.
2. Demonstrate knowledge of principles and theories of educational sociology, history of education, philosophy of education, and general foundations of education.
3. Demonstrate the knowledge and skill necessary for theory application by doing the following:
 - a) Select a specific phenomenon and propose an investigation of the phenomenon, in writing, from the theoretical perspective most relevant to the phenomenon
 - b) Conduct the investigation

- c) Articulate conclusions drawn from the data produced by the investigation
- d) Defend the conclusions drawn from the data by relating the conclusions to the theoretical perspective used to conduct the investigation drawn from the data by relating the conclusions to the theoretical perspective used to conduct the investigation
- e) Argue for the implications and applications of the conclusions relevant to practical problems or needs in educational settings

Master of Education in Higher Education

The Master of Education in Higher Education degree prepares students to become leaders with a deep understanding of higher education administration issues and practices in two- and four-year colleges and universities. This degree is designed for those interested in pursuing entry-level administrative and professional staff positions in higher education, as well as individuals already working in higher education interested in pursuing mid-level positions.

The ME in Higher Education is a 30 semester hour program. Students take core courses in higher education along with courses selected with a faculty advisor based on the student's interests and goals. The program culminates with the completion of a master's research seminar, master's practicum, or thesis in higher education. Coursework is completed online.

Admission to the ME in Higher Education

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals and pursuing a career in the field of higher education
- Two letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, or others who are knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Two letters of recommendation
- Resume or curriculum vitae

Requirements for the ME in Higher Education

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- A higher education specialization that includes HED 5900, HED 6010, HED 6510, HED 6530, HED 6570, HED 6640, HED 6770, HED 6700, and HED 6730
- A thesis, critical issues seminar, or master's practicum in higher education

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the master's degree is required after 12-credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 27 credits of specialization in higher education
 - HED 5900, 6010, 6510, 6530, 6570, 6640, 6770, 6700, and 6730 are required
- 3 credits of thesis, critical issues seminar, or master's practicum in higher education

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Higher Education. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Higher Education Specialization		
Select the following:		27
HED 5900	Diversity Leadership in Higher Education	
HED 6010	History Of Higher Education	
HED 6510	The American College Student	
HED 6530	Theories Of Student Development	
HED 6570	Research in Higher Education	
HED 6640	Governance And Administration In Higher Education	
HED 6770	Evaluation And Outcomes Assessment In Higher Education	
HED 6700	Finance Of Higher Education	
HED 6730	Legal Aspects Of Higher Education	
Master's Thesis, Critical Issues Seminar or Master's Practicum		
Select one of the following as approved by advisor:		3

HED 6850	Critical Issues In Higher Education (recommended for working professionals)
HED 6940	Master's Practicum In Higher Education (recommended for pre-professional students)
HED 6960	Master's Thesis In Higher Education

Total Hours **30**

1. Demonstrate ability to trace and analyze historical and philosophical development trends in higher education and their impact on current practice in higher education.
2. Demonstrate ability to identify and apply governance, leadership, organizational, and administrative practices that assist institutions in accomplishing their missions.
3. Demonstrate ability to assess student/program outcomes to inform current practice in higher education.
4. Demonstrate ability to integrate ethics and considerations of student development in decision making, practice, or course projects.
5. Demonstrate ability to gather higher education data, evaluate it, and use it to understand trends and to inform current practice in higher education.
6. Demonstrate ability to create diverse environments that foster diverse student learning and development in higher education.
7. Demonstrate knowledge of issues of race/ethnicity and social justice to guide professional practice.
8. Demonstrate knowledge of higher education law to guide professional practice.
9. Demonstrate knowledge of higher education finance to guide professional practice.
10. Demonstrate knowledge of critical issues facing higher education administration (working professionals)
11. Demonstrate participation in and reflection on professional development activities (pre-professional students).

Master of Education in Middle Childhood Education

The Master of Education in Middle Childhood Education is designed for those who hold a bachelor's degree and wish to earn an initial Ohio teaching license at the graduate level in conjunction with a master's degree. Students in this program earn a master's degree and an initial Ohio educator license for grades 4 through 9 in two content areas. Options include: reading/language arts, mathematics, science and social studies.

The ME in Middle Childhood Education is a 30 semester hour program with an addition semester hours of coursework required for licensure. Students take courses in curriculum and instruction along with education courses selected with a faculty adviser based on the student's intended licensure area. The program culminates with a theory and research course and the completion of a master's research seminar, research-based project, or thesis depending on the student's interest. Coursework is completed through a combination of on-campus, online, and field-based courses.

Admission to the ME in Middle Childhood Education

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- An overall grade point average (GPA) of at least 2.7 on a 4.0 scale in all undergraduate work is preferred
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program
- A content area grade point average (GPA) of at least 2.7 on a 4.0 scale for coursework in the selected licensure area is preferred
- Undergraduate content area coursework for the selected licensure area

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Resume
- Three letters of recommendation
- Course review worksheet

Requirements for the ME in Middle Childhood Education

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- An area of specialization in curriculum and instruction with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A course in theory and research
- A thesis, project, research seminar, or field experience (practicum)

For the Ohio licensure, students must complete:

- Additional semester hours to fulfill the credential requirements as well as the degree requirements

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

PLAN OF STUDY

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 18 credits of specialization in curriculum and instruction
- 6 credits of a supporting area
- 3 credits of theory and research
- 3 credits of thesis, project or research seminar

Licensure or endorsement requires additional semester hours to fulfill the credential requirements as well as degree requirements. Students should consult their advisor for detailed information.

OTHER REQUIREMENTS

PRIOR TO BEGINNING CLASSROOM EXPERIENCES

- Criminal background check
- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com/>) (OAE) Content Assessment(s) for the licensure area
- All undergraduate content area courses

PRIOR TO APPLYING FOR OHIO TEACHING LICENSE

- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com/>) (OAE) Pedagogy Assessment for the licensure area
- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com/>) (OAE) Foundations of Reading Assessment for the licensure area

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Middle Childhood Education. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Additional hours may be required to fulfill licensure requirements.

Master of Education in Special Education

The Master of Education in Special Education degree allow students to choose a focus in special education in the areas of early intervention, preschool special needs, high incidence conditions (e.g. learning disability, mental retardation, emotional disturbance), severe disabilities (e.g. physical, cognitive and social-emotional), transition, and behavior disorders. The ME in Special Education has an online option and a licensure option.

The ME in Special Education is a 30 semester hour program. Students take courses in special education along with education courses selected with a faculty adviser based on the student's interest. The program

culminates with a master's research seminar, research-based project, or thesis depending on the student's interest. Coursework is completed through a combination of on-campus, online, and field-based courses.

For those who do not need to earn a teaching license, the ME in Special Education may be completed completely online.

For those who hold a bachelor's degree in a major other than education and wish to earn an Ohio teaching license, this program includes coursework that will lead toward an initial teacher license as an intervention specialist for grades PreK to 12 in mild/moderate or moderate/intensive in Ohio and, at the same time, meet the requirements for a Masters Degree in Education. Coursework is completed through a combination of on-campus, online, and field-based courses. Additional semester hours of coursework are required for licensure.

Admission to the ME in Special Education

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program

Additionally, for prospective students interested in the Licensure and Master's Program (LAMP):

- An overall grade point average (GPA) of at least 2.7 on a 4.0 scale in all undergraduate work is preferred

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation
- Goals and background worksheet

Requirements for the ME in Special Education

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- An area of specialization in special education with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A thesis, project, or master's seminar

For the Ohio licensure, students must complete:

- Additional semester hours to fulfill the credential requirements as well as the degree requirements

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

PSNE: Preschool Special Needs Endorsement

TTW: Transition to Work Endorsement

1. Special education professionals understand how exceptionalities may interact with development and learning and use this knowledge to provide meaningful and challenging learning experiences for individuals with exceptionalities.

2. Special education professionals create safe, inclusive, culturally responsive learning environments so that individuals with exceptionalities become active and effective learners and develop emotional well-being, positive social interactions, and self-determination.

3. Special education professionals use knowledge of general and specialized curricula to individualize learning for individuals with exceptionalities.

4. Special education professionals use multiple methods of assessment and data-sources in making educational decisions.

5. Special education professionals select, adapt, and use a repertoire of evidence-based instructional strategies to advance learning of individuals with exceptionalities leading to a high quality of life.

6. Special education professionals use foundational knowledge of the field and the their professional Ethical Principles and Practice Standards to inform special education practice, to engage in lifelong learning, and to advance the profession.

7. Special education professionals collaborate with families, other educators, related service providers, individuals with exceptionalities, and personnel from community agencies in culturally responsive ways to address the needs of individuals with exceptionalities across a range of learning experiences.

Master of Music in Music Education

The Master of Music in Music Education degree is designed for those who hold a bachelor's degree and wish to earn an Ohio teaching license in conjunction with a master's degree. Students in this program earn a master's degree and an initial Ohio educator license for grades PreK through 12 in music.

The MM in Music Education is a 36 semester hour program with additional semester hours of coursework required for licensure. Students take courses in music education along with education and music courses selected with a faculty adviser based on the student's intended licensure area. The program culminates with a theory and research course and the completion of a research-based project or thesis depending on the student's interest. Coursework is completed through a combination of on-campus, online, and field-based courses.

Admission to the MM in Music Education

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- An overall grade point average (GPA) of at least 2.7 on a 4.0 scale in all undergraduate work
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program
- A content area grade point average (GPA) of at least 2.7 on a 4.0 scale for coursework in the selected licensure area is preferred
- Undergraduate content area coursework for the selected licensure area
- Successfully complete a musical audition with an interview

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation
- Course review worksheet

Requirements for the MM in Music Education

For the Master of Music degree, students must complete the following program requirements:

- A minimum of 36 semester hours of approved graduate course work
- An area of specialization in music education that includes MED 5340, 5360, and 5370, with courses pre-approved by the faculty advisor
- An area of specialization in music that includes ensemble, with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A course in theory and research
- A thesis or project

For the Ohio licensure, students must complete:

- Additional semester hours to fulfill the credential requirements as well as the degree requirements

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

PLAN OF STUDY

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 36-semester hour minimum:

- 9 credits of specialization in music education
 - MED 5340, 5360, and 5370 are required
- 12 credits of specialization in music
- 9 credits of a supporting area
- 3 credits of theory and research
- 3 credits of thesis or project

Licensure or endorsement requires additional semester hours to fulfill the credential requirements as well as degree requirements. Students should consult their advisor for detailed information.

OTHER REQUIREMENTS

PRIOR TO BEGINNING CLASSROOM EXPERIENCES

Total Hours		36

1. Develop an understanding of theories of learning and musical learning, their roots, assumptions, and implications for music education practice.
2. Improve and expand upon their knowledge of teaching methods and materials, including the influences of technology and multiculturalism in the learning process.
3. Develop an understanding of current trends and methodologies in education and music education.
4. Demonstrate the advanced musical and pedagogical knowledge and research/writing skills necessary to enhance their teaching abilities in a PK-12 Vocal and/or Instrumental teaching position.

Master of Science and Education

The Master of Science and Education is a combined master's degree program offered by the Judith Herb College of Education in collaboration with the College of Natural Sciences and Mathematics. This degree is designed for students who wish to enhance their knowledge in a science field and in education. As a general rule, students will have an advisor in the Judith Herb College of Education and in the College of Natural Science and Mathematics who will jointly plan and direct the program. Students who wish to complete their culminating experience in education will work with their Judith Herb College of Education advisor. Students who wish to complete their culminating experience in their sciences field will work with their College of Natural Science and Mathematics advisor.

Areas of concentration include: biology, chemistry, geology, and physics. This program does not lead to a teaching license. Students interested in licensure should apply to one of the Licensure and Master's Programs (LAMP).

The MSE is a 36 semester hour program. Students take courses in curriculum and instruction along with courses selected with a faculty adviser based on the student's area of concentration. The program

culminates with a theory and research course and the completion of a master's research seminar, research-based project, or thesis depending on the student's interest. Coursework is completed through a combination of on-campus, online, and field-based courses.

Admission to the Master of Science and Education

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program
- A content area grade point average (GPA) of at least 2.7 on a 4.0 scale for coursework in the selected concentration is preferred
- Undergraduate content area coursework in preparation for graduate work in the selected concentration

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

Requirements for the MSE

For the Master of Science and Education degree, students must complete the following program requirements:

- A minimum of 36 semester hours of approved graduate course work
- An area of specialization in curriculum and instruction of a minimum of 12 semester hours with courses pre-approved by the faculty advisor
- An area of specialization in the selected concentration of a minimum of 15 semester hours with courses pre-approved by the faculty advisor
- A course to complete the specialization in curriculum and instruction or the selected concentration
- A course in theory and research

- A thesis, project, or research seminar

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

PLAN OF STUDY

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 36-semester hour minimum:

- 12 credits of specialization in curriculum and instruction
- 15 credits of specialization in the selected concentration
- 3 credits in curriculum and instruction or the selected concentration
- 3 credits of theory and research
- 3 credits of thesis, project, or research seminar

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Science and Education. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Curriculum and Instruction		
Select 12 credits in curriculum and instruction as approved by faculty advisor		12
Specialization in Area of Concentration		
Select 15 credits in the concentration as approved by faculty advisor		15
Education or Concentration Elective		
Select 3 credits as approved by faculty advisor		3
Theory and Research		
Select one of the following:		3
CI 6490	Theory And Research In Literacy	
CI 6590	Theory And Research In Mathematics Education	
CI 6690	Theory And Research In Science Education (Recommended)	
CI 6790	Theory And Research In Social Studies	
CI 6890	Theory and Research in Learning and Teaching Content	
Master's Thesis, Project, or Research Seminar		
Select one of the following:		3
CI 6900	Masters Research Seminar In Curriculum And Instruction	
CI 6920	Masters Research Project In Curriculum And Instruction	

CI 6960 Masters Thesis In Curriculum And Instruction

Total Hours**36**

Demonstrate knowledge of core ideas in curriculum and instruction including current ideas and issues in a thoughtful and substantive manner.

Demonstrate knowledge of core ideas in a subject matter discipline including concepts and processes in a thoughtful and substantive manner.

Design a plan for studying learning that integrates core ideas and develops pedagogical content knowledge.

Reflect on his or her own thinking, learning, and pedagogical content knowledge.

Communicate professionally in formal writing using language style and conventions of academic English and APA guidelines.

Participate in the roles of author, reviewer, and editor in the professional publication process.

Write a focused manuscript that illustrates their knowledge of content specific education.

Education Specialist in Administration and Supervision

The Educational Specialist degree in Administration and Supervision is designed for educators who hold a master's degree and wish to become advanced practitioners and school leaders. This EdS meets the needs of individuals whose career goals include licensure for advanced administrative positions in public and private schools (e.g., district administrator, building administrator).

The EdS in Administration and Supervision is a 36 semester hour program. Students take courses in their area of concentration at the specialist level (beyond the master's). The degree culminates in a practicum experience working in a school setting. Coursework that will lead toward licensure may be included as part of the degree requirements. Coursework is completed through a combination of on-campus and online courses.

Admission to the EdS in Administration and Supervision

In addition to admission requirements of the College of Graduate Studies, admission to the education specialist program requires the following:

- A master's degree from an accredited institution
- A minimum 3.25 cumulative GPA on a 4.0 scale in all graduate work
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals and demonstrating your writing ability
- Three letters of recommendation regarding your ability and character to succeed in this degree program from academic professionals

The education specialist program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

Requirements for the EdS in Administration and Supervision

For the Education Specialist degree, students must complete the following program requirements:

- A minimum of 36 semester hours of approved graduate coursework beyond the master's level (7000 or 8000 level)
- Completion of a core course in administration and supervision (EDAS 8640)
- An education specialist practicum experience (EDAS 7920), which may include field experiences, internships, or other professional projects

In addition, no more than six semester hours of credit from any combination of workshops (7950), problems or special topics courses (7980), and independent studies (7990) may be included in the degree program.

All coursework and requirements of the specialist degree must be taken within a six-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the specialist degree is required after 12 credit hours, generally at the end of the first semester of full time study. The specialist plan of study must include the following within the 36 semester hour minimum:

- 3 credits of required core
- 30 credits of specialization
- 3 credits of education specialist practicum

Licensure or endorsement may require additional semester hours to fulfill the credential requirements as well as degree requirements.

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Education Specialist in Administration and Supervision. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Additional hours are required to fulfill licensure requirements.

Code	Title	Hours
Administration and Supervision Core		3
EDAS 8640	Leading Systems Change	
Specialization in Administration and Supervision		

Select 30 credits as approved by faculty advisor	30
Education Specialist Practicum	3
EDAS 7920 Specialist Project In Educational Administration	
Total Hours	36

1. Demonstrate critical thinking, applying, analyzing, synthesizing, and/or evaluating information related to school and/or district leadership
2. Conduct and present original research that includes a review of literature, research statement, methods, findings, and implications
3. Integrate leadership theory in order to analyze problems in schools and propose solutions
4. Use excellent oral and written skills for communication
1. Analyze organizational change by integrating theories of leadership and change models
2. Demonstrate critical thinking, applying, analyzing, synthesizing, and/or evaluating information related to school and/or district leadership.
3. Demonstrate leadership theories and practices of school leadership.
4. Use excellent oral and written skills for communication

Education Specialist in Curriculum and Instruction

The Education Specialist in Curriculum and Instruction degree is designed to meet the needs of individuals involved with the curriculum, teaching, and supervision aspects of discipline-centered areas of study. The EdS is a post-master's graduate program that provides students an area of educational specialization with emphasis on practice. The degree culminates in a practicum experience working in a school setting. Education Specialists are prepared to become teacher leaders, curriculum specialists, assessment specialists, or mentor teachers in their districts.

Areas of concentration include: curriculum and instruction, early childhood, and special education.

The EdS in Curriculum and Instruction is a 30 semester hour program. Students take courses in their area of concentration at the specialist level (beyond the master's). The degree culminates in a practicum experience working in a school setting. Coursework is completed through a combination of on-campus and online courses.

Admission to the EdS in Curriculum and Instruction

In addition to admission requirements of the College of Graduate Studies, admission to the education specialist program requires the following:

- A master's degree from an accredited institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals and demonstrating your writing ability
- Three letters of recommendation regarding your ability and character to succeed in this degree program from academic professionals

The education specialist program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

Requirements for the EdS in Curriculum and Instruction

By Concentrations:

- Curriculum and Instruction (p. 467)
- Early Childhood (p. 468)
- Special Education (p. 468)

Curriculum and Instruction

For the Education Specialist degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work beyond the master's level (7000 or 8000 level)
- A curriculum and instruction core that includes two of CI 7650, 8800, 8810, or 8830 or other approved curriculum and instruction course, with courses pre-approved by the faculty advisor
- An area of specialization in curriculum and instruction
- A supporting area with courses pre-approved by the faculty advisor
- An education specialist practicum experience

In addition, no more than six semester hours of credit from any combination of workshops (7950), problems or special topics courses (7980), and independent studies (7990) may be included in the degree program.

All coursework and requirements of the specialist degree must be taken within a six-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the specialist degree is required after 12 credit hours, generally at the end of the first semester of full time study. The specialist plan of study must include the following within the 30 semester hour minimum:

- 6 credits of curriculum and instruction core
 - Two of CI 7650, 8800, 8810, or 8830 or other approved curriculum and instruction course
- 15 credits of specialization in curriculum and instruction
- 6 credits of a supporting area

- 3 credits of education specialist practicum

Licensure or endorsement may require additional semester hours to fulfill the credential requirements as well as degree requirements.

Early Childhood

For the Education Specialist in Curriculum and Instruction degree with a concentration in early childhood education, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work beyond the master's level (7000 or 8000 level)
- A curriculum and instruction core that includes two of CI 7650, 8800, 8810, or 8830 or other approved curriculum and instruction course, with courses pre-approved by the faculty advisor
- An area of specialization in early childhood education
- A supporting area with courses pre-approved by the faculty advisor
- An education specialist practicum experience

In addition, no more than six semester hours of credit from any combination of workshops (7950), problems or special topics courses (7980), and independent studies (7990) may be included in the degree program.

All coursework and requirements of the specialist degree must be taken within a six-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the specialist degree is required after 12 credit hours, generally at the end of the first semester of full time study. The specialist plan of study must include the following within the 30 semester hour minimum:

- 6 credits of curriculum and instruction core
 - Two of CI 7650, 8800, 8810, or 8830 or other approved curriculum and instruction course
- 15 credits of specialization in early childhood education
- 6 credits of a supporting area
- 3 credits of education specialist practicum

Licensure or endorsement may require additional semester hours to fulfill the credential requirements as well as degree requirements.

Special Education

For the Education Specialist degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work beyond the master's level (7000 or 8000 level)

- A curriculum and instruction core that includes two of CI 7650, 8800, 8810, or 8830 or other approved curriculum and instruction course, with courses pre-approved by the faculty advisor

- An area of specialization in special education
- A supporting area with courses pre-approved by the faculty advisor
- An education specialist practicum experience

In addition, no more than six semester hours of credit from any combination of workshops (7950), problems or special topics courses (7980), and independent studies (7990) may be included in the degree program.

All coursework and requirements of the specialist degree must be taken within a six-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the specialist degree is required after 12 credit hours, generally at the end of the first semester of full time study. The specialist plan of study must include the following within the 30 semester hour minimum:

- 6 credits of curriculum and instruction core
 - Two of CI 7650, 8800, 8810, or 8830 or other approved curriculum and instruction course
- 15 credits of specialization in special education
- 6 credits of a supporting area
- 3 credits of education specialist practicum

Licensure or endorsement may require additional semester hours to fulfill the credential requirements as well as degree requirements.

By Concentrations

- Curriculum and Instruction (p. 468)
- Early Childhood (p. 469)
- Special Education (p. 469)

- Demonstrate knowledge of core ideas in curriculum and instruction including current ideas and issues in a thoughtful and substantive manner.

- Develop and articulate a theoretically grounded and supported argument regarding the study of teaching in a content area.

- Design a plan for studying learning that integrates core ideas and develops pedagogical content knowledge.

- Participate knowledgeably, reflectively, and professionally in discussions regarding core ideas for the study of teaching.

- Critique and provide productive feedback for peers.

- Communicate professionally in formal writing using language style and conventions of academic English and APA guidelines.

- Present an evidence-based account of students' learning based on assessment findings and evaluations.

Doctor of Education in Educational Administration and Supervision

Students in the Doctor of Education in Educational Administration and Supervision study to become effective leaders in Pre-K to grade 12 schools in the U.S. They use research-proven methods to guide their thinking about schools to support innovative and responsive models of education. The program allows students to build an area of research specialization that caters to their professional goals and/or personal interests. Students could develop a program that prepares to serve a PreK-12 district, become faculty in educational leadership, or assume a leadership role in a public or private organization.

The EdD in Educational Administration and Supervision is a 60 semester hour program. Students take courses in educational leadership along with education courses selected with faculty based on the student's interests and goals. The program culminates with the completion of original research addressing a problem in educational leadership based on the student's area of concentration. Coursework is completed through a combination of on-campus and online courses.

Admission to the EdD in Educational Administration and Supervision

In addition to admission requirements of the College of Graduate Studies, admission to the doctoral program requires the following:

- A master's degree from an accredited college or university
- A minimum GPA of 3.5 on a 4.0 scale for all previous graduate academic work

- Previous academic work necessary to successfully complete a doctoral program in the area of study
- A statement of purpose that describes why you wish to pursue this doctoral program and includes information on previous study, educational experience, professional accomplishments, immediate and future professional goals, a proposed time schedule for completing the degree, and any other information that you believe is relevant for admission into this doctoral degree program
- Evidence of academic writing ability such as a master's thesis, proctored writing sample, a written research report, one or more reprints of publications, a paper presented to a professional society, or similar evidence
- Current resume reflecting educational and work history, professional and volunteer experience

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- A sample of academic writing (e.g., report, thesis, project, or academic paper)
- Resume or curriculum vitae

A professional interview may be required after the completion of the written application.

Requirements for the DE in Educational Administration and Supervision

For the Doctor of Education in Educational Administration and Supervision degree, students must complete the following program requirements:

- A minimum of 60 semester hours of approved doctoral level (7000/8000 level) course work
- A minimum of 18 semester hours of educational leadership core including EDAS 8110, 8220, 8420, 8440, 8620, and 8930
- A minimum of 12 semester hours of research tools
- A minimum of 12 semester hours of research specialization for educational leadership with courses pre-approved by the faculty advisor
- A written comprehensive (major) examination
- A minimum of 18 semester hours of dissertation research
- A oral presentation and defense of a dissertation research proposal
- An oral presentation and defense of the completed dissertation research in a public forum

- A written document of the completed dissertation research in approved style and format

All coursework and requirements of the doctoral degree must be taken within a seven-year period immediately preceding the date the degree is awarded.

Additional information and guidelines for the doctoral program are provided in the JHCOE **Doctoral Student Handbook**.

Plan of Study

A plan of study identifying the courses for the doctoral degree is required before 18 credit hours are completed, generally by the end of the first year of full time study. The doctoral plan of study must include the following within the 60 semester hour minimum:

- 18 semester hours of educational leadership core
 - EDAS 8110, 8220, 8420, 8440, 8620, and 8930 are required
- 12 semester hours of research tools courses
- 12 semester hours of research specialization for educational leadership
- 18 semester hours of dissertation research
- Comprehensive written examinations

Other Program Requirements

Coursework Phase

- A doctoral program committee is required before the completion of 18 credit hours. The doctoral program committee has a minimum of three members who are selected from the membership of the graduate faculty of the University. The doctoral program committee is responsible for assisting the student in the development of a plan of study and assuring competence by overseeing the comprehensive written examination.
- A plan of study is required before the completion of 18 credit hours. The plan of study must be approved by the doctoral program committee, department chairperson, and associate dean of the college, and submitted to the College of Graduate Studies. Revisions to the plan of study must also be approved and updates submitted to the College of Graduate Studies, usually within the semester a revision occurs.

Dissertation Research Phase

- A doctoral dissertation committee is required immediately after the completion of the required coursework, comprehensive written examination, and comprehensive oral examination. The dissertation committee has a minimum of four graduate faculty members including one who is not in the discipline major. The dissertation committee is responsible for guiding dissertation research and approving the dissertation research proposal and the completed dissertation research, both the written dissertation and oral dissertation defense. Student must work closely with the committee throughout the dissertation process.

- All research must be approved by the Institutional Research Board before beginning any phase of the research study. Student must complete IRB training as defined by the University's Human Research Protection Program.
- A public defense of the dissertation is required.
- The final written dissertation must be approved by the dissertation committee and formatted according the guidelines of the college and the College of Graduate Study. Electronic submission of the dissertation to *OhioLINK* is mandatory.

1. lead an organization;
2. understand, interpret, and implement policy to achieve justice for all stakeholders;
3. understand and implement finance in public education or other public institutions;
4. discuss and apply legal principles governing public education; and
5. interpret and engage in current research impacting the field.

PhD in Curriculum and Instruction

Students in the PhD in Curriculum and Instruction study the interactions between learners, teachers, and subject matter. Designed for students interested in research about and leadership in teaching and learning environments, this program develops educators as researchers and advanced professionals in education.

The PhD in Curriculum and Instruction is a 60 semester hour program. Students take core educational courses along with courses selected with faculty based on the student's interests and goals. The program culminates with the completion of original research addressing a problem in curriculum and instruction based on the student's area of concentration. Coursework can be completed on campus or through a combination of on-campus and online courses.

There are six areas of concentration.

Curriculum and Instruction: For students interested in focused study of teaching and learning environments in a particular area such as English language arts, reading, mathematics, science, or social studies or in broader issues of curriculum and instruction.

Educational Technology: For students interested in focused study of designing online or technology enhanced learning environments or in supporting others in using technology for learning.

Early Childhood Education: For students interested in focused study of teaching and learning environments specifically designed for children ages birth to grade 3.

Gifted and Talented Education: For students interested in focused study of the nature and needs of gifted, talented and creative individuals throughout the lifespan. Special emphasis is placed on balancing the cognitive and affective domains of knowledge and knowing in relation to the education and development of learners.

Secondary Education: For students interested in focused study of teaching and learning environments in a particular area such as English language arts, reading, mathematics, science, or social studies or in broader issues of curriculum and instruction at the secondary or entry college level.

Special Education: For students interested in focused study of the nature and needs of learners with special needs including early intervention, preschool special needs, high incidence conditions (e.g. learning disability, mental retardation, emotional disturbance), severe disabilities (e.g. physical, cognitive and social-emotional), transition, and behavior disorders. The area of specialization in special education can also be completed online as well as on campus.

Admission to the PhD in Curriculum and Instruction

In addition to admission requirements of the College of Graduate Studies, admission to the doctoral program requires the following:

- A master's degree from an accredited college or university
- GRE scores: GRE is NOT required for applicants with a master's degree from an accredited U.S. college or university AND a master's

GPA of 3.5 or higher; GRE IS required for applicants without a master's degree from an accredited U.S. college or university OR with a master's GPA of less than 3.5 (GRE scores with 144 in both the verbal and quantitative sections and a 3.0 writing score or above preferred)

- Previous academic work necessary to successfully complete a doctoral program in the area of study
- Evidence of research and writing ability such as a master's thesis, proctored writing sample, a written research report, one or more reprints of publications, a paper presented to a professional society, or similar evidence of competence
- A statement of purpose that describes why you wish to pursue this doctoral program and includes information on previous study, educational experience, professional accomplishments, immediate and future professional goals, a proposed time schedule for completing the degree, and any other information that you believe is relevant for admission into this doctoral degree program
- Three letters of recommendation regarding your potential for doing doctoral level work. Letters should be recommendations from professionals who are knowledgeable about your ability to engage in graduate work in this doctoral degree program

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- GRE scores if required
- A sample of academic writing (e.g. report, thesis, project, or academic paper)
- Statement of purpose
- Three letters of recommendation

Requirements for the PhD in Curriculum and Instruction

By Concentrations:

- Curriculum and Instruction (p. 472)
- Early Childhood (p. 473)
- Educational Technology (p. 474)
- Gifted and Talented (p. 474)
- Secondary Education (p. 475)
- Special Education (p. 476)

Curriculum and Instruction

For the Doctor of Philosophy in Curriculum and Instruction degree, students must complete the following program requirements:

- A minimum of 60 semester hours of approved doctoral level (7000/8000 level) course work
- Professional Seminar I and II (CI 8700, 8710) with a C or better in first 3 semesters or 18 credit hours (whichever comes later, not counting summer) before continuing with other courses

- A minimum of 12 semester hours of research tools including courses in quantitative research, qualitative research, and independent research
- An area of specialization in curriculum and instruction with courses pre-approved by the faculty advisor and aligned with the area of concentration for the degree
- A written comprehensive (major) examination
- An oral comprehensive examination after passing the written examination
- A minimum of 9 semester hours of dissertation research
- An oral presentation and defense of a dissertation research proposal
- An oral presentation and defense of the completed dissertation research in a public forum
- A written document of the completed dissertation research in approved style and format

All coursework and requirements of the doctoral degree must be taken within a seven-year period immediately preceding the date the degree is awarded.

Additional information and guidelines for the doctoral program are provided in the JHCOE **Doctoral Student Handbook**.

PLAN OF STUDY

A plan of study identifying the courses for the doctoral degree is required before 18 credit hours are completed, generally by the end of the first year of full time study. The doctoral plan of study must include the following within the 60 semester hour minimum:

- 6 credits of professional seminar I and II courses
- 12 credits of research tools courses
- 33 credits of specialization in the area of concentration
- 9 credits of dissertation research
- Comprehensive written and oral examinations

OTHER PROGRAM REQUIREMENTS

COURSEWORK PHASE

- A doctoral program committee is required before the completion of 18 credit hours. The doctoral program committee has a minimum of three members who are selected from the membership of the graduate faculty of the University. The doctoral program committee is responsible for assisting the student in the development of a plan of study and assuring competence by overseeing the comprehensive written examination and the comprehensive oral examination.
- A plan of study is required before the completion of 18 credit hours. The plan of study must be approved by the doctoral program committee, department chairperson, and associate dean of the college, and submitted to the College of Graduate Studies. Revisions to the plan of study must also be approved and updates submitted

to the College of Graduate Studies, usually within the semester a revision occurs.

DISSERTATION RESEARCH PHASE

- A doctoral dissertation committee is required immediately after the completion of the required coursework, comprehensive written examination, and comprehensive oral examination. The dissertation committee has a minimum of four graduate faculty members including one who is not in the discipline major. The dissertation committee is responsible for guiding dissertation research and approving the dissertation research proposal and the completed dissertation research, both the written dissertation and oral dissertation defense. Student must work closely with the committee throughout the dissertation process.
- All research must be approved by the Institutional Research Board before beginning any phase of the research study. Student must complete IRB training as defined by the University's Human Research Protection Program.
- A public defense of the dissertation is required.
- The final written dissertation must be approved by the dissertation committee and formatted according to the guidelines of the college and the College of Graduate Study. Electronic submission of the dissertation to *OhioLINK* is mandatory.

Early Childhood

For the Doctor of Philosophy in Curriculum and Instruction degree, students must complete the following program requirements:

- A minimum of 60 semester hours of approved doctoral level (7000/8000 level) course work
- Professional Seminar I and II (CI 8700, 8710) with a C or better in first 3 semesters or 18 credit hours (whichever comes later, not counting summer) before continuing with other courses
- A minimum of 12 semester hours of research tools including courses in quantitative research, qualitative research, and independent research
- An area of specialization in curriculum and instruction with courses pre-approved by the faculty advisor and aligned with the area of concentration for the degree
- A written comprehensive (major) examination
- An oral comprehensive examination after passing the written examination
- A minimum of 9 semester hours of dissertation research
- An oral presentation and defense of a dissertation research proposal
- An oral presentation and defense of the completed dissertation research in a public forum

- A written document of the completed dissertation research in approved style and format

All coursework and requirements of the doctoral degree must be taken within a seven-year period immediately preceding the date the degree is awarded.

Additional information and guidelines for the doctoral program are provided in the JHCOE **Doctoral Student Handbook**.

PLAN OF STUDY

A plan of study identifying the courses for the doctoral degree is required before 18 credit hours are completed, generally by the end of the first year of full time study. The doctoral plan of study must include the following within the 60 semester hour minimum:

- 6 credits of professional seminar I and II courses
- 12 credits of research tools courses
- 33 credits of specialization in the area of concentration
- 9 credits of dissertation research
- Comprehensive written and oral examinations

OTHER PROGRAM REQUIREMENTS

COURSEWORK PHASE

- A doctoral program committee is required before the completion of 18 credit hours. The doctoral program committee has a minimum of three members who are selected from the membership of the graduate faculty of the University. The doctoral program committee is responsible for assisting the student in the development of a plan of study and assuring competence by overseeing the comprehensive written examination and the comprehensive oral examination.
- A plan of study is required before the completion of 18 credit hours. The plan of study must be approved by the doctoral program committee, department chairperson, and associate dean of the college, and submitted to the College of Graduate Studies. Revisions to the plan of study must also be approved and updates submitted to the College of Graduate Studies, usually within the semester a revision occurs.

DISSERTATION RESEARCH PHASE

- A doctoral dissertation committee is required immediately after the completion of the required coursework, comprehensive written examination, and comprehensive oral examination. The dissertation committee has a minimum of four graduate faculty members including one who is not in the discipline major. The dissertation committee is responsible for guiding dissertation research and approving the dissertation research proposal and the completed dissertation research, both the written dissertation and oral dissertation defense. Student must work closely with the committee throughout the dissertation process.
- All research must be approved by the Institutional Research Board before beginning any phase of the research study. Student must

complete IRB training as defined by the University's Human Research Protection Program.

- A public defense of the dissertation is required.
- The final written dissertation must be approved by the dissertation committee and formatted according the guidelines of the college and the College of Graduate Study. Electronic submission of the dissertation to *OhioLINK* is mandatory.

Educational Technology

For the Doctor of Philosophy in Curriculum and Instruction degree, students must complete the following program requirements:

- A minimum of 60 semester hours of approved doctoral level (7000/8000 level) course work
- Professional Seminar I and II (CI 8700, 8710) with a C or better in first 3 semesters or 18 credit hours (whichever comes later, not counting summer) before continuing with other courses
- A minimum of 12 semester hours of research tools including courses in quantitative research, qualitative research, and independent research
- An area of specialization in curriculum and instruction with courses pre-approved by the faculty advisor and aligned with the area of concentration for the degree (see concentration options above)
 - For the concentration in educational technology include: ETPT 7000, 7100, 7210, 7550, 8150, 8230, 8300, 8510, 8810
- A written comprehensive (major) examination
- An oral comprehensive examination after passing the written examination
- A minimum of 9 semester hours of dissertation research
- An oral presentation and defense of a dissertation research proposal
- An oral presentation and defense of the completed dissertation research in a public forum
- A written document of the completed dissertation research in approved style and format

All coursework and requirements of the doctoral degree must be taken within a seven-year period immediately preceding the date the degree is awarded.

Additional information and guidelines for the doctoral program are provided in the JHCOE **Doctoral Student Handbook**.

PLAN OF STUDY

A plan of study identifying the courses for the doctoral degree is required before 18 credit hours are completed, generally by the end of the first year of full time study. The doctoral plan of study must include the following within the 60 semester hour minimum:

- 6 credits of professional seminar I and II courses
- 12 credits of research tools courses
- 33 credits of specialization in the area of concentration
 - For educational technology, ETPT 7000, 7100, 7210, 7550, 8150, 8230, 8300, 8510, and 8810 are required
- 9 credits of dissertation research
- Comprehensive written and oral examinations

OTHER PROGRAM REQUIREMENTS

Curriculum and Instruction

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the PhD in Curriculum and Instruction. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Professional Seminars		6
Select the following:		
CI 8700	Doctoral Pro-Seminar I: Introduction to Scholarship in Curriculum and Instruction	
CI 8710	Doctoral Pro-Seminar II: Themes in theory and research in Curriculum and Instruction	
Research Tools		12
Select the following:		
	Quantitative Research Course	
	Qualitative Research Course	
	Independent Research Course	
	Other research tools courses as approved by faculty advisor	
Area of Concentration		
Select 33 credits as approved by faculty advisor		33
	6 credits of supporting courses as approved by faculty advisor	
Dissertation Research		
Select one of the following:		9
CI 8960	Dissertation In Curriculum And Instruction	
CIEC 8960	Dissertation In Early Childhood Education	
ETPT 8960	Dissertation In Educational Technology And Performance Technology	
GIFT 8960	Doctoral Dissertation	
SPED 8960	Doctoral Dissertation In Curriculum & Instruction	
Comprehensive Written and Oral Examinations		
Total Hours		60

Students will be able to analyze critically research, and theory in the field of curriculum studies.

Students will be able to conduct qualitative and/or quantitative research to address critical research questions.

Students will develop a conceptual and theoretical base in their area of specialization (ed tech, science ed., math ed., literacy ed., etc.)

Students will develop skills necessary to construct and disseminate knowledge in their field.

Students will complete a dissertation study successfully.

PhD in Foundations of Education

Students in the PhD in Foundations of Education study the broad issues of educational systems and schools. Designed for students interested in research and leadership in foundational areas that support education, this program develops individuals as researchers and leaders in school, governmental, non-governmental/NGO, and nonprofit settings interested in improving education.

The PhD in Foundations of Education is a 61 semester hour program. Students take core educational courses along with courses selected with faculty based on the student's interests and goals. The program culminates with the completion of original research addressing a problem in foundations of education based on the student's area of concentration. Coursework can be completed on campus or through a combination of on-campus and online courses.

There are six areas of concentration.

Educational Psychology: For students interested in focused study of the psychological dimensions of education including teaching, learning, and human development.

Educational Sociology: For students interested in focused study of how the intersections between school, society, and cultural define the limits, possibilities, and impact of education and society.

Foundations of Education: For students interested in focused study of methodological and theoretical interdisciplinary research involving interdisciplinary sociology, anthropology, philosophy and history of education, as well as democratic education, culturally relevant teaching, and social justice.

History of Education: For students interested in focused study of historical research and the origins and development of American education within the context of American social and intellectual history.

Philosophy of Education: For students interested in focused study of the development of educational theory in the context of the broader questions of philosophy and to develop the capacity to engage in

effective discussion of theoretical problems pertaining to education, especially educational justice, peace, and democracy.

Research and Measurement: For students interested in focused study of design, execution, and interpretation of applied research, both quantitative and qualitative, and a deep understanding of the theoretical foundations of research and measurement.

Admission to the PhD in Foundations of Education

In addition to admission requirements of the College of Graduate Studies, admission to the doctoral program requires the following:

- A master's degree from an accredited college or university
- For the concentration in **research and measurement** only: GRE is NOT required for applicants with a master's degree from an accredited U.S. college or university AND a master's GPA of 3.5 or higher; GRE IS required for applicants without a master's degree from an accredited U.S. college or university OR with a master's GPA of less than 3.5 (GRE scores with 152 in the verbal and 146 in the quantitative sections and a 4.0 writing score or above preferred)
- Previous academic work necessary to successfully complete a doctoral program in the area of study
- Evidence of research and writing ability such as a master's thesis, proctored writing sample, a written research report, one or more reprints of publications, a paper presented to a professional society, or similar evidence of competence
- A statement of purpose that describes why you wish to pursue this doctoral program and includes information on previous study, educational experience, professional accomplishments, immediate and future professional goals, a proposed time schedule for completing the degree, and any other information that you believe is relevant for admission into this doctoral degree program

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- GRE scores if required for the concentration in research and measurement
- A sample of academic writing (e.g. report, thesis, project, or academic paper)
- Statement of purpose
- Three letters of recommendation
- Resume or curriculum vitae

For the concentrations in foundations of education, philosophy of education, educational sociology, history of education, or educational psychology: a professional interview may be required after the completion of the written application.

Requirements for the PhD in Foundations of Education

By Concentrations:

- Educational Psychology (p. 480)
- Educational Sociology (p. 481)
- Foundations of Education (p. 482)
- History of Education (p. 483)
- Philosophy of Education (p. 484)
- Research and Measurement (p. 485)

Educational Psychology

For the Doctor of Philosophy in Foundations of Education degree, students must complete the following program requirements:

- A minimum of 61 semester hours of approved doctoral level (7000/8000 level) course work
- A minimum of 6 semester hours of foundations core, one course each in educational psychology and theory and social foundations
- A minimum of 12 semester hours of research tools; for the concentrations of foundations, history, philosophy, and sociology of education courses may be selected from any of the following approaches: (a) quantitative methods, (b) qualitative methods, and (c) interpretive methods
- An area of specialization in foundations of education with courses pre-approved by the faculty advisor and aligned with the area of concentration for the degree (see concentration options above)
- A minimum of 9 semester hours in second (minor) area of focus outside of the area of concentration
- A written comprehensive (major) examination and, if specified, a minor examination
- An oral comprehensive examination after passing written examinations
- A minimum of 10 semester hours of dissertation research
- An oral presentation and defense of a dissertation research proposal
- An oral presentation and defense of the completed dissertation research in a public forum
- A written document of the completed dissertation research in approved style and format

All coursework and requirements of the doctoral degree must be taken within a seven-year period immediately preceding the date the degree is awarded.

Additional information and guidelines for the doctoral program are provided in the JHCOE **Doctoral Student Handbook**.

Plan of Study

A plan of study identifying the courses for the doctoral degree is required before 18 credit hours are completed, generally by the end of the first year of full time study. The doctoral plan of study must include the following within the 61 semester hour minimum:

- 6 credits of foundation core courses
- 12 credits of research tools courses
- 24 credits of specialization in the area of concentration
 - For foundations, history, philosophy, and sociology of education, TSOC 8100 is required
- 9 credits of minor area of study
- 10 credits of dissertation research
- Minor written examination if required
- Comprehensive written and oral examinations

Other Program Requirements

Coursework Phase

- A doctoral program committee is required before the completion of 18 credit hours. The doctoral program committee has a minimum of three members who are selected from the membership of the graduate faculty of the University. The doctoral program committee is responsible for assisting the student in the development of a plan of study and assuring competence by overseeing the comprehensive written examination and the comprehensive oral examination.
- A plan of study is required before the completion of 18 credit hours. The plan of study must be approved by the doctoral program committee, department chairperson, and associate dean of the college, and submitted to the College of Graduate Studies. Revisions to the plan of study must also be approved and updates submitted to the College of Graduate Studies, usually within the semester a revision occurs.

Dissertation Research Phase

- A doctoral dissertation committee is required immediately after the completion of the required coursework, comprehensive written examination, and comprehensive oral examination. The dissertation committee has a minimum of four graduate faculty members including one who is not in the discipline major. The dissertation committee is responsible for guiding dissertation research and approving the dissertation research proposal and the completed dissertation research, both the written dissertation and oral dissertation defense. Student must work closely with the committee throughout the dissertation process.
- All research must be approved by the Institutional Research Board before beginning any phase of the research study. Student must complete IRB training as defined by the University's Human Research Protection Program.
- A public defense of the dissertation is required.
- The final written dissertation must be approved by the dissertation committee and formatted according to the guidelines of the college and the College of Graduate Study. Electronic submission of the dissertation to *OhioLINK* is mandatory.

Educational Sociology

For the Doctor of Philosophy in Foundations of Education degree, students must complete the following program requirements:

- A minimum of 61 semester hours of approved doctoral level (7000/8000 level) course work
 - For concentrations in foundations, history, philosophy, and sociology of education include: TSOC 8100
- A minimum of 6 semester hours of foundations core, one course each in educational psychology and theory and social foundations
- A minimum of 12 semester hours of research tools; for the concentrations of foundations, history, philosophy, and sociology of education courses may be selected from any of the following approaches: (a) quantitative methods, (b) qualitative methods, and (c) interpretive methods
- An area of specialization in foundations of education with courses pre-approved by the faculty advisor and aligned with the area of concentration for the degree (see concentration options above)
- A minimum of 9 semester hours in second (minor) area of focus outside of the area of concentration
- A written comprehensive (major) examination and, if specified, a minor examination
- An oral comprehensive examination after passing written examinations
- A minimum of 10 semester hours of dissertation research
- An oral presentation and defense of a dissertation research proposal
- An oral presentation and defense of the completed dissertation research in a public forum
- A written document of the completed dissertation research in approved style and format

All coursework and requirements of the doctoral degree must be taken within a seven-year period immediately preceding the date the degree is awarded.

Additional information and guidelines for the doctoral program are provided in the JHCOE **Doctoral Student Handbook**.

Plan of Study

A plan of study identifying the courses for the doctoral degree is required before 18 credit hours are completed, generally by the end of the first year of full time study. The doctoral plan of study must include the following within the 61 semester hour minimum:

- 6 credits of foundation core courses
- 12 credits of research tools courses
- 24 credits of specialization in the area of concentration

- For foundations, history, philosophy, and sociology of education, TSOC 8100 is required
- 9 credits of minor area of study
- 10 credits of dissertation research
- Minor written examination if required
- Comprehensive written and oral examinations

Other Program Requirements

Coursework Phase

- A doctoral program committee is required before the completion of 18 credit hours. The doctoral program committee has a minimum of three members who are selected from the membership of the graduate faculty of the University. The doctoral program committee is responsible for assisting the student in the development of a plan of study and assuring competence by overseeing the comprehensive written examination and the comprehensive oral examination.
- A plan of study is required before the completion of 18 credit hours. The plan of study must be approved by the doctoral program committee, department chairperson, and associate dean of the college, and submitted to the College of Graduate Studies. Revisions to the plan of study must also be approved and updates submitted to the College of Graduate Studies, usually within the semester a revision occurs.

Dissertation Research Phase

- A doctoral dissertation committee is required immediately after the completion of the required coursework, comprehensive written examination, and comprehensive oral examination. The dissertation committee has a minimum of four graduate faculty members including one who is not in the discipline major. The dissertation committee is responsible for guiding dissertation research and approving the dissertation research proposal and the completed dissertation research, both the written dissertation and oral dissertation defense. Student must work closely with the committee throughout the dissertation process.
- All research must be approved by the Institutional Research Board before beginning any phase of the research study. Student must complete IRB training as defined by the University's Human Research Protection Program.
- A public defense of the dissertation is required.
- The final written dissertation must be approved by the dissertation committee and formatted according the guidelines of the college and the College of Graduate Study. Electronic submission of the dissertation to *OhioLINK* is mandatory.

Foundations of Education

For the Doctor of Philosophy in Foundations of Education degree, students must complete the following program requirements:

- A minimum of 61 semester hours of approved doctoral level (7000/8000 level) course work
 - For concentrations in foundations, history, philosophy, and sociology of education include: TSOC 8100
- A minimum of 6 semester hours of foundations core, one course each in educational psychology and theory and social foundations
- A minimum of 12 semester hours of research tools; for the concentrations of foundations, history, philosophy, and sociology of education courses may be selected from any of the following approaches: (a) quantitative methods, (b) qualitative methods, and (c) interpretive methods
- An area of specialization in foundations of education with courses pre-approved by the faculty advisor and aligned with the area of concentration for the degree (see concentration options above)
- A minimum of 9 semester hours in second (minor) area of focus outside of the area of concentration
- A written comprehensive (major) examination and, if specified, a minor examination
- An oral comprehensive examination after passing written examinations
- A minimum of 10 semester hours of dissertation research
- An oral presentation and defense of a dissertation research proposal
- An oral presentation and defense of the completed dissertation research in a public forum
- A written document of the completed dissertation research in approved style and format

All coursework and requirements of the doctoral degree must be taken within a seven-year period immediately preceding the date the degree is awarded.

Additional information and guidelines for the doctoral program are provided in the JHCOE **Doctoral Student Handbook**.

By Concentrations:

- Educational Psychology (p. 486)
- Educational Sociology (p. 486)
- Foundations of Education (p. 482)
- History of Education (p. 483)
- Philosophy of Education (p. 487)
- Research and Measurement (p. 488)

Educational Psychology

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the PhD in Foundations of Education. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Core in Foundations of Education		
Select 3 credits of educational psychology as approved by faculty advisor		3
Select 3 credits of theory and social foundations as approved by faculty advisor		3
Research Tools		
Select 12 credits as approved by faculty advisor		12
Area of Concentration		
Select 24 credits as approved by faculty advisor		24
<i>For foundations, history, philosophy, and sociology of education</i>		
TSOC 8100	Seminar in Social & Philosophical Foundations of Education	

21 credits of theory and social foundations courses as approved by faculty advisor

Minor Area of Study

Select 9 credits as approved by faculty advisor 9

Dissertation Research

Select one of the following: 10

EDP 8960	Dissertation Research In Educational Psychology
RESM 8960	Dissertation Research In Foundations Of Education
TSOC 8960	Dissertation Research In Foundations Of Education

Comprehensive Written and Oral Examinations

Students will:

1. demonstrate knowledge of the disciplinary content of SPFE through citation, synthesis, analysis, and interpretation of major scholarship in the field;
2. demonstrate knowledge of principles and theories of educational sociology, history of education, philosophy of education,, and interdisciplinary foundations of education through cited, analytic discussion of classic and current research in those disciplines;
3. demonstrate ethical dispositions in teaching and research through the quality and integrity of their scholarship, teaching methods, attention to democratic practices, diversity, and participation in the academic and civic community as demonstrated in their mentored work (compensated or voluntary) in the program and community;
4. explain specific research methodologies including the theoretical assumptions upon which they are based, the methods of data collection and analysis, the issues of representation, and the foundations of validity, and explain when they are most appropriate to use (i.e., with what research problems or questions);
5. collect, analyze and interpret, with a level of validity acceptable within a research community, at least one of the following types of research data: quantitative, qualitative, and/or interpretive; and

6. demonstrate the knowledge and skills necessary for theory application by doing the following:

- a. select a specific phenomenon and propose an investigation of the phenomenon, in writing, from the theoretical perspective most relevant to the phenomenon
- b. conduct the investigation
- c. articulate conclusions drawn from the data produced by the investigation and
- d. defend the conclusions drawn from the data by relating the conclusions to the theoretical perspective used to conduct the investigation.

PhD in Higher Education

The Doctor or Philosophy in Higher Education is designed to prepare students for successful professional careers in diverse higher education settings, including public and private colleges and universities, government agencies, and professional associations. The doctoral program focuses on Administration and Policy Analysis.

The PhD in Higher Education is a 60 semester hour program. Students take core educational courses along with courses selected with faculty based on the student's interests and goals. The program culminates with the completion of original research addressing a problem in higher education based on the student's area of interests and goals. Coursework can be completed on campus or through a combination of on-campus and online courses.

Admission to the PhD in Higher Education

In addition to admission requirements of the College of Graduate Studies, admission to the doctoral program requires the following:

- A master's degree from an accredited college or university
- A minimum GPA of 3.5 on a 4.0 scale for all previous graduate academic work
- Previous academic work necessary to successfully complete a doctoral program in the area of study
- A statement of purpose indicating your commitment to pursuing a career in the field of higher education, and a description of your potential research topic for dissertation study
- A 1,000-word essay that discusses the most critical issue facing higher education today, the reasons for choosing this issue, and the implications of the issue for the future of higher education
- Two letters of reference, including at least one from a faculty member who can speak to your ability to conduct research and to write at the graduate level
- Current employment at a college or university

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose

- Essay on higher education issue (writing sample)
- Two letters of recommendation
- Resume or curriculum vitae

Requirements for the PhD in Higher Education

For the Doctor of Philosophy in Higher Education degree, students must complete the following program requirements:

- A minimum of 60 semester hours of approved doctoral level (7000/8000 level) course work
- A minimum of 33 semester hours of higher education specialization that includes HED 7900, 8010, 8030, 8120, 8530, 8570, 8640, 8700, 8730, 8770, and 8930
- A minimum of 12 semester hours of research tools
- A written comprehensive (major) examination
- An oral comprehensive examination after passing written examination
- A minimum of 15 semester hours of dissertation research
- An oral presentation and defense of a dissertation research proposal
- An oral presentation and defense of the completed dissertation research in a public forum
- A written document of the completed dissertation research in approved style and format

All coursework and requirements of the doctoral degree must be taken within a seven-year period immediately preceding the date the degree is awarded.

Additional information and guidelines for the doctoral program are provided in the JHCOE **Doctoral Student Handbook**.

Plan of Study

A plan of study identifying the courses for the doctoral degree is required before 18 credit hours are completed, generally by the end of the first year of full time study. The doctoral plan of study must include the following within the 60 semester hour minimum:

- 33 credits of higher education specialization
 - HED 7900, 8010, 8030, 8120, 8530, 8570, 8640, 8700, 8730, 8770, and 8930 are required
- 12 credits of research tools courses
- 15 credits of dissertation research
- Comprehensive written and oral examinations

Other Program Requirements

Coursework Phase

- A doctoral program committee is required before the completion of 18 credit hours. The doctoral program committee has a minimum of three members who are selected from the membership of the graduate faculty of the University. The doctoral program committee is responsible for assisting the student in the development of a plan of study and assuring competence by overseeing the comprehensive written examination and the comprehensive oral examination.
- A plan of study is required before the completion of 18 credit hours. The plan of study must be approved by the doctoral program committee, department chairperson, and associate dean of the college, and submitted to the College of Graduate Studies. Revisions to the plan of study must also be approved and updates submitted to the College of Graduate Studies, usually within the semester a revision occurs.

Dissertation Research Phase

- A doctoral dissertation committee is required immediately after the completion of the required coursework, comprehensive written examination, and comprehensive oral examination. The dissertation committee has a minimum of four graduate faculty members including one who is not in the discipline major. The dissertation committee is responsible for guiding dissertation research and approving the dissertation research proposal and the completed dissertation research, both the written dissertation and oral dissertation defense. Student must work closely with the committee throughout the dissertation process.
- All research must be approved by the Institutional Research Board before beginning any phase of the research study. Student must complete IRB training as defined by the University's Human Research Protection Program.
- A public defense of the dissertation is required.
- The final written dissertation must be approved by the dissertation committee and formatted according to the guidelines of the college and the College of Graduate Study. Electronic submission of the dissertation to *OhioLINK* is mandatory.

1. Develop and lead academic and/or service programs that promote student learning and development based on current research on student learning and development theories.
2. Demonstrate knowledge of issues of race/ethnicity and social justice to guide professional practice.
3. Resolve issues of governance and administration exercising informed leadership approaches.
4. Develop financial policies and practices consistent with emerging trends in higher education finance.
5. Develop institutional policies and practices consistent with emerging trends in higher education law.
6. Lead in writing assessment and evaluation reports.
7. Analyze and synthesize information to create and present policy briefs in the field of higher education.
8. Actively apply historical lessons in higher education to one's future practice.
9. Evaluate and critique how critical issues in higher education in other countries compare with similar issues in the US.
10. Contribute to the research and scholarship in the literature in the area of higher education.

Certificate in Advance Reading and Literacy Instruction

This certificate is designed for licensed teachers who want to be highly qualified to work with struggling readers and writers. The coursework that is part of this certificate also meets guidelines for the coursework

required for Ohio teachers to add the Ohio Reading Endorsement to their teaching licenses.

The certificate is a 12 semester hour program. All coursework is completed online and includes a minimum of 100 hours of field-based experience spanning multiple grade levels.

ADMISSION TO THE CERTIFICATE IN ADVANCE READING AND LITERACY INSTRUCTION

In addition to admission requirements of the college of Graduate Studies, admission to the certificate program requires the following:

- A baccalaureate degree from an accredited college or university
- A current Ohio educator license
- Twelve (12) semester hours of undergraduate or graduate prerequisite coursework in the teaching of reading PRIOR to taking any Advanced Reading/Literacy courses
- A 3 semester hour undergraduate or graduate course in phonics (This requirement is usually met in an undergraduate course prior to enrolling in the certificate program, but it can be met while completing the certificate coursework.)

The certificate program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

WHAT TO SUBMIT WITH YOUR APPLICATION

- Official transcripts from all institutions of higher education
- Copy of current teaching license(s)
- Resume or curriculum vitae

REQUIREMENTS FOR THE CERTIFICATE IN ADVANCED READING AND LITERACY INSTRUCTION

For the Certificate, students must complete the following program requirements:

- A minimum of 12 semester hours of approved graduate course work
- Completion of the following: CI 6400/8400, 6410/8410, 6430/8430, 6440/8440

Courses may be included as part of a master's or doctoral degree program as approved by the student's faculty advisor. Master's level courses (5000/6000 level) may be included as part of a master's plan of study. Doctoral level courses (7000/8000 level) may be included as part of a doctoral plan of study.

All coursework and requirements of the certificate must be taken within a four-year period immediately preceding the date the degree is awarded.

OTHER REQUIREMENTS

- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com/>) (OAE) Content Assessment(s) for the endorsement

A plan of study identifying the courses for the certificate is required after 6 credit hours. The certificate plan of study must include the following within the 12 semester hour minimum:

- 12 credits of specialization in reading and literacy instruction

GUIDE FOR DEVELOPING A PLAN OF STUDY

Below is a guide for developing a Plan of Study for the Certificate in Advanced Reading and Literacy Instruction. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Reading		
CI 6400/8400	Trends In Literacy Acquisition	3
CI 6410/8410	Content Area Literacy	3
CI 6430/8430	Diagnosis Of Reading Disability	3
CI 6440/8440	Remediation Practicum	3

Certificate in Culture and Change in Institutions

The Certificate in Culture and Change in Institutions is designed for professionals working in a variety of educational environments including health and social service organizations, PreK-12 schools, community colleges, universities, and non-governmental organizations. This certificate provides students with the concepts, skills, and values to recognize and use culture more effectively in their professional practices as agents in institutional settings. Courses in the certificate program foster awareness and understanding of culture and power, and also deliver practical strategies and techniques for individuals working in institutional settings to contribute to dynamic institutional culture that extends access and privilege to individuals from all cultural backgrounds and supports enactment of our national democratic values.

The Certificate is a 12 semester hour program. Courses may be included as part of a master's program in theory and social foundations or a doctoral degree educational foundations. Coursework can be completed on campus or through a combination of on-campus and online courses.

Admission to the Certificate in Culture and Change in Institutions

In addition to admission requirements of the College of Graduate Studies, admission to the certificate program requires the following:

- A baccalaureate degree from an accredited college or university
- A well-written statement of purpose describing your background and goals as well as the importance of this certificate program in achieving those goals

- Two letters of recommendation regarding your potential for doing graduate level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this certificate program

The certificate program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Two letters of recommendation

Requirements for the Certificate in Culture and Change in Institutions

For the Certificate, students must complete the following program requirements:

- A minimum of 12 semester hours of approved graduate course work
- Completion of at least four of the following: EDP 6150/8150, TSOC 5100/7100, 5210/7210, 5230/7230, or 6320/8320

Courses may be included as part of a master's or doctoral degree program as approved by the student's faculty advisor. Master's level courses (5000/6000 level) may be included as part of a master's plan of study. Doctoral level courses (7000/8000 level) may be included as part of a doctoral plan of study.

All coursework and requirements of the certificate must be taken within a four-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the certificate is required after 6 credit hours. The certificate plan of study must include the following within the 12 semester hour minimum:

- 12 credits of specialization in culture and change in institutions

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Certificate in Culture and Change in Institutions. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Culture and Change in Institutions		
Select four of the following:		12
EDP 6150/8150	CULTURAL PERSPECTIVES IN LEARNING AND DEVELOPMENT	
TSOC 5100/7100	Network Theory and Educational Reform	

TSOC 5210/7210	Social Justice in American Society	
TSOC 5230/7230	Critical Responses to Deculturalization	
TSOC 6320/8320	Education And The Democratic Ethic	
Total Hours		12

1. Identify the concepts, skills, and values to work effectively toward increasing equity, social justice, and diversity
2. Identify key concepts and values in democratic philosophy as articulated in multicultural, foundational works on democracy
3. Explain critical theories relevant to oppression, democracy, and liberation
4. Analyze and interpret everyday operations of agencies and institutions, including but not limited to schools
5. Reflect on ability to work for positive cultural change in institutions and identify barriers to actualizing that change
6. Interpret how systemic structures of oppression, democracy, and liberation occur across the spectrum of social institutions

Certificate in Educational Assessment Specialist

The Certificate in Educational Assessment Specialist is designed to assist teachers, principals and superintendents to obtain the education needed to use data analytics to meet the challenges of the modern school and promote student learning. Students will acquire skills necessary to meet the data-informed decision making and accountability challenges demanded in the current educational environment.

The Certificate is a 12 semester hour program. The certificate is available to students from any major and courses may be included as part of a master's program with the approval of the faculty advisor. Coursework includes three online courses and a hands-on practicum completed in the student's school setting. The practicum experience is guided by University research and measurement faculty.

Admission to the Certificate in Educational Assessment Specialist

In addition to admission requirements of the College of Graduate Studies, admission to the certificate program requires the following:

- A baccalaureate degree from an accredited college or university
- A well-written statement of purpose describing your background and goals as well as the importance of this certificate program in achieving those goals
- Three letters of recommendation regarding your potential for doing graduate level work. Letters should be recommendations from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this certificate program

The certificate program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

Requirements for the Certificate in Educational Assessment Specialist

For the Certificate, students must complete the following program requirements:

- A minimum of 12 semester hours of approved graduate course work
- Completion of the following: RESM 5110, 5210, 5310, and 6940

Courses may be included as part of a master's degree program as approved by the student's faculty advisor.

All coursework and requirements of the certificate must be taken within a four-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the certificate is required after 6 credit hours. The certificate plan of study must include the following within the 12 semester hour minimum:

- 12 credits of specialization in educational assessment

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Educational Assessment Specialist. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Total Hours		12

Certificate in Foundations of Peace Education

The Certificate in Foundations of Peace Education is designed for educational professionals working in a variety of educational environments, ranging from PreK-12 schools, community colleges, universities, and non-governmental organizations. This certificate will provide students with the concepts, skills, and values to infuse peace education throughout the curriculum, thereby providing them with greater opportunities to be hired in a variety of educational settings.

The Certificate is a 12 semester hour program. The certificate is available to students from any major and courses may be included as part of a master's or doctoral program with the approval of the faculty advisor. Coursework can be completed online, on-campus or through a combination of on-campus and online courses.

Admission to the Certificate in Foundation of Peace Education

In addition to admission requirements of the College of Graduate Studies, admission to the certificate program requires the following:

- A baccalaureate degree from an accredited college or university
- A well-written statement of purpose describing your background and goals as well as the importance of this certificate program in achieving those goals
- Two letters of recommendation regarding your potential for doing graduate level work. Letters should be recommendations from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this certificate program

The certificate program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Two letters of recommendation

Requirements for the Certificate in Foundations of Peace Education

For the Certificate, students must complete the following program requirements:

- A minimum of 12 semester hours of approved graduate course work
- Completion of TSOC 5600/7600
- Completion of at least three additional courses in educational psychology or theory and social foundations as approved by the faculty advisor

Courses may be included as part of a master's or doctoral degree program as approved by the student's faculty advisor. Master's level courses (5000/6000 level) may be included as part of a master's plan of study. Doctoral level courses (7000/8000 level) may be included as part of a doctoral plan of study.

All coursework and requirements of the certificate must be taken within a four-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the certificate is required after 6 credit hours. The certificate plan of study must include the following within the 12 semester hour minimum:

- 12 credits of specialization in peace education

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Certificate in Foundations of Peace Education. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Core in Peace Education		
TSOC 5600/7600	Foundations of Peace Education	3
Specialization in Peace Education		
Select three of the following:		9
EDP 6120/8120	School Violence Theory, Prevention, and Intervention

TSOC 6350/8350	Environmental Ethics and Education	
TSOC 6990/8990	Independent Study In Educational Theory And Social Foundations	
Total Hours		12

Students are able to identify, explain, and provide examples of teaching strategies and assessments of peace learning (i.e., Methods). Students are able to identify, explain, and provide examples of concepts, skills, and values of peace-learning (i.e., Content). Students are able to develop and assess their own program, curricular, and pedagogical approaches to peace-learning (i.e., Planning). Students are able to apply theory and research to inform their decision-making based on empirical and theoretical literature in the area of educational philosophy and/ or educational psychology (i.e., Professional Practice).

Certificate in Higher Education Administration

The Certificate in Higher Education Administration is designed for students interested in studying institutional administration and higher education learning environments. Course focus the administration, governance, and operation of institutions of higher education, as well as student growth and the creation of beneficial learning environments for all members of the academic community.

The Certificate is a 12 semester hour program. The certificate is available to students from any major and courses may be included as part of a master's program with the approval of the faculty advisor. Coursework is completed online.

Admission to the Certificate in Higher Education Administration

In addition to admission requirements of the college of Graduate Studies, admission to the certificate program requires the following:

- A baccalaureate degree from an accredited college or university
- A well-written statement of purpose describing your background and goals as well as the importance of this certificate program in achieving those goals
- A current resume or curriculum vitae

The certificate program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Resume or curriculum vitae

Requirements for the Certificate in Higher EDUCATION Administration

For the Certificate, students must complete the following program requirements:

- A minimum of 12 semester hours of approved graduate course work
- Completion of at least two courses in higher education institutional administration
- Completion of at least two courses in higher education learning environments

Courses may be included as part of a master's degree program as approved by the student's faculty advisor.

All coursework and requirements of the certificate must be taken within a four-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the certificate is required after 6 credit hours. The certificate plan of study must include the following within the 12 semester hour minimum:

- 6 credits of specialization in institutional administration
- 6 credits of specialization in learning environments

Guide for Developing a Plan of Study

Certificate in Interprofessional Teaming in Early Childhood

The Certificate in Interprofessional Teaming is designed to prepare and guide professionals to engage in collaborative best practices in service to individuals with special needs and their families. Graduate students already enrolled in professional programs in the following six disciplines will be able to earn this certificate to augment their preparation to engage in collaborative best practices in services to young children with special needs and their families.

- Early Childhood Education
- Occupational Therapy
- Physical Therapy
- School Psychology
- Special Education
- Speech Language Pathology

Students will demonstrate competencies through individualized programs of study that will entail documenting 38 competencies in the areas of collaboration, advocacy, diversity and cultural competence, evidence-based practice, professional and ethical standards, technology, human development, assessment and evaluation, and service provision.

The Certificate is a 8 semester hour program. The certificate is awarded simultaneously with the professional degree. Coursework is completed through a combination of on-campus and online courses and includes a practicum experience.

Admission to the Certificate in Interprofessional Teaming

Student must be currently enrolled in a professional program in one of these areas: early childhood education, occupational therapy, physical therapy, school psychology, special education, or speech language pathology. In addition, admission to the certificate program requires the following:

- Completion of the first semester in one's program of study with a minimum 3.5 GPA and otherwise in good standing, as verified by program director and/or academic advisor
- A statement of purpose outlining your desire to complete the certificate
- A grades of B or higher in all certificate courses

To Apply to the Program

- Step One: Enroll Team Models and Community Networking (SPED 5270/7270)
- Step Two: During the course, submit your application and statement of purpose to the College of Graduate Studies

Requirements for the Certificate in Interprofessional Teaming in Early Childhood

For the Certificate, students must complete the following program requirements:

- A minimum of 8 semester hours of approved graduate course work
- A grades of B or higher in all certificate courses
- Completion of SPED 5270 or SPED 7270
- Completion of three seminars in teaming
- A practicum in teaming

In addition to the core courses required by the certificate, additional courses from the student's professional program will be identified by the advisor. The certificate must be awarded simultaneously with the professional degree.

All coursework and requirements of the certificate must be taken within a four-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the certificate is required after 6 credit hours. The certificate plan of study must include the following within the 8 semester hour minimum:

- 3 credits of core in teaming
- 3 credits of seminar in teaming
- 2 credits of practicum in teaming

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Certificate in Interprofessional Teaming in Early Childhood. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Total Hours**8**

Partnerships/Collaboration: Demonstrate the ability to work effectively with other professionals as well as parents of individuals with disabilities as well as individuals with disabilities themselves.

Advocacy: Engage in a range of activities that promote the well-being of individuals with disabilities and their families.

Diversity/Cultural Competence: Understand and accommodate for varying beliefs and cultures

Evidence-based Practice: Use theory, research, and collected data to drive practice, provision of the best possible care for clients based on evidence and research previously conducted

Certificate for Principal Licensure

The Certificate for Principal Licensure is designed for Ohio educators who hold a master's degree in an education related field and wish to earn a license as a building level administrator. This certificate program includes coursework that will lead toward initial administrative license in grades PreK to 6, grades 4 to 8, or grades 5 to 12 for Ohio.

The certificate is a 21 semester hour program. Coursework in educational administration and supervision includes 220 hours of field experience. Coursework is completed through a combination of on-campus and online courses.

Students who complete the Graduate Certificate are Educational Leaders who have knowledge and ability to:

- Facilitate the development of a school vision of learning supported by the school community
- Effectively manage an organization's operations and resources in a way that promotes a safe, efficient and effective learning environment
- Demonstrate successful collaboration techniques for working with families and other community members
- Demonstrate application of school law, ethics, and policy to ensure equity for all children within a school community
- Apply leadership skills in the development, implementing, and evaluating of programs and people in real life school settings
- Develop personal understandings of leadership as it pertains to self
- Create a school culture that promotes student learning and professional growth
- Complete a teacher evaluation process
- Analyze multiple forms of school data in order to lead school improvement efforts
- Demonstrate leadership theories and reflective practice in the decision-making process

ADMISSION TO THE CERTIFICATE FOR PRINCIPAL LEADERSHIP

In addition to admission requirements of the college of Graduate Studies, admission to the certificate program requires the following:

- A master's degree from an accredited college or university
- An overall undergraduate GPA of 3.0 or higher
- A current Ohio educator's license
- One letter of recommendation from a direct supervisor addressing formal teaching evaluations and who is knowledgeable about your ability to engage in graduate work in this certificate program

The certificate program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

WHAT TO SUBMIT WITH YOUR APPLICATION

- Official transcripts from all institutions of higher education
- Copy of current, valid teaching license(s)
- One letter of recommendation
- Resume or curriculum vitae

REQUIREMENTS FOR THE CERTIFICATE for Principal Licensure

For the Certificate, students must complete the following program requirements:

- A minimum of 21 semester hours of approved graduate course work
- Completion of the following: EDAS 8000, 8010, 8020, 8110, 8150, 8440, and 8190

Courses may be included as part of a doctoral degree program as approved by the student's faculty advisor.

All coursework and requirements of the certificate must be taken within a four-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the certificate is required after 6 credit hours. The certificate plan of study must include the following within the 21 semester hour minimum:

- 21 credits of specialization in educational administration and supervision

OTHER REQUIREMENTS

Prior to Applying for Ohio Administrator License

- Two years of successful teaching experience for your licensure area
- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com/>) (OAE) Content Assessment(s) for the endorsement

Department of Educational Studies

Edward Janak, chair

The mission of the department of educational studies is to prepare and develop educational leaders and scholars to be agents of transformation on all levels of educational systems. Our graduate programs are geared towards working professionals: they are student-centered, inquiry-based, and praxis-oriented (integrating theory and practice). The department offers master's and doctoral degrees in educational administration and supervision, educational psychology, educational technology, higher education, research and measurement, and social foundations of education (including philosophy, sociology, and history of education).

The department is also the home of the Center for Education in Targeted Violence and Suicide and the Center for Nonviolence and Democratic Education.

Accreditation

The Educational Administration and Supervision Program is accredited by the Council of Accreditation of Educator Preparation (CAEP).

Master's Degrees

Master of Education in Educational Administration and Supervision (p. 449)

Master of Education in Educational Psychology (p. 451)

Master of Education in Educational Research and Measurement (p. 452)

Master of Education in Educational Technology (p. 453)

Courses

EDAS 5950 Workshop In Educational Administration

[3 credit hours]

Topical workshops, based on practical application of skills and knowledge, are intended for in-service educational professionals. Credit may be applied to doctoral degrees upon approval of the committee.

EDAS 5980 Special Topics In Educational Administration

[3 credit hours]

Courses, based on issues, topics and concerns of educational administrators for the real world. Credit may be applied to degree programs upon approval of the adviser or committee.

Term Offered: Fall

EDAS 6000 The Individual In Organizations

[3 credit hours]

An overview of the individual in educational administration, i.e., as visionary leader, organizational leader, instructional leader and policy/community leader. Opportunities for personal assessment are provided as students explore critical educational issues in schools.

Term Offered: Spring, Fall

EDAS 6010 Leadership in School Curriculum

[3 credit hours]

An in-depth analysis of curriculum leadership to improve teacher classroom performance and to ensure that the district curriculum and instructional programs are aligned and operationalized to provide full access and opportunity to all students and student groups to meet district goals.

Term Offered: Spring, Fall

EDAS 6020 Instructional Leadership and Supervision

[3 credit hours]

An in-depth analysis of instructional leadership and principles of supervision which promote improved instruction. Emphasis is on teacher performance evaluation, curriculum management and strategies for creating a philosophical shift from a special education/regular education dichotomy to a universal education paradigm.

Term Offered: Fall

EDAS 6030 Developing Effective Learning Environments

[3 credit hours]

An exploration of group dynamics/processes and the intrapersonal and principles of high performing teams and being an effective leader. Development of effective action plans to improve school climate/culture and the learning environment is explored using problem-based learning.

EDAS 6110 Legal Aspects Of School Administration

[3 credit hours]

This course provides students an opportunity to analyze legal frameworks affecting the organization and administration of public schools, including special education law, church-state issues, pupil rights, staff-student relationships, conditions of employment, teacher organizations, tort liability, school finance, and desegregation. Participants will examine the basic legal structure for education, case and statutory law, legal principles, and provisions relevant to administration.

Term Offered: Spring, Summer

EDAS 6150 The Administrative Experience

[3 credit hours]

Emphasis is on blending current theory and practice by examining the use of data to guide school improvement for students. The collection of meaningful data for focused goal setting to be employed at the district, building and classroom levels is operationalized.

Term Offered: Spring

EDAS 6190 Integrated Experiences: Practicum

[3 credit hours]

Working in a guided reflective practice environment, the student will apply knowledge gained in previous coursework to working in school building operations, and to developing a professional portfolio.

Term Offered: Spring, Fall

EDAS 6200 Continuous Improvement Of Schools

[3 credit hours]

Course addresses current Pre K-16 national and regional reform agendas, relating them to systemic changes in policies, governance and articulation of learner outcomes in local settings.

EDAS 6210 Leadership In Diverse Settings

[3 credit hours]

Issues of multicultural, cross-cultural, race, gender, and ethnicity in school settings are examined in diverse settings in order to develop leaders who can apply theoretical frameworks and analytical skills to improve educational performance in local, urban, suburban, rural and global setting.

EDAS 6220 Administration Of Special Programs

[3 credit hours]

This course examines the administration of special programs that operate at the district and school level with particular focus on Special Education leadership issues. Title I, ESL, vocational education, guidance, and athletic programs are also explored.

EDAS 6230 Community And Schools

[3 credit hours]

This course explores the unique relationship between communities and schools. The democratic social structure is examined through a theoretical critique of strategies that increase citizen involvement in and build support for schools.

Term Offered: Spring, Summer, Fall

EDAS 6240 Developing Learning Organizations In Educational Settings

[3 credit hours]

Course introduces the theories, techniques and practices of planned organizational learning. Students examine the philosophical, theoretical and practical differences of organizational development as interventionist, consultative and collaborative processes in charter schools.

EDAS 6320 School Business Management

[3 credit hours]

The purpose of the course is to involve students in an analysis of the role and functions of school business management. Participants will analyze data in each topical area of school business management.

EDAS 6330 Collective Bargaining And Dispute Resolution

[3 credit hours]

The purpose of the course is to examine the issues that arise before, during and after the collective bargaining process in the public sector, including resolving labor disputes and grievances.

EDAS 6350 Computers In Educational Administration Decision Making
[3 credit hours]

This course allows the development for increased decision making based on local, state and national retrievable data concerning learning, achievement, efficiency and effectiveness of resource allocations.

EDAS 6360 Personnel Management And Contract Administration In Education

[3 credit hours]

Course provides insight into the purposes, policies and processes of personnel administration and contract administration in public education, including recruitment, hiring, induction, evaluation, compensation and development.

EDAS 6380 Planning Educational Facilities For Learning

[3 credit hours]

This course examines the issues surrounding planning, building and maintaining educational facilities appropriate for maximizing learning. Included is an examination of legal, health and safety requirements.

EDAS 6420 Micropolitics Of School Communities

[3 credit hours]

Course focus is on the day to day politics of school work that increase the complexities of educating. Using case studies and problem-based learning, students will practice skills that support democratic practices in school communities.

Term Offered: Spring, Fall

EDAS 6430 Legal Aspects Of Educational Administration

[3 credit hours]

This course provides students a background in legislation and court decisions that affect the administration of public schools. Students will investigate legal problem areas in schools.

EDAS 6440 Equity Issues In Educational Finance And Economics

[3 credit hours]

Analysis of educational finance and economic issues pertinent to school districts. Analysis of various funding models at the local, state and national level are studied employing various measures of equity. Building/District level school finance and resource management strategies are examined.

Term Offered: Spring, Summer

EDAS 6900 Master's Seminar In Educational Administration And Supervision

[3 credit hours]

Examination and reflection on the practice of research in Educational Leadership.

EDAS 6920 Master's Project In Educational Administration

[1-3 credit hours]

Open to graduate students who elect the completion of a research project in fulfilling the research requirements of the master's program.

Term Offered: Spring, Summer, Fall

EDAS 6960 Master's Thesis In Educational Administration

[1-3 credit hours]

Open to graduate students who elect the completion of a research thesis in fulfilling the research requirements of the master's program.

Term Offered: Spring, Summer, Fall

EDAS 6990 Individual Study In Educational Administration - Master's
[1-3 credit hours]

Open to graduate students who wish to pursue individual study on professional problems in EDAS under the direction of an EDAS faculty member.

Term Offered: Spring, Summer

EDAS 7920 Specialist Project In Educational Administration

[1-3 credit hours]

Open to graduate students to fulfill the completion of a research project in fulfilling the research requirements of the specialist program.

Term Offered: Spring, Summer, Fall

EDAS 7950 Workshop In Educational Administration

[3 credit hours]

Topical workshops, based on practical application of skills and knowledge, are intended for in-service educational professionals. Credit may be applied to doctoral degrees upon approval of the committee.

EDAS 7980 Special Topics In Educational Administration

[3 credit hours]

Courses, based on issues, topics and concerns of educational administrators for the real world. Credit may be applied to degree programs upon approval of the adviser or committee.

Term Offered: Fall

EDAS 7990 Independent Study In Education Administration

[1-3 credit hours]

Individual study on professional problems in EDAS under the direction of a EDAS faculty member.

Term Offered: Spring, Summer, Fall

EDAS 8000 The Individual In Organizations

[3 credit hours]

An overview of the individual in educational administration, i.e., as visionary leader, organizational leader, instructional leader and policy/community leader. Opportunities for personal assessment are provided as students explore critical educational issues in schools.

Term Offered: Spring, Fall

EDAS 8010 Leadership in School Curriculum

[3 credit hours]

An in-depth analysis of curriculum leadership to improve teacher classroom performance and to ensure that the district curriculum and instructional programs are aligned and operationalized to provide full access and opportunity to all students and student groups to meet district goals.

Term Offered: Spring, Fall

EDAS 8020 Instructional Leadership

[3 credit hours]

An in-depth analysis of instructional leadership and principles of supervision which promote improved instruction. Emphasis is on teacher performance evaluation, curriculum management and strategies for creating a philosophical shift from a special education/regular education dichotomy to a universal education paradigm.

Term Offered: Fall

EDAS 8030 Developing Effective Learning Environments

[3 credit hours]

An exploration of group dynamics/processes and the intrapersonal and principles of high performing teams and being an effective leader. Development of effective action plans to improve school climate/culture and the learning environment is explored using problem-based learning.

EDAS 8110 Legal Aspects Of School Administration

[3 credit hours]

This course provides students an opportunity to analyze legal frameworks affecting the organization and administration of public schools, including special education law, church-state issues, pupil rights, staff-student relationships, conditions of employment, teacher organizations, tort liability, school finance, and desegregation.

Participants will examine the basic legal structure for education, case and statutory law, legal principles, and provisions relevant to administration.

Term Offered: Spring, Summer**EDAS 8150 The Administrative Experience**

[3 credit hours]

Emphasis is on blending current theory and practice by examining the use of data to guide school improvement for students. The collection of meaningful data for focused goal setting to be employed at the district, building and classroom levels is operationalized.

Term Offered: Spring**EDAS 8190 Integrated Experiences In Education Administration**

[3 credit hours]

Working in a guided reflective practice environment, the student will apply knowledge gained in previous coursework to working in school building operations.

Term Offered: Spring, Fall**EDAS 8200 Continuous Improvement Of Schools**

[3 credit hours]

Course addresses current Pre K-16 national and regional reform agendas for charter schools, relating them to systemic changes in policies, governance and articulation of learner outcomes in local settings.

EDAS 8210 Leadership In Diverse Settings

[3 credit hours]

Issues of multicultural, cross-cultural, race, gender, and ethnicity in school settings are examined in diverse settings in order to develop leaders who can apply theoretical frameworks and analytical skills to improve educational performance in local, urban, suburban, rural and global setting

EDAS 8220 Administration Of Special Programs

[3 credit hours]

This course examines the administration of special programs that operate at the district and school level with particular focus on Special Education leadership issues. Title I, ESL, vocational education, guidance, and athletic programs are also explored.

Term Offered: Summer**EDAS 8230 Community And Schools**

[3 credit hours]

This course explores the unique relationship between communities and schools. The democratic social structure is examined through a theoretical critique of strategies that increase citizen involvement in and build support for schools.

Term Offered: Spring, Summer, Fall**EDAS 8240 Developing Learning Organizations In Educational Settings**

[3 credit hours]

Course introduces the theories, techniques and practices of planned organizational learning. Students examine the philosophical, theoretical and practical differences of organizational development as interventionist, consultative and collaborative processes in charter schools.

EDAS 8300 Integrate Experiences: Policies In Action

[3 credit hours]

This course analyses policies employed by schools and school districts in providing for education of students and services to the school community. On-site fieldwork is required.

Term Offered: Spring, Fall**EDAS 8310 School District Leadership**

[3 credit hours]

Analysis of duties, roles and responsibilities of local school district leadership. Specific competencies of building school support, planning, curriculum development, personnel, legal, financial and planning are covered.

EDAS 8320 School Business Management

[3 credit hours]

The purpose of the course is to involve students in an analysis of the role and functions of school business management. Participants will analyze data in each topical area of school business management.

EDAS 8330 Collective Bargaining And Dispute Resolution

[3 credit hours]

The purpose of the course is to examine the issues that arise before, during and after the collective bargaining process in the public sector, including resolving labor disputes and grievances.

EDAS 8350 Computers In Educational Administration Decision Making

[3 credit hours]

This course allows the development for increased decision making based on local, state and national retrievable data concerning learning, achievement, efficiency and effectiveness of resource allocations.

EDAS 8360 Personnel Management And Contract Administration In Education

[3 credit hours]

Course provides insight into the purposes, policies and processes of personnel administration and contract administration in public education, including recruitment, hiring, induction, evaluation, compensation and development.

EDAS 8380 Planning Educational Facilities For Learning

[3 credit hours]

This course examines the issues surrounding planning, building and maintaining educational facilities appropriate for maximizing learning. Included is an examination of legal, health and safety requirements.

EDAS 8420 Micropolitics Of School Communities

[3 credit hours]

Course focus is on the day to day politics of school work that increase the complexities of educating. Using case studies and problem-based learning, students will practice skills that support democratic practices in school communities.

Term Offered: Spring, Fall

EDAS 8430 Legal Aspects Of Educational Administration

[3 credit hours]

This course provides students a background in legislation and court decisions that affect the administration of public schools. Students will investigate legal problem areas in schools.

EDAS 8440 Equity Issues In Educational Finance And Economics

[3 credit hours]

Analysis of educational finance and economic issues pertinent to school districts. Analysis of various funding models at the local, state and national level are studied employing various measures of equity. Building/District level school finance and resource management strategies are examined.

Term Offered: Spring, Summer

EDAS 8600 Leadership And Organizational Theory

[3 credit hours]

An analysis of leadership and organizational theory as influences on current thinking about and approaches to educational administration. Emphasis is on understanding dominant themes that impact administrative theory.

Term Offered: Fall

EDAS 8610 Organizational Behavior

[3 credit hours]

This course integrates the educational and management theories and knowledge bases on leadership, power, motivation and change to understand the internal and external dynamics of people in educational organizations.

Term Offered: Spring

EDAS 8620 Politics And Policy Analysis And Development

[3 credit hours]

This course examines the issues involved in policy formation and analysis along with the political process of public education. Local, intermediate, state and federal levels are considered.

Term Offered: Spring

EDAS 8640 Leading Systems Change

[3 credit hours]

Course explores processes and practices used by educators to redesign preK-12 educational systems to improve outcomes for students. Content examines processes of moving espoused organizational values to actionable knowledge. Organizational Development recommended.

Term Offered: Spring, Fall

EDAS 8650 Interdisciplinary Perspectives In Educational Administration

[3 credit hours]

Seminar focused on interdisciplinary examination of critical issues in educational administration. Multiple theoretical lenses from sociology, political science, economics and science are used to address educational issues.

EDAS 8660 Critical Analysis Of Inquiry In Schools

[3 credit hours]

Concepts in understanding and evaluating contemporary educational research, addressing both quantitative and qualitative research methods. The focus is on the knowledge base school leaders must have to evaluate, use and initiate educational research in school settings.

Term Offered: Spring, Fall

EDAS 8930 Doctoral Seminar In Educational Administration And Supervision

[3 credit hours]

The course examines research findings and research methodology in Educational Administration and Supervision as they are pertinent to development of dissertation proposals. Dissertation proposal development is encouraged.

Term Offered: Spring, Fall

EDAS 8940 Educational Administration Internship

[3 credit hours]

An advanced field/seminar experience for doctoral students with fieldwork at the school system level. Fieldwork employs application of graduate coursework under supervision by the school system and the university.

EDAS 8960 Doctoral Dissertation In Educational Administration And Supervision

[1-12 credit hours]

Production of an original, scholarly product in the area Educational Administration and Supervision. Dissertation credit may total not less than 12 semester hours.

Term Offered: Spring, Summer, Fall

EDP 5110 Advanced Educational Psychology

[3 credit hours]

A graduate level introduction to the field of educational psychology. Instruction will cover fundamentals of learning, motivation, cognition, individual differences and instructional applications as well as a research-oriented approach to answering scientific questions.

Term Offered: Spring, Summer, Fall

EDP 5120 Alternative Approaches To Discipline

[3 credit hours]

Reviews a variety of models, constructs and methodologies for addressing behavior and discipline problems, especially within school and family settings. Emphases are placed on individual and group approaches to discipline.

EDP 5210 Child Behavior And Development

[3 credit hours]

Current theory and research on physical, cognitive, social, emotional and personality development are examined and used as the basis for identifying and solving problems related to child growth and development.

Term Offered: Spring, Summer, Fall

EDP 5220 Adolescent Behavior And Development

[3 credit hours]

Current theory and research on physical, cognitive, social, emotional and personality development are examined and used as the basis for identifying and solving problems related to adolescent growth and development.

Term Offered: Spring, Summer, Fall

EDP 5230 Adult Development

[3 credit hours]

Emphasizes classical and modern theories of adulthood from a critical perspective, as well as applications of research on cognitive, physical, personality and social development from early adulthood through old age.

Term Offered: Summer, Fall

EDP 5240 Applied Child and Adolescent Development

[3 credit hours]

The course will address issues that impact school and mental health professionals. For example K12 teachers, school psychologists, clinical psychologists, social workers, school counselors, nurses, SROs. Theory and research on physical, cognitive, social, and emotional development are examined and used as the bases for understanding child and adolescent development. Special attention will be focused on practical application.

Term Offered: Spring, Summer**EDP 5310 Issues And Innovations In Learning And Instruction**

[3 credit hours]

Reviews emergent theory, principles and research findings on cognition and learning and applies these concepts to developing instructional experiences and conditions for optimizing classroom learning and performance.

Term Offered: Spring, Fall**EDP 5320 Instructional Psychology**

[3 credit hours]

Theory and research in psychology that contributes to effective instruction. Topics include varieties and conditions of learning, information processing, learning analysis, constructivism, mastery learning, cooperative learning, norm & criterion-referenced measurement.

Term Offered: Spring**EDP 5330 Behavior Management**

[3 credit hours]

Theory and research related to behavioral and cognitive approaches to behavior management. Students will carry out research-based behavior management projects requiring behavioral analyses, observation, program design, development and evaluation.

Term Offered: Fall**EDP 5950 Workshop In Educational Psychology**

[3 credit hours]

Each workshop is developed around a topic of interest and concern to in-service teachers and other educational personnel. Practical application of workshop topics will be emphasized.

Term Offered: Summer, Fall**EDP 6120 School Violence Theory, Prevention, and Intervention**

[3 credit hours]

The seminar focuses on the assessment, management, and prevention of school violence. The role of nature and nurture will be explored, as will society's role (e.g., teachers, school administrators) in assessment, prevention and intervention. The forms of violence to be addressed are child abuse, gang activity, bullying, harassment, and targeted violence.

Term Offered: Spring, Summer, Fall**EDP 6130 Human Coping In Adulthood**

[3 credit hours]

Considers models, research methodologies and constructs on coping in relation to a range of circumstances during the adult years. Emphasis is placed on coping behavior within an ecological context.

Term Offered: Spring**EDP 6140 Motivation Theory And Application**

[3 credit hours]

Graduate-level study of conceptions of motivation in various settings. Emphasis is on understanding major concepts and principles, as well on application to such settings as classroom, counseling and industry.
Prerequisites: EDP 5110 with a minimum grade of D- or EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D- or EDP 5230 with a minimum grade of D- or EDP 7110 with a minimum grade of D- or EDP 7230 with a minimum grade of D-

Term Offered: Spring**EDP 6150 CULTURAL PERSPECTIVES IN LEARNING AND DEVELOPMENT**

[3 credit hours]

This course aims to develop a broader understanding of the role of culture in psychological processes and the implications of such psychological understanding for a culturally diverse society.

Term Offered: Spring, Fall**EDP 6160 Self and Identity**

[3 credit hours]

The Self and Identity course examines the content, structure, organization of self, self-processes, both implicit and explicit, involving cognition, evaluation, motivation, and emotional dimensions of the development of selfhood. The course also examines the meaning of personal and interpersonal identities including cultural, ethnic, and gender identity and the role of context in shaping these multiple identities. The implications of the readings for educators.

Prerequisites: EDP 5110 with a minimum grade of C or EDP 5120 with a minimum grade of C or EDP 5220 with a minimum grade of C or EDP 5230 with a minimum grade of C or PSY 4500 with a minimum grade of C or PSY 4700 with a minimum grade of C

EDP 6190 Seminar In Educational Psychology

[3 credit hours]

The collaborative study of a specific topic in educational psychology by a group of advanced students under the direction of one or more professors.

Term Offered: Spring, Summer, Fall**EDP 6240 Theories Of Development**

[3 credit hours]

Analysis and evaluation of theories of development with emphasis on the philosophical and psychological evolutionary history of the theories and their usefulness for individuals in the helping professions.

Prerequisites: EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D-

EDP 6250 Social Development

[3 credit hours]

Critical examination of theory and research on social behaviors such as attachment, aggression and prosocial behavior, including their causes, how they affect the person and how they change with age.

Prerequisites: EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D-

Term Offered: Spring, Fall

EDP 6260 Research Methods In Child And Adolescent Development

[3 credit hours]

Builds upon basic understanding of development through direct experiences in child study. This course provides individual/small group experiences in the design, implementation and written/oral presentation of original research.

Prerequisites: EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D-

Term Offered: Fall

EDP 6270 Parenting: Theory And Research

[3 credit hours]

Analysis and evaluation of the research on parenting across a variety of sociocultural contexts.

Prerequisites: EDP 5320 with a minimum grade of D-

EDP 6340 Theories Of Learning

[3 credit hours]

Intensive inquiry into the study of learning with particular emphasis on more recent theories. Theory application in a wide variety of settings will also be stressed.

EDP 6350 Advanced Topics In Cognition And Instruction

[3 credit hours]

Theory and research on cognition related to learning/instruction, to include study of expertise, knowledge learned from experience, analysis of ill-structured domains, tacit knowledge, and knowledge representation.

Prerequisites: (EDP 5110 with a minimum grade of D- and EDP 5320 with a minimum grade of D-) or (EDP 7110 with a minimum grade of D- and EDP 7320 with a minimum grade of D-)

EDP 6360 Thinking And Reasoning In School Contexts

[3 credit hours]

Analysis of theory, research policy, and practice about thinking and reasoning in school subjects and school learning in democratic societies.

Term Offered: Spring, Fall

EDP 6370 News Media Literacy, Society, and the Mind

[3 credit hours]

The course provides students with a theoretical and empirical foundation on psychological concepts and processes (e.g., critical thinking, personal epistemology, and belief systems), to understand the role of the news media (e.g., news print/broadcast, social media, and media technology) for the public sphere, citizenship, democracy, and peace. In their area of studies, students will learn how to develop a competency based news media literacy model that enables citizens to be/come critical and effective news media consumers.

EDP 6380 Prevention Through Postvention in Targeted Violence Terrorism and Suicide

[3 credit hours]

This course provides information on key aspects of prevention, intervention, active response, and postvention applied to incidents of targeted violence such as campus shootings, terrorism, and suicide. The content is based on government reports, journal articles, and post incident analyses. Emphasis is placed on practical application of the course content. The course is relevant to those pursuing degrees in educational psychology, psychology, counselor education, educational administration, higher education, criminal justice and related fields.

EDP 6960 Master's Thesis In Educational Psychology

[1-3 credit hours]

A formal, independent study culminating in a written discourse that advances our understanding of educational psychology.

Term Offered: Spring, Summer, Fall

EDP 6980 Master's Project In Educational Psychology

[1-3 credit hours]

A formal, independent project applying principles of educational psychology to solve a particular problem and culminating in a written discourse.

Term Offered: Spring, Summer, Fall

EDP 6990 Independent Study In Educational Psychology

[1-3 credit hours]

Directed study of a current topic in educational psychology. The student meets with the instructor at arranged intervals without formal classes.

Term Offered: Spring, Fall

EDP 7110 Advanced Educational Psychology

[3 credit hours]

A graduate level introduction to the field of educational psychology. Instruction will cover fundamentals of learning, motivation, cognition, individual differences and instructional applications as well as a research-oriented approach to answering scientific questions.

Term Offered: Spring, Summer, Fall

EDP 7230 Adult Development

[3 credit hours]

Emphasizes classical and modern theories of adulthood from a critical perspective, as well as applications of research on cognitive, physical, personality and social development from early adulthood through old age.

Term Offered: Summer, Fall

EDP 7240 Applied Child and Adolescent Development

[3 credit hours]

The course will address issues that impact school and mental health professionals, for example K12 teachers, school psychologists, clinical psychologists, social workers, school counselors, nurses, and SROs. Theory and research on physical, cognitive, social, and emotional development are examined and used as the basis for understanding child and adolescent development. Special attention will be focused on practical application.

Term Offered: Spring, Summer

EDP 7310 Issues And Innovations In Learning And Instruction

[3 credit hours]

Reviews emergent theory, principles and research findings on cognition and learning and applies these concepts to developing instructional experiences and conditions for optimizing classroom learning and performance.

Term Offered: Spring, Fall

EDP 7320 Instructional Psychology

[3 credit hours]

Theory and research in psychology that contributes to effective instruction. Topics include varieties and conditions of learning, information processing, learning analysis, constructivism, mastery learning, cooperative learning, norm & criterion-referenced measurement.

Term Offered: Spring

EDP 7330 Behavior Management

[3 credit hours]

Theory and research related to behavioral and cognitive approaches to behavior management. Students will carry out research-based behavior management projects requiring behavioral analyses, observation, program design, development and evaluation.

Term Offered: Fall**EDP 7950 Workshop In Educational Psychology**

[3 credit hours]

Each workshop is developed around a topic of interest and concern to in-service teachers and other educational personnel. Practical application of workshop topics will be emphasized.

Term Offered: Summer, Fall**EDP 8120 School Violence Theory, Prevention, and Intervention**

[3 credit hours]

The seminar focuses on the assessment, management, and prevention of school violence. The role of nature and nurture will be explored, as will society's role (e.g., teachers, school administrators) in assessment, prevention and intervention. The forms of violence to be addressed are child abuse, gang activity, bullying, harassment, and targeted violence.

Term Offered: Spring, Summer, Fall**EDP 8130 Human Coping In Adulthood**

[3 credit hours]

Considers models, research methodologies and constructs on coping in relation to a range of circumstances during the adult years. Emphasis is placed on coping behavior within an ecological context.

Term Offered: Spring**EDP 8140 Motivation Theory And Application**

[3 credit hours]

Graduate-level study of conceptions of motivation in various settings. Emphasis is on understanding major concepts and principles, as well on application to such settings as classroom, counseling and industry.

Prerequisites: EDP 5110 with a minimum grade of D- or EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D- or EDP 5230 with a minimum grade of D- or EDP 7110 with a minimum grade of D- or EDP 7230 with a minimum grade of D-

Term Offered: Spring**EDP 8150 CULTURAL PERSPECTIVES IN LEARNING AND DEVELOPMENT**

[3 credit hours]

This course aims to develop a broader understanding of the role of culture in psychological processes and the implications of such psychological understanding for a culturally diverse society.

Term Offered: Spring, Fall**EDP 8160 Self and Identity**

[3 credit hours]

The Self and Identity course examines the content, structure, organization of self, self-processes, both implicit and explicit, involving cognition, evaluation, motivation, and emotional dimensions of the development of selfhood. The course also examines the meaning of personal and interpersonal identities including cultural, ethnic, and gender identity and the role of context in shaping these multiple identities. The implications of the readings for educators.

Prerequisites: EDP 5110 with a minimum grade of C or EDP 5120 with a minimum grade of C or EDP 5220 with a minimum grade of C or EDP 5230 with a minimum grade of C or PSY 4500 with a minimum grade of C or PSY 4700 with a minimum grade of C

EDP 8180 Interdisciplinary Seminar In Foundations Of Education

[1 credit hour]

The proseminar will enable doctoral students to improve their understanding of the research process. Students will learn to ask research questions, choose alternative methodologies and interpret the validity of conclusions.

EDP 8190 Seminar In Educational Psychology

[3 credit hours]

The collaborative study of a specific topic in educational psychology by a group of advanced students under the direction of one or more professors.

Term Offered: Spring, Summer, Fall**EDP 8240 Theories Of Development**

[3 credit hours]

Analysis and evaluation of theories of development with emphasis on the philosophical and psychological evolutionary history of the theories and their usefulness for individuals in the helping professions.

Prerequisites: EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D-

EDP 8250 Social Development

[3 credit hours]

Critical examination of theory and research on social behaviors such as attachment, aggression and prosocial behavior, including their causes, how they affect the person and how they change with age.

Prerequisites: EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D-

Term Offered: Spring, Fall**EDP 8260 Research Methods In Child And Adolescent Development**

[3 credit hours]

Builds upon basic understanding of development through direct experiences in child study. This course provides individual/small group experiences in the design, implementation and written/oral presentation of original research.

Prerequisites: EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D-

Term Offered: Spring**EDP 8270 Parenting: Theory And Research**

[3 credit hours]

Analysis and evaluation of the research on parenting across a variety of sociocultural contexts.

EDP 8340 Theories Of Learning

[3 credit hours]

Intensive inquiry into the study of learning with particular emphasis on more recent theories. Theory application in a wide variety of settings will also be stressed.

EDP 8350 Advanced Topics In Cognition And Instruction

[3 credit hours]

Theory and research on cognition related to learning/instruction, to include study of expertise, knowledge learned from experience, analysis of ill-structured domains, tacit knowledge, and knowledge representation.

Prerequisites: (EDP 5110 with a minimum grade of D- and EDP 5320 with a minimum grade of D-) or (EDP 7110 with a minimum grade of D- and EDP 7320 with a minimum grade of D-)

EDP 8360 Thinking And Reasoning In School Contexts

[3 credit hours]

Analysis of theory, research policy, and practice about thinking and reasoning in school subjects and school learning in democratic societies.

Term Offered: Spring, Fall

EDP 8370 News Media Literacy, Society, and the Mind

[3 credit hours]

The course provides students with a theoretical and empirical foundation on psychological concepts and processes (e.g., critical thinking, personal epistemology, and belief systems), to understand the role of the news media (e.g., news print/broadcast, social media, and media technology) for the public sphere, citizenship, democracy, and peace. In their area of studies, students will learn how to develop a competency based news media literacy model that enables citizens to be/come critical and effective news media consumers.

EDP 8380 Prevention through Postvention of Targeted Violence, Terrorism and Suicide

[3 credit hours]

This course provides information on key aspects of prevention, intervention, active response, and postvention applied to incidents of targeted violence such as campus shootings, terrorism, and suicide. The content is based on government reports, journal articles, and post incident analyses. Emphasis is placed on practical application of the course content. The course is relevant to those pursuing degrees in educational psychology, psychology, counselor education, educational administration, higher education, criminal justice, and related fields.

EDP 8960 Dissertation Research In Educational Psychology

[1-12 credit hours]

A formal, independent study culminating in a written discourse that advances our understanding of educational psychology.

Term Offered: Spring, Summer, Fall

EDP 8990 Independent Study In Educational Psychology

[1-6 credit hours]

Directed study of a current topic in educational psychology. The student meets with the instructor at arranged intervals without formal classes.

Term Offered: Spring, Summer, Fall

ETPT 5000 Introduction To Educational Technology

[3 credit hours]

Introduces the field of Educational Technology and its relevant competencies. Examines current trends in Educational Technology.

Term Offered: Spring, Summer, Fall

ETPT 5100 Instructional Systems Design Principles

[3 credit hours]

An introduction to various ISD models and approaches for designing effective systems of instruction. Students will begin to acquire experience in the actual analysis, design, development and evaluation of instruction.

Term Offered: Spring, Summer

ETPT 5200 Computer Skills For Instructional Professionals

[3 credit hours]

Emphasizes developing skills in the use of this common productivity software and the use of computer technology in solving typical instructional problems.

ETPT 5210 Introduction To Multimedia And Web Design

[3 credit hours]

An introduction to the software, hardware and processes involved in the design and development of multimedia and Web-based instructional materials.

Term Offered: Fall

ETPT 5270 Instructional Video Production

[3 credit hours]

An introduction to all facets of producing video for use in various instructional settings.

ETPT 5550 Using The Internet In The Classroom

[3 credit hours]

An introduction to effective use of Internet resources in instruction.

Term Offered: Spring, Summer, Fall

ETPT 5950 Workshop In Educational Technology & Performance Technology

[1-5 credit hours]

Workshops are developed around topics of interest in all areas of educational technology and performance technology. Students should discuss specific content for each offering with educational technology faculty.

ETPT 5980 Special Topics In Educational Technology And Performance Technology

[1-5 credit hours]

Special offerings are of interest to graduate students in educational technology and performance technology. Students should discuss specific content for each offerings with ETPT faculty.

Term Offered: Spring, Summer, Fall

ETPT 5990 Graduate Independent Study In Educational Technology & Performance Technology

[1-5 credit hours]

Individual study designed to provide a student the opportunity to work individually on professional problems under the direction of educational technology & performance technology faculty.

Term Offered: Spring, Summer, Fall

ETPT 6110 Instructional Systems Design Applications

[3 credit hours]

Based on the knowledge and skills acquired in ETPT 6100/8100, students design, develop and evaluate multimedia-based instructional modules and systems.

Prerequisites: (ETPT 5100 with a minimum grade of D- and ETPT 5210 with a minimum grade of D-)

ETPT 6150 Designing Instruction For Diverse Learner Populations

[3 credit hours]

Focuses on instructional designer's role in assessing and addressing such differences as performance environment, culture, ethnicity, physical attributes, age/experience and socioeconomic factors to maximize learning.

Prerequisites: ETPT 5100 with a minimum grade of D-

Term Offered: Summer

ETPT 6220 Developing Computer-Based Instructional Materials

[3 credit hours]

Teaches design and development of instructional software, using multimedia development environments and strategies.

Prerequisites: (ETPT 5100 with a minimum grade of D- and ETPT 5210 with a minimum grade of D-)

ETPT 6230 Developing Web-Based Instructional Materials

[3 credit hours]

Students apply previously acquired skills in multimedia and Web design to develop instructional materials for delivery via the World Wide Web.

Prerequisites: ETPT 5100 with a minimum grade of D-

Term Offered: Spring

ETPT 6300 Technology Management In K-16 Education

[3 credit hours]

Provides teachers and technology coordinators with the knowledge and skills necessary to manage instructional computer laboratories and services in K-16 settings.

Term Offered: Summer, Fall

ETPT 6510 Teaching And Learning At A Distance

[3 credit hours]

Investigates various applications of distance learning for education and training.

Term Offered: Spring, Summer

ETPT 6710 Systemic Change Principles And Applications

[3 credit hours]

Examines the process of change in the diffusion and adoption of innovations in education as well as business and industry. Adoption theory is analyzed.

ETPT 6810 Research And Theory In Educational Technology And Performance Technology

[3 credit hours]

Investigates current major research trends and topics in various areas of educational technology and performance technology. Students develop and present a research proposal.

ETPT 6900 Master's Seminar In Educational Technology And Performance Technology

[3 credit hours]

This course is the culminating experience in the ETPT master's program. Students complete a project under supervision of an educational technology faculty member.

Prerequisites: (ETPT 5000 with a minimum grade of D- and ETPT 6110 with a minimum grade of D-)

Term Offered: Spring, Summer, Fall

ETPT 6930 Master's Research Project In Educational Technology And Performance Technology

[1-3 credit hours]

Student will complete an individual research project under the orientation of a committee of at least two faculty members in ETPT, ordinarily including the faculty adviser.

ETPT 6940 Practicum In Educational Technology And Performance Technology

[3 credit hours]

Students apply ETPT course work to solve an instructional and/or performance problem for a client organization under the supervision of educational technology faculty.

ETPT 6960 Master's Thesis In Educational Technology And Performance Technology

[3 credit hours]

Students who elect this option will complete a thesis under the direction of committee of at least two faculty members from ETPT, ordinarily including the faculty adviser.

Prerequisites: ETPT 5100 with a minimum grade of D-

ETPT 7000 Introduction To Educational Technology

[3 credit hours]

Introduces the field of educational technology and its relevant competencies. Examines current trends in educational technology.

Term Offered: Spring, Summer, Fall

ETPT 7100 Instructional Systems Design Principles

[3 credit hours]

An introduction to various ISD models and approaches for designing effective systems of instruction. Students will begin to acquire experience in the actual analysis, design, development and evaluation of instruction.

Term Offered: Spring, Summer

ETPT 7210 Introduction To Multimedia And Web Design

[3 credit hours]

An introduction to the software, hardware and processes involved in the design and development of multimedia and Web-based instructional materials.

Term Offered: Fall

ETPT 7270 Instructional Video Production

[3 credit hours]

An introduction to all facets of producing video for use in various instructional settings.

Term Offered: Summer

ETPT 7550 Using The Internet In The Classroom

[3 credit hours]

An introduction to effective use of Internet resources in instruction.

Term Offered: Spring, Fall

ETPT 7940 Specialist Practicum In Educational Technology And Performance Technology

[3 credit hours]

Observation and supervised experience in an appropriate setting. Students will be assigned to work as interns under the joint supervision of school and University personnel.

Prerequisites: ETPT 7100 with a minimum grade of D-

ETPT 7980 Special Topics In Educational Technology And Performance Technology

[1-5 credit hours]

Special offerings are of interest to graduate students in educational technology and performance technology. Students should discuss specific content for each offerings with ETPT faculty.

Term Offered: Spring, Summer, Fall

ETPT 7990 Independent Study in ETPT

[1-5 credit hours]

Individual study designed to provide a student the opportunity to work individually on professional problems under the direction of Educational Technology faculty.

Term Offered: Spring, Summer, Fall

ETPT 8110 Instructional Systems Design Applications

[3 credit hours]

Based on the knowledge and skills acquired in ETPT 6100/8100, students design, develop and evaluate multimedia-based instructional modules and systems.

Prerequisites: (ETPT 7100 with a minimum grade of D- and ETPT 7210 with a minimum grade of D-)

ETPT 8150 Designing Instruction For Diverse Learner Populations

[3 credit hours]

Focuses on instructional designer's role in assessing and addressing such differences as performance environment, culture, ethnicity, physical attributes, age/experience and socioeconomic factors to maximize learning.

Prerequisites: ETPT 7100 with a minimum grade of D-

Term Offered: Summer

ETPT 8220 Developing Computer-Based Instructional Materials

[3 credit hours]

Teaches design and development of instructional software, using multimedia development environments and strategies.

Prerequisites: (ETPT 7100 with a minimum grade of D- and ETPT 7210 with a minimum grade of D-)

ETPT 8230 Developing Web-Based Instructional Materials

[3 credit hours]

Students apply previously acquired skills in multimedia and Web design to develop instructional materials for delivery via the World Wide Web.

Prerequisites: (ETPT 7100 with a minimum grade of D- and ETPT 7210 with a minimum grade of D-)

Term Offered: Spring

ETPT 8300 Technology Management In K-16 Education

[3 credit hours]

Provides teachers and technology coordinators with the knowledge and skills necessary to manage instructional computer laboratories and services in K-16 settings.

Term Offered: Summer, Fall

ETPT 8510 Teaching And Learning At A Distance

[3 credit hours]

Investigates various applications of distance learning systems for education and training.

Term Offered: Spring, Summer

ETPT 8710 Systemic Change Principles And Applications

[3 credit hours]

Examines the process of change in the diffusion and adoption of innovations in education as well as business and industry. Adoption theory is analyzed.

ETPT 8810 Research And Theory In Educational Technology And Performance Technology

[3 credit hours]

Investigates current major research trends and topics in various areas of educational technology and performance technology. Students develop and present a research proposal.

Term Offered: Summer, Fall

ETPT 8900 Doctoral Seminar In Educational Technology And Performance Technology

[3 credit hours]

This seminar will consider problems and provide advanced study for doctoral students in educational technology and performance technology.

Prerequisites: ETPT 7100 with a minimum grade of D-

ETPT 8920 Interdisciplinary Seminar In Educational Technology And Performance Technology

[3 credit hours]

Considers issues and problems in various areas of educational technology and performance technology. Intended for advanced ETPT doctoral students.

ETPT 8930 Advanced Research In Educational Technology And Performance Technology

[1-5 credit hours]

Individual study is designed to provide the doctoral student opportunity to work individually on professional problems under the direction of educational technology and performance technology faculty.

Term Offered: Spring

ETPT 8940 Practicum In Educational Technology And Performance Technology

[3 credit hours]

Students apply ETPT course work to solve an instructional and/or performance problem for a client organization under the supervision of educational technology faculty.

Term Offered: Fall

ETPT 8960 Dissertation In Educational Technology And Performance Technology

[1-12 credit hours]

Original research in an area of educational technology and performance technology.

Term Offered: Spring, Summer, Fall

HED 5900 Diversity Leadership in Higher Education

[3 credit hours]

Diversity Leadership in Higher Education explores issues of diversity on campuses through foundational and contemporary lenses. It is intended for students studying higher education as a major or area of research interest, as well as employees in institutions of higher education at all levels. The course defines diversity in higher education settings and explores diversity through student, faculty, and administrative lenses, including the components of an effective diversity office on campus.

Term Offered: Spring, Summer, Fall

HED 5910 Diversity Beginnings

[3 credit hours]

This course will review and apply diversity-related theory, social and psychological understanding, and interpersonal communication to diversity experiences. The course is designed to cultivate an awareness of diversity through communication in education, work, and social settings.

Term Offered: Fall

HED 5920 Introduction to Master's Studies in Higher Education

[1-3 credit hours]

This course explores the expectations and challenges of graduate education. We will look at the role of the graduate student, faculty, adviser, and other university offices that support your journey.

Term Offered: Fall**HED 5930 Interdisciplinary Seminar**

[3 credit hours]

This seminar formatted course will provide the opportunity to explore problems and issues from the perspectives of the various fields of education and of other disciplines related to higher education.

HED 5950 Workshop In Higher Education

[1-3 credit hours]

Each workshop is developed on a topic of interest to faculty members and administrators of higher education institutions. Practical applications of the workshop topic will be emphasized.

HED 5960 Diversity in Practice

[3 credit hours]

This course is designed to explore dimensions of diversity in different settings like that of health care. Dimensions of diversity will include but are not limited to topics of global citizenship, socioeconomic diversity, religious diversity, gender and gender identity, LGBTQ, ADA laws, race and ethnicity, successful aging, and harassment and bullying.

Term Offered: Spring**HED 5970 Diversity Advancement**

[3 credit hours]

This course is designed to teach how to measure effectiveness of diversity-related programs, review of tools and instruments for strategic planning, creation and implementation of diversity plans, and exploration of components of being an effective Chief Diversity Officer (CDO).

Term Offered: Spring, Summer**HED 5980 Special Topics In Higher Education**

[1-3 credit hours]

This seminar provides advanced study in special topics of interest to faculty and administrators in higher education.

Term Offered: Summer, Fall**HED 6010 History Of Higher Education**

[3 credit hours]

Introduction to the historical development of American higher education from colonial times to the 20th century. Emphasis on the major historical events that contributed to the diversity of higher education.

Term Offered: Summer, Fall**HED 6120 International Education**

[3 credit hours]

Complex interrelationships between global and educational systems will be examined. Emphasis will be on how education can be used to build a more global society. Some sections will include an international field study trip.

Term Offered: Spring, Summer, Fall**HED 6210 The Community College**

[3 credit hours]

A study of the history, distinguishing characteristics (mission, functions, organization, curriculum, finances) and current issues facing community colleges, including marginalization of students and institutions, and transfer and articulation policy.

HED 6250 Technical Higher Education

[3 credit hours]

This course examines the development, mission, functions, and assessment of technical, occupational, and career education, including community needs assessment.

HED 6270 Learning and Teaching in Higher Education

[3 credit hours]

Course facilitates application of theory to practice of teaching in higher education. Students explore diverse pedagogical approaches, professional faculty roles effective learning and teaching.

HED 6410 College & University Curriculum

[3 credit hours]

The course examines the philosophical and conceptual underpinnings of college and university curriculum. It introduces a model for curriculum planning, implementation, and evaluation in American higher education, and a framework for designing and assessing courses and curricula.

Term Offered: Fall**HED 6440 General Education In Higher Education**

[3 credit hours]

This course will examine the meaning and purposes of general education in the United States. Students will become acquainted with the design, analysis and evaluation of general education curricula.

HED 6510 The American College Student

[3 credit hours]

This course explores the character and nature of student populations in contemporary American colleges and universities and considers the impact of campus environments and experiences on development, interaction and learning.

Term Offered: Spring, Fall**HED 6520 Organization & Management Of Student Affairs**

[3 credit hours]

This course provides an overview of functional areas of student affairs and the philosophies and ethics that guide the profession. The overview also considers general areas that influence student affairs such as university mission, campus culture and environment, leadership, financing and budgeting, university assessment, student demographics and diversity, and student development.

Term Offered: Spring, Summer, Fall**HED 6530 Theories Of Student Development**

[3 credit hours]

Students critically examine traditional and contemporary theories of college student development, identify methods of assessing that development, and explore ways to apply the theories to everyday practice.

Term Offered: Spring, Summer, Fall**HED 6540 HED 6540 Advising Diverse Students**

[3 credit hours]

This seminar considers the advising role of higher education professionals, emphasizing the ways that culture, race, ethnicity, gender, religion, sexual orientation, socio economic status, and other diversities may impact work with students.

Term Offered: Spring, Fall

HED 6570 Research in Higher Education

[3 credit hours]

The course introduces students to research methods and techniques, along with the resources available, both within the University and nationally, for the purpose of higher education research. Introductory qualitative and quantitative research concepts are covered, as well as how to critique research articles in the field of higher education.

Term Offered: Spring, Summer, Fall

HED 6610 Issues Of Access In Higher Education

[3 credit hours]

This course explores access issues that result from the changing educational needs of society and analyzes the application of democratic ideals of American education to current educational policies affecting access.

HED 6630 Faculty Issues in Higher Education

[3 credit hours]

HED 6640 Governance And Administration In Higher Education

[3 credit hours]

This course introduces students to the theories and structures of the governance and administration of academic organizations, and to the sources of authority and decision-making in academic institutions.

Term Offered: Spring, Fall

HED 6650 Community College Leadership

[3 credit hours]

This course examines community college leadership and administration. It introduces models for leading change and explores challenges facing community college leaders.

Term Offered: Summer, Fall

HED 6660 Building Academic Culture

[3 credit hours]

An examination of institutional culture and the interplay of student, faculty and administrative subcultures. Critical perspectives are used to analyze and understand cultural inquiry, conflict and collaboration in post secondary institutions.

HED 6700 Finance Of Higher Education

[3 credit hours]

This course discusses issues related to the expenditure of funds for higher education within institutions and systems. Issues addressed include capital funding, endowment management and budget preparation.

Term Offered: Spring, Summer, Fall

HED 6710 Economics Of Higher Education

[3 credit hours]

This course discusses issues related to the revenue sources of higher education and discussion of the social worth of public and private sector investment in higher education. Issues include the connection of educational outcomes to educational budget making and how sources of funds drive educational policymaking.

HED 6730 Legal Aspects Of Higher Education

[3 credit hours]

Law, its history, philosophy and practical application to and effect on the creation and administration of public and private higher education is examined in the context of court decisions.

Term Offered: Spring, Fall

HED 6750 Strategic Planning And Decision Making

[3 credit hours]

This course provides an overview and applications of strategic planning theories and methods in higher education and explores how external environments and internal dynamics affect planning processes. The development and implementation of strategic plans are covered as well as the leadership skills needed to direct strategic decision-making.

HED 6770 Evaluation And Outcomes Assessment In Higher Education

[3 credit hours]

This course focuses on outcomes-based assessment of learning and development in student affairs.

Term Offered: Spring, Summer, Fall

HED 6790 Managing College And University Personnel

[3 credit hours]

This course acquaints students with key concepts related to the effective management of human resources within institutions of higher education. Topics covered may include human resource management, diversity and inclusion, talent management, training and development, employee engagement and retention, performance management, benefits and compensation, ethics and fair treatment, and collective bargaining in higher education.

Term Offered: Fall

HED 6810 Women In Higher Education

[3 credit hours]

This course introduces students to the historical, social, and cultural influences on women's higher education, and explores the campus climate for women as students, administrators, faculty, and governing board members. Special attention is paid to the intersections of gender with race and class.

Term Offered: Spring, Fall

HED 6820 Institutional Advancement In Higher Education

[3 credit hours]

Overview of the field of development and introduction to the knowledge, research and theory emerging in the field. Focus on practical skill enhancement as it applies to building development programs.

HED 6830 The Independent College

[3 credit hours]

The course examines the historical and conceptual underpinnings of the independent college and university. It explores the strengths, weaknesses, opportunities, and challenges of small residential liberal arts colleges, along with the other major categories of private colleges and universities in the American context.

Term Offered: Summer

HED 6840 Adult Continuing Education

[3 credit hours]

Course assists student in interpreting the highly diversified field of adult continuing education from the point of view of the student's current or anticipated involvement. Intended for teachers of adults.

HED 6850 Critical Issues In Higher Education

[3 credit hours]

This seminar exposes students to critical issues in higher education. Topics covered vary from course to course in order to stay current with ongoing and emerging critical issues.

Term Offered: Spring, Summer, Fall

HED 6870 Economic Development And Higher Education

[3 credit hours]

How do institutions of higher education impact their local economies? This course examines various roles and methods by which institutions of higher education add to economic development.

HED 6910 Introduction to Interpretive Inquiry

[3 credit hours]

This course equips students with basic knowledge and abilities to conduct qualitative research. It fosters understanding of methodology and methods, and their alignment with a particular research tradition.

HED 6920 Master's Project In Higher Education

[1-3 credit hours]

Open to graduate students who elect the completion of a research project in fulfilling the research requirements of the master's program.

Term Offered: Spring, Summer, Fall**HED 6940 Master's Practicum In Higher Education**

[1-3 credit hours]

The Practicum Seminar provides students with the opportunity to develop specialized skills working in a professional/administrative unit of a college or university. Students are expected to complete a 100 hours of work under the supervision of an experienced administrator. Seminar coursework accompanies the practicum experience.

Term Offered: Spring, Summer, Fall**HED 6950 HED 6950: Master's Internship in Higher Education**

[1-4 credit hours]

The Master's Internship in Higher Education links directly to a student's Graduate Assistantship and offers students the opportunity to integrate theory, research, and skills gained through courses, workshops, and seminars with the knowledge, skills, and abilities they are developing through practice. In addition, the Internship serves as structured professional development opportunity for enhancing theory-to-practice knowledge and skills of the students and practitioners involved. The HED Internship has been developed jointly by the HED Program and UT's Student Affairs, and includes the collaborative participation of both student affairs professionals and higher education faculty.

HED 6960 Master's Thesis In Higher Education

[1-3 credit hours]

Open to graduate students who elect the completion of a research thesis in fulfilling the research requirements of the master's program.

Term Offered: Spring, Summer, Fall**HED 6980 Master's Capstone Seminar**

[3 credit hours]

This seminar provides opportunities for students to strengthen their academic and professional skills and to apply them in different higher education contexts. The culminating requirements may vary.

Term Offered: Spring**HED 6990 Independent Study In Higher Education-Masters**

[1-3 credit hours]

Provides student the opportunity to work independently on a professional problem under the direction of a Higher Education Program faculty member.

Term Offered: Spring, Summer, Fall**HED 7900 Diversity Leadership in Higher Education**

[3 credit hours]

Diversity Leadership in Higher Education explores issues of diversity on campuses through foundational and contemporary lenses. It is intended for students studying higher education as a major or area of research interest, as well as employees in institutions of higher education at all levels. The course defines diversity in higher education settings and explores diversity through student, faculty, and administrative lenses, including the components of an effective diversity office on campus.

Term Offered: Spring, Summer, Fall**HED 7910 Diversity Beginnings**

[3 credit hours]

Review and application of diversity-related theory, social and psychological understanding, and interpersonal communication when applying to diversity experiences.

HED 7930 Interdisciplinary Seminar

[3 credit hours]

This seminar formatted course will provide the opportunity to explore problems and issues from the perspectives of the various fields of education and of other disciplines related to higher education.

HED 7950 Workshop In Higher Education

[1-3 credit hours]

Each workshop is developed on a topic of interest to faculty members and administrators of higher education institutions. Practical applications of the workshop topic will be emphasized.

HED 7960 Diversity in Practice

[3 credit hours]

Review the different dimensions of diversity, understanding of laws that are in diversity-related areas, and exploration of diversity in a health care setting.

HED 7970 Diversity Advancement

[3 credit hours]

Review and application of diversity work as it related to measurement and diversity analysis. Topic categories include but not limited to measuring diversity, creating climate surveys, developing diversity plans, and understanding the components of being an effective Chief Diversity Officer.

HED 7980 Special Topics In Higher Education

[1-3 credit hours]

This seminar provides advanced study in special topics of interest to faculty and administrators in higher education.

Term Offered: Summer, Fall**HED 8010 History Of Higher Education**

[3 credit hours]

Introduction to the historical development of American higher education from colonial times to the 20th century. Emphasis on the major historical events that contributed to the diversity of higher education.

Term Offered: Spring, Fall**HED 8020 Advanced Seminar In Historiography Hied**

[3 credit hours]

Historical methods applied to research in higher education discussed. Course focuses on in-depth readings of primary source material on liberal arts colleges, universities and community colleges. Research paper required.

HED 8030 Federal And State Policy Analysis

[3 credit hours]

Designed for those interested in federal and state policy as related to higher education. Students will investigate specific federal and state legislation and regulatory issues.

Term Offered: Summer

HED 8120 International Education

[3 credit hours]

Complex interrelationships between global issues and educational systems will be examined. Emphasis will be on how education can be used to build a more global society. Some sections of the course will include an international field study trip.

Term Offered: Summer

HED 8210 The Community College

[3 credit hours]

A study of the history, distinguishing characteristics (mission, functions, organization, curriculum, finances), and current issues facing community colleges, including marginalization of students and institutions, and transfer and articulation policy.

Term Offered: Spring, Fall

HED 8250 Technical Higher Education

[3 credit hours]

This course examines the development, mission, functions, and assessment of technical, occupational, and career education, including community needs assessment.

HED 8270 Learning and Teaching in Higher Education

[3 credit hours]

Course facilitates application of theory to practice of teaching in higher education. Students explore diverse pedagogical approaches, professional faculty roles effective learning and teaching.

HED 8410 College & University Curriculum

[3 credit hours]

The course examines the philosophical and conceptual underpinnings of college and university curriculum. It introduces a model for curriculum planning, implementation, and evaluation in American higher education, and a framework for designing and assessing courses and curricula.

HED 8440 General Education In Higher Education

[3 credit hours]

This course will examine the meaning and purposes of general education in the United States. Students will become acquainted with the design, analysis and evaluation of general education curricula.

HED 8510 The American College Student

[3 credit hours]

This course explores the character and nature of student populations in contemporary American colleges and universities and considers the impact of campus environments and experiences on development, interaction and learning.

Term Offered: Summer, Fall

HED 8520 Org & Mgmt Of Student Affairs

[3 credit hours]

This course provides an overview of functional areas of student affairs and the philosophies and ethics that guide the profession. The overview also considers general areas that influence student affairs such as university mission, campus culture and environment, leadership, financing and budgeting, university assessment, student demographics and diversity, and student development.

Term Offered: Fall

HED 8530 Theories Of Student Development

[3 credit hours]

Students critically examine traditional and contemporary theories of college student development, identify methods of assessing that development, and explore ways to apply the theories to everyday practice.

Term Offered: Spring, Summer, Fall

HED 8570 Research In Higher Education

[3 credit hours]

"This course introduces students to various research approaches in the field of higher education. Students learn how to critique research articles in the field of higher education, how higher education institutions are classified, what national postsecondary datasets are available for their own research, and how to develop and present a research study proposal."

Term Offered: Spring, Fall

HED 8580 Leadership Theory

[3 credit hours]

This seminar examines the theory and practice of leadership in higher education. Topics may include the leadership experience, leadership in engaging higher education in social change, and the roles of academic leaders.

HED 8610 Issues Of Access In Higher Education

[3 credit hours]

This course explores access issues that result from the changing educational needs of society and analyzes the application of democratic ideals of American education to current educational policies affecting access.

HED 8630 Faculty Issues In Higher Education

[3 credit hours]

This course explores current issues in the American academic profession. Topics may include faculty work, faculty reward systems, diversity issues, gender issues, salary issues, part-time faculty, work-home balance, governance, satisfaction, career choice, recruitment and retention, and faculty career stages.

HED 8640 Governance And Administration In Higher Education

[3 credit hours]

This course introduces students to the theories and structures of the governance and administration of academic organizations, and to the sources of authority and decision-making in academic institutions.

Term Offered: Spring, Fall

HED 8650 Community College Leadership

[3 credit hours]

This course examines community college leadership and administration. It introduces models for leading change and explores challenges facing community college leaders.

Term Offered: Summer

HED 8660 Building Academic Culture

[3 credit hours]

An examination of institutional culture and the interplay of student, faculty and administrative subcultures. Critical perspectives are used to analyze and understand cultural inquiry, conflict and collaboration in post secondary institutions.

HED 8700 Finance Of Higher Education

[3 credit hours]

This course discusses issues related to the expenditure of funds for higher education within institutions and systems. Issues addressed include capital funding, endowment management and budget preparation.

Term Offered: Spring, Fall**HED 8710 Economics Of Higher Education**

[3 credit hours]

This course discusses issues related to the revenue sources of higher education and discussion of the social worth of public and private sector investment in higher education. Issues include the connection of educational outcomes to educational budget making and how sources of funds drive educational policymaking.

HED 8730 Legal Aspects Of Higher Education

[3 credit hours]

Law, its history, philosophy and practical application to and effect on the creation and administration of public and private higher education is examined in the context of court decisions.

Term Offered: Spring, Fall**HED 8750 Strategic Planning And Decision Making**

[3 credit hours]

This course provides an overview and applications of strategic planning theories and methods in higher education and explores how external environments and internal dynamics affect planning processes. The development and implementation of strategic plans are covered as well as the leadership skills needed to direct strategic decision-making.

HED 8770 Evaluation And Outcomes Assessment In Higher Education

[3 credit hours]

This course focuses on outcomes-based assessment of learning and development in student affairs.

Term Offered: Spring, Fall**HED 8790 Managing College And University Personnel**

[3 credit hours]

This course acquaints students with key concepts related to the effective management of human resources within institutions of higher education. Topics covered may include human resource management, diversity and inclusion, talent management, training and development, employee engagement and retention, performance management, benefits and compensation, ethics and fair treatment, and collective bargaining in higher education.

Term Offered: Spring, Fall**HED 8810 Women In Higher Education**

[3 credit hours]

This course introduces students to the historical, social, and cultural influences on women's higher education, and explores the campus climate for women as students, administrators, faculty, and governing board members. Special attention is paid to the intersections of gender with race and class.

Term Offered: Spring**HED 8820 Institutional Advancement In Higher Education**

[3 credit hours]

Overview of the field of development and introduction to the knowledge, research, and theory emerging in the field. Focus on practical skill enhancement as it applies to building development programs.

HED 8830 The Independent College

[3 credit hours]

The course examines the historical and conceptual underpinnings of the independent college and university. It explores the strengths, weaknesses, opportunities, and challenges of small residential liberal arts colleges, along with the other major categories of private colleges and universities in the American context.

Term Offered: Summer**HED 8840 Adult Continuing Education**

[3 credit hours]

Course assists student in interpreting the highly diversified field of adult continuing education from the point of view of the student's current or anticipated involvement. Intended for teachers of adults.

HED 8850 Critical Issues In Higher Education

[3 credit hours]

This seminar exposes students to critical issues in higher education. Topics covered vary from course to course in order to stay current with ongoing and emerging critical issues.

Term Offered: Summer, Fall**HED 8870 Economic Development And Higher Education**

[3 credit hours]

How do institutions of higher education impact their local economies? This course examines various roles and methods by which institutions of higher education add to economic development.

HED 8910 Introduction to Interpretive Inquiry

[3 credit hours]

This course equips students with basic knowledge and abilities to conduct qualitative research. It fosters understanding of methodology and methods, and their alignment with a particular research tradition.

Term Offered: Spring, Fall**HED 8920 Advanced Seminar**

[3 credit hours]

This seminar requires students to work with a professor on the design and implementation of a research project. This project may be qualitative, quantitative, or mixed method. The seminar may be repeated once for credit when topics vary.

Term Offered: Spring, Fall**HED 8930 Doctoral Research Seminar In Higher Education**

[3 credit hours]

This course provides students the opportunity to work through the various stages of their dissertation in a seminar format. This course may be repeated once for credit as students progress through stages of the dissertation. These credits may count towards students' dissertation hours.

Term Offered: Spring, Summer, Fall

HED 8940 Doctoral Internship In Higher Education

[1-3 credit hours]

The Internship provides students an opportunity to accumulate supervised experience in college/university administration or teaching. Areas of experience are decided upon in collaboration with a guiding higher education organization or institution, the faculty in the Higher Education Program, and the individual student.

Term Offered: Summer, Fall

HED 8960 Dissertation

[1-12 credit hours]

Original and specific research problem of a scholarly nature, requiring the application of advanced research skills and techniques to study. Students must take a minimum of 10 dissertation credit hours.

Term Offered: Spring, Summer, Fall

HED 8990 Independent Study In Higher Education

[1-3 credit hours]

Provides student the opportunity to work independently on a professional problem under the direction of a Higher Education Program faculty member.

Term Offered: Spring, Summer, Fall

RESM 5110 Quantitative Methods I

[3 credit hours]

This course introduces the major concepts of statistical description, including central tendency, dispersion, and relative position and relationship. Inferential methods such as t-tests, one-way analysis of variance, and multiple group analyses are also presented.

Term Offered: Spring, Summer, Fall

RESM 5210 Educational Testing And Grading

[3 credit hours]

This course introduces the development, administration and interpretation of teacher-made tests and other pupil assessments; basic principles underlying norm- and criterion-referenced tests; problems and issues in grading systems and assigning grades; standardized testing and Value-Added Models.

Term Offered: Spring, Summer, Fall

RESM 5220 Applied Assessment for Improved Practice

[3 credit hours]

This is an advanced course in classroom assessment with a focus on informed and applied evidence-based decision making. Key components are the analysis and reporting of results from assessment datasets, the creation of formative and summative assessment action plans based on analysis results, and the incorporation of 21st century technology tools to support assessment planning and instructional decisions.

Prerequisites: RESM 4200 with a minimum grade of C or RESM 5210 with a minimum grade of C

Term Offered: Summer

RESM 5310 Understanding and Consuming Research

[3 credit hours]

This course offers an introduction to the history and foundations of research processes from the consumer's perspective. It introduces qualitative, quantitative, and mixed methods approaches for understanding research problems.

Term Offered: Spring, Summer, Fall

RESM 5330 Qualitative Research I: Introduction And Basic Methods

[3 credit hours]

This course introduces history and theoretical underpinnings of qualitative research. Students then learn and practice fundamental methods of participant-observation, fieldnotes, interviewing, and transcription, and explore common models of qualitative research.

Term Offered: Summer, Fall

RESM 5550 Introduction to Research and Measurement (RESM) and Graduate Studies

[3 credit hours]

This course offers an introduction to the foundations of the research process and an exploration of the major program strands (research and evaluation design, data analysis and interpretation, development and validation of measures, and school-based classroom and program assessment). It also focuses on practical strategies and skills that promote successful graduate-level study.

Term Offered: Spring, Fall

RESM 5950 Workshop In Research And Measurement

[3 credit hours]

Each workshop is developed around a topic of interest and concern to inservice teachers and other educational personnel. Practical application of workshop topics will be emphasized.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer, Fall

RESM 6120 Quantitative Methods II

[3 credit hours]

This course covers the major inferential statistical techniques common to the behavioral sciences. Correlation, factorial analysis of variance, and linear regression are major topics. Computer applications are included.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer, Fall

RESM 6130 Multivariate Statistics

[3 credit hours]

This course covers multivariate analysis of variance, canonical correlation, discriminant analysis, repeated measures and factor analysis. Computer applications are included.

Prerequisites: RESM 6120 with a minimum grade of C or RESM 8120 with a minimum grade of C

Term Offered: Fall

RESM 6140 Advanced Quantitative Methods

[3 credit hours]

This course exposes students to various experimental designs, such as complete and fractional factorial designs, repeated measures designs, and nested designs. Both the conceptual rationale and the computational procedures are covered.

Prerequisites: RESM 6120 with a minimum grade of C or RESM 8120 with a minimum grade of C

RESM 6150 Structural Equation Modeling

[3 credit hours]

This course introduces structural equation modeling as a statistical method to assess the strengths of a priori relations among variables. Topics include path analysis and confirmatory factor analysis. Computer applications with AMOS are included.

Prerequisites: RESM 6120 with a minimum grade of C or RESM 8120 with a minimum grade of C

Term Offered: Spring

RESM 6160 Nonparametric Statistics

[3 credit hours]

This course introduces the most common nonparametric statistical techniques as well as recent developments in this field. Coverage includes contingency tables, binomial distribution tests, several rank tests and other distribution-free statistics.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Fall

RESM 6220 Measurement I

[3 credit hours]

This course introduces psychometric theories, with emphasis on classical test theory; reliability theory, including generalizability theory; approaches to validation; practical applications such as standard setting.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Fall

RESM 6230 Applied Measurement Research

[3 credit hours]

Applied practical experience in measurement analyses is emphasized and participants are introduced to a series of advanced measurement and research-related processes in this authentic experiential course.

Prerequisites: (RESM 6220 with a minimum grade of C or RESM 8220 with a minimum grade of C) and RESM 5110 with a minimum grade of C

Term Offered: Spring

RESM 6320 Research Design

[3 credit hours]

This course exposes students to quantitative and mixed method research approaches that are used in theses and dissertations. Competing designs for addressing research questions are compared. The purpose is to prepare students for their dissertation experience.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer, Fall

RESM 6340 Qualitative Research II: Design And Analysis

[3 credit hours]

This course takes student through the design, implementation, and write up a qualitative study. Topics include theoretical frameworks and research design; managing, analyzing and interpreting data; collaboration between researcher and researched; using computers in analysis.

Prerequisites: RESM 5330 with a minimum grade of C or RESM 7330 with a minimum grade of C

Term Offered: Spring

RESM 6350 Methods Of Survey Research

[3 credit hours]

This course contextualizes survey development within a broad theoretical framework and proceeds through the literature, problem, purpose, methods, and sampling. Particular emphasis is placed on the validity implications of each.

Prerequisites: RESM 6120 with a minimum grade of C

Term Offered: Fall

RESM 6360 Program Evaluation

[3 credit hours]

An overview of prominent human services program evaluation methods including objectives-based, experimental, statistical and economic approaches. Evaluation criteria, issues, ethics and politics are considered.

Prerequisites: RESM 5110 with a minimum grade of C or RESM 7110 with a minimum grade of C

Term Offered: Spring, Fall

RESM 6370 Fundamentals Of Grant Writing

[3 credit hours]

This seminar teaches participants about fundamentals of grant writing. Topics covered include: locating sources of funding, writing grants, designing evaluation instruments and administering grants.

Term Offered: Summer

RESM 6550 Statistical Analysis by Computer

[3 credit hours]

Course covers computer applications (SPSS, Excel) of statistical analyses. Statistical tests covered include descriptive, nonparametric, tests of mean differences, tests of association, and scaling techniques. Successful students generally will have completed a basic statistics class.

Prerequisites: RESM 5110 with a minimum grade of D- and RESM 7110 with a minimum grade of D-

Term Offered: Spring, Fall

RESM 6900 Research and Measurement Master's Portfolio

[1 credit hour]

This course is a one of the program completion options available for the Research and Measurement master's degree. This course is intended to be longitudinal with one credit hour completed each semester of the three-semester (full-time study) master's program. Upon program completion, portfolio contents should reflect samples of best works completed in each of the 9 courses comprising the master's core, the research and measurement core, and research and measurement concentration.

Term Offered: Spring, Summer, Fall

RESM 6940 Internships In Measurement, Evaluation, Research & Statistics

[3 credit hours]

This is a supervised field experience in measurement, evaluation, research design, or statistics in a variety of settings.

Term Offered: Spring, Fall

RESM 6960 Master's Thesis In Educational Research

[1-3 credit hours]

This option is open to a graduate student who elects the completion of a research thesis in fulfilling the research requirement of the master's degree.

Term Offered: Spring, Summer, Fall

RESM 6980 Master's Project In Educational Research

[1-3 credit hours]

This is a formal independent project applying principles of research and/or measurement to solve a particular problem and culminating in a written discourse.

RESM 6990 Master's Independent Study In Educational Research

[1-3 credit hours]

This is a formal exploration of a current topic in educational research, measurement, statistics, or program evaluation. The student meets with the instructor at arranged intervals without formal classes.

Term Offered: Spring, Summer

RESM 7110 Quantitative Methods I

[3 credit hours]

This course introduces the major concepts of statistical description, including central tendency, dispersion, and relative position and relationship. Inferential methods such as t-tests, one-way analysis of variance, and multiple group analyses are also presented.

Term Offered: Spring, Summer, Fall

RESM 7210 Educational Testing And Grading

[3 credit hours]

This course introduces the development, administration and interpretation of teacher-made tests and other pupil assessments; basic principles underlying norm- and criterion-referenced tests; problems and issues in grading systems and assigning grades; standardized testing and Value-Added Models.

Term Offered: Spring, Summer, Fall

RESM 7220 Applied Assessment for Improved Practice

[3 credit hours]

This is an advanced course in classroom assessment with a focus on informed and applied evidence-based decision making. Key components are the analysis and reporting of results from assessment datasets, the creation of formative and summative assessment action plans based on analysis results, and the incorporation of 21st century technology tools to support assessment planning and instructional decisions.

Prerequisites: RESM 4200 with a minimum grade of D- or RESM 5210 with a minimum grade of C or RESM 7210 with a minimum grade of C

Term Offered: Summer

RESM 7310 Understanding and Consuming Research

[3 credit hours]

This course offers an introduction to the history and foundations of research processes from the consumer's perspective. It introduces qualitative, quantitative, and mixed methods approaches for understanding research problems.

Term Offered: Spring, Summer, Fall

RESM 7330 Qualitative Research I: Introduction And Basic Methods

[3 credit hours]

This course introduces history and theoretical underpinnings of qualitative research. Students then learn and practice fundamental methods of participant-observation, fieldnotes, interviewing, and transcription, and explore common models of qualitative research.

Term Offered: Summer, Fall

RESM 7950 Workshop In Research And Measurement

[3 credit hours]

Each workshop is developed around a topic of interest and concern to inservice teachers and other educational personnel. Practical application of workshop topics will be emphasized.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer

RESM 7980 Special Topics In Research, Measurement, Statistics And Evaluation

[3 credit hours]

The study of a current topic or set of related topics in educational research, measurement, statistics, program evaluation and computer applications in quantitative and qualitative data analysis. The course is typically taught as a seminar.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer

RESM 8120 Quantitative Methods II

[3 credit hours]

This course covers the major inferential statistical techniques common to the behavioral sciences. Correlation, factorial analysis of variance, and linear regression are major topics. Computer applications are included.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer, Fall

RESM 8130 Multivariate Statistics

[3 credit hours]

This course covers multivariate analysis of variance, canonical correlation, discriminant analysis, repeated measures and factor analysis. Computer applications are included.

Prerequisites: RESM 6120 with a minimum grade of C or RESM 8120 with a minimum grade of C

Term Offered: Fall

RESM 8140 Advanced Quantitative Methods

[3 credit hours]

This course exposes students to various experimental designs, such as complete and fractional factorial designs, repeated measures designs, and nested designs. Both the conceptual rationale and the computational procedures are covered.

Prerequisites: RESM 6120 with a minimum grade of C or RESM 8120 with a minimum grade of C

RESM 8150 Structural Equation Modeling

[3 credit hours]

This course introduces structural equation modeling as a statistical method to assess the strengths of a priori relations among variables. Topics include path analysis and confirmatory factor analysis. Computer applications with AMOS are included.

Prerequisites: (RESM 6120 with a minimum grade of C or RESM 8120 with a minimum grade of C) and RESM 5110 with a minimum grade of C

Term Offered: Spring

RESM 8160 Nonparametric Statistics

[3 credit hours]

This course introduces the most common nonparametric statistical techniques as well as recent developments in this field. Coverage includes contingency tables, binomial distribution tests, several rank tests and other distribution-free statistics.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Fall

RESM 8180 Interdisciplinary Seminar In Educational Psychology, Research, And Social Foundations

[1 credit hour]

This proseminar will enable doctoral students to improve their understanding of the research process. Students will learn to ask research questions, choose alternative methodologies and interpret the validity of conclusions.

RESM 8220 Measurement I

[3 credit hours]

This course introduces psychometric theories, with emphasis on classical test theory; reliability theory, including generalizability theory; approaches to validation; practical applications such as standard setting.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Fall

RESM 8230 Applied Measurement Research

[3 credit hours]

Applied practical experience in measurement analyses is emphasized and participants are introduced to a series of advanced measurement and research-related processes in this authentic experiential course.

Prerequisites: (RESM 6220 with a minimum grade of C or RESM 8220 with a minimum grade of C) and RESM 5110 with a minimum grade of C

Term Offered: Spring

RESM 8320 Research Design

[3 credit hours]

This course exposes students to quantitative and mixed method research approaches that are used in theses and dissertations. Competing designs for addressing research questions are compared. The purpose is to prepare students for their dissertation experience.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer, Fall

RESM 8340 Qualitative Research II: Design And Analysis

[3 credit hours]

This course takes student through the design, implementation, and write up a qualitative study. Topics include theoretical frameworks and research design; managing, analyzing and interpreting data; collaboration between researcher and researched; using computers in analysis.

Prerequisites: RESM 5330 with a minimum grade of C or RESM 7330 with a minimum grade of C

Term Offered: Spring, Fall

RESM 8350 Methods Of Survey Research

[3 credit hours]

This course contextualizes survey development within a broad theoretical framework and proceeds through the literature, problem, purpose, methods, and sampling. Particular emphasis is placed on the validity implications of each.

Prerequisites: RESM 8120 with a minimum grade of C

Term Offered: Fall

RESM 8360 Program Evaluation

[3 credit hours]

An overview of prominent human services program evaluation methods including objectives-based, experimental, statistical and economic approaches. Evaluation criteria, issues, ethics and politics are included.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Fall

RESM 8370 Fundamentals Of Grant Writing

[3 credit hours]

This seminar teaches participants about fundamentals of grant writing. Topics covered include: locating sources of funding, writing grants, designing evaluation instruments and administering grants.

Term Offered: Summer

RESM 8380 Methods of Normative Theory Construction

[3 credit hours]

This course explores prominent methods and approaches to normative theory construction. The two approaches covered deontological and teleological.

Term Offered: Spring, Fall

RESM 8390 Methods of Conceptual Analysis and Textual Interpretation

[3 credit hours]

This course explores prominent methods and approaches Central Analysis and Textual Interpretation. The central goal of the course is to equip doctoral students to engage in theoretical research, the understanding and skill necessary to engage in theoretical research.

RESM 8550 Statistical Analysis by Computer

[3 credit hours]

Course covers computer applications (SPSS, Excel) of statistical analyses. Statistical tests covered include descriptive, nonparametric, tests of mean differences, tests of association, and scaling techniques. Successful students generally will have completed a basic statistics class.

Prerequisites: RESM 5110 with a minimum grade of D- and RESM 7110 with a minimum grade of D-

Term Offered: Spring, Fall

RESM 8940 Internships In Measurement, Evaluation, Research & Statistics

[3 credit hours]

This is a supervised field experience in measurement, evaluation, research design, or statistics in a variety of settings.

Term Offered: Spring, Summer, Fall

RESM 8960 Dissertation Research In Foundations Of Education

[1-12 credit hours]

This is a formal independent study culminating in a written discourse central to the advancement of knowledge in educational research design, statistics, measurement, or evaluation.

Term Offered: Spring, Summer, Fall

RESM 8990 Doctoral-Independent Study

[1-6 credit hours]

This is a formal exploration of a current topic in educational research, measurement, statistics, or program evaluation. The student meets with the instructor at arranged intervals without formal classes.

Term Offered: Spring, Summer, Fall

TSOC 5000 Introduction to Educational Theory and Social Foundations

[3 credit hours]

This course prepares master's students for professional activity and research in the interdisciplinary field of Social Foundations of Education. It draws on social sciences and humanities to interpret and critique the relationship between school and society.

Term Offered: Fall

TSOC 5100 Network Theory and Educational Reform

[3 credit hours]

This course examines intrapersonal and interpersonal principles of high performing teams and the impact of meaningful relationships both in real-world and virtual environments. Individual and group dynamics are explored through foundational (sociological, philosophical) and political lenses. The course explores elements of effective group membership and leadership in both theoretical and practical applications.

Term Offered: Spring, Summer, Fall

TSOC 5110 Modern Educational Controversies

[3 credit hours]

Examines controversial contemporary educational issues, the forces that perpetuate them and the socio-cultural contexts in which they exist. Teachers' work and ethical tenets shaping practice are also examined.

Term Offered: Spring, Summer

TSOC 5190 Summer Institute On Diversity In Education

[3 credit hours]

School personnel collaborate with persons from higher education, the community, and scholars who have created model multicultural/urban education programs to learn new ways of teaching and learning among diverse populations.

TSOC 5200 Sociology of Education

[3 credit hours]

Introduction to sociological theory and method through critical examination of the socio-cultural foundations of schooling in the United States, including purposes of schooling in a multicultural society and the resulting nature of teacher work.

Term Offered: Spring, Summer, Fall

TSOC 5210 Social Justice in American Society

[3 credit hours]

Examines through models of social justice how race, class, gender, ethnicity and disability intersect with power, culture, knowledge and ideology in American schools and other institutions to influence the lives of citizens in a multicultural society.

Term Offered: Spring

TSOC 5230 Critical Responses to Deculturalization

[3 credit hours]

In-depth history of racial and ethnic minorities in the U.S. and the ongoing tension between deculturalization and democratic pluralism in P-12 and higher education including current theories and practical applications.

Term Offered: Spring

TSOC 5300 Philosophy of Education

[3 credit hours]

The course explores the nature of philosophical inquiry as foundational to the theory and practice of education, including teaching, through the exploration of competing philosophical traditions. The course provides an opportunity for students to articulate their own philosophy of education.

Term Offered: Spring, Summer

TSOC 5400 History of Education

[3 credit hours]

This course examines the evolving role of schooling and teaching over time in the US as an instrument of education. It uses history to reflect on the relationship of schooling to other social institutions, groups of people, and the process of social change. It encourages students from across the spectrum of educational areas of study to historically contextualize their discipline and their own practice.

Term Offered: Spring, Fall

TSOC 5500 Anthropology of Education

[3 credit hours]

Examination of cross-cultural, comparative and other studies directed toward understanding processes of cultural transmission and transformation, and implications of anthropological research for contemporary issues in education.

Term Offered: Spring, Summer, Fall

TSOC 5600 Foundations of Peace Education

[3 credit hours]

The purpose of this course is to introduce the basic concepts, theories, and approaches to peace education. The course explores the theories of peace education, including pedagogical approaches to peace-learning. The course also introduces the substantive areas of peace education.

Term Offered: Summer, Fall

TSOC 5950 Workshop In Educational Theory And Social Foundations

[3 credit hours]

Each workshop is developed around a topic of interest and concern to inservice teachers and other educational personnel. Practical application of workshop topics will be emphasized.

Term Offered: Spring

TSOC 6000 Women, Culture And Pedagogy

[3 credit hours]

This course surveys works of prominent feminist scholars in order to address the impact of dominant ideology upon the lives of women and girls in American schools.

TSOC 6120 International Education

[3 credit hours]

Complex interrelationships between global issues and education systems will be examined. Emphasis will be on how education can be used to build a more global society. Some sections of the course will include an international field trip.

Term Offered: Spring, Fall

TSOC 6140 School-State Relations

[3 credit hours]

This course provides an examination of the historical, legal, and sociological interactions between state and schooling in the US. It explores the historical development of the social, political, and economic purposes of schooling and the impact on diverse populations. It offers students an opportunity to examine issues such as how schools have defined a good citizen and what they have done to create these in religious and secular means.

Term Offered: Spring, Fall**TSOC 6190 Seminar In Educational Theory/Social Foundations**

[3 credit hours]

The collaborative study of a specific topic in educational theory and social foundations by a group of advanced students under the direction of one or more professors.

Term Offered: Spring, Fall**TSOC 6220 Problems And Issues In Multicultural Education**

[3 credit hours]

Application of theoretical assumptions presented in TSOC 5210/7210 to US schools and classrooms, with particular attention given to program and curriculum issues, teachers and teaching policies, practices and procedures.

Prerequisites: TSOC 5210 with a minimum grade of D- or TSOC 7210 with a minimum grade of D-

TSOC 6240 Sociological Analyses Of Urban Education

[3 credit hours]

Development and dynamics of schooling in urban centers across the United States, including historical and critical analyses of current problems, issues and reform initiatives.

Prerequisites: TSOC 5200 with a minimum grade of D- or TSOC 5210 with a minimum grade of D- or TSOC 7200 with a minimum grade of D- or TSOC 7210 with a minimum grade of D-

Term Offered: Spring, Summer, Fall**TSOC 6310 Major Educational Theorists**

[3 credit hours]

An examination of selected educational philosophers who have addressed themselves to the problem of the ends and means of education from Classical Hellenic Times to the present.

TSOC 6320 Education And The Democratic Ethic

[3 credit hours]

Examination of the interdependence among education, democracy and ethics in the context of civic life. Applications made to the practice of schooling as cultural production in a democratic society.

Prerequisites: TSOC 5200 with a minimum grade of D- or TSOC 5300 with a minimum grade of D- or TSOC 5400 with a minimum grade of D- or TSOC 7200 with a minimum grade of D- or TSOC 7300 with a minimum grade of D- or TSOC 7400 with a minimum grade of D-

Term Offered: Spring, Fall**TSOC 6330 THE ETHICS OF WAR AND PEACE AND EDUCATION**

[3 credit hours]

The purpose of this seminar is to explore the ethics of war and peace and its implications for the moral and civic education of democratic citizens.

Term Offered: Spring**TSOC 6340 Human Rights Education**

[3 credit hours]

The purpose of this seminar is to explore the nature of human rights and human rights education. The origin, definition, content, scope, foundation, and correlative duties of human rights, as well as, the theory of human rights education will be explored.

Term Offered: Spring, Fall**TSOC 6350 Environmental Ethics and Education**

[3 credit hours]

The purpose of this seminar is to explore the nature of environmental ethics and its implications for educational theory, in particular moral and civic education.

Term Offered: Fall**TSOC 6360 Theories of Justice and Educational Policy**

[3 credit hours]

The purpose of this class is to explore prominent theories of distributive justice in a liberal democratic republic and to analyze key educational policy issues from the perspective of those theories.

Term Offered: Spring, Fall**TSOC 6900 Master's Seminar in Educational Theory and Social Foundations**

[3 credit hours]

Students are guided step by step to propose, research, and write a Master's thesis or project. Exact format and substance of the thesis or project is highly individualized, reflecting nature of students' interests, audiences, and purposes.

Term Offered: Spring, Fall**TSOC 6960 Master's Thesis In Educational Theory And Social Foundations**

[1-3 credit hours]

A formal, independent study culminating in a written discourse that advances our understanding of educational theory or social foundations.

Term Offered: Spring, Summer, Fall**TSOC 6980 Master's Project In Educational Theory And Social Foundations**

[1-3 credit hours]

A formal, independent project applying principles of educational theory or social foundations to analyze a particular problem and culminating in a written discourse.

Term Offered: Spring, Summer, Fall**TSOC 6990 Independent Study In Educational Theory And Social Foundations**

[1-3 credit hours]

Directed study of a current topic in educational theory and social foundations. The student meets with the instructor at arranged intervals without formal classes.

Term Offered: Spring, Summer, Fall**TSOC 7100 Network Theory and Educational Reform**

[3 credit hours]

This course examines intrapersonal and interpersonal principles of high performing teams and the impact of meaningful relationships both in real-world and virtual environments. Individual and group dynamics are explored through foundational (sociological, philosophical) and political lenses. The course explores elements of effective group membership and leadership in both theoretical and practical applications.

Term Offered: Spring, Summer, Fall

TSOC 7110 Modern Educational Controversies

[3 credit hours]

Examines controversial contemporary educational issues, the forces that perpetuate them and the socio-cultural contexts in which they exist. Teachers' work and ethical tenets shaping practice are also examined.

Term Offered: Spring, Summer

TSOC 7190 Summer Institute On Diversity In Education

[3 credit hours]

School personnel collaborate with persons from higher education, the community, and scholars who have created model multicultural/urban education programs to learn new ways of teaching and learning among diverse populations.

TSOC 7200 Sociology of Education

[3 credit hours]

Introduction to sociological theory and method through critical examination of the socio-cultural foundations of schooling in the United States, including purposes of schooling in a multicultural society and the resulting nature of teacher work.

Term Offered: Spring, Summer, Fall

TSOC 7210 Social Justice in American Society

[3 credit hours]

Examines through models of social justice how race, class, gender, ethnicity and disability intersect with power, culture, knowledge and ideology in American schools and other institutions to influence the lives of citizens in a multicultural society.

Term Offered: Spring

TSOC 7230 Critical Responses to Deculturalization

[3 credit hours]

In-depth history of racial and ethnic minorities in the U.S. and the ongoing tension between deculturalization and democratic pluralism in P-12 and higher education including current theories and practical applications.

Term Offered: Spring

TSOC 7300 Philosophy of Education

[3 credit hours]

The course explores the nature of philosophical inquiry as foundational to the theory and practice of education, including teaching, through the exploration of competing philosophical traditions. The course provides an opportunity for students to articulate their own philosophy of education.

Term Offered: Spring, Summer

TSOC 7400 History of Education

[3 credit hours]

This course examines the evolving role of schooling and teaching over time in the US as an instrument of education. It uses history to reflect on the relationship of schooling to other social institutions, groups of people, and the process of social change. It encourages students from across the spectrum of educational areas of study to historically contextualize their discipline and their own practice.

Term Offered: Spring, Fall

TSOC 7500 Anthropology of Education

[3 credit hours]

Examination of cross-cultural, comparative and other studies directed toward understanding processes of cultural transmission and transformation, and implications of anthropological research for contemporary issues in education.

Term Offered: Spring, Summer, Fall

TSOC 7600 Foundations of Peace Education

[3 credit hours]

The purpose of this course is to introduce the basic concepts, theories, and approaches to peace education. The course explores the theories of peace education, including pedagogical approaches to peace-learning. The course also introduces the substantive areas of peace education.

Term Offered: Summer, Fall

TSOC 7950 Workshop In Educational Theory And Social Foundations

[3 credit hours]

Each workshop is developed around a topic of interest and concern to inservice teachers and other educational personnel. Practical application of workshop topics will be emphasized.

TSOC 8000 Women, Culture, And Pedagogy

[3 credit hours]

This course surveys works of prominent feminist scholars in order to address the impact of dominant ideology upon the lives of women and girls in American schools.

TSOC 8100 Seminar in Social & Philosophical Foundations of Education

[3 credit hours]

This course prepares doctoral students for professional activity and research in the interdisciplinary field of Social Foundations of Education. It draws on social sciences and humanities to interpret and critique the relationship between school and society.

Term Offered: Fall

TSOC 8120 International Education

[3 credit hours]

Complex interrelationships between global issues and education systems will be examined. Emphasis will be on how education can be used to build a more global society. Some sections of the course will include an international field trip.

Term Offered: Spring, Fall

TSOC 8140 School-State Relations

[3 credit hours]

This course provides an examination of the historical, legal, and sociological interactions between state and schooling in the US. It explores the historical development of the social, political, and economic purposes of schooling and the impact on diverse populations. It offers students an opportunity to examine issues such as how schools have defined a good citizen and what they have done to create these in religious and secular means.

Term Offered: Spring, Fall

TSOC 8150 CULTURAL PERSPECTIVES IN LEARNING AND DEVELOPMENT

[3 credit hours]

This course aims to develop a broader understanding of the role of culture in psychological processes and the implications of such psychological understanding for a culturally diverse society.

Term Offered: Spring

TSOC 8180 Interdisciplinary Seminar In Educational Psychology, Research, And Social Foundations

[1 credit hour]

The proseminar will enable doctoral students to improve their understanding of the research process. Students will learn to ask research questions, choose alternative methodologies and interpret the validity of conclusions.

TSOC 8190 Seminar In Educational Theory/Social Foundations

[3 credit hours]

The collaborative study of a specific topic in educational theory and social foundations by a group of advanced students under the direction of one or more professors.

Term Offered: Spring, Fall

TSOC 8220 Problems And Issues In Multicultural Education

[3 credit hours]

2Application of theoretical assumptions presented in TSOC 5210/7210 to US schools and classrooms, with particular attention given to program and curriculum issues, teachers and teaching policies, practices and procedures.

Prerequisites: TSOC 5210 with a minimum grade of D- or TSOC 7210 with a minimum grade of D-

TSOC 8240 Sociological Analyses Of Urban Education

[3 credit hours]

Development and dynamics of schooling in urban centers across the United States, including historical and critical analyses of current problems, issues and reform initiatives.

Prerequisites: TSOC 5200 with a minimum grade of D- or TSOC 5210 with a minimum grade of D- or TSOC 7200 with a minimum grade of D- or TSOC 7210 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

TSOC 8310 Major Educational Theorists

[3 credit hours]

An examination of selected educational philosophers who have addressed themselves to the problem of the ends and means of education from Classical Hellenic Times to the present.

Term Offered: Spring

TSOC 8320 Education And The Democratic Ethic

[3 credit hours]

Examination of the interdependence among education, democracy and ethics in the context of civic life. Applications made to the practice of schooling as cultural production in a democratic society.

Prerequisites: TSOC 5200 with a minimum grade of D- or TSOC 5300 with a minimum grade of D- or TSOC 5400 with a minimum grade of D- or TSOC 7200 with a minimum grade of D- or TSOC 7300 with a minimum grade of D- or TSOC 7400 with a minimum grade of D-

Term Offered: Spring, Fall

TSOC 8330 THE ETHICS OF WAR AND PEACE AND EDUCATION

[3 credit hours]

The purpose of this seminar is to explore the ethics of war and peace and its implications for the moral and civic education of democratic citizens.

Term Offered: Spring

TSOC 8340 Human Rights Education

[3 credit hours]

The purpose of this seminar is to explore the nature of human rights and human rights education. The origin, definition, content, scope, foundation, and correlative duties of human rights, as well as, the theory of human rights education will be explored.

Term Offered: Spring, Fall

[3 credit hours]

The purpose of this seminar is to explore the nature of environmental ethics and its implications for educational theory, in particular moral and civic education.

Term Offered: Fall

TSOC 8360 Theories of Justice and Educational Policy

[3 credit hours]

The purpose of this class is to explore prominent theories of distributive justice in a liberal democratic republic and to analyze key educational policy issues from the perspective of those theories.

Term Offered: Spring, Fall

TSOC 8380 Methods of Normative Theory Construction

[3 credit hours]

The purpose of this course is to explore methods of and approaches to normative theory construction. The central goal of the course is to equip doctoral students in the field of educational theory and social foundations, among other students whose fields engage in normative theory, the understanding and skill necessary to engage in normative theory construction. Normative theory refers to systematic moral, political, social, and educational conceptions that rationally account for what ought to be (rather than empirical theory that accounts for what is). In the discipline of normative theorizing a number of methods of and approaches to theory construction have been developed as a means to the development and analysis of normative theory. There are two main approaches to theory construction in this field: deontological and teleological approaches.

Term Offered: Spring, Fall

TSOC 8390 Methods of Conceptual Analysis and Textual Interpretation

[3 credit hours]

The purpose of this research methods course is to explore prominent methods and approaches Central Analysis and Textual Interpretation. These methods and approaches constitute the research tools in the field of educational theory and social foundations, among other fields of inquiry. The central goal of the course is to equip doctoral students in field of educational theory and social foundations, among other students whose fields engage in theoretical research, the understanding and skill necessary to engage in theoretical research.

TSOC 8960 Dissertation Research In Foundations Of Education

[1-12 credit hours]

A formal, independent study culminating in a written discourse central to the advancement of knowledge in educational theory or social foundations.

Term Offered: Spring, Summer, Fall

TSOC 8990 Independent Study In Educational Theory And Social Foundations

[1-6 credit hours]

Directed study of a current topic in educational theory and social foundations. The student meets with the instructor at arranged intervals without formal classes.

Term Offered: Spring, Summer, Fall

Certificate in Culture and Change in Institutions

The Certificate in Culture and Change in Institutions is designed for professionals working in a variety of educational environments including health and social service organizations, PreK-12 schools, community colleges, universities, and non-governmental organizations. This certificate provides students with the concepts, skills, and values to recognize and use culture more effectively in their professional practices as agents in institutional settings. Courses in the certificate program foster awareness and understanding of culture and power, and also deliver practical strategies and techniques for individuals working in institutional settings to contribute to dynamic institutional culture that extends access and privilege to individuals from all cultural backgrounds and supports enactment of our national democratic values.

The Certificate is a 12 semester hour program. Courses may be included as part of a master's program in theory and social foundations or a doctoral degree educational foundations. Coursework can be completed on campus or through a combination of on-campus and online courses.

Admission to the Certificate in Culture and Change in Institutions

In addition to admission requirements of the College of Graduate Studies, admission to the certificate program requires the following:

- A baccalaureate degree from an accredited college or university
- A well-written statement of purpose describing your background and goals as well as the importance of this certificate program in achieving those goals
- Two letters of recommendation regarding your potential for doing graduate level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this certificate program

The certificate program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Two letters of recommendation

Requirements for the Certificate in Culture and Change in Institutions

For the Certificate, students must complete the following program requirements:

- A minimum of 12 semester hours of approved graduate course work
- Completion of at least four of the following: EDP 6150/8150, TSOC 5100/7100, 5210/7210, 5230/7230, or 6320/8320

Courses may be included as part of a master's or doctoral degree program as approved by the student's faculty advisor. Master's level courses (5000/6000 level) may be included as part of a master's plan of study. Doctoral level courses (7000/8000 level) may be included as part of a doctoral plan of study.

All coursework and requirements of the certificate must be taken within a four-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the certificate is required after 6 credit hours. The certificate plan of study must include the following within the 12 semester hour minimum:

- 12 credits of specialization in culture and change in institutions

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Certificate in Culture and Change in Institutions. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Culture and Change in Institutions		
Select four of the following:		12
EDP 6150/8150	CULTURAL PERSPECTIVES IN LEARNING AND DEVELOPMENT	
TSOC 5100/7100	Network Theory and Educational Reform	
TSOC 5210/7210	Social Justice in American Society	
TSOC 5230/7230	Critical Responses to Deculturalization	
TSOC 6320/8320	Education And The Democratic Ethic	
Total Hours		12

1. Identify the concepts, skills, and values to work effectively toward increasing equity, social justice, and diversity
2. Identify key concepts and values in democratic philosophy as articulated in multicultural, foundational works on democracy
3. Explain critical theories relevant to oppression, democracy, and liberation
4. Analyze and interpret everyday operations of agencies and institutions, including but not limited to schools
5. Reflect on ability to work for positive cultural change in institutions and identify barriers to actualizing that change
6. Interpret how systemic structures of oppression, democracy, and liberation occur across the spectrum of social institutions

Certificate in Educational Assessment Specialist

The Certificate in Educational Assessment Specialist is designed to assist teachers, principals and superintendents to obtain the education needed to use data analytics to meet the challenges of the modern school and promote student learning. Students will acquire skills necessary to meet the data-informed decision making and accountability challenges demanded in the current educational environment.

The Certificate is a 12 semester hour program. The certificate is available to students from any major and courses may be included as part of a master's program with the approval of the faculty advisor. Coursework includes three online courses and a hands-on practicum completed in the student's school setting. The practicum experience is guided by University research and measurement faculty.

Admission to the Certificate in Educational Assessment Specialist

In addition to admission requirements of the College of Graduate Studies, admission to the certificate program requires the following:

- A baccalaureate degree from an accredited college or university
- A well-written statement of purpose describing your background and goals as well as the importance of this certificate program in achieving those goals
- Three letters of recommendation regarding your potential for doing graduate level work. Letters should be recommendations from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this certificate program

The certificate program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

Requirements for the Certificate in Educational Assessment Specialist

For the Certificate, students must complete the following program requirements:

- A minimum of 12 semester hours of approved graduate course work
- Completion of the following: RESM 5110, 5210, 5310, and 6940

Courses may be included as part of a master's degree program as approved by the student's faculty advisor.

All coursework and requirements of the certificate must be taken within a four-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the certificate is required after 6 credit hours. The certificate plan of study must include the following within the 12 semester hour minimum:

- 12 credits of specialization in educational assessment

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Educational Assessment Specialist. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Educational Assessment		
RESM 5110	Quantitative Methods I	3
RESM 5210	Educational Testing And Grading	3
RESM 5310	Understanding and Consuming Research	3
RESM 6940	Internships In Measurement, Evaluation, Research & Statistics	3
Total Hours		12

Certificate in Foundations of Peace Education

The Certificate in Foundations of Peace Education is designed for educational professionals working in a variety of educational environments, ranging from PreK-12 schools, community colleges, universities, and non-governmental organizations. This certificate will provide students with the concepts, skills, and values to infuse peace education throughout the curriculum, thereby providing them with greater opportunities to be hired in a variety of educational settings.

The Certificate is a 12 semester hour program. The certificate is available to students from any major and courses may be included as part of a master's or doctoral program with the approval of the faculty advisor. Coursework can be completed online, on-campus or through a combination of on-campus and online courses.

Admission to the Certificate in Foundation of Peace Education

In addition to admission requirements of the College of Graduate Studies, admission to the certificate program requires the following:

- A baccalaureate degree from an accredited college or university
- A well-written statement of purpose describing your background and goals as well as the importance of this certificate program in achieving those goals
- Two letters of recommendation regarding your potential for doing graduate level work. Letters should be recommendations from professionals such as an undergraduate major advisor, current

employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this certificate program

The certificate program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Two letters of recommendation

Requirements for the Certificate in Foundations of Peace Education

For the Certificate, students must complete the following program requirements:

- A minimum of 12 semester hours of approved graduate course work
- Completion of TSOC 5600/7600
- Completion of at least three additional courses in educational psychology or theory and social foundations as approved by the faculty advisor

Courses may be included as part of a master's or doctoral degree program as approved by the student's faculty advisor. Master's level courses (5000/6000 level) may be included as part of a master's plan of study. Doctoral level courses (7000/8000 level) may be included as part of a doctoral plan of study.

All coursework and requirements of the certificate must be taken within a four-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the certificate is required after 6 credit hours. The certificate plan of study must include the following within the 12 semester hour minimum:

- 12 credits of specialization in peace education

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Certificate in Foundations of Peace Education. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Core in Peace Education		
TSOC 5600/7600	Foundations of Peace Education	3
Specialization in Peace Education		
Select three of the following:		9
EDP 6120/8120	School Violence Theory, Prevention, and Intervention

Certificate for Principal Licensure

The Certificate for Principal Licensure is designed for Ohio educators who hold a master's degree in an education related field and wish to earn a license as a building level administrator. This certificate program includes coursework that will lead toward initial administrative license in grades PreK to 6, grades 4 to 8, or grades 5 to 12 for Ohio.

The certificate is a 21 semester hour program. Coursework in educational administration and supervision includes 220 hours of field experience. Coursework is completed through a combination of on-campus and online courses.

Students who complete the Graduate Certificate are Educational Leaders who have knowledge and ability to:

- Facilitate the development of a school vision of learning supported by the school community
- Effectively manage an organization's operations and resources in a way that promotes a safe, efficient and effective learning environment
- Demonstrate successful collaboration techniques for working with families and other community members
- Demonstrate application of school law, ethics, and policy to ensure equity for all children within a school community
- Apply leadership skills in the development, implementing, and evaluating of programs and people in real life school settings
- Develop personal understandings of leadership as it pertains to self
- Create a school culture that promotes student learning and professional growth
- Complete a teacher evaluation process
- Analyze multiple forms of school data in order to lead school improvement efforts
- Demonstrate leadership theories and reflective practice in the decision-making process

ADMISSION TO THE CERTIFICATE FOR PRINCIPAL LEADERSHIP

In addition to admission requirements of the college of Graduate Studies, admission to the certificate program requires the following:

- A master's degree from an accredited college or university
- An overall undergraduate GPA of 3.0 or higher
- A current Ohio educator's license
- One letter of recommendation from a direct supervisor addressing formal teaching evaluations and who is knowledgeable about your ability to engage in graduate work in this certificate program

The certificate program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

WHAT TO SUBMIT WITH YOUR APPLICATION

- Official transcripts from all institutions of higher education
- Copy of current, valid teaching license(s)
- One letter of recommendation
- Resume or curriculum vitae

REQUIREMENTS FOR THE CERTIFICATE for Principal Licensure

For the Certificate, students must complete the following program requirements:

- A minimum of 21 semester hours of approved graduate course work
- Completion of the following: EDAS 8000, 8010, 8020, 8110, 8150, 8440, and 8190

Courses may be included as part of a doctoral degree program as approved by the student's faculty advisor.

All coursework and requirements of the certificate must be taken within a four-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the certificate is required after 6 credit hours. The certificate plan of study must include the following within the 21 semester hour minimum:

- 21 credits of specialization in educational administration and supervision

OTHER REQUIREMENTS

Prior to Applying for Ohio Administrator License

- Two years of successful teaching experience for your licensure area
- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com/>) (OAE) Content Assessment(s) for the endorsement

Doctor of Education in Educational Administration and Supervision

Students in the Doctor of Education in Educational Administration and Supervision study to become effective leaders in Pre-K to grade 12 schools in the U.S. They use research-proven methods to guide their thinking about schools to support innovative and responsive models of education. The program allows students to build an area of research specialization that caters to their professional goals and/or personal interests. Students could develop a program that prepares to serve a PreK-12 district, become faculty in educational leadership, or assume a leadership role in a public or private organization.

The EdD in Educational Administration and Supervision is a 60 semester hour program. Students take courses in educational leadership along with education courses selected with faculty based on the student's interests and goals. The program culminates with the completion of original research addressing a problem in educational leadership based on the student's area of concentration. Coursework is completed through a combination of on-campus and online courses.

Admission to the EdD in Educational Administration and Supervision

In addition to admission requirements of the College of Graduate Studies, admission to the doctoral program requires the following:

- A master's degree from an accredited college or university
- A minimum GPA of 3.5 on a 4.0 scale for all previous graduate academic work

- Previous academic work necessary to successfully complete a doctoral program in the area of study
- A statement of purpose that describes why you wish to pursue this doctoral program and includes information on previous study, educational experience, professional accomplishments, immediate and future professional goals, a proposed time schedule for completing the degree, and any other information that you believe is relevant for admission into this doctoral degree program
- Evidence of academic writing ability such as a master's thesis, proctored writing sample, a written research report, one or more reprints of publications, a paper presented to a professional society, or similar evidence
- Current resume reflecting educational and work history, professional and volunteer experience

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- A sample of academic writing (e.g., report, thesis, project, or academic paper)
- Resume or curriculum vitae

A professional interview may be required after the completion of the written application.

Requirements for the DE in Educational Administration and Supervision

For the Doctor of Education in Educational Administration and Supervision degree, students must complete the following program requirements:

- A minimum of 60 semester hours of approved doctoral level (7000/8000 level) course work
- A minimum of 18 semester hours of educational leadership core including EDAS 8110, 8220, 8420, 8440, 8620, and 8930
- A minimum of 12 semester hours of research tools
- A minimum of 12 semester hours of research specialization for educational leadership with courses pre-approved by the faculty advisor
- A written comprehensive (major) examination
- A minimum of 18 semester hours of dissertation research
- A oral presentation and defense of a dissertation research proposal
- An oral presentation and defense of the completed dissertation research in a public forum

- A written document of the completed dissertation research in approved style and format

All coursework and requirements of the doctoral degree must be taken within a seven-year period immediately preceding the date the degree is awarded.

Additional information and guidelines for the doctoral program are provided in the JHCOE **Doctoral Student Handbook**.

Plan of Study

A plan of study identifying the courses for the doctoral degree is required before 18 credit hours are completed, generally by the end of the first year of full time study. The doctoral plan of study must include the following within the 60 semester hour minimum:

- 18 semester hours of educational leadership core
 - EDAS 8110, 8220, 8420, 8440, 8620, and 8930 are required
- 12 semester hours of research tools courses
- 12 semester hours of research specialization for educational leadership
- 18 semester hours of dissertation research
- Comprehensive written examinations

Other Program Requirements

Coursework Phase

- A doctoral program committee is required before the completion of 18 credit hours. The doctoral program committee has a minimum of three members who are selected from the membership of the graduate faculty of the University. The doctoral program committee is responsible for assisting the student in the development of a plan of study and assuring competence by overseeing the comprehensive written examination.
- A plan of study is required before the completion of 18 credit hours. The plan of study must be approved by the doctoral program committee, department chairperson, and associate dean of the college, and submitted to the College of Graduate Studies. Revisions to the plan of study must also be approved and updates submitted to the College of Graduate Studies, usually within the semester a revision occurs.

Dissertation Research Phase

- A doctoral dissertation committee is required immediately after the completion of the required coursework, comprehensive written examination, and comprehensive oral examination. The dissertation committee has a minimum of four graduate faculty members including one who is not in the discipline major. The dissertation committee is responsible for guiding dissertation research and approving the dissertation research proposal and the completed dissertation research, both the written dissertation and oral dissertation defense. Student must work closely with the committee throughout the dissertation process.

- All research must be approved by the Institutional Research Board before beginning any phase of the research study. Student must complete IRB training as defined by the University's Human Research Protection Program.
- A public defense of the dissertation is required.
- The final written dissertation must be approved by the dissertation committee and formatted according the guidelines of the college and the College of Graduate Study. Electronic submission of the dissertation to *OhioLINK* is mandatory.

1. lead an organization;
2. understand, interpret, and implement policy to achieve justice for all stakeholders;
3. understand and implement finance in public education or other public institutions;
4. discuss and apply legal principles governing public education; and
5. interpret and engage in current research impacting the field.

Education Specialist in Administration and Supervision

The Educational Specialist degree in Administration and Supervision is designed for educators who hold a master's degree and wish to become advanced practitioners and school leaders. This EdS meets the needs of individuals whose career goals include licensure for advanced administrative positions in public and private schools (e.g., district administrator, building administrator).

The EdS in Administration and Supervision is a 36 semester hour program. Students take courses in their area of concentration at the specialist level (beyond the master's). The degree culminates in a practicum experience working in a school setting. Coursework that will lead toward licensure may be included as part of the degree requirements. Coursework is completed through a combination of on-campus and online courses.

Admission to the EdS in Administration and Supervision

In addition to admission requirements of the College of Graduate Studies, admission to the education specialist program requires the following:

- A master's degree from an accredited institution
- A minimum 3.25 cumulative GPA on a 4.0 scale in all graduate work
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals and demonstrating your writing ability
- Three letters of recommendation regarding your ability and character to succeed in this degree program from academic professionals

The education specialist program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

Requirements for the EdS in Administration and Supervision

For the Education Specialist degree, students must complete the following program requirements:

- A minimum of 36 semester hours of approved graduate coursework beyond the master's level (7000 or 8000 level)
- Completion of a core course in administration and supervision (EDAS 8640)

- An education specialist practicum experience (EDAS 7920), which may include field experiences, internships, or other professional projects

In addition, no more than six semester hours of credit from any combination of workshops (7950), problems or special topics courses (7980), and independent studies (7990) may be included in the degree program.

All coursework and requirements of the specialist degree must be taken within a six-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the specialist degree is required after 12 credit hours, generally at the end of the first semester of full time study. The specialist plan of study must include the following within the 36 semester hour minimum:

- 3 credits of required core
- 30 credits of specialization
- 3 credits of education specialist practicum

Licensure or endorsement may require additional semester hours to fulfill the credential requirements as well as degree requirements.

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Education Specialist in Administration and Supervision. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Additional hours are required to fulfill licensure requirements.

Code	Title	Hours
Administration and Supervision Core		3
EDAS 8640	Leading Systems Change	
Specialization in Administration and Supervision		
Select 30 credits as approved by faculty advisor		30
Education Specialist Practicum		3
EDAS 7920	Specialist Project In Educational Administration	
Total Hours		36

1. Demonstrate critical thinking, applying, analyzing, synthesizing, and/or evaluating information related to school and/or district leadership
 2. Conduct and present original research that includes a review of literature, research statement, methods, findings, and implications
 3. Integrate leadership theory in order to analyze problems in schools and propose solutions
 4. Use excellent oral and written skills for communication
1. Analyze organizational change by integrating theories of leadership and change models
 2. Demonstrate critical thinking, applying, analyzing, synthesizing, and/or evaluating information related to school and/or district leadership.
 3. Demonstrate leadership theories and practices of school leadership.
 4. Use excellent oral and written skills for communication

Master of Education in Educational Administration and Supervision

The Master of Education in Educational Administration and Supervision is designed to develop instructional leaders who can use data for school improvement to enhance student learning. Students are prepared for practice by mastering knowledge, practicing skills and developing moral and ethical standards for leadership.

The ME in Educational Administration and Supervision is a 30 semester hour program. Students take courses in educational administration along with education courses selected with a faculty adviser based on the student's interests and goals. The program culminates with the completion of a master's research seminar, research-based project, thesis, or practicum experience depending on the student's interest. Coursework is completed through a combination of on-campus and online courses.

For students who wish to earn a license as building level administrator, this program includes coursework that will lead toward initial administrative license in grades PreK to 6, grades 4 to 8, or grades 5 to 12 for Ohio and, at the same time, meet the requirements for a Master of Education degree.

Admission to the ME in Educational Administration and Supervision

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- One letter of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- One letter of recommendation
- Resume

Requirements for the ME in Educational Administration and Supervision

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- An area of specialization in administration and supervision that includes EDAS 6000, 6010, 6020, 6110, 6150, 6230, and 6440, with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A thesis, project, research seminar, or practicum

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 21 credits of specialization in administration and supervision
 - EDAS 6000, 6010, 6020, 6110, 6150, 6230, and 6440 are required
- 6 credits of a supporting area
- 3 credits of thesis, project, research seminar, or practicum

Licensure or endorsement requires documentation of teaching experience to fulfill the credential requirements as well as degree requirements. Students should consult their advisor for detailed information.

Other Requirements

Prior to Applying for Ohio Administrator License

- Two years of successful teaching experience for your licensure area
- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com/>) (OAE) Content Assessment for the licensure area

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Administration and Supervision. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Administration and Supervision		
Select the following:		21
EDAS 6000	The Individual In Organizations	
EDAS 6010	Leadership in School Curriculum	
EDAS 6020	Instructional Leadership and Supervision	
EDAS 6110	Legal Aspects Of School Administration	
EDAS 6150	The Administrative Experience	
EDAS 6230	Community And Schools	
EDAS 6440	Equity Issues In Educational Finance And Economics	
Supporting Area		
Select one of the following:		3
RESM 5110	Quantitative Methods I	
RESM 5210	Educational Testing And Grading	
RESM 5310	Understanding and Consuming Research	
RESM 5330	Qualitative Research I: Introduction And Basic Methods	
Select 3 credits of educational psychology or theory and social foundations as approved by advisor		3
Master's Thesis, Project, or Research Seminar		
Select one of the following:		3
EDAS 6190	Integrated Experiences: Prac i (Required for Licensure)	
EDAS 6900	Master's Seminar In Educational Administration And Supervision	
EDAS 6920	Master's Project In Educational Administration	
EDAS 6960	Master's Thesis In Educational Administration	
Total Hours		30

1. Develop personal understandings of leadership as it pertains to self
2. Develop a shared vision for learning in a school
3. Create a school culture that promotes student learning and professional growth
4. Demonstrate the ability to engage and collaborate with families and the community
5. Complete a teacher evaluation process
6. Analyze multiple forms of school data in order to lead school improvement efforts
7. Demonstrate knowledge of effective management strategies for school building operations
8. Demonstrate leadership theories and reflective practice in the decision making process
9. Demonstrate practices of integrity and ethical behavior that support the academic success for students

Master of Education in Educational Psychology

The Master of Education in Educational Psychology is designed for students who are interested in the study and application of the psychological dimensions of education including teaching, learning, and human development. Students work with faculty to choose a

range of courses focused on their particular interest within educational psychology.

The ME in Educational Psychology is a 30 semester hour program. Students take courses in educational psychology along with education courses selected with a faculty adviser based on the student's interests and goals. The program culminates with the completion of a research-based project or thesis depending on the student's interest. Coursework is completed through a combination of on-campus and online courses.

Admission to the ME in Educational Psychology

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

Requirements for the ME in Educational Psychology

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- An area of specialization in educational psychology that includes EDP 5110, with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A thesis or project

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

PLAN OF STUDY

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 18 credits of specialization in educational psychology
 - EDP 5110 is required
- 9 credits of a supporting area
- 3 credits of thesis, project, or research seminar

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Educational Psychology. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Educational Psychology		
Select the following:		18
EDP 5110	Advanced Educational Psychology	
Select 15 credits as approved by faculty advisor		
Supporting Area		
Select 9 credits as approved by advisor		9
Master's Thesis or Project		
Select one of the following:		3
EDP 6960	Master's Thesis In Educational Psychology	
EDP 6980	Master's Project In Educational Psychology	
Total Hours		30

1. Describe, interpret, compare, and explain the theoretical foundations of human learning, cognition, motivation and development.
 2. Summarize and describe specific quantitative and qualitative research methodologies.
 3. Identify and evaluate research methodologies appropriate for examining different kinds of research questions.
 4. Demonstrate expertise (in-depth knowledge, criticize and analyze, evaluate and question existing literature) within a particular area in educational psychology that is of interest to them.
 5. Propose, design and conduct independent research in their chosen area of interest and expertise.
5. That is, students will integrate theoretical knowledge and research expertise to conduct research.
- i. Use appropriate quantitative statistical methods, or qualitative methods for the investigation.
 - ii. Articulate conclusions drawn from the data produced by the investigation.
 - iii. Defend the conclusions drawn from the data by relating the conclusions to the theoretical perspective used to conduct the investigation.

6. Appreciate the interconnections between the multiple theoretical frameworks within educational psychology
7. Appreciate the importance interdisciplinary considerations (e.g., links between educational psychology, educational sociology, curricular issues) in addressing educational issues

Master of Education in Educational Research and Measurement

The Master of Education in Educational Research and Measurement is designed for students who are interested in the development of expertise in the design, execution, and interpretation of applied research, both quantitative and qualitative, and a deep understanding of the theoretical foundations of research and measurement. Students work with faculty to choose a range of courses focused on their particular interest within educational research and measurement. Areas of focus include statistics, measurement, or evaluation.

The ME in Educational Research and Measurement is a 30 semester hour program. Students take courses in research and measurement along with education course selected with a faculty adviser based on the student's interests and goals. The program culminates with the completion of a master's portfolio, master's internship, research-based project, or thesis depending on the student's interest. Coursework is completed through a combination of on-campus and online courses.

Admission to the ME in Educational Research and Measurement

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

Requirements for the ME in Educational Research and Measurement

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- A core in research and measurement that includes RESM 5110, 5330, and 5550, with courses approved by faculty advisor
- An area of specialization in research and measurement that includes RESM 5310, 6120, 6220, and 6350, with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A thesis, project, internship, or portfolio

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

PLAN OF STUDY

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 9 credits of research and measurement core
 - RESM 5110, 5330, and 5550 are required
- 12 credits of specialization in research and measurement
 - RESM 5310, 6120, 6220, and 6350 are required
- 6 credits of a supporting area
- 3 credits of thesis, project, internship, or portfolio

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Educational Research and Measurement. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Research and Measurement Core		
Select the following:		9
RESM 5110	Quantitative Methods I	
RESM 5330	Qualitative Research I: Introduction And Basic Methods	
RESM 5550	Introduction to Research and Measurement (RESM) and Graduate Studies	

Specialization in Educational Research and Measurement	
Select the following:	12
RESM 5310	Understanding and Consuming Research
RESM 6120	Quantitative Methods II
RESM 6220	Measurement I
RESM 6350	Methods Of Survey Research
Supporting Area	
Select 6 credits as approved by advisor	6
Master's Thesis, Project, Internship, or Portfolio	
Select one of the following:	3
RESM 6900	Research and Measurement Master's Portfolio (Portfolio)
RESM 6940	Internships In Measurement, Evaluation, Research & Statistics
RESM 6960	Master's Thesis In Educational Research
RESM 6980	Master's Project In Educational Research
Total Hours	30

Students in the RESM maser's program will be prepared in the following areas:

1. Research Foundations (Quantitative and Qualitative)
2. Research Design
3. Data Analysis and Interpretation
4. Computer-Supported Data Analysis (Quantitative and Qualitative)
5. Development and Validation of Measures
6. Communication and Collaboration

Master of Education in Educational Technology

The Master of Education in Educational Technology degree is designed to meet the needs of those desiring to become specialists in the field of educational technology in positions at school, district, college and university levels as well as non-academic environments in industry.

The ME in Educational Technology is a 30 semester hour program. Students take courses in educational technology along with education courses selected with a faculty adviser based on the student's interests and goals. The program culminates with the completion of a master's research seminar, research-based project, or thesis depending on the student's interest. Coursework is completed online.

Admission to the ME in Educational Technology

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are

knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Three letters of recommendation
- Statement of purpose
- Resume or Curriculum Vitae

REQUIREMENTS FOR THE ME IN EDUCATIONAL TECHNOLOGY

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- An area of specialization in educational technology that includes ETPT 5000, 5100, 5210, 6300, and three of 5550, 6230, 6150, 6510, or 6810, with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A thesis, project, research seminar, or field experience (practicum)

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

PLAN OF STUDY

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full time study. The master's plan of study must include the following within the 30 semester hour minimum:

- 21 credits of specialization
 - ETPT 5000, 5100, 5210, 6300, and three of 5550, 6230, 6150, 6510, or 6810 are required
- 6 credits of a supporting area
- 3 credits of thesis, project or research seminar

Licensure or endorsement may require additional semester hours to fulfill the credential requirements as well as degree requirements.

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Educational Technology. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Educational Technology		
Select the following:		12
ETPT 5000	Introduction To Educational Technology	
ETPT 5100	Instructional Systems Design Principles	
ETPT 5210	Introduction To Multimedia And Web Design	
ETPT 6300	Technology Management In K-16 Education	
Select three of the following:		9
ETPT 5550	Using The Internet In The Classroom	
ETPT 6150	Designing Instruction For Diverse Learner Populations	
ETPT 6230	Developing Web-Based Instructional Materials	
ETPT 6510	Teaching And Learning At A Distance	
ETPT 6810	Research And Theory In Educational Technology And Performance Technology	
Supporting Area		
Select 6 credits as approved by faculty advisor		6
Master's Thesis, Project, or Research Seminar		
Select one of the following:		3
ETPT 6900	Master's Seminar In Educational Technology And Performance Technology (Recommended)	
ETPT 6930	Master's Research Project In Educational Technology And Performance Technology	
ETPT 6940	Practicum In Educational Technology And Performance Technology	
ETPT 6960	Master's Thesis In Educational Technology And Performance Technology	
Total Hours		30

AECT Standard 1 (Content Knowledge): Candidates demonstrate the knowledge necessary to create, use, assess, and manage theoretical and practical applications of educational technologies and processes.

- Candidates create instructional materials and learning environments using a variety of systems approaches.
- Candidates select and use technological resources and processes to support student learning and to enhance their pedagogy.
- Candidates assess and evaluate the effective integration of appropriate technologies and instructional materials.
- Candidates effectively manage people, processes, physical infrastructures, and financial resources to achieve predetermined goals.
- Candidates demonstrate the contemporary professional ethics of the field as defined and developed by the Association for Educational Communications and Technology

AECT Standard 2 (Content Pedagogy): Candidates develop as reflective practitioners able to demonstrate effective implementation of educational technologies and processes based on contemporary content and pedagogy.

a. Candidates apply content pedagogy to create appropriate applications of processes and technologies to improve learning and performance outcomes.

b. Candidates implement appropriate educational technologies and processes based on appropriate content pedagogy.

c. Candidates demonstrate an inquiry process that assesses the adequacy of learning and evaluates the instruction and implementation of educational technologies and processes grounded in reflective practice.

d. Candidates manage appropriate technological processes and resources to provide supportive learning communities, create flexible and diverse learning environments, and develop and demonstrate appropriate content pedagogy.

e. Candidates design and select media, technology, and processes that emphasize the diversity of our society as a multicultural community.

AECT Standard 3 (Learning Environments): Candidates facilitate learning by creating, using, evaluating, and managing effective learning environments.

a. Candidates create instructional design products based on learning principles and research-based best practices.

b. Candidates make professionally sound decisions in selecting appropriate processes and resources to provide optimal conditions for learning based on principles, theories, and effective practices.

c. Candidates use multiple assessment strategies to collect data for informing decisions to improve instructional practice, learner outcomes, and the learning environment.

d. Candidates establish mechanisms for maintaining the technology infrastructure to improve learning and performance.

e. Candidates foster a learning environment in which ethics guide practice that promotes health, safety, best practice and respect for copyright, Fair Use, and appropriate open access to resources.

f. Candidates foster a learning community that empowers learners with diverse backgrounds, characteristics, and abilities.

AECT Standard 4 (Professional Knowledge and Skills): Candidates design, develop, implement, and evaluate technology-rich learning environments within a supportive community of practice.

a. Candidates collaborate with their peers and subject matter experts to analyze learners, develop and design instruction, and evaluate its impact on learners.

b. Candidates lead their peers in designing and implementing technology-supported learning.

c. Candidates analyze and interpret data and artifacts and reflect on the effectiveness of the design, development and implementation of technology-supported instruction and learning to enhance their professional growth.

d. Candidates design and implement assessment and evaluation plans that align with learning goals and instructional activities.

e. Candidates demonstrate ethical behavior within the applicable cultural context during all aspects of their work and with respect for the diversity of learners in each setting.

AECT Standard 5 (Research): Candidates explore, evaluate, synthesize, and apply methods of inquiry to enhance learning and improve performance.

a. Candidates demonstrate foundational knowledge of the contribution of research to the past and current theory of educational communications and technology.

b. Candidates apply research methodologies to solve problems and enhance practice.

- c. Candidates apply formal inquiry strategies in assessing and evaluating processes and resources for learning and performance.
- d. Candidates conduct research and practice using accepted professional and institutional guidelines and procedures.

Master of Education in Educational Theory and Social Foundations

The Master of Education in Educational Theory and Social Foundations is designed for students who are interested in exploring issues of democracy, peace, and social justice in institutions throughout society, including, but not limited to, PreK-12 schools and institutions of higher education. Coursework is based in praxis, i.e. the merger of theory with practice. Students work with faculty to apply ideas from the social sciences and humanities to affect positive change in local and global contexts. Students will have opportunities to work with the Center for Nonviolence and Democratic Education.

The ME in Educational Theory and Social Foundations is a 30 semester hour program. Students take courses in theory and social foundations along with education courses selected with a faculty adviser based on the student's interests and goals. Students may concurrently earn a graduate certificate in areas such as Foundations of Peace Education or Culture and Change in Institutions. The program culminates with the completion of a master's research seminar, research-based project, or thesis depending on the student's interest. Coursework is completed through a combination of on-campus and online courses.

Admission to the ME in Educational Theory and Social Foundations

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals
- Three letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, school principal or others who are knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Three letters of recommendation

Requirements for the ME in Educational Theory and Social Foundations

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- An area of specialization in educational theory and social foundations that includes TSOC 5000, with courses pre-approved by the faculty advisor
- A supporting area with courses pre-approved by the faculty advisor
- A thesis, project or research seminar

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

PLAN OF STUDY

A plan of study identifying the courses for the master's degree is required after 12 credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 18 credits of specialization in theory and social foundations
 - TSOC 5000 is required
- 9 credits of a supporting area
- 3 credits of thesis, project, or research seminar

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Educational Theory and Social Foundations. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Specialization in Educational Theory and Social Foundations		
Select the following:		18
TSOC 5000	Introduction to Educational Theory and Social Foundations	
Select 15 credits as approved by faculty advisor		
Supporting Area		
Select 9 credits as approved by advisor		9
Master's Thesis, Project, or Research Seminar		
Select one of the following:		3
TSOC 6900	Master's Seminar in Educational Theory and Social Foundations	

TSOC 6960	Master's Thesis In Educational Theory And Social Foundations
TSOC 6980	Master's Project In Educational Theory And Social Foundations

Total Hours **30**

1. Comprehend the disciplinary content of educational theory and social foundations through citation of major scholarship in the field.
2. Demonstrate knowledge of principles and theories of educational sociology, history of education, philosophy of education, and general foundations of education.
3. Demonstrate the knowledge and skill necessary for theory application by doing the following:
 - a) Select a specific phenomenon and propose an investigation of the phenomenon, in writing, from the theoretical perspective most relevant to the phenomenon
 - b) Conduct the investigation
 - c) Articulate conclusions drawn from the data produced by the investigation
 - d) Defend the conclusions drawn from the data by relating the conclusions to the theoretical perspective used to conduct the investigation drawn from the data by relating the conclusions to the theoretical perspective used to conduct the investigation
 - e) Argue for the implications and applications of the conclusions relevant to practical problems or needs in educational settings

Master of Education in Higher Education

The Master of Education in Higher Education degree prepares students to become leaders with a deep understanding of higher education administration issues and practices in two- and four-year colleges and universities. This degree is designed for those interested in pursuing entry-level administrative and professional staff positions in higher education, as well as individuals already working in higher education interested in pursuing mid-level positions.

The ME in Higher Education is a 30 semester hour program. Students take core courses in higher education along with courses selected with a faculty advisor based on the student's interests and goals. The program culminates with the completion of a master's research seminar, master's practicum, or thesis in higher education. Coursework is completed online.

Admission to the ME in Higher Education

In addition to admission requirements of the College of Graduate Studies, admission to the master's program requires the following:

- A baccalaureate degree from an accredited four-year institution
- A well-written statement of purpose describing your background and goals as well as the importance of this degree in achieving those goals and pursuing a career in the field of higher education
- Two letters of recommendation regarding your potential for doing master's level work from professionals such as an undergraduate major advisor, current employer, or others who are knowledgeable about your ability to engage in graduate work in this degree program

The master's program has selective admissions and may admit a limited number of students. Thus, meeting all formal criteria does not guarantee admission.

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Two letters of recommendation
- Resume or curriculum vitae

Requirements for the ME in Higher Education

For the Master of Education degree, students must complete the following program requirements:

- A minimum of 30 semester hours of approved graduate course work
- A higher education specialization that includes HED 5900, HED 6010, HED 6510, HED 6530, HED 6570, HED 6640, HED 6770, HED 6700, and HED 6730
- A thesis, critical issues seminar, or master's practicum in higher education

In addition, no more than six semester hours of credit from any combination of workshops (5950), problems or special topics courses (5980 or 6980), and independent studies (5990 or 6990) may be included in the degree program.

All coursework and requirements of the master's degree must be taken within a six-year period immediately preceding the date the degree is awarded.

Plan of Study

A plan of study identifying the courses for the master's degree is required after 12-credit hours, generally at the end of the first semester of full-time study. The master's plan of study must include the following within the 30-semester hour minimum:

- 27 credits of specialization in higher education
 - HED 5900, 6010, 6510, 6530, 6570, 6640, 6770, 6700, and 6730 are required
- 3 credits of thesis, critical issues seminar, or master's practicum in higher education

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the Master of Education in Higher Education. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Higher Education Specialization		
Select the following:		27
HED 5900	Diversity Leadership in Higher Education	
HED 6010	History Of Higher Education	

HED 6510	The American College Student
HED 6530	Theories Of Student Development
HED 6570	Research in Higher Education
HED 6640	Governance And Administration In Higher Education
HED 6770	Evaluation And Outcomes Assessment In Higher Education
HED 6700	Finance Of Higher Education
HED 6730	Legal Aspects Of Higher Education
Master's Thesis, Critical Issues Seminar or Master's Practicum	
Select one of the following as approved by advisor:	
HED 6850	Critical Issues In Higher Education (recommended for working professionals)
HED 6940	Master's Practicum In Higher Education (recommended for pre-professional students)
HED 6960	Master's Thesis In Higher Education
Total Hours	30

1. Demonstrate ability to trace and analyze historical and philosophical development trends in higher education and their impact on current practice in higher education.
2. Demonstrate ability to identify and apply governance, leadership, organizational, and administrative practices that assist institutions in accomplishing their missions.
3. Demonstrate ability to assess student/program outcomes to inform current practice in higher education.
4. Demonstrate ability to integrate ethics and considerations of student development in decision making, practice, or course projects.
5. Demonstrate ability to gather higher education data, evaluate it, and use it to understand trends and to inform current practice in higher education.
6. Demonstrate ability to create diverse environments that foster diverse student learning and development in higher education.
7. Demonstrate knowledge of issues of race/ethnicity and social justice to guide professional practice.
8. Demonstrate knowledge of higher education law to guide professional practice.
9. Demonstrate knowledge of higher education finance to guide professional practice.
10. Demonstrate knowledge of critical issues facing higher education administration (working professionals)
11. Demonstrate participation in and reflection on professional development activities (pre-professional students).

PhD in Foundations of Education

Students in the PhD in Foundations of Education study the broad issues of educational systems and schools. Designed for students interested in research and leadership in foundational areas that support education, this program develops individuals as researchers and leaders in school, governmental, non-governmental/NGO, and nonprofit settings interested in improving education.

The PhD in Foundations of Education is a 61 semester hour program. Students take core educational courses along with courses selected with faculty based on the student's interests and goals. The program culminates with the completion of original research addressing a

problem in foundations of education based on the student's area of concentration. Coursework can be completed on campus or through a combination of on-campus and online courses.

There are six areas of concentration.

Educational Psychology: For students interested in focused study of the psychological dimensions of education including teaching, learning, and human development.

Educational Sociology: For students interested in focused study of how the intersections between school, society, and cultural define the limits, possibilities, and impact of education and society.

Foundations of Education: For students interested in focused study of methodological and theoretical interdisciplinary research involving interdisciplinary sociology, anthropology, philosophy and history of education, as well as democratic education, culturally relevant teaching, and social justice.

History of Education: For students interested in focused study of historical research and the origins and development of American education within the context of American social and intellectual history.

Philosophy of Education: For students interested in focused study of the development of educational theory in the context of the broader questions of philosophy and to develop the capacity to engage in effective discussion of theoretical problems pertaining to education, especially educational justice, peace, and democracy.

Research and Measurement: For students interested in focused study of design, execution, and interpretation of applied research, both quantitative and qualitative, and a deep understanding of the theoretical foundations of research and measurement.

Admission to the PhD in Foundations of Education

In addition to admission requirements of the College of Graduate Studies, admission to the doctoral program requires the following:

- A master's degree from an accredited college or university
- For the concentration in **research and measurement** only: GRE is NOT required for applicants with a master's degree from an accredited U.S. college or university AND a master's GPA of 3.5 or higher; GRE IS required for applicants without a master's degree from an accredited U.S. college or university OR with a master's GPA of less than 3.5 (GRE scores with 152 in the verbal and 146 in the quantitative sections and a 4.0 writing score or above preferred)
- Previous academic work necessary to successfully complete a doctoral program in the area of study
- Evidence of research and writing ability such as a master's thesis, proctored writing sample, a written research report, one or more reprints of publications, a paper presented to a professional society, or similar evidence of competence
- A statement of purpose that describes why you wish to pursue this doctoral program and includes information on previous study, educational experience, professional accomplishments, immediate

and future professional goals, a proposed time schedule for completing the degree, and any other information that you believe is relevant for admission into this doctoral degree program

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- GRE scores if required for the concentration in research and measurement
- A sample of academic writing (e.g. report, thesis, project, or academic paper)
- Statement of purpose
- Three letters of recommendation
- Resume or curriculum vitae

For the concentrations in foundations of education, philosophy of education, educational sociology, history of education, or educational psychology, a professional interview may be required after the completion of the written application.

Requirements for the PhD in Foundations of Education

By Concentrations:

- Educational Psychology (p. 480)
- Educational Sociology (p. 481)
- Foundations of Education (p. 482)
- History of Education (p. 483)
- Philosophy of Education (p. 484)
- Research and Measurement (p. 485)

Educational Psychology

For the Doctor of Philosophy in Foundations of Education degree, students must complete the following program requirements:

- A minimum of 61 semester hours of approved doctoral level (7000/8000 level) course work
- A minimum of 6 semester hours of foundations core, one course each in educational psychology and theory and social foundations
- A minimum of 12 semester hours of research tools; for the concentrations of foundations, history, philosophy, and sociology of education courses may be selected from any of the following approaches: (a) quantitative methods, (b) qualitative methods, and (c) interpretive methods
- An area of specialization in foundations of education with courses pre-approved by the faculty advisor and aligned with the area of concentration for the degree (see concentration options above)
- A minimum of 9 semester hours in second (minor) area of focus outside of the area of concentration
- A written comprehensive (major) examination and, if specified, a minor examination

- An oral comprehensive examination after passing written examinations
- A minimum of 10 semester hours of dissertation research
- An oral presentation and defense of a dissertation research proposal
- An oral presentation and defense of the completed dissertation research in a public forum
- A written document of the completed dissertation research in approved style and format

All coursework and requirements of the doctoral degree must be taken within a seven-year period immediately preceding the date the degree is awarded.

Additional information and guidelines for the doctoral program are provided in the JHCOE **Doctoral Student Handbook**.

Plan of Study

A plan of study identifying the courses for the doctoral degree is required before 18 credit hours are completed, generally by the end of the first year of full time study. The doctoral plan of study must include the following within the 61 semester hour minimum:

- 6 credits of foundation core courses
- 12 credits of research tools courses
- 24 credits of specialization in the area of concentration
 - For foundations, history, philosophy, and sociology of education, TSOC 8100 is required
- 9 credits of minor area of study
- 10 credits of dissertation research
- Minor written examination if required
- Comprehensive written and oral examinations

Other Program Requirements

Coursework Phase

- A doctoral program committee is required before the completion of 18 credit hours. The doctoral program committee has a minimum of three members who are selected from the membership of the graduate faculty of the University. The doctoral program committee is responsible for assisting the student in the development of a plan of study and assuring competence by overseeing the comprehensive written examination and the comprehensive oral examination.
- A plan of study is required before the completion of 18 credit hours. The plan of study must be approved by the doctoral program committee, department chairperson, and associate dean of the college, and submitted to the College of Graduate Studies. Revisions to the plan of study must also be approved and updates submitted to the College of Graduate Studies, usually within the semester a revision occurs.

Dissertation Research Phase

- A doctoral dissertation committee is required immediately after the completion of the required coursework, comprehensive written examination, and comprehensive oral examination. The dissertation committee has a minimum of four graduate faculty members including one who is not in the discipline major. The dissertation committee is responsible for guiding dissertation research and approving the dissertation research proposal and the completed dissertation research, both the written dissertation and oral dissertation defense. Student must work closely with the committee throughout the dissertation process.
- All research must be approved by the Institutional Research Board before beginning any phase of the research study. Student must complete IRB training as defined by the University's Human Research Protection Program.
- A public defense of the dissertation is required.
- The final written dissertation must be approved by the dissertation committee and formatted according to the guidelines of the college and the College of Graduate Study. Electronic submission of the dissertation to *OhioLINK* is mandatory.

Educational Sociology

For the Doctor of Philosophy in Foundations of Education degree, students must complete the following program requirements:

- A minimum of 61 semester hours of approved doctoral level (7000/8000 level) course work
 - For concentrations in foundations, history, philosophy, and sociology of education include: TSOC 8100
- A minimum of 6 semester hours of foundations core, one course each in educational psychology and theory and social foundations
- A minimum of 12 semester hours of research tools; for the concentrations of foundations, history, philosophy, and sociology of education courses may be selected from any of the following approaches: (a) quantitative methods, (b) qualitative methods, and (c) interpretive methods
- An area of specialization in foundations of education with courses pre-approved by the faculty advisor and aligned with the area of concentration for the degree (see concentration options above)
- A minimum of 9 semester hours in second (minor) area of focus outside of the area of concentration
- A written comprehensive (major) examination and, if specified, a minor examination
- An oral comprehensive examination after passing written examinations
- A minimum of 10 semester hours of dissertation research
- An oral presentation and defense of a dissertation research proposal

- An oral presentation and defense of the completed dissertation research in a public forum
- A written document of the completed dissertation research in approved style and format

All coursework and requirements of the doctoral degree must be taken within a seven-year period immediately preceding the date the degree is awarded.

Additional information and guidelines for the doctoral program are provided in the JHCOE **Doctoral Student Handbook**.

Students will:

1. demonstrate knowledge of the disciplinary content of SPFE through citation, synthesis, analysis, and interpretation of major scholarship in the field;
2. demonstrate knowledge of principles and theories of educational sociology, history of education, philosophy of education,, and

interdisciplinary foundations of education through cited, analytic discussion of classic and current research in those disciplines;

3. demonstrate ethical dispositions in teaching and research through the quality and integrity of their scholarship, teaching methods, attention to democratic practices, diversity, and participation in the academic and civic community as demonstrated in their mentored work (compensated or voluntary) in the program and community;
4. explain specific research methodologies including the theoretical assumptions upon which they are based, the methods of data collection and analysis, the issues of representation, and the foundations of validity, and explain when they are most appropriate to use (i.e., with what research problems or questions);
5. collect, analyze and interpret, with a level of validity acceptable within a research community, at least one of the following types of research data: quantitative, qualitative, and/or interpretive; and
6. demonstrate the knowledge and skills necessary for theory application by doing the following:
 - a. select a specific phenomenon and propose an investigation of the phenomenon, in writing, from the theoretical perspective most relevant to the phenomenon
 - b. conduct the investigation
 - c. articulate conclusions drawn from the data produced by the investigation and
 - d. defend the conclusions drawn from the data by relating the conclusions to the theoretical perspective used to conduct the investigation.

PhD in Higher Education

The Doctor of Philosophy in Higher Education is designed to prepare students for successful professional careers in diverse higher education settings, including public and private colleges and universities, government agencies, and professional associations. The doctoral program focuses on Administration and Policy Analysis.

The PhD in Higher Education is a 60 semester hour program. Students take core educational courses along with courses selected with faculty based on the student's interests and goals. The program culminates with the completion of original research addressing a problem in higher education based on the student's area of interests and goals. Coursework can be completed on campus or through a combination of on-campus and online courses.

Admission to the PhD in Higher Education

In addition to admission requirements of the College of Graduate Studies, admission to the doctoral program requires the following:

- A master's degree from an accredited college or university
- A minimum GPA of 3.5 on a 4.0 scale for all previous graduate academic work
- Previous academic work necessary to successfully complete a doctoral program in the area of study
- A statement of purpose indicating your commitment to pursuing a career in the field of higher education, and a description of your potential research topic for dissertation study

- A 1,000-word essay that discusses the most critical issue facing higher education today, the reasons for choosing this issue, and the implications of the issue for the future of higher education
- Two letters of reference, including at least one from a faculty member who can speak to your ability to conduct research and to write at the graduate level
- Current employment at a college or university

What to Submit with Your Application

- Official transcripts from all institutions of higher education
- Statement of purpose
- Essay on higher education issue (writing sample)
- Two letters of recommendation
- Resume or curriculum vitae

Requirements for the PhD in Higher Education

For the Doctor of Philosophy in Higher Education degree, students must complete the following program requirements:

- A minimum of 60 semester hours of approved doctoral level (7000/8000 level) course work
- A minimum of 33 semester hours of higher education specialization that includes HED 7900, 8010, 8030, 8120, 8530, 8570, 8640, 8700, 8730, 8770, and 8930
- A minimum of 12 semester hours of research tools
- A written comprehensive (major) examination
- An oral comprehensive examination after passing written examination
- A minimum of 15 semester hours of dissertation research
- An oral presentation and defense of a dissertation research proposal
- An oral presentation and defense of the completed dissertation research in a public forum
- A written document of the completed dissertation research in approved style and format

All coursework and requirements of the doctoral degree must be taken within a seven-year period immediately preceding the date the degree is awarded.

Additional information and guidelines for the doctoral program are provided in the JHCOE **Doctoral Student Handbook**.

Plan of Study

A plan of study identifying the courses for the doctoral degree is required before 18 credit hours are completed, generally by the end of the first year

of full time study. The doctoral plan of study must include the following within the 60 semester hour minimum:

- 33 credits of higher education specialization
 - HED 7900, 8010, 8030, 8120, 8530, 8570, 8640, 8700, 8730, 8770, and 8930 are required
- 12 credits of research tools courses
- 15 credits of dissertation research
- Comprehensive written and oral examinations

Other Program Requirements

Coursework Phase

- A doctoral program committee is required before the completion of 18 credit hours. The doctoral program committee has a minimum of three members who are selected from the membership of the graduate faculty of the University. The doctoral program committee is responsible for assisting the student in the development of a plan of study and assuring competence by overseeing the comprehensive written examination and the comprehensive oral examination.
- A plan of study is required before the completion of 18 credit hours. The plan of study must be approved by the doctoral program committee, department chairperson, and associate dean of the college, and submitted to the College of Graduate Studies. Revisions to the plan of study must also be approved and updates submitted to the College of Graduate Studies, usually within the semester a revision occurs.

Dissertation Research Phase

- A doctoral dissertation committee is required immediately after the completion of the required coursework, comprehensive written examination, and comprehensive oral examination. The dissertation committee has a minimum of four graduate faculty members including one who is not in the discipline major. The dissertation committee is responsible for guiding dissertation research and approving the dissertation research proposal and the completed dissertation research, both the written dissertation and oral dissertation defense. Student must work closely with the committee throughout the dissertation process.
- All research must be approved by the Institutional Research Board before beginning any phase of the research study. Student must complete IRB training as defined by the University's Human Research Protection Program.
- A public defense of the dissertation is required.
- The final written dissertation must be approved by the dissertation committee and formatted according to the guidelines of the college and the College of Graduate Study. Electronic submission of the dissertation to *OhioLINK* is mandatory.

Guide for Developing a Plan of Study

Below is a guide for developing a Plan of Study for the PhD in Higher Education. Students should work with their faculty advisor to identify specific courses to fulfill program requirements.

Code	Title	Hours
Higher Education Specialization		
Select the following:		33
HED 7900	Diversity Leadership in Higher Education	
HED 8010	History Of Higher Education	
HED 8030	Federal And State Policy Analysis	
HED 8120	International Education	
HED 8530	Theories Of Student Development	
HED 8570	Research In Higher Education	
HED 8640	Governance And Administration In Higher Education	
HED 8700	Finance Of Higher Education	
HED 8730	Legal Aspects Of Higher Education	
HED 8770	Evaluation And Outcomes Assessment In Higher Education	
HED 8930	Doctoral Research Seminar In Higher Education	
Research Tools		
Select the following:		12
HED 8910	Introduction to Interpretive Inquiry	
or RESM 733	Qualitative Research I: Introduction And Basic Methods	
HED 8920	Advanced Seminar (qualitative focus)	
RESM 8120	Quantitative Methods II	
HED 8920	Advanced Seminar (quantitative focus)	
or RESM 8320	Research Design	
Dissertation Research		
Select the following:		15
HED 8960	Dissertation	
Comprehensive Written and Oral Examinations		
Total Hours		60

1. Develop and lead academic and/or service programs that promote student learning and development based on current research on student learning and development theories.
2. Demonstrate knowledge of issues of race/ethnicity and social justice to guide professional practice.
3. Resolve issues of governance and administration exercising informed leadership approaches.
4. Develop financial policies and practices consistent with emerging trends in higher education finance.
5. Develop institutional policies and practices consistent with emerging trends in higher education law.
6. Lead in writing assessment and evaluation reports.
7. Analyze and synthesize information to create and present policy briefs in the field of higher education.

8. Actively apply historical lessons in higher education to one's future practice.
9. Evaluate and critique how critical issues in higher education in other countries compare with similar issues in the US.
10. Contribute to the research and scholarship in the literature in the area of higher education.

Department of Teacher Education

Jenny Denyer, chair

The Department of Teacher Education prepares and develops educators as PreK-12 teachers, curriculum specialists, and educational researchers. Graduate students may focus their study on issues of curriculum and instruction generally or within a specific subject-matter area. Students may choose to concentrate their study in early childhood education, middle childhood education, adolescent and young adult education, special education, career and technical education, literacy education, foreign language education, art education, or music education.

Master's Degree programs are designed for continuing study in curriculum and instruction as well as initial teacher education leading to teaching licensure. The licensure and master's programs (LAMP) are for designed for individuals who already hold a bachelor's degree and are interested in becoming a licensed PreK-12 teacher in Ohio.

The Educational Specialist Degree is a post-master's graduate program that provides students an area of educational specialization with emphasis on practice. The Ed.S. in curriculum and instruction is designed to meet the needs of individuals involved with curriculum, teaching, and supervision in discipline-centered areas of study.

The Doctor of Philosophy Degree in curriculum and instruction is an advanced study of issues in curriculum and instruction that prepares students as educational researchers and leaders. Students may choose a concentration in curriculum and instruction, early childhood, or special education.

Graduate Certificates are designed to provide students with focused study in advanced reading and literacy instruction or Intra-professional teaming in early childhood.

ACCREDITATION

Educational programs at The University of Toledo are accredited by the Council for Accreditation of Educator Preparation (CAEP).

Master's Degrees

Master of Arts and Education (p. 442)

Master of Education in Art Education (p. 443)

Master of Education in Career and Technical Education (p. 444)

Master of Education in Curriculum and Instruction (p. 446)

Master of Education in Early Childhood Education (p. 448)

Master of Education in Middle Childhood Education (p. 457)

Master of Education in Secondary Education (p. 459)

Master of Education in Special Education (p. 461)

Master of Music in Music Education (p. 463)

Master of Science and Education (p. 464)

Education Specialist's Degrees

Education Specialist in Curriculum and Instruction (p. 467)

- Concentrations: Curriculum and Instruction, Early Childhood, and Special Education

Doctoral Degrees

Doctor of Philosophy in Curriculum and Instruction (p. 471)

- Concentrations: Curriculum and Instruction, Early Childhood, Educational Technology, Gifted and Talented, Secondary Education, Special Education

Note: The Doctor of Philosophy in Curriculum and Instruction with a concentration in Educational Technology is in the Department of Educational Studies

Graduate Certificates

Certificate in Advanced Reading and Literacy Instruction (p. 490)

Certificate in Interprofessional Teaming in Early Childhood (p. 494)

ENDORSEMENT PROGRAMS

Endorsement in Career-based Intervention (p. 547)

Endorsement in Early Childhood Generalist (grades 4-5) (p. 547)

Endorsement in Gifted Intervention Specialist Education (p. 547)

Endorsement in Reading Education (preK-12) (p. 547)

Endorsement in Pre-school Special Needs (p. 547)

Endorsement in Transition to Work (p. 547)

Endorsements

Endorsement programs meet the needs of students interested in adding a credential to their standard Ohio teaching license. An endorsement area may be included as part of a degree program but does not, by itself, lead to a degree. There are six endorsement programs available in the department.

Endorsement in Career-based Intervention (p. 548) (grades 7-12)

Endorsement in Early Childhood Generalist (p. 548) (grades 4-5)

Endorsement in Pre-school Special Needs (p. 548)

Endorsement in Reading Education (p. 548) (preK-12)

Endorsement in Transition to Work (p. 549)

Endorsement in Career-based Intervention (grades 7-12)

The Endorsement in Career-based Intervention program gives licensed teachers the skills to work with at-risk students. Qualified individuals employed by a school district are eligible for admission to the CBI Program.

Prerequisites

- A current Ohio educator license
- Two years of successful teaching experience
- One year of work experience outside of education

Requirements for the Endorsement

- Completion of 8 semester hours of online course work (3 courses, one per semester in fall, spring, and summer).
 - CTE 5020 Occupational Safety And Liability
 - CTE 5140 Cooperative Education
 - CTE 5160 Curriculum Development & Teaching

Endorsement in Early Childhood Generalist (grades 4-5)

The Endorsement in Early Childhood Generalist (grades 4-5) program is for educators already licensed in early childhood who also want to teach grades 4-5. Courses can be applied toward the Master's of Education degree when taken at the 5000-level.

Prerequisites

- A current Ohio educator license in Early Childhood or currently enrolled in a licensure program

Requirements for the Endorsement

- Completion of 9 semester hours of methods and educational psychology for grades 4 and 5
 - CI 4110/CI 5110 Developing Instruction for Middle Grades 4-5 Literacy and Social Studies
 - CI 4120/CI 5120 Developing Instruction in Mathematics and Science for Grades 4-5
 - EDP 4210/EDP 5210 Child Behavior And Development
- Completion of a minimum of 50 hours of field work
- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com>) (OAE) Content Assessment(s) for the endorsement

Endorsement in Pre-school Special Needs

The Endorsement in Preschool Special Needs program is designed around the competencies identified by the Ohio Board of Regents/ Department of Education. The online PSNE provides teachers with the foundational courses and field experiences necessary to work effectively

and successfully with preschool aged children with disabilities in a variety of settings.

Prerequisites

- A current Ohio educator license in K-12 Intervention Specialist (mild/moderate or moderate/intensive) or in Early Childhood Education (PK-3)

Requirements for the Endorsement

- Completion of 24 semester hours of coursework in early and special education (see advisor for specific courses)
 - CIEC 6320/CIEC 8320 Meaning And Development Of Play Behavior Or SPED 5260/SPED 7260 Family And Professional Relations In Special Education
 - CIEC 6750/CIEC 8750 Developmental And Classroom Assessment
 - SPED 5010 Atypical Development In Early Childhood: Implications For Development
 - SPED 5210/SPED 7210 Augmentative and Alternative Communication
 - SPED 5270/SPED 7270 Team Models And Community Networking In Early Intervention
 - SPED 5280/SPED 7280 Management Of The Learning Environment In Early Childhood Special Education
 - SPED 6070/SPED 8070 Curriculum Models And Intervention Strategies In Early Childhood Special Education
 - SPED 6940 Internship/Externship In Special Education
- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com>) (OAE) Content Assessment(s) for the endorsement

Endorsement in Reading Education (preK-12)

The Endorsement in Reading Education program is for licensed teachers who want to be highly qualified to work with struggling readers and writers. The coursework meets guidelines for the coursework required for Ohio teachers to add the Ohio Reading Endorsement to their teaching licenses. The reading endorsement may also be earned through the Certificate in Advanced Reading and Literacy Instruction.

Prerequisites

- A current Ohio educator license
- Twelve (12) semester hours of undergraduate or graduate prerequisite coursework in the teaching of reading PRIOR to taking any Advanced Reading/Literacy courses
- A 3-semester hour undergraduate or graduate course in phonics (This requirement is usually met in an undergraduate course prior to enrolling in the certificate program, but it can be met while completing the certificate coursework.)

Requirements for the Endorsement

- Completion of 12 semester hours of advance reading courses
 - CI 6400/CI 8400 Trends In Literacy Acquisition
 - CI 6410/CI 8410 Content Area Literacy
 - CI 6430/CI 8430 Diagnosis Of Reading Disability
 - CI 6440/CI 8440 Remediation Practicum
- Completion of a minimum of 100 hours of field work
- Acceptable scores on the Ohio Assessment for Educators (<http://www.oh.nesinc.com>) (OAE) Content Assessment(s) for the endorsement

Endorsement in Transition to Work

The Endorsement in Transition-to-Work (TTW) program is designed for teachers licensed as intervention specialists (special education) or vocational educators. The TTW endorsement leads to a qualification applicable to all former transition roles such as Work Study Coordinator, Vocational Special Education Coordinator (VOSE), Career Assessment Specialist, and Job Training Coordinators.

Prerequisites

- A current Ohio educator license as intervention specialists in special education or as a vocational educator

Requirements for the Endorsement

- Completion of 12 semester hours of coursework in transition to work
 - SPED 5170 Supporting Youths And Adults With Disabilities Living And Working In The Community
 - SPED 5250 Career And Vocational Education For Students With Disabilities
 - SPED 6250 Issues And Research In Transition And Post-Secondary Outcomes For Student With Disabilities
 - SPED 6940 Internship/Externship In Special Education
- Completion of a minimum of 50 hours of field work

Courses

CI 5110 Developing Instruction for Middle Grades 4-5 Literacy and Social Studies

[3 credit hours]

A course in pedagogy and content for pre-service teachers currently working on Ohio's Early Childhood PK-3 licensure program and licensed teachers who have completed Ohio's Early Childhood PK-3 licensure program and are seeking to extend their license to be eligible to teach all content in grades four and five. The course will focus on the English language arts and social studies as outlined in the Ohio Academic Content Standards.

Term Offered: Spring, Fall

CI 5120 Developing Instruction in Mathematics and Science for Grades 4-5

[3 credit hours]

A course in pedagogy and content for pre-service teachers currently working on Ohio's Early Childhood PK-3 LAMP licensure program and licensed teachers who have completed Ohio's PK-3 licensure program and are seeking to extend their license to be eligible to teach all content in grades four and five. The course will focus on the mathematics and science outlined in Ohio's standards for teaching mathematics and science in grades 4 and 5.

Term Offered: Spring, Fall

CI 5190 Secondary Field Experience II

[3 credit hours]

Field experience for alternative 712 certification. Classroom observations and reports Teach series of lessons or unit of study in secondary classroom. Students will develop and implement a unit plan in the content area integrating teaching of content, thinking skills and adjusting the unit to a special needs population.

Term Offered: Spring, Fall

CI 5300 Literature For Children

[3 credit hours]

Emphasis on all genres of literature for children, including poetry, traditional literature, fantasy, realistic fiction, biography and other information books, particularly for early childhood and middle grades learners. Instructional strategies for engaging learners with children's literature and ways of increasing home-school connections through use of children's literature also introduced.

CI 5320 Literature For Young Adults

[3 credit hours]

Survey of literature materials written for the junior and senior high school student. Emphasis is placed on all genres, literary elements and uses of literature across the curriculum.

Term Offered: Spring, Fall

CI 5360 Multicultural Literature

[3 credit hours]

Picture books, fiction, biography and poetry appropriate for elementary and middle school students that interpret and reflect honestly the lives of persons of color will be studied and evaluated.

Term Offered: Fall

CI 5430 Issues In Second Language Instruction

[3 credit hours]

A critical study of teaching foreign languages and English as a second language across age groups including current theories, curriculum, materials, teaching strategies and assessment.

Term Offered: Spring

CI 5470 Literacy Assessment and Remediation

[3 credit hours]

Examine current literacy practices in assessment and remediation. Emphasis on knowledge and skill needed to diagnose and assess students in reading and writing by working with an at-risk learner. Apply word identification, comprehension, fluency, vocabulary and writing instructional strategies for supporting readers in an experiential learning environment.

Term Offered: Spring, Summer, Fall

CI 5490 Content Area Reading For Adolescent Young Adult, Multi-Age, And Career And Technical Education Teach

[3 credit hours]

Study of the integration of reading comprehension, writing, oral language and word skill development in content reading. Attention will be given to instructional methods as well as assessment practices.

Term Offered: Spring, Summer, Fall**CI 5510 Mathematics For The Young Child**

[3 credit hours]

Development of mathematical understanding in young children, appropriate learning and assessment experiences and analysis of curriculum. Mathematics focus on place value, number sense, geometry, measurement, algebra, data analysis and probability.

Term Offered: Spring, Fall**CI 5530 TEACHING AND LEARNING GEOMETRY AND MEASUREMENT**

[3 credit hours]

Examination of the development of mathematics concepts and skills across the K-12 curriculum. Discussion of mathematics content, teaching methods, instructional materials, assessment techniques and applications to classroom practice.

Term Offered: Spring**CI 5540 Teaching and Learning Algebra**

[3 credit hours]

Examination of the development of algebraic concepts and skills across the K-12 curriculum. Emphasis on current research, theory, and innovative approaches for teaching and learning algebra

Term Offered: Fall**CI 5550 Teaching Problem Solving In Mathematics**

[3 credit hours]

Focuses on the art of problem solving and methods and materials for classroom implementation. Consideration given to current trends and related resource regarding use of problem solving in mathematics teaching.

Term Offered: Fall**CI 5560 ASSESSMENT IN MATHEMATICS EDUCATION**

[3 credit hours]

Study of the role of assessment in the teaching and learning of mathematics. Examination of current research, assessment techniques, and trends and ways in which assessment can guide and inform mathematics instruction.

Term Offered: Fall**CI 5580 TEACHING AND LEARNING NUMBER, DATA, AND PROBABILITY**

[3 credit hours]

Examination of the development of concepts and skills associated with number, data, and probability across the K-12 curriculum. Emphasis on current research, theory, and innovative instructional approaches.

CI 5590 Topics in Mathematics Education

[3 credit hours]

Examination and exploration of policy issues, research, and national trends that have implications for teachers, curriculum specialists, school districts, and others involved in mathematics education

Term Offered: Summer, Fall**CI 5640 Environmental Education**

[3 credit hours]

An experiential course for those interested in developing their knowledge and expertise in Environmental Education. Participants will develop a personal response to current environmental issues and learn how to help others do the same. Participants include teachers, naturalists, environmental science professionals and anyone interested in environmental education. The course will take a practical approach to the NAEE standards for environmental and conservation education as well as the NGSS and relevant Common Core State Standards.

CI 5650 Mentoring a Preservice Teacher

[3 credit hours]

Designed for practicing teachers, this course explores the role of a mentor teacher in guiding prospective teachers in learning to teach. Emphasis is on developing productive mentor-mentee relationships; guiding planning, teaching and assessment; providing useful feedback; and assessing preservice teacher learning.

CI 5660 Technological Tools In Science Education

[3 credit hours]

Designed for science educators, this course explores the use of learning technologies for teaching and learning science. Students investigate theoretical frameworks for thinking about tools to support science learning and the role of technology in science education. This course explores technologies to extend students' capabilities at inquiry and enhance their thinking about science phenomena, how technologies can enhance learning within and beyond classrooms, and how technologies support and change science teachers' work with learners.

Term Offered: Spring**CI 5690 Project-Based Science**

[3 credit hours]

Advanced methods for teaching science to engage learners in extended inquiry as they investigate real-world questions. Emphasis on innovative instructional strategies, research and theoretical perspectives to promote deep understanding of fundamental concepts.

Term Offered: Spring, Summer**CI 5810 Instructional Strategies**

[3 credit hours]

This course examines the purposes and practices of effective teachers. Participants critically investigate different instructional models for teaching including mediated instruction, discussion, inquiry management, project-based instruction, cooperative learning and the use of technology. Many different teaching methodologies will be demonstrated, modeled and critically examined. Participants will draft a personal philosophy of education. Focus is firmly placed on individual student learning outcomes in a climate of increasing diversity in the 21st century.

Term Offered: Spring, Summer, Fall

CI 5870 Secondary School Curriculum

[3 credit hours]

A critical exploration of secondary school curricular issues, trends, and practices including the historical, political, social, psychological, and philosophical traditions. Participants examine how secondary curriculum is developed, implemented and institutionalized. Emphasis will be placed on topics including teacher leadership, collaboration, action research, and reflective decision making in curriculum work. This course is for teachers, administrators, and anyone interested in how curriculum has influenced educational reform and can influence future reform.

Term Offered: Spring

CI 5980 Special Topics In Curriculum & Instruction

[1-5 credit hours]

A course developed around topics of interest and concern to educators.

Term Offered: Spring, Summer, Fall

CI 5990 Graduate Independent Study In Curriculum And Instruction

[1-5 credit hours]

Individual study designed to provide a student the opportunity to work individually on professional problems under the direction of the faculty of the Department of Curriculum and Instruction.

Term Offered: Spring, Summer, Fall

CI 6110 Language Arts Methods of Teaching

[3 credit hours]

An initial in-depth study of methods and materials for teaching and learning the English Language Arts in middle and secondary classrooms with emphasis on planning, content standards and instructional strategies that attend to students as learners; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6210

Term Offered: Fall

CI 6120 Social Studies Methods of Teaching

[3 credit hours]

An initial in-depth study of methods and materials for teaching and learning Social Studies in middle and secondary classrooms with emphasis on planning, content standards and instructional strategies that attend to students as learners; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program.

Corequisites: CI 6220

Term Offered: Fall

CI 6130 Mathematics Method of Teaching

[3 credit hours]

An initial in-depth study of methods and materials for teaching and learning Mathematics in middle and secondary classrooms with emphasis on planning, content standards and instructional strategies that attend to students as learners; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6230

Term Offered: Fall

CI 6140 Science Methods of Teaching

[3 credit hours]

An initial in-depth study of methods and materials for teaching and learning Science in middle and secondary classrooms with emphasis on planning, content standards and instructional strategies that attend to students as learners; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6240

Term Offered: Fall

CI 6150 Advanced Methods of Teaching in Language Arts

[3 credit hours]

A continued in-depth study of methods and materials for teaching and learning the English Language Arts in middle and secondary classrooms with an emphasis on academic language and classroom level assessments; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6110 with a minimum grade of C or CI 6120 with a minimum grade of C or CI 6130 with a minimum grade of C or CI 6140 with a minimum grade of C

Corequisites: CI 6250

Term Offered: Spring

CI 6160 Social Studies Advanced Methods of Teaching

[3 credit hours]

A continued in-depth study of methods and materials for teaching and learning Social Studies in middle and secondary classrooms with an emphasis on academic language and classroom level assessments; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6110 with a minimum grade of C or CI 6120 with a minimum grade of C or CI 6130 with a minimum grade of C or CI 6140 with a minimum grade of C

Corequisites: CI 6260

Term Offered: Spring

CI 6170 Mathematics Advanced Methods of Teaching

[3 credit hours]

A continued in-depth study of methods and materials for teaching and learning Mathematics in middle and secondary classrooms with an emphasis on academic language and classroom level assessments; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6110 with a minimum grade of C or CI 6120 with a minimum grade of C or CI 6140 with a minimum grade of C or CI 6130 with a minimum grade of C

Corequisites: CI 6270

Term Offered: Spring

CI 6180 Science Advanced Methods of Teaching

[3 credit hours]

A continued in-depth study of methods and materials for teaching and learning Science in middle and secondary classrooms with an emphasis on academic language and classroom level assessments; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6120 with a minimum grade of C or CI 6130 with a minimum grade of C or CI 6140 with a minimum grade of C

Corequisites: CI 6280

Term Offered: Spring

CI 6210 Language Arts Practicum of Teaching

[3 credit hours]

Initial field experience for LAMP Middle Childhood and Adolescent to Young Adult licensure only; experiences include focused observations in classroom settings, co-teaching with mentor teacher and the design, planning and teaching of units that integrate the English Language Arts. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6110**Term Offered:** Fall**CI 6220 Social Studies Practicum**

[3 credit hours]

Initial field experience for LAMP Middle Childhood and Adolescent to Young Adult licensure only; experiences include focused observations in classroom settings, co-teaching with mentor teacher and the design, planning and teaching of units that integrate Social Studies. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6120**Term Offered:** Fall**CI 6230 Mathematics Practicum**

[3 credit hours]

Initial field experience for LAMP Middle Childhood and Adolescent to Young Adult licensure only; experiences include focused observations in classroom settings, co-teaching with mentor teacher and the design, planning and teaching of units that integrate Mathematics. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6130**Term Offered:** Fall**CI 6240 Science Practicum**

[3 credit hours]

Initial field experience for LAMP Middle Childhood and Adolescent to Young Adult licensure only; experiences include focused observations in classroom settings, co-teaching with mentor teacher and the design, planning and teaching of units that integrate Science. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6140**Term Offered:** Fall**CI 6250 Language Arts Internship and Student Teaching**

[3 credit hours]

Part 1 of full time, supervised classroom teaching; for LAMP middle childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6210 with a minimum grade of C or CI 6220 with a minimum grade of C or CI 6230 with a minimum grade of C or CI 6240 with a minimum grade of C

Corequisites: CI 6150**Term Offered:** Spring**CI 6260 Social Studies Student Teaching and Internship**

[3 credit hours]

Part 1 of full time, supervised classroom teaching; for LAMP middle childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6210 with a minimum grade of C or CI 6220 with a minimum grade of C or CI 6230 with a minimum grade of C or CI 6240 with a minimum grade of C

Corequisites: CI 6160**Term Offered:** Spring**CI 6270 Mathematics Student Teaching and Internship**

[3 credit hours]

Part 1 of full time, supervised classroom teaching; for LAMP middle childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6210 with a minimum grade of C or CI 6220 with a minimum grade of C or CI 6230 with a minimum grade of C or CI 6240 with a minimum grade of C

Corequisites: CI 6170**Term Offered:** Spring**CI 6280 Science Student Teaching and Internship**

[3 credit hours]

Part 1 of full time, supervised classroom teaching; for LAMP middle childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6210 with a minimum grade of C or CI 6220 with a minimum grade of C or CI 6230 with a minimum grade of C or CI 6240 with a minimum grade of C

Corequisites: CI 6180**Term Offered:** Spring**CI 6370 Fundamentals Of Grant Writing**

[3 credit hours]

This seminar will teach participants about fundamentals of grant writing. Topics covered will include: locating sources of funding, writing grants, designing evaluation instruments and administering grants.

Term Offered: Summer**CI 6400 Trends In Literacy Acquisition**

[3 credit hours]

Study of the theories and foundational components of literacy instruction. Factors affecting literacy development including oral language, phonemic awareness, phonics, fluency, comprehension, vocabulary, reading-writing connections and motivation considered. Issues for learners from diverse backgrounds including English Language Learners examined.

Term Offered: Spring, Summer, Fall**CI 6410 Content Area Literacy**

[3 credit hours]

Study of the integration of reading and writing in the content areas. Attention to both content area literacy approaches and disciplinary literacy practices. Consideration of needs of diverse learners including English Language Learners.

Term Offered: Spring, Summer, Fall**CI 6430 Diagnosis Of Reading Disability**

[3 credit hours]

Teachers acquire the knowledge and skills needed to assess the reading and writing of students and to plan appropriate instruction. Emphasis on phonemic awareness, concepts of print, word recognition, fluency, comprehension, word study, and writing.

Prerequisites: CI 6400 with a minimum grade of C**Term Offered:** Spring, Summer, Fall

CI 6440 Remediation Practicum

[3 credit hours]

In depth tutoring with learners ranging from preK to 12th grade. Data-driven instructional decision-making as well as considerations for individualizing instruction emphasized. Design and conduct of a professional development workshop for literacy educators based on tutoring cases is a culminating aspect of the course.

Prerequisites: (CI 6400 with a minimum grade of C and CI 6430 with a minimum grade of C)

Term Offered: Spring, Summer, Fall

CI 6490 Theory And Research In Literacy

[3 credit hours]

Extensive examination of current research and theoretical considerations in language and literacy learning and instruction. Contemporary contextual factors such as policy and standards are explored. The reciprocal nature of research and practice is a central theme of the course. Individualized culminating projects focus on specific issues of interest related to language and literacy learning and instruction.

Term Offered: Spring, Summer, Fall

CI 6590 Theory And Research In Mathematics Education

[3 credit hours]

Critical appraisal of current theory and research in mathematics education. Emphasis on issues related to teacher practice, student learning, and curriculum development.

Term Offered: Spring, Summer, Fall

CI 6650 Teacher Learning and Education

[3 credit hours]

Designed for future teacher educators and teacher leaders, students investigate frameworks for teacher professional knowledge including pedagogical content knowledge, teacher learning, educative mentoring, and program design. Teacher educators' roles as leaders for teacher learning and improvement are examined.

CI 6690 Theory And Research In Science Education

[3 credit hours]

Designed for individuals beginning their thesis, project, or seminar paper phase of their graduate program, this course explores both theory and research in science education. Based on an area of interest, students review and critically analyze the research literature in science education. Students also learn how to find primary sources, read and critique research, and organize and write a literature review.

Term Offered: Spring, Summer, Fall

CI 6790 Theory And Research In Social Studies

[3 credit hours]

Intensive study of research and theoretical considerations related to the development and current status of learning and instruction in the social studies. Historical and contemporary contextual factors such as policy and standards are explored. The reciprocal nature of research and practice is a central theme of the course. Individualized culminating projects focus on issues related to learning and instruction in the social studies.

Term Offered: Spring, Fall

CI 6800 Foundations Of Curriculum & Instruction

[3 credit hours]

The purpose of CI 6800/8800, Foundations of Curriculum, is to provide an introduction to the foundational areas that affect the design and development of curriculum. This includes the history, social forces, philosophy, and psychology behind many of the curriculum practices and issues that exist in schools today as well as the nature of the curriculum development process. As a result, the course is designed to increase the learner's awareness of the field of curriculum and to introduce specific skills in design and development.

Term Offered: Summer, Fall

CI 6810 Curriculum Development: K-12

[3 credit hours]

The purpose of CI 6810/8810, Curriculum Development: K-12, is to provide appropriate background information and practice in curriculum and instructional design and direct experiences in approaching this process imaginatively. The course will focus on how to use both traditional and emerging models of curriculum design and development to create a working curriculum and to design instructional based on research-based theories of learning and models of teaching.

Term Offered: Spring, Fall

CI 6830 Curriculum Trends And Issues

[3 credit hours]

Designed for educators, this course guides students in exploring core ideas to develop a framework for the study of teaching. Students investigate issues of what and how to teach in the content areas as well as explore the knowledge of expert content teachers. As a core graduate course in curriculum and instruction, students analyze and integrate ideas to form a theoretical framework and are guided in developing professional written work grounded in the professional literature.

Term Offered: Spring, Summer, Fall

CI 6840 Curriculum For Educational Leaders

[3 credit hours]

The purpose of this course is to introduce educational leaders to research-based leadership theories and principles and how these apply to P-12 school settings. Building principals, teacher leaders, and instructional coaches will focus on creating learning environments throughout the school that increase teacher effectiveness, utilize alternative assessment strategies, and focus on connecting curriculum, instruction and assessment in all classrooms.

Term Offered: Spring, Fall

CI 6890 Theory and Research in Learning and Teaching Content

[3 credit hours]

A critical analysis of the research literature in language arts, mathematics, science, or social studies education. Students examine educational research regarding ideas about learning and teaching that influence research, finding primary sources, reading and critiquing research, and organizing and writing a literature review.

Term Offered: Spring, Summer

CI 6900 Masters Research Seminar In Curriculum And Instruction

[2-3 credit hours]

Graduate seminar designed as a culminating experience in the master's programs in Curriculum and Instruction. Participants critically examine the research and scholarship in their specific field of interest. Emphasis is placed on professional academic collaboration, peer review, constructive criticism. The final product of this seminar is an academic manuscript of publishable quality that contributes to the academic discourse in a particular body of scholarship.

Prerequisites: CI 6490 with a minimum grade of D- or CI 6590 with a minimum grade of D- or CI 6690 with a minimum grade of D- or CI 6790 with a minimum grade of D- or CI 6890 with a minimum grade of D- or CIEC 6950 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

CI 6920 Masters Research Project In Curriculum And Instruction

[1-3 credit hours]

Students will complete an individual research project under the direction of a committee of at least two faculty members in Curriculum and Instruction, ordinarily including the faculty adviser.

Term Offered: Spring, Summer, Fall

CI 6950 Student Teaching and Internship: LAMP

[3 credit hours]

Part 2 of full time, supervised classroom teaching; for LAMP middle childhood and Adolescent to Young Adult licensure only; added emphasis on continual professional growth and development as educators. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6250 with a minimum grade of C or CI 6260 with a minimum grade of C or CI 6270 with a minimum grade of C or CI 6280 with a minimum grade of C and CI 6150 with a minimum grade of C or CI 6160 with a minimum grade of C or CI 6170 with a minimum grade of C or CI 6180 with a minimum grade of C

Term Offered: Spring, Summer

CI 6960 Masters Thesis In Curriculum And Instruction

[1-3 credit hours]

Students will complete a thesis under the direction of committee of at least two faculty members from Curriculum and Instruction, ordinarily including the faculty adviser.

Term Offered: Spring, Summer, Fall

CI 7530 TEACHING AND LEARNING GEOMETRY AND MEASUREMENT

[3 credit hours]

Examination of the development of mathematics concepts and skills associated with geometry and measurement across the K-12 curriculum. Emphasis on current research, theory, and innovative instructional approaches to the teaching and learning of geometry and measurement.

Term Offered: Spring

CI 7540 Teaching and Learning Algebra

[3 credit hours]

Examination of the development of algebraic concepts and skills across the K-12 curriculum. Emphasis on current research, theory, and innovative approaches for teaching and learning algebra.

Term Offered: Fall

CI 7560 ASSESSMENT IN MATHEMATICS EDUCATION

[3 credit hours]

Study of the role of assessment in the teaching and learning of mathematics. Examination of current research, assessment techniques, and trends and ways in which assessment can guide and inform mathematics instruction

Term Offered: Fall

CI 7580 TEACHING AND LEARNING NUMBER, DATA, AND PROBABILITY

[3 credit hours]

Examination of the development of concepts and skills associated with number, data, and probability across the K-12 curriculum. Emphasis on current research, theory, and innovative instructional approaches

CI 7590 Topics in Mathematics Education

[3 credit hours]

Examination and exploration of policy issues, research, and national trends that have implications for teachers, curriculum specialists, school districts, and others involved in mathematics education.

Term Offered: Fall

CI 7650 Mentoring a Preservice Teacher

[3 credit hours]

Designed for practicing teachers, this course explores the role of a mentor teacher in guiding prospective teachers in learning to teach. Emphasis is on developing productive mentor-mentee relationships; guiding planning, teaching and assessment; providing useful feedback; and assessing preservice teacher learning.

CI 7660 Technological Tools In Science Education

[3 credit hours]

Designed for science educators, this course explores the use of learning technologies for teaching and learning science. Students investigate theoretical frameworks for thinking about tools to support science learning and the role of technology in science education. This course explores technologies to extend students' capabilities at inquiry and enhance their thinking about science phenomena, how technologies can enhance learning within and beyond classrooms, and how technologies support and change science teachers' work with learners.

Term Offered: Spring

CI 7690 Project-Based Science

[3 credit hours]

Advanced methods for teaching science to engage learners in extended inquiry as they investigate real-world questions. Emphasis on innovative instructional strategies, research and theoretical perspectives to promote deep understanding of fundamental concepts.

Term Offered: Spring, Summer

CI 7810 Instructional Strategies

[3 credit hours]

This course examines the purposes and practices of effective teachers. Participants critically investigate different instructional models for teaching including mediated instruction, discussion, inquiry management, project-based instruction, cooperative learning and the use of technology. Many different teaching methodologies will be demonstrated, modeled and critically examined. Participants will draft a personal philosophy of education. Focus is firmly placed on individual student learning outcomes in a climate of increasing diversity in the 21st century.

Term Offered: Spring, Summer, Fall

CI 7870 Secondary School Curriculum

[3 credit hours]

A critical exploration of secondary school curricular issues, trends, and practices including the historical, political, social, psychological, and philosophical traditions. Participants examine how secondary curriculum is developed, implemented and institutionalized. Emphasis will be placed on topics including teacher leadership, collaboration, action research, and reflective decision making in curriculum work. This course is for teachers, administrators, and anyone interested in how curriculum has influenced educational reform and can influence future reform.

Term Offered: Spring

CI 7940 Specialist Practicum In Curriculum And Instruction

[1-3 credit hours]

Observation and supervised experience in an appropriate setting. This experience may be in a school or other educational setting. Student will study under the supervision of appropriate mentors or advisors.

Term Offered: Spring, Summer, Fall

CI 7980 Special Topics In Curriculum & Instruction

[1-5 credit hours]

A course developed around topics of interest and concern to educators.

Term Offered: Spring, Summer, Fall

CI 8370 Fundamentals Of Grant Writing

[3 credit hours]

This seminar will teach participants about fundamentals of grant writing. Topics covered will include: locating sources of funding, writing grants, designing evaluation instruments and administering grants.

Term Offered: Summer

CI 8400 Trends In Literacy Acquisition

[3 credit hours]

Study of the theories and foundational components of literacy instruction. Factors affecting literacy development including oral language, phonemic awareness, phonics, fluency, comprehension, vocabulary, reading-writing connections and motivation considered. Issues for learners from diverse backgrounds including English Language Learners examined.

Term Offered: Spring, Summer, Fall

CI 8410 Content Area Literacy

[3 credit hours]

Study of the integration of reading and writing in the content areas. Attention to both content area literacy approaches and disciplinary literacy practices. Consideration of needs of diverse learners including English Language Learners.

Term Offered: Spring, Summer, Fall

CI 8430 Diagnosis Of Reading Disability

[3 credit hours]

Teachers acquire the knowledge and skills needed to assess the reading and writing of students and to plan appropriate instruction. Emphasis on phonemic awareness, concepts of print, word recognition, fluency, comprehension, word study, and writing.

Prerequisites: CI 6400 with a minimum grade of C

CI 8440 Remediation Practicum

[3 credit hours]

In depth tutoring with learners ranging from preK to 12th grade. Data-driven instructional decision-making as well as considerations for individualizing instruction emphasized. Design and conduct of a professional development workshop for literacy educators based on tutoring cases is a culminating aspect of the course.

Prerequisites: (CI 6400 with a minimum grade of C and CI 6430 with a minimum grade of C)

Term Offered: Spring, Summer, Fall

CI 8490 Theory And Research In Literacy

[3 credit hours]

Extensive examination of current research and theoretical considerations in language and literacy learning and instruction. Contemporary contextual factors such as policy and standards are explored. The reciprocal nature of research and practice is a central theme of the course. Individualized culminating projects focus on specific issues of interest related to language and literacy learning and instruction.

Term Offered: Spring, Summer, Fall

CI 8590 Theory And Research In Mathematics Education

[3 credit hours]

Critical appraisal of current theory and research in mathematics education. Emphasis on issues related to teacher practice, student learning, and curriculum development.

Term Offered: Spring, Summer, Fall

CI 8650 Teacher Learning and Education

[3 credit hours]

Designed for future teacher educators and teacher leaders, students investigate frameworks for teacher professional knowledge including pedagogical content knowledge, teacher learning, educative mentoring, and program design. Teacher educators' roles as leaders for teacher learning and improvement are examined.

CI 8690 Theory And Research In Science Education

[3 credit hours]

Designed for individuals beginning their thesis, project, or seminar paper phase of their graduate program, this course explores both theory and research in science education. Based on an area of interest, students review and critically analyze the research literature in science education. Students also learn how to find primary sources, read and critique research, and organize and write a literature review.

Term Offered: Spring, Summer, Fall

CI 8700 Doctoral Pro-Seminar I: Introduction to Scholarship in Curriculum and Instruction

[3 credit hours]

The doctoral research cycle begins by introducing students to issues in curriculum and instruction, establishing a research agenda, and building a community of scholars. Pre-requisite to Pro-Seminar II.

Term Offered: Spring, Fall

CI 8710 Doctoral Pro-Seminar II: Themes in theory and research in Curriculum and Instruction

[3 credit hours]

The doctoral research cycle continues by examining the paradigmatic and theoretical bases of C&I research. Develop lines of inquiry grounded in theoretical knowledge and personal interests. Prerequisite: Pro-Seminar I.

Prerequisites: CI 8700 with a minimum grade of D-

Term Offered: Spring, Summer

CI 8720 Doctoral Pro-Seminar III: Themes in theory and research in curriculum and instruction.

[3 credit hours]

The doctoral research cycle is completed. A study is designed, conducted and disseminated within a research group under the guidance of a mentor. Prerequisite: CI 8700 + 8710.

Prerequisites: CI 8710 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

CI 8790 Theory And Research In Social Studies

[3 credit hours]

Intensive study of research and theoretical considerations related to the development and current status of learning and instruction in the social studies. Historical and contemporary contextual factors such as policy and standards are explored. The reciprocal nature of research and practice is a central theme of the course. Individualized culminating projects focus on issues related to learning and instruction in the social studies.

Term Offered: Spring, Fall

CI 8800 Foundations Of Curriculum & Instruction

[3 credit hours]

The purpose of CI 6800/8800, Foundations of Curriculum, is to provide an introduction to the foundational areas that affect the design and development of curriculum. This includes the history, social forces, philosophy, and psychology behind many of the curriculum practices and issues that exist in schools today as well as the nature of the curriculum development process. As a result, the course is designed to increase the learner's awareness of the field of curriculum and to introduce specific skills in design and development.

Term Offered: Spring, Summer, Fall

CI 8810 Curriculum Development: K-12

[3 credit hours]

The purpose of CI 6810/8810, Curriculum Development: K-12, is to provide appropriate background information and practice in curriculum and instructional design and direct experiences in approaching this process imaginatively. The course will focus on how to use both traditional and emerging models of curriculum design and development to create a working curriculum and to design instructional based on research-based theories of learning and models of teaching.

Term Offered: Spring, Fall

CI 8830 Curriculum Trends And Issues

[3 credit hours]

Designed for advanced students of education, this course guides students in exploring core ideas to develop a framework for the study of teaching. Students investigate issues of what and how to teach in the content areas as well as explore the knowledge of expert content teachers. As a core graduate course in curriculum and instruction, students analyze and integrate ideas to form a theoretical framework and are guided in developing professional written work grounded in the literature. Students explore questions and approaches for research on content teaching.

Term Offered: Spring, Summer

CI 8840 Curriculum For Educational Leaders

[3 credit hours]

The purpose of this course is to introduce educational leaders to research-based leadership theories and principles and how these apply to P-12 school settings. Building principals, teacher leaders, and instructional coaches will focus on creating learning environments throughout the school that increase teacher effectiveness, utilize alternative assessment strategies, and focus on connecting curriculum, instruction and assessment in all classrooms.

Term Offered: Spring, Fall

CI 8860 Advanced Curriculum Theory

[3 credit hours]

This course is designed to build on the foundational concepts and principles introduced in CI 6800/8800 and to explore, analyze and evaluate curriculum theory as it applies to curriculum studies as a discipline. This course will explore curriculum theory as a "complicated conversation" led by educators with the knowledge of contemporary social issues, history, philosophy and popular culture. The course will analyze and evaluate modernist and postmodern theories and practices and engage students with readings, discussions, and interactions with influential curriculum theorists.

Term Offered: Spring, Fall

CI 8900 Doctoral Seminar In Curriculum And Instruction

[2-4 credit hours]

This seminar will consider problems and provide advanced study for doctoral students in Curriculum and Instruction.

Term Offered: Spring, Summer, Fall

CI 8930 Independent Research In Curriculum And Instruction

[1-5 credit hours]

Individual study is designed to provide the doctoral student opportunity to work individually on professional problems under the direction of CI faculty.

Term Offered: Spring, Summer, Fall

CI 8940 Doctoral Internship In Curriculum And Instruction

[1-3 credit hours]

Placement of doctoral students in appropriate school, school district, or other professional setting under direction of appropriate mentors or advisors.

Term Offered: Spring, Fall

CI 8960 Dissertation In Curriculum And Instruction

[1-10 credit hours]

Original research in an area of curriculum and instruction.

Term Offered: Spring, Summer, Fall

CIEC 5000 Ece: Philosophy And Practice

[3 credit hours]

A comprehensive introduction to the profession of early childhood education by examining relevant issues as they relate to overall development of children ages birth to eight years.

Term Offered: Spring, Summer, Fall

CIEC 5070 Effective Teaching Practices: Pre-K To 3rd Grade

[3 credit hours]

Applies characteristics of best practice to curriculum development and implementation with adherence to national and state curriculum standards as they apply to children, age 3 to 8, with diverse educational needs.

Prerequisites: (EDP 5210 with a minimum grade of C and CIEC 5000 with a minimum grade of C)

Term Offered: Spring, Fall

CIEC 5150 Setting The Stage For Early Childhood Learning: Inspirations From Reggio Emilia

[3 credit hours]

This course will explore Reggio's philosophy of early childhood education and the numerous ways that children explore the "hundred languages." Reggio uses these languages (art, clay, wire, sculpture, light, shadow, etc.) as a way to help children represent their world and what they know about it.

Term Offered: Spring, Summer

CIEC 5340 Infant/Toddler Curriculum

[3 credit hours]

Introduction to the sequential development of the young child from birth to 3 years. Students will engage in field hours in infant-toddler settings, design learning materials and critique research in topics related to infant/toddler curriculum.

Term Offered: Spring, Summer, Fall

CIEC 5350 Public Policy And Advocacy In Early Childhood Education

[3 credit hours]

Students will understand the implications of social, political and economic policies on the emergence of services for young children in the 21st century.

Prerequisites: CIEC 5000 with a minimum grade of C

Term Offered: Spring, Summer, Fall

CIEC 5380 Field Experience Cohort I

[3 credit hours]

This course aligns with the graduate Cohort II coursework (CIEC 5070).

Prerequisites: EDP 5210 with a minimum grade of C

Corequisites: CIEC 5070

Term Offered: Spring, Fall

CIEC 5460 Science Methods For Early Childhood Education

[3 credit hours]

This course is designed to help teachers of science in grades Pre-Kindergarten through third to understand the concepts, ideas and applications of science in the real world. Students will learn how scientific thinking involves collecting data, analyzing data, making decisions and taking action based on those decisions. Students will learn how to plan effective science experience for young children that cause them to explore environments and act upon their discoveries. Students will learn how to assess the scientific thinking of young children appropriately, using formal and informal strategies.

Term Offered: Spring, Fall

CIEC 5480 Field Experience Cohort II

[3 credit hours]

This course aligns with all graduate-level Cohort II coursework in the early childhood teacher education licensure program.

Corequisites: CIEC 5460

Term Offered: Spring, Fall

CIEC 5520 Multisensory Experiences

[3 credit hours]

Development and sensory principles underlying the planning and implementation of developmentally appropriate learning activities for young children. Technical content will include the physical and neurological bases for learning.

CIEC 5530 Affective Experiences

[3 credit hours]

This course focuses on teacher planning and activities that support the socio-emotional development of young children.

CIEC 5540 Prekindergarten Programs

[3 credit hours]

Focuses on the successful operations of an early childhood program. Covers topics such as licensing and certification standards, staff development selection and purchase of equipment and proper food and health services.

CIEC 5550 Teaching Methods For Early Childhood Social Studies

[3 credit hours]

In depth study of methods and materials for teaching social studies from pre-school to third grade. Implementation of early childhood curriculum within the context of current technology and the development of critical thinking skills.

Prerequisites: (CIEC 5000 with a minimum grade of C and EDP 5210 with a minimum grade of C)

Term Offered: Spring, Fall

CIEC 5580 Practicum: Infant/Toddler

[1 credit hour]

Practicum experience in infant/toddler settings where students will observe, plan, implement and evaluate activities.

CIEC 5590 Infant Toddler/Seminar

[2 credit hours]

Planning, research, teacher-made materials appropriate for environments for infants and toddlers will be covered.

CIEC 5610 Seminar I: Orientation to Interprofessional Teaming

[1 credit hour]

Become familiar with requirements for the Certificate in Interprofessional Teaming. Focus on competencies needed to work collaboratively with professionals to meet the needs of individuals with disabilities and their families.

Prerequisites: SPED 5270 with a minimum grade of D-

Term Offered: Summer

CIEC 5620 Seminar II: Working Effectively with Team Members

[1 credit hour]

Factors that support and threaten interprofessional collaboration. Become aware of policies affecting teaming. Engage in advocacy for teaming that will benefit individuals with disabilities.

Prerequisites: CIEC 5610 with a minimum grade of D- and CIEC 5270 with a minimum grade of D-

Term Offered: Summer, Fall

CIEC 5630 Seminar III: Evidence-Based Practice and Innovation in Teaming

[1 credit hour]

Issues related to principles of ethical practice, professional identity and advocacy. Ways in which technology can promote effective teaming practices with other professionals as well as with family members.

Prerequisites: CIEC 5620 with a minimum grade of D-

Corequisites: CIEC 5640

Term Offered: Summer

CIEC 5640 Practicum in Interprofessional Teaming

[2 credit hours]

Students will work as part of an inter-professional team to develop, implement, and evaluate integrated intervention plans designed to support the development of children who have special needs.

Prerequisites: CIEC 5620 with a minimum grade of D-

Corequisites: CIEC 5630

CIEC 5770 Field Experience Cohort III

[3 credit hours]

This course aligns with all Cohort III coursework in the early childhood education program.

Prerequisites: (CIEC 5070 with a minimum grade of C and EDP 3210 with a minimum grade of C) or (CIEC 5070 with a minimum grade of C and EDP 5210 with a minimum grade of C) or (CIEC 4070 with a minimum grade of C and EDP 3210 with a minimum grade of C)

Term Offered: Spring, Fall

CIEC 5800 Teacher/Parent Child Relations

[3 credit hours]

This course is designed to assist the classroom teacher in building positive relationships with the parents of students and to develop effective strategies for communicating with them.

CIEC 5950 Workshop In Early Childhood Education

[1-5 credit hours]

Workshops developed around topics of interest and concern to inservice teachers. Practical application of workshop topics will be emphasized. Students may include several workshops in their master's or specialist degree programs.

CIEC 5980 Special Topics In Early Childhood Education

[1-5 credit hours]

A course developed around topics of interest and concern to inservice teachers within districts served by the Center for Educational Research and Services. Stresses solution and resolution of educational problems occurring within the district.

Term Offered: Spring, Summer, Fall

CIEC 5990 Graduate Independent Study In Early Childhood Education

[1-5 credit hours]

Individual study designed to provide a student the opportunity to work individually on professional problems under the direction of the faculty in Early Childhood Education.

Term Offered: Spring, Summer, Fall

CIEC 6310 Pre-K/Primary Curriculum

[3 credit hours]

The study and design of early childhood curriculum from a best practice/developmental perspective including integrated curriculum, anti-bias approaches, authentic assessment, direct learning strategies. Student self assessment and change project required.

Term Offered: Spring, Fall

CIEC 6320 Meaning And Development Of Play Behavior

[3 credit hours]

Theoretical bases of play behavior and its role in curriculum development/assessment. Students implement and evaluate a sociodramatic play kit and conduct library research on one aspect of play behavior.

Term Offered: Summer

CIEC 6330 Language And Concept Development

[3 credit hours]

Study of the language and literacy development of the young child with emphasis upon the factors that influence and support this development. Students will do projects to implement their learning.

Term Offered: Spring, Summer, Fall

CIEC 6750 Developmental And Classroom Assessment

[3 credit hours]

Focuses upon teaching and learning in a developmental learning environment. Emphases includes observing the developmental characteristics of young children and assessment for prescriptive teaching.

Term Offered: Spring, Summer, Fall

CIEC 6900 Masters Research Seminar In Early Childhood Education

[2-3 credit hours]

Examination of research and current issues in early childhood education. Emphasis on theory and research and evaluation models.

Prerequisites: CIEC 6950 with a minimum grade of C

Term Offered: Spring

CIEC 6920 Masters Research Project In Early Childhood Education

[1-3 credit hours]

Student will complete an individual research project under the direction of a committee of at least two faculty members in Early Childhood ordinarily involving the faculty advisor.

CIEC 6940 Internship In Early Childhood

[1-12 credit hours]

Placement of a Master's student in an appropriate PreK-Grade 3 school setting under the direction of a CIEC instructor. A maximum of 3 hours can be applied towards a masters degree.

Term Offered: Spring, Fall

CIEC 6950 Theory And Research In Early Childhood

[3 credit hours]

Review and analysis of theory and research related to rationale and methods for program options for young children. Critique research and prepare a review of synthesis of research.

Term Offered: Fall

CIEC 6960 Masters Thesis In Early Childhood Education

[1-3 credit hours]

Students who elect this option will complete a thesis under the direction of committee of at least two faculty members from Early Childhood Education, ordinarily including the faculty advisor.

CIEC 7610 Seminar I: Orientation to Interprofessional Teaming

[1 credit hour]

Become familiar with requirements for the Certificate in Interprofessional Teaming. Focus on competencies needed to work collaboratively with professionals to meet the needs of individuals with disabilities and their families.

Prerequisites: SPED 7270 with a minimum grade of D-

Term Offered: Summer

CIEC 7620 Seminar II: Working Effectively with Team Members

[1 credit hour]

Factors that support and threaten interprofessional collaboration. Become aware of policies affecting teaming. Engage in advocacy for teaming that will benefit individuals with disabilities.

Prerequisites: CIEC 7610 with a minimum grade of D- and CIEC 7270 with a minimum grade of D-

Term Offered: Summer

CIEC 7630 Seminar III: Evidence-Based Practice and Innovation in Teaming

[1 credit hour]

Issues related to principles of ethical practice, professional identity and advocacy. Ways in which technology can promote effective teaming practices with other professionals as well as with family members.

Prerequisites: CIEC 7620 with a minimum grade of D-

Corequisites: CIEC 7640

Term Offered: Spring, Summer

CIEC 7640 Practicum in Interprofessional Teaming

[2 credit hours]

Students will work as part of an inter-professional team to develop, implement, and evaluate integrated intervention plans designed to support the development of children who have special needs.

Prerequisites: CIEC 7620 with a minimum grade of D-

Corequisites: CIEC 7630

CIEC 7800 Teacher/Parent Child Relations

[3 credit hours]

This course is designed to assist the classroom teacher in building positive relationships with the parents of students and to develop effective strategies for communicating with them.

CIEC 7940 Specialist Practicum In Early Childhood Education

[1-3 credit hours]

Observation and supervised experience in an appropriate setting. Students will be assigned to work as interns under the joint supervision of school and University personnel.

CIEC 7980 Special Topics In Early Childhood Education

[1-5 credit hours]

A course developed around topics of interest and concern to inservice teachers within districts served by the Center for Educational Research and Services. Stresses solution and resolution of educational problems occurring within the district.

Term Offered: Spring, Summer, Fall

CIEC 8310 Pre-K/Primary Curriculum

[3 credit hours]

The study and design of early childhood curriculum from a best practice/developmental perspective including integrated curriculum, anti-bias approaches, authentic assessment, direct learning strategies. Student self assessment and change project required.

Term Offered: Spring, Fall

CIEC 8320 Meaning And Development Of Play Behavior

[3 credit hours]

Theoretical bases of play behavior and its role in curriculum development/assessment. Students implement and evaluate a sociodramatic play kit and conduct library research on one aspect of play behavior.

Term Offered: Summer

CIEC 8330 Language And Concept Development

[3 credit hours]

Study of the language and literacy development of the young child with emphasis upon the factors that influence and support this development. Students will do projects to implement their learning.

Term Offered: Spring, Summer, Fall

CIEC 8340 Curriculum Design For Infants And Toddlers

[3 credit hours]

Introduction to the sequential development of the young child from birth to 3 years. Students will engage in field hours in infant-toddler settings, design learning materials and critique research in topics related to infant/toddler curriculum.

Term Offered: Summer

CIEC 8750 Developmental And Classroom Assessment

[3 credit hours]

Focuses upon teaching and learning in a developmental learning environment. Emphases includes observing the developmental characteristics of young children and assessment for prescriptive teaching.

Term Offered: Spring, Summer, Fall

CIEC 8900 Doctoral Seminar In Early Childhood Education

[2-4 credit hours]

This seminar will consider problems and provide advanced study for doctoral students in Early Childhood Education.

Term Offered: Spring, Fall

CIEC 8930 Independent Research In Early Childhood Education

[1-5 credit hours]

Individual study is designed to provide the doctoral student opportunity to work individually on professional problems under the direction of Early Childhood faculty.

Term Offered: Spring, Summer, Fall

CIEC 8940 Doctoral Internship In Early Childhood

[1-3 credit hours]

Placement of doctoral students in an appropriate PreK-Grade 3 school, school district or other professional setting under the direction of joint placement personnel and CIEC faculty.

Term Offered: Spring

CIEC 8950 Theory And Research In Early Childhood

[3 credit hours]

Review and analysis of theory and research related to rationale and methods for program options for young children. Critique research and prepare a review of synthesis of research.

CIEC 8960 Dissertation In Early Childhood Education

[1-12 credit hours]

Original research in an area of early childhood education.

Term Offered: Spring, Summer, Fall

CTE 5010 Teaching Occupational Skills

[3 credit hours]

This course is required for the Health Careers, Career-Technical Education and the six Career-Technical Licenses. This course addresses multiple topics critical to workforce education as they apply to the laboratory environment. Students are provided classroom and clinical experiences designed to assist the beginning teacher with basic laboratory instructional techniques and management strategies that integrate academic, occupational and employability skills in a contextual framework.

Term Offered: Summer**CTE 5020 Occupational Safety And Liability**

[3 credit hours]

This course is required for the Adult Education, Career Based Intervention, and Work-Site Teacher/Coordinator endorsements. Occupational health and safety hazards applicable to school, business, and industry, will be examined. Utilizing clinical and classroom experiences students will investigate: the rationale for safety training; strategies to minimize exposure and prevent injuries; specific topics, such as ergonomics, blood borne pathogens, air quality, sound, hazardous materials, back safety, substance abuse, violence in the workplace, etc.

Term Offered: Spring, Summer**CTE 5030 Teaching Occupational Knowledge**

[3 credit hours]

This course is required for the Health Careers, Career-Technical Education and the six Career-Technical Licenses. Designed as a co-requisite in the professional education series, this course addresses multiple topics critical to workforce education as they apply to the classroom environment. Students are provided classroom and clinical experiences designed to assist the beginning teacher with basic classroom instructional techniques and management strategies that integrate academic, occupational and employability skills in a contextual framework.

Term Offered: Summer**CTE 5040 Laboratory Organization And Management**

[3 credit hours]

Designed for laboratory instructors to increase their operating efficiency and effectiveness. Focus is on arranging the facility and controlling materials, supplies, learning activities and maintenance through various system approaches.

CTE 5050 Methods for Teaching CTE Methods I

[2 credit hours]

This course is required for the Health Careers, Career-Technical Education and the six Career- Technical Licenses. The pedagogical and management skills introduced in CTE 4010 are integrated in a contextual framework utilizing an actual laboratory situation. Learning styles; laboratory planning, instruction, technology, and management; integrated academics; performance assessment; safety and liability issues; employability and SCANS skills; community partnerships; school-based and work-site learning; etc. are the basis for student research, reflection, and inquiry

Term Offered: Fall**CTE 5060 Foundations Of Career And Technical Education**

[3 credit hours]

A study of social issues, historical events and philosophies that provide a basis for the development of career and technical education. Principles and their implications are also reviewed.

Term Offered: Fall**CTE 5070 CTE Methods II**

[2 credit hours]

This course is required for the Health Careers, Career-Technical Education and the six Career-Technical Licenses. The pedagogical and management skills introduced in CTE 4030 are integrated in a contextual framework utilizing an actual classroom setting. Organizing curriculum; instructional planning, management, delivery and technology; learning theory; behavior management; motivation; integrated academics; authentic assessment; career-technical student organizations; etc. are the basis for student research, reflection, and inquiry.

Term Offered: Spring**CTE 5080 Principles Of School-To-work Transition**

[3 credit hours]

Design for educators and employers to increase their knowledge and skill to build partnerships between schools and business, industry and labor. Examines transition concepts, components, implementation strategies and models.

Term Offered: Summer**CTE 5100 Organization, Administration & Regulations Of Career And Technical Education**

[3 credit hours]

Study of the organization and administration of career and technical education at the national, state and local levels, noting relationships existing between the agencies.

Term Offered: Spring**CTE 5110 Seminar for CTE Teachers**

[3 credit hours]

The career-technical education teacher is an occupational professional who possesses the pedagogical knowledge and reflective decision making skills necessary to enter the teaching profession at multiple levels. In order to prepare individuals as career-technical instructors, components of the licensure program were developed and approved by the State Board of Education, to promote high professional standards to provide quality classroom teachers. The components are: a clear mission; operational goals; specific competencies of an assessment system.

Term Offered: Spring**CTE 5120 Supervision Of Career And Technical Education**

[3 credit hours]

Development of supervisory skills in career and technical education. Stresses human relations, team building, basic management and leadership skills in program inauguration and operations.

Term Offered: Fall

CTE 5140 Cooperative Education

[2 credit hours]

This course is required for the Career Based Intervention. The course is designed to present the basic fundamentals of establishing and operating a cooperative occupational program. Students investigate and develop operational procedures to address: student selection; assessing the quality of potential training stations; student placement; school-based learning; critical issues related to work-based learning; critical issues related to work-based learning; minor labor laws; partnering with parents, business, and labor; connecting activities; record keeping; evaluation techniques; etc.

Term Offered: Spring, Summer, Fall**CTE 5160 Curriculum Development & Teaching**

[3 credit hours]

This course is required for the Career Based Intervention. Designed as a study of cooperative education curriculum and instructional methods, the course includes the coordination of school-based instruction with on-the-job work-based experience. Learning styles of diverse students; instructional planning and delivery; classroom management; integrated academics; authentic assessment; safety and liability issues; employability and SCANS skills; community partnerships; school-based and work-site learning; etc. are the basis for student research, reflection, and inquiry.

Term Offered: Spring, Summer**CTE 5180 Promotion, Recruitment & Retention**

[3 credit hours]

A study of career and technical education in the community, and promotion, recruitment and retention strategies, including school publics, theories of community power structure and the career and technical school in a democratic society.

Term Offered: Summer, Fall**CTE 5220 Adviser Training For Youth Leaders**

[3 credit hours]

Designed for teachers and supervisors to increase their skills and knowledge of youth leadership development. Focus is on advising a student career and technical organization and includes both establishing and maintaining functions.

Term Offered: Summer**CTE 5570 Teaching Adult Learners**

[3 credit hours]

A study of the unique learning and teaching characteristics associated with adult learners, adult learning theory, learner characteristics, physical effects of aging and strategies consistent with adult learning styles.

Term Offered: Fall**CTE 5810 Staff Evaluation And Development**

[3 credit hours]

An analysis of the processes and current instruments available for evaluation of programs and personnel, and an appraisal of the professional development needs of individuals in educational settings.

CTE 5830 Curriculum Principles And Models

[3 credit hours]

Curriculum principles and models are examined. The characteristics of curricula are established and inferences are drawn for the planning, implementation and evaluation phases of curriculum development.

CTE 5930 CTE Supervised Teaching

[4 credit hours]

This course is required for the Health Careers, Career-Technical Education and the six Career-Technical Licenses. A planned field experience will be completed in public school classrooms under the direction of university facilitated induction teams. The university faculty member, on-site teacher mentor, and local administrator will collaborate to assure the novice teacher maximizes his/her potential as an individual and member of an educational team. Students are provided a contextual framework to integrate theory and practice.

Term Offered: Spring, Fall**CTE 5940 Practicum-Internship In Career And Technical Education**

[1-3 credit hours]

Observation and supervised experiences will be offered in a variety of appropriate settings, or students will be assigned to work as interns in a school setting under the joint supervision of school and university personnel.

Term Offered: Spring, Summer, Fall**CTE 5950 Workshop In Career And Technical Education**

[1-5 credit hours]

Workshops developed around topics of interest and concern for preservice and inservice teachers and other education personnel. Practical applications of workshop topics will be emphasized.

CTE 5980 Problems In Career And Technical Education

[1-5 credit hours]

A course developed around topics of interest and concern to inservice teachers and administrators. Stresses solution and resolution of educational problems occurring within selected districts.

Term Offered: Spring, Summer, Fall**CTE 5990 Individual Study In Career And Technical Education**

[1-3 credit hours]

Individual study is designed to provide the opportunity to work individually on professional problems under the direction of the faculty in career and technical education.

Term Offered: Spring, Fall**CTE 6900 Research In Career And Technical Education**

[1-3 credit hours]

This course is required for the Health Careers, Career-Technical Education and the six Career-Technical Licenses. The course provides the knowledge and skill in competency-based education. It includes occupational analysis; selection of course content; course of study and instructional guide development; and, credentialing students. Utilizing the Career Field Content Standards the teacher is prepared to draw from their content expertise and experiences to plan and develop instruction that addresses curriculum goals of diverse and special populations.

Term Offered: Fall**CTE 6920 Master's Research Project In Career And Technical Education**

[1-3 credit hours]

Open to a graduate student who elects the completion of a research project in fulfilling the research requirement of the master's degree.

Term Offered: Spring**CTE 6960 Master's Thesis In Career And Technical Education**

[1-3 credit hours]

Open to a graduate student who elects the completion of a master's thesis in fulfilling the research requirement of the master's degree.

CTE 7810 Staff Evaluation And Development

[3 credit hours]

An analysis of the processes and current instruments available for evaluation of programs and personnel, and an appraisal of the professional development needs of individuals in educational settings.

CTE 7830 Curriculum Principles And Models

[3 credit hours]

Curriculum principles and models are examined. The characteristics of curricula are established and inferences are drawn for the planning, implementation and evaluation phases of curriculum development.

CTE 7940 Practicum-Internship In Career And Technical Education

[1-3 credit hours]

Observation and supervised experiences will be offered in a variety of appropriate settings, or students will be assigned to work as interns in a school setting under the joint supervision of school and university personnel.

Term Offered: Summer**CTE 7950 Workshop In Career And Technical Education**

[1-5 credit hours]

Workshops developed around topics of interest and concern for preservice and inservice teachers and other education personnel. Practical applications of workshop topics will be emphasized.

CTE 7980 Problems In Career And Technical Education

[1-5 credit hours]

A course developed around topics of interest and concern to inservice teachers and administrators. Stresses solution and resolution of educational problems occurring within selected districts.

Term Offered: Summer**CTE 7990 Individual Study In Career And Technical Education**

[1-3 credit hours]

Individual study is designed to provide the opportunity to work individually on professional problems under the direction of the faculty in career and technical education.

GIFT 5100 Introduction To Talented And Gifted Education

[3 credit hours]

Survey of major topics about the education and development of talents and gifts, including history, identification, social-emotional development, curriculum, creativity, intelligence, programming and evaluation.

Term Offered: Spring, Summer, Fall**GIFT 5200 Assessment And Evaluation In Talented And Gifted Education**

[3 credit hours]

The study of assessment and evaluation as it pertains to the special educational needs of talented and gifted persons. Theoretical and practical issues in assessing talent domains and educational programs are emphasized.

GIFT 5300 Socioemotional Development Of The Talented And Gifted

[3 credit hours]

Examination of the social and emotional needs of talented and gifted persons within the context of roles in family, school and society. Attention to issues of guidance, parenting, special populations and underachievement.

Term Offered: Summer, Fall**GIFT 5400 Creativity In The Classroom**

[3 credit hours]

Explores existing theories about creativity; examination of approaches and their implementation within various educational settings.

Term Offered: Spring**GIFT 5500 Curriculum I: Differentiation For The Talented And Gifted**

[3 credit hours]

The study of curriculum models, theories and trends, principles and practices of differentiation, and application of content within various educational settings.

Term Offered: Spring, Summer**GIFT 5600 Curriculum II: Integrating & Implementing Service Plans For The Talented & Gifted**

[3 credit hours]

The study, development and implementation of curriculum models across content areas both vertically and horizontally within various educational settings. Focuses on multi-exceptionalities and implications of varied service delivery plans.

Term Offered: Summer**GIFT 5700 Practicum In Talented And Gifted Education**

[3-6 credit hours]

Provides opportunities for field experience to use and refine the strategies for persons with talented and gifted abilities.

Term Offered: Spring, Summer, Fall**GIFT 6000 Issues & Trends In Talented And Gifted Education**

[3 credit hours]

The course examines the current theoretical and practical issues that are dominating the literature in the field. Perennial issues such as identification and intelligence will be discussed, as well as emergent topics such as the biological bases of advanced development and creativity and emotional adjustment.

GIFT 6100 Advanced Development In Social, Cultural & Political Context In Talented & Gifted Education

[3 credit hours]

The course explores social, cultural and political contexts related to advanced development or expression of talents. Emphasizes personal reflection and recognition of hegemony related to gifted individuals' past, present and future.

Prerequisites: (GIFT 5100 with a minimum grade of D- and GIFT 5300 with a minimum grade of D-)**GIFT 6900 Advanced Seminar In Teaching, Learning & Curriculum Theory In Talented & Gifted Education**

[3 credit hours]

The course studies teaching, learning and curriculum from theoretical and historical perspectives to establish defensible lines of scholarly inquiry in gifted education.

GIFT 6910 Seminar In Talent & Advanced Development I: Academic Talents

[3 credit hours]

The course studies the theoretical and research basis of development of specific academic domains, such as science, mathematics, language and literature, etc. Attention is paid to tacit as well as more public kinds of knowledge.

GIFT 6920 Seminar In Talent & Advanced Development II: Aesthetic Talents

[3 credit hours]

The course studies development and expression of aesthetic abilities and talents such literacy, theatrical and/or musical expressiveness, visual and performing arts, emotional giftedness, movement and dance.

GIFT 6930 Seminar In Talent & Advanced Development III: Practical, Folk & Sport

[3 credit hours]

The course studies the theoretical and research basis for development of talents in folk, practical and athletic domains. Attention is paid to tacit, esoteric and public forms of knowledge.

GIFT 6950 Master's Research Project In Talented And Gifted Education

[3 credit hours]

Independent research project that integrates and synthesizes concepts and practices in gifted and talented education with implementation of action research and practical inquiry study.

Term Offered: Spring, Fall

GIFT 6980 Special Topics About Advanced Development In The Talented And Gifted

[3-6 credit hours]

Collaborative inquiry into emerging topics in the field. This course is open to advanced graduate students in the master's or doctoral program.

GIFT 6990 Independent Study In The Development Of The Talented & Gifted

[1-6 credit hours]

Directed readings and/or study on a topic selected in conjunction with a faculty mentor.

Term Offered: Spring

GIFT 7100 Introduction To Talented And Gifted Education

[3 credit hours]

Survey of major topics about the education and development of talents and gifts, including history, identification, social-emotional development, curriculum, creativity, intelligence, programming and evaluation.

Term Offered: Spring, Fall

GIFT 7200 Assessment And Evaluation In Talented And Gifted Education

[3 credit hours]

The study of assessment and evaluation as it pertains to the special educational needs of talented and gifted persons. Theoretical and practical issues in assessing talent domains and educational programs are emphasized.

GIFT 7300 Socioemotional Development Of The Talented And Gifted

[3 credit hours]

Examination of the social and emotional needs of talented and gifted persons within the context of roles in family, school and society. Attention to issues of guidance, parenting, special populations and underachievement.

Term Offered: Fall

GIFT 7400 Creativity In The Classroom

[3 credit hours]

Explores existing theories about creativity; examination of approaches and their implementation within various educational settings.

GIFT 7500 Curriculum I: Differentiation For The Talented And Gifted

[3 credit hours]

The study of curriculum models, theories and trends, principles and practices of differentiation, and application of content within various educational settings.

Term Offered: Spring, Summer

GIFT 7600 Curriculum II: Integrating & Implementing Service Plans For The Talented & Gifted

[3 credit hours]

The study, development and implementation of curriculum models across content areas both vertically and horizontally within various educational settings. Focuses on multi-exceptionalities and implications of varied service delivery plans.

Term Offered: Summer

GIFT 7700 Practicum In Talented And Gifted Education

[3-6 credit hours]

Provides opportunities for field experience to use and refine the strategies for persons with talented and gifted abilities.

Term Offered: Spring, Summer, Fall

GIFT 8000 Issues & Trends In Talented And Gifted Education

[3 credit hours]

The course examines the current theoretical and practical issues that are dominating the literature in the field. Perennial issues such as identification and intelligence will be discussed, as well as emergent topics such as the biological bases of advanced development and creativity and emotional adjustment.

Term Offered: Spring, Summer, Fall

GIFT 8100 Advanced Development In Social, Cultural & Political Context In Talented & Gifted Education

[3 credit hours]

The course explores social, cultural and political contexts related to advanced development or expression of talents. Emphasizes personal reflection and recognition of hegemony related to gifted individuals' past, present and future.

GIFT 8900 Advanced Seminar In Teaching, Learning & Curriculum Theory In Talented & Gifted Education

[3 credit hours]

The course studies teaching, learning and curriculum from theoretical and historical perspectives to establish defensible lines of scholarly inquiry in gifted education.

Term Offered: Spring, Fall

GIFT 8910 Seminar In Talent & Advanced Development I: Academic Talents

[3 credit hours]

The course studies the theoretical and research basis of development of specific academic domains, such as science, mathematics, language and literature, etc. Attention is paid to tacit as well as more public kinds of knowledge.

GIFT 8920 Seminar In Talent & Advanced Development II: Aesthetic Talents

[3 credit hours]

The course studies development and expression of aesthetic abilities and talents such literacy, theatrical and/or musical expressiveness, visual and performing arts, emotional giftedness, movement and dance.

Term Offered: Fall

GIFT 8930 Seminar In Talent & Advanced Development III: Practical, Folk & Sport

[3 credit hours]

The course studies the theoretical and research basis for development of talents in folk, practical and athletic domains. Attention is paid to tacit, esoteric and public forms of knowledge.

GIFT 8940 Internship In Gifted Studies

[3-6 credit hours]

Supervised internship in college teaching, or administration/leadership in agencies, or research and evaluation for advanced graduate students to practice skills and knowledge within settings relevant to career goals in talented and gifted education.

Term Offered: Spring, Summer, Fall**GIFT 8960 Doctoral Dissertation**

[1-15 credit hours]

Developing, conducting analyzing and writing the dissertation.

Term Offered: Spring, Summer, Fall**GIFT 8980 Special Topics About Advanced Development In The Talented And Gifted**

[3-6 credit hours]

Collaborative inquiry into emerging topics in the field. This course is open to advanced graduate students in the master's or doctoral program.

Term Offered: Spring, Summer, Fall**GIFT 8990 Independent Study In The Development Of The Talented & Gifted**

[1-6 credit hours]

Directed readings and/or study on a topic selected in conjunction with a faculty mentor.

Term Offered: Spring, Summer, Fall**SPED 5000 Issues In Special Education**

[3 credit hours]

Examination of causes and characteristics, identification procedures, and potential of learners who significantly deviate from the norm mentally, physically and behaviorally. Issues related to services for persons with disabilities will be studied.

Term Offered: Spring, Summer, Fall**SPED 5010 Atypical Development In Early Childhood: Implications For Development**

[3 credit hours]

Factors that contribute to atypical development in early childhood, appropriate intervention models and implications of delay on young children's development. The focus will be on conditions that may result in eligibility of children for early intervention and/or special education services in infancy (0-2), in the preschool (3-5) and primary grade (K-3) years (ages 5 to 8).

Term Offered: Summer**SPED 5080 Curriculum Adaptations and Strategies in Early Childhood Education**

[3 credit hours]

[3 hours] Early childhood development, including learning and behavioral characteristics examined focusing on implications of developmental delay and risk. Implications for IEP-based instruction explored. Strategies that support inclusion discussed. Prerequisite: CIEC 5000, EDP 5210, SPED 5010.

Term Offered: Spring, Fall**SPED 5120 Students With Special Needs: Developmental And Educational Implication**

[3 credit hours]

In-depth study of personality, psychological and physical development, and educational needs of atypical children: including current research issues in areas of social, legal and environmental aspects of exceptional populations.

SPED 5150 Advanced Practicum For Teaching Students With Moderate Educational Needs

[1 credit hour]

This course is taken with SPED 5160 to apply strategies and techniques for teaching students with moderate educational needs. Forty hours of required field.

Term Offered: Spring, Fall**SPED 5160 Advanced Instructional Methods For Teaching Students With Moderate Educational Needs**

[3 credit hours]

This course focuses on a community-referenced functional curricula approach to teaching children and youths with moderate to severe delays. An in-depth study of inclusionary activities, community-based instruction, social skills.

SPED 5170 Supporting Youths And Adults With Disabilities Living And Working In The Community

[3 credit hours]

In-depth study of issues faced by adults with severe and multiple disabilities and their families. Emphasis on supported employment, residential options, self-determination, recreation and quality of life issues. Field experience required.

Term Offered: Fall**SPED 5180 Advanced Instructional Methods For Teaching Students With Intensive Educational Needs**

[3 credit hours]

An in-depth examination of appropriate curriculum models, instructional strategies and adaptations, and related behavior problems for students with severe and multiple disabilities. A transdisciplinary team approach is explored.

Term Offered: Spring**SPED 5190 Advanced Practicum For Students With Intensive Needs**

[1 credit hour]

This course is taken with SPED 5180 to apply strategies and techniques for teaching students with intensive needs. Forty field hours are required.

Term Offered: Spring**SPED 5210 Augmentative and Alternative Communication**

[3 credit hours]

This course will provide an overview of alternative or augmentative modes of communication for children who are unable to meet their daily communication needs through natural modes such as speech, gestures or handwriting. It will provide a broad overview of AAC and its application, along with the history and terminology.

SPED 5220 Research And Practice In Teaching Phonics, Reading And Writing To Students With Special Needs

[3 credit hours]

Current trends and issues in teaching reading and writing to students with disabilities. Examination of research supporting various methods. Application of research-based methods into practical strategies for classroom implementation. Twenty-four hours of field required.

Term Offered: Summer, Fall

SPED 5230 Advanced Field Practicum In Diagnostic And Prescriptive Teaching

[1 credit hour]

Provides the laboratory to rehearse and refine the teaching skills presented in SPED 5/7220. Required of persons seeking initial special education certification. Forty field hours required. Taken concurrently with SPED 5220.

SPED 5240 Disorders and Characteristics of Students with Emotional Disturbance

[3 credit hours]

This course introduces conceptual models of emotional disturbance (ED) in children and adolescents. Definitive diagnostics categories and their etiology are presented in contexts of their use in a variety of educational settings appropriate for children and adolescents with ED.

Prerequisites: SPED 5000 with a minimum grade of C

SPED 5250 Career And Vocational Education For Students With Disabilities

[3 credit hours]

This course covers career and vocational education activities for youths with disabilities. Special emphasis placed on developing and implementing an Individual Transition Plan (ITP) and coordination with adult service providers.

Term Offered: Spring, Summer

SPED 5260 Family And Professional Relations In Special Education

[3 credit hours]

Effective parent and professional partnerships will be explored. Interpersonal communication skills, legal issues, effective models for home-school communication, and differences in culture, values and family expectations will be discussed.

Term Offered: Summer, Fall

SPED 5270 Team Models And Community Networking In Early Intervention

[3 credit hours]

This course will focus on the skills, knowledge and ethical practices essential to the provision of effective service coordination and teaming for early intervention and early childhood special education. In addition, students will examine various models of teaming and consultation approaches and address issues related to working with individuals from cultural backgrounds other than their own.

Term Offered: Spring, Fall

SPED 5280 Management Of The Learning Environment In Early Childhood Special Education

[3 credit hours]

Aspects of quality environments, in the home and in early childhood centers for young children with special needs. Of particular interest is identifying characteristics of natural environments that promote positive child outcomes.

Term Offered: Spring

SPED 5300 Teaching Literacy Skills To Adolescents With Disabilities

[3 credit hours]

This course will review existing theories and research regarding teaching literacy to students with disabilities in 4th through 12th grades (those who did not learn to read by 3rd grade).

Term Offered: Summer

SPED 5310 Advanced Instructional Methods For Teaching Students With Mild Educational Needs

[3 credit hours]

Theoretical considerations for designing instruction, lesson plan development using direct, explicit instructional approach, differentiation, co-teaching, and evidence-based practices to meet the needs of students with mild disabilities in school settings will be examined. Research-based approaches to teaching language arts, mathematics, science, and social studies, will be explored.

Term Offered: Spring, Fall

SPED 5320 Advanced Field Practicum For Students With Mild Educational Needs

[1 credit hour]

Provides opportunities for field experience to use and refine the strategies for persons with mild disabilities presented in SPED 5310. Forty hours of field required.

Term Offered: Spring, Fall

SPED 5330 Advanced Child Study Institute: Ebd

[1 credit hour]

Provides quality educational settings to inservice teachers to practice effective behavioral and academic managing of children and youth experiencing continuous emotional stress and trauma.

SPED 5340 Advanced Behavior Management

[3 credit hours]

This course provides training inservice teachers to become managers of intra-communication and interpersonal relationships in diverse special education settings. Nonviolent Crisis Prevention/Intervention (CPI) training required.

Term Offered: Spring

SPED 5450 Advanced Methods of Teaching Studeents With Emotional Disturbance

[3 credit hours]

This course provides evaluation and application techniques of research-based methodologies for teaching students with emotional disturbance in school-based settings within the least restrictive environment.

Prerequisites: SPED 5340 with a minimum grade of C

Term Offered: Fall

SPED 5510 Curriculum And Teaching Strategies: Physical And Other Health Impairments

[3 credit hours]

Appropriate curriculum models, learning objectives and teaching strategies for students with physical or health impairing conditions are examined. Modification of materials, assessment options and alternatives response modes will be discussed.

SPED 5600 ADVANCED PROFESSIONAL REFLECTIVE SEMINAR

[3 credit hours]

The focus of this seminar is on teaching as a profession. Student will complete The Student Teaching Portfolio Project, a performance-based assessment approach to licensure and professional development. Additionally, this internship seminar provides a forum for group sharing, reflection, professional issues, ethical behaviors, interview processes, and career development.

Corequisites: SPED 6940**Term Offered:** Spring, Fall**SPED 5610 Seminar I: Orientation to Interprofessional Teaming**

[1 credit hour]

Become familiar with requirements for the Certificate in Interprofessional Teaming. Focus on competencies needed to work collaboratively with professionals to meet the needs of individuals with disabilities and their families.

Prerequisites: SPED 5270 with a minimum grade of D-**Term Offered:** Summer**SPED 5620 Seminar II: Working Effectively with Team Members**

[1 credit hour]

Factors that support and threaten interprofessional collaboration. Become aware of policies affecting teaming. Engage in advocacy for teaming that will benefit individuals with disabilities.

Prerequisites: SPED 5610 with a minimum grade of D- and SPED 5270 with a minimum grade of D-**Term Offered:** Summer, Fall**SPED 5630 Seminar III: Evidence-Based Practice and Innovation in Teaming**

[1 credit hour]

Issues related to principles of ethical practice, professional and advocacy. Ways in which technology can promote effective teaming practices with other professionals as well as with family members.

Prerequisites: SPED 5620 with a minimum grade of D-**Corequisites:** SPED 5640**Term Offered:** Spring, Summer**SPED 5640 Practicum in Interprofessional Teaming**

[2 credit hours]

Students will work as part of an inter-professional team to develop, implement, and evaluate integrated intervention plans designed to support the development of children who have special needs.

Prerequisites: SPED 5620 with a minimum grade of D-**Corequisites:** SPED 5630**Term Offered:** Spring, Summer**SPED 5950 Workshop In Special Education**

[1-5 credit hours]

A workshop developed around topics of interest and concern for in-service teachers and other education personnel. Practical application of workshop topics will be emphasized.

Term Offered: Summer**SPED 5980 Special Topics In Special Education**

[1-5 credit hours]

An advanced course for graduate students in special education or related fields. Topics are selected based on needs of the population. Student may repeat this course under different section numbers.

Term Offered: Spring, Summer, Fall**SPED 5990 Independent Study In Special Education**

[1-5 credit hours]

Individual study provides graduate students with opportunities to work individually on professional problems with faculty of the Department of Special Education Services. Individual meetings with sponsoring faculty are held.

Term Offered: Spring, Summer, Fall**SPED 6060 K-3 Curr. Models and Int. Strategies**

[3 credit hours]

Examination of appropriate curriculum models, instructional strategies and adaptations for young students (K-3 grade) with mild to intensive educational needs. A trans-disciplinary team approach is explored with an emphasis on collaboration and communication.

Term Offered: Spring**SPED 6070 Curriculum Models And Intervention Strategies In Early Childhood Special Education**

[3 credit hours]

Atypical infant, toddler and early childhood development will be examined. Specialized intervention techniques, their research and practice base and appropriate curriculum models will be explored. 20 clock hour practicum required.

Term Offered: Fall**SPED 6080 Clinical And Educational Evaluation Of Students With Disabilities**

[3 credit hours]

An in-depth study of instruments used by school psychologists and classroom teachers to access and evaluate students. The diagnostic uses and the understanding of the results will be the focus.

SPED 6220 Collaboration For Inclusive Schools

[3 credit hours]

Provides information and competencies to develop, implement and evaluate collaborative programs. Educators will enhance their ability to collaborate so that they can better meet the needs of their students.

SPED 6250 Issues And Research In Transition And Post-Secondary Outcomes For Student With Disabilities

[3 credit hours]

In-depth study of transition issues and outcomes focusing on: a) best practices, b) the roles and responsibilities of a transition specialist, c) inter-agency collaboration, d) team building, and e) program development, implementation and evaluation.

Term Offered: Spring**SPED 6350 Educational And Instructional Implications In Specific Learning Disabilities**

[3 credit hours]

Students will examine current trends in research and program development in Specific Learning Disabilities. The focus will be on learning and study skills: their implication in the development of learning.

SPED 6360 Clinical Practicum: Learning Strategies For Students With Specific Learning Disabilities

[1 credit hour]

Provides advanced graduate student with supervised practice in developing and implementing strategies and study skills for persons with learning problems. Required 15 hours instructional practice and weekly meetings with supervisors.

SPED 6410 Theory And Research: Emotional Behavioral Disorders

[3 credit hours]

This course provides in-depth readings on problems of emotionally and behaviorally disturbed/disordered children and youth. Intense study on two levels: (1) theoretical considerations and (2) treatments pertinent to diverse educational settings.

Term Offered: Fall

SPED 6420 Public School Emotional Behavior Disorders

[1 credit hour]

This course provides supervised practice in classroom participation with students identified as Emotionally Behaviorally Disturbed/Disordered. Public School settings include: self-contained, resource, transition, mainstreamed and consultative-collaborative teaching roles.

Term Offered: Spring, Summer

SPED 6440 Teaching Children And Youth With Emotional Behavior Disorders

[3 credit hours]

This course provides evaluation and application techniques of research based methodologies for teaching students with emotional behavioral Disorders/disturbances. Psycho-social educational best practices within the least restrictive environment are presented.

Term Offered: Spring

SPED 6470 Theory And Research: Autism

[3 credit hours]

This course provides in-depth readings in the field of autism. The course includes intense study on two levels: (1) theoretical considerations and (2) treatment approaches pertinent to populations with autism.

SPED 6480 Teach Youth/Child With Autism

[3 credit hours]

This course provides research based methodologies for understanding and teaching children and youth with autism. Psycho-Social Educational best practices within the least restrictive environment are presented.

SPED 6900 Independent Research In Special Education

[1-5 credit hours]

Independent Research provides opportunities to work on individual research under the direction of faculty. The student meets with the instructor at intervals and conducts research without formal class meeting.

SPED 6920 Master's Research Project In Special Education

[1-5 credit hours]

The master's project is an individually designed product which meets the final activity requirement for completion of the masters degree.

Term Offered: Spring, Summer, Fall

SPED 6930 Seminars In Special Education

[1-5 credit hours]

Seminars will consider problems and provide advanced study in the field of Special Education. A student may register for more than one seminar during a graduate program.

Term Offered: Spring, Summer, Fall

SPED 6940 Internship/Externship In Special Education

[1-8 credit hours]

Provides the advanced graduate student with supervised practicum experiences at an off-campus site; including schools, hospitals, agencies, rehabilitation clinics, work training sites and other community sites where persons with disabilities are served.

Term Offered: Spring, Summer, Fall

SPED 6960 Master Research Thesis In Special Education

[1-5 credit hours]

The master's thesis is an individually designed research study which meets the final activity requirement for completion of the master's degree.

Term Offered: Spring, Summer, Fall

SPED 6990 Independent Study In Special Education

[1-5 credit hours]

Individual study provides advanced graduate students opportunities to work individually on professional problems with faculty of the Department of Special Education Services. Individual meetings with sponsoring faculty are held.

Term Offered: Spring, Summer, Fall

SPED 7000 Issues In Special Education

[3 credit hours]

Examination of causes and characteristics, identification procedures, and potential of learners who significantly deviate from the norm mentally, physically and behaviorally. Issues related to services for persons with disabilities will be studied.

Term Offered: Spring, Summer, Fall

SPED 7120 Students With Special Needs: Developmental And Educational Implication

[3 credit hours]

In-depth study of personality, psychological and physical development, and educational needs of atypical children: including current research issues in areas of social, legal and environmental aspects of exceptional populations.

SPED 7150 Advanced Practicum For Teaching Students With Moderate Educational Needs

[1 credit hour]

This course is taken with SPED 5160 to apply strategies and techniques for teaching students with moderate educational needs. Forty hours of required field.

Term Offered: Spring

SPED 7160 Advanced Instructional Methods For Teaching Students With Moderate Educational Needs

[3 credit hours]

This course focuses on a community-referenced functional curricula approach to teaching children and youths with moderate to severe delays. An in-depth study of inclusionary activities, community-based instruction, social skills.

Term Offered: Spring, Fall

SPED 7170 Supporting Youths And Adults With Disabilities Living And Working In The Community

[3 credit hours]

In-depth study of issues faced by adults with severe and multiple disabilities and their families. Emphasis on supported employment, residential options, self-determination, recreation and quality of life issues. Field experience required.

Term Offered: Fall**SPED 7180 Advanced Instructional Methods For Teaching Students With Intensive Educational Needs**

[3 credit hours]

An in-depth examination of appropriate curriculum models, instructional strategies and adaptations, and related behavior problems for students with severe and multiple disabilities. A transdisciplinary team approach is explored.

Term Offered: Spring**SPED 7190 Advanced Practicum For Students With Intensive Needs**

[1 credit hour]

This course is taken with SPED 7180 to apply strategies and techniques for teaching students with intensive needs. Forty field hours are required.

Term Offered: Spring**SPED 7210 Augmentative and Alternative Communication**

[3 credit hours]

This course will provide an overview of alternative or augmentative modes of communication for children who are unable to meet their daily communication needs through natural modes such as speech, gestures or handwriting.

SPED 7220 Research And Practice In Teaching Phonics, Reading And Writing To Students With Special Needs

[3 credit hours]

Current trends and issues in teaching reading and writing to students with disabilities. Examination of research supporting various methods. Application of research-based methods into practical strategies for classroom implementation. Twenty-four hours of field required.

Term Offered: Summer, Fall**SPED 7230 Advanced Field Practicum In Diagnostic And Prescriptive Teaching**

[1 credit hour]

Provides the laboratory to rehearse and refine the teaching skills presented in SPED 5/7220. Required of persons seeking initial special education certification. Forty field hours required. Taken concurrently with SPED 7220.

SPED 7250 Career And Vocational Education For Students With Disabilities

[3 credit hours]

This course covers career and vocational education activities for youths with disabilities. Special emphasis placed on developing and implementing an Individual Transition Plan (ITP) and coordination with adult service providers.

Term Offered: Spring, Summer**SPED 7260 Family And Professional Relations In Special Education**
[3 credit hours]

Effective parent and professional partnerships will be explored.

Interpersonal communication skills, legal issues, effective models for home-school communication, and differences in culture, values and family expectations will be discussed.

Term Offered: Spring, Summer, Fall**SPED 7270 Team Models And Community Networking In Early Intervention**

[3 credit hours]

This course will focus on the skills, knowledge and ethical practices essential to the provision of effective service coordination and teaming for early intervention and early childhood special education. In addition, students will examine various models of teaming and consultation approaches and address issues related to working with individuals from cultural backgrounds other than their own.

Term Offered: Spring, Summer, Fall**SPED 7280 Management Of The Learning Environment In Early Childhood Special Education**

[3 credit hours]

Aspects of quality environments, in the home and in early childhood centers for young children with special needs. Of particular interest is identifying characteristics of natural environments that promote positive child outcomes.

Term Offered: Spring, Fall**SPED 7310 Advanced Instructional Methods For Teaching Students With Mild Educational Needs**

[3 credit hours]

Theoretical considerations for designing instruction, lesson plan development using direct, explicit instructional approach, differentiation, co-teaching, and evidence-based practices to meet the needs of students with mild disabilities in school settings will be examined. Research-based approaches to teaching language arts, mathematics, science, and social studies, will be explored.

Term Offered: Spring, Fall**SPED 7320 Advanced Field Practicum For Students With Mild Educational Needs**

[1 credit hour]

Provides opportunities for field experience to use and refine the strategies for persons with mild disabilities presented in SPED 7310. Forty hours of field required.

Term Offered: Fall**SPED 7330 Advanced Child Study Institute: Ebd**

[1 credit hour]

Provides quality educational settings to inservice teachers to practice effective behavioral and academic managing of children and youth experiencing continuous emotional stress and trauma.

SPED 7340 Advanced Behavior Management

[3 credit hours]

This course provides training inservice teachers to become managers of intra-communication and interpersonal relationships in diverse special education settings. Nonviolent Crisis Prevention/Intervention (CPI) training required.

Term Offered: Spring

SPED 7510 Curriculum And Teaching Strategies: Physical And Other Health Impairments

[3 credit hours]

Appropriate curriculum models, learning objectives and teaching strategies for students with physical or health impairing conditions are examined. Modification of materials, assessment options and alternatives response modes will be discussed.

SPED 7610 Seminar I: Orientation to Interprofessional Teaming

[1 credit hour]

Become familiar with requirements for the Certificate in Interprofessional Teaming. Focus on competencies needed to work collaboratively with professionals to meet the needs of individuals with disabilities and their families.

Prerequisites: SPED 7270 with a minimum grade of D-

Term Offered: Summer

SPED 7620 Seminar II: Working Effectively with Team Members

[1 credit hour]

Factors that support and threaten interprofessional collaboration. Become aware of policies affecting teaming. Engage in advocacy for teaming that will benefit individuals with disabilities.

Prerequisites: SPED 7610 with a minimum grade of D- and SPED 7270 with a minimum grade of D-

SPED 7630 Seminar III: Evidence-Based Practice and Innovation in Teaming

[1 credit hour]

Issues related to principles of ethical practice, professional and advocacy. Ways in which technology can promote effective teaming practices with other professionals as well as with family members.

Prerequisites: SPED 7620 with a minimum grade of D-

Corequisites: SPED 7640

Term Offered: Summer

SPED 7640 Practicum in Interprofessional Teaming

[2 credit hours]

Students will work as part of an inter-professional team to develop, implement, and evaluate integrated intervention plans designed to support the development of children who have special needs.

Prerequisites: SPED 7620 with a minimum grade of D-

Corequisites: SPED 7630

Term Offered: Summer

SPED 7800 Practical And Theoretical Implication Of Vision Impairment

[3 credit hours]

A study of the research on the anatomy and physiology of the eye, visual impairments and the practical implication for learning, working and independent living.

SPED 7810 Low Vision: Theory & Research

[3 credit hours]

An in-depth study of the field of low vision. Conditions, equipment and instruction will be reviewed and analyzed for their implication to the field of vision.

SPED 7880 Advanced Study Of Technology And Independent Daily Living For The Persons With Visual Impairment

[3 credit hours]

This course includes the research regarding technology, strategies and an analytical evaluation of the independent living of the blind and visually impaired.

SPED 7950 Workshop In Special Education

[1-5 credit hours]

A workshop developed around topics of interest and concern for in-service teachers and other education personnel. Practical application of workshop topics will be emphasized.

Term Offered: Summer

SPED 7980 Special Topics In Special Education

[1-5 credit hours]

An advanced course for graduate students in special education or related fields. Topics are selected based on needs of the population. Student may repeat this course under different section numbers.

Term Offered: Spring, Summer, Fall

SPED 7990 Independent Study In Special Education

[1-5 credit hours]

Individual study provides graduate students with opportunities to work individually on professional problems with special education faculty. Individual meetings with sponsoring faculty are held.

Term Offered: Spring, Summer, Fall

SPED 8060 K-3 Curr Models and Int Strate

[3 credit hours]

Examination of appropriate curriculum models, instructional strategies and adaptations for young students (K-3 grade) with mild to intensive educational needs. A trans-disciplinary team approach is explored with an emphasis on collaboration and communication.

Term Offered: Spring

SPED 8070 Curriculum Models And Intervention Strategies In Early Childhood Special Education

[3 credit hours]

Atypical infant, toddler and early childhood development will be examined. Specialized intervention techniques, their research and practice base, and appropriate curriculum models will be explored. 20 clock hour practicum required.

Term Offered: Spring, Summer, Fall

SPED 8080 Clinical And Educational Evaluation Of Students With Disabilities

[3 credit hours]

An in-depth study of instruments used by school psychologists and classroom teachers to access and evaluate students. The diagnostic uses and the understanding of the results will be the focus.

SPED 8220 Collaboration For Inclusive Schools

[3 credit hours]

Provides information and competencies to develop, implement and evaluate collaborative programs. Educators will enhance their ability to collaborate so that they can better meet the needs of their students.

SPED 8250 Issues And Research In Transition And Post-Secondary Outcomes For Students With Disabilities

[3 credit hours]

In-depth study of transition issues and outcomes focusing on: a) best practices, b) the roles and responsibilities of a transition specialist, c) inter-agency collaboration, d) team building, and e) program development, implementation and evaluation.

Term Offered: Spring

SPED 8350 Educational And Instructional Implications In Specific Learning Disabilities

[3 credit hours]

Students will examine current trends in research and program development in Specific Learning Disabilities. The focus will be on learning and study skills: their implication in the development of learning.

SPED 8360 Clinical Practicum: Learning Strategies For Students With Specific Learning Disabilities

[1 credit hour]

Provides advanced graduate student with supervised practice in developing and implementing strategies and study skills for persons with learning problems. Required 15 hours instructional practice and weekly meetings with supervisors.

SPED 8410 Theory And Research: Emotional Behavioral Disorders

[3 credit hours]

This course provides in-depth readings on problems of emotionally and behaviorally disturbed/disordered children and youth. Intense study on two levels: (1) theoretical considerations and (2) treatments pertinent to diverse educational settings.

SPED 8420 Public School Emotional Behavior Disorders

[1 credit hour]

This course provides supervised practice in classroom participation with students identified as Emotionally Behaviorally Disturbed/Disordered. Public School settings include: self-contained, resource, transition, mainstreamed and consultative-collaborative teaching roles.

SPED 8440 Teaching Children And Youth With Emotional Behavior Disorders

[3 credit hours]

This course provides evaluation and application techniques of research based methodologies for teaching students with emotional behavioral Disorders/disturbances. Psycho-social educational best practices within the least restrictive environment are presented.

Term Offered: Spring**SPED 8470 Theory And Research: Autism**

[3 credit hours]

This course provides in-depth readings in the field of autism. The course includes intense study on two levels: (1) theoretical considerations and (2) treatment approaches pertinent to populations with autism.

SPED 8480 Teach Youth/Child With Autism

[3 credit hours]

This course provides research based methodologies for understanding and teaching children and youth with autism. Psycho-Social Educational best practices within the least restrictive environment are presented.

SPED 8720 Advanced Language And Speech For Persons With Hearing Impairments

[3 credit hours]

Clinical evaluation model in descriptive linguistics and interaction in the use of a process approach to developing language with children with hearing impairments. Includes relation of hearing impairment to language development.

SPED 8730 Synthesis Of Principles Of Educating Children With Hearing Impairments

[3 credit hours]

Historical, Philosophical, psychological and social aspects of educating the hearing impaired. Factors affecting successful public school instruction is covered.

SPED 8740 Curriculum And Assessment Issues Of The Education Of Persons With Hearing Impairments

[3 credit hours]

Principles of educational assessment and curriculum development for students with hearing impairment. Assessment and curriculum issues will be discussed as they relate to current research trends in hearing impairment.

SPED 8900 Independent Research In Special Education

[1-5 credit hours]

Independent Research provides opportunities to work on individual research under the direction of faculty. The student meets with the instructor at intervals and conducts research without formal class meeting.

Term Offered: Spring, Summer, Fall**SPED 8930 Seminars In Special Education**

[1-5 credit hours]

Seminars will consider problems and provide advanced study in the field of Special Education. A student may register for more than one seminar during a graduate program.

Term Offered: Summer, Fall**SPED 8940 Internship/Externship In Special Education**

[1-8 credit hours]

Provides the advanced graduate student with supervised practicum experiences at an off-campus site; including schools, hospitals, agencies, rehabilitation clinics, work training sites and other community sites where persons with disabilities are served.

Term Offered: Spring, Summer, Fall**SPED 8960 Doctoral Dissertation In Curriculum & Instruction**

[1-12 credit hours]

The doctoral dissertation is an original scholarly product required of all students completing the doctoral degree in Special Education Services.

Term Offered: Spring, Summer, Fall**SPED 8990 Independent Study In Special Education**

[1-5 credit hours]

Individual study provides advanced graduate students opportunities to work individually on professional problems with faculty of the Department of Special Education Services. Individual meetings with sponsoring faculty are held.

Term Offered: Spring, Fall

their courses in their degree programs on campuses of The University of Toledo. Part-time graduate students pay the instructional, general, and if applicable, the nonresident fees at the host institution on a per-hour basis. Full-time graduate students who have paid full-time instructional, general and nonresident fees at their home institution, or who are graduate assistants or teaching fellows at their home university, generally will not have additional charges associated with their concurrent registration; however special service fees and facilities fees apply.

Financial Assistance

Assistantships are available for students studying for advanced degrees. Students holding assistantships receive a stipend for service as assistants and a tuition fee award. Contact department chairs or designated directors of graduate programs for application procedures.

A limited number of University Fellowships are available in doctoral areas for outstanding students. Letters of recommendation including from the student's University of Toledo advisor are required in addition to the application. Fellowship recipients receive a stipend during the academic year and a scholarship for tuition and fees.

Scholarships from foundations and societies are available to students who have maintained a high undergraduate and graduate scholastic record. Such scholarships usually permit full- or part-time study. Prospective students are advised to inquire directly with departments, colleges or agencies that provide scholarships or other financial support.

Letter of Admission

A letter of admission will be mailed to the student upon the recommendation of the admitting department and final approval of the College of Graduate Studies. Only the College of Graduate Studies is authorized to provide admission into graduate programs.

Academic Regulations

- Responsibilities of Graduate Students (p. 572)
- Academic Standards (p. 572)
- Academic Fresh Start (p. 573)
- Courses for Graduate Study (p. 573)
- Advising (p. 573)
- Plan of Study (p. 573)
- Graduate Research Advisory Committee Approval & Assurances (GRAD) Form (p. 574)
- Defense Acceptance and Intellectual Protection (p. 574)
- Approval of Project/Thesis/Dissertation Forms (p. 574)
- Minimum Enrollment (p. 574)
- Transfer of Credits (p. 575)
- Foreign Language Requirement (p. 575)
- Master's Thesis (p. 575)
- Application for Admission to Candidacy for the Doctoral Degree (p. 575)
- Doctoral Dissertation (p. 575)
- Dissertation Committee (p. 575)
- Graduation Procedures (p. 576)

- Residence Requirements for the Ph.D. and Ed.D. Degrees (p. 576)
- Time Limitations for Degrees (p. 576)
- Graduate Student Enrollment Status Policy Statement (p. 576)
- Graduate Student Academic Dishonesty Policy Statement (p. 576)
- Graduate Student Academic Grievance Policy Statement (p. 577)
- Graduate Student Leave of Absence Policy Statement (p. 574)

Responsibilities of Graduate Students

Graduate students are expected to become familiar with the academic regulations of the University and the specific requirements of their graduate program. The student is solely responsible for complying with all regulations of the University, the College of Graduate Studies and the department/program of instruction, and for meeting all requirements for the degree. The student should consult with their advisor on a regular basis to ensure that they remain on track within the degree program or in the event that there are any questions concerning the requirements for the degree.

Academic Standards

A minimum cumulative GPA of 3.0 (four-point grading system) in graduate coursework is required for graduation. Graduate students whose cumulative GPA falls below 3.0 during any semester will be placed on academic probation. Depending on the program, a full-time student on academic probation will have one or at most two semesters (excluding summers) to meet the cumulative GPA standard. A student failing to meet the standard will be subject to dismissal. A part-time student on academic probation will be required to meet the GPA standard after 12 additional credit hours of graduate coursework. A grade of C (2.0) is the minimum passing grade for graduate courses. Therefore, any graduate course in which a grade below "C" or grade of "U" was earned will not be used to fulfill graduation requirements. Grades of below "C" will continue to be counted in calculating the cumulative grade point average. Individual programs may offer a specific number of credit hours with earned grades of C or below to be repeated one time. Colleges are permitted to establish individual program course retake standards. However, such standards shall not exceed two courses up to a maximum of 12 credit hours. Both the original and repeated grades will appear on the transcript and be calculated into the cumulative GPA. Colleges/ departments/degree programs may enact additional coursework grade requirements beyond the minimum standard established here by the Graduate Faculty. Graduate students shall be responsible to consult with the appropriate graduate degree program director for the applicable standards.

Grades of A, A-, B+, B, B-, C+, C, C-, D+, D, D-, F, S, U, WP, or WF may be awarded depending on College/program/departamental policies. A limited number of graduate courses earn grades of S (Satisfactory) or U (Unsatisfactory) upon completion. A grade of S will be allowed for credit toward graduation but is not computed in the grade point average. A grade of U earns no credit and the course must be repeated to earn graduate credit but is not computed in the grade point average. The grade of PR may be awarded to indicate work in progress and courses with this grade will not be included in the GPA calculation. The assignment of this grade is highly discouraged unless extenuating circumstances exist. The

grade of IN is assigned only under extraordinary circumstances when unexpected events prevent a student from completing the requirements of the course within the term of enrollment. The student must complete the required work before the end of the following semester (excluding summers) in which the IN grade was received; otherwise the grade will be converted to the grade of F by the Office of the Registrar. The student may initiate a request for an additional semester to complete the work for the grade (excluding summers). The extension is granted upon the approval of the faculty member and the associate dean of the college offering the course. Once the IN grade has been converted to F, the student must re-register and take the course again. The grade of IN will not be included in the GPA calculation. It is recommended that faculty set specific benchmarks for completion of the course or material each term, and regularly assign S, U or IN grades as appropriate instead of awarding a PR. Students may not graduate with a grade of U, IN, or PR on their Plan of Study. Students may not graduate with a grade of IN or PR on their transcript. A grade of WP (withdrawal passing) or WF (withdrawal failing), according to the status of the student at the time of withdrawal, will be assigned to students who withdraw after the university established withdrawal period at the discretion of the instructor. The grade of WP will not be included in the GPA calculation. A grade of WF indicates that a student's work is unsatisfactory (grade of less than C), and will be included in the GPA calculation as a grade of F. Students may repeat courses with grades WF or U subject to the maximum credit hour repeat limitation.

Academic Fresh Start

A student who meets all of the criteria described below may petition the Vice Provost for Graduate Affairs and Dean of the College of Graduate Studies to remove from his/her graduate cumulative grade point average all those grades earned under the student's prior enrollment at The University of Toledo. The petition must first be approved through the appropriate academic college channels prior to submission to the College of Graduate Studies.

- Degree seeking graduate student.
- Had previous enrollment at The University of Toledo.
- Not enrolled at The University of Toledo for at least two years prior to current enrollment. Under exceptional circumstances a student may apply to the College of Graduate Studies for a waiver of the two-year rule.
- Under exceptional circumstances a student may apply to the College of Graduate Studies for a waiver of the two-year rule.
- Maintain a current graduate grade point average of 3.0 or better for the first semester of re-enrollment if full-time or the first 12 credits of re-enrollment if part-time (not to exceed three semesters)

If the student's petition is granted, the following will apply:

- This policy only applies to the student's graduate grade point average. There is no impact on a student's earned hours.
- All University of Toledo grades will remain on the student's official, permanent academic record (transcript); this process will affect the cumulative graduate grade point average only. It will not remove evidence/documentation of the student's overall academic history at the university.

- No grades/credits from the student's prior graduate enrollment at the university may be counted toward the subsequent degree program requirements. Degree requirements may only be met by courses included in the calculation of the student's cumulative graduate grade point average at The University of Toledo. Thus, the student who successfully petitions for cumulative graduate grade point average recalculation under this policy automatically forfeits the right to use any of the excluded course work toward the current degree requirements.
- Credit earned from other institutions during the two-year period will not be accepted for transfer credit.

A student may exercise this graduate academic fresh start option only once, regardless of the number of times the student enters/attends a graduate degree program at The University of Toledo.

The Academic Fresh Start option applies only to students re-enrolled in the summer 2011 term or beyond. Students re-enrolled prior to summer 2011 are not eligible.

Petition for Academic Fresh Start

https://www.utoledo.edu/graduate/forms/Academic_Fresh_Start_Petition.pdf

Courses for Graduate Study

Credit toward a graduate degree is given for completion of courses designed for graduate students (5000-8000 level). University course numbers follow this system at the graduate level:

5000-5990	Master's level
6000-6990	Advanced master's level
7000-7990	Doctoral level
8000-8990	Advanced doctoral level

Advising

The College of Graduate Studies at UToledo places a high priority on a program of faculty advising for students. After a student has been accepted for graduate study by the Graduate College, a program contact is appointed. The student should address questions concerning the program to the faculty member and seek advice prior to registration. All questions regarding advising should be directed to the academic college. The College of Graduate Studies works with the advisor as identified on the required academic program forms (i.e., Plan of Study and GRAD form).

Plan of Study

By the end of the first semester, but no later than the completion of 12 credit hours, graduate students must submit to the College of Graduate Studies a Plan of Study approved and signed by the student, graduate advisor, department chair or program director, and the associate dean of the college (or designee). The Plan of Study is a listing of courses and other requirements that a student must complete to fulfill the minimum requirements of the graduate degree program. The College of Graduate

Studies checks the student's record against the Plan of Study to verify eligibility for graduation. The Plan of Study forms are available on the College of Graduate Studies' web-site.

Graduate Research Advisory Committee Approval & Assurances (GRAD) Form

Students must complete the GRAD form and receive the required approvals **prior to** beginning any research for a project, thesis, or dissertation involving humans, animals, radiation, or biohazardous substances. Federal regulations do not allow retroactive approval. Completion of the GRAD form indicates that a student's committee has approved both a topic and an approach for the research, and is aware of federal requirements for institutional review of research methods. Policy information and required applications referenced on the GRAD form are available on the Research & Sponsored Programs website.

<https://www.utoledo.edu/graduate/forms/GRADform.pdf>

This form normally should be completed at the time the student determines the nature of the research project. However, in all cases the student must have submitted the form demonstrating compliance before engaging in related research. **Failure to obtain the proper approvals could prevent or significantly delay the awarding of the degree.** Compliance with federal and state regulations is essential to assure continued funding of the University research programs and, therefore, requires cooperation of all University researchers.

If a student works on a project that is supported by a research grant or contract between the University and an external entity or entities, the student must comply with all terms of the grant or contract. Contractual agreements in support of research or other sponsored activities are legally binding on the University, including the administration, faculty and students engaged in the sponsored projects.

Defense Acceptance and Intellectual Protection

Students with a thesis or dissertation degree requirement must complete this two-part form with their adviser for approval to present/defense their paper, as well as ensure that any invention or proprietary information contained in the thesis/dissertation and presentation/defense of the paper is legally protected. The Defense Acceptance and Intellectual Protection form is due immediately upon scheduling the defense date. Completing this form ensures that access to the thesis/dissertation or presentation/defense, which might disclose an invention, is determined at the direction of the student and faculty adviser. Upon public disclosure of an invention, all international patent rights are lost and a one-year bar date is set to file a patent in the U.S., or all rights are lost.

Graduate Student Leave of Absence Policy Statement

Policy Number: 3364-77-04 <http://www.utoledo.edu/policies/>

Students enrolled in a graduate degree program (or graduate certificate program), who do not expect to make progress towards degree requirements for a period of time due to personal, medical, call to active military duty, or other compelling reasons may request a leave of absence from a degree program. Students on an approved leave may not make significant use of university resources and services and do not have the rights and privileges of registered students. Students cannot fulfill any official department or university requirements during the leave period. Students on an approved leave must complete the Application for Graduate Readmission at the end of the leave. In order to register and to have the rights and privileges of registered students. If a student does not return to the graduate degree program within the approved period for which the leave was granted, the student will be considered as having withdrawn from the university. To be reconsidered for graduate study, students who have withdrawn must complete the necessary application materials and pay all associated fees. Students called to active duty while enrolled in graduate school will follow regulations for military leave of absence per section 3345.53 of the Ohio Revised Code. It is the responsibility of the student to resolve all issue pertaining to registration, financial support, federal financial aid, and outstanding balances owed to the university. Students should also consider the potential implications of a leave on such matters as immigration status, health insurance, and loan repayment. Leaves approved in accordance with this policy, do not constitute a leave of absence for federal financial aid purposes. *Please visit the University Policy Website to view the complete policy.*

For additional details regarding the graduate student leave of absence process, please visit the College of Graduate Studies Website: <http://www.utoledo.edu/graduate/currentstudents/references/GradLOA.html>.

Approval of Project/Thesis/ Dissertation Forms

This academic form, which is available on the College of Graduate Studies' website, is required of all students completing a project, thesis, or dissertation requirement. It must be submitted in paper copy with all original signatures by the last day of the term in which the degree will be awarded. No exceptions, waivers, or extensions to this deadline will be granted.

Minimum Enrollment

Graduate students who have completed their course work and are working on their project, thesis or dissertation, and/or using University facilities and services (i.e., the library, health services, computer services, laboratories, consulting with faculty, apply for graduation, etc.) must register for a minimum of one graduate credit hour each semester, excluding summer terms. However, students who apply for graduation during the summer term also must be registered for a minimum of one graduate credit hour. Access to certain other facilities and services, such as the Student Recreation Center and parking, will require additional user fees. Students who are not enrolled during any time over one calendar year (three consecutive semesters, including summer) will be considered to have stopped their graduate programs and will be required to apply for readmission in order to complete their programs.

Transfer of Credits

Application for transfer of credit must be made to the student's advisor. The department/college will communicate its recommendation to the Graduate College by completing this form. The form with all approval signatures should be returned to the respective College of Graduate Studies Office for review and final approval. Please use one form for each institution transfer credit is requested. An official transcript from the accredited institution must be attached to this form. Transfer credit will not be processed from a copy. If the official transcript has already been sent, please attach a note indicating that it was sent previously. The Transfer Credit policy is available on the Graduate College website; <http://www.utoledo.edu/graduate/currentstudents/references/transfercredit.html>.

Please note the following:

- All graduate credits requested for transfer must carry a grade of A-, A+, B+, or B. Credit for an S grade may be transferred only if the granting institution verifies, in writing, that the S translates into a grade of B or higher. Research hours earned at another university are not transferable towards research hours for a project, thesis, or dissertation.
- Credit applied towards the master's degree and education specialist degree must have been earned within the period of six years immediately preceding the time the degree is awarded, credit applied for the doctoral degree must have been earned within seven years immediately preceding the time the degree is awarded (combined M.D./Ph.D. program limit is ten years).
- Credits earned at another University as part of a completed degree are not transferable.

For complete transfer credit policy at the graduate level, see Policy Number 3364-77-06 <http://www.utoledo.edu/policies/>.

Foreign Language Requirement

The student is required to meet the foreign language requirement of the specific department or college. The "Instructions and Application for the Foreign Language Exam" are available on the College of Graduate Studies' website.

Master's Thesis

Certain departments specify the submission of a thesis as a requirement for the master's degree. If a thesis is required, the student must meet with the advisor to determine the appropriate paperwork and establish a timeline to meet all requirements of the academic department, academic college, and College of Graduate Studies. Students are required to submit their document electronically by uploading to OhioLINK and to publish their document with ProQuest by selecting the transfer paper option in OhioLINK. Procedures for proper submission of a thesis are available on the College of Graduate Studies' website. The Manual for the Formatting of Graduate Dissertations and Theses authorized by the Graduate Council is available on the site which details the requirements for preparing your document.

Thesis Committee

A master's thesis committee must consist of a minimum of three members, all of whom must be members of the graduate faculty. An expert from outside the University also may serve as one of the three thesis committee members upon recommendation of the committee chair and approval by the department chair and the graduate dean. Full membership on the graduate faculty is a prerequisite to chairing a master's thesis committee.

Application for Admission to Candidacy for the Doctoral Degree

Students typically apply for admission to candidacy following the completion of coursework and any required qualifying examinations. At the time a student applies for admission to candidacy, the following requirements must be fulfilled:

- a GPA of 3.0 on a 12-point system for all courses completed and
- satisfactory completion of the examination requirements of the specific college or department.

The Admission to Candidacy form is available on the College of Graduate Studies' website. It is the student's responsibility to initiate the application. A student who fails to qualify for candidacy at the required time will not be permitted to continue.

Doctoral Dissertation

All departments require a dissertation in partial fulfillment of the PhD. The dissertation should constitute an original work of a scholarly nature. The student must meet with the advisor to determine the appropriate paperwork and establish a timeline to meet all requirements of the academic department, academic college, and College of Graduate Studies. Students are required to submit their dissertation electronically by uploading to OhioLINK and to publish their document with ProQuest by selecting the transfer paper option in OhioLINK. Procedures for proper submission of a dissertation are available on the College of Graduate Studies' website. The Manual for the Formatting of Graduate Dissertations and Theses authorized by the Graduate Council is available on the site, which details the requirements for preparing your document.

Dissertation Committee

Full membership on the graduate faculty is a prerequisite to chairing a doctoral dissertation committee. A doctoral dissertation committee must consist of a minimum of four members. One of the four members must be an external committee member whose primary appointment is outside the candidate's program or department, or may be outside the University. The external member must be familiar with the standards of doctoral research in the field of the dissertation and should be in a field related to the student's dissertation topic. Those committee members who are tenured or tenure-track UT faculty must be members of UT's graduate faculty. An expert from outside the University may serve on the doctoral dissertation committee upon the recommendation of the committee chair, and approval by the department chair and the graduate dean. The request, along with the Graduate Faculty Membership Application and

reader's curriculum vita, must be submitted to the College of Graduate Studies for approval prior to committee appointment.

The composition of the doctoral dissertation committee is recommended by the chair of the committee in consultation with the student; it requires concurrence by the relevant department/program director, the dean (or designate) of the academic division, and approval by the dean of the College of Graduate Studies.

Graduation Procedures

Students must apply for graduation by the posted deadline for the term. Graduation information is available on the College of Graduate Studies' website. It is the responsibility of the student to meet all requirements for graduation. To ensure graduation proceeds as planned, it is important for students to meet with their advisor early in the semester of intended graduation. Graduate students completing all degree requirements will receive the official diploma approximately six to eight weeks after the commencement ceremony. Students who fail to graduate in the semester for which they have applied must submit a new application for a future term.

The University graduation exercises are conducted to honor those who have earned their degrees. The graduate is encouraged to attend the commencement exercises. Candidates shall wear academic dress with appropriate hoods. Arrangements for academic dress must be made through the University Bookstore well in advance of commencement. The student should contact the University Bookstore early in the semester of graduation. Participation in the commencement ceremony is not a guarantee of graduation.

Residence Requirements for the Ph.D. and Ed.D. Degrees

The College of Graduate Studies has established an academic residency requirement in order to provide doctoral students with the opportunity to engage in intensive, concentrated study over an extended period of time in association with faculty members and other students in an atmosphere conducive to a high level of intellectual and scholarly activity.

The purpose of a residency requirement is to encourage doctoral students to experience contact with the academic community: colleagues, libraries, laboratories, ongoing programs of research and inquiry, and the intellectual environment that characterizes a university. Such experience is generally as important as formal classwork in the process of intellectual development. Although the residency requirement is, by necessity, given in terms of full or part-time enrollment, the intent of the requirement is to ensure that the student becomes fully engaged in an essential part of scholarly life.

Doctoral students satisfy the doctoral residency requirement by completing a total of 18 hours of coursework taken over 3 consecutive semesters. Enrollment in a summer term is not required to maintain continuity, but credits earned during summer terms could count toward the 18 hours required for residency. Each graduate program may exclude certain courses and credit hours from meeting the residency requirement.

Any exceptions to the residency requirement must be requested in writing. For students who have been determined by their academic

college to need an exception to this requirement, the request must be attached to a Plan of Study and include information detailing how a student will interact with faculty and other students, read widely within and beyond the major field, and contemplate scholarly issues as they relate to professional practice.

Time Limitations for Degrees

Credit applied toward the master's and education specialist degree must have been earned within the period of six years immediately preceding the time the degree is awarded. Credit applied for the doctoral degree must have been earned within seven years immediately preceding the time the degree is awarded (combined M.D./Ph.D. program limit is ten years). Certificate programs must be completed within four years.

An extension of the time limit for the degree may be requested by a student by written petition to the College of Graduate Studies. Although exceptions may be warranted, students who exceed the norm shall be required to justify in writing their request for an extension. Additional information is located in the Graduate Student Handbook and forms are available on the College of Graduate Studies' website.

Graduate Student Enrollment Status Policy Statement

Policy Number: 3364-77-05 <http://www.utoledo.edu/policies/>

The university recognizes the role of enrollment status in support of satisfactory academic progress towards degree completion. A student's enrollment status is determined by the number of class hours the student is enrolled in credit bearing courses during a semester or during an entire summer term. The definitions are as follows: A full-time graduate student is enrolled in 9 to 18 semester hours in credit bearing courses. A fulltime student who elects to enroll in more than 18 credit hours in fall or spring (or more than 15 semester credit hours in summer) is considered to be on academic overload. A part-time graduate student is enrolled in 1 to 8 semester hours in credit bearing courses. Audit means a student is enrolled in credit bearing courses but elects not to receive credit. A student enrolled in a full-time and transcribed internship placement will be considered a full-time student for purposes of reporting to the National Clearinghouse. A student must be enrolled through the university's official registration and enrollment information system in order to receive transcribed credit for any course.

For additional details regarding enrollment status, please visit the Registrar's Office Website: https://www.utoledo.edu/offices/registrar/student_records/enrollment_status.html.

Graduate Student Academic Dishonesty Policy Statement

Policy Number: 3364-77-01 <http://www.utoledo.edu/policies/>

Academic dishonesty will not be tolerated. Among the aims of education are the acquisition of knowledge and development of the skills necessary for success as an educator or in another profession. Activities inconsistent with these aims will not be permitted. Graduate students are responsible for knowing what constitutes academic dishonesty; if

students are uncertain, for example about what constitutes plagiarism or cheating, they should seek the instructor's advice. The purpose of the policy is to outline the procedures that allow graduate students to appeal an adverse decision by their college in an instance of academic dishonesty. *Please visit the University Policy Website to view the complete policy.*

Graduate Student Academic Grievance Policy Statement

Policy Number: 3364-77-02 <http://www.utoledo.edu/policies/>

The graduate student grievance policy covers appeals in which a graduate student disputes (grieves) a particular grade. Appeals dealing with academic dishonesty, including, but not limited to, cheating and plagiarism, are explicitly exempt from this process and shall be dealt with under the procedures outlined in the Graduate Academic Dishonesty Appeal Policy (3364-77-01). The purpose of the policy is to provide graduate students and their colleges with the procedures to follow to grieve a particular grade after appeals within their respective college are exhausted. This policy grants the graduate student the right to appeal in writing to the Dean of the College of Graduate Studies for further and final consideration of the student's appeal. *Please visit the University Policy Website to view the complete policy.*

Other Policies and Information

Other policies and information pertaining to graduate education may be found on the University Policy Website (<http://www.utoledo.edu/policies/>) and the college and departmental catalog sections. Graduate students are encouraged to frequently check the "Current Students" section of The College of Graduate Studies website for up-to-date information, the *Graduate Student Handbook*, and/or the individual college departments for specific program policies.

GRADUATE COURSE DESCRIPTIONS

A

- Accounting (ACCT) (ACCT) (p. 579)
- Anatomy and Neurosciences (ANAT) (p. 581)
- Anthropology (ANTH) (p. 582)
- Art Education (AED) (p. 582)
- Athletic Training (ATTR) (p. 583)

B

- Bioengineering (BIOE) (p. 586)
- Bioinform and Proteom-Genomics (BIPG) (p. 588)
- Biology (BIOL) (p. 590)
- Biomarker Res Indiv Medicine (BRIM) (p. 592)
- Biomarkers and Diagnostics (BIDI) (p. 592)
- Biomedical Engineering (BME) (p. 593)
- Biomedical Sciences Pgm (BMSP) (p. 593)
- Business Administration (BUAD) (p. 594)
- Business Analysis (BANS) (p. 595)
- Business Law (BLAW) (p. 596)

C

- Cancer Biology (CABP) (p. 596)
- Career and Technical Education (CTE) (p. 597)
- Chemical and Environmental Engineering (CHEE) (p. 599)
- Chemistry (CHEM) (p. 601)
- Civil Engineering (CIVE) (p. 607)
- Communication (COMM) (p. 610)
- Contemporary Gerontology Pract (GERO) (p. 611)
- Counseling (COUN) (p. 611)
- Criminal Justice (CRIM) (p. 615)
- Curricriculum and Instruction: Early Childhood (CIEC) (p. 616)
- Curriculum and Instruction (CI) (p. 619)

D

- Dentistry-Oral Biology (DENT) (p. 627)

E

- Earth Ecology and Environmental Science (EEES) (p. 628)
- Economics (ECON) (p. 631)
- Education Technology and Performance Technology (ETPT) (p. 633)
- Educational Administration and Supervision (EDAS) (p. 635)
- Educational Psychology (EDP) (p. 639)
- Electrical Engineering and Computer Science (EECS) (p. 643)
- English (ENGL) (p. 649)
- Entrepreneurship, Family and Small Business (EFSB) (p. 652)

- Executive MBA (EMBA) (p. 652)
- Exercise Science (EXSC) (p. 654)

F

- Faculty Development (FACD) (p. 655)
- Finance (FINA) (p. 656)
- Foreign Language (FLAN) (p. 656)
- French (FREN) (p. 657)

G

- General Engineering (GNEN) (p. 658)
- Geography and Planning (GEPL) (p. 659)
- German (GERM) (p. 661)
- Gifted and Talented Education (GIFT) (p. 662)

H

- Health Education (HEAL) (p. 664)
- Health Science & Human Service (HSHS) (p. 667)
- Higher Education (HED) (p. 667)
- History (HIST) (p. 672)
- Human Donation Science (HDSC) (p. 675)
- Human Resource Managment (HURM) (p. 676)

I

- Information Systems (INFS) (p. 677)
- Interdisciplinary (INDI) (p. 678)
- International Business (IBUS) (p. 679)

L

- Latin (LAT) (p. 680)
- Law (Bar-Tested) (LAWG) (p. 680)
- Law (Basic First-Yr Required) (LAWD) (p. 681)
- Law (Clinics and Skills) (LAWN) (p. 683)
- Law (Electives) (LAWI) (p. 686)
- Law (Law Revw and Moot Court) (LAWL) (p. 697)
- Law (Masters Program) (LAWM) (p. 698)
- Law (Special Topics) (LAWT) (p. 698)
- Law (Upper Level Required) (LAWA) (p. 698)
- Law (Writing and Indep Resrch) (LAWP) (p. 699)
- Legal Specialties (LGL) (p. 700)
- Linguistics (LING) (p. 701)

M

- Management (MGMT) (p. 701)
- Manufacturing Management (MFGM) (p. 701)
- Marketing (MKTG) (p. 702)
- Master of Liberal Studies (MLS) (p. 704)
- Mathematics (MATH) (p. 705)
- Mechanical Industrial and Manufacturing Engineering (MIME) (p. 715)

- Medical Microbiology and Immunology (MMIM) (p. 722)
- Medical Physics (MPHY) (p. 723)
- Medicinal-Biological Chemistry (MBC) (p. 727)
- Medicine (MEDI) (p. 729)
- Microbiology (MICB) (p. 729)
- Music (MUS) (p. 729)
- Music Education (MED) (p. 731)

N

- Neuroscience (NERS) (p. 732)
- Neurosciences and Neurological Disorders (NNDP) (p. 731)
- Nursing (NURS) (p. 733)

O

- Occupational Therapy (OCCT) (p. 741)
- Operations & Supply Chain Management (OSCM) (p. 744)
- Orthopedics (ORTH) (p. 745)

P

- Pathology (PATH) (p. 747)
- Pharmacology (PHCL) (PHCL) (p. 748)
- Pharmacy (PHM) (p. 751)
- Pharmacy Practice (PHPR) (p. 751)
- Pharmacology HSC (PHRM) (p. 758)
- Philosophy (PHIL) (p. 758)
- Physical Therapy (PHYT) (p. 759)
- Physician Assistant (PHYA) (p. 763)
- Physics (PHYS) (p. 766)
- Physiology (PHSL) (p. 771)
- Political Science (PSC) (p. 771)
- Psychology (PSY) (p. 773)
- Public Health and Occupational Health (PUBH) (p. 780)

R

- Recreation and Rec Therapy (RCRT) (p. 786)
- Religion (REL) (p. 788)
- Research and Measurement (RESM) (p. 788)

S

- School Psychology (SPSY) (p. 792)
- Social Work (SOCW) (p. 795)
- Sociology (SOC) (p. 798)
- Spanish (SPAN) (p. 800)
- Spatially Integrated Social Sciences (SISS) (p. 801)
- Special Education (SPED) (p. 802)
- Speech Language Pathology (SLP) (p. 808)
- Surgery (SURG) (p. 812)

T

- Theory and Social Foundations (TSOC) (p. 815)

W

- Women and Gender Studies (WGST) (p. 819)

Accounting (ACCT) (ACCT)

ACCT 5000 Financial And Managerial Accounting

[3 credit hours]

The study of the principles of Financial and Managerial accounting. The financial accounting segment of the course will focus on the preparation, interpretation and analysis of financial statements and the use of the financial information. The managerial accounting segment of the course will focus on an introduction to cost accounting, managerial accounting concepts and the use of accounting information in managerial decision-making.

Term Offered: Spring, Summer, Fall

ACCT 5100 Financial Accounting and Analysis

[3 credit hours]

This course will review the financial accounting process including the steps in the accounting cycle, transaction cycles, and the role of internal controls. In addition, students will learn the essential Excel skills needed for accounting. This course will also introduce students to data analytics.

Prerequisites: ACCT 5000 with a minimum grade of C

Term Offered: Spring, Summer, Fall

ACCT 5110 Intermediate Financial I

[3 credit hours]

This course covers accounting topics applicable to asset valuation, income measurement and financial statement disclosure. It concentrates on accounting for corporations and emphasizes the accounting cycle and the asset side of the balance sheet.

Prerequisites: ACCT 3100 with a minimum grade of C or ACCT 5100 with a minimum grade of C

Term Offered: Spring, Summer, Fall

ACCT 5120 External Financial Reporting II

[3 credit hours]

This class concentrates on financial accounting for corporations and emphasizes the liability and owner's equity sections of the balance sheet and related income statement issues.

Prerequisites: ACCT 3110 with a minimum grade of C

Term Offered: Spring, Summer, Fall

ACCT 5210 Individual Taxation

[3 credit hours]

This class focuses on the concepts and principles applicable to the taxation of individuals.

Prerequisites: ACCT 3100 with a minimum grade of C or ACCT 5100 with a minimum grade of C

Term Offered: Spring, Summer, Fall

ACCT 5310 Accounting Information Systems and Controls

[3 credit hours]

This course provides an introduction to processing and reporting of accounting information. Major emphasis is placed on basic accounting information processing including accounting applications in an advanced information technology environment.

Prerequisites: ACCT 3100 with a minimum grade of C or ACCT 5100 with a minimum grade of C

Term Offered: Spring, Summer, Fall

ACCT 5320 Cost Accounting

[3 credit hours]

This course focuses on budgeting, product and service costing, and the ability to recognize and provide management with relevant information for strategic cost management and performance evaluation. This class will include a project for additional analysis. Prerequisite: Acct 5100 with a grade of C (2.0) or better.

Prerequisites: ACCT 3110 with a minimum grade of C

Term Offered: Spring, Summer, Fall

ACCT 5420 Auditing

[3 credit hours]

Auditing integrates financial and cost accounting, ethics, accounting theory, information systems and control structure concepts into a systematic process of obtaining, evaluating and reporting on economic events and activities.

Prerequisites: ACCT 5120 with a minimum grade of C or ACCT 3120 with a minimum grade of C and ACCT 3310 with a minimum grade of C

Term Offered: Spring, Summer, Fall

ACCT 5940 Internship

[1-3 credit hours]

A combination of practical experience at a business concern with discussion to be held at the University with others in the program. An oral and written report is required.

Term Offered: Spring, Summer, Fall

ACCT 6130 Advanced Financial Accounting

[3 credit hours]

This is the third course in the external financial reporting sequence. This course covers topics such as foreign exchange, partnerships, business consolidations and mergers.

Prerequisites: ACCT 3120 with a minimum grade of C or ACCT 5120 with a minimum grade of C

Term Offered: Spring, Fall

ACCT 6150 International Accounting And Taxation

[3 credit hours]

Analysis of accounting issues crucial to multinational companies. Issues to be addressed include: comparing accounting across countries, effects of harmonization of financial reporting requirements and the translation of foreign currency financial statements.

Prerequisites: ACCT 6210 (may be taken concurrently) with a minimum grade of C

Term Offered: Spring, Fall

ACCT 6190 Contemporary Accounting Problems

[3 credit hours]

An overview of current topics and issues concerning the accounting profession. The course will focus on, but not be limited to, topics in external financial reporting.

Prerequisites: (ACCT 6210 with a minimum grade of C and ACCT 6130 with a minimum grade of C)

Term Offered: Spring, Summer, Fall

ACCT 6210 Research In Accounting And Taxation

[3 credit hours]

Provides the methodology necessary for accountants to perform effective, efficient and ethical accounting and tax research and the means of communicating those results.

Prerequisites: ACCT 3120 with a minimum grade of C or ACCT 5120 with a minimum grade of C and ACCT 3210 with a minimum grade of C

Term Offered: Spring, Fall

ACCT 6250 Corporate Taxation

[3 credit hours]

This course covers the taxation of corporations, their shareholders, and other business entities. Topics include the formation, taxation of income, and the tax treatment of distributions.

Prerequisites: ACCT 3210 with a minimum grade of C and ACCT 5120 with a minimum grade of C or ACCT 3120 with a minimum grade of C

Term Offered: Spring, Summer, Fall

ACCT 6310 Advanced Managerial Accounting

[3 credit hours]

Use of accounting information in planning and controlling an organization, including case studies in cost-volume-profit, budgeting, transfer pricing and performance evaluation.

Prerequisites: ACCT 3320 with a minimum grade of C or ACCT 5320 with a minimum grade of C

Term Offered: Summer, Fall

ACCT 6330 Advanced Topics In Accounting Information Systems

[3 credit hours]

Additional analysis of processing and reporting accounting information. Major emphasis is placed on accounting information processing including accounting applications in an advanced technology environment.

Prerequisites: ACCT 3310 with a minimum grade of C

Term Offered: Spring, Fall

ACCT 6410 Governmental And Not-For-profit Accounting

[3 credit hours]

Principles, procedures and ethics of financial reporting for not-for-profit organizations, including state and local government. Includes the use of funds, budgets, appropriations and encumbrances as a means of control.

Prerequisites: ACCT 3120 with a minimum grade of C or ACCT 5120 with a minimum grade of C

Term Offered: Spring, Fall

ACCT 6430 Business Valuation And Analysis

[3 credit hours]

Analyzes business analysis and valuation techniques with major emphasis placed on how a firm's financial reporting decisions affect fundamental analysis.

Prerequisites: ACCT 3120 with a minimum grade of C or ACCT 5120 with a minimum grade of C

Term Offered: Spring, Fall

ACCT 6440 Advanced Auditing

[3 credit hours]

Advanced Auditing aims to extend students' knowledge on auditing learned from lower level auditing course(s). The course introduces students to topics such as financial statement audit, audit planning, analytical procedures, professional judgment framework, financial statement fraud, professional ethics, and so on. In addition, cases, practitioners' and academic journal articles assigned during the semester enhance students' understanding and application of concepts learned. Finally, students can develop necessary audit skills through involving in doing Real Audit simulation.

Prerequisites: ACCT 4420 with a minimum grade of C or ACCT 5420 with a minimum grade of C

Term Offered: Spring, Fall

ACCT 6450 Fraud and Forensic Accounting

[3 credit hours]

This course is designed to introduce the student to the basic concepts of Fraud Examination and Forensic Accounting.

Prerequisites: ACCT 4420 with a minimum grade of C or ACCT 5420 with a minimum grade of C

Term Offered: Spring, Summer

ACCT 6510 Auditing Concepts and Applications

[3 credit hours]

An in-depth study of professional auditing standards and application to audit engagements. Emphasis will be placed on system analysis, the relationship of internal control to audit objectives, and the purpose of selected audit procedures. Cases and simulations will be used where applicable.

Prerequisites: ACCT 4420 with a minimum grade of C

Term Offered: Spring, Summer, Fall

ACCT 6520 Regulation Capstone Taxation and Business Law Studies

[3 credit hours]

An in-depth study of regulation in the accounting discipline. Emphasis will be placed on individual, partnership, and corporate taxation, along with business law and the professional responsibilities of Certified Public Accountants. Writing assignments and simulations will be used where applicable.

Prerequisites: ACCT 6250 with a minimum grade of C and ACCT 4250 with a minimum grade of C

Term Offered: Spring, Summer, Fall

ACCT 6530 Comprehensive Financial Accounting and Reporting

[3 credit hours]

An in-depth study of financial accounting for public, government, and not-for profit entities. Emphasis will be placed on the preparation, interpretation and evaluation of financial statements. Writing assignments and case studies in the form of simulations will be used where applicable.

Prerequisites: ACCT 3120 with a minimum grade of C or ACCT 5120 with a minimum grade of C

Term Offered: Spring, Summer, Fall

ACCT 6540 An Accounting Perspective of the Business Environment

[3 credit hours]

An in-depth study of the general business environment. Emphasis will be placed on corporate governance, financial management, accounting, information systems, economic concepts and theory, and professional communication. Writing assignments and simulations will be used where applicable.

Prerequisites: ACCT 6130 with a minimum grade of C

Term Offered: Spring, Summer, Fall

ACCT 6600 Data Analytics for Accountants

[3 credit hours]

This course will cover the analysis of data as it pertains to accounting professionals. This will include analytic techniques for decision making and the examination of "big data" involving accounting information. Hands-on experiences will develop skills with a variety of software tools used in data analytics by accounting professionals.

Term Offered: Spring, Fall

ACCT 6960 Independent Study In Accounting

[1-3 credit hours]

Independent research report on an accounting topic of interest to both the student and the faculty member. Research related to a topic not covered in the listed graduate accounting courses.

Term Offered: Spring, Summer, Fall

Anatomy and Neurosciences (ANAT)

ANAT 5000 Anatomy for Physician Assist

[5 credit hours]

Provides students with a working knowledge of the major anatomical regions and structures. Emphasis placed on the relationships of components as well as topographical and functional anatomy. Case studies will be utilized.

Term Offered: Spring, Fall

ANAT 6790 Microanatomy for Pathology Assistants

[4 credit hours]

Microanatomy for Pathology Assistants is a course that includes the study of the structure and function of cells, tissues, and organs. Particular emphasis is placed on histology at the light microscopic level. The course uses hundreds of high-resolution photographs and images of human and domestic animal tissues. Histology laboratories involve finding and identifying histological structures at low, medium, high, and oil immersion views. Clinical exercises will be used to develop "problem solving" and "critical thinking" skills.

Term Offered: Fall

ANAT 8330 Advanced Topographic Anatomy

[3 credit hours]

Detailed dissections of specific body regions. May be repeated for credit.

Term Offered: Fall

Anthropology (ANTH)

ANTH 5300 Cultural Resource Management

[3 credit hours]

Course explores the history, theory, and contemporary issues behind the historic preservation movement and emergence of Cultural Resource Management in the United States; topics engaged include legislation, federal and state programs, the national register, regional planning, and research orientations.

Term Offered: Spring, Summer, Fall

ANTH 5450 Exploring the City

[3 credit hours]

This course takes an interdisciplinary approach to life in cities around the world, with emphasis on the ethnographic exploration of how power, cultural difference, and social inequality in cities are produced and experienced.

Term Offered: Spring, Fall

ANTH 5530 Qualitative Approaches in Social Science Research

[3 credit hours]

This course examines qualitative methods used in social science research. Focusing on ethnographic and qualitative methods, the course provides students the skills necessary to design and conduct qualitative research studies.

Term Offered: Spring

ANTH 5560 Fieldwork In Anthropology

[1-6 credit hours]

Consists of field work involving the student in meaningful research problems at the community level. Introduces the student to the methods and problems of participant research.

ANTH 5740 Nutritional Anthro-po-Logy

[3 credit hours]

An examination of the historical, social, political and economic factors that influence the production, distribution and consumption of food and the effects on world health and development.

Term Offered: Spring, Fall

ANTH 5760 Medical Anthropology

[3 credit hours]

An examination of the biocultural nature of health and illness.

Term Offered: Spring, Fall

ANTH 5860 The Irish-American Experience

[3 credit hours]

A survey of the sociohistorical and cultural factors related to the immigration and adaptation of the Irish in America.

ANTH 5920 Directed Readings In Anthropology

[1-3 credit hours]

Designed for those wishing to continue course work in greater depth or seeking contact with unlisted subject areas. Written proposal and consent required.

ANTH 5980 Problems In Anthropology

[3 credit hours]

Courses on varied anthropological specialties. May be repeated in different specialty areas such as religion, ethnohistory, ethnic conflict and area courses.

Term Offered: Spring, Summer, Fall

ANTH 6990 Independent Research In Anthropology

[1-3 credit hours]

Supervised independent research in anthropology.

Term Offered: Spring, Fall

Art Education (AED)

AED 5000 Research In Art Education

[4 credit hours]

This course will provide an overview of empirical and historical research structures, application of research to classroom activities and development of research for publication.

Term Offered: Spring, Fall

AED 5140 Art Education For The Special Child

[3 credit hours]

This course introduces and surveys a wide variety of art strategies and instructional adaptations for use with the child with physical, emotional or mental differences.

Term Offered: Spring, Fall

AED 5150 Setting The Stage For Early Childhood Learning: Inspirations From Reggio Emilia

[3 credit hours]

This course will explore Reggio's philosophy of early childhood education and the numerous ways that children explore the "hundred languages." Reggio uses these languages (art, clay, wire, sculpture, light, shadow, etc.) as a way to help children represent their world and what they know about it.

AED 5200 Computer Graphics In Art Education

[3 credit hours]

This course examines the tools, technology and instructional application of computer graphics education settings. The course is appropriate for art educators as well as others interested in using graphics and the microcomputer.

Term Offered: Spring

AED 5220 Issues In Therapeutic Art

[3 credit hours]

The study of art processes that provide physical, emotional and intellectual development. Topics covered include art history, art appreciation, aesthetics, making art and art materials.

Term Offered: Fall

AED 5240 Adaptive Methods In Art Education For Special Populations

[3 credit hours]

This course is designed to provide understanding of how art experiences relate to special populations. Students will research and develop strategies and instructional adaptations for use with special populations in a therapeutic or rehabilitative setting.

Prerequisites: AED 5200 with a minimum grade of D-

AED 5300 Media And Methods In Therapeutic Art

[3 credit hours]

An investigation into group and individual processes as they relate to art media and methods in therapeutic art will be presented. Experiences in art media will be explored.

Prerequisites: AED 5220 with a minimum grade of D-

Term Offered: Spring

AED 5320 The Art Museum And The Art/Humanities Educator

[3 credit hours]

This course will introduce the role of the museum for the art/humanities educator and will examine the installation and design of exhibitions and the implications for teaching. Life center issues, museum education, curriculum issues, interactive galleries and technology will be presented.

Term Offered: Spring, Summer, Fall**AED 5930 Advanced Seminar In Philosophy Of Art Education**

[1-4 credit hours]

Guest lecturers from other institutions of higher learning are invited to The Toledo Museum of Art or The University of Toledo Department of Art to present seminars relevant to their endeavors.

Term Offered: Spring, Summer, Fall**AED 5990 Individual Study Of Art For The Graduate Student**

[1-4 credit hours]

Individual study is designed to provide a student with the opportunity to work independently on professional problems under the direction of the faculty in the Department of Art.

Term Offered: Spring, Summer, Fall**AED 6920 Masters Research Project In Art Education**

[1-4 credit hours]

This course is open to graduate students who elect the completion of a master's project in fulfilling the research requirement of the master's degree program.

AED 6940 Internship

[1-4 credit hours]

This course will incorporate advanced recreational therapy program concepts in therapeutic art within an internship environment using expressive techniques.

Term Offered: Spring, Fall**AED 6960 Master's Research Thesis In Art Education**

[1-4 credit hours]

This course is open to graduate students who elect the completion of a master's thesis in fulfilling the research requirement of the master's degree program.

Term Offered: Summer

Athletic Training (ATTR)

ATTR 6010 Clinical Applications I

[1 credit hour]

Clinical skill experience is provided to develop autonomous athletic trainer and provide exposure to implementing evidence based practice in clinical practice.

ATTR 6020 Clinical Applications II

[1 credit hour]

Continue to develop autonomous athletic training skills built upon in Clinical Applications I and continue to advance diagnosis, treatment and intervention skills.

Prerequisites: KINE 6010 with a minimum grade of D- or ATTR 6010 with a minimum grade of D-

ATTR 6030 Clinical Applications III

[2 credit hours]

Advanced integration of clinical skills with the introduction of mentoring athletic training students in a clinical setting.

Prerequisites: KINE 6020 with a minimum grade of D- or EXSC 6020 with a minimum grade of D-

ATTR 6040 Clinical Applications IV

[2 credit hours]

Preparation of autonomous athletic training care for the transition into an occupation in sports medicine.

Prerequisites: KINE 6030 with a minimum grade of D- or EXSC 6030 with a minimum grade of D-

ATTR 6120 Evaluation and Management of Peripheral Joint Injuries

[4 credit hours]

The study of the pathology, etiology and presentation of peripheral joint injuries. Subjective and objective components as well as orthopedic special testing will be introduced and serve as the foundation for the formulation of a systematic evaluation method. In addition, acute management techniques include first aid as well as immobilization methods will be introduced. Laboratory concepts include selection and implementation of appropriate evaluation and acute management techniques.

Prerequisites: ATTR 6140 with a minimum grade of C+ and ATTR 6150 with a minimum grade of C+

Term Offered: Fall**ATTR 6140 Functional Musculoskeletal Anatomy**

[3 credit hours]

A cadaver anatomy course focusing on foundation concepts of structural kinesiology and anatomy. In addition, the structure of various musculoskeletal tissues and functional joint complexes will be examined.

ATTR 6150 Foundations of Athletic Training Practice

[3 credit hours]

Introduction to the profession of athletic training including history, regulation of practice, and the role of the profession in the sports medicine health care team. Course topics include fundamental aspects of clinical practice such as health care core competencies, systematic evaluation, first aid, and communication in the health care team.

Laboratory concepts include selection and application of appropriate prophylactic taping, wrapping and bracing techniques as well as selection and application of appropriate first aid techniques.

Term Offered: Summer**ATTR 6220 Evaluation and Management of Head and Spine Injuries**

[4 credit hours]

The study of the pathology, etiology and presentation of head and spine injuries common in active populations. Subjective and objective components as well as orthopedic special testing will be introduced and serve as the foundation for the formulation of a systematic evaluation method. In addition, acute management techniques include first aid as well as immobilization methods will be introduced. Laboratory concepts include selection and implementation of appropriate evaluation and acute management techniques.

Prerequisites: ATTR 6140 with a minimum grade of C+ and ATTR 6150 with a minimum grade of C+

Term Offered: Spring

ATTR 6310 Therapeutic Interventions I

[3 credit hours]

The study of the physiological, mechanical and bio-electrical principles related to the application of thermal, electrical and mechanical modalities in the treatment of musculoskeletal injury. Laboratory concepts include selection and application of appropriate modality use specific to patient values and situation.

Prerequisites: KINE 6140 with a minimum grade of C+ and KINE 6150 with a minimum grade of C+ or ATTR 6140 with a minimum grade of C+ and ATTR 6150 with a minimum grade of C+

ATTR 6410 Clinical Biomechanics

[2 credit hours]

The study of common kinematic and kinetic alterations that can occur following acute and chronic musculoskeletal injuries and the deleterious effects these changes can cause. In addition, students will be introduced to both laboratory and clinical techniques to assess and alter the kinematic and kinetic deficits associated with injury.

Prerequisites: KINE 6120 with a minimum grade of C+ and KINE 6610 with a minimum grade of B- or ATTR 6120 with a minimum grade of C+ and ATTR 6610 with a minimum grade of B-

Term Offered: Spring, Summer

ATTR 6500 Biomechanics Of Posture And Balance

[3 credit hours]

Focus on the mechanical and sensory-motor factors involved in the control of balance and posture. Emphasis on the theories, the influence of pathology and techniques for the assessment of balance.

Prerequisites: KINE 6130 with a minimum grade of D- or ATTR 6130 with a minimum grade of D-

ATTR 6510 Evaluation and Management of General Medical Conditions

[3 credit hours]

The study of the pathology, etiology and presentation of common general medical conditions in active populations. Systems will include cardiovascular, respiratory, gastrointestinal, genitourinary, reproductive, dermatologic and neurologic systems and infectious diseases. For each system, subjective and objective components as well as common special tests will be introduced. In addition, concepts of pharmacology including pharmacokinetics, basic drug classifications and legal aspects of use will be covered. Specific focus will be placed on common therapeutic drugs used in sports medicine.

Prerequisites: KINE 6620 with a minimum grade of B- or ATTR 6620 with a minimum grade of B-

ATTR 6520 Management of Emergencies in Athletic Training

[3 credit hours]

A laboratory and simulation-based course that focuses on the recognition and management of emergency situations common in athletic training clinical practice.

Prerequisites: ATTR 6620 with a minimum grade of B-

Term Offered: Summer

ATTR 6600 Issues And Management In Athletic Training

[3 credit hours]

This course addresses current issues that affect the profession of Athletic Training. Topics cover issues that influence clinical practice as well as political issues related to the profession.

Term Offered: Spring, Fall

ATTR 6610 Clinical Skills I

[2 credit hours]

The first of sequential courses that focuses on development of professional behaviors and review of concepts and skills from previous coursework. In addition, clinical education rotations provided will allow students to implement course material into a clinical setting and gain practical hands-on experience working under the supervision of a certified athletic trainer.

Prerequisites: KINE 6150 with a minimum grade of C+ and KINE 6140 with a minimum grade of C+ or ATTR 6150 with a minimum grade of C+ and ATTR 6140 with a minimum grade of C+

ATTR 6620 Clinical Skills II

[2 credit hours]

The second of sequential courses that focuses on development of professional behaviors and review of concepts and skills from previous coursework. In addition, clinical education rotations provided will allow students to implement course material into a clinical setting and gain practical hands-on experience working under the supervision of a Clinical Preceptor.

Prerequisites: ATTR 6610 with a minimum grade of B-

Term Offered: Spring

ATTR 6630 Clinical Skills III

[3 credit hours]

The third of sequential courses that focuses on development of professional behaviors and review of concepts and skills from previous coursework. In addition, clinical education rotations provided will allow students to implement course material into a clinical setting and gain practical hands-on experience working under the supervision of a Clinical Preceptor.

Prerequisites: ATTR 6620 with a minimum grade of B-

Term Offered: Fall

ATTR 6640 Clinical Skills IV

[3 credit hours]

The final of sequential courses that focuses on development of professional behaviors and review of concepts and skills from previous coursework. In addition, clinical education rotations provided will allow students to implement course material into a clinical setting and gain practical hands-on experience working under the supervision of a Clinical Preceptor.

Prerequisites: ATTR 6630 with a minimum grade of B-

Term Offered: Spring

ATTR 6660 Evidence-Based Practice in Sports Medicine

[2 credit hours]

This course will introduce the student to clinical epidemiology and the evaluation of the efficacy of prevention, diagnosis, and treatment strategies in athletic training and sports medicine.

Term Offered: Fall

ATTR 6670 Pathology of Orthopedic Injury

[3 credit hours]

An in-depth investigation into the basic structure and mechanisms of injury of various musculoskeletal tissue applied to the recognition and prevention of specific orthopedic injuries and conditions.

Term Offered: Spring, Fall

ATTR 6680 Advanced Interventions I

[2 credit hours]

Students will be introduced to advanced techniques that impact clinical practice in Athletic Training, including manual therapy, advanced orthopedic evaluations, and advanced management and planning related to emergency medicine.

Term Offered: Spring

ATTR 6690 Advanced Interventions II

[3 credit hours]

Students will be introduced to advanced evaluation and assessment techniques that impact clinical practice, including general medical conditions, psychosocial, professionalism, and profession advocacy.

Prerequisites: KINE 6680 with a minimum grade of D- or ATTR 6680 with a minimum grade of D-

ATTR 6700 Therapeutic Interventions II

[3 credit hours]

The study of the advanced techniques related to rehabilitation of musculoskeletal injuries. Concepts include development of an exercise program, exercise program progression, indication and contraindications for specific techniques as well as reconditioning, return to play and preventative programs. Laboratory concepts include selection and implementation of appropriate rehabilitation techniques specific to patient values and situation.

Prerequisites: ATTR 6610 with a minimum grade of B- and ATTR 6310 with a minimum grade of B-

Term Offered: Spring, Fall

ATTR 6710 Organization And Administration Of Athletic Training Programs

[3 credit hours]

Administration of athletic training programs including legal issues, athletic training room management, budgeting, staffing, insurance, medical records, emergency care planning, preparticipation physical examinations, athletic training room design and public relations.

Prerequisites: ATTR 6620 with a minimum grade of B-

Term Offered: Fall

ATTR 6730 Optimization of Performance and Wellness

[3 credit hours]

An investigation into the nutritional and psychological components of optimal performance and wellness in active populations as well as recognition and appropriate referral of patients with suspected substance abuse and mental health disorders. In addition, concepts related to wellness and fitness assessment and weight management in a healthy population including prescription of strengthening and conditioning exercises will be discussed.

Prerequisites: ATTR 6620 with a minimum grade of B-

Term Offered: Fall

ATTR 6800 Foundations of Scholarly Practice

[3 credit hours]

An introduction to the consumption and appraisal of research in the field of athletic training with a specific focus on supporting evidence-based clinical practice. Overview of the stages of research project development as well as introduction to various research methods and designs.

Students will be introduced to strategies to effectively search, read and appraise scientific literature as well as strategies to help translate evidence from scientific literature into clinical practice.

Prerequisites: ATTR 6140 with a minimum grade of C+ and ATTR 6150 with a minimum grade of C+

Term Offered: Fall

ATTR 6810 Scholarly Practice I

[1 credit hour]

The first of sequential courses designed to provide students opportunity to refine skills in consuming, applying and disseminating contemporary sports medicine research.

Prerequisites: ATTR 6800 with a minimum grade of C+ and ATTR 6610 with a minimum grade of B-

Term Offered: Spring

ATTR 6820 Scholarly Practice II

[1 credit hour]

The second of sequential courses designed to provide students opportunity to refine skills in consuming, applying and disseminating contemporary sports medicine research.

Prerequisites: ATTR 6810 with a minimum grade of C+ and ATTR 6620 with a minimum grade of B-

Term Offered: Fall

ATTR 6830 Scholarly Practice III

[1 credit hour]

The third of sequential courses designed to provide students opportunity to refine skills in consuming, applying and disseminating contemporary sports medicine research. Assignments in this course serve to fulfill graduate research requirements.

Prerequisites: ATTR 6820 with a minimum grade of C+ and ATTR 6630 with a minimum grade of B-

Term Offered: Spring

ATTR 6910 Introduction to Sports Medicine Research I

[1 credit hour]

Students will be introduced to sports medicine research with a focus on evaluating the literature, asking a clinically relevant research question, and developing experimental hypotheses.

ATTR 6920 Introduction to Sports Medicine Research II

[1 credit hour]

Students will continue to develop the ability to critique research and will be introduced to developing research methods to address a clinically question related to sports medicine.

Prerequisites: KINE 6910 with a minimum grade of D- or ATTR 6910 with a minimum grade of D-

ATTR 8600 Issues And Management In Athletic Training

[3 credit hours]

This course addresses current issues that affect the profession of Athletic Training. Topics cover issues that influence clinical practice as well as political issues related to the profession.

Term Offered: Fall

ATTR 8660 Evidence-Based Practice in Sports Medicine

[3 credit hours]

An investigation into the science and theories of therapeutic rehabilitation and its impact on clinical practice using current literature and databases from the areas of evidence based medicine.

Term Offered: Fall**ATTR 8670 Pathology of Orthopedic Injury**

[3 credit hours]

An in-depth investigation into the basic structure and mechanisms of injury of various musculoskeletal tissue applied to the recognition and prevention of specific orthopedic injuries and conditions.

Term Offered: Spring, Fall

Bioengineering (BIOE)

BIOE 5200 Physiology And Anatomy For Bioengineers

[3 credit hours]

Review and study of general physiological principles and bioengineering perspectives of the human circulatory, respiratory, digestive, immune, nervous, muscular and excretory systems.

Term Offered: Fall**BIOE 5260 Medical Imaging Systems I**

[3 credit hours]

An introduction to the physical principles, design and function of x-ray based diagnostic imaging systems, including radiographic, fluoroscopic and computer tomography (CT) systems.

Prerequisites: MIME 6000 with a minimum grade of C or MIME 8000 with a minimum grade of C

Term Offered: Spring**BIOE 5620 Cellular Electrophysiology**

[3 credit hours]

The generation of electrical impulses by ion channels in excitable tissues. Models of ion channel gating include the Hodgkin-Huxley equations and Markov models. Principles of electrodiffusion applied to ionic flow through open channels.

Term Offered: Spring**BIOE 5640 Applications of Biotransport**

[3 credit hours]

The application of engineering principles to the design and analysis of artificial organs and their clinical application.

Term Offered: Spring**BIOE 5650 Bioseparations**

[3 credit hours]

Introduction to, analysis and industrial design of processes required to separate and purify proteins and other biological compounds for the downstream processing of bioreactor products. The separations techniques will include filtration, chromatography and crystallization.

Prerequisites: BIOE 3400 with a minimum grade of D- or CHEE 3120 with a minimum grade of D-

Term Offered: Fall**BIOE 5670 Ultrasound Principles And Medical Applications**

[3 credit hours]

The basic principles and physics of ultrasound will be covered. Students will learn various medical applications of ultrasound and will be exposed to the latest developments in ultrasound technology.

Prerequisites: (MATH 2860 with a minimum grade of D- and MATH 3820 with a minimum grade of D-) or (PHYS 2140 with a minimum grade of D- and MATH 3860 with a minimum grade of D-)

BIOE 5710 Biomechanics of Soft and Hard Materials

[3 credit hours]

Composite and hierarchical models of bone remodeling models presented. Soft tissue models include linear and nonlinear viscoelasticity, Fung's quasilinear viscoelastic theory. Biphasic and triphasic models and mechano-ionic interactions.

Term Offered: Fall**BIOE 5730 Computational Bioengineering**

[3 credit hours]

Introduction to and utilization of computational packages for bioengineering applications. Introduction to finite element analysis and applications in biomechanics, biofluidics, bioheat transfer, optimization.

Term Offered: Spring**BIOE 5740 Tissue Engineering**

[3 credit hours]

Application of principles from engineering and the life sciences toward the development of biological substitutes that restore, maintain, or improve tissue function.

Term Offered: Spring, Fall**BIOE 5750 Experimental Methods In Orthopedic Biomechanics**

[3 credit hours]

The theory and implementation of techniques used for the measurement of forces and motion within the musculoskeletal system at the system, organ and tissue levels.

Prerequisites: BIOE 3110 with a minimum grade of D- or CIVE 1160 with a minimum grade of D-

Term Offered: Spring, Fall**BIOE 5780 Advanced Biomechanics**

[3 credit hours]

Three-dimensional analysis and measurement of human body motions. Applications to gait analysis, physical therapies, and impact analysis. Includes total hip and knee replacement: elbow, shoulder, wrist and finger arthroplasty: bone plates, hip fracture fixation devices, and external fixators.

Term Offered: Spring, Fall**BIOE 5830 Additive Manufacturing**

[3 credit hours]

Additive manufacturing (AM) is a method of manufacturing that has been growing rapidly. In this course the students will learn about various AM technologies. They will also work with the required design software packages to create 3D models and 3D-print objects from the designed models.

Prerequisites: MIME 2650 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Fall

BIOE 5930 Bioengineering Seminar

[0 credit hours]

Presentations of ongoing research in the field of bioengineering. Includes presentations by guest speakers, faculty and graduate students.

Term Offered: Spring, Fall

BIOE 5980 Special Topics In Bioengineering

[1-5 credit hours]

Selected subjects in the field of bioengineering with intensive investigation of the recent literature in a few areas of special interest to the class and the professor.

Term Offered: Spring, Summer, Fall

BIOE 5990 Independent Study In Bioengineering

[1-6 credit hours]

The student, under the guidance of their research adviser, explores in-depth specific areas or topics related to their thesis or dissertation research.

Term Offered: Spring, Summer, Fall

BIOE 6100 Computational Physiology

[3 credit hours]

Application of mathematical and computational techniques to physiological systems. Models include conductive cables and compartmental models of nerve fibers, nonlinear differential equation models of electrophysiology, and stochastic models of biomolecular interactions.

Prerequisites: MIME 6000 with a minimum grade of D- and BIOE 4100 with a minimum grade of D-

Term Offered: Spring

BIOE 6210 Optical Instrumentation For Bioengineering

[3 credit hours]

Introduction to the theory and design of topical instruments for bioengineers. Instruments using geometrical, physical and quantum optical principles will be discussed.

BIOE 6310 Cell and Tissue Engineering Laboratory

[3 credit hours]

The application of engineering principles to the design and analysis of biological processes that employ living organisms or biochemicals.

Term Offered: Spring

BIOE 6520 Orthopaedic Biomechanics

[3 credit hours]

The course of orthopaedic biomechanics has been designed to fuse the biological and physiological problems with the science and technology of engineering. It focuses on a brief review of the physiology and biology of the human body, introduces the physics of manual industrial activities.

Prerequisites: BIOE 4110 with a minimum grade of D- and BIOE 5780 with a minimum grade of D-

Term Offered: Spring

BIOE 6730 Biological Transport Phenomena

[3 credit hours]

Application of transport phenomena and reaction engineering in the understanding of signaling, growth processes and the flow of biological fluids in mammalian vessels in living systems.

BIOE 6920 Bioengineering Project

[1-6 credit hours]

The student performs a special project of an advanced nature in bioengineering. The course is primarily intended for students pursuing a Masters degree with the project option in Bioengineering.

Term Offered: Spring, Summer, Fall

BIOE 6960 Bioengineering Research And Thesis - Master's

[1-9 credit hours]

Graduate thesis research. The student completes and defends a written thesis under the direction and guidance of their faculty research adviser.

Term Offered: Spring, Summer, Fall

BIOE 6970 Graduate Engineering Internship

[1 credit hour]

Faculty advisor approved industry, government, or agency internship to provide an experiential learning component to the master's/doctoral degree program.

Prerequisites: GNEN 5000 with a minimum grade of S

Term Offered: Spring, Summer, Fall

BIOE 7260 Medical Imaging Systems I

[3 credit hours]

An introduction to the physical principles, design and function of x-ray based diagnostic imaging systems, including radiographic, fluoroscopic and computer tomography (CT) systems.

Prerequisites: MIME 6000 with a minimum grade of C or MIME 8000 with a minimum grade of C

Term Offered: Spring

BIOE 7930 Bioengineering Seminar

[0 credit hours]

Presentations of ongoing research in the field of bioengineering. Includes presentations by guest speakers, faculty and graduate students.

Term Offered: Spring, Fall

BIOE 7980 Special Topics In Bioengineering

[1-5 credit hours]

Selected subjects in the field of bioengineering with intensive investigation of the recent literature in a few areas of special interest to the class and the professor.

Term Offered: Summer

BIOE 7990 Independent Study In Bioengineering

[1-6 credit hours]

The student, under the guidance of their research adviser, explores in-depth specific areas or topics related to their thesis or dissertation research.

Term Offered: Spring, Summer, Fall

BIOE 8100 Computational Physiology

[3 credit hours]

Application of mathematical and computational techniques to physiological systems. Models include conductive cables and compartmental models of nerve fibers, nonlinear differential equation models of electrophysiology, and stochastic models of biomolecular interactions.

Prerequisites: MIME 6000 with a minimum grade of D- and BIOE 4100 with a minimum grade of D-

Term Offered: Spring

BIOE 8210 Optical Instrumentation For Bioengineering

[3 credit hours]

Introduction to the theory and design of topical instruments for bioengineers. Instruments using geometrical, physical and quantum optical principles will be discussed.

BIOE 8310 Cell and Tissue Engineering Laboratory

[3 credit hours]

The application of engineering principles to the design and analysis of biological processes that employ living organisms or biochemicals.

Term Offered: Spring**BIOE 8520 Orthopaedic Biomechanics**

[3 credit hours]

The course of orthopaedic biomechanics has been designed to fuse the biological and physiological problems with the science and technology of engineering. It focuses on a brief review of the physiology and biology of the human body, introduces the physics of manual industrial activities.

Prerequisites: BIOE 4110 with a minimum grade of D- and BIOE 5780 with a minimum grade of D-

Term Offered: Spring**BIOE 8730 Biological Transport Phenomena**

[3 credit hours]

Application of transport phenomena and reaction engineering in the understanding of signaling, growth processes and the flow of biological fluids in mammalian vessels in living systems.

BIOE 8960 Bioengineering Dissertation

[1-9 credit hours]

Original investigations of significant bioengineering problems at the graduate level under the guidance of a member of the faculty.

Term Offered: Spring, Summer, Fall**BIOE 8970 Graduate Engineering Internship**

[1 credit hour]

Faculty advisor approved industry, government, or agency internship to provide an experiential learning component to the master's/doctoral degree program.

Prerequisites: GNEN 5000 with a minimum grade of S

Term Offered: Spring, Summer, Fall

Bioinform and Proteom-Genomics (BIPG)

BIPG 5100 Fund Bioinformatics Proteomics

[3 credit hours]

Introduction to bioinformatics and computational biology. Both theory and practical methods for evaluating and managing biomedical data will be covered. Topics range from sequence analysis to structure prediction. Includes computer laboratory sessions. May be taken concurrently with BIPG520/720.

Term Offered: Fall**BIPG 5110 Practical Bioinformatics**

[1 credit hour]

This course will provide students with practical experience with the most common bioinformatics tasks. Short lectures will be integrated with computer exercises in the Bioinformatics Computer Lab.

Term Offered: Summer**BIPG 5200 Statistical Methods in Bioinformatics**

[3 credit hours]

This course introduces students to statistical methods commonly used in bioinformatics. Students will learn to use statistical programs and related bioinformatics resources locally and on the Internet. Lectures and lab discussion will emphasize on the statistical models and methods underlying the computational tools. The course briefly reviews basic statistical methods and methods more specific to bioinformatics research, including Markov chains, hidden Markov models, Bayesian statistics, and Bayesian networks. Students will learn the principles behind these statistical methods and how they can be applied to analyze throughput data.

Term Offered: Fall**BIPG 5300 Current Topics in BPG**

[1 credit hour]

In-depth analysis of original scientific papers/seminars in the fields of bioinformatics, proteomics and genomics for the development of critical analysis and scientific communication skills. May be repeated for credit.

Term Offered: Spring, Summer, Fall**BIPG 5400 Biodatabases**

[1 credit hour]

This course will introduce students to database concepts, design, and implementation, using the most popular database formats utilized in biomedical research. The practicum provides hands-on experience with real-world databases.

Term Offered: Summer**BIPG 5500 Microarray Analysis**

[1 credit hour]

This course aims at providing hands-on training on analysis of microarray data. Students will learn how to handle and analyze microarray data. Topics covered include preprocessing, identifying differentially expressed genes, classification and presentation of findings. Different platforms of microarray technologies will be covered in this course.

Term Offered: Summer**BIPG 5800 Rotations in BPG**

[0-4 credit hours]

Students will participate in selected on-going research programs with faculty members in the Bioinformatics, Proteomics and Genomics program. May be repeated for credit.

Term Offered: Fall**BIPG 6100 Bioinformatic Computation**

[3 credit hours]

Use, design, strengths and limitations of bioinformatics programs run on desktop computers. Programming in PERL to acquire and analyze biological sequences. Construction and management of databases. Introduction of LINUX, C++, and Java. Includes computer laboratory sessions.

Term Offered: Spring, Summer

BIPG 6200 Advanced Programming in Bioinformatics

[3 credit hours]

This course introduces students to programming methods commonly used in bioinformatics. The course consists of two parts. The first part focuses on Python programming and the second part focuses on R programming. The Python part of the course provides a general overview of the Python programming. Students will learn and practice programming concepts using the Python programming language. Focus lies on how to think computationally and students will learn and practice to write programs to tackle problems in bioinformatics. The course will also contain a section on how to use code written by other programmers in your own Python programs. The R part of the course provides the programming tools needed for data analysis in bioinformatics. The student will learn how to access and summarize big dataset using the R program. Each section will be driven by a particular problem in bioinformatics and students will gain experience in R programming addressing bioinformatics problems.

Prerequisites: BIPG 6100 with a minimum grade of C

Term Offered: Fall

BIPG 6300 Clinical Proteomics

[2 credit hours]

This course teaches advanced proteomics techniques of disease, pathways, targets and drug effects, such as advanced proteomics experimental and computational techniques to support clinical research needs. Protein structure and classification, including their functional role and protein-protein interaction will be presented. Protein identification by mass spectrometry and bioinformatics analysis will be taught to help in drug discovery and translating bench to bedside, building on basic scientific research to create new therapies, medical procedures, or diagnostics.

Term Offered: Fall

BIPG 6400 Applications of Bioinformatics

[3 credit hours]

Lectures and hands-on activities that demonstrate the application of bioinformatics, proteomic and genomics techniques to solve research problems being studied by selected faculty from MCO, UT, BGSU or another institution.

Term Offered: Spring

BIPG 6500 Applied Statistics for Bioinformatics

[3 credit hours]

This course will provide students with practical statistical and data analysis skills to perform rigorous analysis of high-throughput biological data. The course assumes familiarity with the statistical methods and with R programming. The course covers the statistical concepts necessary to design experiments and analyze high-dimensional data generated by high-throughput technologies. Also included are stochastic modeling and statistical methods applied to problems such as mapping disease-associated genes, SNP and mutation analysis, transcriptomics, miRNA, DNA methylation and epigenetics, proteomics, metabolomics, and metagenomics.

Term Offered: Fall

BIPG 6600 BIPG Internship

[1-6 credit hours]

Focused practical training in Biomarker discovery and validation with a pharmaceutical-oriented company. Builds upon didactic course work.

BIPG 6700 Research in Bioinformatics

[1-6 credit hours]

Supervised research in bioinformatics, especially designed for new graduate students to gain research credits before taking their Qualifying Exam. Students will study bioinformatics applications to biochemical research, usually in a laboratory setting, as well as discussing current literature and advanced techniques in all areas of bioinformatics.

BIPG 6800 Practical Genomics

[3 credit hours]

This course provides a broad overview of the field of bioinformatics, algorithmic solutions for biological data analysis, and applications in genomics. The course is addressed to students in computational and interdisciplinary programs, such as Biomedical Informatics, Biostatistics, Computer Science and Engineering, Biomedical Engineering, as well as Systems Biology & Physiology, Cancer Biology, and related programs. Other students interested in learning about computational methods in biomedical research are also encouraged to take this course.

Term Offered: Spring

BIPG 6890 Independent Study in BPG

[0-4 credit hours]

Intense study in an area of bioinformatics, proteomics and genomics (BPG). Course content, assignments, meeting times and grade requirements are arranged with a BPG faculty member. May be repeated for credit.

Term Offered: Spring, Summer, Fall

BIPG 6990 Thesis in Bioinformatics

[1-15 credit hours]

Research in bioinformatics, or interdisciplinary investigation of biomedical problems with significant bioinformatic components. This research is at the masters level, leading to completion of a scientific project for presentation as a thesis. May be repeated for credit.

Term Offered: Spring, Summer, Fall

BIPG 7100 Fund Bioinform and Proteomics

[3 credit hours]

Introduction to bioinformatics and computational biology. Both theory and practical methods for evaluating and managing biomedical data will be covered. Topics range from sequence analysis to structure prediction. Includes computer laboratory sessions. May be taken concurrently with BIPG520/720.

Term Offered: Fall

BIPG 7110 Practical Bioinformatics

[1 credit hour]

Short lectures integrated with computer tasks in Bioinformatics Computer Lab. The bioinformatics resources will primarily be those freely available on the internet. The course will meet twice a week for 2-hour sessions in the Bioinformatics Computer Lab. The course will last four weeks during the Summer semester. The following topics will be presented in the eight sessions: searching biological databases, pair-wise sequence alignments, BLAST searches, multiple sequence alignment, phylogenetic analysis, gene prediction, and transcription factor binding sites and other DNA motifs. No prerequisites.

Term Offered: Summer

BIPG 7300 Transcriptomic Data Science

[3 credit hours]

Transcriptomic though part of genomics has evolved tremendously over the past 10 years and has expanded to many other domains including drug discovery and cellular anatomy. This course introduces students to the basic biology of modern transcriptomics and the experimental tools that we use to measure it. Starting with the Central Dogma of Molecular Biology I will cover how next-generation sequencing can be used to measure RNA expression and its regulation. Recent advances in transcriptomic data science including single cell RNA sequencing, RNA-editing, and transcriptomic signature-based drug discovery approaches will also be covered. Students will also get an introduction to the key concepts in cluster computing and data science that you'll need to understand how data from next-generation sequencing experiments are generated and analyzed. The course is designed based on the need of transcriptomic data science and cluster computing in job market. Accordingly, the major focus will be on project-based teaching.

Term Offered: Summer**BIPG 7350 Algorithms for Bioinformatics**

[3 credit hours]

The course introduces students to design and use of major algorithm classes that are often used in bioinformatic analyses. These include, but are not limited to, exhaustive search, greedy algorithms, dynamic programming, divide#and#conquer, and graph#based formulations. Lectures, and individual and group-based projects are used.

Term Offered: Spring**BIPG 7400 Biodatabases**

[1 credit hour]

This course will introduce students to database concepts, design, and implementation, using the most popular database formats utilized in biomedical research. The practicum provides hands-on experience with real-world databases.

Term Offered: Summer**BIPG 7500 Microarray Analysis**

[1 credit hour]

BIPG 8100 Bioinformatic Computation

[3 credit hours]

Use, design, strengths and limitations of bioinformatics programs run on desktop computers. Programming in PERL to acquire and analyze biological sequences. Construction and management of databases. Introduction of LINUX, C++, and Java. Includes computer laboratory sessions.

Term Offered: Spring**BIPG 8400 Applications of Bioinformatics**

[3 credit hours]

BIPG 8890 Independent Study in BPG

[0-4 credit hours]

Intense study in an area of bioinformatics, proteomics and genomics (BPG). Course content, assignments, meeting times and grade requirements are arranged with a BPG faculty member. May be repeated for credit.

BIPG 9990 Dissertation Research in BIPG

[1-9 credit hours]

Formal intensive study of specific topic in bioinformatics, or bioinformatic applications in other biomedical fields. This research should be conducted after the doctoral student passes their qualifying exam. Individual studies may include the application of both experimental and theoretical scientific methods, with the goal of advancing bioinformatic methods and/or of advancing biomedical fields through the use of such methods. May be repeated for credit.

Term Offered: Spring, Summer, Fall

Biology (BIOL)

BIOL 5030 Advanced Microbiology

[3 credit hours]

Lectures on the principles of modern microbiology and virology, including metabolism, growth, cellular morphology, genetics and host parasite relationships. Bacterial and viral diseases will be illustrated.

Term Offered: Spring**BIOL 5040 Advanced Microbiology Laboratory**

[1 credit hour]

Laboratories utilizing basic microbiological techniques and illustrating principles of growth, identification and genetics of microbes.

Corequisites: BIOL 5030**Term Offered:** Spring**BIOL 5050 Advanced Immunology**

[3 credit hours]

The development, genetics and physiology of the immune response.

Term Offered: Spring, Fall**BIOL 5060 Advanced Immunology Laboratory**

[1 credit hour]

Laboratory studies of the immune response.

Corequisites: BIOL 5050**Term Offered:** Fall**BIOL 5230 Advanced Comparative Animal Physiology**

[3 credit hours]

Lectures on the comparative and environmental physiology of vertebrates and invertebrates including metabolism, temperature regulation, respiration, circulation excretion and osmotic regulation.

Prerequisites: BIOL 3030 with a minimum grade of D- and BIOL 3070 with a minimum grade of D-**Term Offered:** Spring, Summer**BIOL 5980 Advanced Topics In The Biological Sciences For Science Educators**

[1-3 credit hours]

Lecture, seminar or distance learning course on current topics or problems in the biological sciences that are relevant for science educators.

BIOL 6000 Introduction To Scientific Thought And Expression

[3 credit hours]

A writing intensive course for new graduate students that focuses on scientific hypothesis testing and reading the original literature in biology.

Term Offered: Spring, Fall

BIOL 6010 Advanced Molecular Biology

[4 credit hours]

Analysis of recent developments in prokaryotic and eukaryotic molecular biology through evaluation and discussion of current literature.

Term Offered: Fall

BIOL 6020 Advanced Molecular Biology Laboratory

[2 credit hours]

Students will gain a working knowledge of essential laboratory techniques used in molecular biology. These techniques, including polymerase chain reaction (PCR), electrophoresis, DNA cloning, microscopy and transfection, will be used in a course project to express and analyze a protein of interest in cultured mammalian cells. The concepts underlying these procedures will be studied online before the lab. This course is designed to prepare students for careers in research, biotechnology and science education.

Term Offered: Summer

BIOL 6090 Advanced Cell Biology

[4 credit hours]

An advanced course that stresses the experimental basis for current concepts of cell structure and function.

Term Offered: Spring

BIOL 6100 Research Methodology: Cell And Molecular Biology

[3 credit hours]

An in-depth discussion of techniques used in the study of cell and molecular biology. Examples include chromatography and fractionation, electrophoresis cell and molecular cloning.

Term Offered: Fall

BIOL 6200 Advanced Signal Transduction

[3 credit hours]

This course will provide an in-depth discussion of signal transduction topics important for cell/molecular biology research, emphasizing the interplay between intracellular signaling molecules needed to regulate physiological responses.

Prerequisites: BIOL 6010 with a minimum grade of D-

Term Offered: Spring

BIOL 6260 Topics in Cancer Biology

[3 credit hours]

The course will cover our current understanding of carcinogenesis and provide in-depth discussion of the important topics and latest advances in cancer research.

Prerequisites: BIOL 6010 with a minimum grade of D- and BIOL 6090 with a minimum grade of D- and CHEM 6500 with a minimum grade of D-

Term Offered: Fall

BIOL 6300 Advanced Microscopy and Imaging

[3 credit hours]

This course focuses on advanced quantitative fluorescence imaging methods used to visualize single molecules, organelles, cells and tissues in vitro and in vivo. Students will gain theoretical understanding of fluorescence-based imaging techniques such as confocal, TIRF, and super-resolution microscopy, and hands-on experience on the fundamentals of image analysis and quantification.

Prerequisites: BIOL 6090 with a minimum grade of D- and BIOL 6100 with a minimum grade of D-

Term Offered: Fall

BIOL 6830 Molecular and Cellular Biology

[4 credit hours]

Essential concepts of molecular genetics and cell biology. Major topics include gene structure and composition, transcription, translation, protein structure and function, cell cycle, cell movement, and cell signaling. Primarily intended for Master students enrolled in a non-laboratory research based degree program. Students who have received credit for either BIOL 6010 or BIOL 6090 cannot receive credit for BIOL 6830.

Term Offered: Summer

BIOL 6920 Special Projects In Biology

[2-4 credit hours]

Introduction to research on a selected problem under the direction of an individual faculty member.

Term Offered: Spring, Summer, Fall

BIOL 6930 Seminar In Biology

[1 credit hour]

Presentation on research or current literature by graduate students, faculty, or guest speakers.

Term Offered: Spring, Fall

BIOL 6960 Masters Thesis Research

[1-15 credit hours]

Research that normally contributes to the fulfillment of the M.S. thesis requirement.

Term Offered: Spring, Summer, Fall

BIOL 6980 Advanced Topics In Biology

[2-4 credit hours]

Seminar/discussion of significant current topics or problems in biology.

Term Offered: Spring

BIOL 6990 Advanced Readings In Biology

[2-4 credit hours]

Faculty directed readings or projects in a specific area of Biology.

Term Offered: Spring, Summer, Fall

BIOL 7030 Advanced Microbiology

[3 credit hours]

Lectures on the principles of modern microbiology and virology, including metabolism, growth, cellular morphology, genetics and host parasite relationships. Bacterial and viral diseases will be illustrated.

Term Offered: Spring

BIOL 7040 Advanced Microbiology Laboratory

[1 credit hour]

Laboratories utilizing basic microbiological techniques and illustrating principles of growth, identification and genetics of microbes.

Corequisites: BIOL 7030

Term Offered: Spring

BIOL 7050 Advanced Immunology

[3 credit hours]

The development, genetics and physiology of the immune response.

Term Offered: Spring, Fall

BIOL 7060 Advanced Immunology Laboratory

[1 credit hour]

Laboratory studies of the immune response.

Corequisites: BIOL 7050

Term Offered: Fall

BIOL 8000 Introduction To Scientific Thought And Expression

[3 credit hours]

A writing intensive course for new graduate students that focuses on scientific hypothesis testing and reading the original literature in biology.

Term Offered: Spring, Fall**BIOL 8010 Advanced Molecular Biology**

[4 credit hours]

Analysis of recent developments in prokaryotic and eukaryotic molecular biology through evaluation and discussion of current literature.

Term Offered: Fall**BIOL 8090 Advanced Cell Biology**

[4 credit hours]

An advanced course that stresses the experimental basis for current concepts of cell structure and function.

Term Offered: Spring**BIOL 8100 Research Methodology: Cell And Molecular Biology**

[3 credit hours]

An in-depth discussion of techniques used in the study of cell and molecular biology. Examples include chromatography and fractionation, electrophoresis cell and molecular cloning.

Term Offered: Fall**BIOL 8200 Advanced Signal Transduction**

[3 credit hours]

This course will provide an in-depth discussion of signal transduction topics important for cell/molecular biology research, emphasizing the interplay between intracellular signaling molecules needed to regulate physiological responses.

Prerequisites: BIOL 8010 with a minimum grade of D-**Term Offered:** Spring**BIOL 8260 Topics in Cancer Biology**

[3 credit hours]

The course will cover our current understanding of carcinogenesis and provide in-depth discussion of the important topics and latest advances in cancer research.

Prerequisites: BIOL 8010 with a minimum grade of D- and BIOL 8090 with a minimum grade of D- and CHEM 8500 with a minimum grade of D-**Term Offered:** Fall**BIOL 8300 Advanced Microscopy and Imaging**

[3 credit hours]

This course focuses on advanced quantitative fluorescence imaging methods used to visualize single molecules, organelles, cells and tissues in vitro and in vivo. Students will gain theoretical understanding of fluorescence-based imaging techniques such as confocal, TIRF, and super-resolution microscopy, and hands-on experience on the fundamentals of image analysis and quantification.

Prerequisites: BIOL 8090 with a minimum grade of D- and BIOL 8100 with a minimum grade of D-**Term Offered:** Fall**BIOL 8920 Special Projects In Biology**

[2-4 credit hours]

Introduction to research on a selected problem under the direction of an individual faculty member.

Term Offered: Spring, Summer, Fall**BIOL 8930 Seminar In Biology**

[1 credit hour]

Presentation on research or current literature by graduate students, faculty, or guest speakers.

Term Offered: Spring, Fall**BIOL 8960 Doctoral Dissertation Research**

[1-15 credit hours]

Research normally leading to the fulfillment of the Ph.D. dissertation requirement.

Term Offered: Spring, Summer, Fall**BIOL 8980 Advanced Topics In Biology**

[2-4 credit hours]

Seminar/discussion of significant current topics or problems in biology.

Term Offered: Spring**BIOL 8990 Advanced Readings In Biology**

[2-4 credit hours]

Faculty directed readings or projects in a specific area of Biology.

Term Offered: Spring, Summer, Fall

Biomarker Res Indiv Medicine (BRIM)

BRIM 6200 Biomarker Disc,Valid & Impleme

[3 credit hours]

Unit I of this survey course will explore the clinical need and methodologic approaches to biomarker development and validation. Unit 2 will consider biomarker use in individualized medicine.

Term Offered: Spring**BRIM 8200 Biomarker Disc Valid & Impleme**

[3 credit hours]

Unit I of this survey course will explore the clinical need and methodologic approaches to biomarker development and validation. Unit 2 will consider biomarker use in individualized medicine.

Term Offered: Spring

Biomarkers and Diagnostics (BIDI)

BIDI 5000 Biostatistical Methods for Biomarkers

[3 credit hours]

This course will introduce students to biostatistical concepts and methods for analyzing biomarker data. The course focuses on statistical methods for biomarkers to address various issues arising from studies assessing biomarkers in biomedical research and including associations with certain diseases or health conditions. The course presents both basic and advanced topics.

BIDI 5100 Biomarkers and Diagnostics Internship

[6 credit hours]

Supervised full time work experience in Biomarker discovery and validation in a pharmaceutical oriented company. Builds upon didactic course work.

Term Offered: Summer**BIDI 5200 Readings in Biomarkers and Diagnostics**

[1 credit hour]

Review of selected research topics related to Biomarkers and their application to diagnosis. Student discussion will be moderated through the Blackboard course management system by the course director.

Term Offered: Summer

Biomedical Engineering (BME)

BME 8900 Independent Research

[1-16 credit hours]

[1-16 hours] Selected topics from current BME research with investigation into recent literature and/or via a laboratory experience in an area of mutual interest to the student and the instructor. Students are to use the section number of their instructor. Prerequisite: Instructor consent.

Term Offered: Spring, Summer, Fall

BME 8930 Graduate Seminar

[0 credit hours]

0 hour] Biomedical engineering research presentations by external speakers from industry, universities and other organizations.

BME 8960 Dissertation Research

[1-9 credit hours]

[1-16 hours] Doctoral dissertation research credit hours for students in the biomedical engineering program. Students are to use the section number of their dissertation adviser.

Term Offered: Spring, Summer, Fall

BME 8970 Graduate Engineering Internship

[1 credit hour]

Faculty advisor approved industry, government, or agency internship to provide an experiential learning component to the Doctoral degree program.

Prerequisites: GNEN 5000 with a minimum grade of S

Term Offered: Spring, Summer, Fall

BME 8980 Special Topics

[1-8 credit hours]

[1-8 hours] A special topic at the graduate level in biomedical engineering to be offered as a lecture course during a term by a BME faculty member. Prerequisite: Consent of the BME faculty member.

Term Offered: Spring, Summer, Fall

Biomedical Sciences Pgm (BMSP)

BMSP 5320 Statistical Methods I

[3 credit hours]

Introduction to statistical methods with emphasis on problems in the biomedical sciences. Included are descriptive statistics, probability theory, statistical inference, experimental design and simple statistical tests.

Term Offered: Summer

BMSP 6250 Grant Writing Workshop

[2 credit hours]

This is an interdisciplinary course designed to teach students skills in developing a research plan in the form of a grant proposal.

Term Offered: Spring

BMSP 6310 Systems Pathophysiology I

[2.5 credit hours]

The course will cover the fundamentals and current research efforts in biomedical sciences, emphasizing diseases of the cardiovascular, immune, and nervous systems, as well as metabolic and infectious diseases.

Term Offered: Spring

BMSP 6320 Systems Pathophysiology II

[2.5 credit hours]

The course will cover the fundamentals and current research efforts in biomedical sciences, emphasizing diseases of the cardiovascular, immune, and nervous systems, as well as metabolic and infectious diseases.

Term Offered: Spring

BMSP 6330 Current Problems and Research Approaches in Proteins

[2 credit hours]

The course will cover principles of protein structural organization, basics of protein chemistry and structure/function relationships in proteins. Special emphasis will be given to the modern trends in protein science including research in proteomic aspects of system biology and biomedical applications of proteomics.

Term Offered: Fall

BMSP 6340 Curr Prob Res App Genes/Genom

[2 credit hours]

This course provides an introduction to major areas of current research in genetics and molecular biology. Topics include gene structure and regulation, DNA replication, recombination, repair, mutation, and quantitative genetics.

Term Offered: Fall

BMSP 6350 Cell Biology & Signaling

[3 credit hours]

The content of this course will encompass didactic lectures on current knowledge and methodological approaches in the area of fundamental cellular processes and cell communication.

Term Offered: Spring

BMSP 6360 Current Problems and Research Approaches in Cell Membranes

[2 credit hours]

This course will explore vital roles played by plasma and intracellular membranes in communication and homeostasis, and by membrane lipid/protein interactions in defining cytoarchitecture, protein sorting, excitability and synaptic transmission.

Term Offered: Fall

BMSP 6370 Recent Advances in NND Journal

[1 credit hour]

Forum for the presentation, critique, and discussion of recent primary literature important to the development of the field of biomedical science.

Term Offered: Spring

BMSP 6380 Methods in Biomedical Sciences

[2 credit hours]

This course will cover the basic principles and applications, of state-of-the-art technology in molecular biology, protein chemistry, and studies with culture cells, tissue explants and transgenic animal models.

Term Offered: Fall

BMSP 6390 Mentored Research

[1-15 credit hours]

Students will be mentored in biomedical research and will gain familiarity with research projects ongoing in graduate laboratories. May be repeated for credit.

Term Offered: Spring, Summer, Fall

BMSP 6400 BPG Intro to Mthds in Bio Sci

[1 credit hour]

Introduction to biomedical methods. Required for Bioinformatics, Proteomics and Genomics (BPG) MSBS (but not certificate) students. An abbreviated version of BMSP 638, BMSP 640 runs for first 8 weeks of Fall semester.

Term Offered: Fall**BMSP 6470 System Pathophysiology**

[4 credit hours]

This course provides an understanding of fundamental processes underlying pathophysiology, which occur at the cellular and organ level and lead to impairment of physiology processes. The course is organized into 6 blocks providing knowledge on the malfunctions of physiological systems, including cardiovascular, renal, skeletal, endocrinology, immunology, neural system, and cancer, and an introduction to pharmacology and applied bioinformatics.

Term Offered: Spring**BMSP 7320 Statistical Methods I**

[3 credit hours]

Introduction to statistical methods with emphasis on problems in the biomedical sciences. Included are descriptive statistics, probability theory, statistical inference, experimental design and simple statistical tests.

Term Offered: Summer**BMSP 8250 Grant Writing Workshop**

[2 credit hours]

This is an interdisciplinary course designed to teach students skills in developing a research plan in the form of a grant proposal.

Term Offered: Spring**BMSP 8310 Systems Pathophysiology I**

[2.5 credit hours]

The course will cover the fundamentals and current research efforts in biomedical sciences, emphasizing diseases of the cardiovascular, immune, and nervous systems, as well as metabolic and infectious diseases.

Term Offered: Spring**BMSP 8320 Systems Pathophysiology II**

[2.5 credit hours]

The course will cover the fundamentals and current research efforts in biomedical sciences, emphasizing diseases of the cardiovascular, immune, and nervous systems, as well as metabolic and infectious diseases.

Term Offered: Spring**BMSP 8330 Curr Prob Res App Protein Str**

[2.5 credit hours]

The course will cover principles of protein structure/function relationships in proteins, protein folding, ligand-protein interactions and mechanisms of enzyme-catalyzed reactions. Special emphasis will be given to the present-day research.

Term Offered: Fall**BMSP 8340 Curr Prob Res App Genes/Genome**

[2 credit hours]

This course provides an introduction to major areas of current research in genetics and molecular biology. Topics include gene structure and regulation, DNA replication, recombination, repair, mutation, and quantitative genetics.

Term Offered: Fall**BMSP 8350 Cell Biology & Signaling**

[3 credit hours]

The content of this course will encompass didactic lectures on current knowledge and methodological approaches in the area of fundamental cellular processes and cell communication.

Term Offered: Spring**BMSP 8360 Curr Prob Cell Membranes**

[2.5 credit hours]

This course will explore vital roles played by plasma and intracellular membranes in communication and homeostasis, and by membrane lipid/protein interactions in defining cytoarchitecture, protein sorting, excitability and synaptic transmission.

Term Offered: Fall**BMSP 8380 Methods Biomedical Sciences**

[2.5 credit hours]

This course will cover the basic principles and applications, of state-of-the-art technology in molecular biology, protein chemistry, and studies with culture cells, tissue explants and transgenic animal models.

Term Offered: Fall**BMSP 8390 Mentored Research**

[1-15 credit hours]

Students will be mentored in biomedical research and will gain familiarity with research projects ongoing in graduate laboratories. May be repeated for credit.

Term Offered: Spring, Summer, Fall**BMSP 8470 System Pathophysiology**

[4 credit hours]

This course provides an understanding of fundamental processes underlying pathophysiology, which occur at the cellular and organ level and lead to impairment of physiology processes. The course is organized into 6 blocks providing knowledge on the malfunctions of physiological systems, including cardiovascular, renal, skeletal, endocrinology, immunology, neural system, and cancer, and an introduction to pharmacology and applied bioinformatics.

Term Offered: Spring

Business Administration (BUAD)

BUAD 6100 Accounting For Decision Making

[3 credit hours]

This course develops an appreciation for financial statements and their usefulness in making decisions. The nature of costs, opportunity costs, responsibility accounting, budgeting, cost allocations, absorption cost systems, activity based costing and standard costs are included.

Prerequisites: ACTG 1040 with a minimum grade of C and ACTG 1050 with a minimum grade of C or BUAD 2040 with a minimum grade of C and BUAD 2050 with a minimum grade of C or ACCT 5000 with a minimum grade of C

Term Offered: Spring, Summer, Fall

BUAD 6200 Corporate Finance

[3 credit hours]

The course reviews the analytical tools needed to solve a wide range of financial management issues. It concentrates on three major types of decisions in corporate finance: investment decisions, financing decisions, and payout decisions. Specific topics include stock and bond pricing, risk and returns, capital budgeting, leverage and capital structure choice, and dividend policy.

Prerequisites: FINA 5310 with a minimum grade of C or BUAD 3040 with a minimum grade of C

Term Offered: Spring, Summer, Fall

BUAD 6300 Strategic Marketing And Analysis

[3 credit hours]

This course examines the fundamentals of marketing analysis and strategy. The purpose is to strengthen your basic understanding of marketing strategy and the management philosophy of being market-driven. Being market-driven means the organization's decision-making is driven by customer information, market knowledge, competitive intelligence, an understanding of how the organization creates and delivers value, and a clear set of strategies that differentiate the organization and give it a competitive advantage.

Prerequisites: MKTG 5410 with a minimum grade of C or BUAD 3010 with a minimum grade of C

Term Offered: Spring, Summer, Fall

BUAD 6400 Results-Based Management

[3 credit hours]

This course is dedicated to understanding human behavior in organizational settings and how organizations can impact and support results-based management. The intent of this course is to provide an understanding of alternative managerial approaches to particular issues, and to introduce ways to analyze the various organizational and social costs and benefits typically associated with any given approach. Case analyses and team projects are core elements of this course.

Term Offered: Spring, Summer, Fall

BUAD 6500 International Business

[3 credit hours]

This course focuses on an understanding of the process and controversies underlying globalization, as well as its supporting theories and strategic challenges encountered when firms "go global" or operate in the global context.

Term Offered: Spring, Summer, Fall

BUAD 6600 Supply Chain Management

[3 credit hours]

This course presents an integrated approach to value chain management and analyzes key challenges, practices and trends concerning primary business functions and processes. The course also examines the strategic ramifications for the supply chain in an emerging digital economy.

Prerequisites: BUAD 3020 with a minimum grade of C or OPMT 5520 with a minimum grade of C or OSCM 5520 with a minimum grade of C

Term Offered: Spring, Summer, Fall

BUAD 6800 Information Technology And E-Business

[3 credit hours]

This course covers the strategic role of information technology resources, e-commerce initiatives and e-business transformation for competitive advantage, managerial decision support, business process streamlining and inter-firm collaboration. Also covered are analysis of business models, exposure to data analysis tools, evaluation of information system architecture and resource requirements.

Term Offered: Spring, Summer, Fall

BUAD 6900 Strategic Management Capstone

[3 credit hours]

This capstone course integrates business functions toward the strategic management of organizations or subunits thereof. Course pedagogy includes lectures, guest speakers, cases, experiential exercises field projects and simulations.

Prerequisites: (BUAD 6300 with a minimum grade of C and BUAD 6200 with a minimum grade of C and BUAD 6100 with a minimum grade of C) and BUAD 6600 (may be taken concurrently) with a minimum grade of C

Term Offered: Spring, Summer, Fall

BUAD 6920 Specialization Internship Opportunity

[1-4 credit hours]

Receive practical business experience working in an organization, while meeting with other students and learning about their experiences.

Term Offered: Spring, Summer, Fall

BUAD 6980 Special Topics In Business Administration

[1-4 credit hours]

Independent study to be arranged with the Director, M.B.A. program.

Term Offered: Spring, Summer, Fall

Business Analysis (BANS)

BANS 6050 Health Care Economics

[3 credit hours]

Health care national policy, third party payment systems, capital formation, delivery systems, health care budgeting and macro economic health issues are examined.

Prerequisites: ACCT 5000 with a minimum grade of D- or BANS 5210 with a minimum grade of D-

BANS 6310 Business Forecasting

[3 credit hours]

Study and use of forecasting models, managing and monitoring the forecasting function and communicating forecasts to management.

Prerequisites: (BANS 5210 with a minimum grade of D- and OPMT 5510 with a minimum grade of D-)

BANS 6520 Managerial Economics

[3 credit hours]

Economic concepts and technique applied to company-level decision making. Focus on demand analysis, applied regression analysis and the interface between economics and human resource management, production, marketing and finance.

Prerequisites: (BANS 5210 with a minimum grade of D- and OPMT 5510 with a minimum grade of D-)

BANS 6740 Business Conditions Analysis

[3 credit hours]

Course develops a framework for measuring, tracking and forecasting national, regional and international business conditions. Focus is on how external economic conditions in the world economy influence business decisions.

Prerequisites: (BANS 5210 with a minimum grade of D- and OPMT 5510 with a minimum grade of D-)

BANS 7210 Economics For Business Decisions

[3 credit hours]

An examination of the basic economic concepts and techniques used in business decision-making. The course covers micro- and macro-economic theories, history and evolution of economic institutions, ethical questions and economic applications to business decisions in a global environment.

Business Law (BLAW)

BLAW 5150 Dynamics Of Legal Environment Of Business

[3 credit hours]

Emphasis will be placed on the law in those areas which would assist the student to have a better understanding of those ethical and social problems in our increasingly more complicated legal environment.

BLAW 6040 Health Law

[3 credit hours]

Provides an analytical framework for the understanding of the legal climate within which the health care institution operates. Emphasis on the legal concepts which bear upon current health care problems and operation and planning decisions.

BLAW 6100 Business, Government And Society

[3 credit hours]

Discussion of social criticisms of business and of responses which may improve its social performance. Topics include consumerism, ecology, market power, market organization, social responsibility and ethics regulation and public policy, social performance measurement.

Term Offered: Spring, Summer

BLAW 6900 Cannabis Law

[3 credit hours]

This online seminar on Cannabis, which addresses both Marijuana and Hemp, provides a practical guide for managers in navigating laws and regulations related to Cannabis use, distribution and sale; the Legal Environment in which the Cannabis industry and Cannabis businesses operate as well as the ethics supporting the legalization of Cannabis in the United States and states.

Term Offered: Spring, Fall

BLAW 7150 Dynamics Of Legal Environment Of Business

[3 credit hours]

Emphasis will be placed on the law in those areas that would assist the student to have a better understanding of those ethical and social problems in our increasingly more complicated legal environment.

Cancer Biology (CABP)

CABP 6250 Scientific Communication Skills and Career Goals

[2 credit hours]

Three-fourths of the course will be focused on individual, small group, and whole class participation in communication skills. One fourth of the class will be devoted to information and assessment of individual career options. Web based assessment tools and outside expertise will be recruited for this portion of the class.

Term Offered: Spring

CABP 6270 Advanced Cancer Biology

[3 credit hours]

A comprehensive examination of the cellular and molecular foundation of cancer. Topics to be covered include: neoplasia; epidemiology and etiology; the role of causative agents such as chemicals, radiation, and viruses; cell proliferation, injury, and death; oncogenes; tumor suppressor genes; and an overview of cancer therapy.

Term Offered: Spring, Fall

CABP 6560 Readings in Cancer Biology

[1 credit hour]

A readings and discussion course that will examine classic and current research publications from within the broad realm of cancer biology.

Term Offered: Spring

CABP 6730 Research in Cancer Biology

[1-1.5 credit hours]

CABP 6890 Ind Study in Cancer Biology

[1-1.5 credit hours]

Intensive study in the field of cancer biology including theoretical and experimental work. May be repeated for credit.

Term Offered: Spring, Summer, Fall

CABP 6990 Thesis Research in Cancer Biol

[1-1.5 credit hours]

CABP 8250 Scientific Communication Skills and Career Goals

[2 credit hours]

Three-fourths of the course will be focused on individual, small group, and whole class participation in communication skills. One fourth of the class will be devoted to information and assessment of individual career options. Web based assessment tools and outside expertise will be recruited for this portion of the class.

Term Offered: Spring

CABP 8270 Advanced Cancer Biology

[3 credit hours]

A comprehensive examination of the cellular and molecular foundation of cancer. Topics to be covered include: neoplasia; epidemiology and etiology; the role of causative agents such as chemicals, radiation, and viruses; cell proliferation, injury, and death; oncogenes; tumor suppressor genes; and an overview of cancer therapy.

Term Offered: Spring, Fall

CABP 8560 Readings in Cancer Biology

[0.5 credit hours]

This course is designed for Ph.D students to develop professional skills in seminar comprehension, critical peer review, scientific presentation, and communication.

Term Offered: Spring, Fall

CABP 8730 Research in Cancer Biology

[1-15 credit hours]

CABP 8890 Ind Study in Cancer Biology

[1-15 credit hours]

Intensive study in the field of cancer biology including theoretical and experimental work. May be repeated for credit.

Term Offered: Spring, Summer, Fall

CABP 9990 Dissertation Research CABP

[1-15 credit hours]

Career and Technical Education (CTE)

CTE 5010 Teaching Occupational Skills

[3 credit hours]

This course is required for the Health Careers, Career-Technical Education and the six Career-Technical Licenses. This course addresses multiple topics critical to workforce education as they apply to the laboratory environment. Students are provided classroom and clinical experiences designed to assist the beginning teacher with basic laboratory instructional techniques and management strategies that integrate academic, occupational and employability skills in a contextual framework.

Term Offered: Summer

CTE 5020 Occupational Safety And Liability

[3 credit hours]

This course is required for the Adult Education, Career Based Intervention, and Work-Site Teacher/Coordinator endorsements. Occupational health and safety hazards applicable to school, business, and industry, will be examined. Utilizing clinical and classroom experiences students will investigate: the rationale for safety training; strategies to minimize exposure and prevent injuries; specific topics, such as ergonomics, blood borne pathogens, air quality, sound, hazardous materials, back safety, substance abuse, violence in the workplace, etc.

Term Offered: Spring, Summer

CTE 5030 Teaching Occupational Knowledge

[3 credit hours]

This course is required for the Health Careers, Career-Technical Education and the six Career-Technical Licenses. Designed as a co-requisite in the professional education series, this course addresses multiple topics critical to workforce education as they apply to the classroom environment. Students are provided classroom and clinical experiences designed to assist the beginning teacher with basic classroom instructional techniques and management strategies that integrate academic, occupational and employability skills in a contextual framework.

Term Offered: Summer

CTE 5040 Laboratory Organization And Management

[3 credit hours]

Designed for laboratory instructors to increase their operating efficiency and effectiveness. Focus is on arranging the facility and controlling materials, supplies, learning activities and maintenance through various system approaches.

CTE 5050 Methods for Teaching CTE Methods I

[2 credit hours]

This course is required for the Health Careers, Career-Technical Education and the six Career- Technical Licenses. The pedagogical and management skills introduced in CTE 4010 are integrated in a contextual framework utilizing an actual laboratory situation. Learning styles; laboratory planning, instruction, technology, and management; integrated academics; performance assessment; safety and liability issues; employability and SCANS skills; community partnerships; school-based and work-site learning; etc. are the basis for student research, reflection, and inquiry

Term Offered: Fall

CTE 5060 Foundations Of Career And Technical Education

[3 credit hours]

A study of social issues, historical events and philosophies that provide a basis for the development of career and technical education. Principles and their implications are also reviewed.

Term Offered: Fall

CTE 5070 CTE Methods II

[2 credit hours]

This course is required for the Health Careers, Career-Technical Education and the six Career-Technical Licenses. The pedagogical and management skills introduced in CTE 4030 are integrated in a contextual framework utilizing an actual classroom setting. Organizing curriculum; instructional planning, management, delivery and technology; learning theory; behavior management; motivation; integrated academics; authentic assessment; career-technical student organizations; etc. are the basis for student research, reflection, and inquiry.

Term Offered: Spring

CTE 5080 Principles Of School-To-work Transition

[3 credit hours]

Design for educators and employers to increase their knowledge and skill to build partnerships between schools and business, industry and labor. Examines transition concepts, components, implementation strategies and models.

Term Offered: Summer

CTE 5100 Organization, Administration & Regulations Of Career And Technical Education

[3 credit hours]

Study of the organization and administration of career and technical education at the national, state and local levels, noting relationships existing between the agencies.

Term Offered: Spring

CTE 5110 Seminar for CTE Teachers

[3 credit hours]

The career-technical education teacher is an occupational professional who possesses the pedagogical knowledge and reflective decision making skills necessary to enter the teaching profession at multiple levels. In order to prepare individuals as career-technical instructors, components of the licensure program were developed and approved by the State Board of Education, to promote high professional standards to provide quality classroom teachers. The components are: a clear mission; operational goals; specific competencies of an assessment system.

Term Offered: Spring

CTE 5120 Supervision Of Career And Technical Education

[3 credit hours]

Development of supervisory skills in career and technical education. Stresses human relations, team building, basic management and leadership skills in program inauguration and operations.

Term Offered: Fall**CTE 5140 Cooperative Education**

[2 credit hours]

This course is required for the Career Based Intervention. The course is designed to present the basic fundamentals of establishing and operating a cooperative occupational program. Students investigate and develop operational procedures to address: student selection; assessing the quality of potential training stations; student placement; school-based learning; critical issues related to work-based learning; critical issues related to work-based learning; minor labor laws; partnering with parents, business, and labor; connecting activities; record keeping; evaluation techniques; etc.

Term Offered: Spring, Summer, Fall**CTE 5160 Curriculum Development & Teaching**

[3 credit hours]

This course is required for the Career Based Intervention. Designed as a study of cooperative education curriculum and instructional methods, the course includes the coordination of school-based instruction with on-the-job work-based experience. Learning styles of diverse students; instructional planning and delivery; classroom management; integrated academics; authentic assessment; safety and liability issues; employability and SCANS skills; community partnerships; school-based and work-site learning; etc. are the basis for student research, reflection, and inquiry.

Term Offered: Spring, Summer**CTE 5180 Promotion, Recruitment & Retention**

[3 credit hours]

A study of career and technical education in the community, and promotion, recruitment and retention strategies, including school publics, theories of community power structure and the career and technical school in a democratic society.

Term Offered: Summer, Fall**CTE 5220 Adviser Training For Youth Leaders**

[3 credit hours]

Designed for teachers and supervisors to increase their skills and knowledge of youth leadership development. Focus is on advising a student career and technical organization and includes both establishing and maintaining functions.

Term Offered: Summer**CTE 5570 Teaching Adult Learners**

[3 credit hours]

A study of the unique learning and teaching characteristics associated with adult learners, adult learning theory, learner characteristics, physical effects of aging and strategies consistent with adult learning styles.

Term Offered: Fall**CTE 5810 Staff Evaluation And Development**

[3 credit hours]

An analysis of the processes and current instruments available for evaluation of programs and personnel, and an appraisal of the professional development needs of individuals in educational settings.

CTE 5830 Curriculum Principles And Models

[3 credit hours]

Curriculum principles and models are examined. The characteristics of curricula are established and inferences are drawn for the planning, implementation and evaluation phases of curriculum development.

CTE 5930 CTE Supervised Teaching

[4 credit hours]

This course is required for the Health Careers, Career-Technical Education and the six Career-Technical Licenses. A planned field experience will be completed in public school classrooms under the direction of university facilitated induction teams. The university faculty member, on-site teacher mentor, and local administrator will collaborate to assure the novice teacher maximizes his/her potential as an individual and member of an educational team. Students are provided a contextual framework to integrate theory and practice.

Term Offered: Spring, Fall**CTE 5940 Practicum-Internship In Career And Technical Education**

[1-3 credit hours]

Observation and supervised experiences will be offered in a variety of appropriate settings, or students will be assigned to work as interns in a school setting under the joint supervision of school and university personnel.

Term Offered: Spring, Summer, Fall**CTE 5950 Workshop In Career And Technical Education**

[1-5 credit hours]

Workshops developed around topics of interest and concern for preservice and inservice teachers and other education personnel. Practical applications of workshop topics will be emphasized.

CTE 5980 Problems In Career And Technical Education

[1-5 credit hours]

A course developed around topics of interest and concern to inservice teachers and administrators. Stresses solution and resolution of educational problems occurring within selected districts.

Term Offered: Spring, Summer, Fall**CTE 5990 Individual Study In Career And Technical Education**

[1-3 credit hours]

Individual study is designed to provide the opportunity to work individually on professional problems under the direction of the faculty in career and technical education.

Term Offered: Spring, Fall**CTE 6900 Research In Career And Technical Education**

[1-3 credit hours]

This course is required for the Health Careers, Career-Technical Education and the six Career-Technical Licenses. The course provides the knowledge and skill in competency-based education. It includes occupational analysis; selection of course content; course of study and instructional guide development; and, credentialing students. Utilizing the Career Field Content Standards the teacher is prepared to draw from their content expertise and experiences to plan and develop instruction that addresses curriculum goals of diverse and special populations.

Term Offered: Fall**CTE 6920 Master's Research Project In Career And Technical Education**

[1-3 credit hours]

Open to a graduate student who elects the completion of a research project in fulfilling the research requirement of the master's degree.

Term Offered: Spring

CTE 6960 Master's Thesis In Career And Technical Education

[1-3 credit hours]

Open to a graduate student who elects the completion of a master's thesis in fulfilling the research requirement of the master's degree.

CTE 7810 Staff Evaluation And Development

[3 credit hours]

An analysis of the processes and current instruments available for evaluation of programs and personnel, and an appraisal of the professional development needs of individuals in educational settings.

CTE 7830 Curriculum Principles And Models

[3 credit hours]

Curriculum principles and models are examined. The characteristics of curricula are established and inferences are drawn for the planning, implementation and evaluation phases of curriculum development.

CTE 7940 Practicum-Internship In Career And Technical Education

[1-3 credit hours]

Observation and supervised experiences will be offered in a variety of appropriate settings, or students will be assigned to work as interns in a school setting under the joint supervision of school and university personnel.

Term Offered: Summer

CTE 7950 Workshop In Career And Technical Education

[1-5 credit hours]

Workshops developed around topics of interest and concern for preservice and inservice teachers and other education personnel. Practical applications of workshop topics will be emphasized.

CTE 7980 Problems In Career And Technical Education

[1-5 credit hours]

A course developed around topics of interest and concern to inservice teachers and administrators. Stresses solution and resolution of educational problems occurring within selected districts.

Term Offered: Summer

CTE 7990 Individual Study In Career And Technical Education

[1-3 credit hours]

Individual study is designed to provide the opportunity to work individually on professional problems under the direction of the faculty in career and technical education.

Chemical and Environmental Engineering (CHEE)

CHEE 5410 Bioseparations

[3 credit hours]

Introduction to, analysis and industrial design of processes required to separate and purify proteins and other biological compounds for the downstream processing of bioreactor products. The separations techniques will include filtration, chromatography and crystallization.

Prerequisites: BIOE 3400 with a minimum grade of D- or CHEE 3120 with a minimum grade of D-

Term Offered: Fall

CHEE 5800 Polymer Science And Engineering

[3 credit hours]

Polymerization processes, characterization, structure and properties of polymers, processing and engineering applications of the major polymer types.

Term Offered: Fall

CHEE 5930 Seminars in Chemical Engineering

[0-1 credit hours]

Research topics of current interest to chemical engineers will be presented by internal and external speakers in a research seminar format.

Term Offered: Spring, Fall

CHEE 6010 Green Engineering Principles

[3 credit hours]

The principles of chemical process analysis and design are introduced for the development of green engineering processes. Common components of chemical processes are reviewed and quantitative analyses of process performance and economics developed. The impact of design variables on materials and energy usage is demonstrated.

Term Offered: Fall

CHEE 6110 Green Engineering Applications

[3 credit hours]

Applications of green engineering principles in the chemical industry are discussed. Metrics for comparing process options are introduced along with common techniques for improving process performance.

Prerequisites: CHEE 6010 with a minimum grade of C

Term Offered: Spring

CHEE 6120 Biofuels

[3 credit hours]

The technical, economic, social, and political issues associated with energy consumption are discussed. The potential for biofuels to replace current energy sources is examined based on the historical evolution of the industry and current research activity.

Term Offered: Spring

CHEE 6500 Advanced Chemical Reaction Engineering

[3 credit hours]

Analysis of kinetic, diffusive and flow factors on chemical reactor performance. Topics include batch, plug flow and CSTR reactors, empirical rate expressions, residence time distributions, catalytic reactors, stability and optimization.

Term Offered: Spring

CHEE 6510 Advanced Chemical Engineering Thermodynamics

[3 credit hours]

Advanced treatment of fundamental principles of thermodynamics, especially as related to calculation of phase equilibria. Topics include intermolecular potentials, excess functions, theories of solutions, high-pressure equilibria and introductory statistical mechanics.

Term Offered: Spring, Fall

CHEE 6550 Transport Phenomena I

[3 credit hours]

Students learn how to formulate and solve engineering problems involving momentum transfer from the microscopic view. Topics include vector/tensor analysis, approximation methods, computational solutions and non-Newtonian fluid phenomena.

Term Offered: Fall

CHEE 6560 Transport Phenomena II

[3 credit hours]

Students learn how to formulate and solve engineering problems involving simultaneous momentum, heat and mass transfer from the microscopic view. Topics include conduction, radiation, diffusion, forced convection and free convection.

Prerequisites: CHEE 6550 with a minimum grade of D-

Term Offered: Spring

CHEE 6860 Polymer Laboratory Methods

[3 credit hours]

Characterization of polymers by physical testing (tensile, creep and rheological), physicochemical methods (viscosity, gel permeation chromatography), thermal analysis, spectroscopy, light microscopy, permeation, density, light scattering and processing.

Term Offered: Spring, Fall

CHEE 6920 Chemical Engineering Project

[1-6 credit hours]

Students will perform a special project of an advanced nature in Chemical Engineering under the supervision of a faculty advisor. The project will culminate in submission of a written report. The course is intended primarily for Masters students pursuing a project Masters in Chemical Engineering.

Term Offered: Spring, Summer, Fall

CHEE 6960 Master's Graduate Research And Thesis

[1-9 credit hours]

Graduate research towards the completion of a Master's Degree.

Term Offered: Spring, Summer, Fall

CHEE 6970 Graduate Engineering Internship

[1-6 credit hours]

Academic advisor approved industrial or non-profit internship to provide an experiential learning component to the Master's/ doctoral degree program.

Prerequisites: GNEN 5000 (may be taken concurrently) with a minimum grade of S

Term Offered: Spring, Summer, Fall

CHEE 6980 Special Topics In Chemical Engineering

[1-6 credit hours]

Selected topics from current chemical engineering research with intensive investigation into the recent literature in an area of mutual interest to the student and the instructor.

Term Offered: Spring, Summer, Fall

CHEE 6990 Independent Study In Chemical Engineering

[1-6 credit hours]

The student, under the guidance of their research advisor, explores in-depth specific areas or topics related to their project, thesis, or dissertation research, or other academic interests.

Term Offered: Spring, Summer, Fall

CHEE 7930 Seminars in Chemical Engineering

[0-1 credit hours]

Research topics of current interest to chemical engineers will be presented by internal and external speakers in a research seminar format.

Term Offered: Spring, Fall

CHEE 8010 Green Engineering Principles

[3 credit hours]

The principles of chemical process analysis and design are introduced for the development of green engineering processes. Common components of chemical processes are reviewed and quantitative analyses of process performance and economics developed. The impact of design variables on materials and energy usage is demonstrated.

Term Offered: Fall

CHEE 8110 Green Engineering Applications

[3 credit hours]

Applications of green engineering principles in the chemical industry are discussed. Metrics for comparing process options are introduced along with common techniques for improving process performance.

Prerequisites: CHEE 8010 with a minimum grade of C

Term Offered: Spring

CHEE 8120 Biofuels

[3 credit hours]

The technical, economic, social, and political issues associated with energy consumption are discussed. The potential for biofuels to replace current energy sources is examined based on the historical evolution of the industry and current research activity.

Term Offered: Spring

CHEE 8500 Advanced Chemical Reaction Engineering

[3 credit hours]

Analysis of kinetic, diffusive and flow factors on chemical reactor performance. Topics include batch, plug flow and CSTR reactors, empirical rate expressions, residence time distributions, catalytic reactors, stability and optimization.

Term Offered: Spring

CHEE 8510 Advanced Chemical Engineering Thermodynamics

[3 credit hours]

Advanced treatment of fundamental principles of thermodynamics, especially as related to calculation of phase equilibria. Topics include intermolecular potentials, excess functions, theories of solutions, high-pressure equilibria and introductory statistical mechanics.

Term Offered: Spring, Fall

CHEE 8550 Transport Phenomena I

[3 credit hours]

Students learn how to formulate and solve engineering problems involving momentum transfer from the microscopic view. Topics include vector/tensor analysis, approximation methods, computational solutions and non-Newtonian fluid phenomena.

Term Offered: Fall

CHEE 8560 Transport Phenomena II

[3 credit hours]

Students learn how to formulate and solve engineering problems involving simultaneous momentum, heat and mass transfer from the microscopic view. Topics include conduction, radiation, diffusion, forced convection and free convection.

Prerequisites: CHEE 8550 with a minimum grade of D-

Term Offered: Spring

CHEE 8860 Polymer Laboratory Methods

[3 credit hours]

Characterization of polymers by physical testing (tensile, creep and rheological), physicochemical methods (viscosity, gel permeation chromatography), thermal analysis, spectroscopy, light microscopy, permeation, density, light scattering and processing.

Term Offered: Spring, Fall

CHEE 8960 Doctoral Graduate Research And Dissertation

[1-9 credit hours]

Graduate research towards the completion of a Doctoral Degree.

Term Offered: Spring, Summer, Fall

CHEE 8970 Graduate Engineering Internship

[1-6 credit hours]

Academic advisor approved industrial or non-profit internship to provide an experiential learning component to the Master's/ doctoral degree program.

Prerequisites: GNEN 5000 (may be taken concurrently) with a minimum grade of S

Term Offered: Spring, Summer, Fall

CHEE 8980 Special Topics In Chemical Engineering

[1-6 credit hours]

Selected topics from current chemical engineering research with intensive investigation into the recent literature in an area of mutual interest to the student and the instructor.

Term Offered: Spring, Summer, Fall

CHEE 8990 Independent Study In Chemical Engineering

[1-6 credit hours]

The student, under the guidance of their research advisor, explores in-depth specific areas or topics related to their project, thesis, or dissertation research, or other academic interests.

Term Offered: Spring, Summer, Fall

Chemistry (CHEM)

CHEM 5100 Principles of Organic and Inorganic Chemistry

[4 credit hours]

Study of coordination compounds with a focus on ligand bonding, electron counting, molecular orbital theory, reactivity, and catalysis. In addition, polymerization, structure-property relationships, and commercial materials will be explored. A review of undergraduate-level general and organic chemistry topics with discussions concerning teaching these subjects is also included.

Term Offered: Summer

CHEM 5160 Chemistry Laboratory Techniques Development

[2 credit hours]

Study of general and organic chemistry laboratory techniques, such as the characterization, structural determination and reactions of organic and inorganic compounds, with an emphasis on pedagogical aspects of the techniques. Approved chemical safety goggles meeting the American National Standard Z87.1-1968 must be worn by every student during every laboratory class meeting.

Term Offered: Summer

CHEM 5170 Chemistry Instrumentation Techniques

[2 credit hours]

The study of advanced instrumentation techniques and structural determination of organic and inorganic compounds with an emphasis on pedagogical aspects of the techniques. Approved chemical safety goggles meeting the American National Standard Z87.1-1968 must be worn by every student during every laboratory class meeting.

Prerequisites: CHEM 5160 with a minimum grade of D-

CHEM 5230 Chemistry of Sustainable Materials

[4 credit hours]

Applications of the principles of chemistry to understand the issues related to a sustainable energy future.

CHEM 5300 Principles Of Analytical Chemistry

[1-4 credit hours]

Tutorial in selected topics in analytical chemistry. S/U grading only.

Term Offered: Fall

CHEM 5400 Principles Of Organic Chemistry

[1-4 credit hours]

Tutorial in selected topics in organic chemistry. S/U grading only.

Term Offered: Summer, Fall

CHEM 5500 Principles Of Biological Chemistry

[1-4 credit hours]

Tutorial in selected topics in biological chemistry. S/U grading only.

Term Offered: Fall

CHEM 5600 Principles Of Inorganic And Organometallic Chemistry

[1-4 credit hours]

Tutorial in selected topics in inorganic and organometallic chemistry. S/U grading only.

Term Offered: Summer, Fall

CHEM 5700 Principles Of Physical Chemistry

[1-4 credit hours]

Tutorial in selected topics in physical chemistry. S/U grading only.

Term Offered: Spring, Fall

CHEM 5800 Principles Of Materials Chemistry

[1-4 credit hours]

Tutorial in selected topics in materials chemistry. S/U grading only.

Term Offered: Fall

CHEM 6200 Green Chemistry

[3 credit hours]

Advanced topics in green chemistry, including industrial applications, atom economy, safer solvent substitutions, alternatives assessment, green metrics (PMI, E-factor), basic life cycle analysis, and an introduction to chemical toxicology.

Term Offered: Fall

CHEM 6210 Environmental Chemistry

[3 credit hours]

This course will focus on the chemistry of air, water, and soil with specific emphasis on the effects of human-made chemical products and by-products on the environment. Connections with green chemistry will be highlighted.

Term Offered: Spring

CHEM 6300 Advanced Analytical Chemistry

[4 credit hours]

An overview of new techniques in analytical chemistry. Topics include sample preparation and sampling, spectroscopic, separation, electrochemical, surface characterization and thermal methods.

Prerequisite: Permission of department.

Term Offered: Fall

CHEM 6310 Separation Methods

[3 credit hours]

The theory, design and application of separation methods. Topics include extraction techniques, gas, liquid, and supercritical fluid chromatography, affinity and chiral separation, and capillary electrophoresis.

Term Offered: Spring

CHEM 6320 Electrochemistry

[4 credit hours]

A fundamental study of electrochemical concepts, methods, instrumentation and applications.

Term Offered: Spring

CHEM 6330 Spectroscopic Methods And Analysis Of Spectra

[4 credit hours]

A comprehensive study of theory and instrumentation. Applications of spectroscopic methods including spectral interpretation. Topics include a study of absorption, emission, Raman, NMR, ESR, mass spectrometry, and related subjects. Important methodology and strategy in organic synthesis including disconnection and retrosynthetic analysis.

Term Offered: Spring

CHEM 6340 Mass Spectrometry

[4 credit hours]

The principles and applications of mass spectrometry in chemistry, biochemistry, and related disciplines. Prerequisite: Admitted to the graduate program.

CHEM 6350 Separation Methods Laboratory

[1 credit hour]

Experiments covering topics discussed in CHEM 6310 lectures. Five hours of laboratory per week. Approved chemical safety goggles meeting the American National Standard 287.1-1968 must be worn by every student during every laboratory class meeting.

Corequisites: CHEM 6310

Term Offered: Spring

CHEM 6400 Advanced Organic Chemistry

[4 credit hours]

This course deals with chemical structure and reactivity correlations applied to the study of organic reaction mechanisms; stereochemical features including conformation and stereoelectronic effects; reaction dynamics, isotope effects and molecular orbital theory applied to pericyclic and photochemical reactions; and special reactive intermediates including carbenes, carbanions, and free radicals.

Term Offered: Fall

CHEM 6410 Organic Synthesis

[4 credit hours]

Important methodology and strategy in organic synthesis including disconnection and retrosynthetic analysis.

Term Offered: Spring

CHEM 6420 Topics in Modern Organic Chemistry

[4 credit hours]

This course is designed to introduce groundbreaking topics and technologies in organic chemistry over the past decades including new methods in heterocyclic chemistry and applications, photochemistry, electrocatalysis, enzymatic catalysis, and advances in transition metal catalysis.

Term Offered: Spring

CHEM 6430 Medicinal Chemistry

[4 credit hours]

Qualitative and quantitative aspects of the design of new therapeutic agents are discussed. Approaches to the design of drugs and new therapeutic modalities directed at enzymes, receptors, membrane transport proteins and nucleic acids will be examined.

Term Offered: Fall

CHEM 6440 Carbohydrate Chemistry

[4 credit hours]

Topics in carbohydrate chemistry, including chemical synthesis of complex oligosaccharides, complex glycoconjugates (glycolipids, glycopeptides, and glycoproteins).

Term Offered: Fall

CHEM 6450 Organic Reaction Mechanisms

[3 credit hours]

This course focuses on a thorough treatment of synthetic chemistry through so-called Named Reactions, as well as extensive study of the underlying mechanisms. Course is often conducted as a "flipped classroom", and will require viewing pre-recorded lectures outside of the scheduled class time to allow in class time to focus on practical applications of course material.

Term Offered: Fall

CHEM 6500 Advanced Biological Chemistry

[4 credit hours]

The chemistry of cellular and molecular transformations in biochemical systems. Molecular structure of proteins, nucleic acids and membranes. Metabolism and biosynthesis of carbohydrates, amino acids and lipids; gene regulation and replication.

Term Offered: Fall

CHEM 6510 Protein Chemistry

[4 credit hours]

A detailed analysis of the structure and function of proteins. Current methodology for the analysis of structure, the basis for molecular associations and relationships between structure and biological function.

Prerequisites: CHEM 6500 with a minimum grade of D-

Term Offered: Spring

CHEM 6520 Enzymology

[4 credit hours]

Survey of current methods to study enzyme-catalyzed reactions, and application to examples from major enzyme groups. Current topics in enzymology include abzymes and ribozymes, artificial enzymes, and enzymes, and enzyme engineering.

Term Offered: Spring

CHEM 6530 Nucleic Acid Chemistry

[4 credit hours]

The structural and chemical properties of nucleic acids and the resulting biological consequences. Topics include: 3D structures, conformation, protein/nucleic acid interactions, physical properties and chemical reactions, mutagenesis, damage/repair, and recombination.

Prerequisites: CHEM 6500 with a minimum grade of D-

Term Offered: Spring

CHEM 6540 Macromolecular Crystallography

[2 credit hours]

Fundamental theory and practical application of X-ray diffraction to macromolecular structure determination, including protein crystallization and manipulation, data collection and reduction, phase solution, electron density interpretation, structural refinement and validation.

Prerequisites: CHEM 6850 with a minimum grade of D-

Term Offered: Spring

CHEM 6550 Practical Protein Crystallography

[2 credit hours]

Hands-on training in protein crystallography. Laboratory projects include: protein crystallization, crystal manipulation and mounting, X-ray diffraction data collection, data reduction, structure solution, electron density interpretation, refinement and validation.

Prerequisites: CHEM 6850 with a minimum grade of D-

Term Offered: Spring

CHEM 6570 Biophysical Chemistry

[4 credit hours]

Principles and applications of physical chemistry as applied to biological macromolecules (i.e., proteins and nucleic acids in solution), including thermodynamics, kinetics and spectroscopy of macromolecular interactions.

Term Offered: Fall

CHEM 6580 Bioinorganic Chemistry

[4 credit hours]

Survey of biologically important metals and metal-ligand complexes, and the role of metal ions in proteins, metal ion transport and regulation, and metals in medicine.

CHEM 6600 Physical Inorganic Chemistry

[4 credit hours]

Symmetry, bonding theories, magnetism, and spectroscopic characterization of inorganic compounds are described. Coverage of spectroscopic techniques such as NMR, EPR, UV/VIS, IR, AND Mossbauer focus on applications to inorganic systems.

Term Offered: Fall

CHEM 6610 Chemistry of Transition and Post-Transition Elements

[4 credit hours]

The organometallic chemistry of the transition metals, lanthanides and actinides is described. Synthesis, structure, bonding, and reactivity are considered. Applications in catalysis, bioinorganic, and materials chemistry are discussed.

Term Offered: Fall

CHEM 6620 Chemistry of the Main Group Elements

[4 credit hours]

The inorganic and organometallic chemistry of main group elements is described. Synthesis, structure, bonding, and reactivity are considered. The use of main group reagents in synthesis, catalysis, and materials chemistry are discussed.

Term Offered: Spring

CHEM 6700 Advanced Physical Chemistry

[4 credit hours]

Chemical systems and processes in the context of classical equilibrium thermodynamics. It introduces non-equilibrium and statistical thermodynamics to elucidate chemical changes and the connection between molecular and macroscopic system properties.

Term Offered: Fall

CHEM 6710 Quantum Chemistry and Spectroscopy

[4 credit hours]

Fundamental principles of quantum mechanics and their application to model systems, atoms and molecules; Introduction to molecular spectroscopy.

Term Offered: Spring

CHEM 6720 Modern Topics in Physical Chemistry

[4 credit hours]

Advanced topics of current interest in physical chemistry. Examples of topics include nanomaterials science, spectroscopic techniques, or molecular modeling.

Term Offered: Spring, Fall

CHEM 6730 Molecular Modeling

[4 credit hours]

CHEM 6730 Molecular Modeling [4 credit hours]. Theory and techniques of contemporary molecular modeling, and their application to calculate physical and chemical properties of realistic molecular systems.

Term Offered: Fall

CHEM 6800 Advanced Materials Chemistry

[4 credit hours]

Introduction to important classes of solids, including conductors, magnetic materials, ferroelectrics, glasses, microporous materials, organic solids. Traditional and novel synthetic approaches, structure/property relationships, and characterization methods specific to solids.

Term Offered: Spring

CHEM 6810 Materials Science I

[4 credit hours]

A generic materials science approach to the study of crystalline structure and defects (point, line and planar) in crystalline materials. The mechanisms and kinetics of diffusion in the condensed state.

Term Offered: Fall

CHEM 6820 Materials Science II

[4 credit hours]

A materials science approach to the thermodynamics of condensed state equilibria. Phase transformation kinetics.

Term Offered: Spring

CHEM 6830 Nanomaterials Science

[4 credit hours]

This survey course is intended to serve as an introduction to nanotechnology for non-specialists. It is accessible to students in any technical major, including chemists (all divisions), physicists, and engineers. The fundamentals of nanotechnology will be covered, including the origin of nanoscale properties, synthesis and characterization of nanomaterials (e.g. colloids, nanoparticles, nanowires, nanotubes, DNA-based structures), fabrication of larger-scale structures (e.g. self assembly, lithography), and characterization techniques (e.g. microscopy, microanalysis, spectroscopy). Applications will also be discussed.

Term Offered: Spring, Fall**CHEM 6850 X-Ray Crystallography**

[4 credit hours]

Theory and practice of structure determination by X-ray diffraction. Basics of symmetry, diffraction, and reciprocal space. Hands-on introduction to single-crystal and powder methods.

Term Offered: Fall**CHEM 6920 Chemistry Colloquium**

[1-4 credit hours]

Presentations on research or current literature.

Term Offered: Spring, Summer, Fall**CHEM 6930 Chemistry Seminar**

[1-2 credit hours]

Seminars conducted by individual members of the department.

Term Offered: Spring, Fall**CHEM 6940 Scientific Communication**

[1-2 credit hours]

Instructions on different modes of scientific communication : written communication, oral presentation, and research proposal, to enable students to think and converse competently in the language of science.

Term Offered: Spring, Fall**CHEM 6960 Thesis Research**

[1-15 credit hours]

Original investigations of significant chemical problems at the master's level under the guidance of a member of the faculty.

Term Offered: Spring, Summer, Fall**CHEM 6970 Graduate Professional Internship**

[1-6 credit hours]

Academic adviser approved industrial or non profit internship to provide an experiential learning component to the MS and PhD degrees in chemistry, including the Professional Science Masters Degree in Green Chemistry and Engineering.

CHEM 6980 Special Topics In Chemistry

[1-4 credit hours]

Discussions of newly developing areas in chemistry research.

Term Offered: Spring, Fall**CHEM 7300 Principles Of Analytical Chemistry**

[1-4 credit hours]

Tutorial in selected topics in analytical chemistry. S/U grading only.

Term Offered: Fall**CHEM 7400 Principles Of Organic Chemistry**

[1-4 credit hours]

Tutorial in selected topics in organic chemistry. S/U grading only.

Term Offered: Fall**CHEM 7500 Principles Of Biological Chemistry**

[1-4 credit hours]

Tutorial in selected topics in biological chemistry. S/U grading only.

Term Offered: Spring, Fall**CHEM 7600 Principles Of Inorganic And Organometallic Chemistry**

[1-4 credit hours]

Tutorial in selected topics in inorganic and organometallic chemistry. S/U grading only.

Term Offered: Fall**CHEM 7700 Principles Of Physical Chemistry**

[1-4 credit hours]

Tutorial in selected topics in physical chemistry. S/U grading only.

Term Offered: Fall**CHEM 7800 Principles Of Materials Chemistry**

[1-4 credit hours]

Tutorial in selected topics in materials chemistry. S/U grading only.

Term Offered: Fall**CHEM 8200 Green Chemistry**

[3 credit hours]

Advanced topics in green chemistry, including industrial applications, atom economy, safer solvent substitutions, alternatives assessment, green metrics (PMI, E-factor), basic life cycle analysis, and an introduction to chemical toxicology.

Term Offered: Fall**CHEM 8210 Environmental Chemistry**

[3 credit hours]

This course will focus on the chemistry of air, water, and soil with specific emphasis on the effects of human-made chemical products and by-products on the environment. Connections with green chemistry will be highlighted.

Term Offered: Spring**CHEM 8300 Advanced Analytical Chemistry**

[4 credit hours]

An overview of new techniques in analytical chemistry. Topics include sample preparation and sampling, spectroscopic, separation, electrochemical, surface characterization and thermal methods.

Term Offered: Fall**CHEM 8310 Separation Methods**

[3 credit hours]

The theory, design and application of separation methods. Topics include extraction techniques, gas, liquid, and supercritical fluid chromatography, affinity and chiral separation, and capillary electrophoresis.

Term Offered: Spring**CHEM 8320 Electrochemistry**

[4 credit hours]

A fundamental study of electrochemical concepts, methods, instrumentation and applications. Prerequisite: Permission of department.

Term Offered: Spring

CHEM 8330 Spectroscopic Methods And Analysis Of Spectra

[4 credit hours]

A comprehensive study of theory and instrumentation. Applications of spectroscopic methods including spectral interpretation. Topics include a study of absorption, emission, Raman, NMR, ESR, mass spectrometry, and related subjects. Important methodology and strategy in organic synthesis including disconnection and retrosynthetic analysis.

Term Offered: Spring**CHEM 8340 Mass Spectrometry**

[4 credit hours]

The principles and applications of mass spectrometry in chemistry, biochemistry, and related disciplines. Prerequisite: Admitted to the graduate program.

CHEM 8350 Separation Methods Laboratory

[1 credit hour]

Experiments covering topics discussed in CHEM 8310 lectures. Five hours of laboratory per week. Approved chemical safety goggles meeting the American National Standard 287.1-1968 must be worn by every student during every laboratory class meeting.

Corequisites: CHEM 8310**Term Offered:** Spring**CHEM 8400 Advanced Organic Chemistry**

[4 credit hours]

This course deals with chemical structure and reactivity correlations applied to the study of organic reaction mechanisms; stereochemical features including conformation and stereoelectronic effects; reaction dynamics, isotope effects and molecular orbital theory applied to pericyclic and photochemical reactions; and special reactive intermediates including carbenes, carbanions, and free radicals.

Term Offered: Fall**CHEM 8410 Organic Synthesis**

[4 credit hours]

Important methodology and strategy in organic synthesis including disconnection and retrosynthetic analysis.

Term Offered: Spring**CHEM 8420 Topics in Modern Organic Chemistry**

[4 credit hours]

This course is designed to introduce groundbreaking topics and technologies in organic chemistry over the past decades including new methods in heterocyclic chemistry and applications, photochemistry, electrocatalysis, enzymatic catalysis, and advances in transition metal catalysis.

Term Offered: Spring**CHEM 8430 Medicinal Chemistry**

[4 credit hours]

Qualitative and quantitative aspects of the design of new therapeutic agents are discussed. Approaches to the design of drugs and new therapeutic modalities directed at enzymes, receptors, membrane transport proteins and nucleic acids will be examined.

Term Offered: Fall**CHEM 8440 Carbohydrate Chemistry**

[4 credit hours]

Topics in carbohydrate chemistry, including chemical synthesis of complex oligosaccharides, complex glycoconjugates (glycolipids, glycopeptides, and glycoproteins).

Term Offered: Fall**CHEM 8450 Organic Reaction Mechanisms**

[3 credit hours]

This course focuses on a thorough treatment of synthetic chemistry through so-called Named Reactions, as well as extensive study of the underlying mechanisms. Course is often conducted as a "flipped classroom", and will require viewing pre-recorded lectures outside of the scheduled class time to allow in class time to focus on practical applications of course material.

Term Offered: Fall**CHEM 8500 Advanced Biological Chemistry**

[4 credit hours]

The chemistry of cellular and molecular transformations in biochemical systems. Molecular structure of proteins, nucleic acids and membranes. Metabolism and biosynthesis of carbohydrates, amino acids and lipids; gene regulation and replication.

Term Offered: Fall**CHEM 8510 Protein Chemistry**

[4 credit hours]

A detailed analysis of the structure and function of proteins. Current methodology for the analysis of structure, the basis for molecular associations and relationships between structure and biological function.

Prerequisites: CHEM 6500 with a minimum grade of D- or CHEM 8500 with a minimum grade of D-**Term Offered:** Spring**CHEM 8520 Enzymology**

[4 credit hours]

Survey of current methods to study enzyme-catalyzed reactions, and application to examples from major enzyme groups. Current topics in enzymology include abzymes and ribozymes, artificial enzymes, and enzymes, and enzyme engineering.

Term Offered: Spring**CHEM 8530 Nucleic Acid Chemistry**

[4 credit hours]

The structural and chemical properties of nucleic acids and the resulting biological consequences. Topics include: 3D structures, conformation, protein/nucleic acid interactions, physical properties and chemical reactions, mutagenesis, damage/repair, and recombination.

Prerequisites: CHEM 6500 with a minimum grade of D- or CHEM 8500 with a minimum grade of D-**Term Offered:** Spring**CHEM 8540 Macromolecular Crystallography**

[2 credit hours]

Fundamental theory and practical application of X-ray diffraction to macromolecular structure determination, including protein crystallization and manipulation, data collection and reduction, phase solution, electron density interpretation, structural refinement and validation.

Prerequisites: CHEM 6850 with a minimum grade of D- or CHEM 8850 with a minimum grade of D-**Term Offered:** Spring

CHEM 8550 Practical Protein Crystallography

[2 credit hours]

Hands-on training in protein crystallography. Laboratory projects include: protein crystallization, crystal manipulation and mounting, X-ray diffraction data collection, data reduction, structure solution, electron density interpretation, refinement and cultural validation.

Prerequisites: CHEM 8850 with a minimum grade of D-

Term Offered: Spring

CHEM 8570 Biophysical Chemistry

[4 credit hours]

Principles and applications of physical chemistry as applied to biological macromolecules (i.e., proteins and nucleic acids in solution), including thermodynamics, kinetics and spectroscopy of macromolecular interactions.

Term Offered: Fall

CHEM 8580 Bioinorganic Chemistry

[4 credit hours]

Survey of biologically important metals and metal-ligand complexes, and the role of metal ions in proteins, metal ion transport and regulation, and metals in medicine.

CHEM 8600 Advanced Inorganic And Organometallic Chemistry

[4 credit hours]

Symmetry, bonding theories, magnetism, and spectroscopic characterization of inorganic compounds are described. Coverage of spectroscopic techniques such as NMR, EPR, UV/VIS, IR, AND Mossbauer focus on applications to inorganic systems.

Term Offered: Fall

CHEM 8610 Chemistry of Transition and Post-Transition Elements

[4 credit hours]

The organometallic chemistry of the transition metals, lanthanides and actinides is described. Synthesis, structure, bonding, and reactivity are considered. Applications in catalysis, bioinorganic, and materials chemistry are discussed.

Term Offered: Fall

CHEM 8620 Chemistry of the Main Elements

[4 credit hours]

The inorganic and organometallic chemistry of main group elements is described. Synthesis, structure, bonding, and reactivity are considered. The use of main group reagents in synthesis, catalysis, and materials chemistry are discussed.

Term Offered: Spring

CHEM 8700 Advanced Physical Chemistry

[4 credit hours]

Chemical systems and processes in the context of classical equilibrium thermodynamics. It introduces non-equilibrium and statistical thermodynamics to elucidate chemical changes and the connection between molecular and macroscopic system properties.

Term Offered: Fall

CHEM 8710 Quantum Chemistry and Spectroscopy

[4 credit hours]

Fundamental principles of quantum mechanics and their application to model systems, atoms and molecules; Introduction to molecular spectroscopy.

Term Offered: Spring

CHEM 8720 Modern Topics in Physical Chemistry

[4 credit hours]

Advanced topics of current interest in physical chemistry. Examples of topics include nanomaterials science, spectroscopic techniques, or molecular modeling.

Term Offered: Spring, Fall

CHEM 8730 Molecular Modeling

[4 credit hours]

CHEM 8730 Molecular Modeling [4 credit hours]. Theory and techniques of contemporary molecular modeling, and their application to calculate physical and chemical properties of realistic molecular systems.

Term Offered: Fall

CHEM 8800 Advanced Materials Chemistry

[4 credit hours]

Introduction to important classes of solids, including conductors, magnetic materials, ferroelectrics, glasses, microporous materials, organic solids. Traditional and novel synthetic approaches, structure/property relationships, and characterization methods specific to solids.

Term Offered: Spring

CHEM 8810 Materials Science I

[4 credit hours]

A generic materials science approach to the study of crystalline structure and defects (point, line and planar) in crystalline materials. The mechanisms and kinetics of diffusion in the condensed state.

Term Offered: Fall

CHEM 8820 Materials Science II

[4 credit hours]

A materials science approach to the thermodynamics of condensed state equilibria. Phase transformation kinetics.

Term Offered: Spring

CHEM 8830 Nanomaterials Science

[4 credit hours]

This survey course is intended to serve as an introduction to nanotechnology for non-specialists. It is accessible to students in any technical major, including chemists (all divisions), physicists, and engineers. The fundamentals of nanotechnology will be covered, including the origin of nanoscale properties, synthesis and characterization of nanomaterials (e.g. colloids, nanoparticles, nanowires, nanotubes, DNA-based structures), fabrication of larger-scale structures (e.g. self assembly, lithography), and characterization techniques (e.g. microscopy, microanalysis, spectroscopy). Applications will also be discussed.

Term Offered: Spring, Fall

CHEM 8850 X-Ray Crystallography

[4 credit hours]

Theory and practice of structure determination by X-ray diffraction. Basics of symmetry, diffraction, and reciprocal space. Hand-on introduction to single-crystal and powder methods.

Term Offered: Fall

CHEM 8920 Chemistry Colloquium

[1-4 credit hours]

Presentations on research or current literature.

Term Offered: Spring, Summer, Fall

CHEM 8930 Chemistry Seminar

[1-2 credit hours]

Seminars conducted by individual members of the Department.

Term Offered: Spring, Fall

CHEM 8940 Scientific Communication

[1 credit hour]

Instructions on different modes of scientific communication: written communication, oral presentation, and research proposal to enable students to think and converse competently in the language of science.

Term Offered: Spring, Fall

CHEM 8960 Dissertation Research

[1-15 credit hours]

Original investigations of significant chemical problems at the Doctoral level under the guidance of a member of the faculty.

Term Offered: Spring, Summer, Fall

CHEM 8970 Graduate Professional Internship

[1-6 credit hours]

Academic adviser approved industrial or non profit internship to provide an experiential learning component to the M.S. and Ph.D. degrees in chemistry, including the Professional Science Masters Degree in Green Chemistry and Engineering.

CHEM 8980 Special Topics In Chemistry

[1-4 credit hours]

Discussions of newly developing areas in chemistry research.

Term Offered: Spring, Fall

Civil Engineering (CIVE)

CIVE 5210 Advanced Soil Mechanics

[3 credit hours]

A study of soil behavior including stress distributions, deformation, consolidation and shear strength. The course focuses upon the development and use of well accepted solutions and practical applications.

CIVE 5240 Design With Geosynthetics

[3 credit hours]

Use of geosynthetic materials in engineering design for reinforcement, barrier, separation and/or drainage functions. Design applications for geotechnical, transportation and environmental uses.

CIVE 5300 Advanced Mechanics Of Materials

[3 credit hours]

Introduction to theory of elasticity, plane-stress and plane-strain problems, yield criteria and failure theories, bending of beams, energy methods, curved flexural members, unsymmetrical bending, torsion, shear center and axisymmetrically loaded members.

Term Offered: Fall

CIVE 5320 Computer-Aided Analysis of Structures

[3 credit hours]

Matrix analysis of continuous beams, trusses and frames by force method and displacement method. Methods of consistent deformation and slope deflection will be discussed to complement the matrix analysis. Computer applications.

Prerequisites: CIVE 3310 with a minimum grade of D-

CIVE 5340 Experimental Mechanics

[3 credit hours]

Application of experimental techniques to stress analysis. Comparison of experimental and analytical methods. Theory of electrical resistance strain gages. Methods of photoelasticity including photostress. Data acquisition systems and their use.

Term Offered: Spring

CIVE 5430 Structural Steel Design II

[3 credit hours]

Study of local failure in beams, biaxial bending, plate girders, composite beams, semi-rigid composite connections and beam columns.

Term Offered: Spring

CIVE 5440 Reinforced Concrete Design II

[3 credit hours]

Analysis and design of columns under axial compression and biaxial bending. Consideration of bar cutoff, development lengths. Design of two-way slabs and building frames in reinforced concrete. Deflection of beams. Shear design provisions for deep beams.

CIVE 5450 Bridge Design I

[3 credit hours]

Design of the three most common types of short span bridges: concrete slabs, steel stringers and prestressed concrete. Additional topics are bearings, rehabilitation and retrofit and design to minimize maintenance.

Term Offered: Spring, Summer, Fall

CIVE 5480 Reinforced Masonry Design

[3 credit hours]

Study of the design of reinforced and unreinforced masonry design, beams and walls and columns. Working stress design, strength design and empirical design are studied.

Term Offered: Spring, Fall

CIVE 5550 Traffic Control

[3 credit hours]

To provide a detailed understanding of the basic concepts of traffic engineering together with driver-roadway-vehicle system characteristics. Capacity analysis of freeways, rural highways, multilane and two lane highways. Traffic control devices and traffic signal design and capacity. Traffic studies and data collections; volume, speed and travel time, accident and parking studies. Introduction to other tools to mitigate traffic congestion.

Term Offered: Fall

CIVE 5610 Water Resources And Hydrology

[3 credit hours]

Aspects of Hydrology. Stream gauging. Common and rare event analysis. Hydraulic and hydrologic routing. Irrigation, navigation, flood control and urban drainage. Resource demand conflicts and multiple use planning.

Term Offered: Spring, Fall

CIVE 5630 Indoor Air Quality

[3 credit hours]

Characterization of the indoor air pollutants, predictions of indoor air quality levels and indoor air quality control. Four to five design problems involving indoor air quality will be discussed/solved in the class. Special emphasis on indoor radon and asbestos problems in the United States.

Use of USEPA program.

Term Offered: Fall

CIVE 5650 Industrial Ventilation

[3 credit hours]

Industrial ventilation as related to need of industrial hygiene engineer, including principles of air flow, natural and power ventilation, supply and exhaust, characteristics and design of systems, fans, collectors, testing instruments. Construction guidelines for local exhaust systems.

CIVE 5670 Solid Waste Management And Disposal

[3 credit hours]

A basic study of solid waste management concepts including origin, quantities, qualities, collection and disposal of solid waste materials. The course focuses upon municipal wastes and introduces the student to hazardous waste technologies. The primary course objective is to develop environmentally sound landfill design technologies and other ultimate disposal techniques.

CIVE 5680 Environmental Law

[3 credit hours]

An overview of the major federal environmental statutes: Clean Air Act, Clean Water Act, RCRA, CERCLA, etc. and legal perspective of why they were developed. Exposure to some basic legal principles which will be integrated into the overall study of environmental law. Provides a practical perspective on how the law can be applied to situations encountered by environmental engineers and scientists in the real world.

Term Offered: Fall**CIVE 5690 Sustainability Engineering**

[3 credit hours]

Course develops students' abilities to apply the principles of sustainability to engineered systems. Course topics include sustainability definition and data, life cycle assessment based design, planetary boundaries, greenhouse gas emissions, green construction.

Term Offered: Spring, Fall**CIVE 5710 Advanced Engineering Systems Modeling**

[3 credit hours]

A systematic approach to the analysis of complicated engineering system involving uncertain and probabilistic phenomena. Decision-making with multiple objectives, monte carlo simulation, reliability based design, and Markov process are studied.

Term Offered: Fall**CIVE 5930 Graduate Seminar In Civil Engineering**

[1-3 credit hours]

An opportunity for qualified graduate students to pursue a relevant area of Civil Engineering of particular personal interest under the supervision of a faculty member.

Term Offered: Spring, Fall**CIVE 6280 Environmental and Energy Geotechnology**

[3 credit hours]

This course is designed for engineering and geoscience students who want to explore a broad range of engineering challenges that emerge at the interface of materials, environment and energy. This course is aimed to provide advanced students with fundamental knowledge for understanding and modelling many complex phenomena involved in a variety of engineering applications. These include technologies of nuclear and hazardous waste disposal, unconventional petroleum and gas extraction, CO₂ sequestration and geothermal energy.

Term Offered: Spring**CIVE 6310 Finite Element Methods**

[3 credit hours]

Study of direct stiffness method, introduction to the minimum potential energy method and the Galerkin method, formulation of truss, beam, triangular and rectangular elements, applications to the analyses of space trusses, building frames, folded plates, fluid flow and seepage problems. Applications of modern computer software.

Term Offered: Spring, Fall**CIVE 6340 Mechanics Of Stability**

[3 credit hours]

Differential equations. Buckling of centrally and eccentrically loaded compression members; variational methods of determining critical loads; lateral and torsional buckling of beams; introduction to dynamic stability; parametric excitations; nonconservative stability problems; buckling of plates.

CIVE 6360 Dynamics Of Structures

[3 credit hours]

Evaluation of dynamic response of structures to arbitrary time-varying loadings; single degree-of-freedom, multi-degree-of-freedom and distributed-parameter systems; partial differential equation formulations of simple systems; mode superposition and wave propagation solutions; time history analysis and estimation of maximum response by spectral analysis; effects of nonlinearities on the structural response.

Term Offered: Spring, Fall**CIVE 6460 Advanced Composite Materials In Infrastructure**

[3 credit hours]

Introduction to fiber composites and their applications in repair and retrofit of infrastructure. Strengthening of bridges, buildings, pavements. Understanding of basic concepts involved in design of concrete members reinforced with fiber reinforced polymer.

Term Offered: Spring**CIVE 6480 Prestressed Concrete Structures**

[3 credit hours]

Structural behavior and failure modes of prestressed concrete structures; design in prestressed concrete, including long-span structures, bridges and precast systems.

Prerequisites: CIVE 5440 with a minimum grade of D-**Term Offered:** Spring, Fall**CIVE 6490 Nonlinear Modeling of Reinforced Concrete**

[3 credit hours]

Theories of elasticity and plasticity as applied to reinforced concrete, mechanical properties of concrete and reinforcing bars, linear and nonlinear elastic models, shear response, compression field and smeared crack models, their implementation and application into nonlinear finite element analysis, and performance assessment of plane frame structures.

Prerequisites: CIVE 3420 with a minimum grade of C and CIVE 6310 with a minimum grade of C or CIVE 8310 with a minimum grade of C or MIME 4280 with a minimum grade of C or MIME 5280 with a minimum grade of C

CIVE 6630 Dispersion And Risk Modeling

[3 credit hours]

Treatment of atmospheric dispersion problems, development of air quality models, components of a physical model, selection and evaluation of air pollution software, evaluation of models, risk modeling, EPA models and recent topics.

CIVE 6670 Physicochemical Processes for Water Quality Control

[3 credit hours]

The course will discuss theories and designs for water treatment processes.

Term Offered: Fall

CIVE 6690 Dispersion Modeling Laboratory

[1 credit hour]

Use of USEPA network, use of ten computer programs from the USEPA network, use of Internet and environmental BBS, search for environmental data bases using search engines.

Prerequisites: CIVE 6630 with a minimum grade of D-

Term Offered: Spring, Summer

CIVE 6900 Civil Engineering Problems

[3 credit hours]

Special assignment of civil engineering problems of various types at the graduate level.

Term Offered: Spring, Summer, Fall

CIVE 6920 Civil Engineering Project

[1-6 credit hours]

The student performs a special project of an advanced nature in civil engineering. The course is primarily intended for students pursuing a Masters degree with the project option in Civil Engineering.

Term Offered: Spring, Summer, Fall

CIVE 6960 Graduate Research And Thesis - Masters

[1-9 credit hours]

MS student should register their adviser's section number.

Term Offered: Spring, Summer, Fall

CIVE 6970 Graduate Engineering Internship

[1 credit hour]

Faculty advisor approved industry, government, or agency internship to provide an experiential learning component to the Master's/doctoral degree program.

Term Offered: Spring, Summer, Fall

CIVE 6980 Special Topics in Civil and Environmental Engineering

[1-6 credit hours]

This course is offered on selected subjects in a field in civil or environmental engineering with intensive investigation of the recent literature in an area of special interest to the class and the instructor.

Term Offered: Spring, Summer, Fall

CIVE 6990 Independent Study in Civil and Environmental Engineering

[1-6 credit hours]

The student, under the guidance of their research advisor, explores in-depth specific areas or topics related to their project, thesis, or dissertation research, or other academic interests.

Term Offered: Spring, Summer, Fall

CIVE 7340 Experimental Mechanics

[3 credit hours]

CIVE 7430 Structural Steel Design II

[3 credit hours]

CIVE 7450 Bridge Design I

[3 credit hours]

Design of the three most common types of short span bridges: concrete slabs, steel stringers and prestressed concrete. Additional topics are bearings, rehabilitation and retrofit and design to minimize maintenance.

Term Offered: Spring, Fall

CIVE 7900 Independent Problems

[1-6 credit hours]

CIVE 8280 Environmental and Energy Geotechnology

[3 credit hours]

This course is designed for engineering and geoscience students who want to explore a broad range of engineering challenges that emerge at the interface of materials, environment and energy. This course is aimed to provide advanced students with fundamental knowledge for understanding and modelling many complex phenomena involved in a variety of engineering applications. These include technologies of nuclear and hazardous waste disposal, unconventional petroleum and gas extraction, CO2 sequestration and geothermal energy.

Term Offered: Spring

CIVE 8310 Finite Element Methods

[3 credit hours]

Study of direct stiffness method, introduction to the minimum potential energy method and the Galerkin method, formulation of truss, beam, triangular and rectangular elements, applications to the analyses of space trusses, building frames, folded plates, fluid flow and seepage problems. Applications of modern computer software.

Term Offered: Spring, Fall

CIVE 8340 Mechanics Of Stability

[3 credit hours]

Differential equations. Buckling of centrally and eccentrically loaded compression members; variational methods of determining critical loads; lateral and torsional buckling of beams; introduction to dynamic stability; parametric excitations; nonconservative stability problems; buckling of plates.

CIVE 8360 Dynamics Of Structures

[3 credit hours]

Evaluation of dynamic response of structures to arbitrary time-varying loadings; single degree-of-freedom, multi-degree-of-freedom and distributed-parameter systems; partial differential equation formulations of simple systems; mode superposition and wave propagation solutions; time history analysis and estimation of maximum response by spectral analysis; effects of nonlinearities on the structural response.

Term Offered: Spring, Fall

CIVE 8460 Advanced Composite Materials In Infrastructure

[3 credit hours]

Introduction to fiber composites and their applications in repair and retrofit of infrastructure. Strengthening of bridges, buildings, pavements. Understanding of basic concepts involved in design of concrete members reinforced with fiber reinforced polymer.

Term Offered: Spring

CIVE 8480 Prestressed Concrete Structures

[3 credit hours]

Structural behavior and failure modes of prestressed concrete structures; design in prestressed concrete, including long-span structures, bridges and precast systems.

Prerequisites: CIVE 7440 with a minimum grade of D-

Term Offered: Spring, Fall

CIVE 8490 Nonlinear Modeling of Reinforced Concrete

[3 credit hours]

Theories of elasticity and plasticity as applied to reinforced concrete, mechanical properties of concrete and reinforcing bars, linear and nonlinear elastic models, shear response, compression field and smeared crack models, their implementation and application into nonlinear finite element analysis, and performance assessment of plane frame structures.

Prerequisites: CIVE 3420 with a minimum grade of C and CIVE 6310 with a minimum grade of C or CIVE 8310 with a minimum grade of C or MIME 4280 with a minimum grade of C or MIME 5280 with a minimum grade of C

CIVE 8630 Dispersion And Risk Modeling

[3 credit hours]

Treatment of atmospheric dispersion problems, development of air quality models, components of a physical model, selection and evaluation of air pollution software, evaluation of models, risk modeling, EPA models and recent topics.

CIVE 8670 Physicochemical Processes for Water Quality Control

[3 credit hours]

The course will discuss theories and designs for water treatment processes.

Term Offered: Fall

CIVE 8690 Dispersion Modeling Laboratory

[1 credit hour]

Use of USEPA network, use of ten computer programs from the USEPA network, use of Internet and environmental BBS, search for environmental data bases using search engines.

Prerequisites: CIVE 8630 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

CIVE 8900 Independent Problems

[1-6 credit hours]

Ph.D. student should register their adviser's section number.

Term Offered: Spring, Summer, Fall

CIVE 8960 Doctoral Graduate Research & Dissertation

[1-16 credit hours]

Graduate research towards the completion of a Doctoral degree.

Term Offered: Spring, Summer, Fall

CIVE 8970 Graduate Engineering Internship

[1 credit hour]

Faculty advisor approved industry, government, or agency internship to provide an experiential learning component to the Master's/doctoral degree program.

Term Offered: Spring, Summer, Fall

CIVE 8980 Special Topics in Civil and Environmental Engineering

[1-6 credit hours]

This course is offered on selected subjects in a field in civil or environmental engineering with intensive investigation of the recent literature in an area of special interest to the class and the instructor.

Term Offered: Spring, Summer, Fall

CIVE 8990 Independent Study in Civil and Environmental Engineering

[1-6 credit hours]

The student, under the guidance of their research advisor, explores in-depth specific areas or topics related to their project, thesis, or dissertation research, or other academic interests.

Term Offered: Spring, Summer, Fall

Communication (COMM)

COMM 6200 Communication Research Methods

[3 credit hours]

Research methods, design and conventions in social scientific communication research including measurement, operationalizations, experimental and quasi-experimental design, analysis interpretation and reporting of findings, including quantitative and qualitative approaches.

Term Offered: Spring

COMM 6210 Principles And Practices Of Visual Communication

[3 credit hours]

This course explores the influence of factors like color and design on human visual communication, the role of Gestalt principles, and the impact of various forms of visual communication.

Term Offered: Fall

COMM 6220 Communication, Technology, And Society

[3 credit hours]

This course covers issues in communication technology including media, policy and strategic planning. Particular emphasis is given to the information revolution, communication industry development, and the marketplace for communication products.

Term Offered: Fall

COMM 6230 Communication, Propaganda And Persuasion

[3 credit hours]

This seminar examines techniques of persuasion in social science research and applications and how this knowledge is used for the engineering of perception, mobilization and consent in organizations and society.

Term Offered: Spring

COMM 6240 Communication, Ethics And The Workplace

[3 credit hours]

This course evaluates the impact of ethics on job performance, public perception of companies or agencies, and the ramifications of personal decision-making on the worker's job satisfaction and long-range goals.

COMM 6260 Business, Communication And Technology

[3 credit hours]

The course examines how organizations use media and communication strategies. Effective tools of communication to be studied include face-to-face interaction, dissemination of information through mass media, and communication through technologies.

Term Offered: Spring, Summer

COMM 6980 Special Topics In Communication Studies

[3 credit hours]

Examination of emerging issues and topics in the field of communication. May be repeated for credit in different specialized topics.

Term Offered: Spring, Summer, Fall

Contemporary Gerontology Practice (GERO)

GERO 5400 Health and Aging

[3 credit hours]

This course is designed to investigate health-related issues in older adults. The psychosocial aspects of disability and disease will be explored. Practical application of material will be emphasized.

Term Offered: Fall

GERO 5410 Issues Contemp Gerontol Pract

[3 credit hours]

Designed to explore introductory issues in older adults. Biological, psychological and sociological perspectives of aging will be addressed. Practical application of the material will be emphasized.

Term Offered: Fall

GERO 5420 Grief and Bereavement Issues

[3 credit hours]

Grief and bereavement issues related to loss in later life will be explored. The role of the health care professional in facilitating the grief process will be introduced.

Term Offered: Spring

GERO 5430 Funding Adult Programming

[3 credit hours]

Funding opportunities and resource generation for older adult programming will be introduced. Students will be taught basic needs assessment, grant writing and proposal development skills.

Term Offered: Spring

GERO 5440 Independent Study Gerontology

[3 credit hours]

Intensive discipline specific study in geriatrics and gerontology, including theoretical and experimental work May be repeated for credit.

Term Offered: Spring, Summer, Fall

Counseling (COUN)

COUN 5010 Professional Orientation To School Counseling

[4 credit hours]

This course is an introduction to the profession of school counseling including the historical foundations, roles and responsibilities, legal and ethical issues, implications of sociocultural diversity, organization and administration, and future trends within the context of the school community.

Term Offered: Spring, Summer, Fall

COUN 5020 Professional Orientation to Clinical Mental Health Counseling

[4 credit hours]

An orientation to the counseling profession; ethical and legal issues, counseling process, skills and theories; counselor roles, functions and work settings; and historical foundations of counseling.

Term Offered: Spring, Fall

COUN 5110 Career Counseling And Development

[3 credit hours]

Theories, resources and practices of career counseling and development are presented. Knowledge and skills for promoting career growth among a broad range of individuals across the life span is emphasized.

Term Offered: Spring, Summer, Fall

COUN 5120 Individual And Group Assessment

[3 credit hours]

This course provides an in-depth understanding of psychological testing through (1) an overview of basic testing concepts, (2) an understanding of test construction, (3) familiarity with instruments and (4) an overview of using test results. History and rationale of testing are included.

Term Offered: Summer, Fall

COUN 5130 Group Counseling

[4 credit hours]

This course provides training and experience in group development, dynamics, theories, methods and skills of group counseling, group leadership, research and evaluation, ethical issues, and other group work approaches. Multicultural issues, advocacy, and wellness will be explored throughout the course.

Term Offered: Spring, Summer, Fall

COUN 5140 Counseling Theories and Application

[4 credit hours]

Includes a study of counseling and consultation theories and application of theory in therapeutic/helping relationships from individual, group, and systemic perspectives.

Term Offered: Spring, Summer, Fall

COUN 5150 Counseling Across The Life Span

[3 credit hours]

This course provides training in the theoretical understanding and processes of human development (e.g., social, affective, familial, cognitive, physical) from prenatal stages through older adulthood. Counseling approaches relevant to theoretical principles will be presented. Multicultural issues, advocacy, wellness, and ethical issues will be explored throughout the course. Theories of individual and family development across the lifespan are examined. Developmental processes of individuals and families and implications for counseling are presented from a multi-generational family perspective.

Term Offered: Spring, Summer, Fall

COUN 5160 Cultural Diversity For Counselors And School Psychologists

[3 credit hours]

This course addresses sociocultural diversity, multicultural, and social justice concepts related to self and others. Throughout the course the tripartite model of multicultural attitudes, knowledge, and skills will be explored using an inclusive definition of multiculturalism. We will examine multiculturalism and social justice on individual, community, and systemic levels. Wellness, prevention, and advocacy will also be infused throughout the course. Addresses the cross cultural theories, knowledge, beliefs and techniques required for providing effective services to culturally diverse populations. Examines assumptions about cultural differences, which underlie counseling theories and therapies.

Term Offered: Spring, Summer, Fall

COUN 5180 Counseling Skills

[4 credit hours]

This course is an introduction to the basic helping/microskills used in individual, group, and systemic therapeutic settings. These are the foundational counseling skills necessary in the preparation of school and clinical mental health counselors. Supervised training prepares students for their entry-level clinical practicum experience.

Term Offered: Spring, Fall**COUN 5190 Counseling Practicum**

[4 credit hours]

Students receive supervised, practical experiences in providing counseling services to clients. Performance of counseling skills; relationship skills; intervention techniques; documentation skills; and professional, ethical and legal conduct is expected.

Term Offered: Spring, Summer, Fall**COUN 5250 Creating Therapeutic Environments For The Aged**

[3 credit hours]

Explores the various aspects necessary for creating therapeutic physical and social psychological settings for older institutionalized adults. Models of care giving and programmatic skills are examined.

COUN 5980 Special Topics In Counseling, Mental Health, And School Psychology

[1-8 credit hours]

This course is open to a graduate student pursuing a master's, specialist or doctoral degree program and may be a requirement of that program.

Term Offered: Spring, Summer, Fall**COUN 6000 Counseling Research and Program Evaluation**

[3 credit hours]

This course focuses on the research and program evaluation in professional counseling, covering basic statistics and related research design with specific applications counseling. Students will be expected to critique existing counseling research. Material covered in this course should provide the student with the skills necessary to be a competent consumer as well as producer of research. Students will gain skills in the preparation of research problems, design and implementation of quantitative and qualitative research and methodology in the field of counseling.

Term Offered: Summer, Fall**COUN 6100 Comprehensive School Counseling Programs**

[3 credit hours]

Emphasis in this course is placed on the skills necessary to assess K-12 students' needs, design a program of comprehensive services, and coordinate, implement, and evaluate the program's activities. This includes counseling strategies for the school counselor that promote academic and personal/social development in children and youth. Finally, a thorough study of consulting models and techniques to help school counselors develop consultation skills, which may be applied when working with school personnel, administrators, parents, and mental health clinicians in community agencies, or other settings.

Prerequisites: COUN 5010 with a minimum grade of B-**Term Offered:** Spring**COUN 6210 Psychopathology**

[4 credit hours]

The study of various paradigms for conceptualizing psychopathology related to children, adolescents and adults. Includes study of specific personality theories and their application to clinical counseling.

Term Offered: Spring**COUN 6220 Child, Adolescent, Family Therapy**

[3 credit hours]

Specialized study of therapeutic techniques commonly emphasized in working with children, adolescents and their families. Approaches to family therapy in a multicultural context, family assessment and ethical issues will be emphasized.

Prerequisites: COUN 5140 with a minimum grade of D-**Term Offered:** Summer, Fall**COUN 6230 Crisis Intervention Counseling**

[3 credit hours]

Instruction in the theories, skills and techniques necessary to intervene into a variety of crisis situations such as suicide, violence, domestic violence, drug and alcohol abuse and family dysfunction.

Prerequisites: COUN 5140 with a minimum grade of D-**Term Offered:** Summer, Fall**COUN 6240 Diagnosis And Mental Health**

[4 credit hours]

Study of the signs, symptoms, etiology and psychodynamics of various mental and emotional disorders based on the most current edition of the Diagnostic and Statistical Manual for Mental Disorders (DSM).

Term Offered: Summer, Fall**COUN 6470 Drugs And Mental Health Counseling**

[4 credit hours]

This course includes instruction on the neuroanatomy of the nervous system, the physiology of the neuron, and the processes involved in synaptic transmission. The psychobiological and psychophysiological effects of various psychotropic medications typically used in the treatment of mental disorder will be investigated. Integration of pharmacotherapy and psychotherapy in the treatment of mental, emotional, and substance use disorders will also be considered.

Term Offered: Spring, Summer, Fall**COUN 6500 Advanced Theory And Practice Of Career Counseling**

[3 credit hours]

Advanced study in theories pertaining to the principles and practice of career counseling. Special emphasis on research, legal and ethical issues, and the role of culture in career choice and development.

COUN 6720 Advocacy for the Survivor of Child Neglect and Abuse

[3 credit hours]

This course prepares students to recognize the long term cognitive, social, and emotional effects of child maltreatment. Evidenced-based approaches for effective advocacy and for treatment of the survivor are examined.

Prerequisites: SOCW 6700 with a minimum grade of D- and CRIM 6710 with a minimum grade of D-**Term Offered:** Spring**COUN 6920 Master's Research Project**

[1-3 credit hours]

In this capstone experience, master's students review the literature, report implications and produce a project which can be applied in counseling-related settings. This can substitute for CMHS 6930.

COUN 6930 Master's Research Seminar

[2-3 credit hours]

In this capstone experience, master's students review and critique the literature and report implications for research, theory and practice on counseling-related topic of interest, approved by the instructor.

COUN 6940 Counseling Internship

[1-8 credit hours]

The course is intended to provide counseling students with practical experience in settings where counseling services are offered. It allows students to relate academic and theoretical learning to settings outside the classroom. Field placement also allows student to receive evaluative feedback on their knowledge, attitudes, and skills with clients in the school setting. Since students already have received advanced training in counseling, the staff and the clientele at the placement site should benefit from the services that are provided by students during the placement. Students are expected to assume a broad spectrum of counseling roles and functions. Students are asked to experience as many responsibilities as feasible in the school setting that are similar to the responsibilities of a professional counselor.

Prerequisites: COUN 5190 with a minimum grade of B or CMHS 5190 with a minimum grade of B

Term Offered: Spring, Summer, Fall

COUN 6950 Workshop In Counseling, Mental Health, And School Psychology

[1-6 credit hours]

Workshops developed around topics of interest and concern to counselors, school psychologists or other mental health care professionals. Practical application of topics will be stressed.

COUN 6960 Master's Research Thesis

[1-3 credit hours]

In this capstone experience, master's students complete an original piece of research, including literature review, methods, analysis and discussion. This can substitute for CMHS 6930.

COUN 6990 Master's Independent Study

[1-4 credit hours]

Provides students the opportunity to work independently on professional problems under the direction of a faculty member in the Department of Counseling and Mental Health Services.

Term Offered: Spring, Summer, Fall

COUN 7010 Professional Orientation To School Counseling

[4 credit hours]

This course is an introduction to the profession of school counseling including the historical foundations, roles and responsibilities, legal and ethical issues, implications of sociocultural diversity, organization and administration, and future trends within the context of the school community.

COUN 7130 Group Counseling

[4 credit hours]

This course provides training and experience in group development, dynamics, theories, methods and skills of group counseling, group leadership, research and evaluation, ethical issues, and other group work approaches. Multicultural issues, advocacy, and wellness will be explored throughout the course.

Term Offered: Spring, Summer, Fall

COUN 7140 Counseling Theories and Application

[4 credit hours]

Includes a study of counseling and consultation theories and application of theory in therapeutic/helping relationships from individual, group, and systemic perspectives.

Term Offered: Spring, Summer, Fall

COUN 7150 Counseling Across The Life Span

[3 credit hours]

This course provides training in the theoretical understanding and processes of human development (e.g., social, affective, familial, cognitive, physical) from prenatal stages through older adulthood. Counseling approaches relevant to theoretical principles will be presented. Multicultural issues, advocacy, wellness, and ethical issues will be explored throughout the course. Theories of individual and family development across the lifespan are examined. Developmental processes of individuals and families and implications for counseling are presented from a multi-generational family perspective.

Term Offered: Spring, Summer, Fall

COUN 7160 Cultural Diversity For Counselors And School Psychologists

[3 credit hours]

This course addresses sociocultural diversity, multicultural, and social justice concepts related to self and others. Throughout the course the tripartite model of multicultural attitudes, knowledge, and skills will be explored using an inclusive definition of multiculturalism. We will examine multiculturalism and social justice on individual, community, and systemic levels. Wellness, prevention, and advocacy will also be infused throughout the course. Addresses the cross cultural theories, knowledge, beliefs and techniques required for providing effective services to culturally diverse populations. Examines assumptions about cultural differences, which underlie counseling theories and therapies.

Term Offered: Spring, Summer

COUN 7180 Counseling Skills

[4 credit hours]

This course is an introduction to the basic helping/microskills used in individual, group, and systemic therapeutic settings. These are the foundational counseling skills necessary in the preparation of school and clinical mental health counselors. Supervised training prepares students for their entry-level clinical practicum experience.

Term Offered: Spring, Fall

COUN 7210 Psychopathology

[4 credit hours]

This course is designed as an exploration into various conceptualizations of psychopathology and their implications for assessment, diagnosis, and treatment planning in counseling. The study of various paradigms for conceptualizing psychopathology related to children, adolescents and adults. Includes study of specific personality theories and their application to clinical counseling

Term Offered: Spring

COUN 7220 Child, Adolescent, Family Therapy

[3 credit hours]

Specialized study of therapeutic techniques commonly emphasized in working with children, adolescents and their families. Approaches to family therapy in a multicultural context, family assessment and ethical issues will be emphasized.

Prerequisites: COUN 5140 with a minimum grade of D-

Term Offered: Summer, Fall

COUN 7230 Crisis Intervention Counseling

[3 credit hours]

The Crisis Intervention Counseling course (COUN 7230) is designed to develop knowledge and skills in crisis intervention counseling associated with a variety of crisis situations. The course contributes to meeting the Council on Accreditation of Counseling and Related Educational Programs (CACREP) accreditation general

Prerequisites: COUN 5140 with a minimum grade of D-

Term Offered: Fall

COUN 7240 Diagnosis And Mental Health

[4 credit hours]

Study of the signs, symptoms, etiology and psychodynamics of various mental and emotional disorders based on the most current edition of the Diagnostic and Statistical Manual for Mental Disorders (DSM).

Term Offered: Summer, Fall

COUN 7510 Supervision In Counseling And School Psychology

[4 credit hours]

Training in supervision models, methods, roles, ethical issues, research and evaluation. Advanced training in consultation.

Term Offered: Spring, Fall

COUN 7520 Education And Leadership In Mental Health Professions

[4 credit hours]

Orient students to the roles and tasks of educators and leaders in mental health professions, curricular issues of programs, professional and ethical issues and current status and future trends in higher education among mental health professions.

Term Offered: Spring

COUN 7530 Advanced Theories Of Counseling And Consultation

[4 credit hours]

This course is designed to provide advanced preparation in theory pertaining to the principles and practice of individual counseling, group work and consultation.

Term Offered: Fall

COUN 7540 Advanced Personality Assessment

[4 credit hours]

This course will focus on the administration, scoring, and interpretation of selected advanced personality assessment instruments. Special emphasis will be given to the MMPI-2, NEO-PI-3, MCMI-III, SASSI-3, and report writing.

Prerequisites: COUN 5120 with a minimum grade of D-

Term Offered: Fall

COUN 7930 Doctoral Research Seminar

[4 credit hours]

Advanced preparation in research problems, design and implementation of quantitative and qualitative research and methodology in the fields of counseling and supervision.

Term Offered: Spring

COUN 8180 Advanced Multicultural Issues in Counselor Education and Supervision

[4 credit hours]

This advanced course is designed to prepare counseling students for leadership and advocacy in the areas of diversity, inclusion, and equity in counselor education and supervision.

Prerequisites: COUN 5160 with a minimum grade of D-

Term Offered: Spring

COUN 8410 Advanced Practicum In Individual And Group Therapy

[4 credit hours]

Students receive supervised, practical experiences in providing counseling in individual and group modes of services. Advanced therapy skills will be emphasized.

Term Offered: Spring

COUN 8420 Advanced Practicum In Family Therapy

[4 credit hours]

This course is designed to provide specialized opportunity under live supervision to develop specialized skills in family therapy. The student will work in co-therapy with a family experiencing difficulties.

COUN 8440 Advanced Theory And Practice Of Group Counseling

[3 credit hours]

Advanced training and experience in development, dynamics, theories, methods and skills of group counseling and therapy, leadership, research and evaluation and ethical issues as applicable to normal and abnormal populations.

COUN 8450 Couples And Family Therapy

[3 credit hours]

Theories and practice of couples and family counseling are explored. Foundations of systems theories and their application to couples and family therapy are presented.

Prerequisites: (COUN 5140 with a minimum grade of D- and COUN 5150 with a minimum grade of D-)

Term Offered: Spring

COUN 8460 Substance Abuse Counseling

[4 credit hours]

Review of treatment approaches, techniques and programs for counseling individuals and families experiencing substance-related problems.

Term Offered: Spring, Fall

COUN 8470 Drugs And Mental Health Counseling

[4 credit hours]

This course includes instruction on the neuroanatomy of the nervous system, the physiology of the neuron, and the processes involved in synaptic transmission. The psychobiological and psychophysiological effects of various psychotropic medications typically used in the treatment of mental disorder will be investigated. Integration of pharmacotherapy and psychotherapy in the treatment of mental, emotional, and substance use disorders will also be considered.

Term Offered: Spring, Summer, Fall

COUN 8480 Advanced Training In Professional, Legal, And Ethical Issues

[4 credit hours]

The content of this course will consider advanced training in contemporary professional, legal, and ethical issues that influence, regulate, or affect the work of counselors, psychologists, and other mental health professionals.

Term Offered: Spring

COUN 8490 Gender Issues In Counseling And Mental Health Services

[3 credit hours]

Examines the effect of gender role and related dynamics upon the psychological functioning of men and women and considers how these issues can be explored in counseling based upon an interactive model of gender roles emphasizing the learned nature of these characteristics.

COUN 8500 Advanced Theory And Practice Of Career Counseling

[3 credit hours]

Advanced study in theories pertaining to the principles and practice of career counseling. Special emphasis on research, legal and ethical issues, and the role of culture in career choice and development.

COUN 8930 Advanced Doctoral Seminar

[3 credit hours]

This seminar will consider problems and provide advanced study. Open only to advanced graduate students.

COUN 8940 Counseling Internship

[1-8 credit hours]

The course is intended to provide counselor education doctoral students with student-directed, practical experiences in which they can develop advanced skills in various facets of counselor education (e.g., clinical counseling, advocacy, instruction, research, leadership, clinical supervision). Multicultural issues, ethics, professional issues, and wellness will be explored throughout the course. Supervised practical experiences in various settings while assuming a spectrum of counseling roles and functions. Emphasis is placed upon integrating ethical practice, theory, and research in work settings.

Prerequisites: COUN 5190 with a minimum grade of B or CMHS 5190 with a minimum grade of B

Term Offered: Spring, Summer, Fall

COUN 8950 Workshop In Counseling, Mental Health, And School Psychology

[1-6 credit hours]

Workshops developed around topics of interest and concern to counselors, school psychologists, or other mental health care professionals. Practical application of topics will be stressed.

COUN 8960 Doctoral Research Dissertation

[1-12 credit hours]

Dissertation credit may not total less than 10 semester hours and no greater than 32 hours. A doctoral student may register for such credit in more than one semester.

Term Offered: Spring, Summer, Fall

COUN 8980 Special Topics In Counseling, Mental Health, And School Psychology

[1-3 credit hours]

This course is open to a graduate student pursuing a master's, specialist or doctoral degree program and may be a requirement of that program.

Term Offered: Spring, Summer, Fall

COUN 8990 Doctoral Independent Study

[1-4 credit hours]

Provides students the opportunity to work independently on professional problems under the direction of a faculty member in the Department of Counseling and Mental Health Services.

Term Offered: Spring, Summer, Fall

Criminal Justice (CRIM)

CRIM 6000 Advanced Theories: Criminal Justice

[3 credit hours]

This course critically examines contributions made by a variety of theorists to an understanding of crime/deviance and reactions to it.

Term Offered: Spring

CRIM 6200 Data Analysis In Criminal Justice

[3 credit hours]

This course provides students with a basic understanding of fundamental data analysis techniques utilized in criminal justice research.

Term Offered: Spring, Fall

CRIM 6300 Advanced Studies In Ethics And Criminal Justice

[3 credit hours]

This course is designed to provide students with the opportunity to integrate ethics in an understanding of criminal justice.

Term Offered: Spring, Summer, Fall

CRIM 6310 Juvenile Justice In The Metropolitan Community

[3 credit hours]

Criminal justice theories of delinquency are studied and compared with a paradigmatic foundation of current criminal justice processes.

Term Offered: Fall

CRIM 6320 Women, Crime And Criminal Justice

[3 credit hours]

This course explores women as offenders, victims and professionals in criminal justice.

Term Offered: Summer

CRIM 6400 Graduate Criminal Justice Research Methodology

[3 credit hours]

This course is designed to provide students with an understanding of criminal justice research.

Term Offered: Fall

CRIM 6590 Administration Of Criminal Justice

[3 credit hours]

A research-oriented course into the relationship of the major structures of criminal justice-police, prosecutor, courts and corrections with emphasis on the development of performance evaluation criteria.

Term Offered: Fall

CRIM 6620 Police And Society

[3 credit hours]

An examination of the role of the police in contemporary America, emphasizing the ambivalence of the self-image of the police and the social and political forces that compete to redefine the police function.

Term Offered: Spring, Summer, Fall

CRIM 6940 Criminal Justice Graduate Internship

[1-3 credit hours]

Field placement experience in an approved criminal justice agency to enhance the knowledge of the student.

Term Offered: Spring, Summer, Fall

CRIM 6950 Policy Projects In Criminal Justice

[3 credit hours]

Students will demonstrate their knowledge and skills gained in the program via the development of a comprehensive policy project. This analysis will focus on a contemporary issue in criminology or criminal justice, selected by the student and approved by professor. Students will be expected to develop a plan to assess the theoretical background and empirical research relevant to the issue, then research the problem and develop informed policy.

Prerequisites: CRIM 6000 with a minimum grade of D- and CRIM 6200 with a minimum grade of D- and CRIM 6400 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

CRIM 6960 Thesis

[1-6 credit hours]

This course involves research leading to a written thesis. Both the topic of the research and the final thesis must be defended and approved by the student's thesis committee.

CRIM 6980 Special Topics In Criminal Justice

[3 credit hours]

Content will vary as instructors present a single concentration on developments, problems and controversies in criminal justice.

Term Offered: Spring, Summer, Fall

CRIM 6990 Independent Study In Criminal Justice

[1-3 credit hours]

Directed study in criminal justice under the supervision of a criminal justice faculty member.

Term Offered: Spring, Summer, Fall

Curriculum and Instruction: Early Childhood (CIEC)

CIEC 5000 Ece: Philosophy And Practice

[3 credit hours]

A comprehensive introduction to the profession of early childhood education by examining relevant issues as they relate to overall development of children ages birth to eight years.

Term Offered: Spring, Summer, Fall

CIEC 5070 Effective Teaching Practices: Pre-K To 3rd Grade

[3 credit hours]

Applies characteristics of best practice to curriculum development and implementation with adherence to national and state curriculum standards as they apply to children, age 3 to 8, with diverse educational needs.

Prerequisites: (EDP 5210 with a minimum grade of C and CIEC 5000 with a minimum grade of C)

Term Offered: Spring, Fall

CIEC 5150 Setting The Stage For Early Childhood Learning: Inspirations From Reggio Emilia

[3 credit hours]

This course will explore Reggio's philosophy of early childhood education and the numerous ways that children explore the "hundred languages." Reggio uses these languages (art, clay, wire, sculpture, light, shadow, etc.) as a way to help children represent their world and what they know about it.

Term Offered: Spring, Summer

CIEC 5340 Infant/Toddler Curriculum

[3 credit hours]

Introduction to the sequential development of the young child from birth to 3 years. Students will engage in field hours in infant-toddler settings, design learning materials and critique research in topics related to infant/toddler curriculum.

Term Offered: Spring, Summer, Fall

CIEC 5350 Public Policy And Advocacy In Early Childhood Education

[3 credit hours]

Students will understand the implications of social, political and economic policies on the emergence of services for young children in the 21st century.

Prerequisites: CIEC 5000 with a minimum grade of C

Term Offered: Spring, Summer, Fall

CIEC 5380 Field Experience Cohort I

[3 credit hours]

This course aligns with the graduate Cohort II coursework (CIEC 5070).

Prerequisites: EDP 5210 with a minimum grade of C

Corequisites: CIEC 5070

Term Offered: Spring, Fall

CIEC 5460 Science Methods For Early Childhood Education

[3 credit hours]

This course is designed to help teachers of science in grades Pre-Kindergarten through third to understand the concepts, ideas and applications of science in the real world. Students will learn how scientific thinking involves collecting data, analyzing data, making decisions and taking action based on those decisions. Students will learn how to plan effective science experience for young children that cause them to explore environments and act upon their discoveries. Students will learn how to assess the scientific thinking of young children appropriately, using formal and informal strategies.

Term Offered: Spring, Fall

CIEC 5480 Field Experience Cohort II

[3 credit hours]

This course aligns with all graduate-level Cohort II coursework in the early childhood teacher education licensure program.

Corequisites: CIEC 5460

Term Offered: Spring, Fall

CIEC 5520 Multisensory Experiences

[3 credit hours]

Development and sensory principles underlying the planning and implementation of developmentally appropriate learning activities for young children. Technical content will include the physical and neurological bases for learning.

CIEC 5530 Affective Experiences

[3 credit hours]

This course focuses on teacher planning and activities that support the socio-emotional development of young children.

CIEC 5540 Prekindergarten Programs

[3 credit hours]

Focuses on the successful operations of an early childhood program. Covers topics such as licensing and certification standards, staff development selection and purchase of equipment and proper food and health services.

CIEC 5550 Teaching Methods For Early Childhood Social Studies

[3 credit hours]

In depth study of methods and materials for teaching social studies from pre-school to third grade. Implementation of early childhood curriculum within the context of current technology and the development of critical thinking skills.

Prerequisites: (CIEC 5000 with a minimum grade of C and EDP 5210 with a minimum grade of C)

Term Offered: Spring, Fall

CIEC 5580 Practicum: Infant/Toddler

[1 credit hour]

Practicum experience in infant/toddler settings where students will observe, plan, implement and evaluate activities.

CIEC 5590 Infant Toddler/Seminar

[2 credit hours]

Planning, research, teacher-made materials appropriate for environments for infants and toddlers will be covered.

CIEC 5610 Seminar I: Orientation to Interprofessional Teaming

[1 credit hour]

Become familiar with requirements for the Certificate in Interprofessional Teaming. Focus on competencies needed to work collaboratively with professionals to meet the needs of individuals with disabilities and their families.

Prerequisites: SPED 5270 with a minimum grade of D-

Term Offered: Summer

CIEC 5620 Seminar II: Working Effectively with Team Members

[1 credit hour]

Factors that support and threaten interprofessional collaboration. Become aware of policies affecting teaming. Engage in advocacy for teaming that will benefit individuals with disabilities.

Prerequisites: CIEC 5610 with a minimum grade of D- and CIEC 5270 with a minimum grade of D-

Term Offered: Summer, Fall

CIEC 5630 Seminar III: Evidence-Based Practice and Innovation in Teaming

[1 credit hour]

Issues related to principles of ethical practice, professional identity and advocacy. Ways in which technology can promote effective teaming practices with other professionals as well as with family members.

Prerequisites: CIEC 5620 with a minimum grade of D-

Corequisites: CIEC 5640

Term Offered: Summer

CIEC 5640 Practicum in Interprofessional Teaming

[2 credit hours]

Students will work as part of an inter-professional team to develop, implement, and evaluate integrated intervention plans designed to support the development of children who have special needs.

Prerequisites: CIEC 5620 with a minimum grade of D-

Corequisites: CIEC 5630

CIEC 5770 Field Experience Cohort III

[3 credit hours]

This course aligns with all Cohort III coursework in the early childhood education program.

Prerequisites: (CIEC 5070 with a minimum grade of C and EDP 3210 with a minimum grade of C) or (CIEC 5070 with a minimum grade of C and EDP 5210 with a minimum grade of C) or (CIEC 4070 with a minimum grade of C and EDP 3210 with a minimum grade of C)

Term Offered: Spring, Fall

CIEC 5800 Teacher/Parent Child Relations

[3 credit hours]

This course is designed to assist the classroom teacher in building positive relationships with the parents of students and to develop effective strategies for communicating with them.

CIEC 5950 Workshop In Early Childhood Education

[1-5 credit hours]

Workshops developed around topics of interest and concern to inservice teachers. Practical application of workshop topics will be emphasized. Students may include several workshops in their master's or specialist degree programs.

CIEC 5980 Special Topics In Early Childhood Education

[1-5 credit hours]

A course developed around topics of interest and concern to inservice teachers within districts served by the Center for Educational Research and Services. Stresses solution and resolution of educational problems occurring within the district.

Term Offered: Spring, Summer, Fall

CIEC 5990 Graduate Independent Study In Early Childhood Education

[1-5 credit hours]

Individual study designed to provide a student the opportunity to work individually on professional problems under the direction of the faculty in Early Childhood Education.

Term Offered: Spring, Summer, Fall

CIEC 6310 Pre-K/Primary Curriculum

[3 credit hours]

The study and design of early childhood curriculum from a best practice/developmental perspective including integrated curriculum, anti-bias approaches, authentic assessment, direct learning strategies. Student self assessment and change project required.

Term Offered: Spring, Fall

CIEC 6320 Meaning And Development Of Play Behavior

[3 credit hours]

Theoretical bases of play behavior and its role in curriculum development/assessment. Students implement and evaluate a sociodramatic play kit and conduct library research on one aspect of play behavior.

Term Offered: Summer

CIEC 6330 Language And Concept Development

[3 credit hours]

Study of the language and literacy development of the young child with emphasis upon the factors that influence and support this development. Students will do projects to implement their learning.

Term Offered: Spring, Summer, Fall

CIEC 6750 Developmental And Classroom Assessment

[3 credit hours]

Focuses upon teaching and learning in a developmental learning environment. Emphases includes observing the developmental characteristics of young children and assessment for prescriptive teaching.

Term Offered: Spring, Summer, Fall

CIEC 6900 Masters Research Seminar In Early Childhood Education

[2-3 credit hours]

Examination of research and current issues in early childhood education. Emphasis on theory and research and evaluation models.

Prerequisites: CIEC 6950 with a minimum grade of C

Term Offered: Spring

CIEC 6920 Masters Research Project In Early Childhood Education

[1-3 credit hours]

Student will complete an individual research project under the direction of a committee of at least two faculty members in Early Childhood ordinarily involving the faculty advisor.

CIEC 6940 Internship In Early Childhood

[1-12 credit hours]

Placement of a Master's student in an appropriate PreK-Grade 3 school setting under the direction of a CIEC instructor. A maximum of 3 hours can be applied towards a masters degree.

Term Offered: Spring, Fall**CIEC 6950 Theory And Research In Early Childhood**

[3 credit hours]

Review and analysis of theory and research related to rationale and methods for program options for young children. Critique research and prepare a review of synthesis of research.

Term Offered: Fall**CIEC 6960 Masters Thesis In Early Childhood Education**

[1-3 credit hours]

Students who elect this option will complete a thesis under the direction of committee of at least two faculty members from Early Childhood Education, ordinarily including the faculty advisor.

CIEC 7610 Seminar I: Orientation to Interprofessional Teaming

[1 credit hour]

Become familiar with requirements for the Certificate in Interprofessional Teaming. Focus on competencies needed to work collaboratively with professionals to meet the needs of individuals with disabilities and their families.

Prerequisites: SPED 7270 with a minimum grade of D-**Term Offered:** Summer**CIEC 7620 Seminar II: Working Effectively with Team Members**

[1 credit hour]

Factors that support and threaten interprofessional collaboration. Become aware of policies affecting teaming. Engage in advocacy for teaming that will benefit individuals with disabilities.

Prerequisites: CIEC 7610 with a minimum grade of D- and CIEC 7270 with a minimum grade of D-**Term Offered:** Summer**CIEC 7630 Seminar III: Evidence-Based Practice and Innovation in Teaming**

[1 credit hour]

Issues related to principles of ethical practice, professional identity and advocacy. Ways in which technology can promote effective teaming practices with other professionals as well as with family members.

Prerequisites: CIEC 7620 with a minimum grade of D-**Corequisites:** CIEC 7640**Term Offered:** Spring, Summer**CIEC 7640 Practicum in Interprofessional Teaming**

[2 credit hours]

Students will work as part of an inter-professional team to develop, implement, and evaluate integrated intervention plans designed to support the development of children who have special needs.

Prerequisites: CIEC 7620 with a minimum grade of D-**Corequisites:** CIEC 7630**CIEC 7800 Teacher/Parent Child Relations**

[3 credit hours]

This course is designed to assist the classroom teacher in building positive relationships with the parents of students and to develop effective strategies for communicating with them.

CIEC 7940 Specialist Practicum In Early Childhood Education

[1-3 credit hours]

Observation and supervised experience in an appropriate setting. Students will be assigned to work as interns under the joint supervision of school and University personnel.

CIEC 7980 Special Topics In Early Childhood Education

[1-5 credit hours]

A course developed around topics of interest and concern to inservice teachers within districts served by the Center for Educational Research and Services. Stresses solution and resolution of educational problems occurring within the district.

Term Offered: Spring, Summer, Fall**CIEC 8310 Pre-K/Primary Curriculum**

[3 credit hours]

The study and design of early childhood curriculum from a best practice/developmental perspective including integrated curriculum, anti-bias approaches, authentic assessment, direct learning strategies. Student self assessment and change project required.

Term Offered: Spring, Fall**CIEC 8320 Meaning And Development Of Play Behavior**

[3 credit hours]

Theoretical bases of play behavior and its role in curriculum development/assessment. Students implement and evaluate a sociodramatic play kit and conduct library research on one aspect of play behavior.

Term Offered: Summer**CIEC 8330 Language And Concept Development**

[3 credit hours]

Study of the language and literacy development of the young child with emphasis upon the factors that influence and support this development. Students will do projects to implement their learning.

Term Offered: Spring, Summer, Fall**CIEC 8340 Curriculum Design For Infants And Toddlers**

[3 credit hours]

Introduction to the sequential development of the young child from birth to 3 years. Students will engage in field hours in infant-toddler settings, design learning materials and critique research in topics related to infant/toddler curriculum.

Term Offered: Summer**CIEC 8750 Developmental And Classroom Assessment**

[3 credit hours]

Focuses upon teaching and learning in a developmental learning environment. Emphases includes observing the developmental characteristics of young children and assessment for prescriptive teaching.

Term Offered: Spring, Summer, Fall

CIEC 8900 Doctoral Seminar In Early Childhood Education

[2-4 credit hours]

This seminar will consider problems and provide advanced study for doctoral students in Early Childhood Education.

Term Offered: Spring, Fall

CIEC 8930 Independent Research In Early Childhood Education

[1-5 credit hours]

Individual study is designed to provide the doctoral student opportunity to work individually on professional problems under the direction of Early Childhood faculty.

Term Offered: Spring, Summer, Fall

CIEC 8940 Doctoral Internship In Early Childhood

[1-3 credit hours]

Placement of doctoral students in an appropriate PreK-Grade 3 school, school district or other professional setting under the direction of joint placement personnel and CIEC faculty.

Term Offered: Spring

CIEC 8950 Theory And Research In Early Childhood

[3 credit hours]

Review and analysis of theory and research related to rationale and methods for program options for young children. Critique research and prepare a review of synthesis of research.

CIEC 8960 Dissertation In Early Childhood Education

[1-12 credit hours]

Original research in an area of early childhood education.

Term Offered: Spring, Summer, Fall

Curriculum and Instruction (CI)

CI 5110 Developing Instruction for Middle Grades 4-5 Literacy and Social Studies

[3 credit hours]

A course in pedagogy and content for pre-service teachers currently working on Ohio's Early Childhood PK-3 licensure program and licensed teachers who have completed Ohio's Early Childhood PK-3 licensure program and are seeking to extend their license to be eligible to teach all content in grades four and five. The course will focus on the English language arts and social studies as outlined in the Ohio Academic Content Standards.

Term Offered: Spring, Fall

CI 5120 Developing Instruction in Mathematics and Science for Grades 4-5

[3 credit hours]

A course in pedagogy and content for pre-service teachers currently working on Ohio's Early Childhood PK-3 LAMP licensure program and licensed teachers who have completed Ohio's PK-3 licensure program and are seeking to extend their license to be eligible to teach all content in grades four and five. The course will focus on the mathematics and science outlined in Ohio's standards for teaching mathematics and science in grades 4 and 5.

Term Offered: Spring, Fall

CI 5190 Secondary Field Experience II

[3 credit hours]

Field experience for alternative 712 certification. Classroom observations and reports Teach series of lessons or unit of study in secondary classroom. Students will develop and implement a unit plan in the content area integrating teaching of content, thinking skills and adjusting the unit to a special needs population.

Term Offered: Spring, Fall

CI 5300 Literature For Children

[3 credit hours]

Emphasis on all genres of literature for children, including poetry, traditional literature, fantasy, realistic fiction, biography and other information books, particularly for early childhood and middle grades learners. Instructional strategies for engaging learners with children's literature and ways of increasing home-school connections through use of children's literature also introduced.

CI 5320 Literature For Young Adults

[3 credit hours]

Survey of literature materials written for the junior and senior high school student. Emphasis is placed on all genres, literary elements and uses of literature across the curriculum.

Term Offered: Spring, Fall

CI 5360 Multicultural Literature

[3 credit hours]

Picture books, fiction, biography and poetry appropriate for elementary and middle school students that interpret and reflect honestly the lives of persons of color will be studied and evaluated.

Term Offered: Fall

CI 5430 Issues In Second Language Instruction

[3 credit hours]

A critical study of teaching foreign languages and English as a second language across age groups including current theories, curriculum, materials, teaching strategies and assessment.

Term Offered: Spring

CI 5470 Literacy Assessment and Remediation

[3 credit hours]

Examine current literacy practices in assessment and remediation. Emphasis on knowledge and skill needed to diagnose and assess students in reading and writing by working with an at-risk learner. Apply word identification, comprehension, fluency, vocabulary and writing instructional strategies for supporting readers in an experiential learning environment.

Term Offered: Spring, Summer, Fall

CI 5490 Content Area Reading For Adolescent Young Adult, Multi-Age, And Career And Technical Education Teach

[3 credit hours]

Study of the integration of reading comprehension, writing, oral language and word skill development in content reading. Attention will be given to instructional methods as well as assessment practices.

Term Offered: Spring, Summer, Fall

CI 5510 Mathematics For The Young Child

[3 credit hours]

Development of mathematical understanding in young children, appropriate learning and assessment experiences and analysis of curriculum. Mathematics focus on place value, number sense, geometry, measurement, algebra, data analysis and probability.

Term Offered: Spring, Fall**CI 5530 TEACHING AND LEARNING GEOMETRY AND MEASUREMENT**

[3 credit hours]

Examination of the development of mathematics concepts and skills across the K-12 curriculum. Discussion of mathematics content, teaching methods, instructional materials, assessment techniques and applications to classroom practice.

Term Offered: Spring**CI 5540 Teaching and Learning Algebra**

[3 credit hours]

Examination of the development of algebraic concepts and skills across the K-12 curriculum. Emphasis on current research, theory, and innovative approaches for teaching and learning algebra

Term Offered: Fall**CI 5550 Teaching Problem Solving In Mathematics**

[3 credit hours]

Focuses on the art of problem solving and methods and materials for classroom implementation. Consideration given to current trends and related resource regarding use of problem solving in mathematics teaching.

Term Offered: Fall**CI 5560 ASSESSMENT IN MATHEMATICS EDUCATION**

[3 credit hours]

Study of the role of assessment in the teaching and learning of mathematics. Examination of current research, assessment techniques, and trends and ways in which assessment can guide and inform mathematics instruction.

Term Offered: Fall**CI 5580 TEACHING AND LEARNING NUMBER, DATA, AND PROBABILITY**

[3 credit hours]

Examination of the development of concepts and skills associated with number, data, and probability across the K-12 curriculum. Emphasis on current research, theory, and innovative instructional approaches.

CI 5590 Topics in Mathematics Education

[3 credit hours]

Examination and exploration of policy issues, research, and national trends that have implications for teachers, curriculum specialists, school districts, and others involved in mathematics education

Term Offered: Summer, Fall**CI 5640 Environmental Education**

[3 credit hours]

An experiential course for those interested in developing their knowledge and expertise in Environmental Education. Participants will develop a personal response to current environmental issues and learn how to help others do the same. Participants include teachers, naturalists, environmental science professionals and anyone interested in environmental education. The course will take a practical approach to the NAEE standards for environmental and conservation education as well as the NGSS and relevant Common Core State Standards.

CI 5650 Mentoring a Preservice Teacher

[3 credit hours]

Designed for practicing teachers, this course explores the role of a mentor teacher in guiding prospective teachers in learning to teach. Emphasis is on developing productive mentor-mentee relationships; guiding planning, teaching and assessment; providing useful feedback; and assessing preservice teacher learning.

CI 5660 Technological Tools In Science Education

[3 credit hours]

Designed for science educators, this course explores the use of learning technologies for teaching and learning science. Students investigate theoretical frameworks for thinking about tools to support science learning and the role of technology in science education. This course explores technologies to extend students' capabilities at inquiry and enhance their thinking about science phenomena, how technologies can enhance learning within and beyond classrooms, and how technologies support and change science teachers' work with learners.

Term Offered: Spring**CI 5690 Project-Based Science**

[3 credit hours]

Advanced methods for teaching science to engage learners in extended inquiry as they investigate real-world questions. Emphasis on innovative instructional strategies, research and theoretical perspectives to promote deep understanding of fundamental concepts.

Term Offered: Spring, Summer**CI 5810 Instructional Strategies**

[3 credit hours]

This course examines the purposes and practices of effective teachers. Participants critically investigate different instructional models for teaching including mediated instruction, discussion, inquiry management, project-based instruction, cooperative learning and the use of technology. Many different teaching methodologies will be demonstrated, modeled and critically examined. Participants will draft a personal philosophy of education. Focus is firmly placed on individual student learning outcomes in a climate of increasing diversity in the 21st century.

Term Offered: Spring, Summer, Fall**CI 5870 Secondary School Curriculum**

[3 credit hours]

A critical exploration of secondary school curricular issues, trends, and practices including the historical, political, social, psychological, and philosophical traditions. Participants examine how secondary curriculum is developed, implemented and institutionalized. Emphasis will be placed on topics including teacher leadership, collaboration, action research, and reflective decision making in curriculum work. This course is for teachers, administrators, and anyone interested in how curriculum has influenced educational reform and can influence future reform.

Term Offered: Spring**CI 5980 Special Topics In Curriculum & Instruction**

[1-5 credit hours]

A course developed around topics of interest and concern to educators.

Term Offered: Spring, Summer, Fall

CI 5990 Graduate Independent Study In Curriculum And Instruction

[1-5 credit hours]

Individual study designed to provide a student the opportunity to work individually on professional problems under the direction of the faculty of the Department of Curriculum and Instruction.

Term Offered: Spring, Summer, Fall

CI 6110 Language Arts Methods of Teaching

[3 credit hours]

An initial in-depth study of methods and materials for teaching and learning the English Language Arts in middle and secondary classrooms with emphasis on planning, content standards and instructional strategies that attend to students as learners; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6210

Term Offered: Fall

CI 6120 Social Studies Methods of Teaching

[3 credit hours]

An initial in-depth study of methods and materials for teaching and learning Social Studies in middle and secondary classrooms with emphasis on planning, content standards and instructional strategies that attend to students as learners; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program.

Corequisites: CI 6220

Term Offered: Fall

CI 6130 Mathematics Method of Teaching

[3 credit hours]

An initial in-depth study of methods and materials for teaching and learning Mathematics in middle and secondary classrooms with emphasis on planning, content standards and instructional strategies that attend to students as learners; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6230

Term Offered: Fall

CI 6140 Science Methods of Teaching

[3 credit hours]

An initial in-depth study of methods and materials for teaching and learning Science in middle and secondary classrooms with emphasis on planning, content standards and instructional strategies that attend to students as learners; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6240

Term Offered: Fall

CI 6150 Advanced Methods of Teaching in Language Arts

[3 credit hours]

A continued in-depth study of methods and materials for teaching and learning the English Language Arts in middle and secondary classrooms with an emphasis on academic language and classroom level assessments; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6110 with a minimum grade of C or CI 6120 with a minimum grade of C or CI 6130 with a minimum grade of C or CI 6140 with a minimum grade of C

Corequisites: CI 6250

Term Offered: Spring

CI 6160 Social Studies Advanced Methods of Teaching

[3 credit hours]

A continued in-depth study of methods and materials for teaching and learning Social Studies in middle and secondary classrooms with an emphasis on academic language and classroom level assessments; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6110 with a minimum grade of C or CI 6120 with a minimum grade of C or CI 6130 with a minimum grade of C or CI 6140 with a minimum grade of C

Corequisites: CI 6260

Term Offered: Spring

CI 6170 Mathematics Advanced Methods of Teaching

[3 credit hours]

A continued in-depth study of methods and materials for teaching and learning Mathematics in middle and secondary classrooms with an emphasis on academic language and classroom level assessments; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6110 with a minimum grade of C or CI 6120 with a minimum grade of C or CI 6140 with a minimum grade of C or CI 6130 with a minimum grade of C

Corequisites: CI 6270

Term Offered: Spring

CI 6180 Science Advanced Methods of Teaching

[3 credit hours]

A continued in-depth study of methods and materials for teaching and learning Science in middle and secondary classrooms with an emphasis on academic language and classroom level assessments; for LAMP Middle Childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6120 with a minimum grade of C or CI 6130 with a minimum grade of C or CI 6140 with a minimum grade of C

Corequisites: CI 6280

Term Offered: Spring

CI 6210 Language Arts Practicum of Teaching

[3 credit hours]

Initial field experience for LAMP Middle Childhood and Adolescent to Young Adult licensure only; experiences include focused observations in classroom settings, co-teaching with mentor teacher and the design, planning and teaching of units that integrate the English Language Arts. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6110

Term Offered: Fall

CI 6220 Social Studies Practicum

[3 credit hours]

Initial field experience for LAMP Middle Childhood and Adolescent to Young Adult licensure only; experiences include focused observations in classroom settings, co-teaching with mentor teacher and the design, planning and teaching of units that integrate Social Studies. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6120**Term Offered:** Fall**CI 6230 Mathematics Practicum**

[3 credit hours]

Initial field experience for LAMP Middle Childhood and Adolescent to Young Adult licensure only, experiences include focused observations in classroom settings, co-teaching with mentor teacher and the design, planning and teaching of units that integrate Mathematics. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6130**Term Offered:** Fall**CI 6240 Science Practicum**

[3 credit hours]

Initial field experience for LAMP Middle Childhood and Adolescent to Young Adult licensure only; experiences include focused observations in classroom settings, co-teaching with mentor teacher and the design, planning and teaching of units that integrate Science. Admission to SECE or MIDD LAMP program required.

Corequisites: CI 6140**Term Offered:** Fall**CI 6250 Language Arts Internship and Student Teaching**

[3 credit hours]

Part 1 of full time, supervised classroom teaching; for LAMP middle childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6210 with a minimum grade of C or CI 6220 with a minimum grade of C or CI 6230 with a minimum grade of C or CI 6240 with a minimum grade of C

Corequisites: CI 6150**Term Offered:** Spring**CI 6260 Social Studies Student Teaching and Internship**

[3 credit hours]

Part 1 of full time, supervised classroom teaching; for LAMP middle childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6210 with a minimum grade of C or CI 6220 with a minimum grade of C or CI 6230 with a minimum grade of C or CI 6240 with a minimum grade of C

Corequisites: CI 6160**Term Offered:** Spring**CI 6270 Mathematics Student Teaching and Internship**

[3 credit hours]

Part 1 of full time, supervised classroom teaching; for LAMP middle childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6210 with a minimum grade of C or CI 6220 with a minimum grade of C or CI 6230 with a minimum grade of C or CI 6240 with a minimum grade of C

Corequisites: CI 6170**Term Offered:** Spring**CI 6280 Science Student Teaching and Internship**

[3 credit hours]

Part 1 of full time, supervised classroom teaching; for LAMP middle childhood and Adolescent to Young Adult licensure only. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6210 with a minimum grade of C or CI 6220 with a minimum grade of C or CI 6230 with a minimum grade of C or CI 6240 with a minimum grade of C

Corequisites: CI 6180**Term Offered:** Spring**CI 6370 Fundamentals Of Grant Writing**

[3 credit hours]

This seminar will teach participants about fundamentals of grant writing. Topics covered will include: locating sources of funding, writing grants, designing evaluation instruments and administering grants.

Term Offered: Summer**CI 6400 Trends In Literacy Acquisition**

[3 credit hours]

Study of the theories and foundational components of literacy instruction. Factors affecting literacy development including oral language, phonemic awareness, phonics, fluency, comprehension, vocabulary, reading-writing connections and motivation considered. Issues for learners from diverse backgrounds including English Language Learners examined.

Term Offered: Spring, Summer, Fall**CI 6410 Content Area Literacy**

[3 credit hours]

Study of the integration of reading and writing in the content areas. Attention to both content area literacy approaches and disciplinary literacy practices. Consideration of needs of diverse learners including English Language Learners.

Term Offered: Spring, Summer, Fall**CI 6430 Diagnosis Of Reading Disability**

[3 credit hours]

Teachers acquire the knowledge and skills needed to assess the reading and writing of students and to plan appropriate instruction. Emphasis on phonemic awareness, concepts of print, word recognition, fluency, comprehension, word study, and writing.

Prerequisites: CI 6400 with a minimum grade of C**Term Offered:** Spring, Summer, Fall

CI 6440 Remediation Practicum

[3 credit hours]

In depth tutoring with learners ranging from preK to 12th grade. Data-driven instructional decision-making as well as considerations for individualizing instruction emphasized. Design and conduct of a professional development workshop for literacy educators based on tutoring cases is a culminating aspect of the course.

Prerequisites: (CI 6400 with a minimum grade of C and CI 6430 with a minimum grade of C)

Term Offered: Spring, Summer, Fall

CI 6490 Theory And Research In Literacy

[3 credit hours]

Extensive examination of current research and theoretical considerations in language and literacy learning and instruction. Contemporary contextual factors such as policy and standards are explored. The reciprocal nature of research and practice is a central theme of the course. Individualized culminating projects focus on specific issues of interest related to language and literacy learning and instruction.

Term Offered: Spring, Summer, Fall

CI 6590 Theory And Research In Mathematics Education

[3 credit hours]

Critical appraisal of current theory and research in mathematics education. Emphasis on issues related to teacher practice, student learning, and curriculum development.

Term Offered: Spring, Summer, Fall

CI 6650 Teacher Learning and Education

[3 credit hours]

Designed for future teacher educators and teacher leaders, students investigate frameworks for teacher professional knowledge including pedagogical content knowledge, teacher learning, educative mentoring, and program design. Teacher educators' roles as leaders for teacher learning and improvement are examined.

CI 6690 Theory And Research In Science Education

[3 credit hours]

Designed for individuals beginning their thesis, project, or seminar paper phase of their graduate program, this course explores both theory and research in science education. Based on an area of interest, students review and critically analyze the research literature in science education. Students also learn how to find primary sources, read and critique research, and organize and write a literature review.

Term Offered: Spring, Summer, Fall

CI 6790 Theory And Research In Social Studies

[3 credit hours]

Intensive study of research and theoretical considerations related to the development and current status of learning and instruction in the social studies. Historical and contemporary contextual factors such as policy and standards are explored. The reciprocal nature of research and practice is a central theme of the course. Individualized culminating projects focus on issues related to learning and instruction in the social studies.

Term Offered: Spring, Fall

CI 6800 Foundations Of Curriculum & Instruction

[3 credit hours]

The purpose of CI 6800/8800, Foundations of Curriculum, is to provide an introduction to the foundational areas that affect the design and development of curriculum. This includes the history, social forces, philosophy, and psychology behind many of the curriculum practices and issues that exist in schools today as well as the nature of the curriculum development process. As a result, the course is designed to increase the learner's awareness of the field of curriculum and to introduce specific skills in design and development.

Term Offered: Summer, Fall

CI 6810 Curriculum Development: K-12

[3 credit hours]

The purpose of CI 6810/8810, Curriculum Development: K-12, is to provide appropriate background information and practice in curriculum and instructional design and direct experiences in approaching this process imaginatively. The course will focus on how to use both traditional and emerging models of curriculum design and development to create a working curriculum and to design instructional based on research-based theories of learning and models of teaching.

Term Offered: Spring, Fall

CI 6830 Curriculum Trends And Issues

[3 credit hours]

Designed for educators, this course guides students in exploring core ideas to develop a framework for the study of teaching. Students investigate issues of what and how to teach in the content areas as well as explore the knowledge of expert content teachers. As a core graduate course in curriculum and instruction, students analyze and integrate ideas to form a theoretical framework and are guided in developing professional written work grounded in the professional literature.

Term Offered: Spring, Summer, Fall

CI 6840 Curriculum For Educational Leaders

[3 credit hours]

The purpose of this course is to introduce educational leaders to research-based leadership theories and principles and how these apply to P-12 school settings. Building principals, teacher leaders, and instructional coaches will focus on creating learning environments throughout the school that increase teacher effectiveness, utilize alternative assessment strategies, and focus on connecting curriculum, instruction and assessment in all classrooms.

Term Offered: Spring, Fall

CI 6890 Theory and Research in Learning and Teaching Content

[3 credit hours]

A critical analysis of the research literature in language arts, mathematics, science, or social studies education. Students examine educational research regarding ideas about learning and teaching that influence research, finding primary sources, reading and critiquing research, and organizing and writing a literature review.

Term Offered: Spring, Summer

CI 6900 Masters Research Seminar In Curriculum And Instruction

[2-3 credit hours]

Graduate seminar designed as a culminating experience in the master's programs in Curriculum and Instruction. Participants critically examine the research and scholarship in their specific field of interest. Emphasis is placed on professional academic collaboration, peer review, constructive criticism. The final product of this seminar is an academic manuscript of publishable quality that contributes to the academic discourse in a particular body of scholarship.

Prerequisites: CI 6490 with a minimum grade of D- or CI 6590 with a minimum grade of D- or CI 6690 with a minimum grade of D- or CI 6790 with a minimum grade of D- or CI 6890 with a minimum grade of D- or CIEC 6950 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

CI 6920 Masters Research Project In Curriculum And Instruction

[1-3 credit hours]

Students will complete an individual research project under the direction of a committee of at least two faculty members in Curriculum and Instruction, ordinarily including the faculty adviser.

Term Offered: Spring, Summer, Fall

CI 6950 Student Teaching and Internship: LAMP

[3 credit hours]

Part 2 of full time, supervised classroom teaching; for LAMP middle childhood and Adolescent to Young Adult licensure only; added emphasis on continual professional growth and development as educators. Admission to SECE or MIDD LAMP program required.

Prerequisites: CI 6250 with a minimum grade of C or CI 6260 with a minimum grade of C or CI 6270 with a minimum grade of C or CI 6280 with a minimum grade of C and CI 6150 with a minimum grade of C or CI 6160 with a minimum grade of C or CI 6170 with a minimum grade of C or CI 6180 with a minimum grade of C

Term Offered: Spring, Summer

CI 6960 Masters Thesis In Curriculum And Instruction

[1-3 credit hours]

Students will complete a thesis under the direction of committee of at least two faculty members from Curriculum and Instruction, ordinarily including the faculty adviser.

Term Offered: Spring, Summer, Fall

CI 7530 TEACHING AND LEARNING GEOMETRY AND MEASUREMENT

[3 credit hours]

Examination of the development of mathematics concepts and skills associated with geometry and measurement across the K-12 curriculum. Emphasis on current research, theory, and innovative instructional approaches to the teaching and learning of geometry and measurement.

Term Offered: Spring

CI 7540 Teaching and Learning Algebra

[3 credit hours]

Examination of the development of algebraic concepts and skills across the K-12 curriculum. Emphasis on current research, theory, and innovative approaches for teaching and learning algebra.

Term Offered: Fall

CI 7560 ASSESSMENT IN MATHEMATICS EDUCATION

[3 credit hours]

Study of the role of assessment in the teaching and learning of mathematics. Examination of current research, assessment techniques, and trends and ways in which assessment can guide and inform mathematics instruction

Term Offered: Fall

CI 7580 TEACHING AND LEARNING NUMBER, DATA, AND PROBABILITY

[3 credit hours]

Examination of the development of concepts and skills associated with number, data, and probability across the K-12 curriculum. Emphasis on current research, theory, and innovative instructional approaches

CI 7590 Topics in Mathematics Education

[3 credit hours]

Examination and exploration of policy issues, research, and national trends that have implications for teachers, curriculum specialists, school districts, and others involved in mathematics education.

Term Offered: Fall

CI 7650 Mentoring a Preservice Teacher

[3 credit hours]

Designed for practicing teachers, this course explores the role of a mentor teacher in guiding prospective teachers in learning to teach. Emphasis is on developing productive mentor-mentee relationships; guiding planning, teaching and assessment; providing useful feedback; and assessing preservice teacher learning.

CI 7660 Technological Tools In Science Education

[3 credit hours]

Designed for science educators, this course explores the use of learning technologies for teaching and learning science. Students investigate theoretical frameworks for thinking about tools to support science learning and the role of technology in science education. This course explores technologies to extend students' capabilities at inquiry and enhance their thinking about science phenomena, how technologies can enhance learning within and beyond classrooms, and how technologies support and change science teachers' work with learners.

Term Offered: Spring

CI 7690 Project-Based Science

[3 credit hours]

Advanced methods for teaching science to engage learners in extended inquiry as they investigate real-world questions. Emphasis on innovative instructional strategies, research and theoretical perspectives to promote deep understanding of fundamental concepts.

Term Offered: Spring, Summer

CI 7810 Instructional Strategies

[3 credit hours]

This course examines the purposes and practices of effective teachers. Participants critically investigate different instructional models for teaching including mediated instruction, discussion, inquiry management, project-based instruction, cooperative learning and the use of technology. Many different teaching methodologies will be demonstrated, modeled and critically examined. Participants will draft a personal philosophy of education. Focus is firmly placed on individual student learning outcomes in a climate of increasing diversity in the 21st century.

Term Offered: Spring, Summer, Fall

CI 7870 Secondary School Curriculum

[3 credit hours]

A critical exploration of secondary school curricular issues, trends, and practices including the historical, political, social, psychological, and philosophical traditions. Participants examine how secondary curriculum is developed, implemented and institutionalized. Emphasis will be placed on topics including teacher leadership, collaboration, action research, and reflective decision making in curriculum work. This course is for teachers, administrators, and anyone interested in how curriculum has influenced educational reform and can influence future reform.

Term Offered: Spring

CI 7940 Specialist Practicum In Curriculum And Instruction

[1-3 credit hours]

Observation and supervised experience in an appropriate setting. This experience may be in a school or other educational setting. Student will study under the supervision of appropriate mentors or advisors.

Term Offered: Spring, Summer, Fall

CI 7980 Special Topics In Curriculum & Instruction

[1-5 credit hours]

A course developed around topics of interest and concern to educators.

Term Offered: Spring, Summer, Fall

CI 8370 Fundamentals Of Grant Writing

[3 credit hours]

This seminar will teach participants about fundamentals of grant writing. Topics covered will include: locating sources of funding, writing grants, designing evaluation instruments and administering grants.

Term Offered: Summer

CI 8400 Trends In Literacy Acquisition

[3 credit hours]

Study of the theories and foundational components of literacy instruction. Factors affecting literacy development including oral language, phonemic awareness, phonics, fluency, comprehension, vocabulary, reading-writing connections and motivation considered. Issues for learners from diverse backgrounds including English Language Learners examined.

Term Offered: Spring, Summer, Fall

CI 8410 Content Area Literacy

[3 credit hours]

Study of the integration of reading and writing in the content areas. Attention to both content area literacy approaches and disciplinary literacy practices. Consideration of needs of diverse learners including English Language Learners.

Term Offered: Spring, Summer, Fall

CI 8430 Diagnosis Of Reading Disability

[3 credit hours]

Teachers acquire the knowledge and skills needed to assess the reading and writing of students and to plan appropriate instruction. Emphasis on phonemic awareness, concepts of print, word recognition, fluency, comprehension, word study, and writing.

Prerequisites: CI 6400 with a minimum grade of C

CI 8440 Remediation Practicum

[3 credit hours]

In depth tutoring with learners ranging from preK to 12th grade. Data-driven instructional decision-making as well as considerations for individualizing instruction emphasized. Design and conduct of a professional development workshop for literacy educators based on tutoring cases is a culminating aspect of the course.

Prerequisites: (CI 6400 with a minimum grade of C and CI 6430 with a minimum grade of C)

Term Offered: Spring, Summer, Fall

CI 8490 Theory And Research In Literacy

[3 credit hours]

Extensive examination of current research and theoretical considerations in language and literacy learning and instruction. Contemporary contextual factors such as policy and standards are explored. The reciprocal nature of research and practice is a central theme of the course. Individualized culminating projects focus on specific issues of interest related to language and literacy learning and instruction.

Term Offered: Spring, Summer, Fall

CI 8590 Theory And Research In Mathematics Education

[3 credit hours]

Critical appraisal of current theory and research in mathematics education. Emphasis on issues related to teacher practice, student learning, and curriculum development.

Term Offered: Spring, Summer, Fall

CI 8650 Teacher Learning and Education

[3 credit hours]

Designed for future teacher educators and teacher leaders, students investigate frameworks for teacher professional knowledge including pedagogical content knowledge, teacher learning, educative mentoring, and program design. Teacher educators' roles as leaders for teacher learning and improvement are examined.

CI 8690 Theory And Research In Science Education

[3 credit hours]

Designed for individuals beginning their thesis, project, or seminar paper phase of their graduate program, this course explores both theory and research in science education. Based on an area of interest, students review and critically analyze the research literature in science education. Students also learn how to find primary sources, read and critique research, and organize and write a literature review.

Term Offered: Spring, Summer, Fall

CI 8700 Doctoral Pro-Seminar I: Introduction to Scholarship in Curriculum and Instruction

[3 credit hours]

The doctoral research cycle begins by introducing students to issues in curriculum and instruction, establishing a research agenda, and building a community of scholars. Pre-requisite to Pro-Seminar II.

Term Offered: Spring, Fall

CI 8710 Doctoral Pro-Seminar II: Themes in theory and research in Curriculum and Instruction

[3 credit hours]

The doctoral research cycle continues by examining the paradigmatic and theoretical bases of C&I research. Develop lines of inquiry grounded in theoretical knowledge and personal interests. Prerequisite: Pro-Seminar I.

Prerequisites: CI 8700 with a minimum grade of D-

Term Offered: Spring, Summer

CI 8720 Doctoral Pro-Seminar III: Themes in theory and research in curriculum and instruction.

[3 credit hours]

The doctoral research cycle is completed. A study is designed, conducted and disseminated within a research group under the guidance of a mentor. Prerequisite: CI 8700 + 8710.

Prerequisites: CI 8710 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

CI 8790 Theory And Research In Social Studies

[3 credit hours]

Intensive study of research and theoretical considerations related to the development and current status of learning and instruction in the social studies. Historical and contemporary contextual factors such as policy and standards are explored. The reciprocal nature of research and practice is a central theme of the course. Individualized culminating projects focus on issues related to learning and instruction in the social studies.

Term Offered: Spring, Fall

CI 8800 Foundations Of Curriculum & Instruction

[3 credit hours]

The purpose of CI 6800/8800, Foundations of Curriculum, is to provide an introduction to the foundational areas that affect the design and development of curriculum. This includes the history, social forces, philosophy, and psychology behind many of the curriculum practices and issues that exist in schools today as well as the nature of the curriculum development process. As a result, the course is designed to increase the learner's awareness of the field of curriculum and to introduce specific skills in design and development.

Term Offered: Spring, Summer, Fall

CI 8810 Curriculum Development: K-12

[3 credit hours]

The purpose of CI 6810/8810, Curriculum Development: K-12, is to provide appropriate background information and practice in curriculum and instructional design and direct experiences in approaching this process imaginatively. The course will focus on how to use both traditional and emerging models of curriculum design and development to create a working curriculum and to design instructional based on research-based theories of learning and models of teaching.

Term Offered: Spring, Fall

CI 8830 Curriculum Trends And Issues

[3 credit hours]

Designed for advanced students of education, this course guides students in exploring core ideas to develop a framework for the study of teaching. Students investigate issues of what and how to teach in the content areas as well as explore the knowledge of expert content teachers. As a core graduate course in curriculum and instruction, students analyze and integrate ideas to form a theoretical framework and are guided in developing professional written work grounded in the literature. Students explore questions and approaches for research on content teaching.

Term Offered: Spring, Summer

CI 8840 Curriculum For Educational Leaders

[3 credit hours]

The purpose of this course is to introduce educational leaders to research-based leadership theories and principles and how these apply to P-12 school settings. Building principals, teacher leaders, and instructional coaches will focus on creating learning environments throughout the school that increase teacher effectiveness, utilize alternative assessment strategies, and focus on connecting curriculum, instruction and assessment in all classrooms.

Term Offered: Spring, Fall

CI 8860 Advanced Curriculum Theory

[3 credit hours]

This course is designed to build on the foundational concepts and principles introduced in CI 6800/8800 and to explore, analyze and evaluate curriculum theory as it applies to curriculum studies as a discipline. This course will explore curriculum theory as a "complicated conversation" led by educators with the knowledge of contemporary social issues, history, philosophy and popular culture. The course will analyze and evaluate modernist and postmodern theories and practices and engage students with readings, discussions, and interactions with influential curriculum theorists.

Term Offered: Spring, Fall

CI 8900 Doctoral Seminar In Curriculum And Instruction

[2-4 credit hours]

This seminar will consider problems and provide advanced study for doctoral students in Curriculum and Instruction.

Term Offered: Spring, Summer, Fall

CI 8930 Independent Research In Curriculum And Instruction

[1-5 credit hours]

Individual study is designed to provide the doctoral student opportunity to work individually on professional problems under the direction of CI faculty.

Term Offered: Spring, Summer, Fall

CI 8940 Doctoral Internship In Curriculum And Instruction

[1-3 credit hours]

Placement of doctoral students in appropriate school, school district, or other professional setting under direction of appropriate mentors or advisors.

Term Offered: Spring, Fall

CI 8960 Dissertation In Curriculum And Instruction

[1-10 credit hours]

Original research in an area of curriculum and instruction.

Term Offered: Spring, Summer, Fall

Dentistry - Oral Biology (DENT)

DENT 6010 Growth and Development

[0.5 credit hours]

Presentation and discussion of key growth and development concepts related to orthodontic/orthopedic diagnosis and treatment in pediatric dentistry including: Orthodontic Records, Growth and Development of the Face and Dental Arches, Cephalometrics and Facial Esthetics, Orthodontic Diagnosis and Treatment in the Mixed Dentition, Management of the Developing Occlusion, Case Selection.

Term Offered: Fall

DENT 6020 Pharmacology I

[0.5 credit hours]

Advanced pharmacologic principles in decision making for dental pharmacotherapy. Emphasis is on physiological responses to drugs, expected outcomes, adverse reactions, and potential drug interactions.

Term Offered: Summer, Fall

DENT 6030 Dento-Alveolar Trauma I

[0.5 credit hours]

DENT 6040 Conscious Sedation I

[2 credit hours]

In depth discussion of the principles and objectives of conscious sedation, deep sedation and general anesthesia as behavior management techniques, including indications and contraindications for their use.

Term Offered: Summer, Fall

DENT 6050 Clinical Pediatric Dentistry

[0.5-1 credit hours]

In depth analysis of the scientific principles underlying the contemporary practice of pediatric dentistry, including the prevention of disease, dental anomalies, habits and other problems in occlusal development, and CAN.

Term Offered: Spring, Summer, Fall

DENT 6060 Principles of Behav/Comm Mgmt

[2 credit hours]

Critical analysis of historical behavior management and communication techniques and currently accepted behavior management techniques and utilization of techniques based upon patient age, cognitive development, behavior, medical history, parental concerns, and patient response to management techniques.

Term Offered: Summer, Fall

DENT 6070 Pediatric Dentistry Literature

[0.5 credit hours]

Presentation and discussion of selected articles related to the field of pediatric dentistry and other health related topics.

Term Offered: Spring, Summer, Fall

DENT 6080 Anatomy & Embryology Head/Neck

[1 credit hour]

Lecture and discussion of select topics in gross anatomy and embryology.

Term Offered: Spring

DENT 6090 Concepts - Dental Microbiology

[0.5 credit hours]

DENT 6100 Pediatric Medicine Lecture

[2 credit hours]

Advanced pharmacologic principles in decision making for dental pharmacotherapy. Emphasis is on physiological responses to drugs, expected outcomes, adverse reactions, and potential drug interactions.

Term Offered: Spring, Summer, Fall

DENT 6110 Oral Health Policies

[2 credit hours]

DENT 6120 Pharmacology II

[0.5 credit hours]

Advanced pharmacologic principles in decision making for dental pharmacotherapy. Emphasis is on physiological responses to drugs, expected outcomes, adverse reactions, and potential drug interactions.

Term Offered: Spring

DENT 6130 Dento-alveolar Trauma II

[0.5 credit hours]

DENT 6140 Conscious Sedation

[2 credit hours]

In depth discussion of the principles and objectives of conscious sedation, deep sedation and general anesthesia as behavior management techniques, including indications and contraindications for their use.

Term Offered: Spring, Summer

DENT 6150 Amer Board of Pediatric Dent RE

[2 credit hours]

DENT 6160 Special Care Dentistry

[1 credit hour]

In depth discussion of medical and handicapping conditions that require modifications in the delivery of dental services to infants, children and adolescents. Topics to be covered include, but are not limited to: bleeding disorders, cardiovascular disease, complications of chemotherapy and radiation therapy, diabetes, developmental disabilities, hemoglobinopathies, hematopoietic cell transplantation, hematologic malignancies, infectious diseases, neurologic disorders, organ transplantation, respiratory diseases, sensory impairments, solid tumors, common pediatric syndromes.

Term Offered: Fall

DENT 6170 Clinical Pediatric Dent Clinic

[1-10 credit hours]

Observation and participation in the care of patients with preventive, restorative, surgical, orthodontic and prosthetic care within the Dentistry Clinic.

Term Offered: Spring, Summer, Fall

DENT 6200 Oral Pathology

[1 credit hour]

In depth discussion of the epidemiology, pathogenesis, clinical characteristics, diagnostic methods, formulation of differential diagnoses, and management of oral and perioral lesions and anomalies with emphasis on the infant child and adolescent.

Term Offered: Spring, Summer

Earth Ecology and Environmental Science (EEES)

EEES 5100 Advanced Glacial Geology

[3 credit hours]

To understand glaciers and glacial landscapes. Topics include mass balance, ice flow, hydrology, erosion, deposition, landforms, glacial lakes and development of the Ohio glacial landscape. Field trip is mandatory.

Prerequisites: EEES 3100 with a minimum grade of D-

Term Offered: Spring

EEES 5150 Organic Evolution

[3 credit hours]

The modern theory of evolution is presented within a general framework of biological and geological evidence focusing on the fossil record, early biomolecules, protein synthesis, genetics, phylogeny and vertebrate evolution.

Term Offered: Spring, Summer

EEES 5160 Advanced Environmental Data Management

[3 credit hours]

A course in data management for environmental science graduate students covering the basics of data management practices and the use of Excel and R for data preparation, evaluation, analysis, visualization, and interpretation.

Term Offered: Fall

EEES 5200 Advanced Quaternary Geology

[3 credit hours]

To provide understanding of such cyclical events as climate change, sea level fluctuations, vegetation change and ice sheet paleogeography during the Quaternary Period and to explore future changes for planet Earth.

Term Offered: Spring

EEES 5220 Environmental Geochemistry

[3 credit hours]

Chemical reactions of environmental concern. Water and soil chemistry related to contaminant fate and mobility. Computer software used.

Term Offered: Spring, Fall

EEES 5240 Soil Science

[3 credit hours]

Basic principles of soil formation of physics, chemistry and biology with emphasis on their influence on fluid and chemical migration and preservation of soil quality from geological, agricultural and environmental perspectives.

Term Offered: Spring

EEES 5250 Soil Ecology

[3 credit hours]

Underlying concepts and theory of modern soil ecology will be reviewed including the biogeochemical cycles and ecological functions of soil, and the effects of human activities. (Spring, alternate years, odd)

Prerequisites: (BIOL 3050 with a minimum grade of D- and EEES 4240 with a minimum grade of D-) or (BIOL 3050 with a minimum grade of D- and EEES 5240 with a minimum grade of D-)

Term Offered: Spring, Fall

EEES 5260 Soil Ecology Laboratory

[1 credit hour]

Laboratory exercises designed to complement the material covered in EEES 5250.

Corequisites: EEES 5250

Term Offered: Spring, Fall

EEES 5350 Ecology and Conservation of Reptiles and Amphibians

[3 credit hours]

Ecology, diversity, evolution, and conservation of amphibians and reptiles. Lectures will discuss natural history, trait diversity, evolutionary context, and ecological implications of amphibians and reptiles. Hands-on activities will include taxonomy and identification of local species, survey and field methods, and discussions of scientific literature. Throughout this course, the biology of amphibians and reptiles will be emphasized in the context of conservation.

Term Offered: Spring

EEES 5410 Hydrogeology

[3 credit hours]

Fundamentals of groundwater/earth interactions are introduced concentrating on physical aspects of groundwater flow with applications to the field of water resources and contaminant investigations.

This course is designed as the fundamental course in groundwater for students who plan to use hydrogeology in their careers, e.g., environmental geologists, civil and environmental engineers, environmental specialists and scientists, and petroleum geologists.

Prerequisites: MATH 1750 with a minimum grade of D- or MATH 1850 with a minimum grade of D- or MATH 1830 with a minimum grade of D- or MATH 1920 with a minimum grade of D-

Term Offered: Spring

EEES 5450 Hazardous Waste Management

[3 credit hours]

Environmental regulations concerning hazardous waste, characteristics of hazardous waste and disposal technologies, toxicology, characteristics of organic chemicals and heavy metals, biodegradation, soil science, groundwater contamination, risk assessment, site investigation.

Term Offered: Fall

EEES 5480 GIS Applications in ENSC

[3 credit hours]

An applications course focused on using GIS techniques and applications in environmental problems and research.

Term Offered: Spring, Fall

EEES 5490 Remote Sensing of the Environment

[4 credit hours]

Introduction to theory, methods and techniques used to gather and analyze remote sensor data. Topics range from low altitude air photo interpretation through satellite image acquisition.

Prerequisites: GEPL 3550 with a minimum grade of D- and EEES 2100 with a minimum grade of D-

Term Offered: Fall

EEES 5510 Environmental Microbiology

[3 credit hours]

Microbial diversity and activities in an applied environmental context. Topics include function of microbial ecosystems in energy and carbon flow, bioremediation, and the detection and control of pathogens.

Prerequisites: (EEES 2150 with a minimum grade of D- and CHEM 1230 with a minimum grade of D-)

Term Offered: Fall

EEES 5520 Bioremediation

[3 credit hours]

The environmental fate and transport of contaminants; their transformation and biodegradation by plants and microorganisms; bioremediation strategies, including solid phase, slurry phase and vapor-phase treatments, and natural attenuation.

EEES 5540 Advanced Microbial Ecology

[3 credit hours]

An advanced course focusing on the ecology and public health role of microbes with emphasis on the epidemiology of infectious disease outbreaks.

Term Offered: Fall

EEES 5550 Advanced Methods Of Microbial Investigation

[3 credit hours]

Student will learn the classical and current methodologies (biochemical and molecular) used in microbial community analysis while developing an understanding of experimental design sample handling and data analysis.

Prerequisites: EEES 5540 with a minimum grade of D-

EEES 5610 Solid Earth Geophysics

[3 credit hours]

Survey of theory, field applications, interpretation principles of solid earth and exploration geophysics. Two hours lecture, three hours methods laboratory.

Prerequisites: (PHYS 2070 with a minimum grade of D- and PHYS 2080 with a minimum grade of D- and MATH 1850 with a minimum grade of D- and MATH 1860 with a minimum grade of D-)

Term Offered: Spring, Fall

EEES 5630 Numerical Methods In Geophysics

[3 credit hours]

Numerical filters and matrix operations used to process potential field data and waveforms, isolating anomalies and signals of interest; derivative maps, upward and downward continuation; current interpretation software. Term project.

Prerequisites: EEES 5610 with a minimum grade of D-

Term Offered: Spring

EEES 5650 Advanced Geology Field Studies

[1-4 credit hours]

Intensive field studies to various areas of geologic interest. Studies may involve various geologic field methods and descriptive techniques. Course may be repeated multiple times. Fall and Spring.

EEES 5730 Advanced Aquatic Ecology

[3 credit hours]

Advanced cross-disciplinary concepts in the ecology of aquatic environments emphasizing the biology of populations, communities and ecosystems. Includes a project on the application of principles and theory to help understand and solve a management problem in aquatic systems.

Prerequisites: EEES 3050 with a minimum grade of D-

Term Offered: Fall

EEES 5740 Advanced Aquatic Ecology Laboratory

[1 credit hour]

Laboratory exercises on the biology of aquatic populations, communities and ecosystems.

Corequisites: EEES 5730

Term Offered: Fall

EEES 5750 Advanced Conservation Biology

[4 credit hours]

Advanced cross-disciplinary concepts in the application of principles and theory to the study and maintenance of biological diversity in temperate, subtropical and tropical systems. Lectures, classroom discussion and readings.

Prerequisites: EEES 3050 with a minimum grade of D-

Term Offered: Spring

EEES 5760 Advanced Landscape Ecology

[3 credit hours]

This course is for graduate students from a variety of disciplines. Emphasis will be placed on up-to-date knowledge and methods in landscape analysis, pattern-process relationship and potential management applications at multiple spatial and temporal scales.

Prerequisites: EEES 3050 with a minimum grade of D-

Term Offered: Spring, Fall

EEES 5790 Ecology Field Study

[2-4 credit hours]

Field study of globally significant ecosystem(s), including analysis of structural and functional relationships within and between ecosystems. Opportunities for individual student projects.

Prerequisites: EEES 3050 with a minimum grade of D-

Term Offered: Spring, Summer

EEES 6100 Glacial Stratigraphy And Geophysics

[3 credit hours]

To integrate glacial sedimentology and stratigraphy, with near-surface, geophysical methodologies. Field work to collect a variety of field data to analyze in the lab is mandatory. Data to be presented as posters.

Term Offered: Fall

EEES 6160 Advanced Environmental Data Management

[3 credit hours]

A course in data management for environmental science graduate students covering the basics of data management practices and the use of Excel and R for data preparation, evaluation, analysis, visualization, and interpretation.

EEES 6250 Graduate Launch

[1 credit hour]

This course prepares graduate students for success by preparing individual study plans, research proposals and presentations, and launching bibliographic research.

Term Offered: Spring, Fall

EEES 6400 Biostatistics

[4 credit hours]

Application of statistical inference with environmental and ecological data, including estimation, testing of hypotheses, and statistical modeling.

Prerequisites: EEES 6400 with a minimum grade of C- and EEES 5160 with a minimum grade of C- or EEES 8400 with a minimum grade of C- and EEES 6160 with a minimum grade of C-

Term Offered: Spring

EEES 6440 Contaminant Hydrogeology

[3 credit hours]

Groundwater contaminant sources, impacts, transport, geochemistry and remediation in relation to geological environments with attention to sampling, detection, characterization, modeling and aquifer protection.

Prerequisites: EEES 5410 with a minimum grade of D-

EEES 6450 Advanced Applied Hydrogeology

[3 credit hours]

Applications of hydrogeological monitoring, analyses and modeling using mathematics, statistics and computers. Subjects include: well field and pump test design, sampling strategies, data presentation and analysis and modeling fundamentals.

Prerequisites: EECS 5410 with a minimum grade of D-

Term Offered: Fall

EEES 6500 Multivariable Geostatistics

[3 credit hours]

Application of multivariate statistical methods to scientific data. Emphasis is on applied regression, cluster, principal components, factor, correspondence, canonical correlation and discriminant analyses.

Prerequisites: EEES 6400 with a minimum grade of D-

EEES 6600 Foundations of Ecology

[3 credit hours]

This course is a thorough review of ecological concepts for graduate students including workshops exploring classic quantitative models in ecology.

Term Offered: Spring, Fall

EEES 6650 Statistical Modeling in Environmental Sciences

[4 credit hours]

Statistical modeling techniques applied to environmental problems, with an emphasis on multilevel modeling.

Prerequisites: EEES 6400 with a minimum grade of D-

Term Offered: Spring

EEES 6810 Writing For The Environmental Sciences

[3 credit hours]

Learn to write papers that get cited and proposals that get funded. This course focuses on building the fundamental skills required for effective scientific writing. Writing exercises focus on improving the clarity and persuasiveness of student theses, manuscripts, and proposals. This course is for anyone who wants to improve their science writing, is writing theses or proposals, or who may have to write on the job.

EEES 6930 Seminar

[1 credit hour]

Individual presentation and discussion of papers in the environmental sciences.

Term Offered: Spring, Fall

EEES 6960 Thesis Research

[1-15 credit hours]

Research on a particular geologic problem leading to a written thesis which must be presented and defended before a faculty committee.

Term Offered: Spring, Summer, Fall

EEES 6980 Special Topics

[1-4 credit hours]

A graduate course covering some aspect of environmental sciences not covered in the formal graduate curriculum. Students may repeat the course for credit as topics vary.

Term Offered: Spring, Summer, Fall

EEES 6990 Independent Study

[1-4 credit hours]

Student selects an approved subject for individual study and prepares a detailed report, or gives equivalent evidence of mastering of the selected subject. Taken only as S/U.

Term Offered: Spring, Summer, Fall

EEES 7150 Organic Evolution

[3 credit hours]

The modern theory of evolution is presented within a general framework of biological and geological evidence focusing on the fossil record, early biomolecules, protein synthesis, genetics, phylogeny and vertebrate evolution.

Term Offered: Spring

EEES 7730 Advanced Aquatic Ecology

[3 credit hours]

Advanced cross-disciplinary concepts in the ecology of aquatic environments emphasizing the biology of populations, communities and ecosystems. Includes a project on the application of principles and theory to help understand and solve a management problem in aquatic systems.

Prerequisites: EEES 3050 with a minimum grade of D-

Term Offered: Fall

EEES 7740 Advanced Aquatic Ecology Laboratory

[1 credit hour]

Laboratory exercises on the biology of aquatic populations, communities and ecosystems.

Corequisites: EEES 7730

Term Offered: Fall

EEES 7750 Advanced Conservation Biology

[4 credit hours]

Advanced cross-disciplinary concepts in the application of principles and theory to the study and maintenance of biological diversity in temperate, subtropical and tropical systems. Lectures, classroom discussion and readings.

Prerequisites: EEES 3050 with a minimum grade of D-

Term Offered: Spring

EEES 7790 Ecology Field Trip

[2-4 credit hours]

Field study of globally significant ecosystem(s), including analysis of structural and functional relationships within and between ecosystems. Opportunities for individual student projects.

Prerequisites: EEES 3050 with a minimum grade of D-

Term Offered: Spring, Summer

EEES 8250 Graduate Launch

[1 credit hour]

This course prepares graduate students for success by preparing individual study plans, research proposals and presentations, and launching bibliographic research.

Term Offered: Spring, Fall

EEES 8400 Biostatistics

[4 credit hours]

Application of statistical inference with environmental and ecological data, including estimation, testing of hypotheses, and statistical modeling.

Prerequisites: EEES 6400 with a minimum grade of C- and EEES 5160 with a minimum grade of C- or EEES 8400 with a minimum grade of C- and EEES 6160 with a minimum grade of C-

Term Offered: Spring

EEES 8500 Multivariate Geostatistics

[3 credit hours]

Application of multivariate statistical methods to scientific data. Emphasis is on applied regression, cluster, principal components, factor, correspondence, canonical correlation and discriminant analyses.

Prerequisites: EEES 8400 with a minimum grade of D-

EEES 8600 Foundations of Ecology

[3 credit hours]

This course is a thorough review of ecological concepts for graduate students including workshops exploring classic quantitative models in ecology.

Term Offered: Spring, Fall

EEES 8650 Statistical Modeling in Environmental Sciences

[4 credit hours]

Statistical modeling techniques applied to environmental problems, with an emphasis on multilevel modeling.

Prerequisites: EEES 6400 with a minimum grade of D- or EEES 8400 with a minimum grade of D-

Term Offered: Spring

EEES 8810 Writing For The Environmental Sciences

[3 credit hours]

Learn to write papers that get cited and proposals that get funded. This course focuses on building the fundamental skills required for effective scientific writing. Writing exercises focus on improving the clarity and persuasiveness of student theses, manuscripts, and proposals. This course is for anyone who wants to improve their science writing, is writing theses or proposals, or who may have to write on the job.

EEES 8930 Seminar In Ecology

[1 credit hour]

Presentation on research or current literature by graduate doctoral students, faculty or guest speakers.

Term Offered: Spring, Fall

EEES 8960 Doctoral Dissertation Research

[1-15 credit hours]

Research on a particular problem leading a written dissertation that must be presented and defended before a faculty committee.

Term Offered: Spring, Summer, Fall

EEES 8980 Advanced Topics In Ecology

[2-4 credit hours]

Course covering some aspect of ecology not covered in the formal graduate curriculum. Students may repeat the course for different topics.

Term Offered: Spring, Fall

EEES 8990 Advanced Readings In Ecology

[2-4 credit hours]

Faculty-directed readings or projects in a specific area of ecology.

Students may repeat the course for different topics.

Term Offered: Spring, Fall

Economics (ECON)

ECON 5050 Population Economics

[4 credit hours]

Interaction of economic changes and demographic variables; topics include birth rates, women's employment, marriage and divorce, aging and mortality, migration and overpopulation.

Prerequisites: (ECON 1150 (may be taken concurrently) with a minimum grade of D- or ECON 1200 (may be taken concurrently) with a minimum grade of D-) and ECON 2810 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring

ECON 5120 Monetary Theory

[4 credit hours]

Modern theories of financial markets, money and the theory of interest rates, money's role in general equilibrium and growth models and money's ability to cause inflation.

Prerequisites: ECON 2120 with a minimum grade of D- or ECON 3120 with a minimum grade of D- or ECON 3150 with a minimum grade of D-

Term Offered: Spring

ECON 5130 Monetary And Fiscal Policy

[3 credit hours]

Changes in the quantity of money and alternative government spending, taxation and debt policies, interrelations of fiscal and monetary policies in stabilization programs.

Prerequisites: ECON 3150 with a minimum grade of D- or ECON 4120 with a minimum grade of D-

Term Offered: Spring

ECON 5150 Advanced Macroeconomic Theory

[4 credit hours]

Theories of consumption and investment. Empirical estimates. Cycle and growth theory, multiplier-accelerator analysis and growth models. The theory and instruments of macroeconomic policy. Dynamic Macroeconomic Theory.

Prerequisites: ECON 3150 with a minimum grade of D-

Term Offered: Fall

ECON 5200 Advanced Microeconomic Theory

[4 credit hours]

Advanced topics in microeconomic theory, consumer behavior, the firm and market structure, distribution theory, equilibrium conditions, welfare economics.

Prerequisites: ECON 3200 with a minimum grade of D-

Term Offered: Fall

ECON 5240 Applied Environmental Economics

[3 credit hours]

The economics of the environment and natural resources using applied welfare theory, benefit-cost analyses, and nonmarket valuation. Examination of economic instruments, such as marketable permits, for solving environmental problems.

Prerequisites: ECON 1200 with a minimum grade of D- or ECON 3240 with a minimum grade of D- or ECON 3270 with a minimum grade of D-

Term Offered: Spring

ECON 5250 Labor Economics

[4 credit hours]

The labor market is studied. Topics include labor force characteristics, wage determination, hours and condition of work, human capital models, unemployment, labor union structure and growth, and modern labor legislation.

Prerequisites: ECON 1200 (may be taken concurrently) with a minimum grade of D- and ECON 2810 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring

ECON 5280 Energy Economics

[4 credit hours]

This course explores the theoretical and empirical perspectives on the demand and supply sides of the energy markets. This course starts with an energy outlook in both domestic and global scales. Then it discusses the natural resource modelling, energy supply, and the behavioral underpinnings of the energy demand. The course continues with current and historical aspects of national and global markets for oil, natural gas, coal, electricity, nuclear power, and renewable energy.

Prerequisites: ECON 1150 with a minimum grade of D- or ECON 1200 with a minimum grade of D-

ECON 5300 Mathematical Economics

[3 credit hours]

Development and applications of the mathematical tools used by economists. Differential and integral calculus, linear algebra, transcendental functions and series.

Prerequisites: ECON 1150 with a minimum grade of D- or ECON 1200 with a minimum grade of D-

Term Offered: Fall

ECON 5410 American Economic History

[3 credit hours]

Exploration of economic growth in America from pre-Columbian times to the present day. Analysis of economic institutions, technological change, industrialization and standards of living.

Prerequisites: ECON 1150 with a minimum grade of D- or ECON 1200 with a minimum grade of D- or ECON 1880 with a minimum grade of D-

ECON 5510 International Economics I

[4 credit hours]

Theory of international trade; commercial policy; costs and benefits, economic integration; trade and economic growth and balance of payments problems.

Prerequisites: ECON 1150 with a minimum grade of D-

Term Offered: Spring

ECON 5550 Economic Development

[3 credit hours]

Economic problems and policies in less-developed countries, including such topics as schooling, population growth, urbanization, landholding, income distribution, capital formation and development strategies.

Prerequisites: ECON 1150 with a minimum grade of D- or ECON 1200 with a minimum grade of D-

ECON 5620 Regional Economics

[3 credit hours]

Examination of regional income estimates and social accounts, regional multipliers, diverse location theories, supplemented with techniques of regional analysis.

Prerequisites: ECON 1200 with a minimum grade of D-

ECON 5660 Public Finance Economics

[4 credit hours]

An analysis of the government sector in the economy, government expenditures, taxation and borrowing and their effects on employment, price levels and growth.

Prerequisites: ECON 1200 with a minimum grade of D-

Term Offered: Spring

ECON 5750 Health Economics

[3 credit hours]

Economic analysis of health and health services. Topics currently include medical and allied manpower, hospitals, drugs and cost-benefit analysis of selected health programs.

Prerequisites: ECON 1200 (may be taken concurrently) with a minimum grade of D- and ECON 2810 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring

ECON 5810 Econometrics Models And Methods I

[4 credit hours]

An introduction to econometric methods and their use in quantitative analysis of economic theories. Diagnostics for problems typically encountered are detailed along with techniques for correcting these problems.

Prerequisites: MATH 2600 with a minimum grade of D- or ECON 2810 with a minimum grade of D- or PSY 2100 with a minimum grade of D- or SOC 3290 with a minimum grade of D- or GEPL 4420 with a minimum grade of D-

Term Offered: Fall

ECON 5820 Econometrics Models And Methods II

[4 credit hours]

An introduction to forecasting methods for economic time-series including Bayesian methods. Both theory and application of forecasting models and methods are covered.

Prerequisites: ECON 5810 with a minimum grade of D-

Term Offered: Spring

ECON 5830 Econometrics Models And Methods III

[3 credit hours]

Econometric methods that apply to survey, spatial and cross-sectional/ time-series data along with other specialized modeling techniques are covered.

Prerequisites: ECON 5810 with a minimum grade of D-

Term Offered: Spring, Fall

ECON 5980 Current Economic Problems

[3 credit hours]

Course content changes from time to time as important economic problems arise.

Prerequisites: ECON 1150 with a minimum grade of D- or ECON 1200 with a minimum grade of D-

ECON 6260 Behavioral Economics

[4 credit hours]

Economic analysis of decisions made by people. Topics include decision-making under risk and uncertainty, strategic decision-making, and experimental economics.

Prerequisites: ECON 1200 (may be taken concurrently) with a minimum grade of D- and ECON 2810 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring

ECON 6810 Seminar in Applied Econometrics I

[2 credit hours]

ECON 6820 Seminar in Applied Econometrics II

[2 credit hours]

ECON 6830 Seminar in Applied Econometrics III

[2 credit hours]

ECON 6900 Graduate Research

[1-7 credit hours]

ECON 6950 Capstone Project

[0 credit hours]

Demonstration of applied economic analysis through a Master's paper or equivalent.

Term Offered: Spring, Summer, Fall

ECON 6960 Thesis

[1-8 credit hours]

ECON 6990 Graduate Readings

[1-7 credit hours]

Education Technology and Performance Technology (ETPT)

ETPT 5000 Introduction To Educational Technology

[3 credit hours]

Introduces the field of Educational Technology and its relevant competencies. Examines current trends in Educational Technology.

Term Offered: Spring, Summer, Fall

ETPT 5100 Instructional Systems Design Principles

[3 credit hours]

An introduction to various ISD models and approaches for designing effective systems of instruction. Students will begin to acquire experience in the actual analysis, design, development and evaluation of instruction.

Term Offered: Spring, Summer

ETPT 5200 Computer Skills For Instructional Professionals

[3 credit hours]

Emphasizes developing skills in the use of this common productivity software and the use of computer technology in solving typical instructional problems.

ETPT 5210 Introduction To Multimedia And Web Design

[3 credit hours]

An introduction to the software, hardware and processes involved in the design and development of multimedia and Web-based instructional materials.

Term Offered: Fall

ETPT 5270 Instructional Video Production

[3 credit hours]

An introduction to all facets of producing video for use in various instructional settings.

ETPT 5550 Using The Internet In The Classroom

[3 credit hours]

An introduction to effective use of Internet resources in instruction.

Term Offered: Spring, Summer, Fall

ETPT 5950 Workshop In Educational Technology & Performance Technology

[1-5 credit hours]

Workshops are developed around topics of interest in all areas of educational technology and performance technology. Students should discuss specific content for each offering with educational technology faculty.

ETPT 5980 Special Topics In Educational Technology And Performance Technology

[1-5 credit hours]

Special offerings are of interest to graduate students in educational technology and performance technology. Students should discuss specific content for each offerings with ETPT faculty.

Term Offered: Spring, Summer, Fall

ETPT 5990 Graduate Independent Study In Educational Technology & Performance Technology

[1-5 credit hours]

Individual study designed to provide a student the opportunity to work individually on professional problems under the direction of educational technology & performance technology faculty.

Term Offered: Spring, Summer, Fall

ETPT 6110 Instructional Systems Design Applications

[3 credit hours]

Based on the knowledge and skills acquired in ETPT 6100/8100, students design, develop and evaluate multimedia-based instructional modules and systems.

Prerequisites: (ETPT 5100 with a minimum grade of D- and ETPT 5210 with a minimum grade of D-)

ETPT 6150 Designing Instruction For Diverse Learner Populations

[3 credit hours]

Focuses on instructional designer's role in assessing and addressing such differences as performance environment, culture, ethnicity, physical attributes, age/experience and socioeconomic factors to maximize learning.

Prerequisites: ETPT 5100 with a minimum grade of D-

Term Offered: Summer

ETPT 6220 Developing Computer-Based Instructional Materials

[3 credit hours]

Teaches design and development of instructional software, using multimedia development environments and strategies.

Prerequisites: (ETPT 5100 with a minimum grade of D- and ETPT 5210 with a minimum grade of D-)

ETPT 6230 Developing Web-Based Instructional Materials

[3 credit hours]

Students apply previously acquired skills in multimedia and Web design to develop instructional materials for delivery via the World Wide Web.

Prerequisites: ETPT 5100 with a minimum grade of D-

Term Offered: Spring

ETPT 6300 Technology Management In K-16 Education

[3 credit hours]

Provides teachers and technology coordinators with the knowledge and skills necessary to manage instructional computer laboratories and services in K-16 settings.

Term Offered: Summer, Fall

ETPT 6510 Teaching And Learning At A Distance

[3 credit hours]

Investigates various applications of distance learning for education and training.

Term Offered: Spring, Summer

ETPT 6710 Systemic Change Principles And Applications

[3 credit hours]

Examines the process of change in the diffusion and adoption of innovations in education as well as business and industry. Adoption theory is analyzed.

ETPT 6810 Research And Theory In Educational Technology And Performance Technology

[3 credit hours]

Investigates current major research trends and topics in various areas of educational technology and performance technology. Students develop and present a research proposal.

ETPT 6900 Master's Seminar In Educational Technology And Performance Technology

[3 credit hours]

This course is the culminating experience in the ETPT master's program. Students complete a project under supervision of an educational technology faculty member.

Prerequisites: (ETPT 5000 with a minimum grade of D- and ETPT 6110 with a minimum grade of D-)

Term Offered: Spring, Summer, Fall

ETPT 6930 Master's Research Project In Educational Technology And Performance Technology

[1-3 credit hours]

Student will complete an individual research project under the orientation of a committee of at least two faculty members in ETPT, ordinarily including the faculty adviser.

ETPT 6940 Practicum In Educational Technology And Performance Technology

[3 credit hours]

Students apply ETPT course work to solve an instructional and/or performance problem for a client organization under the supervision of educational technology faculty.

ETPT 6960 Master's Thesis In Educational Technology And Performance Technology

[3 credit hours]

Students who elect this option will complete a thesis under the direction of committee of at least two faculty members from ETPT, ordinarily including the faculty adviser.

Prerequisites: ETPT 5100 with a minimum grade of D-

ETPT 7000 Introduction To Educational Technology

[3 credit hours]

Introduces the field of educational technology and its relevant competencies. Examines current trends in educational technology.

Term Offered: Spring, Summer, Fall

ETPT 7100 Instructional Systems Design Principles

[3 credit hours]

An introduction to various ISD models and approaches for designing effective systems of instruction. Students will begin to acquire experience in the actual analysis, design, development and evaluation of instruction.

Term Offered: Spring, Summer

ETPT 7210 Introduction To Multimedia And Web Design

[3 credit hours]

An introduction to the software, hardware and processes involved in the design and development of multimedia and Web-based instructional materials.

Term Offered: Fall

ETPT 7270 Instructional Video Production

[3 credit hours]

An introduction to all facets of producing video for use in various instructional settings.

Term Offered: Summer

ETPT 7550 Using The Internet In The Classroom

[3 credit hours]

An introduction to effective use of Internet resources in instruction.

Term Offered: Spring, Fall

ETPT 7940 Specialist Practicum In Educational Technology And Performance Technology

[3 credit hours]

Observation and supervised experience in an appropriate setting. Students will be assigned to work as interns under the joint supervision of school and University personnel.

Prerequisites: ETPT 7100 with a minimum grade of D-

ETPT 7980 Special Topics In Educational Technology And Performance Technology

[1-5 credit hours]

Special offerings are of interest to graduate students in educational technology and performance technology. Students should discuss specific content for each offerings with ETPT faculty.

Term Offered: Spring, Summer, Fall

ETPT 7990 Independent Study in ETPT

[1-5 credit hours]

Individual study designed to provide a student the opportunity to work individually on professional problems under the direction of Educational Technology faculty.

Term Offered: Spring, Summer, Fall

ETPT 8110 Instructional Systems Design Applications

[3 credit hours]

Based on the knowledge and skills acquired in ETPT 6100/8100, students design, develop and evaluate multimedia-based instructional modules and systems.

Prerequisites: (ETPT 7100 with a minimum grade of D- and ETPT 7210 with a minimum grade of D-)

ETPT 8150 Designing Instruction For Diverse Learner Populations

[3 credit hours]

Focuses on instructional designer's role in assessing and addressing such differences as performance environment, culture, ethnicity, physical attributes, age/experience and socioeconomic factors to maximize learning.

Prerequisites: ETPT 7100 with a minimum grade of D-

Term Offered: Summer

ETPT 8220 Developing Computer-Based Instructional Materials

[3 credit hours]

Teaches design and development of instructional software, using multimedia development environments and strategies.

Prerequisites: (ETPT 7100 with a minimum grade of D- and ETPT 7210 with a minimum grade of D-)

ETPT 8230 Developing Web-Based Instructional Materials

[3 credit hours]

Students apply previously acquired skills in multimedia and Web design to develop instructional materials for delivery via the World Wide Web.

Prerequisites: (ETPT 7100 with a minimum grade of D- and ETPT 7210 with a minimum grade of D-)

Term Offered: Spring

ETPT 8300 Technology Management In K-16 Education

[3 credit hours]

Provides teachers and technology coordinators with the knowledge and skills necessary to manage instructional computer laboratories and services in K-16 settings.

Term Offered: Summer, Fall

ETPT 8510 Teaching And Learning At A Distance

[3 credit hours]

Investigates various applications of distance learning systems for education and training.

Term Offered: Spring, Summer

ETPT 8710 Systemic Change Principles And Applications

[3 credit hours]

Examines the process of change in the diffusion and adoption of innovations in education as well as business and industry. Adoption theory is analyzed.

ETPT 8810 Research And Theory In Educational Technology And Performance Technology

[3 credit hours]

Investigates current major research trends and topics in various areas of educational technology and performance technology. Students develop and present a research proposal.

Term Offered: Summer, Fall

ETPT 8900 Doctoral Seminar In Educational Technology And Performance Technology

[3 credit hours]

This seminar will consider problems and provide advanced study for doctoral students in educational technology and performance technology.

Prerequisites: ETPT 7100 with a minimum grade of D-

ETPT 8920 Interdisciplinary Seminar In Educational Technology And Performance Technology

[3 credit hours]

Considers issues and problems in various areas of educational technology and performance technology. Intended for advanced ETPT doctoral students.

ETPT 8930 Advanced Research In Educational Technology And Performance Technology

[1-5 credit hours]

Individual study is designed to provide the doctoral student opportunity to work individually on professional problems under the direction of educational technology and performance technology faculty.

Term Offered: Spring

ETPT 8940 Practicum In Educational Technology And Performance Technology

[3 credit hours]

Students apply ETPT course work to solve an instructional and/or performance problem for a client organization under the supervision of educational technology faculty.

Term Offered: Fall

ETPT 8960 Dissertation In Educational Technology And Performance Technology

[1-12 credit hours]

Original research in an area of educational technology and performance technology.

Term Offered: Spring, Summer, Fall

Educational Administration and Supervision (EDAS)

EDAS 5950 Workshop In Educational Administration

[3 credit hours]

Topical workshops, based on practical application of skills and knowledge, are intended for in-service educational professionals. Credit may be applied to doctoral degrees upon approval of the committee.

EDAS 5980 Special Topics In Educational Administration

[3 credit hours]

Courses, based on issues, topics and concerns of educational administrators for the real world. Credit may be applied to degree programs upon approval of the adviser or committee.

Term Offered: Fall

EDAS 6000 The Individual In Organizations

[3 credit hours]

An overview of the individual in educational administration, i.e., as visionary leader, organizational leader, instructional leader and policy/community leader. Opportunities for personal assessment are provided as students explore critical educational issues in schools.

Term Offered: Spring, Fall

EDAS 6010 Leadership in School Curriculum

[3 credit hours]

An in-depth analysis of curriculum leadership to improve teacher classroom performance and to ensure that the district curriculum and instructional programs are aligned and operationalized to provide full access and opportunity to all students and student groups to meet district goals.

Term Offered: Spring, Fall**EDAS 6020 Instructional Leadership and Supervision**

[3 credit hours]

An in-depth analysis of instructional leadership and principles of supervision which promote improved instruction. Emphasis is on teacher performance evaluation, curriculum management and strategies for creating a philosophical shift from a special education/regular education dichotomy to a universal education paradigm.

Term Offered: Fall**EDAS 6030 Developing Effective Learning Environments**

[3 credit hours]

An exploration of group dynamics/processes and the intrapersonal and principles of high performing teams and being an effective leader. Development of effective action plans to improve school climate/culture and the learning environment is explored using problem-based learning.

EDAS 6110 Legal Aspects Of School Administration

[3 credit hours]

This course provides students an opportunity to analyze legal frameworks affecting the organization and administration of public schools, including special education law, church-state issues, pupil rights, staff-student relationships, conditions of employment, teacher organizations, tort liability, school finance, and desegregation. Participants will examine the basic legal structure for education, case and statutory law, legal principles, and provisions relevant to administration.

Term Offered: Spring, Summer**EDAS 6150 The Administrative Experience**

[3 credit hours]

Emphasis is on blending current theory and practice by examining the use of data to guide school improvement for students. The collection of meaningful data for focused goal setting to be employed at the district, building and classroom levels is operationalized.

Term Offered: Spring**EDAS 6190 Integrated Experiences: Practicum**

[3 credit hours]

Working in a guided reflective practice environment, the student will apply knowledge gained in previous coursework to working in school building operations, and to developing a professional portfolio.

Term Offered: Spring, Fall**EDAS 6200 Continuous Improvement Of Schools**

[3 credit hours]

Course addresses current Pre K-16 national and regional reform agendas, relating them to systemic changes in policies, governance and articulation of learner outcomes in local settings.

EDAS 6210 Leadership In Diverse Settings

[3 credit hours]

Issues of multicultural, cross-cultural, race, gender, and ethnicity in school settings are examined in diverse settings in order to develop leaders who can apply theoretical frameworks and analytical skills to improve educational performance in local, urban, suburban, rural and global setting.

EDAS 6220 Administration Of Special Programs

[3 credit hours]

This course examines the administration of special programs that operate at the district and school level with particular focus on Special Education leadership issues. Title I, ESL, vocational education, guidance, and athletic programs are also explored.

EDAS 6230 Community And Schools

[3 credit hours]

This course explores the unique relationship between communities and schools. The democratic social structure is examined through a theoretical critique of strategies that increase citizen involvement in and build support for schools.

Term Offered: Spring, Summer, Fall**EDAS 6240 Developing Learning Organizations In Educational Settings**

[3 credit hours]

Course introduces the theories, techniques and practices of planned organizational learning. Students examine the philosophical, theoretical and practical differences of organizational development as interventionist, consultative and collaborative processes in charter schools.

EDAS 6320 School Business Management

[3 credit hours]

The purpose of the course is to involve students in an analysis of the role and functions of school business management. Participants will analyze data in each topical area of school business management.

EDAS 6330 Collective Bargaining And Dispute Resolution

[3 credit hours]

The purpose of the course is to examine the issues that arise before, during and after the collective bargaining process in the public sector, including resolving labor disputes and grievances.

EDAS 6350 Computers In Educational Administration Decision Making

[3 credit hours]

This course allows the development for increased decision making based on local, state and national retrievable data concerning learning, achievement, efficiency and effectiveness of resource allocations.

EDAS 6360 Personnel Management And Contract Administration In Education

[3 credit hours]

Course provides insight into the purposes, policies and processes of personnel administration and contract administration in public education, including recruitment, hiring, induction, evaluation, compensation and development.

EDAS 6380 Planning Educational Facilities For Learning

[3 credit hours]

This course examines the issues surrounding planning, building and maintaining educational facilities appropriate for maximizing learning. Included is an examination of legal, health and safety requirements.

EDAS 6420 Micropolitics Of School Communities

[3 credit hours]

Course focus is on the day to day politics of school work that increase the complexities of educating. Using case studies and problem-based learning, students will practice skills that support democratic practices in school communities.

Term Offered: Spring, Fall

EDAS 6430 Legal Aspects Of Educational Administration

[3 credit hours]

This course provides students a background in legislation and court decisions that affect the administration of public schools. Students will investigate legal problem areas in schools.

EDAS 6440 Equity Issues In Educational Finance And Economics

[3 credit hours]

Analysis of educational finance and economic issues pertinent to school districts. Analysis of various funding models at the local, state and national level are studied employing various measures of equity. Building/District level school finance and resource management strategies are examined.

Term Offered: Spring, Summer

EDAS 6900 Master's Seminar In Educational Administration And Supervision

[3 credit hours]

Examination and reflection on the practice of research in Educational Leadership.

EDAS 6920 Master's Project In Educational Administration

[1-3 credit hours]

Open to graduate students who elect the completion of a research project in fulfilling the research requirements of the master's program.

Term Offered: Spring, Summer, Fall

EDAS 6960 Master's Thesis In Educational Administration

[1-3 credit hours]

Open to graduate students who elect the completion of a research thesis in fulfilling the research requirements of the master's program.

Term Offered: Spring, Summer, Fall

EDAS 6990 Individual Study In Educational Administration - Master's

[1-3 credit hours]

Open to graduate students who wish to pursue individual study on professional problems in EDAS under the direction of an EDAS faculty member.

Term Offered: Spring, Summer

EDAS 7920 Specialist Project In Educational Administration

[1-3 credit hours]

Open to graduate students to fulfill the completion of a research project in fulfilling the research requirements of the specialist program.

Term Offered: Spring, Summer, Fall

EDAS 7950 Workshop In Educational Administration

[3 credit hours]

Topical workshops, based on practical application of skills and knowledge, are intended for in-service educational professionals. Credit may be applied to doctoral degrees upon approval of the committee.

EDAS 7980 Special Topics In Educational Administration

[3 credit hours]

Courses, based on issues, topics and concerns of educational administrators for the real world. Credit may be applied to degree programs upon approval of the adviser or committee.

Term Offered: Fall

EDAS 7990 Independent Study In Education Administration

[1-3 credit hours]

Individual study on professional problems in EDAS under the direction of a EDAS faculty member.

Term Offered: Spring, Summer, Fall

EDAS 8000 The Individual In Organizations

[3 credit hours]

An overview of the individual in educational administration, i.e., as visionary leader, organizational leader, instructional leader and policy/community leader. Opportunities for personal assessment are provided as students explore critical educational issues in schools.

Term Offered: Spring, Fall

EDAS 8010 Leadership in School Curriculum

[3 credit hours]

An in-depth analysis of curriculum leadership to improve teacher classroom performance and to ensure that the district curriculum and instructional programs are aligned and operationalized to provide full access and opportunity to all students and student groups to meet district goals.

Term Offered: Spring, Fall

EDAS 8020 Instructional Leadership

[3 credit hours]

An in-depth analysis of instructional leadership and principles of supervision which promote improved instruction. Emphasis is on teacher performance evaluation, curriculum management and strategies for creating a philosophical shift from a special education/regular education dichotomy to a universal education paradigm.

Term Offered: Fall

EDAS 8030 Developing Effective Learning Environments

[3 credit hours]

An exploration of group dynamics/processes and the intrapersonal and principles of high performing teams and being an effective leader. Development of effective action plans to improve school climate/culture and the learning environment is explored using problem-based learning.

EDAS 8110 Legal Aspects Of School Administration

[3 credit hours]

This course provides students an opportunity to analyze legal frameworks affecting the organization and administration of public schools, including special education law, church-state issues, pupil rights, staff-student relationships, conditions of employment, teacher organizations, tort liability, school finance, and desegregation. Participants will examine the basic legal structure for education, case and statutory law, legal principles, and provisions relevant to administration.

Term Offered: Spring, Summer

EDAS 8150 The Administrative Experience

[3 credit hours]

Emphasis is on blending current theory and practice by examining the use of data to guide school improvement for students. The collection of meaningful data for focused goal setting to be employed at the district, building and classroom levels is operationalized.

Term Offered: Spring**EDAS 8190 Integrated Experiences In Education Administration**

[3 credit hours]

Working in a guided reflective practice environment, the student will apply knowledge gained in previous coursework to working in school building operations.

Term Offered: Spring, Fall**EDAS 8200 Continuous Improvement Of Schools**

[3 credit hours]

Course addresses current Pre K-16 national and regional reform agendas for charter schools, relating them to systemic changes in policies, governance and articulation of learner outcomes in local settings.

EDAS 8210 Leadership In Diverse Settings

[3 credit hours]

Issues of multicultural, cross-cultural, race, gender, and ethnicity in school settings are examined in diverse settings in order to develop leaders who can apply theoretical frameworks and analytical skills to improve educational performance in local, urban, suburban, rural and global setting

EDAS 8220 Administration Of Special Programs

[3 credit hours]

This course examines the administration of special programs that operate at the district and school level with particular focus on Special Education leadership issues. Title I, ESL, vocational education, guidance, and athletic programs are also explored.

Term Offered: Summer**EDAS 8230 Community And Schools**

[3 credit hours]

This course explores the unique relationship between communities and schools. The democratic social structure is examined through a theoretical critique of strategies that increase citizen involvement in and build support for schools.

Term Offered: Spring, Summer, Fall**EDAS 8240 Developing Learning Organizations In Educational Settings**

[3 credit hours]

Course introduces the theories, techniques and practices of planned organizational learning. Students examine the philosophical, theoretical and practical differences of organizational development as interventionist, consultative and collaborative processes in charter schools.

EDAS 8300 Integrate Experiences: Policies In Action

[3 credit hours]

This course analyses policies employed by schools and school districts in providing for education of students and services to the school community. On-site fieldwork is required.

Term Offered: Spring, Fall**EDAS 8310 School District Leadership**

[3 credit hours]

Analysis of duties, roles and responsibilities of local school district leadership. Specific competencies of building school support, planning, curriculum development, personnel, legal, financial and planning are covered.

EDAS 8320 School Business Management

[3 credit hours]

The purpose of the course is to involve students in an analysis of the role and functions of school business management. Participants will analyze data in each topical area of school business management.

EDAS 8330 Collective Bargaining And Dispute Resolution

[3 credit hours]

The purpose of the course is to examine the issues that arise before, during and after the collective bargaining process in the public sector, including resolving labor disputes and grievances.

EDAS 8350 Computers In Educational Administration Decision Making

[3 credit hours]

This course allows the development for increased decision making based on local, state and national retrievable data concerning learning, achievement, efficiency and effectiveness of resource allocations.

EDAS 8360 Personnel Management And Contract Administration In Education

[3 credit hours]

Course provides insight into the purposes, policies and processes of personnel administration and contract administration in public education, including recruitment, hiring, induction, evaluation, compensation and development.

EDAS 8380 Planning Educational Facilities For Learning

[3 credit hours]

This course examines the issues surrounding planning, building and maintaining educational facilities appropriate for maximizing learning. Included is an examination of legal, health and safety requirements.

EDAS 8420 Micropolitics Of School Communities

[3 credit hours]

Course focus is on the day to day politics of school work that increase the complexities of educating. Using case studies and problem-based learning, students will practice skills that support democratic practices in school communities.

Term Offered: Spring, Fall**EDAS 8430 Legal Aspects Of Educational Administration**

[3 credit hours]

This course provides students a background in legislation and court decisions that affect the administration of public schools. Students will investigate legal problem areas in schools.

EDAS 8440 Equity Issues In Educational Finance And Economics

[3 credit hours]

Analysis of educational finance and economic issues pertinent to school districts. Analysis of various funding models at the local, state and national level are studied employing various measures of equity. Building/District level school finance and resource management strategies are examined.

Term Offered: Spring, Summer

EDAS 8600 Leadership And Organizational Theory

[3 credit hours]

An analysis of leadership and organizational theory as influences on current thinking about and approaches to educational administration. Emphasis is on understanding dominant themes that impact administrative theory.

Term Offered: Fall

EDAS 8610 Organizational Behavior

[3 credit hours]

This course integrates the educational and management theories and knowledge bases on leadership, power, motivation and change to understand the internal and external dynamics of people in educational organizations.

Term Offered: Spring

EDAS 8620 Politics And Policy Analysis And Development

[3 credit hours]

This course examines the issues involved in policy formation and analysis along with the political process of public education. Local, intermediate, state and federal levels are considered.

Term Offered: Spring

EDAS 8640 Leading Systems Change

[3 credit hours]

Course explores processes and practices used by educators to redesign preK-12 educational systems to improve outcomes for students. Content examines processes of moving espoused organizational values to actionable knowledge. Organizational Development recommended.

Term Offered: Spring, Fall

EDAS 8650 Interdisciplinary Perspectives In Educational Administration

[3 credit hours]

Seminar focused on interdisciplinary examination of critical issues in educational administration. Multiple theoretical lenses from sociology, political science, economics and science are used to address educational issues.

EDAS 8660 Critical Analysis Of Inquiry In Schools

[3 credit hours]

Concepts in understanding and evaluating contemporary educational research, addressing both quantitative and qualitative research methods. The focus is on the knowledge base school leaders must have to evaluate, use and initiate educational research in school settings.

Term Offered: Spring, Fall

EDAS 8930 Doctoral Seminar In Educational Administration And Supervision

[3 credit hours]

The course examines research findings and research methodology in Educational Administration and Supervision as they are pertinent to development of dissertation proposals. Dissertation proposal development is encouraged.

Term Offered: Spring, Fall

EDAS 8940 Educational Administration Internship

[3 credit hours]

An advanced field/seminar experience for doctoral students with fieldwork at the school system level. Fieldwork employs application of graduate coursework under supervision by the school system and the university.

EDAS 8960 Doctoral Dissertation In Educational Administration And Supervision

[1-12 credit hours]

Production of an original, scholarly product in the area Educational Administration and Supervision. Dissertation credit may total not less than 12 semester hours.

Term Offered: Spring, Summer, Fall

Educational Psychology (EDP)

EDP 5110 Advanced Educational Psychology

[3 credit hours]

A graduate level introduction to the field of educational psychology. Instruction will cover fundamentals of learning, motivation, cognition, individual differences and instructional applications as well as a research-oriented approach to answering scientific questions.

Term Offered: Spring, Summer, Fall

EDP 5120 Alternative Approaches To Discipline

[3 credit hours]

Reviews a variety of models, constructs and methodologies for addressing behavior and discipline problems, especially within school and family settings. Emphases are placed on individual and group approaches to discipline.

EDP 5210 Child Behavior And Development

[3 credit hours]

Current theory and research on physical, cognitive, social, emotional and personality development are examined and used as the basis for identifying and solving problems related to child growth and development.

Term Offered: Spring, Summer, Fall

EDP 5220 Adolescent Behavior And Development

[3 credit hours]

Current theory and research on physical, cognitive, social, emotional and personality development are examined and used as the basis for identifying and solving problems related to adolescent growth and development.

Term Offered: Spring, Summer, Fall

EDP 5230 Adult Development

[3 credit hours]

Emphasizes classical and modern theories of adulthood from a critical perspective, as well as applications of research on cognitive, physical, personality and social development from early adulthood through old age.

Term Offered: Summer, Fall

EDP 5240 Applied Child and Adolescent Development

[3 credit hours]

The course will address issues that impact school and mental health professionals. For example K12 teachers, school psychologists, clinical psychologists, social workers, school counselors, nurses, SROs. Theory and research on physical, cognitive, social, and emotional development are examined and used as the bases for understanding child and adolescent development. Special attention will be focused on practical application.

Term Offered: Spring, Summer

EDP 5310 Issues And Innovations In Learning And Instruction

[3 credit hours]

Reviews emergent theory, principles and research findings on cognition and learning and applies these concepts to developing instructional experiences and conditions for optimizing classroom learning and performance.

Term Offered: Spring, Fall**EDP 5320 Instructional Psychology**

[3 credit hours]

Theory and research in psychology that contributes to effective instruction. Topics include varieties and conditions of learning, information processing, learning analysis, constructivism, mastery learning, cooperative learning, norm & criterion-referenced measurement.

Term Offered: Spring**EDP 5330 Behavior Management**

[3 credit hours]

Theory and research related to behavioral and cognitive approaches to behavior management. Students will carry out research-based behavior management projects requiring behavioral analyses, observation, program design, development and evaluation.

Term Offered: Fall**EDP 5950 Workshop In Educational Psychology**

[3 credit hours]

Each workshop is developed around a topic of interest and concern to in-service teachers and other educational personnel. Practical application of workshop topics will be emphasized.

Term Offered: Summer, Fall**EDP 6120 School Violence Theory, Prevention, and Intervention**

[3 credit hours]

The seminar focuses on the assessment, management, and prevention of school violence. The role of nature and nurture will be explored, as will society's role (e.g., teachers, school administrators) in assessment, prevention and intervention. The forms of violence to be addressed are child abuse, gang activity, bullying, harassment, and targeted violence.

Term Offered: Spring, Summer, Fall**EDP 6130 Human Coping In Adulthood**

[3 credit hours]

Considers models, research methodologies and constructs on coping in relation to a range of circumstances during the adult years. Emphasis is placed on coping behavior within an ecological context.

Term Offered: Spring**EDP 6140 Motivation Theory And Application**

[3 credit hours]

Graduate-level study of conceptions of motivation in various settings. Emphasis is on understanding major concepts and principles, as well on application to such settings as classroom, counseling and industry.

Prerequisites: EDP 5110 with a minimum grade of D- or EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D- or EDP 5230 with a minimum grade of D- or EDP 7110 with a minimum grade of D- or EDP 7230 with a minimum grade of D-

Term Offered: Spring**EDP 6150 CULTURAL PERSPECTIVES IN LEARNING AND DEVELOPMENT**

[3 credit hours]

This course aims to develop a broader understanding of the role of culture in psychological processes and the implications of such psychological understanding for a culturally diverse society.

Term Offered: Spring, Fall**EDP 6160 Self and Identity**

[3 credit hours]

The Self and Identity course examines the content, structure, organization of self, self-processes, both implicit and explicit, involving cognition, evaluation, motivation, and emotional dimensions of the development of selfhood. The course also examines the meaning of personal and interpersonal identities including cultural, ethnic, and gender identity and the role of context in shaping these multiple identities. The implications of the readings for educators.

Prerequisites: EDP 5110 with a minimum grade of C or EDP 5120 with a minimum grade of C or EDP 5220 with a minimum grade of C or EDP 5230 with a minimum grade of C or PSY 4500 with a minimum grade of C or PSY 4700 with a minimum grade of C

EDP 6190 Seminar In Educational Psychology

[3 credit hours]

The collaborative study of a specific topic in educational psychology by a group of advanced students under the direction of one or more professors.

Term Offered: Spring, Summer, Fall**EDP 6240 Theories Of Development**

[3 credit hours]

Analysis and evaluation of theories of development with emphasis on the philosophical and psychological evolutionary history of the theories and their usefulness for individuals in the helping professions.

Prerequisites: EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D-

EDP 6250 Social Development

[3 credit hours]

Critical examination of theory and research on social behaviors such as attachment, aggression and prosocial behavior, including their causes, how they affect the person and how they change with age.

Prerequisites: EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D-

Term Offered: Spring, Fall**EDP 6260 Research Methods In Child And Adolescent Development**

[3 credit hours]

Builds upon basic understanding of development through direct experiences in child study. This course provides individual/small group experiences in the design, implementation and written/oral presentation of original research.

Prerequisites: EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D-

Term Offered: Fall**EDP 6270 Parenting: Theory And Research**

[3 credit hours]

Analysis and evaluation of the research on parenting across a variety of sociocultural contexts.

Prerequisites: EDP 5320 with a minimum grade of D-

EDP 6340 Theories Of Learning

[3 credit hours]

Intensive inquiry into the study of learning with particular emphasis on more recent theories. Theory application in a wide variety of settings will also be stressed.

EDP 6350 Advanced Topics In Cognition And Instruction

[3 credit hours]

Theory and research on cognition related to learning/instruction, to include study of expertise, knowledge learned from experience, analysis of ill-structured domains, tacit knowledge, and knowledge representation.

Prerequisites: (EDP 5110 with a minimum grade of D- and EDP 5320 with a minimum grade of D-) or (EDP 7110 with a minimum grade of D- and EDP 7320 with a minimum grade of D-)

EDP 6360 Thinking And Reasoning In School Contexts

[3 credit hours]

Analysis of theory, research policy, and practice about thinking and reasoning in school subjects and school learning in democratic societies.

Term Offered: Spring, Fall

EDP 6370 News Media Literacy, Society, and the Mind

[3 credit hours]

The course provides students with a theoretical and empirical foundation on psychological concepts and processes (e.g., critical thinking, personal epistemology, and belief systems), to understand the role of the news media (e.g., news print/broadcast, social media, and media technology) for the public sphere, citizenship, democracy, and peace. In their area of studies, students will learn how to develop a competency based news media literacy model that enables citizens to be/come critical and effective news media consumers.

EDP 6380 Prevention Through Postvention in Targeted Violence Terrorism and Suicide

[3 credit hours]

This course provides information on key aspects of prevention, intervention, active response, and postvention applied to incidents of targeted violence such as campus shootings, terrorism, and suicide. The content is based on government reports, journal articles, and post incident analyses. Emphasis is placed on practical application of the course content. The course is relevant to those pursuing degrees in educational psychology, psychology, counselor education, educational administration, higher education, criminal justice and related fields.

EDP 6960 Master's Thesis In Educational Psychology

[1-3 credit hours]

A formal, independent study culminating in a written discourse that advances our understanding of educational psychology.

Term Offered: Spring, Summer, Fall

EDP 6980 Master's Project In Educational Psychology

[1-3 credit hours]

A formal, independent project applying principles of educational psychology to solve a particular problem and culminating in a written discourse.

Term Offered: Spring, Summer, Fall

EDP 6990 Independent Study In Educational Psychology

[1-3 credit hours]

Directed study of a current topic in educational psychology. The student meets with the instructor at arranged intervals without formal classes.

Term Offered: Spring, Fall

EDP 7110 Advanced Educational Psychology

[3 credit hours]

A graduate level introduction to the field of educational psychology. Instruction will cover fundamentals of learning, motivation, cognition, individual differences and instructional applications as well as a research-oriented approach to answering scientific questions.

Term Offered: Spring, Summer, Fall

EDP 7230 Adult Development

[3 credit hours]

Emphasizes classical and modern theories of adulthood from a critical perspective, as well as applications of research on cognitive, physical, personality and social development from early adulthood through old age.

Term Offered: Summer, Fall

EDP 7240 Applied Child and Adolescent Development

[3 credit hours]

The course will address issues that impact school and mental health professionals, for example K12 teachers, school psychologists, clinical psychologists, social workers, school counselors, nurses, and SROs. Theory and research on physical, cognitive, social, and emotional development are examined and used as the basis for understanding child and adolescent development. Special attention will be focused on practical application.

Term Offered: Spring, Summer

EDP 7310 Issues And Innovations In Learning And Instruction

[3 credit hours]

Reviews emergent theory, principles and research findings on cognition and learning and applies these concepts to developing instructional experiences and conditions for optimizing classroom learning and performance.

Term Offered: Spring, Fall

EDP 7320 Instructional Psychology

[3 credit hours]

Theory and research in psychology that contributes to effective instruction. Topics include varieties and conditions of learning, information processing, learning analysis, constructivism, mastery learning, cooperative learning, norm & criterion-referenced measurement.

Term Offered: Spring

EDP 7330 Behavior Management

[3 credit hours]

Theory and research related to behavioral and cognitive approaches to behavior management. Students will carry out research-based behavior management projects requiring behavioral analyses, observation, program design, development and evaluation.

Term Offered: Fall

EDP 7950 Workshop In Educational Psychology

[3 credit hours]

Each workshop is developed around a topic of interest and concern to in-service teachers and other educational personnel. Practical application of workshop topics will be emphasized.

Term Offered: Summer, Fall

EDP 8120 School Violence Theory, Prevention, and Intervention

[3 credit hours]

The seminar focuses on the assessment, management, and prevention of school violence. The role of nature and nurture will be explored, as will society's role (e.g., teachers, school administrators) in assessment, prevention and intervention. The forms of violence to be addressed are child abuse, gang activity, bullying, harassment, and targeted violence.

Term Offered: Spring, Summer, Fall

EDP 8130 Human Coping In Adulthood

[3 credit hours]

Considers models, research methodologies and constructs on coping in relation to a range of circumstances during the adult years. Emphasis is placed on coping behavior within an ecological context.

Term Offered: Spring

EDP 8140 Motivation Theory And Application

[3 credit hours]

Graduate-level study of conceptions of motivation in various settings.

Emphasis is on understanding major concepts and principles, as well on application to such settings as classroom, counseling and industry.

Prerequisites: EDP 5110 with a minimum grade of D- or EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D- or EDP 5230 with a minimum grade of D- or EDP 7110 with a minimum grade of D- or EDP 7230 with a minimum grade of D-

Term Offered: Spring

EDP 8150 CULTURAL PERSPECTIVES IN LEARNING AND DEVELOPMENT

[3 credit hours]

This course aims to develop a broader understanding of the role of culture in psychological processes and the implications of such psychological understanding for a culturally diverse society.

Term Offered: Spring, Fall

EDP 8160 Self and Identity

[3 credit hours]

The Self and Identity course examines the content, structure, organization of self, self-processes, both implicit and explicit, involving cognition, evaluation, motivation, and emotional dimensions of the development of selfhood. The course also examines the meaning of personal and interpersonal identities including cultural, ethnic, and gender identity and the role of context in shaping these multiple identities. The implications of the readings for educators.

Prerequisites: EDP 5110 with a minimum grade of C or EDP 5120 with a minimum grade of C or EDP 5220 with a minimum grade of C or EDP 5230 with a minimum grade of C or PSY 4500 with a minimum grade of C or PSY 4700 with a minimum grade of C

EDP 8180 Interdisciplinary Seminar In Foundations Of Education

[1 credit hour]

The proseminar will enable doctoral students to improve their understanding of the research process. Students will learn to ask research questions, choose alternative methodologies and interpret the validity of conclusions.

EDP 8190 Seminar In Educational Psychology

[3 credit hours]

The collaborative study of a specific topic in educational psychology by a group of advanced students under the direction of one or more professors.

Term Offered: Spring, Summer, Fall

EDP 8240 Theories Of Development

[3 credit hours]

Analysis and evaluation of theories of development with emphasis on the philosophical and psychological evolutionary history of the theories and their usefulness for individuals in the helping professions.

Prerequisites: EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D-

EDP 8250 Social Development

[3 credit hours]

Critical examination of theory and research on social behaviors such as attachment, aggression and prosocial behavior, including their causes, how they affect the person and how they change with age.

Prerequisites: EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D-

Term Offered: Spring, Fall

EDP 8260 Research Methods In Child And Adolescent Development

[3 credit hours]

Builds upon basic understanding of development through direct experiences in child study. This course provides individual/small group experiences in the design, implementation and written/oral presentation of original research.

Prerequisites: EDP 5210 with a minimum grade of D- or EDP 5220 with a minimum grade of D-

Term Offered: Spring

EDP 8270 Parenting: Theory And Research

[3 credit hours]

Analysis and evaluation of the research on parenting across a variety of sociocultural contexts.

EDP 8340 Theories Of Learning

[3 credit hours]

Intensive inquiry into the study of learning with particular emphasis on more recent theories. Theory application in a wide variety of settings will also be stressed.

EDP 8350 Advanced Topics In Cognition And Instruction

[3 credit hours]

Theory and research on cognition related to learning/instruction, to include study of expertise, knowledge learned from experience, analysis of ill-structured domains, tacit knowledge, and knowledge representation.

Prerequisites: (EDP 5110 with a minimum grade of D- and EDP 5320 with a minimum grade of D-) or (EDP 7110 with a minimum grade of D- and EDP 7320 with a minimum grade of D-)

EDP 8360 Thinking And Reasoning In School Contexts

[3 credit hours]

Analysis of theory, research policy, and practice about thinking and reasoning in school subjects and school learning in democratic societies.

Term Offered: Spring, Fall

EDP 8370 News Media Literacy, Society, and the Mind

[3 credit hours]

The course provides students with a theoretical and empirical foundation on psychological concepts and processes (e.g., critical thinking, personal epistemology, and belief systems), to understand the role of the news media (e.g., news print/broadcast, social media, and media technology) for the public sphere, citizenship, democracy, and peace. In their area of studies, students will learn how to develop a competency based news media literacy model that enables citizens to be/come critical and effective news media consumers.

EDP 8380 Prevention through Postvention of Targeted Violence, Terrorism and Suicide

[3 credit hours]

This course provides information on key aspects of prevention, intervention, active response, and postvention applied to incidents of targeted violence such as campus shootings, terrorism, and suicide. The content is based on government reports, journal articles, and post incident analyses. Emphasis is placed on practical application of the course content. The course is relevant to those pursuing degrees in educational psychology, psychology, counselor education, educational administration, higher education, criminal justice, and related fields.

EDP 8960 Dissertation Research In Educational Psychology

[1-12 credit hours]

A formal, independent study culminating in a written discourse that advances our understanding of educational psychology.

Term Offered: Spring, Summer, Fall

EDP 8990 Independent Study In Educational Psychology

[1-6 credit hours]

Directed study of a current topic in educational psychology. The student meets with the instructor at arranged intervals without formal classes.

Term Offered: Spring, Summer, Fall

Electrical Engineering and Computer Science (EECS)

EECS 5120 Introduction to Fuzzy Systems and Applications

[3 credit hours]

Introduction to Fuzzy Rule Based Intelligent Systems. Basic concepts of Fuzzy logic, Fuzzy Sets, Fuzzy Arithmetic, Fuzzy Relations, Fuzzy Graphs, Approximate Reasoning and Fuzzy Implication. Applications in Real World Domains.

Term Offered: Spring, Fall

EECS 5130 Digital Design

[4 credit hours]

The design of digital systems, design methodologies, hardware description language such as VHDL, behavioral-, dataflow- and structural-level description of digital systems. Implementation technologies including PLDs and FPGAs.

Term Offered: Spring

EECS 5200 Feedback Control Systems

[3 credit hours]

Feedback methods for the control of dynamic systems. Topics include characteristics and performance of feedback systems, state variable analysis stability, root locus and frequency response methods and computer simulations.

Term Offered: Spring

EECS 5220 Programmable Logic Controllers

[3 credit hours]

Programmable Logic Controllers (PLCs), programming, sensors, process control algorithms, interfacing of sensors and other I/O devices, simulation and networking.

Term Offered: Spring, Fall

EECS 5240 Power Systems Operation

[3 credit hours]

Single Line Diagrams & Per Unit calculations, Network Matrices & Ybus for systems with uncoupled lines, Load Flow Techniques, Large system Loss Formula using Zbus, Real and Reactive Power Dispatch programming, Power systems relays & protection schemes.

Term Offered: Spring, Fall

EECS 5260 Control Systems Design

[3 credit hours]

A general study of computer-aided design of control systems. Topics include: stability, compensation, pole placement, nonlinear systems and digital systems.

Term Offered: Fall

EECS 5330 Image Analysis And Computer Vision

[3 credit hours]

Imaging geometry, image filtering, segmentation techniques, image representation and description, stereovision and depth measurements, texture analysis, dynamic vision and motion analysis, matching and recognition.

Term Offered: Fall

EECS 5360 Communication Systems

[3 credit hours]

Fourier transform applications in signal analysis and communication. Signals spectra, filtering, AM and FM modulation, noise and optimum receiver, sampling theorem, multiplexing, PCM, introduction to digital modulators and demodulators.

Prerequisites: EECS 3300 with a minimum grade of D-

Term Offered: Spring

EECS 5370 Information Theory And Coding

[3 credit hours]

Coding concepts, Huffman code, Entropy analysis, Channel and mutual information, Channel capacity and Shannon's theorems, Algebraic coding theory and application to block code and cyclic code, Introduction to convolutional code.

Term Offered: Spring, Fall

EECS 5380 Digital Signal Processing

[3 credit hours]

Discrete Fourier Transform (DFT), Discrete convolution and correlation, Fast Fourier Transform (FFT) and its applications. Design of IIR and FIR digital filters, Multi-rate/channel digital systems, Decimation and Interpolation.

Term Offered: Spring

EECS 5390 Wireless And Mobile Networks

[3 credit hours]

Mobile radio propagation; traffic engineering; cellular concept; multiple radio access; multiple division techniques; channel allocation; mobile communication systems; existing wireless systems; network protocols; Ad Hoc and sensor networks; wireless LANS and PANS; recent advances.

Term Offered: Spring, Fall

EECS 5410 Electro-Optics

[3 credit hours]

Laser physics, optics, optical waveguides, optical communication systems and electro-optics. Design of light processing and communication systems will be considered with emphasis on optics and optical communication.

Term Offered: Spring, Fall

EECS 5460 Power Systems Management

[3 credit hours]

An advanced study of the management and operation of today's power system. Included are historical developments, utility and operational costs and economics, power generation alternatives, fuel alternatives, renewable applications, transmission and distribution practices, and a discussion of current power system issues, both in the U.S. and abroad.

Prerequisites: EECS 3220 with a minimum grade of D-

Term Offered: Spring

EECS 5470 Electronic Design

[3 credit hours]

Principles and techniques of analog active circuit design. Selected design problems are given; working circuits using standard parts are designed and laboratory tested. A design notebook is kept.

Term Offered: Spring

EECS 5480 Power Electronics I

[3 credit hours]

Basic electronic power switching circuits. Half-wave and full-wave rectification. Characteristics of power semiconductors. Phase-controlled rectifiers and inverters. Isolated and non-isolated dc-dc converters.

Term Offered: Fall

EECS 5500 Programming for the World Wide Web

[3 credit hours]

Fundamental concepts and programming languages for constructing contemporary websites. Differences and similarities between procedural, object-oriented, and scripting languages. Topics include HTML, Javascript, CSS, XML, Ajax, PHP, ASP.net, Three.js, and related technologies, as well as their impact on the programming process.

Term Offered: Spring

EECS 5520 Advanced Systems Programming

[4 credit hours]

This course examines pertinent concepts of systems programming. Topics covered include: synchronization, distributed programming models, kernel design, peripheral handling, file systems and security history and methods.

Term Offered: Spring

EECS 5530 Computer Graphics I

[4 credit hours]

An introduction to typical computer graphics systems and their operation. Interactive techniques will be introduced as well as representations and projections of three-dimensional images. Exercises using graphics equipment are assigned.

Term Offered: Fall

EECS 5540 Computer Graphics II

[4 credit hours]

Examines current topics related to realistic and representative 3D computer graphics. Topics include curve and surface geometry, solid modeling, raytracing, radiosity and real-time computer graphics.

EECS 5560 Database Systems I

[3 credit hours]

The following topics are covered: relational database modeling, query languages, design issues and implementation issues of databases. An appropriate database language is introduced and used to demonstrate principles.

Term Offered: Spring, Fall

EECS 5590 Human Computer Interface Design

[3 credit hours]

This course presents the fundamental theory and practice of design, implementation and evaluation of human-computer interfaces.

Term Offered: Spring

EECS 5600 Solid State Devices

[3 credit hours]

Theory and operation of physical electronic devices. Electrical transport in metals, semiconductors and models of BJT's and FET's. Optoelectronic devices and integrated circuits. Laboratory includes hands-on experimentation with basic semiconductor fabrication processes.

Term Offered: Spring

EECS 5610 Digital Vlsi Design I: Basic Subsystems

[4 credit hours]

CMOS process technologies. CMOS logic families. Custom and semicustom design. Subsystem design; adders, counters, multipliers. System design methods. VLSI design tools.

Prerequisites: EECS 3400 with a minimum grade of D-

EECS 5640 Inside Cryptography

[3 credit hours]

Examines the inner workings of several cryptographic algorithms, including the discrete math behind them. Introduces operations in a Galois Field, and covers some Prime Number Theory. Symmetric algorithms include Feistel (DES) and non-Feistel (AES) designs; Asymmetric algorithms include Merkle-Hellman and RSA. Block and stream modes are explored, as are cryptographic hash functions, and ECB and Chained modes of encryption.

Prerequisites: EECS 2520 with a minimum grade of D- and EECS 3100 with a minimum grade of D-

Term Offered: Spring

EECS 5720 Fundamentals of Cyber Security

[3 credit hours]

Introduces to cyber security, its interdisciplinarity, relation to nation, businesses, society, and people. Discusses cyber security terminologies, technologies, protocols, threat analysis, security principles, security mechanisms, policies, forensics, incidence response and methods/practices to secure systems. Additional real-world security problems are discussed using hands-on experiments.

Prerequisites: EECS 2110 with a minimum grade of D-

Term Offered: Fall

EECS 5740 Artificial Intelligence

[3 credit hours]

This course explores the topic of intelligent software agents with a emphasis on hands-on design of adaptive problem-solving agents for environments of increasing complexity ranging from single-agent computer games to complex real-world multi-agent environments.

Term Offered: Spring

EECS 5750 Machine Learning

[3 credit hours]

This course emphasizes learning algorithms and theory including concept, decision tree, neural network, computational, Bayesian, evolutionary, and reinforcement learning.

Prerequisites: (MIME 4000 with a minimum grade of D- and MATH 2890 with a minimum grade of D- and EECS 2110 with a minimum grade of D-)

Term Offered: Spring, Fall

EECS 5760 Computer Security

[3 credit hours]

Survey of computer security concepts: ethics and responsibility, OS vulnerabilities and intrusion detection, viruses and worms, defensive strategies including secret/public key cryptosystems, firewalls and decoys.

Prerequisites: EECS 2110 with a minimum grade of C- and EECS 3540 with a minimum grade of C-

Term Offered: Fall

EECS 5770 Computer Hacking and Forensic Analysis

[3 credit hours]

This course is an introduction to discovering vulnerabilities, attacking/defending systems, responding to attacks, and identifying/designing controls for attack prevention. Topics include the evolution of hacking, penetration testing; cryptology; footprinting; vulnerability scanning and exploit; wireless, web, and database attacks; traffic analysis; incident response; and defensive technologies and controls.

Prerequisites: (EECS 2110 with a minimum grade of C- and EECS 4720 with a minimum grade of C-) or (EECS 5720 with a minimum grade of C)

Term Offered: Spring

EECS 5790 Network Security

[4 credit hours]

Theory and practice of network security. Topics include firewalls, Windows, UNIX and TCP/IP network security. Security auditing, attacks, viruses, intrusion detection and threat analysis will also be covered.

Prerequisites: EECS 4720 with a minimum grade of D- or EECS 5720 with a minimum grade of C

Term Offered: Spring

EECS 5920 Projects

[1-6 credit hours]

Independent research project with intensive investigation into an area of practical interest to the student and the instructor. Students will make progress in a project of an advanced nature in Electrical Engineering/Computer Science and Engineering. The project will culminate in a submission of a written report. Course may be repeated.

Term Offered: Spring, Summer, Fall

EECS 5930 Electrical Engineering & Computer Science Seminar

[1 credit hour]

Seminar talk series by invited speakers from academia, industry, research corporations, private or federal research labs, and funding agencies. 1 cr. hr. seminar.

Term Offered: Spring, Fall

EECS 5980 Special Topics in EECS

[1-4 credit hours]

Pilot offerings of new courses involving emerging topics of interest are introduced using this number. One credit per lecture hour or 2.5 lab hours per week.

Term Offered: Spring, Fall

EECS 6110 Advanced Computer Architecture

[3 credit hours]

Architectural development in computer systems and scalability. Processors and arithmetic algorithms. Memory hierarchy, shared memory and cache architecture. Pipeline, superscaler and vector organization.

Term Offered: Fall

EECS 6120 Computer Systems Performance And Reliability

[4 credit hours]

Relative importance of performance and reliability. Fault-tolerance in computer systems. Techniques for reliability modeling and analysis. Markov and semi-Markov models. Queuing network models of computer systems. Performability modeling and analysis.

Prerequisites: (EECS 2100 with a minimum grade of D- and MIME 4000 with a minimum grade of D-)

EECS 6180 Biologically Inspired Computing

[3 credit hours]

Introduction to Computational Techniques inspired from Biology for Self Learning Adaptive Systems. Evolutionary Computations, Binary and Real coded Genetic Algorithms. Neural Networks, Swarm Intelligence, DNA Computing and Artificial Immune Systems. Hybrid systems such as Evolutionary Fuzzy Systems and Evolutionary Neural Systems, Swarm Neural Systems. Emerging Topics in Computing inspired by nature.

Term Offered: Spring, Fall

EECS 6190 Renewable Energy and Smart Grid

[3 credit hours]

Electric power systems nowadays are undergoing significant changes worldwide in order to become cleaner, smarter, and more reliable. This course examines a broad spectrum of topics relevant to these changes.

Term Offered: Fall

EECS 6220 Nonlinear Control Systems

[3 credit hours]

The multiple input describing function. Random signals in nonlinear systems. The phase plane, equilibrium points, limit cycles and linearization methods. Lyapunov stability theorems. Optimum switching systems. Selected applications.

Term Offered: Spring

EECS 6230 Optimal Control Theory

[3 credit hours]

Optimization of dynamic systems by the calculus of variations and Pontryagin's Maximum Principle. Solution of optimal control problems using direct and indirect computational methods. Applications include constrained state and/or control parameters.

Prerequisites: EECS 4200 with a minimum grade of D-

EECS 6250 Advanced Digital Signal Processing

[3 credit hours]

Documentation/interpolation filter design, wavelet transforms, spectral estimation, multirate, adaptive, radar and array signal processing techniques, beamforming, simulation of signal processing algorithms via MATLAB or equivalent.

Term Offered: Spring

EECS 6300 Random Signals And Optimal Filters

[3 credit hours]

Description and properties of random signals and their processing by optimal filters. Correlation and power spectra. GRP. Narrowband noise. Signal detection (matched filter) and estimation (Wiener and Kalman filters).

Term Offered: Fall

EECS 6320 Data Compression For Multimedia Communication

[3 credit hours]

Multimedia information representation, Huffman, run length and arithmetic coding, predictive, transform, pyramid coding; vector quantization and subband coding; wavelet-based coding, data packetization, error resilience coding, multimedia compression standards, JPEG, MPEG coding.

Term Offered: Spring**EECS 6340 Modern Communications Engineering I**

[3 credit hours]

Introduction to detection and estimation and applications to the bandpass signals, Binary and M-ary digital modulation techniques, Error-control convolutional coding, Trellis Coded Modulation (TCM), Spread Spectrum (SS) communication techniques.

Term Offered: Fall**EECS 6350 Modern Communications Engineering II**

[3 credit hours]

Digital transmission over Gaussian/non-Gaussian channels, Satellite systems (GEO and LEO) and multiple accesses, Cellular and satellite communication network, Mobile/wireless Personal communication services (PCS) and its networking.

Term Offered: Spring, Fall**EECS 6390 Modeling And Performance Evaluation Of Communication Networks**

[3 credit hours]

Communication network model-based performance evaluation methodology. Principles of stochastic processes in communication networks. Modeling and analysis of LANs, MANs, and WANs. Single class networks and Jackson networks. Multimedia network analysis.

Term Offered: Spring, Fall**EECS 6410 Advanced Electromagnetic Components**

[3 credit hours]

Maxwell's equations, transmission line theory, technology CAD, circuit modeling of magnetics, antenna design, electromagnetic interference (EMI), signal integrity.

Term Offered: Fall**EECS 6420 Computer-Aided Modeling and Design of Circuits**

[3 credit hours]

Introduction to computer aided design, classification of CAD operations, modified nodal admittance matrix, frequency-domain analysis, time-domain analysis of nonlinear circuits, sensitivity analysis, high-frequency modeling and design.

Term Offered: Fall**EECS 6450 Advanced Power Electronics**

[3 credit hours]

Dynamic analysis of DC-DC power conversion circuits. State space and converter transfer functions. Analytical semiconductor device modeling techniques. Sinusoidal pulse width modulation in inverter circuits. Isolated DC-DC converters.

Prerequisites: EECS 5480 with a minimum grade of D-**EECS 6550 Software Specification And Design**

[3 credit hours]

This course covers the software development steps of specification, requirements analysis and design in depth. Computer-human interfaces are also discussed.

Term Offered: Spring, Fall**EECS 6570 Intelligent Systems**

[3 credit hours]

Heuristic search, game playing, constraint satisfaction, knowledge representation and reasoning with first order logic, planning, probabilistic modeling and reasoning, and learning.

Term Offered: Fall**EECS 6580 Wireless Sensor Networks**

[3 credit hours]

Single node and network architecture, design principles, medium access control, naming and addressing, synchronization, localization and positioning, topology control, routing protocols, data-centric networking, and information and data aggregation.

Term Offered: Spring**EECS 6610 Principles of CMOS Devices**

[3 credit hours]

MOSFET Device Physics, CMOS Fabrication, Scaling Trends, Characterization, Technology CAD, Digital Analog and RF Applications, Advanced Device Concepts, Nanoelectronics.

Term Offered: Spring**EECS 6630 Digital and VLSI System Testing**

[3 credit hours]

In depth study of testing techniques for digital and VLSI circuit including memory and logic, field programmable gate arrays, system on chips, and quantum dot cellular automata circuits.

Term Offered: Spring**EECS 6650 Hardware Oriented Security and Trust**

[3 credit hours]

The course covers the following topics: Hardware Security Basics, Physical Unclonable Function (PUF), Metrics for Evaluating PUFs, Split Manufacturing, Hardware Trojans, Detection of Hardware Trojans, Built-In Self-Repair Hardware Circuits, Security of FPGAs, Machine Learning Attack Models, Testing of Digital/VLSI Circuits.

Term Offered: Spring**EECS 6660 Field Programmable Gate Arrays**

[3 credit hours]

Introduction to FPGA's. Programming technology. Logic block architectures. Routing architectures. FPGA based VLSI design. Design tools.

Term Offered: Spring, Fall**EECS 6830 Power Semiconductor Device Engineering**

[3 credit hours]

Semiconductor material physics, electrical transport physics, power switching, power amplification characteristics, power diodes, power MOSFETs, power MOS-bipolar devices, thyristors, and emerging devices.

Term Offered: Fall**EECS 6840 Compound Semiconductors and Devices**

[3 credit hours]

This course will cover the fundamentals of various compound-semiconductor materials and devices, including materials and device physics, diodes, GaAs MESFETs, optoelectronic and photovoltaic devices and structures.

Term Offered: Fall

EECS 6860 RF Integrated Circuits

[3 credit hours]

Wireless principles, Passive RLC networks, Passive IC component characteristics, MOS Device Physics, Distributed Systems, Smith Chart and s-parameters, Bandwidth estimation, high frequency amplifier design, voltage references, noise, LNA design, mixers, feedback systems, RF power amplifiers, PLLs, Oscillators and Synthesizers, Phase Noise, Transceiver architectures.

Term Offered: Spring

EECS 6870 Advanced Analog Integrated Circuits

[3 credit hours]

Integrated Circuit Technology, Device Modeling, MOS Switches, Current Sinks and Sources, Bandgap References, Amplifiers, Operational Amplifiers, Comparators, Switched-Capacitor Circuits, Data Converters

Term Offered: Fall

EECS 6900 Independent Research

[1-6 credit hours]

Selected topics from current EE and CSE research with intensive investigation into recent literature in an area of mutual interest to the student and the instructor.

Term Offered: Spring, Summer, Fall

EECS 6910 EECS Graduate Seminar

[1 credit hour]

Students will attend seminars and prepare a report reflecting their learning, questions and the impact of the seminar series. Students will also present their thesis or project plan and initial research results.

Term Offered: Spring, Fall

EECS 6960 Master's Graduate Research And Thesis

[1-9 credit hours]

Graduate research towards the completion of a Master's degree. Students will make progress in a project of an advanced nature in Electrical Engineering/Computer Science and Engineering. The project will culminate in submission and a public defense a master's thesis. Course may be repeated.

Term Offered: Spring, Summer, Fall

EECS 6970 Graduate Engineering Internship

[1 credit hour]

Faculty advisor approved industry, government, or agency full-time internship to provide an experiential learning component to the Master's/ Doctoral degree program.

Prerequisites: GNEN 5000 with a minimum grade of S

Term Offered: Spring, Summer, Fall

EECS 6980 Special Topics In Electrical Engineering & Computer Science

[1-5 credit hours]

Selected topics in the field of Electrical Engineering and Computer Science in areas of special interest to the class and the professor.

Term Offered: Spring, Summer, Fall

EECS 6990 Independent Study

[1-3 credit hours]

In depth study of a selected topic of mutual interest to the student and the instructor.

Term Offered: Spring, Summer, Fall

EECS 7520 Advanced Systems Programming

[4 credit hours]

EECS 8110 Advanced Computer Architecture

[3 credit hours]

Architectural development in computer systems and scalability. Processors and arithmetic algorithms. Memory hierarchy, shared memory and cache architecture. Pipeline, superscaler and vector organization.

Term Offered: Fall

EECS 8120 Computer Systems Performance And Reliability

[4 credit hours]

Relative importance of performance and reliability. Fault-tolerance in computer systems. Techniques for reliability modeling and analysis. Markov and semi-Markov models. Queuing network models of computer systems. Performability modeling and analysis.

Prerequisites: (EECS 2100 with a minimum grade of D- and MIME 4000 with a minimum grade of D-)

EECS 8180 Biologically Inspired Computing

[3 credit hours]

Introduction to Computational Techniques inspired from Biology for Self Learning Adaptive Systems. Evolutionary Computations, Binary and Real coded Genetic Algorithms. Neural Networks, Swarm Intelligence, DNA Computing and Artificial Immune Systems. Hybrid systems such as Evolutionary Fuzzy Systems and Evolutionary Neural Systems, Swarm Neural Systems. Emerging Topics in Computing inspired by nature.

Term Offered: Spring, Fall

EECS 8190 Renewable Energy and Smart Grid

[3 credit hours]

Electric power systems nowadays are undergoing significant changes worldwide in order to become cleaner, smarter, and more reliable. This course examines a broad spectrum of topics relevant to these changes.

Term Offered: Fall

EECS 8220 Nonlinear Control Systems

[3 credit hours]

The multiple input describing function. Random signals in nonlinear systems. The phase plane, equilibrium points, limit cycles and linearization methods. Lyapunov stability theorems. Optimum switching systems. Selected applications.

Term Offered: Spring

EECS 8230 Optimal Control Theory

[3 credit hours]

Optimization of dynamic systems by the calculus of variations and Pontryagin's Maximum Principle. Solution of optimal control problems using direct and indirect computational methods. Applications include constrained state and/or control parameters.

Prerequisites: EECS 4200 with a minimum grade of D-

EECS 8250 Advanced Digital Signal Processing

[3 credit hours]

Documentation/interpolation filter design, wavelet transforms, spectral estimation, multirate, adaptive, radar and array signal processing techniques, beamforming, simulation of signal processing algorithms via MATLAB or equivalent.

Term Offered: Spring

EECS 8300 Random Signals And Optimal Filters

[3 credit hours]

Description and properties of random signals and their processing by optimal filters. Correlation and power spectra. GRP. Narrowband noise. Signal detection (matched filter) and estimation (Wiener and Kalman filters).

Term Offered: Fall**EECS 8320 Data Compression For Multimedia Communication**

[3 credit hours]

Multimedia information representation, Huffman, run length and arithmetic coding, predictive, transform, pyramid coding; vector quantization and subband coding; wavelet-based coding, data packetization, error resilience coding, multimedia compression standards, JPEG, MPEG coding.

Term Offered: Spring**EECS 8340 Modern Communications Engineering I**

[3 credit hours]

Introduction to detection and estimation and applications to the bandpass signals, Binary and M-ary digital modulation techniques, Error-control convolutional coding, Trellis Coded Modulation (TCM), Spread Spectrum (SS) communication techniques.

Term Offered: Fall**EECS 8350 Modern Communications Engineering II**

[3 credit hours]

Digital transmission over Gaussian/non-Gaussian channels, Satellite systems (GEO and LEO) and multiple accesses, Cellular and satellite communication network, Mobile/wireless Personal communication services (PCS) and its networking.

Term Offered: Spring, Fall**EECS 8390 Modeling And Performance Evaluation Of Communication Networks**

[3 credit hours]

Communication network model-based performance evaluation methodology. Principles of stochastic processes in communication networks. Modeling and analysis of LANs, MANs, and WANs. Single class networks and Jackson networks. Multimedia network analysis.

Term Offered: Spring, Fall**EECS 8410 Advanced Electromagnetic Components**

[3 credit hours]

Maxwell's equations, transmission line theory, technology CAD, circuit modeling of magnetics, antenna design, electromagnetic interference (EMI), signal integrity.

Term Offered: Fall**EECS 8420 Computer-Aided Modeling and Design of Circuits**

[3 credit hours]

Introduction to computer aided design, classification of CAD operations, modified nodal admittance matrix, frequency-domain analysis, time-domain analysis of nonlinear circuits, sensitivity analysis, high-frequency modeling and design.

Term Offered: Fall**EECS 8450 Advanced Power Electronics**

[3 credit hours]

Dynamic analysis of DC-DC power conversion circuits. State space and converter transfer functions. Analytical semiconductor device modeling techniques. Sinusoidal pulse width modulation in inverter circuits. Isolated DC-DC converters.

Prerequisites: EECS 5480 with a minimum grade of D-**EECS 8550 Software Specification And Design**

[3 credit hours]

This course covers the software development steps of specification, requirements analysis and design in depth. Computer-human interfaces are also discussed.

Term Offered: Spring, Fall**EECS 8570 Intelligent Systems**

[3 credit hours]

Heuristic search, game playing, constraint satisfaction, knowledge representation and reasoning with first order logic, planning, probabilistic modeling and reasoning, and learning.

Term Offered: Fall**EECS 8580 Wireless Sensor Networks**

[3 credit hours]

Single node and network architecture, design principles, medium access control, naming and addressing, synchronization, localization and positioning, topology control, routing protocols, data-centric networking, and information and data aggregation.

Term Offered: Spring**EECS 8610 Principles of CMOS Devices**

[3 credit hours]

MOSFET Device Physics, CMOS Fabrication, Scaling Trends, Characterization, Technology CAD, Digital Analog and RF Applications, Advanced Device Concepts, Nanoelectronics.

Term Offered: Spring**EECS 8630 Digital and VLSI System Testing**

[3 credit hours]

In depth study of testing techniques for digital and VLSI circuit including memory and logic, field programmable gate arrays, system on chips, and quantum dot cellular automata circuits

Term Offered: Spring**EECS 8660 Field Programmable Gate Arrays**

[3 credit hours]

Introduction to FPGA's. Programming technology. Logic block architectures. Routing architectures. FPGA based VLSI design. Design tools.

Term Offered: Spring, Fall**EECS 8670 Hardware Oriented Security and Trust**

[3 credit hours]

The course covers the following topics: Hardware Security Basics, Physical Unclonable Function (PUF), Metrics for Evaluating PUFs, Split Manufacturing, Hardware Trojans, Detection of Hardware Trojans, Built-In Self-Repair Hardware Circuits, Security of FPGAs, Machine Learning Attack Models, and Testing of Digital/VLSI Circuits.

Term Offered: Spring

EECS 8830 Power Semiconductor Device Engineering

[3 credit hours]

Semiconductor material physics, electrical transport physics, power switching, power amplification characteristics, power diodes, power MOSFETs, power MOS-bipolar devices, thyristors, and emerging devices.

Term Offered: Fall**EECS 8840 Compound Semiconductors and Devices**

[3 credit hours]

This course will cover the fundamentals of various compound-semiconductor materials and devices, including materials and device physics, diodes, GaAs MESFETs, optoelectronic and photovoltaic devices and structures.

Term Offered: Spring, Fall**EECS 8860 RF Integrated Circuits**

[3 credit hours]

Wireless principles, Passive RLC networks, Passive IC component characteristics, MOS Device Physics, Distributed Systems, Smith Chart and s-parameters, Bandwidth estimation, high frequency amplifier design, voltage references, noise, LNA design, mixers, feedback systems, RF power amplifiers, PLLs, Oscillators and Synthesizers, Phase Noise, Transceiver architectures.

Term Offered: Fall**EECS 8870 Advanced Analog Integrated Circuits**

[3 credit hours]

Integrated Circuit Technology, Device Modeling, MOS Switches, Current Sinks and Sources, Bandgap References, Amplifiers, Operational Amplifiers, Comparators, Switched-Capacitor Circuits, Data Converters

Term Offered: Fall**EECS 8900 Independent Research**

[1-6 credit hours]

Selected topics from current EE and CSE research with intensive investigation into recent literature in an area of mutual interest to the student and the instructor.

Term Offered: Spring, Summer, Fall**EECS 8910 EECS Graduate Seminar**

[1 credit hour]

Students will attend seminars and prepare a report reflecting their learning, questions and the impact of the seminar series. Students will also present their thesis or project plan and initial research results.

Term Offered: Spring, Fall**EECS 8960 Dissertation**

[1-9 credit hours]

Graduate research towards the completion of a Doctoral Degree. Course may be repeated.

Term Offered: Spring, Summer, Fall**EECS 8970 Graduate Engineering Internship**

[1 credit hour]

Faculty advisor approved industry, government, or agency full-time internship to provide an experiential learning component to the Master's/Doctoral degree program.

Prerequisites: GNEN 5000 with a minimum grade of U**Term Offered:** Spring, Summer, Fall**EECS 8980 Current Topics In Electrical Engineering & Computer Science**

[1-5 credit hours]

Current topics in the field of Electrical Engineering and Computer Science in areas of special interest to the class and the professor. Students will be expected to complete a written project based on a review of the research literature of the area covered in this course.

Term Offered: Spring, Summer, Fall**EECS 8990 Independent Study**

[1-3 credit hours]

In depth study of a selected topic of mutual interest to the student and the instructor.

Term Offered: Spring, Summer, Fall

English (ENGL)

ENGL 5090 Current Writing Theory

[3 credit hours]

An intensive study of current theories and research connecting reading, critical thinking and writing with applications of theory to students' literate practices and research.

Term Offered: Spring, Fall**ENGL 5100 The History Of English**

[3 credit hours]

Study of the changes that have taken place in the English language from the earliest days to the present.

Term Offered: Spring, Summer, Fall**ENGL 5110 Old English**

[3 credit hours]

Study of the phonology, morphology and syntax of Old English, with special attention to literary and cultural backgrounds. Representative readings in verse and prose.

Term Offered: Fall**ENGL 5120 Middle English**

[3 credit hours]

Study of the phonology, morphology and syntax of Middle English, with special attention to literary and cultural background. Representative readings in verse and prose.

ENGL 5150 Linguistic Principles

[3 credit hours]

Intensive study of modern linguistic theories about the nature and structure of language, with emphasis on English.

Term Offered: Spring, Fall**ENGL 5200 British Fiction: 18th Century**

[3 credit hours]

A course in 18th Century fiction with emphasis on the novels of Defoe, Richardson, Fielding, Smollett, and Sterne and their relation to historical background and literary theory.

ENGL 5210 Issues in ESL Writing

[3 credit hours]

Course content

Term Offered: Spring, Fall

ENGL 5280 American Fiction: 20th and 21st Century

[3 credit hours]

Major developments in the 20th-century and 21st Century American short story and novel. Recommended: ENGL 3600 or 3790.

Term Offered: Spring, Fall

ENGL 5300 Medieval and Early Tudor Drama

[3 credit hours]

A study of drama and performance from the British Isles and relevant continental traditions in the late middle ages through the early 16th century, in their cultural, material, and performance contexts. Course may include performance traditions and texts such as monastic and liturgical drama, civic Creation-to-Doomsday play cycles manuscript collections of drama, morality plays, miracle and saints' plays, folk plays, courtly interludes and mummings, and royal entries, as well as modern revivals.

ENGL 5310 British Drama: 1580-1642

[3 credit hours]

A study of early British drama exclusive of Shakespeare, with particular attention to Elizabethan drama and its background.

ENGL 5410 Old And Middle English Literature

[3 credit hours]

Study of Old and Middle English Literature, using translations where necessary, with emphasis on major works and genres, cultural, philosophical, and historical contexts and backgrounds.

Term Offered: Spring, Fall

ENGL 5420 English Renaissance

[3 credit hours]

Poetry and prose of the English Renaissance, including the sonnet tradition; "Spenser's Fairie Queene"; Shakespeare's longer poems; the prose of Raleigh, Hoby, Ascham, and Elyot; "Defense of Poesy"; More's "Utopia."

Term Offered: Spring, Fall

ENGL 5440 Early 17th Century English Literature

[3 credit hours]

Early and mid-17th Century texts, primarily non-dramatic. Including such authors as Milton, Donne, Jonson, Lanyer, Herrick, Wroth, Herbert, Pulter, Marvell, Bacon, Hobbes, Philips, Browne, Cavendish, and others.

Term Offered: Spring

ENGL 5460 Restoration And 18th Century British Literature

[3 credit hours]

Drama, poetry, and prose of the Restoration, Neo-classical and pre-Romantic periods, focusing on literary strategies and themes, political and cultural contexts.

ENGL 5500 British Literature: The Romantic Period

[3 credit hours]

Study of major authors and genres of the Romantic period: approximately 1789 to 1837.

Term Offered: Spring, Fall

ENGL 5520 British Literature: The Victorian Period

[3 credit hours]

Study of major authors, genres and ideas of the Victorian period: approximately 1837 to 1901.

Term Offered: Spring, Fall

ENGL 5540 British Literature: The 20th and 21st Centuries

[3 credit hours]

Study of major authors, genres, and ideas of 20th-century and 21st-century British literature.

ENGL 5550 Literature of the British Empire, Beginnings to 1850

[3 credit hours]

Study of the development of race, empire, and colonialism through literary texts written in (or translated into) English from the late-thirteenth century to the abolition of the British slave trade in the early-nineteenth.

Term Offered: Spring, Fall

ENGL 5560 Literature of the British Empire 1850 to The Present

[3 credit hours]

Studies in texts from Britain and its former colonies. Genres may include the novel, travel writing, memoir, and film. Recommended: ENGL 2800 or 3790

Term Offered: Spring, Fall

ENGL 5600 Early American Literature

[3 credit hours]

The poetry and prose writings of the New England Puritans and the American Enlightenment with emphasis on Bradford, Bradstreet, Taylor, Franklin, Jefferson, Paine and Wheatley.

ENGL 5620 American Literary Romanticism

[3 credit hours]

American literature from 1798 to 1865, from the beginnings of Romanticism in Bryant and Cooper through the Transcendental movement, with emphasis on Hawthorne, Melville, Stowe and Douglass.

Term Offered: Spring

ENGL 5630 American Literary Realism

[3 credit hours]

American literature from the post-Civil War period to the early 20th century: some emphasis on naturalism and humor; such writers as Twain, James, Howells, Dreiser and Wharton.

Term Offered: Fall

ENGL 5640 Early 20th Century American Literature

[3 credit hours]

Study of American literature from 1900 to World War II, focusing on literary modernism and its social, political and philosophical contexts.

Term Offered: Spring, Fall

ENGL 5650 African American Writing Before The 20th Century

[3 credit hours]

Study of African American prose, poetry, drama and fiction from 1760 to 1915.

Term Offered: Fall

ENGL 5660 African American Literature In The 20th and 21st Century

[3 credit hours]

A course focused on 20th and 21st century African American poetry, fiction, nonfiction, and drama.

Term Offered: Spring, Summer, Fall

Multicultural US Diversity

ENGL 5680 American Literature Since World War II

[3 credit hours]

Major trends in postwar American literature, including traditional and uncanonical writers. Emphasis may be on poetry or prose by instructor's option.

Term Offered: Spring, Fall

ENGL 5690 Native American Literature And Culture

[3 credit hours]

Native American literature interrogates a selection of texts by and about Native Americans, including the oral traditions of storytelling and mythology.

Term Offered: Spring

ENGL 5750 History Of Literary Criticism

[3 credit hours]

A chronological examination of literary criticism, analyzing the variety of claims and practices which contribute to the current frameworks used to interpret and analyze literary texts.

Term Offered: Spring

ENGL 5780 Contemporary Literary Theories And Criticism

[3 credit hours]

An intensive examination of contemporary literary theories and criticism, focusing on selected issues and on representative theorists and critics.

Term Offered: Spring

ENGL 5790 Approaches To Research In English

[3 credit hours]

An introduction to the discipline(s) of English, the methods and resources of scholarship in the field.

Term Offered: Fall

ENGL 5800 Chaucer

[3 credit hours]

A study of Chaucer's major works and historical contexts, with emphasis on either *Troilus and Criseyde* and the dream visions, or on *The Canterbury Tales* in their entirety.

Term Offered: Spring, Fall

ENGL 5810 Shakespeare

[3 credit hours]

A study of Shakespeare's plays with emphasis on his development as a dramatist and with readings in major Shakespearean criticism.

Term Offered: Fall

ENGL 5820 Milton

[3 credit hours]

A study of the poetry and selected prose. Particular attention is given to biography and criticism.

Term Offered: Spring, Fall

ENGL 5850 Studies In The Work Of A British Author

[3 credit hours]

Author changes with each offering. Consult Time Schedules for authors to be studied.

Term Offered: Spring, Fall

ENGL 5860 Studies In The Work Of An American Author

[3 credit hours]

Author changes with each offering. Consult Time Schedules for authors to be studied.

Term Offered: Spring, Fall

ENGL 5980 Special Topics

[3 credit hours]

Consideration of a special topic in literature and language.

Term Offered: Spring, Fall

ENGL 6010 Seminar In English Instruction: Composition

[3 credit hours]

For prospective college instructors of composition. Includes supervised teaching of composition. Graded S/U only.

Term Offered: Fall

ENGL 6180 Methods In Composition Research, Course Design And Assessment

[3 credit hours]

Students will learn to use rhetorical analysis, discourse analysis and ethnographic research methodologies to write a substantial research proposal, and to design a course and write criteria for assessment of student writing accomplished in such a course.

Prerequisites: ENGL 4090 with a minimum grade of D- or ENGL 5090 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

ENGL 6190 Environments For Esl Learning

[3 credit hours]

In the course, students learn how to identify English as a Second Language learners' linguistic needs and to design and evaluate environments for ESL learning.

Prerequisites: ENGL 3150 with a minimum grade of D- or ENGL 5150 with a minimum grade of D- or ENGL 7150 with a minimum grade of D- or LING 3150 with a minimum grade of D- or LING 5150 with a minimum grade of D- or LING 7150 with a minimum grade of D-

Term Offered: Fall

ENGL 6410 Seminar: Studies In Early English Literature

[3 credit hours]

Seminar on a specialized topic in Old and/or Middle English literature.

Term Offered: Spring, Fall

ENGL 6420 Seminar: Studies In English Renaissance Literature

[3 credit hours]

Seminar on a specialized topic in English Renaissance literature.

ENGL 6440 Seminar: Studies In Early 17th Century Literature

[3 credit hours]

Seminar on a specialized topic in early 17th century English literature.

Term Offered: Fall

ENGL 6460 Seminar: Studies In Restoration And 18th Century British Literature

[3 credit hours]

Seminar on a specialized topic in Restoration and 18th century British literature.

ENGL 6500 Seminar: Studies In British Romantic Literature

[3 credit hours]

Seminar on a specialized topic in British Romantic literature.

ENGL 6520 Seminar: Studies In Victorian Literature

[3 credit hours]

Seminar on a specialized topic in Victorian literature.

Term Offered: Spring, Fall

ENGL 6620 Seminar: Studies In American Literary Romanticism

[3 credit hours]

Seminar on a specialized topic in American literary Romanticism.

ENGL 6630 Seminar: Studies In American Literary Realism

[3 credit hours]

Seminar on a specialized topic in American literary realism.

ENGL 6640 Seminar: Studies In 20th Century American Literature

[3 credit hours]

Seminar on a specialized topic in 20th century American literature.

Term Offered: Spring, Fall**ENGL 6890 Certificate Capstone**

[3 credit hours]

This course completes the certificate program. Students will fulfill research on writing piloted in ENGL 6180, culminating in a research essay that will be submitted for publication to an appropriate scholarly journal.

Prerequisites: (ENGL 5090 with a minimum grade of D- and ENGL 5780 with a minimum grade of D- and ENGL 6010 with a minimum grade of D- and ENGL 6180 with a minimum grade of D-)

Term Offered: Spring, Summer, Fall**ENGL 6940 Internship in English as a Second Language**

[2 credit hours]

Supervised practice teaching in the form of a community-service internship in English as a Second Language. Must be taken twice with different content. Graded S/U only.

Term Offered: Spring, Fall**ENGL 6960 Master's Research**

[1-3 credit hours]

Research on, and writing of the master's paper or thesis.

Term Offered: Spring, Summer, Fall**ENGL 6970 Master's Thesis**

[1-3 credit hours]

Research on and writing of the master's thesis in the concentration in English as a Second Language.

Term Offered: Spring, Summer, Fall**ENGL 6980 Seminar: Literary Types And Special Topics**

[3 credit hours]

Seminar on a specialized topic in English studies.

Term Offered: Spring, Summer, Fall**ENGL 6990 Independent Study**

[1-3 credit hours]

By permission of department; may be repeated for additional credit.

Term Offered: Spring, Summer, Fall**ENGL 8990 Independent Study**

[1-3 credit hours]

By permission of department; may be repeated for additional credit.

Term Offered: Spring, Fall

Entrepreneurship, Family and Small Business (EFSB)

EFSB 6590 New Venture Creation

[3 credit hours]

Course addresses the issues faced in starting a new venture, including the identification of new business opportunities and the effective and efficient evaluation of the economic feasibility of these opportunities.

Term Offered: Spring, Fall**EFSB 6690 Technology Commercialization**

[3 credit hours]

Course addresses the entire technology commercialization process, from idea to market. A key feature of the course is a "strategic opportunity evaluation" of an actual early stage technology. (Prerequisite: EFSB 6590)

Term Offered: Spring, Fall**EFSB 6790 Venture Capital Finance**

[3 credit hours]

Course considers how potential entrepreneurial investments are evaluated, valued, structured, and enhanced. Primarily focuses on financing start-up and early stage firms, later stage investments, and buyouts. (Prerequisites: BUAD 6200 and EFSB 6590)

EFSB 6900 Cannabis Entrepreneurship

[3 credit hours]

EFSB 4900/6900 is an entrepreneurship course with a core focus on business verticals in the cannabis industry. The course will cover a substantial body of knowledge, concepts and tools that entrepreneurs need to know prior to and while starting their new ventures.

Term Offered: Spring, Fall

Executive MBA (EMBA)

EMBA 5500 Analytic Foundation For Executives

[3 credit hours]

This course provides managers with the analytical foundations in economics, computer skills and statistical methods. Internet exercises prior to class meetings provide the basis for continuous discussions of current economic events.

Term Offered: Fall**EMBA 6100 Global Competitive Challenge**

[3 credit hours]

An overview of the competitive challenge faced by firms in today's global setting. Executives select nations or regions and industries to analyze in terms of the competitive challenge. Factors which helped the nations/regions to achieve competitive advantage will be studied to gain a better understanding of the competitive challenge.

Prerequisites: EMBA 5500 with a minimum grade of D-**Term Offered:** Fall**EMBA 6120 Cultural, Legal, & Operational Issues in Doing Business Abroad**

[3 credit hours]

This course develops the executive's appreciation, knowledge, and understanding of the different cultures and legal systems as they impact business operations in doing business in major foreign countries or regions, including emerging markets. The underpinning of cross-cultural literacy for global competitive advantage is emphasized.

Prerequisites: EMBA 5500 with a minimum grade of D-**Term Offered:** Spring, Fall**EMBA 6140 Accounting And Financial Foundations For Executives**

[3 credit hours]

This course gives an overview of the firm from a financial management perspective including financial decision making. Topics covered include the time value of money, stock and bond valuation, and capital budgeting decision rules.

Prerequisites: EMBA 5500 with a minimum grade of D-**Term Offered:** Spring

EMBA 6200 Personal Strategic Planning And Entrepreneurship

[3 credit hours]

Executives assess their personal values, clarifying their personal goals and develop a career strategy. Identifying market opportunities and developing new businesses for today's technological and global environment are explored.

Prerequisites: EMBA 5500 with a minimum grade of D-

Term Offered: Fall

EMBA 6210 Processes for Ethical Business Decisions

[3 credit hours]

Introduces executives to specific analytical processes for identifying the ethical dilemmas frequently experienced in business, resolving them and then justifying the course of action selected from multiple ethical perspectives. These processes are essential for recognizing and understanding the ethical implications of complex and controversial problems in culturally diverse and competitive organizations. The course involves ongoing practice in ethical dilemma resolution in both group and individual formats involving various ethical scenarios.

Prerequisites: EMBA 5500 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

EMBA 6220 Accounting Systems For Operational And Strategic Management

[3 credit hours]

Emphasizes the preparation and use of financial statements, accounting for international transactions and tax consequences of U.S. and international operatives. Managerial accounting and control systems are examined. Focuses on the tax consequences of selected transactions of both U.S. and international operations.

Prerequisites: EMBA 5500 with a minimum grade of D-

Term Offered: Fall

EMBA 6230 Market-Driven Analysis And Strategy

[3 credit hours]

This course focuses on what it means to be market-oriented and provides individuals with a basic understanding of the market-based management practices needed to create superior customer value. Being 'market-driven' means the organization's decision-making is also driven by customer information, market knowledge, competitive intelligence, an understanding of how the organization creates and delivers value, and a clear set of strategies that differentiate the organization and make give it a competitive advantage.

Prerequisites: EMBA 5500 with a minimum grade of D-

Term Offered: Spring

EMBA 6240 Entrepreneurial Financial Management

[3 credit hours]

Studies the management of international financial activities, including financial planning and forecasting, capital budgeting and leasing, capital structure, working capital management, sources of funds, business valuation and risk management.

Prerequisites: EMBA 5500 with a minimum grade of D-

Term Offered: Spring, Summer

EMBA 6250 Leadership And Performance Management

[3 credit hours]

Executives learn to be visionary leaders by understanding how change, culture and strategy link to the vision. This course also focuses on employee motivation, development and empowerment, culminating in insights on how to manage performance in order to achieve the company's mission.

Prerequisites: EMBA 5500 with a minimum grade of D-

Term Offered: Fall

EMBA 6290 Strategic Management In A Global Environment

[3 credit hours]

The goal of the capstone course is for each executive to finish an integrated business plan creating value for his or her sponsoring firm. Strategic planning tools are studied.

Prerequisites: EMBA 5500 with a minimum grade of D-

Term Offered: Fall

EMBA 6300 Global Technology Management

[3 credit hours]

This course focuses on the strategic and technical challenges facing executives who want to take advantage of today's existing and emerging technological developments to enhance business opportunities. Best practices are reviewed and the focus is on how executives can manage technology across functions to best achieve competitive advantage.

Prerequisites: EMBA 5500 with a minimum grade of D-

Term Offered: Spring, Summer

EMBA 6310 Managing Global Supply Chains

[3 credit hours]

Examines how e-business models, information technology and globalization have changed supply chain design and management. Effective information management for decision making is explored.

Prerequisites: EMBA 5500 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

EMBA 6320 Product Development

[3 credit hours]

This course is designed to provide an understanding of how new products/services and e-business initiatives are developed and managed and explores the tools and skills needed to manage these processes.

Prerequisites: EMBA 5500 with a minimum grade of D-

Term Offered: Spring, Summer

EMBA 6470 Global/E-Business Field Trip

[2 credit hours]

This experiential international field trip facilitates student learning of best business practices from senior executives in a variety of multinational firms and organizations across industries, and enables them to gain new insights from being immersed in foreign cultural environments.

Prerequisites: EMBA 5500 with a minimum grade of D-

Term Offered: Fall

EMBA 6980 Special Topics in Business

[1-3 credit hours]

Analysis of current issues in business, specialized industries, or specific markets. Syllabus determined jointly by EMBA office and faculty as special topics are identified.

EMBA 6990 Independent Study

[3 credit hours]

Independent research report on a business topics of interest to the student and faculty member. Students must work with a professor on this project. Permission of Instructor required.

Exercise Science (EXSC)

EXSC 5110 Measurement And Statistical Inference In Human Performance

[3 credit hours]

Application of measurement and statistical inference to human performance testing and research. Includes descriptive and inferential statistics, principles of test construction and introduction to authentic assessment in public schools.

Term Offered: Spring**EXSC 5250 Readings In Exercise Biology**

[3 credit hours]

Faculty and student directed readings of original research in Exercise Biology. Readings will focus on how changes in physical activity influence the biology of skeletal muscle.

Term Offered: Spring, Fall**EXSC 6100 Physiology of Exercise**

[3 credit hours]

This course is designed to provide an understanding of the mechanisms of the physiological responses to exercise. Emphasis will be placed on adaptations to exercise training and the role of exercise in health and disease.

Term Offered: Fall**EXSC 6130 Biomechanics Of Human Motion**

[3 credit hours]

This course provides a basic overview of the principles of biomechanics as they apply to human movement. In-depth discussion and lab activities focus on the application of these principles to such topics as muscle function, locomotion, balance, mechanisms of injury and ergonomics.

Term Offered: Spring, Fall**EXSC 6200 Biomechanical Instrumentation**

[3 credit hours]

Provides students with experience in the research and clinical use of videography, force and pressure plates, electromyography and other systems in applied biomechanics. Emphasis on hands-on lab experience and topics related to data collection and signal processing.

Prerequisites: KINE 6130 with a minimum grade of D- or EXSC 6130 with a minimum grade of D-

Term Offered: Spring**EXSC 6230 Scientific Writing And Research Methods**

[3 credit hours]

Principles and issues involved in the design and conduct of research in exercise science: critical evaluation, research design, development of a research proposal, grant acquisition, and compliance with institutional and federal guidelines on the use of humans and animals.

Term Offered: Fall**EXSC 6420 Cardiopulmonary Exercise Physiology**

[3 credit hours]

The responses and adaptations of the cardiovascular and pulmonary systems to exercise in healthy individuals.

Prerequisites: KINE 6100 with a minimum grade of D- or EXSC 6100 with a minimum grade of D-

Term Offered: Spring, Fall**EXSC 6430 Environmental Physiology**

[3 credit hours]

Physiological responses and adaptations to extreme environments.

Term Offered: Fall**EXSC 6460 Readings in Cardiovascular Physiology**

[3 credit hours]

This is a faculty directed examination of current research in Cardiovascular Physiology. Emphasis is placed on the role of physical activity on the prevention and/or treatment of cardiovascular treatment.

Term Offered: Spring, Fall**EXSC 6540 Laboratory Techniques In Exercise Physiology**

[3 credit hours]

This course covers theoretical and practical knowledge for the assessment of exercise metabolism, cardiorespiratory function, body composition, thermoregulation and skeletal muscle function. Hands-on data collection will be emphasized.

Term Offered: Fall**EXSC 6550 Lab Techniques In Exercise Biology**

[3 credit hours]

The course provides students with theoretical and practical knowledge for assessing cellular and molecular responses to exercise and inactivity. Emphasis will be placed on laboratory safety, reagent preparation, cell culture techniques, and tissue analysis.

Prerequisites: (KINE 6100 with a minimum grade of D- and KINE 6540 with a minimum grade of D-) or (EXSC 6100 with a minimum grade of D- and EXSC 6540 with a minimum grade of D-)

EXSC 6720 Advanced Clinical Anatomy

[2 credit hours]

A cadaver anatomy course focusing on the extremities. Emphasis will be placed on the link between anatomical structure, orthopedic injuries, and clinical practice.

Term Offered: Fall**EXSC 6960 Masters Thesis In Exercises Science**

[1-4 credit hours]

Independence research in Exercise Science completed as part of the requirements for the Master of Science in Exercise Science degree.

Term Offered: Spring, Summer, Fall**EXSC 6990 Independent Study In Exercise Science Independent Study In Exercise Science**

[1-4 credit hours]

Faculty supervised independent reading, laboratory research, field experience and other activities not suited for class instruction.

Term Offered: Spring, Summer, Fall

EXSC 7110 Measurement And Statistical Inference In Human Performance

[3 credit hours]

Application of measurement and statistical inference to human performance testing and research. Includes descriptive and inferential statistics, principles of test construction and introduction to authentic assessment in public schools.

Term Offered: Spring

EXSC 7250 Readings In Exercise Biology

[3 credit hours]

EXSC 8100 Physiology of Exercise

[3 credit hours]

This course is designed to provide an understanding mechanisms of the physiological responses to exercise. Emphasis will be placed on adaptations to exercise training and the role of exercise in health and disease.

Term Offered: Fall

EXSC 8130 Biomechanics of Human Motion

[3 credit hours]

This course provides a basic overview of the principles of biomechanics as they apply to human movement. In-depth discussion and lab activities focus on the application of these principles to such topics as muscle function, locomotion, balance, mechanisms of injury and ergonomics.

Term Offered: Spring, Fall

EXSC 8200 Biomechanical Instrumentation

[3 credit hours]

Provides students with experience in the research and clinical use of videography, force and pressure plates, electromyography and other systems in applied biomechanics. Emphasis on hands-on lab experience and topics related to data collection and signal processing.

Prerequisites: (KINE 6130 with a minimum grade of D- and KINE 8130 with a minimum grade of D-) or (EXSC 6130 with a minimum grade of D- and EXSC 8130 with a minimum grade of D-)

Term Offered: Spring

EXSC 8230 Scientific Writing And Research Methods

[3 credit hours]

Principles and issues involved in the design and conduct of research in exercise science: critical evaluation, research design, development of a research proposal, grant acquisition, and compliance with institutional and federal guidelines on the use of humans and animals.

Term Offered: Fall

EXSC 8420 Cardiopulmonary Exercise Physiology

[3 credit hours]

The responses and adaptations of the cardiovascular and pulmonary systems to exercise in healthy individuals.

Prerequisites: KINE 8100 with a minimum grade of D- or EXSC 8100 with a minimum grade of D-

Term Offered: Spring, Fall

EXSC 8430 Environmental Physiology

[3 credit hours]

Physiological responses and adaptations to extreme environments.

Term Offered: Fall

EXSC 8460 Readings in Cardiovascular Physiology Readings in Cardiovascular Physiology

[3 credit hours]

This is a faculty directed examination of current research in Cardiovascular Physiology. Emphasis is placed on the role of physical activity on the prevention and/or treatment of cardiovascular diseases.

Prerequisites: KINE 8100 with a minimum grade of D- or EXSC 8100 with a minimum grade of D-

Term Offered: Spring, Fall

EXSC 8540 Laboratory Techniques In Exercise Physiology

[3 credit hours]

This course covers theoretical and practical knowledge for the assessment of exercise metabolism, cardiorespiratory function, body composition, thermoregulation and skeletal muscle function. Hands-on data collection will be emphasized.

Term Offered: Spring, Fall

EXSC 8550 Lab Techniques In Exercise Biology

[3 credit hours]

The course provides students with theoretical and practical knowledge for assessing cellular and molecular responses to exercise and inactivity. Emphasis will be placed on laboratory safety, reagent preparation, cell culture techniques, and tissue analysis.

Prerequisites: (KINE 8100 with a minimum grade of D- and KINE 8540 with a minimum grade of D-) or (EXSC 8100 with a minimum grade of D- and EXSC 8540 with a minimum grade of D-)

EXSC 8720 Anatomical Concepts for Clinical Practice

[3 credit hours]

A cadaver anatomy course focusing on the extremities. Emphasis will be placed on the link between anatomical structure, orthopedic injuries, and clinical practice.

Term Offered: Fall

EXSC 8960 Doctoral Dissertation In Exercise Science

[1-12 credit hours]

Directed research towards completion of the doctoral degree. Students may register for credit in more than one semester. Total dissertation credit toward the degree may not exceed 16 hours.

Term Offered: Spring, Summer, Fall

EXSC 8990 Independent Study In Exercise Science

[1-4 credit hours]

Faculty supervised independent reading, laboratory research, field experience and other activities not suited for class instruction.

Term Offered: Spring, Summer, Fall

Faculty Development (FACD)

FACD 6250 Learning/Instruct Theories

[3 credit hours]

Introduction to the fundamental principles of curriculum development and assessment of learning outcomes. Application of the theoretical concepts to the development of curriculum and instructional strategies. The concept of instructional alignment will be at the foundation of various experiences that will expose students to knowledge and skill relevant to the development of instructional units and appropriate evaluation strategies.

FACD 6350 Teach/Learn Hlth Med Sci

[3 credit hours]

Introduction to various theories of teaching and learning. Explores current issues in medical and health science education relative to the theoretical foundations of teaching. Current challenges faced by educators in the health sciences will be discussed and relevant literature reviewed and assessed.

FACD 6700 Teach Improve Practicum

[1 credit hour]

Students evaluate their own teaching and reflect on how they integrate concepts presented in FACD 635 and FACD 625 into their own performance.

Prerequisites: FACD 6350 with a minimum grade of S or FACD 635 with a minimum grade of S

Term Offered: Fall

FACD 6970 Teaching/Learning Project

[3 credit hours]

Students are provided with the opportunity to synthesize the concepts presented and discussed in FACD 625 and FACD 635 into a unique curriculum development or educational research project.

Prerequisites: (FACD 6350 with a minimum grade of S and FACD 6250 with a minimum grade of S) or (FACD 635 with a minimum grade of S and FACD 625 with a minimum grade of S)

Finance (FINA)

FINA 5210 Economics For Business Decisions

[3 credit hours]

This course is designed for students with little or no prior formal economic education. The course consists of two distinct halves—microeconomics and macroeconomics. The former deals with economic behavior at disaggregated levels; the individual, firm, and industry levels. The macroeconomics portion deals with economic behavior and policy making at the highest level of aggregation topics include unemployment, inflation, and economic growth and related government and quasi-governmental institutions.

Term Offered: Spring, Summer, Fall

FINA 5310 Managerial Finance

[3 credit hours]

This course is designed to develop the skills necessary to understand how financial managers make value-maximizing decisions in their organization. Contents include fundamentals of financial analysis, short and long-term investments, time value of money, stock and bond valuation, risk and return, and corporate structure.

Prerequisites: ACCT 5000 with a minimum grade of C or BUAD 2040 with a minimum grade of C and BUAD 2050 with a minimum grade of C or ACTG 1040 with a minimum grade of C and ACTG 1050 with a minimum grade of C

Term Offered: Spring, Summer, Fall

FINA 6130 Advanced Corporate Finance

[3 credit hours]

The course emphasizes the application of financial decision making tools, techniques and theory. Specific topics include advanced capital budgeting, cost of capital, enterprise valuation, mergers and acquisitions, real options and corporate governance.

Prerequisites: BUAD 6200 with a minimum grade of C

Term Offered: Spring, Summer, Fall

FINA 6140 Investments And Security Analysis

[3 credit hours]

This course covers portfolio analysis and asset pricing models such as CAPM, APT, and index models. It also examines bond and stock valuation. In addition, it discusses investment characteristics of individual securities and markets in which these securities are traded, as well as performance evaluation of portfolios.

Prerequisites: BUAD 6200 with a minimum grade of C

Term Offered: Spring, Summer, Fall

FINA 6150 Financial Institutions And Markets

[3 credit hours]

This course covers operations of financial institutions and financial markets. Topics include interest rate theory, the monetary policy of the Federal Reserve, financial instruments characteristics, banking management, and internationalization.

Prerequisites: BUAD 6200 with a minimum grade of C

Term Offered: Spring, Fall

FINA 6340 Derivative Securities

[3 credit hours]

It examines the valuation of and institutional characteristics of derivative securities such as options, futures, forward contracts, and swaps among others. The course covers the Black-Scholes and binomial option-pricing models. It also introduces the risk management aspect of derivative securities.

Prerequisites: BUAD 6200 with a minimum grade of C

Term Offered: Spring, Summer

FINA 6370 MBA International Financial Management

[3 credit hours]

Techniques and theory of financial management in an international environment. The role of international markets in risk reduction and profit maximization are emphasized.

Prerequisites: BUAD 6200 with a minimum grade of C

Term Offered: Spring, Summer, Fall

FINA 6480 Student Managed Portfolio

[3 credit hours]

Course provides selected students active portfolio management training utilizing an endowed portfolio. Student Portfolio Managers apply equity selection analysis and portfolio risk analytics, with fiduciary responsibilities.

Prerequisites: BUAD 6200 with a minimum grade of C

Term Offered: Spring, Fall

FINA 6750 Research In Finance

[1-3 credit hours]

This course fulfills the need for students who would like to do research on specific area of finance supervised by a faculty member.

Prerequisites: BUAD 6200 with a minimum grade of C

Term Offered: Spring, Summer, Fall

FOREIGN LANGUAGE (FLAN)

FLAN 1970 Special Topics

[4 credit hours]

Special topics which vary semester to semester. Course may be repeated when topic varies.

Term Offered: Spring, Fall

FLAN 1980 Special Topics

[4 credit hours]

Special topics which vary semester to semester. Course may be repeated when topic varies.

Term Offered: Spring, Fall

FLAN 2700 World Cultures through Literature and Cinema in Translation

[3 credit hours]

This course introduces students to World Cultures through selected translated texts and films from various European, Latin American, African, Asian, and Middle East cultures. Among the themes considered are race, gender, class, immigration, and colonialism. Taught in English. 3 credit hours.

Term Offered: Spring, Summer, Fall

Core Arts & Humanities, Multicultural Non-US Diversity

FLAN 2970 Special Topics

[3 credit hours]

Special topics which vary semester to semester. Course may be repeated when topic varies.

Term Offered: Spring, Fall

FLAN 2980 Special Topics

[3 credit hours]

Special topics which vary semester to semester. Course may be repeated when topic varies.

Term Offered: Spring, Fall

FLAN 3440 Intercultural Communication: Principles And Practice

[4 credit hours]

This course offers a survey of major concepts in intercultural communication. It emphasizes a balance between theoretical and practical learning opportunities and seeks to promote intercultural understanding.

Term Offered: Spring, Summer, Fall

Multicultural Non-US Diversity

FLAN 3980 Special Topics in Foreign Languages

[0-6 credit hours]

Study of a selected topic in language, literature, or culture.

Term Offered: Spring, Summer, Fall

FLAN 4160 Teaching Colloquia

[3 credit hours]

A course in the theory of second language acquisition and practice of teaching foreign / second languages in general.

Term Offered: Spring, Summer, Fall

FLAN 4940 Internship in Foreign Languages

[0-12 credit hours]

Educational work experience in a pre-approved professional field.

Term Offered: Spring, Fall

FLAN 4980 Special Topics in Foreign Languages

[0-6 credit hours]

Study of a selected topic in foreign languages. May be repeated when topic varies.

Term Offered: Spring, Summer, Fall

FLAN 4990 Independent Study in World Languages and Cultures

[3 credit hours]

Independent study of a selected topic in foreign languages, developed in consultation with a faculty member. 3 hours. May be repeated with a different topic.

Term Offered: Spring, Summer, Fall

FLAN 5160 Teaching Colloquia

[3 credit hours]

A course in the theory of second language acquisition and practice of teaching foreign / second languages in general.

Term Offered: Spring, Summer, Fall

FLAN 5980 Special Topics

[3 credit hours]

Study of a selected topic in foreign languages. Taught in English. May be repeated when topic varies. 3 Credit hours/contact hours

Term Offered: Spring, Fall

FLAN 5990 Independent Study in World Languages and Cultures

[3 credit hours]

Independent study of a selected topic in foreign languages, developed in consultation with a faculty member. May be repeated when the topic varies. 3 hours.

Term Offered: Spring, Summer, Fall

French (FREN)

FREN 5010 Advanced French Grammar I

[3 credit hours]

Advanced study of structural and stylistic principles of French with emphasis on longer writing activities and various styles.

Term Offered: Spring

FREN 5020 Advanced French Grammar II

[3 credit hours]

Advanced study of structural and stylistic principles of French with emphasis on longer writing assignments.

Term Offered: Spring

FREN 5050 Advanced Conversation

[3 credit hours]

Intensive practice in speaking French.

Term Offered: Spring

FREN 5070 French Translation

[3 credit hours]

Practice in translation of texts from French into English and English into French. Subject matter area will include commerce, natural, physical, and social sciences and the humanities.

FREN 5160 Teaching Colloquia

[3 credit hours]

A course in the theory of second language acquisition and practice of teaching foreign / second languages in general.

Term Offered: Spring, Summer, Fall

FREN 5190 Study Abroad

[1-12 credit hours]

Graduate credit may be granted for foreign study on the basis of credentials that certify the nature of the student's academic achievements in a French-speaking country.

FREN 5200 Contemporary French And Francophone Civilization

[3 credit hours]

A study of contemporary France and/or Francophone cultures including discussion of economics, daily life, the family, social groups, industry, politics and education.

Term Offered: Spring, Fall

FREN 5210 French For Reading Knowledge I

[3 credit hours]

Course designed to develop sufficient reading proficiency to conduct and process research in French. (Not for majors)

Term Offered: Spring, Fall

FREN 5220 French For Reading Knowledge II

[3 credit hours]

Course designed to develop sufficient reading proficiency to conduct and process research in French. (Not for majors)

FREN 5310 Medieval Studies

[3 credit hours]

Introduction to Old French and readings in the major genres from the twelfth through fifteenth centuries.

Term Offered: Fall

FREN 5410 Renaissance Studies

[3 credit hours]

Literature reflecting major currents of the Renaissance.

Term Offered: Spring, Fall

FREN 5510 17th Century French Literature

[3 credit hours]

A study of the development of French Classicism.

Term Offered: Spring, Fall

FREN 5610 18th Century French Literature

[3 credit hours]

Readings from the novels, plays and prose of the major writers of the Enlightenment.

Term Offered: Fall

FREN 5710 19th Century French Literature I

[3 credit hours]

Literary and intellectual trends from Romanticism to Symbolism.

FREN 5810 Contemporary French & Francophone Literature I

[3 credit hours]

Literature of all genres from the period before World War I to the present.

Term Offered: Spring, Fall

FREN 5850 Le Cinema Francais

[3 credit hours]

A study of the development of French film and its place in world cinema.

Term Offered: Spring, Fall

FREN 5860 La Production Feminine

[3 credit hours]

This course deals with examples of feminine production which have influenced French culture in the areas of film, literary criticism, literature, philosophy, psychoanalysis and semiotics.

Term Offered: Fall

FREN 5980 Special Topics In French Studies

[3 credit hours]

Study of a selected topic in French or Francophone language, literature, or culture. May be repeated when topic varies.

Term Offered: Spring

FREN 5990 Independent Study In French

[1-3 credit hours]

Independent research in special topics. May be repeated once for additional credit.

FREN 6900 Research In French

[1-3 credit hours]

Independent research of a selected topic in French or Francophone language, literature, or culture. May be repeated once for additional credit.

Term Offered: Spring, Summer, Fall

General Engineering (GNEN)

GNEN 5000 Graduate Launch

[0-2 credit hours]

The courses addresses specific requirements for graduate degrees in COE as well as more general requirements for successful careers as professional engineers. Content to be discussed includes University paperwork and progress towards degree; professionalism; research initiation (literature searches, research database, endnote); professional writing; career preparation; and developing professional relationships.

Term Offered: Spring, Fall

GNEN 5500 Applications of Engineering Analysis

[3 credit hours]

A course in analysis for engineers. Topics include: Linear differential equations, continuous and discrete series representation. Laplace transforms, matrix methods, eigenvalues and eigen vectors, systems of equations.

Term Offered: Fall

GNEN 5700 Applied Probability and Statistics

[3 credit hours]

An introduction to the application of descriptive and inferential statistics. Topics include probability distributions, confidence intervals, tests of hypotheses, linear regression and correlation and the use of statistical software.

Term Offered: Spring

GNEN 6200 Environmental Efficiency for Buildings

[3 credit hours]

This course is an in-depth study of the latest advances in efficient energy and environmental design and operation of commercial, industrial, and institutional building as defined by the United States Green Building Council. Topics include selection of building sites considering the interaction with mass or local transportation, water efficiency of both potable and waste water streams, energy efficiency as it relates to the building systems and construction including lighting and power generation, atmospheric effects including combustion wastes and refrigerant selection, building construction materials that reflect sustainable resources, and building indoor air quality. Upon completion, students are prepared to take the accreditation exam for LEED-GA, LEED-AP or both from the USGBC.

Term Offered: Spring, Fall

GNEN 6700 Management of Projects and Technological Innovation

[3 credit hours]

Study of new Accelerated Radical Innovation discipline targeting 2X-10X improvement innovation effectiveness, measured by reduced risk, time and cost. Assessment and modeling to speed development, transfer and profitable commercialization.

Term Offered: Fall

GNEN 6920 Special Projects in Engineering

[1-6 credit hours]

A special project is intended for the graduate student to investigate or solve a problem in an engineering area. The scope of the project is defined by the instructor in an area of mutual interest of the instructor and the student.

Term Offered: Spring, Summer, Fall

GNEN 6980 Special Topics in Engineering

[0-6 credit hours]

A special topic at the graduate level in engineering to be offered as a course during a term by a faculty member.

Term Offered: Spring, Summer, Fall

Geography and Planning (GEPL)

GEPL 5040 Geography Education Strategies

[3 credit hours]

Graduate level preparation for K - 12 educators with geography specialization. Integrates social studies and standard geography curricula in response to state and federal mandates.

Term Offered: Fall

GEPL 5110 Geographic Information Systems

[3 credit hours]

Introduction to computerized methods for the capture, storage, management, analysis and display of spatially-referenced data for the solution of planning, management and research problems.

Term Offered: Spring, Summer, Fall

GEPL 5160 Patterns Of World Development

[3 credit hours]

Examination of contemporary global economic patterns and trends. Topics receiving special attention include population problems, the spread of multinational corporations, and the causes and consequences of the emergence of postindustrial economics.

Term Offered: Fall

GEPL 5180 Geographic Information Systems Applications

[3 credit hours]

Advanced applications in geographic information systems (GIS) with an emphasis on advanced GIS analysis techniques, Global Positioning System applications in GIS, database design, and a survey of vector- and raster-based GIS software and databases. Research project required.

Prerequisites: GEPL 5110 with a minimum grade of D- or GEPL 4110 with a minimum grade of D-

Term Offered: Spring

GEPL 5210 Land Use Planning

[3 credit hours]

A broad review of urban and regional planning in the US and Western Europe, introducing land use planning concepts and practices and their role in shaping the direction of urban development.

Term Offered: Spring

GEPL 5310 Geography of Gypsies (Romanies) and Travelers

[3 credit hours]

Explorations into identities and distributions of Gypsies (Romanies) and Travelers (GR&T peoples) worldwide and the challenges that their study presents to Geography and to other social science disciplines.

Term Offered: Spring, Summer, Fall

GEPL 5420 Quantitative methods in geographic research

[3 credit hours]

An examination of quantitative methods commonly used in geographic research with an emphasis on spatial statistics and cartographic analysis.

Term Offered: Fall

GEPL 5490 Remote Sensing Of The Environment

[3 credit hours]

Introduction to theory, methods and techniques used to gather and analyze remote sensor data. Topics range from low altitude air photo interpretation through satellite image acquisition. Recommended: GEPL 3550.

Term Offered: Fall

GEPL 5500 Digital Image Analysis

[3 credit hours]

Using imagery captured by earth orbiting satellites, students will document changes on the surface of the earth addressing environmental issues. Students will have the opportunity to learn applications of this technology including project based work in the classroom.

Prerequisites: GEPL 4490 with a minimum grade of D- or EEES 4490 with a minimum grade of D- or GEPL 5490 with a minimum grade of C or EEES 5490 with a minimum grade of C

Term Offered: Spring

GEPL 5520 Analytical And Computer Cartography

[4 credit hours]

The theoretical and mathematical foundations of the mapping process in a digital environment. An introduction to the structure and manipulation of graphic and nongraphic geographical data to produce maps.

Prerequisites: GEPL 5510 with a minimum grade of D-

Term Offered: Spring

GEPL 5530 Principles Of Urban Planning

[3 credit hours]

Elaborations on planning theory. The planner's role in land use regulation, economic development, housing and social service delivery is reviewed.

Term Offered: Fall

GEPL 5540 Weather And Climate

[3 credit hours]

Survey analysis of meteorology and climatology. The physical processes of weather and the pattern of climate provide the basis for this course.

Term Offered: Summer, Fall

GEPL 5570 Land Development And Planning

[4 credit hours]

The exploration of theoretical location analysis, pragmatic land development issues and analytic feasibility tools, and the consequences of land use policies that affect development.

Term Offered: Spring

GEPL 5580 Location Analysis

[4 credit hours]

The application of geographic location theory, spatial interaction modeling, optimization techniques and geographic information system processing to the solution of facility location problems.

Prerequisites: GEPL 5570 with a minimum grade of D-

Term Offered: Spring

GEPL 5600 Urban Design

[3 credit hours]

Concepts and procedures for the organization, design and development of public and private urban forms and spaces at the micro-level, including a survey of intraurban elements, cultural, ecological and aesthetic considerations, historic preservation, and interdisciplinary collaboration. Research project required.

Term Offered: Fall

GEPL 5650 Physical Geography

[3 credit hours]

This course will introduce you to the fundamental aspects of physical geography: the understanding of the physical elements and processes which comprise the environment and the spatial patterns of these elements and processes.

Term Offered: Spring

GEPL 5700 Community Planning Workshop

[3 credit hours]

This course introduces the skills and techniques used by practitioners in the planning process. Assignments will focus on the collection, analysis and communication of information by following community planning approaches.

Term Offered: Spring

GEPL 5710 Urban Environments

[3 credit hours]

Examines urban areas, the approaches to studying them, and explanations offered for urban processes and forms.

Term Offered: Spring, Fall

GEPL 5750 Transportation Geography

[3 credit hours]

The role of transportation and communication in the economic development of places. Theories of geographic interaction, location of transport routes and the developmental implications of transport investments are explored.

Term Offered: Spring, Fall

GEPL 5810 Political Geography

[3 credit hours]

Space and place facets of population size, growth, migration, distribution and composition with emphasis on the population trends and patterns in both developing and developed nations.

Term Offered: Spring, Fall

GEPL 5910 Directed Research

[1-3 credit hours]

GEPL 5920 Readings in Geography

[1-3 credit hours]

GEPL 6100 Philosophy & General Methodology

[3 credit hours]

Past and current trends in geographic thought and related methodological implications, with elaborations by current faculty members.

Term Offered: Fall

GEPL 6150 Seminar In Research Methods

[3 credit hours]

A computer-based course in geographic research methodology. The course includes an introduction to research design, data measurement, spatial sampling and multivariate approaches to the study of areal networks and spatial distributions.

Term Offered: Spring

GEPL 6160 Seminar In Spatial Analysis

[4 credit hours]

A computer-based laboratory course in multivariate spatial analysis methodologies. The course includes the study of spatial graphics and mapping, computerized regionalization, areal forecasting and predictive modeling techniques.

Prerequisites: GEPL 6150 with a minimum grade of D-

GEPL 6190 Advanced Geographic Information Systems Seminar

[4 credit hours]

Seminar in advanced GIS topics which include database design, spatial analysis and specialized application to spatial problems.

Prerequisites: GEPL 5180 with a minimum grade of D- or GEPL 6180 with a minimum grade of D-

GEPL 6200 Earth System Science Through Inquiry-Based Learning

[3 credit hours]

The course is geared towards in-service teachers. Teachers will explore four natural events affecting the earth as a system, using inquiry-based learning and lesson plan development.

Term Offered: Summer

GEPL 6300 Seminar In Resource Management

[3 credit hours]

Intensive group study of major themes in the resource management literature. Primary emphasis is placed on individual student research projects oriented toward resource management problems.

GEPL 6530 Seminar-Urban/Regional Planning Applications

[3 credit hours]

The course applies forecasting and projection techniques to urban and regional problems. Population, economic base, land use, retail and fiscal impact analyses are examined.

GEPL 6550 Seminar In Environment Planning

[3 credit hours]

Intensive group study of major goals and methodologies of environmental planning. Major emphasis is placed upon individual student research projects oriented toward specific environmental planning problems.

GEPL 6570 Seminar In Neighborhood Revitalization

[3 credit hours]

Intensive group study of major themes in the revitalization of urban neighborhoods, both residential and commercial. Major emphasis is placed upon individual residential and commercial. Major emphasis is placed upon individual student research projects oriented toward specific revitalization problems.

GEPL 6580 Urban Development And Housing

[3 credit hours]

Course examines the changing land use and functions of metropolitan regions. City suburban linkages, urban restructuring, urban policy and metropolitan planning issues are examined.

GEPL 6700 Teaching Practicum In Geography

[1-6 credit hours]

Methods of teaching geography in a university of college setting. Supervision of labs or discussion.

Term Offered: Spring, Summer, Fall

GEPL 6890 Professional Development in Geography and Planning

[3 credit hours]

Study of professional practices, knowledge, and skills required for pursuing opportunities in the public or private sector in geography and planning, including important issues of considering career planning, networking, ethics, writing and publishing.

Term Offered: Spring

GEPL 6910 Comprehensive Exam Preparation

[2 credit hours]

The course is used for the completion of the comprehensive exam requirement for M.A candidates.

Prerequisites: (GEPL 6100 with a minimum grade of D- and GEPL 6150 with a minimum grade of D-)

Term Offered: Spring, Fall

GEPL 6920 Research Design

[3 credit hours]

The course will have students prepare all the main components of a thesis proposal leading to the completion presentation of the proposal to their thesis advisory committee.

Prerequisites: (GEPL 6100 with a minimum grade of D- and GEPL 6150 with a minimum grade of D- and GEPL 6910 with a minimum grade of D-)

Term Offered: Spring, Fall

GEPL 6930 General Seminar

[3 credit hours]

GEPL 6940 Internship In Planning

[1-6 credit hours]

Professional work experience with a Greater Toledo planning organization related to academic education.

Term Offered: Spring, Summer, Fall

GEPL 6950 Applied Geographic Workshop

[3 credit hours]

Capstone course for GIS/Applied Geographics certificate program to provide hands-on experience in applying GIS, remote sensing and desktop mapping systems to spatially-oriented problems that are unique to their individual disciplines.

Term Offered: Spring, Fall

GEPL 6960 Thesis

[1-6 credit hours]

Work on a thesis is the culmination of graduate education and occupies most of the second year.

Term Offered: Spring, Summer, Fall

German (GERM)

GERM 5010 German Syntax And Stylistics I

[3 credit hours]

A review of German stylistic structures through the analysis of texts and written and oral exercises.

Term Offered: Fall

GERM 5020 German Syntax And Stylistics II

[4 credit hours]

Further review of German stylistic structures through the analysis of texts and written and oral exercises.

Prerequisites: GERM 5010 with a minimum grade of D-

Term Offered: Spring

GERM 5160 Teaching Colloquia

[3 credit hours]

A course in the theory of second language acquisition and practice of teaching foreign / second languages in general.

Term Offered: Spring, Summer, Fall

GERM 5190 Study Abroad

[1-12 credit hours]

Graduate credit may be granted for foreign study on the basis of credentials that certify the nature of the student's academic achievements in a German-speaking country.

Term Offered: Summer

GERM 5200 German Culture And Civilization

[3 credit hours]

Study of major trends and current developments in German Landeskunde. May be repeated when topic varies.

Term Offered: Spring, Fall

GERM 5210 German For Reading Knowledge I

[3 credit hours]

Elements of pronunciation, structure and vocabulary most appropriate to preparing graduate students to read effectively in German. (Not for major credit).

Term Offered: Spring

GERM 5620 German Classicism

[3 credit hours]

Study of Classical writers of Germany: Goethe, Schiller and their contemporaries.

Term Offered: Spring, Fall

GERM 5710 German Literature Of The 19th Century

[3 credit hours]

Study of selected works by authors from B chner to Fontane.

Term Offered: Spring

GERM 5720 German Romanticism

[3 credit hours]

Study of Romantic writers of Germany such as Novalis, Eichendorff, E.T.A. Hoffmann and Bettina Brentano.

GERM 5810 German Literature Of The 20th Century

[3 credit hours]

Study of selected works by authors from the turn of the century to the present.

Term Offered: Spring, Fall

GERM 5850 Genre Studies

[3 credit hours]

Study of a selected literary or film genre, its development, and its influence on German culture. May be repeated for credit when topic varies.

Term Offered: Spring, Fall**GERM 5980 Special Topics In German Studies**

[1-3 credit hours]

Study of a selected topic in German language, literature, or culture. May be repeated for credit when topic varies.

Term Offered: Spring, Summer, Fall**GERM 5990 Independent Study In German**

[1-3 credit hours]

Independent research in special topics. May be repeated once for additional credit.

Term Offered: Spring, Fall**GERM 6900 Research In German**

[1-3 credit hours]

Independent research of a selected topic in German language, literature, or culture. May be repeated once for additional credit.

Term Offered: Spring, Summer, Fall**GERM 6930 Seminar: Selected Topics**

[1-3 credit hours]

Study of selected topics in German language, literature, or culture. May be repeated once for additional credit.

Term Offered: Spring, Summer

Gifted and Talented Education (GIFT)

GIFT 5100 Introduction To Talented And Gifted Education

[3 credit hours]

Survey of major topics about the education and development of talents and gifts, including history, identification, social-emotional development, curriculum, creativity, intelligence, programming and evaluation.

Term Offered: Spring, Summer, Fall**GIFT 5200 Assessment And Evaluation In Talented And Gifted Education**

[3 credit hours]

The study of assessment and evaluation as it pertains to the special educational needs of talented and gifted persons. Theoretical and practical issues in assessing talent domains and educational programs are emphasized.

GIFT 5300 Socioemotional Development Of The Talented And Gifted

[3 credit hours]

Examination of the social and emotional needs of talented and gifted persons within the context of roles in family, school and society. Attention to issues of guidance, parenting, special populations and underachievement.

Term Offered: Summer, Fall**GIFT 5400 Creativity In The Classroom**

[3 credit hours]

Explores existing theories about creativity; examination of approaches and their implementation within various educational settings.

Term Offered: Spring**GIFT 5500 Curriculum I: Differentiation For The Talented And Gifted**

[3 credit hours]

The study of curriculum models, theories and trends, principles and practices of differentiation, and application of content within various educational settings.

Term Offered: Spring, Summer**GIFT 5600 Curriculum II: Integrating & Implementing Service Plans For The Talented & Gifted**

[3 credit hours]

The study, development and implementation of curriculum models across content areas both vertically and horizontally within various educational settings. Focuses on multi-exceptionalities and implications of varied service delivery plans.

Term Offered: Summer**GIFT 5700 Practicum In Talented And Gifted Education**

[3-6 credit hours]

Provides opportunities for field experience to use and refine the strategies for persons with talented and gifted abilities.

Term Offered: Spring, Summer, Fall**GIFT 6000 Issues & Trends In Talented And Gifted Education**

[3 credit hours]

The course examines the current theoretical and practical issues that are dominating the literature in the field. Perennial issues such as identification and intelligence will be discussed, as well as emergent topics such as the biological bases of advanced development and creativity and emotional adjustment.

GIFT 6100 Advanced Development In Social, Cultural & Political Context In Talented & Gifted Education

[3 credit hours]

The course explores social, cultural and political contexts related to advanced development or expression of talents. Emphasizes personal reflection and recognition of hegemony related to gifted individuals' past, present and future.

Prerequisites: (GIFT 5100 with a minimum grade of D- and GIFT 5300 with a minimum grade of D-)

GIFT 6900 Advanced Seminar In Teaching, Learning & Curriculum Theory In Talented & Gifted Education

[3 credit hours]

The course studies teaching, learning and curriculum from theoretical and historical perspectives to establish defensible lines of scholarly inquiry in gifted education.

GIFT 6910 Seminar In Talent & Advanced Development I: Academic Talents

[3 credit hours]

The course studies the theoretical and research basis of development of specific academic domains, such as science, mathematics, language and literature, etc. Attention is paid to tacit as well as more public kinds of knowledge.

GIFT 6920 Seminar In Talent & Advanced Development II: Aesthetic Talents

[3 credit hours]

The course studies development and expression of aesthetic abilities and talents such literacy, theatrical and/or musical expressiveness, visual and performing arts, emotional giftedness, movement and dance.

GIFT 6930 Seminar In Talent & Advanced Development III: Practical, Folk & Sport

[3 credit hours]

The course studies the theoretical and research basis for development of talents in folk, practical and athletic domains. Attention is paid to tacit, esoteric and public forms of knowledge.

GIFT 6950 Master's Research Project In Talented And Gifted Education

[3 credit hours]

Independent research project that integrates and synthesizes concepts and practices in gifted and talented education with implementation of action research and practical inquiry study.

Term Offered: Spring, Fall

GIFT 6980 Special Topics About Advanced Development In The Talented And Gifted

[3-6 credit hours]

Collaborative inquiry into emerging topics in the field. This course is open to advanced graduate students in the master's or doctoral program.

GIFT 6990 Independent Study In The Development Of The Talented & Gifted

[1-6 credit hours]

Directed readings and/or study on a topic selected in conjunction with a faculty mentor.

Term Offered: Spring

GIFT 7100 Introduction To Talented And Gifted Education

[3 credit hours]

Survey of major topics about the education and development of talents and gifts, including history, identification, social-emotional development, curriculum, creativity, intelligence, programming and evaluation.

Term Offered: Spring, Fall

GIFT 7200 Assessment And Evaluation In Talented And Gifted Education

[3 credit hours]

The study of assessment and evaluation as it pertains to the special educational needs of talented and gifted persons. Theoretical and practical issues in assessing talent domains and educational programs are emphasized.

GIFT 7300 Socioemotional Development Of The Talented And Gifted

[3 credit hours]

Examination of the social and emotional needs of talented and gifted persons within the context of roles in family, school and society. Attention to issues of guidance, parenting, special populations and underachievement.

Term Offered: Fall

GIFT 7400 Creativity In The Classroom

[3 credit hours]

Explores existing theories about creativity; examination of approaches and their implementation within various educational settings.

GIFT 7500 Curriculum I: Differentiation For The Talented And Gifted

[3 credit hours]

The study of curriculum models, theories and trends, principles and practices of differentiation, and application of content within various educational settings.

Term Offered: Spring, Summer

GIFT 7600 Curriculum II: Integrating & Implementing Service Plans For The Talented & Gifted

[3 credit hours]

The study, development and implementation of curriculum models across content areas both vertically and horizontally within various educational settings. Focuses on multi-exceptionalities and implications of varied service delivery plans.

Term Offered: Summer

GIFT 7700 Practicum In Talented And Gifted Education

[3-6 credit hours]

Provides opportunities for field experience to use and refine the strategies for persons with talented and gifted abilities.

Term Offered: Spring, Summer, Fall

GIFT 8000 Issues & Trends In Talented And Gifted Education

[3 credit hours]

The course examines the current theoretical and practical issues that are dominating the literature in the field. Perennial issues such as identification and intelligence will be discussed, as well as emergent topics such as the biological bases of advanced development and creativity and emotional adjustment.

Term Offered: Spring, Summer, Fall

GIFT 8100 Advanced Development In Social, Cultural & Political Context In Talented & Gifted Education

[3 credit hours]

The course explores social, cultural and political contexts related to advanced development or expression of talents. Emphasizes personal reflection and recognition of hegemony related to gifted individuals' past, present and future.

GIFT 8900 Advanced Seminar In Teaching, Learning & Curriculum Theory In Talented & Gifted Education

[3 credit hours]

The course studies teaching, learning and curriculum from theoretical and historical perspectives to establish defensible lines of scholarly inquiry in gifted education.

Term Offered: Spring, Fall

GIFT 8910 Seminar In Talent & Advanced Development I: Academic Talents

[3 credit hours]

The course studies the theoretical and research basis of development of specific academic domains, such as science, mathematics, language and literature, etc. Attention is paid to tacit as well as more public kinds of knowledge.

GIFT 8920 Seminar In Talent & Advanced Development II: Aesthetic Talents

[3 credit hours]

The course studies development and expression of aesthetic abilities and talents such literacy, theatrical and/or musical expressiveness, visual and performing arts, emotional giftedness, movement and dance.

Term Offered: Fall

GIFT 8930 Seminar In Talent & Advanced Development III: Practical, Folk & Sport

[3 credit hours]

The course studies the theoretical and research basis for development of talents in folk, practical and athletic domains. Attention is paid to tacit, esoteric and public forms of knowledge.

GIFT 8940 Internship In Gifted Studies

[3-6 credit hours]

Supervised internship in college teaching, or administration/leadership in agencies, or research and evaluation for advanced graduate students to practice skills and knowledge within settings relevant to career goals in talented and gifted education.

Term Offered: Spring, Summer, Fall**GIFT 8960 Doctoral Dissertation**

[1-15 credit hours]

Developing, conducting analyzing and writing the dissertation.

Term Offered: Spring, Summer, Fall**GIFT 8980 Special Topics About Advanced Development In The Talented And Gifted**

[3-6 credit hours]

Collaborative inquiry into emerging topics in the field. This course is open to advanced graduate students in the master's or doctoral program.

Term Offered: Spring, Summer, Fall**GIFT 8990 Independent Study In The Development Of The Talented & Gifted**

[1-6 credit hours]

Directed readings and/or study on a topic selected in conjunction with a faculty mentor.

Term Offered: Spring, Summer, Fall

Health Education (HEAL)

HEAL 5750 Obesity And Eating Disorders

[3 credit hours]

Examines the issues of obesity and eating disorders. Consideration of effects on the individual as well as the public health implications. Explores causes, health and emotional impact, and treatment approaches.

Term Offered: Summer, Fall**HEAL 5930 General Seminar In Health Education**

[1-3 credit hours]

A seminar to consider health problems and provide advanced study in health education. A graduate student may register for this seminar two or more times with permission of the adviser.

Term Offered: Spring, Fall**HEAL 6280 Health Communication**

[3 credit hours]

Designed to help students identify, analyze, and apply concepts, theories and methodologies related to health communication in various settings and at various levels of influence. Emphasis will be placed on learning how to design, communicate and evaluate effective health promotion messages.

Term Offered: Spring**HEAL 6300 Community Health Organization**

[3 credit hours]

Focuses on techniques to bring about change in a community's health status through assessment, public advocacy, coalition building, decision making, planning, policy development and political influence. Application will be emphasized.

HEAL 6360 Applied Survey Research In Health

[3 credit hours]

An examination of applied survey research techniques essential in conducting health-related surveys. Topics will include standard health survey instruments, sample selection, quality instruments, response rates and data presentation for publication.

HEAL 6530 Drug Use And Misuse

[3 credit hours]

Focuses on impact of drug abuse and misuse on the individual and society. Explores physiological, psychological, societal and rehabilitative aspects of substance abuse. Prevention strategies are addressed.

Term Offered: Summer, Fall**HEAL 6540 Human Sexuality**

[3 credit hours]

The course examines the historical, physiological, psychological, sociological and ethical aspects of human sexuality in health and illness. Extensive emphasis is placed on reviewing the pertinent periodical literature.

HEAL 6600 Health Behavior

[3 credit hours]

Examines the role of behaviors on health status and how to influence and understand behavior through use of cognitive models and change theory. Applications through projects are emphasized.

Term Offered: Spring, Summer, Fall**HEAL 6720 Issues In Minority Health**

[3 credit hours]

This course will be an examination of the demographic trends of racial/ethnic minorities and social, political and economic factors affecting the physical and mental well-being of minorities.

Term Offered: Fall**HEAL 6880 Scientific Writing In Health**

[3 credit hours]

Examines salient issues related to scientific writing and academic publishing, including ethical issues surrounding publication and best practices for scientific writing in academia.

HEAL 6900 Grant Writing In Health Sciences

[3 credit hours]

Consideration is given to funding sources, proposal guidelines, procedures for support, budgetary requirements and evaluation procedures. Students examine different types of funded projects, develop a research prospectus and grant proposal, and explore the art of politics and grantsmanship.

Prerequisites: (RESM 6320 with a minimum grade of D- and HEAL 6800 with a minimum grade of D-)

Term Offered: Spring, Fall**HEAL 6920 Master's Research Project In Health Education**

[1-4 credit hours]

Open to graduate students who elect the completion of a master's project in fulfilling the research elective of the master's program. Students may register for the credits in more than one semester.

Term Offered: Spring, Summer, Fall

HEAL 6930 Interdisciplinary Seminar In Health Education

[1-3 credit hours]

A seminar to consider problems and provide advanced study in several fields of education and other disciplines related to health education. Open only to advanced graduate students.

Term Offered: Spring, Summer, Fall

HEAL 6990 Independent Study In Health Education

[1-3 credit hours]

The student will participate in independent readings, laboratory research, field experience and other activities not suited for class instruction. May be repeated for course credit.

Term Offered: Spring, Summer, Fall

HEAL 8000 Professional Issues In Health Education

[3 credit hours]

This course will examine the historical and philosophical foundations underlying the health education profession. Occupational and ethical issues specific to the field of health education will be explored. Special emphasis will be placed on becoming a culturally competent professional.

Term Offered: Fall

HEAL 8080 Social Determinants of Health

[3 credit hours]

Social determinants of health are social conditions, factors, and systems that place people from different socio-demographic and socioeconomic group (social class, gender, race/ethnicity, and place of birth) at differential risk of poor health and premature mortality. Mechanisms through which these factors are hypothesized to influence health, such as stress and access to health resources and constraints, will be discussed, as well as the ways in which these mechanisms can operate across the life course.

Term Offered: Spring, Fall

HEAL 8100 College Teaching In Health Education

[3 credit hours]

This course is designed to provide an overview of the issues surrounding teaching health education at the college level. The course will include information on course development, effective teaching, tenure and promotion process, and professional development.

Term Offered: Fall

HEAL 8190 Statistical Packages for Public Health

[3 credit hours]

The purpose of this 3 credit course is to develop analysis skills using the SAS statistical package, SPSS, and R for students that already have a basic knowledge of biostatistics.

Prerequisites: PUBH 6000 with a minimum grade of D- or PUBH 8000 with a minimum grade of D-

Term Offered: Fall

HEAL 8200 Methods And Materials In Public Health

[3 credit hours]

Introduces students to resource materials and methods appropriate for public health education. Students will use various mediums of instruction in direct application to public health programs.

Term Offered: Spring, Fall

HEAL 8250 Nutritional Epidemiology

[3 credit hours]

Examination of human nutritional needs. Emphasized the role of diet in health and disease throughout the lifecycle and includes current nutrition issues. Personal nutritional practices are analyzed and evaluated.

Prerequisites: HEAL 8700 with a minimum grade of D-

Term Offered: Spring

HEAL 8280 Health Communication

[3 credit hours]

Designed to help students identify, analyze, and apply concepts, theories and methodologies related to health communication in various settings and at various levels of influence. Emphasis will be placed on learning how to design, communicate and evaluate effective health promotion messages.

Term Offered: Spring

HEAL 8300 Community Health Organization

[3 credit hours]

Focuses on techniques to bring about change in a community's health status through assessment, public advocacy, coalition building, decision making, planning, policy development and political influence. Application will be emphasized.

Term Offered: Spring

HEAL 8310 Public Health Assessment and Planning

[3 credit hours]

This course introduces the principles of health promotion program assessment and planning. Students learn the process of community health assessment, precursors to program planning, as well as the purposes, procedures, terminology, and specific techniques in the planning process.

Term Offered: Fall

HEAL 8320 Implementation of Public Health Programs

[3 credit hours]

This course is designed to prepare students to implement health education programs in the community. Emphasis will be placed on a variety of health education methods and strategies to plan, promote, present and evaluate health promotion activities.

Prerequisites: HEAL 8310 with a minimum grade of D-

Term Offered: Spring

HEAL 8330 Qualitative Research Methods in Public Health

[3 credit hours]

This course is designed to provide an introduction to qualitative research methods in Public Health. Topics include: philosophical perspectives on qualitative research; rationales for the use of qualitative approaches to understanding health behaviors and disease processes, with emphasis on vulnerable, marginalized, and low health literacy populations; study design; selection of culturally appropriate methods and measures for data collection; analytic techniques and processes; issues of reliability and validity; data interpretation and reporting results; and research ethics.

Term Offered: Fall

HEAL 8360 Applied Survey Research In Health

[3 credit hours]

An examination of applied survey research techniques essential in conducting health-related surveys. Topics will include standard health survey instruments, sample selection, quality instruments, response rates and data presentation for publication.

Term Offered: Spring, Fall**HEAL 8460 Health Promotion Programs**

[3 credit hours]

This course introduces the principles of health promotion program planning. Students learn the precursors to program planning as well as the purposes, procedures, terminology, and specific techniques in the planning process.

HEAL 8510 Pathophysiology in Public Health

[3 credit hours]

This course is designed to provide an introduction to the distribution and determinants of infectious and chronic diseases that are recognized as priority public health concerns by the Centers for Disease Control and Prevention (CDC); US Department of Health and Human Services (USDHHS); and the World Health Organization (WHO). Topics will include: etiology and epidemiology of disease; prevalence, incidence, and risk factors; best practices in prevention and control.

Term Offered: Fall**HEAL 8520 Public Health Nutrition**

[3 credit hours]

Explore the relationship between dietary intake and nutritional status and health of individuals and groups. Investigates role of dietary intake in reducing risk and treating chronic diseases. Explore public health approaches to alleviate nutritional problems.

Term Offered: Spring, Summer**HEAL 8530 Drug Use And Misuse**

[3 credit hours]

Focuses on impact of drug abuse and misuse on the individual and society. Explores physiological, psychological, societal and rehabilitative aspects of substance abuse. Prevention strategies are addressed.

Term Offered: Summer, Fall**HEAL 8540 Human Sexuality**

[3 credit hours]

The course examines the historical, physiological, psychological, sociological and ethical aspects of human sexuality in health and illness. Extensive emphasis is placed on reviewing the pertinent periodical literature.

Term Offered: Spring, Fall**HEAL 8600 Health Behavior**

[3 credit hours]

Examines the role of behaviors on health status and how to influence and understand behavior through use of cognitive models and change theory. Applications through projects are emphasized.

Term Offered: Spring, Summer, Fall**HEAL 8690 Public Health Research Design**

[3 credit hours]

This course will cover the components of public health research methods. After completing the course, students will be able to write a research proposal to answer a question of interest. Additionally, students will be able to analyze evidence in order to engage in evidence-based public health practice. The course will be offered at the masters and doctoral levels with a focus on research methods utilized in public health and health education. The course is relevant for students in all majors within the M.P.H. program, and is required for students in the Health Education Ph.D. program.

Term Offered: Spring**HEAL 8720 Issues In Minority Health**

[3 credit hours]

This course will be an examination of the demographic trends of racial/ethnic minorities and social, political and economic factors affecting the physical and mental well-being of minorities.

Term Offered: Fall**HEAL 8800 Evaluation Of Health Programs**

[3 credit hours]

An exploration of types of program evaluation, evaluation models, data collection, types of data, data quality, evaluation reports, standard data collection instruments and ethical issues in health program evaluation.

Prerequisites: HEAL 8460 with a minimum grade of D-**Term Offered:** Spring, Fall**HEAL 8880 Scientific Writing In Health**

[3 credit hours]

This course is designed to integrate research methods with the writing of a five-chapter thesis or dissertation, including: selecting a topic, literature reviews; research hypotheses; selecting participants; data analysis; instrument development; institutional review boards; references; conclusions, discussion, and recommendations.

Prerequisites: (HEAL 8600 with a minimum grade of D- and HEAL 8800 with a minimum grade of D-)**Term Offered:** Spring, Fall**HEAL 8900 Grant Writing In Health Sciences**

[3 credit hours]

Consideration is given to funding sources, proposal guidelines, procedures for support, budgetary requirements and evaluation procedures. Students examine different types of funded projects, develop a research prospectus and grant proposal, and explore the art of politics and grantsmanship.

Prerequisites: (RESM 8320 with a minimum grade of D- and HEAL 8800 with a minimum grade of D-)**Term Offered:** Spring, Fall**HEAL 8930 Interdisciplinary Seminar In Health Education**

[1-3 credit hours]

A seminar to consider problems and provide advanced study in several fields of education and other disciplines related to health education. Open only to advanced graduate students.

Term Offered: Spring, Summer, Fall

HEAL 8940 Public Health Internship

[1-4 credit hours]

A field internship designed to supplement classroom experience by providing direct insight into the operation of a public health agency through participant-observer experience.

Term Offered: Spring, Fall

HEAL 8960 Doctoral Research Dissertation

[1-12 credit hours]

Graduate students may register for credit in more than one semester. Dissertation credit toward the degree program may not exceed 16 hours.

Term Offered: Spring, Summer, Fall

HEAL 8990 Independent Study In Health Education

[1-3 credit hours]

The student will participate in independent readings, laboratory research, field experience and other activities not suited for class instruction. May be repeated for course credit.

Term Offered: Spring, Summer, Fall

Health Science & Human Service (HSHS)

HSHS 6000 Statistics and Research for Health Science and Human Service Professions

[3-5 credit hours]

An interdisciplinary course covering basic statistics and related research design with specific applications in various health sciences and human service professions.

Term Offered: Spring, Summer, Fall

HSHS 8000 Statistics and Research for Health Science and Human Service Professions

[3-5 credit hours]

An interdisciplinary course covering basic statistics and related research design with specific applications in various health sciences and human service professions.

Term Offered: Summer

Higher Education (HED)

HED 5900 Diversity Leadership in Higher Education

[3 credit hours]

Diversity Leadership in Higher Education explores issues of diversity on campuses through foundational and contemporary lenses. It is intended for students studying higher education as a major or area of research interest, as well as employees in institutions of higher education at all levels. The course defines diversity in higher education settings and explores diversity through student, faculty, and administrative lenses, including the components of an effective diversity office on campus.

Term Offered: Spring, Summer, Fall

HED 5910 Diversity Beginnings

[3 credit hours]

This course will review and apply diversity-related theory, social and psychological understanding, and interpersonal communication to diversity experiences. The course is designed to cultivate an awareness of diversity through communication in education, work, and social settings.

Term Offered: Fall

HED 5920 Introduction to Master's Studies in Higher Education

[1-3 credit hours]

This course explores the expectations and challenges of graduate education. We will look at the role of the graduate student, faculty, adviser, and other university offices that support your journey.

Term Offered: Fall

HED 5930 Interdisciplinary Seminar

[3 credit hours]

This seminar formatted course will provide the opportunity to explore problems and issues from the perspectives of the various fields of education and of other disciplines related to higher education.

HED 5950 Workshop In Higher Education

[1-3 credit hours]

Each workshop is developed on a topic of interest to faculty members and administrators of higher education institutions. Practical applications of the workshop topic will be emphasized.

HED 5960 Diversity in Practice

[3 credit hours]

This course is designed to explore dimensions of diversity in different settings like that of health care. Dimensions of diversity will include but are not limited to topics of global citizenship, socioeconomic diversity, religious diversity, gender and gender identity, LGBTQ, ADA laws, race and ethnicity, successful aging, and harassment and bullying.

Term Offered: Spring

HED 5970 Diversity Advancement

[3 credit hours]

This course is designed to teach how to measure effectiveness of diversity-related programs, review of tools and instruments for strategic planning, creation and implementation of diversity plans, and exploration of components of being an effective Chief Diversity Officer (CDO).

Term Offered: Spring, Summer

HED 5980 Special Topics In Higher Education

[1-3 credit hours]

This seminar provides advanced study in special topics of interest to faculty and administrators in higher education.

Term Offered: Summer, Fall

HED 6010 History Of Higher Education

[3 credit hours]

Introduction to the historical development of American higher education from colonial times to the 20th century. Emphasis on the major historical events that contributed to the diversity of higher education.

Term Offered: Summer, Fall

HED 6120 International Education

[3 credit hours]

Complex interrelationships between global and educational systems will be examined. Emphasis will be on how education can be used to build a more global society. Some sections will include an international field study trip.

Term Offered: Spring, Summer, Fall

HED 6210 The Community College

[3 credit hours]

A study of the history, distinguishing characteristics (mission, functions, organization, curriculum, finances) and current issues facing community colleges, including marginalization of students and institutions, and transfer and articulation policy.

HED 6250 Technical Higher Education

[3 credit hours]

This course examines the development, mission, functions, and assessment of technical, occupational, and career education, including community needs assessment.

HED 6270 Learning and Teaching in Higher Education

[3 credit hours]

Course facilitates application of theory to practice of teaching in higher education. Students explore diverse pedagogical approaches, professional faculty roles effective learning and teaching.

HED 6410 College & University Curriculum

[3 credit hours]

The course examines the philosophical and conceptual underpinnings of college and university curriculum. It introduces a model for curriculum planning, implementation, and evaluation in American higher education, and a framework for designing and assessing courses and curricula.

Term Offered: Fall**HED 6440 General Education In Higher Education**

[3 credit hours]

This course will examine the meaning and purposes of general education in the United States. Students will become acquainted with the design, analysis and evaluation of general education curricula.

HED 6510 The American College Student

[3 credit hours]

This course explores the character and nature of student populations in contemporary American colleges and universities and considers the impact of campus environments and experiences on development, interaction and learning.

Term Offered: Spring, Fall**HED 6520 Organization & Management Of Student Affairs**

[3 credit hours]

This course provides an overview of functional areas of student affairs and the philosophies and ethics that guide the profession. The overview also considers general areas that influence student affairs such as university mission, campus culture and environment, leadership, financing and budgeting, university assessment, student demographics and diversity, and student development.

Term Offered: Spring, Summer, Fall**HED 6530 Theories Of Student Development**

[3 credit hours]

Students critically examine traditional and contemporary theories of college student development, identify methods of assessing that development, and explore ways to apply the theories to everyday practice.

Term Offered: Spring, Summer, Fall**HED 6540 HED 6540 Advising Diverse Students**

[3 credit hours]

This seminar considers the advising role of higher education professionals, emphasizing the ways that culture, race, ethnicity, gender, religion, sexual orientation, socio economic status, and other diversities may impact work with students.

Term Offered: Spring, Fall**HED 6570 Research in Higher Education**

[3 credit hours]

The course introduces students to research methods and techniques, along with the resources available, both within the University and nationally, for the purpose of higher education research. Introductory qualitative and quantitative research concepts are covered, as well as how to critique research articles in the field of higher education.

Term Offered: Spring, Summer, Fall**HED 6610 Issues Of Access In Higher Education**

[3 credit hours]

This course explores access issues that result from the changing educational needs of society and analyzes the application of democratic ideals of American education to current educational policies affecting access.

HED 6630 Faculty Issues in Higher Education

[3 credit hours]

HED 6640 Governance And Administration In Higher Education

[3 credit hours]

This course introduces students to the theories and structures of the governance and administration of academic organizations, and to the sources of authority and decision-making in academic institutions.

Term Offered: Spring, Fall**HED 6650 Community College Leadership**

[3 credit hours]

This course examines community college leadership and administration. It introduces models for leading change and explores challenges facing community college leaders.

Term Offered: Summer, Fall**HED 6660 Building Academic Culture**

[3 credit hours]

An examination of institutional culture and the interplay of student, faculty and administrative subcultures. Critical perspectives are used to analyze and understand cultural inquiry, conflict and collaboration in post secondary institutions.

HED 6700 Finance Of Higher Education

[3 credit hours]

This course discusses issues related to the expenditure of funds for higher education within institutions and systems. Issues addressed include capital funding, endowment management and budget preparation.

Term Offered: Spring, Summer, Fall**HED 6710 Economics Of Higher Education**

[3 credit hours]

This course discusses issues related to the revenue sources of higher education and discussion of the social worth of public and private sector investment in higher education. Issues include the connection of educational outcomes to educational budget making and how sources of funds drive educational policymaking.

HED 6730 Legal Aspects Of Higher Education

[3 credit hours]

Law, its history, philosophy and practical application to and effect on the creation and administration of public and private higher education is examined in the context of court decisions.

Term Offered: Spring, Fall

HED 6750 Strategic Planning And Decision Making

[3 credit hours]

This course provides an overview and applications of strategic planning theories and methods in higher education and explores how external environments and internal dynamics affect planning processes. The development and implementation of strategic plans are covered as well as the leadership skills needed to direct strategic decision-making.

HED 6770 Evaluation And Outcomes Assessment In Higher Education

[3 credit hours]

This course focuses on outcomes-based assessment of learning and development in student affairs.

Term Offered: Spring, Summer, Fall

HED 6790 Managing College And University Personnel

[3 credit hours]

This course acquaints students with key concepts related to the effective management of human resources within institutions of higher education. Topics covered may include human resource management, diversity and inclusion, talent management, training and development, employee engagement and retention, performance management, benefits and compensation, ethics and fair treatment, and collective bargaining in higher education.

Term Offered: Fall

HED 6810 Women In Higher Education

[3 credit hours]

This course introduces students to the historical, social, and cultural influences on women's higher education, and explores the campus climate for women as students, administrators, faculty, and governing board members. Special attention is paid to the intersections of gender with race and class.

Term Offered: Spring, Fall

HED 6820 Institutional Advancement In Higher Education

[3 credit hours]

Overview of the field of development and introduction to the knowledge, research and theory emerging in the field. Focus on practical skill enhancement as it applies to building development programs.

HED 6830 The Independent College

[3 credit hours]

The course examines the historical and conceptual underpinnings of the independent college and university. It explores the strengths, weaknesses, opportunities, and challenges of small residential liberal arts colleges, along with the other major categories of private colleges and universities in the American context.

Term Offered: Summer

HED 6840 Adult Continuing Education

[3 credit hours]

Course assists student in interpreting the highly diversified field of adult continuing education from the point of view of the student's current or anticipated involvement. Intended for teachers of adults.

HED 6850 Critical Issues In Higher Education

[3 credit hours]

This seminar exposes students to critical issues in higher education. Topics covered vary from course to course in order to stay current with ongoing and emerging critical issues.

Term Offered: Spring, Summer, Fall

HED 6870 Economic Development And Higher Education

[3 credit hours]

How do institutions of higher education impact their local economies?

This course examines various roles and methods by which institutions of higher education add to economic development.

HED 6910 Introduction To Interpretive Inquiry

[3 credit hours]

This course equips students with basic knowledge and abilities to conduct qualitative research. It fosters understanding of methodology and methods, and their alignment with a particular research tradition.

HED 6920 Master's Project In Higher Education

[1-3 credit hours]

Open to graduate students who elect the completion of a research project in fulfilling the research requirements of the master's program.

Term Offered: Spring, Summer, Fall

HED 6940 Master's Practicum In Higher Education

[1-3 credit hours]

The Practicum Seminar provides students with the opportunity to develop specialized skills working in a professional/administrative unit of a college or university. Students are expected to complete a 100 hours of work under the supervision of an experienced administrator. Seminar coursework accompanies the practicum experience.

Term Offered: Spring, Summer, Fall

HED 6950 HED 6950: Master's Internship in Higher Education

[1-4 credit hours]

The Master's Internship in Higher Education links directly to a student's Graduate Assistantship and offers students the opportunity to integrate theory, research, and skills gained through courses, workshops, and seminars with the knowledge, skills, and abilities they are developing through practice. In addition, the Internship serves as structured professional development opportunity for enhancing theory-to-practice knowledge and skills of the students and practitioners involved. The HED Internship has been developed jointly by the HED Program and UT's Student Affairs, and includes the collaborative participation of both student affairs professionals and higher education faculty.

HED 6960 Master's Thesis In Higher Education

[1-3 credit hours]

Open to graduate students who elect the completion of a research thesis in fulfilling the research requirements of the master's program.

Term Offered: Spring, Summer, Fall

HED 6980 Master's Capstone Seminar

[3 credit hours]

This seminar provides opportunities for students to strengthen their academic and professional skills and to apply them in different higher education contexts. The culminating requirements may vary.

Term Offered: Spring

HED 6990 Independent Study In Higher Education-Masters

[1-3 credit hours]

Provides student the opportunity to work independently on a professional problem under the direction of a Higher Education Program faculty member.

Term Offered: Spring, Summer, Fall

HED 7900 Diversity Leadership in Higher Education

[3 credit hours]

Diversity Leadership in Higher Education explores issues of diversity on campuses through foundational and contemporary lenses. It is intended for students studying higher education as a major or area of research interest, as well as employees in institutions of higher education at all levels. The course defines diversity in higher education settings and explores diversity through student, faculty, and administrative lenses, including the components of an effective diversity office on campus.

Term Offered: Spring, Summer, Fall**HED 7910 Diversity Beginnings**

[3 credit hours]

Review and application of diversity-related theory, social and psychological understanding, and interpersonal communication when applying to diversity experiences.

HED 7930 Interdisciplinary Seminar

[3 credit hours]

This seminar formatted course will provide the opportunity to explore problems and issues from the perspectives of the various fields of education and of other disciplines related to higher education.

HED 7950 Workshop In Higher Education

[1-3 credit hours]

Each workshop is developed on a topic of interest to faculty members and administrators of higher education institutions. Practical applications of the workshop topic will be emphasized.

HED 7960 Diversity in Practice

[3 credit hours]

Review the different dimensions of diversity, understanding of laws that are in diversity-related areas, and exploration of diversity in a health care setting.

HED 7970 Diversity Advancement

[3 credit hours]

Review and application of diversity work as it related to measurement and diversity analysis. Topic categories include but not limited to measuring diversity, creating climate surveys, developing diversity plans, and understanding the components of being an effective Chief Diversity Officer.

HED 7980 Special Topics In Higher Education

[1-3 credit hours]

This seminar provides advanced study in special topics of interest to faculty and administrators in higher education.

Term Offered: Summer, Fall**HED 8010 History Of Higher Education**

[3 credit hours]

Introduction to the historical development of American higher education from colonial times to the 20th century. Emphasis on the major historical events that contributed to the diversity of higher education.

Term Offered: Spring, Fall**HED 8020 Advanced Seminar In Historiography Hied**

[3 credit hours]

Historical methods applied to research in higher education discussed. Course focuses on in-depth readings of primary source material on liberal arts colleges, universities and community colleges. Research paper required.

HED 8030 Federal And State Policy Analysis

[3 credit hours]

Designed for those interested in federal and state policy as related to higher education. Students will investigate specific federal and state legislation and regulatory issues.

Term Offered: Summer**HED 8120 International Education**

[3 credit hours]

Complex interrelationships between global issues and educational systems will be examined. Emphasis will be on how education can be used to build a more global society. Some sections of the course will include an international field study trip.

Term Offered: Summer**HED 8210 The Community College**

[3 credit hours]

A study of the history, distinguishing characteristics (mission, functions, organization, curriculum, finances), and current issues facing community colleges, including marginalization of students and institutions, and transfer and articulation policy.

Term Offered: Spring, Fall**HED 8250 Technical Higher Education**

[3 credit hours]

This course examines the development, mission, functions, and assessment of technical, occupational, and career education, including community needs assessment.

HED 8270 Learning and Teaching in Higher Education

[3 credit hours]

Course facilitates application of theory to practice of teaching in higher education. Students explore diverse pedagogical approaches, professional faculty roles effective learning and teaching.

HED 8410 College & University Curriculum

[3 credit hours]

The course examines the philosophical and conceptual underpinnings of college and university curriculum. It introduces a model for curriculum planning, implementation, and evaluation in American higher education, and a framework for designing and assessing courses and curricula.

HED 8440 General Education In Higher Education

[3 credit hours]

This course will examine the meaning and purposes of general education in the United States. Students will become acquainted with the design, analysis and evaluation of general education curricula.

HED 8510 The American College Student

[3 credit hours]

This course explores the character and nature of student populations in contemporary American colleges and universities and considers the impact of campus environments and experiences on development, interaction and learning.

Term Offered: Summer, Fall

HED 8520 Org & Mgmt Of Student Affairs

[3 credit hours]

This course provides an overview of functional areas of student affairs and the philosophies and ethics that guide the profession. The overview also considers general areas that influence student affairs such as university mission, campus culture and environment, leadership, financing and budgeting, university assessment, student demographics and diversity, and student development.

Term Offered: Fall

HED 8530 Theories Of Student Development

[3 credit hours]

Students critically examine traditional and contemporary theories of college student development, identify methods of assessing that development, and explore ways to apply the theories to everyday practice.

Term Offered: Spring, Summer, Fall

HED 8570 Research In Higher Education

[3 credit hours]

"This course introduces students to various research approaches in the field of higher education. Students learn how to critique research articles in the field of higher education, how higher education institutions are classified, what national postsecondary datasets are available for their own research, and how to develop and present a research study proposal."

Term Offered: Spring, Fall

HED 8580 Leadership Theory

[3 credit hours]

This seminar examines the theory and practice of leadership in higher education. Topics may include the leadership experience, leadership in engaging higher education in social change, and the roles of academic leaders.

HED 8610 Issues Of Access In Higher Education

[3 credit hours]

This course explores access issues that result from the changing educational needs of society and analyzes the application of democratic ideals of American education to current educational policies affecting access.

HED 8630 Faculty Issues In Higher Education

[3 credit hours]

This course explores current issues in the American academic profession. Topics may include faculty work, faculty reward systems, diversity issues, gender issues, salary issues, part-time faculty, work-home balance, governance, satisfaction, career choice, recruitment and retention, and faculty career stages.

HED 8640 Governance And Administration In Higher Education

[3 credit hours]

This course introduces students to the theories and structures of the governance and administration of academic organizations, and to the sources of authority and decision-making in academic institutions.

Term Offered: Spring, Fall

HED 8650 Community College Leadership

[3 credit hours]

This course examines community college leadership and administration. It introduces models for leading change and explores challenges facing community college leaders.

Term Offered: Summer

HED 8660 Building Academic Culture

[3 credit hours]

An examination of institutional culture and the interplay of student, faculty and administrative subcultures. Critical perspectives are used to analyze and understand cultural inquiry, conflict and collaboration in post secondary institutions.

HED 8700 Finance Of Higher Education

[3 credit hours]

This course discusses issues related to the expenditure of funds for higher education within institutions and systems. Issues addressed include capital funding, endowment management and budget preparation.

Term Offered: Spring, Fall

HED 8710 Economics Of Higher Education

[3 credit hours]

This course discusses issues related to the revenue sources of higher education and discussion of the social worth of public and private sector investment in higher education. Issues include the connection of educational outcomes to educational budget making and how sources of funds drive educational policymaking.

HED 8730 Legal Aspects Of Higher Education

[3 credit hours]

Law, its history, philosophy and practical application to and effect on the creation and administration of public and private higher education is examined in the context of court decisions.

Term Offered: Spring, Fall

HED 8750 Strategic Planning And Decision Making

[3 credit hours]

This course provides an overview and applications of strategic planning theories and methods in higher education and explores how external environments and internal dynamics affect planning processes. The development and implementation of strategic plans are covered as well as the leadership skills needed to direct strategic decision-making.

HED 8770 Evaluation And Outcomes Assessment In Higher Education

[3 credit hours]

This course focuses on outcomes-based assessment of learning and development in student affairs.

Term Offered: Spring, Fall

HED 8790 Managing College And University Personnel

[3 credit hours]

This course acquaints students with key concepts related to the effective management of human resources within institutions of higher education. Topics covered may include human resource management, diversity and inclusion, talent management, training and development, employee engagement and retention, performance management, benefits and compensation, ethics and fair treatment, and collective bargaining in higher education.

Term Offered: Spring, Fall

HED 8810 Women In Higher Education

[3 credit hours]

This course introduces students to the historical, social, and cultural influences on women's higher education, and explores the campus climate for women as students, administrators, faculty, and governing board members. Special attention is paid to the intersections of gender with race and class.

Term Offered: Spring

HED 8820 Institutional Advancement In Higher Education

[3 credit hours]

Overview of the field of development and introduction to the knowledge, research, and theory emerging in the field. Focus on practical skill enhancement as it applies to building development programs.

HED 8830 The Independent College

[3 credit hours]

The course examines the historical and conceptual underpinnings of the independent college and university. It explores the strengths, weaknesses, opportunities, and challenges of small residential liberal arts colleges, along with the other major categories of private colleges and universities in the American context.

Term Offered: Summer**HED 8840 Adult Continuing Education**

[3 credit hours]

Course assists student in interpreting the highly diversified field of adult continuing education from the point of view of the student's current or anticipated involvement. Intended for teachers of adults.

HED 8850 Critical Issues In Higher Education

[3 credit hours]

This seminar exposes students to critical issues in higher education. Topics covered vary from course to course in order to stay current with ongoing and emerging critical issues.

Term Offered: Summer, Fall**HED 8870 Economic Development And Higher Education**

[3 credit hours]

How do institutions of higher education impact their local economies? This course examines various roles and methods by which institutions of higher education add to economic development.

HED 8910 Introduction to Interpretive Inquiry

[3 credit hours]

This course equips students with basic knowledge and abilities to conduct qualitative research. It fosters understanding of methodology and methods, and their alignment with a particular research tradition.

Term Offered: Spring, Fall**HED 8920 Advanced Seminar**

[3 credit hours]

This seminar requires students to work with a professor on the design and implementation of a research project. This project may be qualitative, quantitative, or mixed method. The seminar may be repeated once for credit when topics vary.

Term Offered: Spring, Fall**HED 8930 Doctoral Research Seminar In Higher Education**

[3 credit hours]

This course provides students the opportunity to work through the various stages of their dissertation in a seminar format. This course may be repeated once for credit as students progress through stages of the dissertation. These credits may count towards students' dissertation hours.

Term Offered: Spring, Summer, Fall**HED 8940 Doctoral Internship In Higher Education**

[1-3 credit hours]

The Internship provides students an opportunity to accumulate supervised experience in college/university administration or teaching. Areas of experience are decided upon in collaboration with a guiding higher education organization or institution, the faculty in the Higher Education Program, and the individual student.

Term Offered: Summer, Fall**HED 8960 Dissertation**

[1-12 credit hours]

Original and specific research problem of a scholarly nature, requiring the application of advanced research skills and techniques to study. Students must take a minimum of 10 dissertation credit hours.

Term Offered: Spring, Summer, Fall**HED 8990 Independent Study In Higher Education**

[1-3 credit hours]

Provides student the opportunity to work independently on a professional problem under the direction of a Higher Education Program faculty member.

Term Offered: Spring, Summer, Fall

History (HIST)

HIST 5010 Greek History

[3 credit hours]

Selected topics on the political and social institutions of Greece in the classical and Hellenistic periods.

Term Offered: Fall**HIST 5020 Roman History**

[3 credit hours]

Selected topics on the political and social institutions of Rome during the Republic and Empire.

Term Offered: Spring**HIST 5030 Europe In The 14th-15th Centuries**

[3 credit hours]

The waning of the Middle Ages and the development of the Renaissance in Western Europe with emphasis on Italy.

HIST 5060 Age Of Absolutism

[3 credit hours]

The growth and decline of the absolute monarchies in Europe and the development of a world market economy, c. 1550-1715.

HIST 5080 Age Of Revolution

[4 credit hours]

The age of the French Revolution and Napoleon, c. 1785-1848.

HIST 5100 Europe Since World War I

[3 credit hours]

Internal and international development of the major European states from World War I to the end of the twentieth century.

HIST 5150 Critics Of Victorian Society

[3 credit hours]

Principal critics of society like Ruskin, Carlyle, Cobbett, Marx, Engels, Morris and Mill are read with a view to understanding capitalism, industrialism and England.

HIST 5170 The British Empire: For And Against

[3 credit hours]

The emergence of England as a maritime power, as an empire, and as a financial force, with emphasis upon resistances and decolonization.

Term Offered: Fall

HIST 5200 Colonial Foundations Of The U.s.

[3 credit hours]

This course analyzes the colonial experience of the United States prior to 1763. It stresses the various cultures and social groups in America and how they related with one another.

HIST 5220 The American Revolution

[3 credit hours]

The background and progress of the War for Independence.

Term Offered: Spring, Fall

HIST 5230 United States Early Republic

[3 credit hours]

American politics and culture from the Federalist period to the Mexican - American War, 1789-1848.

Term Offered: Spring

HIST 5240 The Age Of Jackson

[3 credit hours]

Jacksonian democracy in politics and as a reform movement; the sectional controversy; the Mexican-American War.

HIST 5250 Civil War And Reconstruction

[3 credit hours]

Slavery and the Constitution in the sectional controversy, the political and military events of the Civil War, and the impact of the war on American society, 1848-1876.

Term Offered: Fall

HIST 5260 Emergence Of Modern America, 1876-1919

[3 credit hours]

American society in the late 19th and early 20th centuries, including industrialization, urbanization, immigration, agrarian and labor revolts, politics, economic expansion, overseas initiatives, Progressive reform and involvement in World War I.

Term Offered: Spring

HIST 5270 20th Century America, 1920-1945

[3 credit hours]

Social, political and economic development of the United States, 1920-1945. The Republican ascendancy, the car culture, Great Depression, New Deal and World War II.

Term Offered: Fall

HIST 5280 U.s. Since 1945: Affluence And Anxiety

[3 credit hours]

Social, economic and political development of the United States since 1945. The Cold War, McCarthyism, Eisenhower Equilibrium, the New Frontier and the Great Society, civil rights, Watergate and the Reagan Revolution.

Term Offered: Fall

HIST 5310 History Of Native American Religious Movements

[3 credit hours]

History of Native American revitalization movements as a response to European colonization and Indian dispossession.

HIST 5330 Western American Indians

[3 credit hours]

Native Americans of the Far West from prehistoric times through recent years. Emphasis on European contact and governmental policies.

Term Offered: Spring

HIST 5340 Far Western Frontier

[3 credit hours]

Native Americans; Spanish conquistadors and missionaries; American scientific and military exploration; mountain men and fur trade; international rivalries and Mexican War; gold rush of '49.

HIST 5360 American Intellectual History I

[3 credit hours]

Development and influence of major ideas from the colonial period to 1865. Topics include Puritanism, the Enlightenment, Democracy and Transcendentalism.

Term Offered: Spring

HIST 5370 American Intellectual History II

[3 credit hours]

Major developments in American thought from 1865, including Social Darwinism, pragmatism, ideological conflict, modern science, education.

Term Offered: Spring

HIST 5430 Slavery In America

[3 credit hours]

Stresses the African continuum among slaves within the context of variations in goals and policies of slaveowners, slave trade, slave economics, demographics, slave labor and formation of slave culture.

Term Offered: Spring, Summer

HIST 5450 United States and Latin America

[3 credit hours]

HIST 5460 Women In American History

[3 credit hours]

This course presents American history from early settlement to the present by examining the contributions of women, in interaction with men, to the immensely complex fabric of American life.

HIST 5470 Mexico

[3 credit hours]

Mexican history from pre-Hispanic times to the present. Emphasis on the political, social and economic changes imposed by the Spaniards; the legacy of colonialism on the modern nation; the Mexican Revolution and the "Mexican Miracle."

Term Offered: Summer, Fall

HIST 5480 American Labor And Working Class History

[3 credit hours]

Development of working class communities, cultures, organizations and ideology from colonial era to the present. Topics include industrialization, unionization, labor law, gender and race constructions.

HIST 5490 Witchcraft And Magic In Medieval And Early Modern Europe

[3 credit hours]

Witchcraft, religion and magic in western Europe from the 12th through 17th centuries, focusing on the origins of witchcraft belief, diabolical magic, the witchcraze and its decline.

Term Offered: Spring

HIST 5530 History Of The Middle East Since 1500

[3 credit hours]

History of the Middle East from the collapse of the Medieval Muslim States and the rise of the Ottoman Empire in the 16th century through the period of European intervention to the development of independent Middle Eastern States in the 20th century.

Term Offered: Spring, Fall**HIST 5620 Central Europe**

[3 credit hours]

Central Europe from medieval times to the present. The Habsburg Empire, Poland, the Balkans, twentieth-century changes.

HIST 5660 Imperial Russia, 1700-1917

[3 credit hours]

Rise and fall of the Russian Empire. Politics and society from the time of Peter the Great to the 1917 Revolution.

HIST 5680 20th Century Russia

[3 credit hours]

Russia from the 1917 Revolution to the present. Topics include Marxism, Communism, Stalinism, Cold War.

HIST 5720 Modern Chinese History

[3 credit hours]

China in transition under the impact of the West; forces leading to the revolution of 1911, the Nationalists' struggle, the emergence of the People's Republic of China and aspects of post-revolutionary China.

Term Offered: Spring**HIST 5740 Modern Japanese History**

[3 credit hours]

Japan in transition under Western influence, forces leading to the Meiji Restoration, the modernization of Japan, Japan's rise as a world power, war and postwar developments.

Term Offered: Spring**HIST 5750 Europe And Asia: Exploration And Exchange, 1415-1800**

[3 credit hours]

Motivation and process of European expansion to Africa and Asia from 1415-1800.

HIST 5790 The Holocaust

[3 credit hours]

This advanced course deals with selected aspects of the history and memory of Nazi genocide against the Jews of Europe, with special emphasis on visual and survivor sources.

Term Offered: Spring**HIST 5830 Theory Of Public History**

[3 credit hours]

The definition, philosophy and evolution of public history as well as the current literature and debates within the field. Public history is the application of historical knowledge and methodology beyond academe.

HIST 5840 Public History Practicum

[3 credit hours]

Course provides students with hands-on experience in the practice of public history by completing a project using specialized techniques, client-oriented research and teamwork. May be repeated for credit.

HIST 5940 Public History Internship

[2-4 credit hours]

Supervised practical experience in the field of public history.

Term Offered: Fall**HIST 5980 Special Topics**

[1-4 credit hours]

Topics selected by various instructors.

Term Offered: Spring, Fall**HIST 6600 Historiography**

[3 credit hours]

The nature of historical writing. Concepts of the historical method. The history of the writing of history from the beginning to the present.

Term Offered: Spring, Fall**HIST 6930 Seminar**

[3 credit hours]

Focus on primary research and writing in various fields: 01: 17th and 18th century America, 05: 19th century America, 06: American Urban, 07: American West, 08: American Intellectual, 10: Local History, 11: American Labor, 12: American Foreign Relations, 15: 20th century America, 16: Public History, 17: U. S. Bibliography to 1865, 18: U. S. Bibliography since 1865, 35: Latin America, 39: Ancient, 40: Medieval Europe, 45: Early Modern Europe, 50: Modern Europe, 55: Central Europe and Balkans, 60: England, 65: British Empire, 70: Russia, 75: Modern East Asia, 80: Africa, 90: Special Topics

Term Offered: Spring, Fall**HIST 6950 Workshops**

[3 credit hours]

Introduction to essential pedagogical and academic skills including survey class design: syllabi, lectures, history writing, theses and prospectuses. And professional skills: constructing a CV, letter of introduction, teaching philosophy, and grant proposals.

Term Offered: Fall**HIST 6960 Thesis**

[1-16 credit hours]

M.A. thesis topic to be selected by the student with the approval of the thesis adviser.

Term Offered: Spring, Summer, Fall**HIST 6990 Independent Study**

[1-4 credit hours]

Readings: 01: 17th and 18th Century America, 05: 19th Century America, 06: American Urban, 07: American West, 08: American Intellectual, 10: Local History, 11: American Labor, 12: American Foreign Relations, 13: Public History, 15: 20th Century America, 16: Business, 17: Peace Movements, 18: Social, 35: Latin America, 40: Medieval Europe, 41: Renaissance and Reformation, 45: Early Modern Europe, 50: Modern Europe, 55: Central Europe and Balkans, 60: England, 65: British Empire, 70: Russia, 75: Modern East Asia, 80: Ancient Greece, 90: Ancient Rome, 92: Africa, 99: Any Title

Term Offered: Spring, Summer, Fall

HIST 7980 Special Topics

[1-4 credit hours]

Study of secondary and primary sources in various fields: 01: Colonial and Revolutionary, 02: 19th century America, 03: 20th century America, 04: American South, 05: American West, 06: American Intellectual, 07: American Foreign Relations, 08: American Constitutional, 09: American Labor, 10: American Urban, 11: American Social, 12: American Urban Progressive Reform, 13: Public History, 16: American Business, 17: Peace Movements, 18: Ethnic, 19: Ancient, 20: Medieval Europe, 21: Renaissance and Reformation, 22: Europe, 1648-1815, 23: Europe, 1815-present, 24: Russia, 25: Great Britain, 26: Traditional East Asia to 1800, 27: Modern East Asia, 1800 to present, 28: Latin America, 29: Middle East, 30: Africa, 99: Any Title

Term Offered: Fall

HIST 8600 Historiography

[3 credit hours]

The nature of historical writing. Concepts of the historical method. The history of the writing of history from the beginning to the present: 01: America 02: Asia 03: Europe 04: Latin America 05: Africa 06: Special Topics

Term Offered: Spring, Fall

HIST 8930 Seminar

[3 credit hours]

Focus on primary research and writing in various fields: 01: 17th and 18th century America, 05: 19th century America, 06: American Urban, 07: American West, 08: American Intellectual, 10: Local History, 11: American Labor, 12: American Foreign Relations, 15: 20th century America, 16: Public History, 17: U. S. Bibliography to 1865, 18: U. S. Bibliography since 1865, 35: Latin America, 39: Ancient, 40: Medieval Europe, 45: Early Modern Europe, 50: Modern Europe, 55: Central Europe and Balkans, 60: England, 65: British Empire, 70: Russia, 75: Modern East Asia, 80: Africa, 90: Special Topics

Term Offered: Spring, Fall

HIST 8950 Workshops

[3 credit hours]

Introduction to essential pedagogical and academic skills including survey class design: syllabi, lectures, history writing, theses and prospectuses. And professional skills: constructing a CV, letter of introduction, teaching philosophy, and grant proposals.

Term Offered: Fall

HIST 8960 Dissertation

[1-16 credit hours]

Ph.D. dissertation topic to be selected by the student with the approval of the dissertation adviser.

Term Offered: Spring, Summer, Fall

HIST 8990 Independent Study

[1-4 credit hours]

Readings: 01: 17th and 18th Century America, 05: 19th Century America, 06: American Urban, 07: American West, 08: American Intellectual, 10: Local History, 11: American Labor, 12: American Foreign Relations, 13: Public History, 15: 20th Century America, 16: Business, 17: Peace Movements, 18: Social, 35: Latin America, 40: Medieval Europe, 41: Renaissance and Reformation, 45: Early Modern Europe, 50: Modern Europe, 55: Central Europe and Balkans, 60: England, 65: British Empire, 70: Russia, 75: Modern East Asia, 80: Ancient Greece, 90: Ancient Rome, 92: Africa, 99: Any Title

Term Offered: Spring, Summer, Fall

Human Donation Science (HDSC)

HDSC 5010 Organ Transplant Procurement

[3 credit hours]

This course introduces the student to the history of organ procurement and transplantation, the role of the organ procurement coordinator, consent, privacy issues, diversity and multicultural issues related to death and other issues related with the profession.

Term Offered: Spring, Summer, Fall

HDSC 5020 Scholarly Proj Hum Donation Sc

[3 credit hours]

HDSC 5110 Fundamental Concepts and Clinical Practicum I

[3 credit hours]

This course provides students with clinical information, cases and experiences to compliment HDSC 521. Students also will observe organ procurement coordinators and will be assigned "on call" rotations.

Corequisites: HDSC 5010, HDSC 5210

Term Offered: Spring, Summer, Fall

HDSC 5120 Clinical Practicum II

[2 credit hours]

Enables the learner to develop proficiency in the practice of human donation science in a clinical setting under the supervision of a professional organ procurement coordinator.

Term Offered: Spring, Summer, Fall

HDSC 5130 Human Donation Sci Internship

[8 credit hours]

Supervised full-time clinical experience in organ procurement organizations to prepare students for clinical practice. Builds upon classroom and practicum coursework.

Term Offered: Spring, Summer, Fall

HDSC 5210 Scientific & Clinical Foundations for Human Organ & Tissue Donation & Transportation

[6 credit hours]

This course provides the foundation of the basic science and medical/surgical information required for the organ procurement coordinator. Topics include structure, normal and pathological function, pharmacology, brain death, and approaches to medical and surgical management.

Corequisites: HDSC 5010, HDSC 5110

Term Offered: Spring, Summer, Fall

HDSC 5310 Clinical Aspects Procurement

[4 credit hours]

Builds upon the foundations of the basic science and medical-surgical information required for the organ procurement coordinator.

Term Offered: Spring, Summer, Fall

HDSC 5410 Human Donation Science Seminar

[2 credit hours]

Selected topics that integrate learning and practice in human donation science.

Term Offered: Spring, Summer, Fall

Human Resource Management (HURM)

HURM 6700 Human Resource Management

[3 credit hours]

A survey of the functions and current trends in human resources management. Special emphasis on research methods, tools and techniques for in-depth understanding of problems and challenges faced by for-profit and not-for-profit organizations.

Term Offered: Summer, Fall

HURM 6710 Employment And Labor Law

[3 credit hours]

This course introduces the objectives, activities and practices involved in employment and labor law. It is designed for those pursuing careers in human resources or managers wishing to understand their responsibilities in this area.

Term Offered: Fall

HURM 6720 Advanced Negotiation and Conflict Management

[3 credit hours]

Course is designed to develop advanced skills in all phases of negotiation and conflict management strategies and techniques. The course is based on a series of simulated negotiations in a variety of contexts.

Term Offered: Spring, Fall

HURM 6730 Performance Management

[3 credit hours]

This course is designed to provide practical working knowledge of the processes of setting expectations, monitoring performance, coaching and developing employees, and assessing and rewarding good performance in rapidly changing organizations.

Term Offered: Spring, Fall

HURM 6750 Current Topics In Human Resource Management

[3 credit hours]

This course is designed to provide students with current viewpoints, challenges, practices and theories in human resource management. Conducted in a seminar format, the course will emphasize different aspects of HR management each time it is offered.

Prerequisites: HURM 6700 with a minimum grade of C

Term Offered: Spring, Summer, Fall

HURM 6760 Talent Management

[3 credit hours]

Talent management uses interconnected human resources to provide organizational benefits through developing a strategic approach to managing core talent encompassing recruiting, onboarding, training, performance management, and succession planning.

Prerequisites: HURM 6700 with a minimum grade of C

Term Offered: Spring, Fall

HURM 6800 Human Resource Information Systems

[3 credit hours]

Course covers issues and techniques related to human resource information systems, human resource analytics, performance metrics, and the integration of technology to create and sustain effective HRM practices that contribute to the effectiveness of organizations.

Prerequisites: HURM 6700 with a minimum grade of C

HURM 8700 Human Resource Management

[3 credit hours]

Introduces the objectives, activities, and practices involved in human resource management. Designed for both those pursuing careers in human resources or managers who wish to supplement their skills in this area. (Prerequisite: None)

HURM 8710 Employment and Labor Law

[3 credit hours]

Introduces the objectives, activities, and practices involved in employment and labor law. Designed for those pursuing careers in human resources or managers wishing to understand their responsibilities in this area.

HURM 8720 Employer-Employee Relations

[3 credit hours]

Course is designed to develop advanced skills in all phases of negotiation and conflict management strategies and techniques. The course is based on a series of simulated negotiations in a variety of contexts.

HURM 8730 Performance Management

[3 credit hours]

Course is designed to provide practical working knowledge of the processes of setting expectations, monitoring performance, coaching and developing employees, and assessing and rewarding good performance in rapidly changing organizations.

Prerequisites: HURM 6700 with a minimum grade of D- and HURM 8700 with a minimum grade of D-

HURM 8740 Human Resource Strategy and Metrics

[3 credit hours]

Focuses on the integration of human resource strategies with the strategies of the firm. Students will learn how to assess and measure human resource processes, programs, and outcomes.

Prerequisites: HURM 6700 with a minimum grade of D- and HURM 8700 with a minimum grade of D-

Term Offered: Spring

HURM 8750 Current Topics in Human Resource Management

[3 credit hours]

Course is designed to provide students with current viewpoints, challenges, practices, and theories in human resource management. Conducted in a seminar format, the course will emphasize different aspects of HR management each time it is offered.

Prerequisites: HURM 6700 with a minimum grade of D- and HURM 8700 with a minimum grade of D-

Term Offered: Fall

HURM 8760 Recruitment and Retention

[3 credit hours]

Talent management uses interconnected human resources to provide organizational benefits through developing a strategic approach to managing core talent encompassing recruiting, onboarding, training, performance management, and succession planning.

Prerequisites: HURM 8700 with a minimum grade of D-

Term Offered: Fall

Information Systems (INFS)

INFS 6050 Information Systems Fundamentals

[3 credit hours]

This will be a crash course for MBA students wanting to concentrate in Information Systems. The student is expected to develop the basic skills needed to create computer-based applications. In addition, the student will gain an understanding of the various contemporary topics surrounding Information Systems and business.

Term Offered: Summer, Fall

INFS 6150 Business Intelligence Management

[3 credit hours]

This course aims to give students a broad understanding of technical and business issues in data analytics. Students will gain proficiency with reporting, data visualization and prediction. Students will learn analytics techniques that are useful in areas such as marketing and forensics accounting.

INFS 6450 Data Mining

[3 credit hours]

This course aims to give students a broad understanding of technical and business issues in data mining and data warehousing. Students will gain understanding of the techniques and issues surrounding data warehousing. In addition, students will learn advanced data mining techniques that are useful in various business functions.

Term Offered: Spring, Fall

INFS 6460 Management Information Systems

[3 credit hours]

This course is designed for end-users of computers to understand and appreciate the role of information technology and end-user's role in the management of this technology in organizations.

INFS 6560 Systems Analysis And Design

[3 credit hours]

Concepts, tools, and techniques for information systems analysis, design and development will be discussed. Contemporary methodologies for systems development including CASE tools, prototyping and RAD project work will be included.

Prerequisites: BUAD 6800 with a minimum grade of C

Term Offered: Spring, Summer, Fall

INFS 6610 Information Integration and Data Management

[3 credit hours]

This course is intended to provide basic understandings of database management systems for businesses. The course has two components: basic theories on relational data bases, and extensive skills in developing and manipulating relational database (Oracle, MS-SQL, and MS Access) objects and applications. The theory component will emphasize the relational database model, including database integrity, data modeling, SQL, and logical database design. The "Skills" component will focus on creating and maintaining various database objects, such as tables, relationship diagram, queries, reports, forms, and web connections.

Term Offered: Spring, Fall

INFS 6710 Management of Information Systems Security

[3 credit hours]

This course aims to give students a broad understanding of technical and business issues in information systems security, systems security models, analysis of process and technology in systems security and security policies leading to information assurance.

INFS 6750 Research In Information Systems, Operations Management Or Decision Sciences

[1-3 credit hours]

Individual study of topics of common interest to both student and faculty member.

Term Offered: Spring, Summer, Fall

INFS 6780 ERP Systems Process Management

[3 credit hours]

This course will provide students an overview of the fundamental business processes and examination of the application of business enterprise software using SAP. Issues include software deployment that supports transaction processing in the business supply chain. Also, students will work on various hands-on exercises including process of entire business cycle with a fictitious company and implementation of simple application with NetWeaver development platform.

INFS 6790 ERP Systems Configuration and Integration

[3 credit hours]

This course will provide students an overview of the fundamental business processes and examination of how business processes interact with SAP ERP including the system configuration and implementation. Issues. Students will gain a deep appreciation for the role of enterprise systems in managing processes from multiple functional perspectives. Also, students will work on various hands-on exercises including configuration of a fictitious company and implementation of business rules using an enterprise system.

INFS 6810 Network Communications

[3 credit hours]

Applications of business data communication, basic electronic communications concepts, public networks, computer networks, the Internet, network management, regulatory environment.

Term Offered: Spring

INFS 6930 Contemporary Topics Seminar

[3 credit hours]

This seminar will focus on current topics in the fields of Information Systems and Operations Management.

Term Offered: Spring, Fall

INFS 8150 Business Intelligence Management

[3 credit hours]

This course aims to give students a broad understanding of technical and business issues in data analytics. Students will gain proficiency with reporting, data visualization and prediction. Students will learn analytics techniques that is useful in areas such as marketing and forensics accounting.

INFS 8460 Management Information Systems

[3 credit hours]

This course is designed for end-users of computers to understand and appreciate the role of information technology and end-user's role in the management of this technology in organizations.

INFS 8480 Information Systems Issues In Manufacturing

[4 credit hours]

This course examines theoretical frameworks and recent empirical research of information and manufacturing technology. Emphasis will be on developing an integrative perspective of both technologies.

INFS 8560 Systems Analysis and Design

[3 credit hours]

This advanced course in systems analysis and design focuses on practical, managerial, and conceptual issues related to systems analysis, design, and development. The course presents traditional (process and data-oriented) and modern (object-oriented) approaches to the design and development of computer-based applications and information systems; discusses organizational, social, and ethical issues associated with systems development; and presents research topics, techniques, and issues involving systems analysis and design in the MIS field.

Prerequisites: BUAD 6800 with a minimum grade of D-

Term Offered: Summer, Fall

INFS 8710 Management of Information Systems Security

[3 credit hours]

This course aims to give students a broad understanding of technical and business issues in information systems security, systems security models, analysis of process and technology in systems security and security policies leading to information assurance.

Term Offered: Spring, Fall

INFS 8760 IS Research Seminar I

[3 credit hours]

This course covers the full spectrum of IS research on technology adoption models and the adoption and diffusion of innovations in information technology. We examine the Technology Acceptance Model, TAM II, the Unified Theory of the Acceptance and Use of Technology and UTAUT 2. We also examine the literature on technology acceptance beyond the dominant paradigm of technology acceptance.

INFS 8770 IS Research Seminar II

[3 credit hours]

This course covers the rich vein of IS research that falls outside the Technology Acceptance Model or quantitative positivist research genre. These include examining questions of IT strategy and the value of IT to business firms. The value of IT to the organization has been approached using various theoretical lenses.

INFS 8930 Contemporary Topics Seminar-Outsourcing

[3 credit hours]

The course will address issues in planning for, implementing and managing or just working in, outsourcing projects. PhD. students enrolled in 8930 will be assigned additional readings and required to complete a research paper.

Term Offered: Spring, Fall

INFS 8990 Integrative Seminar in IT

[3 credit hours]

The seminar will investigate managerial issues in the field of information systems and technology management.

Term Offered: Spring, Summer, Fall

Interdisciplinary (INDI)

INDI 5050 Medical Science Practicum

[0-10 credit hours]

Practical applications of theory in basic and clinical medical sciences.

Practicum experience will be under the guidance of a faculty preceptor.

May be repeated for credit.

Term Offered: Summer, Fall

INDI 5150 Intro Anatomy and Physiology

[6 credit hours]

This course provides basic knowledge of anatomy and physiology.

INDI 5200 Cellular and Molecular Biology

[11 credit hours]

This course includes an introduction to cell structure, function and pathological changes, information about molecular structure of proteins, carbohydrates and lipids, basic human genetics.

Term Offered: Fall

INDI 5250 Human Physiology

[3 credit hours]

INDI 5350 Pathophysiology of Organ Systems

[2-10 credit hours]

MSBS in Medical Sciences (MSBS-MS) is a one-year program designed to train students in foundational medical sciences. The newly redesigned course emphasizes an organ-system based approach where clinical and graduate faculty train students in the pathophysiology of disease. This is a graduate level course that incorporates materials taught to medical students during their first and second years, and provides foundational information for the MD curriculum. Also, pathophysiology of disease is a significant portion of the USMLE exams and its inclusion in our new MSBS-MS curriculum has the potential to increase our student-scores in step 1 and step 2.

INDI 5450 Molecular Cell Biology

[7 credit hours]

This is a graduate level course that incorporates materials taught to first year medical students and provides foundational information for the MD curriculum. The major topics are molecular biology and genetics, biochemistry of metabolic pathways, and cellular organization. This is the first course in the MSBS in Medical Sciences (MSBS-MS) curriculum.

INDI 5550 Anatomy and Pathophysiology

[3 credit hours]

Introductory and foundational course designed to cover selected topics in human anatomy, embryology, physiology and pathophysiology.

Term Offered: Spring, Fall

INDI 5650 Immunology and Medical Microbiology

[4 credit hours]

This course introduces foundational concepts in immunology and medical microbiology. The course will educate the students about the microorganisms that are relevant to human health, and the immune system, which allows us to overcome infection as well as to reject transplantation of organs and tissue.

INDI 6000 Introduction to Biostatistical Methods

[3 credit hours]

An introduction to statistical reasoning with an overview of selected descriptive and inferential statistics commonly used in healthcare research. Computer analysis of data will be included.

Term Offered: Spring, Summer, Fall

INDI 6020 On Being a Scientist

[1 credit hour]

A series of one-hour lectures dealing with the ethics, regulations, and issues facing a modern, biomedical research scientist.

Term Offered: Spring, Summer, Fall

INDI 6730 Research Biomedical Science

[0-15 credit hours]

Intensive study in field of interest, including theoretical and experimental work. May be repeated for credit.

Term Offered: Spring, Summer, Fall

INDI 6860 Electron Microscopy

[4 credit hours]

A lecture/laboratory course in the standard theories and techniques employed in biological transmission and scanning electron microscopy.

INDI 6920 Student Seminar Series

[1 credit hour]

This course is designed to provide students with an opportunity to develop and/or strengthen oral presentation and communication skills in the form of short scientific oral communications. Students will present data and conclusions –whether preliminary or final- acquired during their scholarly project in medical sciences – which is required to fulfill the research requirements of the MSBS in Medical Sciences degree program. Through these seminar presentations students will have an opportunity to discuss various contemporary research topics in medical sciences in relation to their scholarly project.

Term Offered: Summer

INDI 6980 Scholarly Project for Medical Sciences

[0-10 credit hours]

Option to develop an in-depth scholarly project to fulfill the research requirements of the MSBS Degree Program. May be repeated for credit.

INDI 6990 Thesis Research

[1-15 credit hours]

Research in biomedical sciences or interdisciplinary investigation of significant problems at the master level, leading to the preparation of a scientific project for presentation as a thesis. May be repeated for credit.

INDI 8000 Introduction to Biostatistical Methods

[3 credit hours]

An introduction to statistical reasoning with an overview of selected descriptive and inferential statistics commonly used in healthcare research. Computer analysis of data will be included.

Term Offered: Spring, Summer, Fall

INDI 8020 On Being a Scientist

[1 credit hour]

A series of one-hour lectures dealing with the ethics, regulations, and issues facing a modern, biomedical research scientist.

Term Offered: Spring, Summer, Fall

INDI 8280 Intro To Global Medicine

[3 credit hours]

This course is intended for medical and graduate students as an introduction to medical and community development missions in developing nations.

Term Offered: Summer

INDI 8730 Research Biomedical Sciences

[0-15 credit hours]

Intensive study in field of interest, including theoretical and experimental work. May be repeated for credit.

Term Offered: Summer

INDI 8790 Basic and Adv Light Microscopy

[4 credit hours]

A lecture/laboratory course in the standard theories and techniques in histology and light microscopy. The emphasis is on preparation of samples, including histocytochemistry, immunocytochemistry and special staining for photo microscopy. Brightfield, fluorescence and confocal microscopy.

Term Offered: Spring, Fall

INDI 8860 Electron Microscopy

[4 credit hours]

A lecture/laboratory course in the standard theories and techniques employed in biological transmission and scanning electron microscopy.

INDI 9990 Dissertation Research

[1-15 credit hours]

Disciplinary or interdisciplinary investigation of significant problems at the doctoral level under the guidance of a member of the Graduate Faculty, leading to the preparation of a scientific project for presentation as a dissertation. May be repeated for credit.

International Business (IBUS)

IBUS 6100 Study Abroad Program

[3 credit hours]

Program includes travel abroad, study and written report of an industry, company, or issues of interest, cultural immersion, and visits to manufacturing, service and government organizations.

Term Offered: Spring, Summer, Fall

IBUS 6360 Management Of Multinational Firms

[3 credit hours]

Analysis of the multinational firm, emphasizing the differences with domestic enterprises, with respect to strategic planning and capital allocation, marketing, production, supply, personnel and contract negotiation.

Term Offered: Spring, Fall

IBUS 6990 Independent Study

[1-3 credit hours]

Independent study in international business. A proposal for the independent study must be approved by faculty member and department chair.

Term Offered: Spring, Summer, Fall

IBUS 8490 Global Management Systems

[3 credit hours]

Compares the management philosophies, systems and methods of U.S. firms with those of firms from other countries, particularly the management system of Japanese, German and other nationality firms that are competitors of U.S. firms. Ph.D. students are assigned additional readings from the academic literature.

IBUS 8790 International Business Research Seminar

[3 credit hours]

A seminar in selected topics in International Business. Ph.D. students are assigned readings from the International Business academic literature. They will complete several research papers focusing on specific topics that advance the field and that are suitable for submission to an academic journal or conference.

Term Offered: Spring, Fall

Latin (LAT)

LAT 5210 Latin For Reading Knowledge I

[3 credit hours]

Elements of grammar and vocabulary appropriate to preparing graduate students to read effectively in Latin.

LAT 5220 Latin For Reading Knowledge II

[3 credit hours]

Elements of pronunciation, structure and vocabulary most appropriate to preparing graduate students to read effectively in Latin.

Law (Bar-Tested) (LAWG)

LAWG 6010 Business Associations

[4 credit hours]

Business Associations focuses on the legal entities commonly used to operate business enterprises, with an emphasis on closely held businesses. The course explores the major issues involved in formation and operation of agency relationships, corporations, and limited liability companies. These include creation of business entities; financing for the small business; sharing in earnings; the roles of corporate officers, directors, and shareholders; roles of LLC managers and members; doctrines of limited liability; fiduciary duties; and special statutory treatment of closely held corporations.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWG 6210 Criminal Procedure - Investigations

[3 credit hours]

A study of the constitutional and statutory limitations on the conduct of criminal investigations and related matters. Includes a discussion of the Fourth Amendment prohibition against unreasonable searches and seizures, the Fifth Amendment privilege against self-incrimination, and the Sixth Amendment right to counsel.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Fall**LAWG 6370 Family Law**

[3 credit hours]

This course explores the interaction of law and the family. It surveys various topics including marriage, divorce and its financial consequences, child custody, non-marital families, parentage, adoption, and assisted reproductive technology.

Prerequisites: LAWM 5000 with a minimum grade of D-

Term Offered: Spring, Summer, Fall**LAWG 6610 Secured Transactions**

[3 credit hours]

The creation, enforcement, perfection, and priority of security interests in personal property under Article Nine of the Uniform Commercial Code and the federal Bankruptcy Code.

Prerequisites: LAWD 6210 with a minimum grade of D- and LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWG 6710 Trusts and Estates

[3-4 credit hours]

The study of decedents' estates and trust law. Interstate succession, the law of wills, estate administration, formation and administration of trusts, and future interests are studied. Common law approaches are contrasted with Ohio and Uniform Probate Code practices.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of C

LAWG 9010 Business Associations

[4 credit hours]

Business Associations focuses on the legal entities commonly used to operate business enterprises, with an emphasis on closely held businesses. The course explores the major issues involved in formation and operation of agency relationships, corporations, and limited liability companies. These include creation of business entities; financing for the small business; sharing in earnings; the roles of corporate officers, directors, and shareholders; roles of LLC managers and members; doctrines of limited liability; fiduciary duties; and special statutory treatment of closely held corporations.

Term Offered: Spring, Summer, Fall**LAWG 9170 Conflict of Laws**

[2-3 credit hours]

This course will study the problems encountered when a transaction or occurrence has a significant relationship to two or more states or countries. The jurisdiction of courts, the effect to be given to out-of-state judgments, and the rules of decision in multi-state cases are studied. Both traditional rules and theories and modern developments are analyzed.

Term Offered: Spring, Summer, Fall**LAWG 9210 Criminal Procedure - Investigations**

[3 credit hours]

A study of the constitutional and statutory limitations on the conduct of criminal investigations and related matters. Includes a discussion of the Fourth Amendment prohibition against unreasonable searches and seizures, the Fifth Amendment privilege against self-incrimination, and the Sixth Amendment right to counsel.

Term Offered: Spring, Fall

LAWG 9370 Family Law

[3 credit hours]

This course explores the interaction of law and the family. It surveys various topics including marriage, divorce and its financial consequences, child custody, non-marital families, parentage, adoption, and assisted reproductive technology.

Term Offered: Spring, Summer, Fall

LAWG 9610 Secured Transactions

[3 credit hours]

The creation, enforcement, perfection, and priority of security interests in personal property under Article Nine of the Uniform Commercial Code and the federal Bankruptcy Code.

Prerequisites: LAWD 9210 with a minimum grade of D

Term Offered: Spring, Summer, Fall

LAWG 9710 Trusts and Estates

[3-4 credit hours]

The study of decedents' estates and trust law. Interstate succession, the law of wills, estate administration, formation and administration of trusts, and future interests are studied. Common law approaches are contrasted with Ohio and Uniform Probate Code practices.

Prerequisites: LAWD 9410 with a minimum grade of C

Term Offered: Spring, Fall

Law (Basic First-Yr Required) (LAWD)

LAWD 6020 Civil Procedure - Pleading and Practice

[3 credit hours]

Study of the rules controlling the management of civil litigation. State and federal systems are covered.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of C

Term Offered: Spring, Fall

LAWD 6110 Constitutional Law - Structure

[3 credit hours]

Constitutional Law - Structure will cover structural issues focusing on the Supreme Court's interpretation of the nature and distribution of power within the federal government, the relationship between the federal government and the states in regulating commerce, and the meaning and scope of the Due Process Clause of the Fourteenth Amendment.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer

LAWD 6210 Contracts I

[3 credit hours]

A survey of the law of contracts including the creation, modification, and termination of contract rights obligations, the roles of reliance and restitution, capacity, conditions, third party rights and duties, and the effect of changed circumstances or mistake. Performance and breach of contractual obligations and remedies for breach are also examined in detail. The course includes a survey of the law relating to sales of goods under Article 2 of the Uniform Commercial Code.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Fall

LAWD 6220 Contracts II

[3 credit hours]

A continued survey of the law of contracts including the creation, modification, and termination of contract rights and obligations, the roles of reliance and restitution, capacity, conditions, third party rights and duties, and the effect of changed circumstances or mistake. Performance and breach of contractual obligations and remedies for breach are also examined in detail. The course includes a survey of the law relating to sales of goods under Article 2 of the Uniform Commercial Code.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer

LAWD 6300 Criminal Law

[4 credit hours]

Substantive criminal law, focusing on general principles of liability and defenses, the definitional elements of certain crimes, particularly homicide, and principles of accessorial liability.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring

LAWD 6410 Property - Fundamentals of Ownership

[3 credit hours]

An introduction to the law of personal property and comprehensive coverage of the law of real property as it relates to estates and interests in land, landlord-tenant relationships, real estate transactions, private agreements respecting the use of land, and public controls upon property use.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Fall

LAWD 6420 Property - Transactions and Land Use

[3 credit hours]

Continued study of the law of personal property and comprehensive coverage of the law of real property as it relates to estates and interests in land, landlord-tenant relationships, real estate transactions, private agreements respecting the use of land, and public controls upon property use.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWD 6510 Torts

[4 credit hours]

Torts explores civil claims for a variety of intentional harms and offenses to people and property, negligent harms, and theories of strict liability (including products liability). The course studies both traditional principles and modern concepts.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

LAWD 6750 Lawyering Skills I

[2-3 credit hours]

A foundation course providing intensive instruction in three major areas: using research resources and techniques of research; developing skills of legal analysis; presenting legal analysis in predictive and persuasive formats, both written and oral. Instruction is through class meetings, small group meetings, and individual conferences.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Fall

LAWD 6760 Lawyering Skills II

[1-2 credit hours]

A continuation of Lawyering Skills I, this course provides intensive instruction in three major areas: using research resources and techniques of research; developing skills of legal analysis; presenting legal analysis in predictive and persuasive formats, both written and oral. Instruction is through class meetings, small group meetings, and individual conferences.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWD 9020 Civil Procedure - Pleading and Practice

[3 credit hours]

Study of the rules controlling the management of civil litigation. State and federal systems are covered.

Term Offered: Spring, Fall

LAWD 9110 Constitutional Law - Structure

[3 credit hours]

Constitutional Law - Structure will cover structural issues focusing on the Supreme Court's interpretation of the nature and distribution of power within the federal government, the relationship between the federal government and the states in regulating commerce, and the meaning and scope of the Due Process Clause of the Fourteenth Amendment.

Term Offered: Spring, Summer, Fall

LAWD 9210 Contracts I

[3 credit hours]

A survey of the law of contracts including the creation, modification, and termination of contract rights obligations, the roles of reliance and restitution, capacity, conditions, third party rights and duties, and the effect of changed circumstances or mistake. Performance and breach of contractual obligations and remedies for breach are also examined in detail. The course includes a survey of the law relating to sales of goods under Article 2 of the Uniform Commercial Code.

Term Offered: Spring, Fall

LAWD 9220 Contracts II

[3 credit hours]

A continued survey of the law of contracts including the creation, modification, and termination of contract rights and obligations, the roles of reliance and restitution, capacity, conditions, third party rights and duties, and the effect of changed circumstances or mistake. Performance and breach of contractual obligations and remedies for breach are also examined in detail. The course includes a survey of the law relating to sales of goods under Article 2 of the Uniform Commercial Code.

Term Offered: Spring, Summer, Fall

LAWD 9300 Criminal Law

[4 credit hours]

Substantive criminal law, focusing on general principles of liability and defenses, the definitional elements of certain crimes, particularly homicide, and principles of accessorial liability.

Term Offered: Spring

LAWD 9410 Property - Fundamentals of Ownership

[3 credit hours]

An introduction to the law of personal property and comprehensive coverage of the law of real property as it relates to estates and interests in land, landlord-tenant relationships, real estate transactions, private agreements respecting the use of land, and public controls upon property use.

Term Offered: Fall

LAWD 9420 Property - Transactions and Land Use

[3 credit hours]

Continued study of the law of personal property and comprehensive coverage of the law of real property as it relates to estates and interests in land, landlord-tenant relationships, real estate transactions, private agreements respecting the use of land, and public controls upon property use.

Term Offered: Spring

LAWD 9510 Torts

[4 credit hours]

Torts explores civil claims for a variety of intentional harms and offenses to people and property, negligent harms, and theories of strict liability (including products liability). The course studies both traditional principles and modern concepts.

Term Offered: Spring, Summer, Fall

LAWD 9750 Lawyering Skills I

[2-3 credit hours]

A foundation course providing intensive instruction in three major areas: using research resources and techniques of research; developing skills of legal analysis; presenting legal analysis in predictive and persuasive formats, both written and oral. Instruction is through class meetings, small group meetings, and individual conferences.

Term Offered: Spring, Fall

LAWD 9760 Lawyering Skills II

[1-2 credit hours]

A continuation of Lawyering Skills I, this course provides intensive instruction in three major areas: using research resources and techniques of research; developing skills of legal analysis; presenting legal analysis in predictive and persuasive formats, both written and oral. Instruction is through class meetings, small group meetings, and individual conferences.

Term Offered: Spring, Summer

Law (Clinics and Skills) (LAWN)

LAWN 6000 Trial Practice

[3 credit hours]

Simulated exercises and trials, including such matters as pretrial motions, jury selection, opening statement, presentation of evidence, cross-examination, witness impeachment, closing argument, and jury instructions. Emphasis is given to developing and proving a theory of the case.

Prerequisites: LAWA 6310 with a minimum grade of C

LAWN 6020 Advanced Legal Research

[2-3 credit hours]

An in-depth view of legal bibliography in both print and electronic formats. Detailed attention given to encyclopedias, treatises, and various general and topical indexes, digests, and citators as well as web based compilations of legal materials.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWN 6030 Law Practice

[1-3 credit hours]

An introduction to management of a law practice. This course will develop concepts related to four areas: Business Management, Practice Management, Client Management and Life Management. In the area of Business Management, students will be exposed to business start-up considerations, including choice of entity, financing, bookkeeping and trust accounting. In the area of Practice Management, the students will cover administrative and substantive systems, including conflicts of interest, docket management, form files and employee management. In Client Management, the students will be exposed to issues related to client acceptance, declination, disengagement, client satisfaction and malpractice to name a few.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWN 6050 Negotiation and Settlement

[2-3 credit hours]

This course focuses on developing an analytical framework for preparing, conducting and evaluating negotiations. A variety of negotiation strategies and tactics are explored including cooperative, problem-solving and competitive, positional approaches. Students conduct approximately ten negotiations that explore a variety of deal-making and dispute resolution fact situations.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWN 6100 Negotiation: Theory and Strategy

[3 credit hours]

This practical, skills course develops a series of conceptual structures for understanding negotiation as a coherent process and for understanding the strategic dynamics of all negotiating situations. The goal of the course is to encourage students to become skilled, versatile, and effective negotiators by applying the relevant structures, theories, and strategies to legal negotiations that will be scheduled each week of the course.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWN 6110 Advanced Trial Practice

[2 credit hours]

An examination of the development and adjudication of complex civil and criminal cases through demonstration and performance exercises. Students will participate in developing juror profiles and the creation of jury instructions; the direct and cross examination of expert witnesses; the introduction, handling and admissibility of exhibit evidence; and the recognition of constitutional issues arising during the trial.

Prerequisites: LAWA 6310 with a minimum grade of C and (LAWN 6000 with a minimum grade of C or LAWL 6180 with a minimum grade of S)

LAWN 6130 Criminal Law Simulation

[2-3 credit hours]

In this simulation course, students will prepare a case for trial/plea and end the semester with a sentencing hearing. The course will feature written assignments and in-class exercises and will cover hearings on arraignment, detention, suppression, plea, and sentencing. Students will work together and hone their skills as members of prosecution and defense teams.

Prerequisites: LAWM 5000 with a minimum grade of C

LAWN 6190 Interviewing and Counseling

[2-3 credit hours]

Most lawyers in both litigation and transactional practice spend substantial amounts of their time interviewing and counseling clients. The goals of this course are to develop understanding of theories and techniques of client interviewing and counseling and to assist students to develop skills in performance of interviewing and counseling. Readings and class discussion impart knowledge of theory and techniques. Mere understanding, however, is insufficient to develop performance competence. To develop competence in performance of these skills, students participate in simulations based on case files that will be distributed. Simulations will be recorded on videotape and will be evaluated by the performer, classmates and the instructor.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWN 6310 Criminal Law Practice Program

[4-6 credit hours]

The Criminal Law Practice Program trains law students in basic prosecutorial skills and values. Students serve externships in local prosecutor offices trying cases, plea-bargaining, and interviewing witnesses. The clinic may be taken for either six or four credit hours.

Prerequisites: LAWA 6310 with a minimum grade of C

LAWN 6330 Advanced Criminal Law Practice Program

[3-4 credit hours]

The Advanced Criminal Law Practice Program trains students in advanced skills of prosecution. Students undertake more challenging tasks than those typically undertaken in the basic clinic. For example, students may conduct jury trials, make appellate arguments, or draft clinical training manuals.

Prerequisites: LAWN 6310 with a minimum grade of C

LAWN 6410 Dispute Resolution Clinic

[2-4 credit hours]

In the Dispute Resolution Clinic, second and third year students have the unique opportunity to learn mediation skills and apply those skills mediating in the Lucas County Juvenile Court and Toledo Municipal Court. This fieldwork experience provides hands-on training in the area of alternative dispute resolution. Skills such as listening, communication, and negotiation are stressed in both the fieldwork and weekly classroom component. Students are taught theoretical technique and are exposed to a variety of topics and speakers in the Alternative Dispute Resolution field. This clinical program is designed to teach practical skills and give the students an opportunity to interact in the legal community in a new and emerging area of law.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWN 6420 Advanced Dispute Resolution Clinic

[2-4 credit hours]

The Advanced Dispute Resolution Clinic emphasizes development of skills beyond those achieved in the basic clinic. The course provides students with the opportunity to become involved in mediations in a number of courts throughout Lucas County and Northwest Ohio.

Prerequisites: LAWN 6410 with a minimum grade of C

LAWN 6610 Public Service Externship

[1-6 credit hours]

The Public Service Externship Clinic is a field placement program in which students are placed in structured legal settings with public service attorneys and programs. There is a required classroom component in which issues relating to learning from experience are explored. The program is available year round with out-of-town placements available in the summer term.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWN 6910 Civil Advocacy Clinic

[2-6 credit hours]

The Civil Advocacy Clinic focuses on development of skills such as interviewing, counseling, negotiation, problem-solving, fact investigation, strategy formation law, landlord and tenant, consumer, and civil rights cases. In addition, students may work on law reform and policy projects. Students in the clinic are the primary contact for clients, and are given responsibility for work on all aspects of the case under the close supervision of clinic faculty. Classroom meetings focus on practical, substantive, procedural, and ethical issues, especially as they relate to the clients and cases handled by the clinic. It is recommended, but not required, that students complete at least 59 credit hours and apply for certification as legal interns under Rule II of the Ohio Supreme Court Rules for the Governance of the Bar.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWN 6930 Advanced Civil Advocacy Clinic

[2-4 credit hours]

The Advanced Civil Advocacy Clinic emphasizes development of skills beyond those achieved in the basic clinic. The program is tailored to meet the needs and interests of individual students. Typically, students in the Advanced Civil Advocacy Clinic are assigned more complex legal matters, mentor students in the basic Civil Advocacy Clinic, and/or work on policy or legislative projects.

Prerequisites: LAWN 6910 with a minimum grade of C

LAWN 6940 Children's Rights Clinic

[3-6 credit hours]

The Children's Rights Clinic deals with a variety of legal and policy issues affecting survivors of domestic violence, including representation to obtain protection orders, dissolution of marriage, and attendant issues of custody and support. The Clinic also handles juvenile law matters including parentage, parental rights, and adoptions. Admission is by the permission of the instructor. It is recommended, but not required, that students complete at least 59 credit hours and apply for certification as legal interns under Rule II of the Ohio Supreme Court Rules for the Governance of the Bar.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWN 6950 Advanced Children's Rights Clinic

[2-4 credit hours]

In the Advanced Children's Rights Clinic students will act more independently as lead counsel for clients and may assume some supervisory responsibilities on cases handled by students in the basic Children's Rights Clinic. In addition, depending on student interest, students may conduct research on issues relating to domestic violence or juvenile law.

Prerequisites: LAWN 6940 with a minimum grade of C

LAWN 9000 Trial Practice

[3 credit hours]

Simulated exercises and trials, including such matters as pretrial motions, jury selection, opening statement, presentation of evidence, cross-examination, witness impeachment, closing argument, and jury instructions. Emphasis is given to developing and proving a theory of the case.

Prerequisites: LAWA 9310 with a minimum grade of C

Term Offered: Spring, Fall

LAWN 9020 Advanced Legal Research

[2-3 credit hours]

An in-depth view of legal bibliography in both print and electronic formats. Detailed attention given to encyclopedias, treatises, and various general and topical indexes, digests, and citators, as well as web based compilations of legal materials.

Term Offered: Spring

LAWN 9030 Law Practice

[1-3 credit hours]

An introduction to management of a law practice. This course will develop concepts related to four areas: Business Management, Practice Management, Client Management and Life Management. In the area of Business Management, students will be exposed to business start-up considerations, including choice of entity, financing, bookkeeping and trust accounting. In the area of Practice Management, the students will cover administrative and substantive systems, including conflicts of interest, docket management, form files and employee management. In Client Management, the students will be exposed to issues related to client acceptance, declination, disengagement, client satisfaction and malpractice to name a few.

LAWN 9050 Negotiation and Settlement

[2-3 credit hours]

This course focuses on developing an analytical framework for preparing, conducting and evaluating negotiations. A variety of negotiation strategies and tactics are explored including cooperative, problem-solving and competitive, positional approaches. Students conduct approximately ten negotiations that explore a variety of deal-making and dispute resolution fact situations.

LAWN 9100 Negotiation: Theory and Strategy

[3 credit hours]

This practical, skills course develops a series of conceptual structures for understanding negotiation as a coherent process and for understanding the strategic dynamics of all negotiating situations. The goal of the course is to encourage students to become skilled, versatile, and effective negotiators by applying the relevant structures, theories, and strategies to legal negotiations that will be scheduled each week of the course.

Term Offered: Spring, Summer, Fall

LAWN 9110 Advanced Trial Practice

[2 credit hours]

An examination of the development and adjudication of complex civil and criminal cases through demonstration and performance exercises. Students will participate in developing juror profiles and the creation of jury instructions; the direct and cross examination of expert witnesses; the introduction, handling and admissibility of exhibit evidence; and the recognition of constitutional issues arising during the trial.

Prerequisites: LAWA 9310 with a minimum grade of C and (LAWN 9000 with a minimum grade of C or LAWL 9180 with a minimum grade of S)

Term Offered: Spring

LAWN 9130 Criminal Law Simulation

[2-3 credit hours]

In this simulation course, students will prepare a case for trial/plea and end the semester with a sentencing hearing. The course will feature written assignments and in-class exercises and will cover hearings on arraignment, detention, suppression, plea, and sentencing. Students will work together and hone their skills as members of prosecution and defense teams.

LAWN 9190 Interviewing and Counseling

[2-3 credit hours]

[2-4 credit hours]

The Advanced Dispute Resolution Clinic emphasizes development of skills beyond those achieved in the basic clinic. The course provides students with the opportunity to become involved in mediations in a number of courts throughout Lucas County and Northwest Ohio.

Prerequisites: LAWN 9410 with a minimum grade of C

Term Offered: Spring, Fall

LAWN 9510 Tax Controversy Clinic

[4 credit hours]

In order to give law students valuable experience in handling actual tax cases, the Tax Controversy Clinic will offer free representation to taxpayers who are involved with IRS audits, appeals, and collection matters. In certain cases the Tax Clinic will represent taxpayers before the United States Tax Court. The Tax Clinic will negotiate and resolve contested matter with the IRS.

Term Offered: Spring, Fall

LAWN 9520 Advanced Tax Controversy Clinic

[2 credit hours]

In order to give law students valuable experience in handling actual tax cases, the Tax Controversy Clinic will offer free representation to taxpayers who are involved with IRS audits, appeals, and collection matters. In certain cases the Tax Clinic will represent taxpayers before the United States Tax Court. The Tax Clinic will negotiate and resolve contested matter with the IRS.

Term Offered: Spring, Summer, Fall

LAWN 9610 Public Service Externship

[1-6 credit hours]

The Public Service Externship Clinic is a field placement program in which students are placed in structured legal settings with public service attorneys and programs. There is a required classroom component in which issues relating to learning from experience are explored. The program is available year round with out-of-town placements available in the summer term.

Term Offered: Spring, Summer, Fall

LAWN 9910 Civil Advocacy Clinic

[2-6 credit hours]

The Civil Advocacy Clinic focuses on development of skills such as interviewing, counseling, negotiation, problem-solving, fact investigation, strategy formation law, landlord and tenant, consumer, and civil rights cases. In addition, students may work on law reform and policy projects. Students in the clinic are the primary contact for clients, and are given responsibility for work on all aspects of the case under the close supervision of clinic faculty. Classroom meetings focus on practical, substantive, procedural, and ethical issues, especially as they relate to the clients and cases handled by the clinic. LAWN 9950 Advanced Children's Rights Clinic

[2-4 credit hours]

In the Advanced Children's Rights Clinic students will act more independently as lead counsel for clients and may assume some supervisory responsibilities on cases handled by students in the basic Children's Rights Clinic. In addition, depending on student interest, students may conduct research on issues relating to domestic violence or juvenile law.

Prerequisites: LAWN 9940 with a minimum grade of C

Term Offered: Spring, Fall

Law (Electives) (LAWI)

LAWI 6000 International Comparative Law

[2-3 credit hours]

This course introduces students to the major legal systems of the world. The first third of the course provides an overview of the major families of law encountered in various nations of the world today: common law (as exemplified by California and England), civil law (France and Germany), religious law (Egypt), and the extra-legal approach seen in various Asian countries (China). The rest of the course examines how each of these systems handles the same types of common legal situation: inheritance and succession, criminal behavior and contracts.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6010 Accounting and Financial Statements

[1-3 credit hours]

An introduction for students without prior accounting experience to the terms and concepts necessary to an understanding of the financial affairs of a client and to the variety of legal contexts in which the lawyer is likely to encounter accounting problems. Students will learn to perform basic financial analysis.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6020 E-Commerce

[1-3 credit hours]

This course will examine critical information technologies that provide a basis for electronic commerce. Topics include problems surrounding electronic commerce such as security, privacy, content selection and rating, intellectual property rights, authentication, encryption, acceptable use policies, UETA, UCITA and E-Sign.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6030 Administrative Law

[3 credit hours]

The law and operation of administrative agencies, including agency adjudication, rulemaking, and other forms of policy implementation. The course covers agencies' place in the constitutional structure, legislative and executive controls on agency action, and judicial review of agency fact-finding, statutory interpretation, and exercise of discretion. The course examines state agencies as well as federal agencies and the federal Administrative Procedure Act.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

LAWI 6060 Sales and Leases of Goods

[2-3 credit hours]

A detailed study of sales of goods under Article 2 of the Uniform Commercial Code and a survey of both Article 2A of the Uniform Commercial Code (leases of goods) and the U.N. Convention on Contracts for the International Sale of Goods. Topics include contract formation and interpretation, warranties, express and implied terms, risk of loss, performance obligations and breach, and remedies for breach. Consideration may also be given to other state and federal laws affecting sales and leases of goods.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6070 Antitrust

[2-3 credit hours]

This course will cover the role of competition in a modern market economy, federal antitrust law, regulation and policies. Topics covered include horizontal restraints (price fixing, conspiracy, data dissemination, concerted refusals to deal, etc.); monopolization, attempts to monopolize, and oligopoly; problems concerning the relationship of antitrust to patent law; vertical restraints (restricted distribution, tying arrangements, exclusive dealing etc.); mergers (horizontal, vertical and conglomerate); selected Robinson-Patman Act problems, remedies and enforcement.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6080 Gender and the Law

[2-3 credit hours]

This course covers issues of gender and the law with a primary focus on how the law addresses sex discrimination. Students will discuss constitutional and statutory protections against sex discrimination from a doctrinal and theoretical perspective. Subjects covered in this class include employment discrimination, family law, public benefits, domestic violence and sexual orientation and the law.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6090 Disability Law

[2-3 credit hours]

This course examines the growing area of disability law. Topics to be covered include discrimination based on disability in employment and public accommodations, as well as the requirement for educational institutions to provide special education services to disabled students. Relevant federal statutes will be examined, including the Americans with Disabilities Act (with special emphasis on the ADA Amendments Act of 2009), Section 504 of the Rehabilitation Act, and the Individuals with Disabilities in Education Act.

Term Offered: Spring, Fall

LAWI 6100 International Law

[3 credit hours]

This course focuses on the legal processes of the international community. The creation of law among nation states, the law-making activities of international organizations, the enforcement (and non-enforcement) of international law in both national and international forums, the limits of national jurisdiction, the responsibility of states for the injuries to the persons or property of aliens, and the rules governing international agreements are surveyed. Particular attention is given to the law of treaties and the role of lawyers in foreign policy decision making.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

LAWI 6110 Commercial Paper

[3 credit hours]

A study of payment systems. Initial emphasis is upon commercial paper (Article 3 of the Uniform Commercial Code) and bank deposits and collections (Article 4 of the Uniform Commercial Code), followed by credit cards (Truth in Lending, Consumer Credit Protection, and Fair Credit Billing Acts), commercial funds transfer (Article 4A of the Uniform Commercial Code), and consumer electronic funds transfer (Electronic Funds Transfers Act).

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of C

Term Offered: Spring, Summer, Fall

LAWI 6130 Business Enterprise Tax

[2-3 credit hours]

An examination of the federal income tax treatment of business enterprises (including corporations, partnerships and limited liability companies) and their owners. The course considers the tax consequences of entity-owner transactions (formation and property contributions, distributions, redemptions and liquidations) as well as entity-level transactions (business operations, mergers, acquisitions and other business combinations).

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6200 Jurisprudence

[2-3 credit hours]

Jurisprudence is the philosophy of law. The two primary goals of this class are 1) to give students a basic background and understanding of important legal thinkers and theory and 2) to stimulate critical thinking through assigned readings and rollicking in-class discussions about concepts of law from Plato to present day. We will philosophically analyze concepts of precedence, interpretation, rights, civil disobedience, semantics, and virtues such as justice, desert and compassion.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6210 Copyright Law

[2-3 credit hours]

A substantive examination of the Copyright Act. This course will cover the fundamentals of copyright law and practice and the challenges to the existing copyright regime by new technologies.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

LAWI 6220 Civil Rights Litigation Simulation

[2-3 credit hours]

This course will explore how to litigate constitutional claims, and how to enforce individual constitutional rights, including 4th, 8th, and 14th Amendment claims. The course will cover the relevant case law for a doctrinal overview, as well as the historical and factual backgrounds to the landmark cases in constitutional litigation. The course will also involve simulated law practice problems and other exercises to provide a hands-on approach to the problems and issues that arise in litigating constitutional claims.

Prerequisites: LAWM 5000 with a minimum grade of C

Term Offered: Spring, Summer, Fall

LAWI 6260 Race and American Law

[2-3 credit hours]

This course addresses the racial and legal history of the major racial groups in the U.S., including African Americans, Native Americans, Asian Americans, Latinos, and Whites. In addition to these histories, the course includes the following topics: competing definitions of race and racism; race, voting, and participation in democracy; developing notions of equality; segregation and education; and responses to racism, including resistance, coalitions, and healing.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

LAWI 6270 Creditor and Debtor Law

[2-3 credit hours]

Explores creditors' rights under state law including judgment liens, execution liens, fraudulent conveyances, set off, assignments to benefit creditors, and statutory liens. Debtor defenses under state and federal law including constitutional protections, exemptions, and counterclaims are evaluated. Following this overview of general creditor execution, the majority of the course is devoted to resolution of claims in federal bankruptcy law.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6280 Criminal Procedure-Adjudications

[2-3 credit hours]

A study of the criminal processes from arrest through sentencing and appeal. Topics covered include bail, preliminary hearing, grand jury, plea bargaining and guilty pleas, discovery, fair trial, free press, jury trial, sentencing, and double jeopardy.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6300 Employment Discrimination

[3 credit hours]

This course focuses on the main federal statutes prohibiting employment discrimination and the policies underlying these laws, with the majority of time spent on Title VII of the Civil Rights Act of 1964, the Age Discrimination in Employment Act, and the Americans with Disabilities Act. Additional topics and subtopics include sexual harassment, discrimination based on sexual orientation, defenses, and reasonable accommodation of religion.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Fall

LAWI 6310 Employment Law

[2-3 credit hours]

This course focuses on the major state and federal employment laws affecting individual employees, excluding laws on unions and employment discrimination. Coverage includes the legal regulation of the hiring and firing process, testing and privacy issues, wage and hour laws, occupational health and safety, workers' compensation, unemployment insurance, covenants not to compete, and related topics.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

LAWI 6330 Environmental Law

[2-3 credit hours]

This course provides an introduction to U.S. environmental law by examining major federal statutes and the policy goals underlying them. Key statutes explored include the Clean Air Act, Clean Water Act, Resource Conservation and Recovery Act (RCRA), and Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Through analyzing and comparing different environmental statutes, students develop an understanding not only of the current environmental regulatory framework, but also of alternative approaches that may be employed to prevent pollution, clean up contamination, and protect the environment.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6350 Estate Planning

[2-3 credit hours]

This course focuses on the practical and tax aspects of estate planning. Emphasis is placed on the application of estate planning and wealth preservation techniques to commonly encountered estate planning problems.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6360 Estate and Gift Tax

[2-3 credit hours]

A study of the federal estate and gift tax structure and its impact on the gratuitous transfer of property. Income taxation of trusts and estates and the generation skipping transfer tax are also discussed.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6380 Federal Courts and Federal Rights

[3 credit hours]

An intensive examination of the jurisdiction of federal courts, the role of the federal courts within the federal government, and within our federalist system. Topics surveyed include the law applied by federal courts in civil actions, the original and removal jurisdiction of federal courts, the relationship of the federal courts to state courts, congressional power over federal courts, the enforceability of federal law against states, and states' sovereign immunity.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6390 Natural Resources Law

[2-3 credit hours]

This course provides an introduction to natural resources law and policy affecting both public lands and private property. Conflicts over natural resources, including their protection and use, are among the most contentious legal and policy issues of our time. Students explore the reasons why, the roles governmental authorities play in the management of natural resources, and the laws and policies pertaining to wildlife, preservation, conservation, protected lands, forestry, mining, oil and gas, water rights, and other natural resources. Key federal statutes such as the National Environmental Policy Act and the Endangered Species Act are reviewed as well as cases, regulations, and commentary.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6400 American Legal History

[2-3 credit hours]

This seminar/course (students may elect either to write a paper or to take an examination) follows the profession's development from the American Revolution through the 1920's and the emergence of university-based professional education, the advent of new client constituencies including corporations, labor organizations, and anti-slavery and other social action groups, the development of standards of professional ethnic and racial minorities. The teaching approach emphasizes comparisons with current practice, critical use of original source materials and development of research and writing skills.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6440 Immigration Law

[2-3 credit hours]

The course is designed to present a survey of immigration and nationality law. It will cover issues of citizenship as well as admissions to the United States. The course will address issues of removal and deportation, as well as relief from removal.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6460 Insurance Law

[2-3 credit hours]

A study of property, liability and life insurance, and the insurer-insured relationship from a legal vantage point. Numerous concepts are examined during the course, including insurable interest, concealment and misrepresentation, the duty of good faith and fair dealing, scope of coverage, policy interpretation, change of beneficiary, duty to defend, bad faith refusal to settle, measures of recovery, multiple interests coverage, subrogation and other insurance clauses. Several insurance policies are examined in detail.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of C

Term Offered: Summer

LAWI 6470 Intellectual Property and Licensing

[2-3 credit hours]

This course focuses on the commercialization of intellectual property through the use of assignments and licenses. The course will cover intellectual property assignments and licenses, including express and implied licenses, the scope of licenses, bankruptcy issues, anti-trust issues and international licensing. The course will also cover intellectual property audits and patent, trade secret, copyright and trademark law to the extent an understanding of the rights and obligations inherent in such intellectual property classifications are necessary to effectively assign or license intellectual property. Students will analyze several licenses.

Prerequisites: (LAWI 6210 with a minimum grade of D or LAWI 6710 with a minimum grade of D or LAWI 6720 with a minimum grade of D or LAWI 6900 with a minimum grade of D)

LAWI 6480 International Business Transactions

[2-3 credit hours]

This course introduces students to the issues, problems, and legal norms applicable to International Business Transactions. The course will examine various problems that occur in international business as a means of discerning pitfalls for the unwary, as well as the matters that must be considered to protect one's client. The course will begin with an examination of the issues arising in a basic international sale and will progress through increasingly complex types of business interaction, including distributorships, franchising, licensing, joint ventures, and incorporating abroad. Through the course, there will be an emphasis on the U.S., foreign, and international laws and standards that may affect the transaction. The course will emphasize contract negotiation and drafting skills.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring

LAWI 6490 Juvenile Law

[2-3 credit hours]

An examination of the relationship between children, their parents, siblings, and the state in the lives of delinquent, unruly, dependent, neglected, and abused children. The role of the court, judiciary, attorneys, police, and social services historically, and in modern practice, will be examined as to the impact on families and individuals brought before the juvenile court. Special emphasis will be given to the theory of the juvenile justice system; the various court alternatives to adjudication; dispositional considerations and the attorney's role in representing the child, parents, or serving as a guardian ad litem.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6500 Federal Income Tax

[3-4 credit hours]

After a brief consideration of the federal income taxation system, this course examines the conceptual problems in defining income. A detailed treatment of the more significant personal and business deductions, exemptions, and credits follows. Statutory methodology and policy considerations (including the tax expenditure concept) are developed integrally with substantive topics. In addition, the course considers the tax treatment of gains and losses from the disposition of property, including the capital gains preference and deferral of taxation. Tax shelters and attempts by Congress and the Internal Revenue Service to limit their utilization may be explored as well.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

LAWI 6510 Labor Law

[3 credit hours]

This course focuses on the law governing and policy issues surrounding the major facets of union-management relations in the private sector under the National Labor Relations Act (NLRA). These include union organizing, collective bargaining, contract enforcement, picketing, and the economic weapons of both sides, including strikes. The course also covers the procedural mechanisms by which rights under the NLRA are enforced and remedies for NLRA violations.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6520 Health Care Finance

[2-3 credit hours]

This course will cover the different problems presented by government regulation versus the private market model focusing on managed care (risk allocation, standard of care, consumer information), insurance (basic models of insurance and underwriting), health care licensing, and related ERISA issues as they affect the delivery of health care services.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of C

LAWI 6530 Consumer Law

[2-3 credit hours]

This course will study the practical application of Consumer Law including student loan law, credit card and debt collection law, Fair Credit Reporting Act, Lemon Law, Predatory Lending, etc.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6550 Health Care Fraud and Abuse

[2-3 credit hours]

The high cost of health care in the United States is exacerbated by rampant fraud and abuse on state and federal health care systems. This course presents an overview of legal and policy issues related to health care fraud and practical issues related to the prosecution and defense of health care fraud-related suits. Pre- and post-litigation issues, such as corporate compliance programs, administrative investigations, and corporate integrity agreements, will also be explored. Course materials will cover major health care fraud and abuse statutes, including statutes addressing false claims, kickbacks, and self-referrals, as well as the regulatory regimes and administrative rulings that govern this area of the law. Students will be evaluated on one or more written assignments and exercises.

Prerequisites: LAWM 5000 with a minimum grade of C

LAWI 6560 Real Estate Transactions

[2-3 credit hours]

The course will address the purchase and sale, financing and leasing of real property. Students will draft various documents common in real estate transactions. Assignments will be reviewed, critiqued and revised in order to enhance drafting skills.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6570 Health Care Provider Liability

[2-3 credit hours]

This advanced torts course covers quality control in health care, medical malpractice, informed consent, medical confidentiality and institutional liability for medical injury. It includes causes of action against individual and institutional health care providers as well as third party payors, including insurers and managed care organizations. Tort reform issues are also addressed.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of C

LAWI 6630 Health Law

[2-3 credit hours]

This course provides an overview of the legal issues that arise in the health care field. Topics surveyed will include individual and institutional liability, public and private regulation, accreditation and licensure, hospital/medical staff relationships, and the challenge of achieving cost efficiencies, while also maintaining high quality care and improved access to care. Students will learn to identify key legal issues affecting the operation of a health care entity.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of C

Term Offered: Spring, Fall

LAWI 6680 State and Local Government Law and Taxation

[2-3 credit hours]

An overview of the law relating to the administration of municipalities and their dealings with other local governmental units. Topics include the powers and problems of urban governmental units, federalism, corporate powers and police powers. Coverage includes the basic law and rules relating to the financing of local government and the various sources of tax revenue for local governments.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6700 Patent Practice and Procedure

[2-3 credit hours]

A hands-on course focusing on both regulatory requirements and attorney skills relating to representation of inventors before the Patent and Trademark Office. The course will follow a patent attorney's relationship with an inventor and the written PTO responses, appeals, and finally, patent grant.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6710 Patent Law

[2-3 credit hours]

A survey of the legal protection of inventions. This course covers the requirements for obtaining and enforcing a patent and the rights of a patentee with respect to licensing, assignment, and patent misuse.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Fall

LAWI 6720 Intellectual Property Survey

[2-3 credit hours]

A preparatory course covering Copyright, Patent, Trademark and Trade Secret Law. A broad coverage of intellectual property law is useful for those students who want to learn the fundamentals of intellectual property law either as basis for more advanced courses or to integrate intellectual property law into other substantive courses.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6730 Pension and Employee Benefits

[2-3 credit hours]

A study of the law regarding employment benefits, such as ERISA, focusing on various forms of pension plans, and health and welfare plans. The law will address issues of plan qualification under the tax code and also applicable labor laws and regulations. Some familiarity with tax concepts would be helpful but is not required.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring

LAWI 6750 Products Liability

[2-3 credit hours]

An examination of the law relating to products liability. Particular emphasis will be given to strict liability in tort, with coverage of negligence and warranty-based products claims. Discussions will cover design and manufacturing defects and failure to warn. Applications to contemporary problem areas, such as pharmaceuticals, automobiles, and tobacco, will be explored.

Prerequisites: LAWD 6220 with a minimum grade of D- and LAWD 6510 with a minimum grade of D- and LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6780 Remedies

[2-3 credit hours]

The course in Remedies is about the bottom line. It is about what a court can do for a litigant who has been wronged or is about to be wronged. The most common remedies are judgments for money and injunctions against defendants to prevent them from wronging plaintiffs or to require them to undo wrongs. The course takes up questions such as the measure of relief, the relationship between legal and equitable remedies, declaratory remedies, benefit to the defendant as the measure of relief in restitution, punitive remedies, enforcing judgments, equitable defenses, immunities and federal interference with state law enforcement.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6790 Bar Exam Preparation

[2-3 credit hours]

This is a pre-bar preparatory course designed to introduce students to certain critical and analytical and writing skills, techniques, protocols, and frameworks that are essential to maximize bar exam preparation and ultimately pass the bar exam. Students will review outlines for selected substantive topics, complete in-class and at-home simulated bar exam tests and assignments, and receive feedback. Through the use of problems and exercises in a bar exam format, students will become familiar with techniques for answering multiple choice questions, essays, and performance tests that comprise the bar exam in Ohio and other states. It is reserved for third year students and is graded on a satisfactory/unsatisfactory basis.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of C

LAWI 6800 Securities Regulation

[2-3 credit hours]

This course focuses on the disclosure requirements of the federal securities laws which apply when businesses raise capital and when their shares are publicly traded. It examines the requirements of the Securities Act of 1933, selected provisions of the Securities Exchange Act and state blue sky laws. It covers extensively the structuring of exempt transactions for small businesses. The course is taught primarily from a transactional, rather than a litigation, focus.

Prerequisites: LAWM 5000 with a minimum grade of C and LAWG 6010 with a minimum grade of D

LAWI 6810 Sentencing

[2-3 credit hours]

A survey of the law relating to the disposition of individuals convicted of crimes. Topics include sentencing authority, ex post facto laws, factual bases for sentencing, probation, parole, the death penalty, and state and federal sentencing guidelines.

Prerequisites: LAWM 5000 with a minimum grade of C and LAWD 6300 with a minimum grade of C and LAWD 6110 with a minimum grade of C

LAWI 6820 Land Use Planning

[2-3 credit hours]

This course explores the rapidly evolving area of public land use regulation in the context of private property development rights and constitutional protections of those rights. Regulatory areas examined include: zoning, subdivision controls, environmental land use controls, development exactions, aesthetic regulations, and growth controls, as well as land use planning requirements. First and Fifth Amendment issues are explored along with a variety of key public policy questions.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of C

LAWI 6840 International and Domestic Arbitration

[2-3 credit hours]

This course conveys a thorough understanding of the law and practice of arbitration: its practical, doctrinal, theoretical, and policy aspects both in the domestic and international spheres.

Prerequisites: LAWM 5000 with a minimum grade of C

Term Offered: Summer

LAWI 6870 Sports Law

[2-4 credit hours]

A substantive examination of concepts and cases from legal disciplines which affect professional and amateur sports including antitrust law, labor law, contracts, tax, and civil procedure.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6880 Business Bankruptcy

[2-3 credit hours]

This course will explore basic principles of Federal Bankruptcy Law, with particular emphasis on corporate reorganizations under Chapter 11 of the Bankruptcy Code. Topics addressed will include business operations in Chapter 11; the rights and duties of a Chapter 11 debtor; allowance, disallowance, estimations, and subordination of creditor claims; the reduction of secured obligations to the value of collateral; debtor-in-possession financing; preference and fraudulent transfer avoidance actions; and using bankruptcy to effect a sale of assets. This course will also address special rules involving, among others, small business debtors, municipalities, and international (cross-border) insolvency cases.

Prerequisites: LAWM 5000 with a minimum grade of C

LAWI 6900 Trademarks

[2-3 credit hours]

An introduction to the fundamentals of federal trademark law and practice with some discussion of common law trademarks and state trademark registration. This course will cover how trademarks are acquired, trademark registration and practice before the U.S. Patent and Trademark Office, and trademark infringement. False advertising and other forms of unfair competition actionable under the Lanham Act also will be studied.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6930 Water Law

[2-3 credit hours]

This course focuses on the laws governing surface and ground water resources, with an emphasis on allocation and management issues. Because water is perhaps our most vital natural resource, and because it is often in scarce supply relative to demand, disputes over its use have been and will continue to be of crucial importance. Students explore common law, statutory, and constitutional issues at the state and federal levels, including the Clean Water and Safe Drinking Water Acts. Topics crucial to the Great Lakes region are particularly emphasized.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWI 6940 White Collar Crime

[2-3 credit hours]

A survey of the federal criminal law relating to crimes committed by corporations and non-traditional criminals. Topics include corporate criminal liability, wire and mail fraud, RICO, money laundering, false claims and false statements, tax crimes, environmental crimes, perjury, and obstruction of justice.

Prerequisites: LAWM 5000 with a minimum grade of C and LAWD 6300 with a minimum grade of C

LAWI 9000 International Comparative Law

[2-3 credit hours]

This course introduces students to the major legal systems of the world. The first third of the course provides an overview of the major families of law encountered in various nations of the world today: common law (as exemplified by California and England), civil law (France and Germany), religious law (Egypt), and the extra-legal approach seen in various Asian countries (China). The rest of the course examines how each of these systems handles the same types of common legal situation: inheritance and succession, criminal behavior and contracts.

LAWI 9010 Accounting and Financial Statements

[1-3 credit hours]

An introduction for students without prior accounting experience to the terms and concepts necessary to an understanding of the financial affairs of a client and to the variety of legal contexts in which the lawyer is likely to encounter accounting problems. Students will learn to perform basic financial analysis.

LAWI 9020 E-Commerce

[1-3 credit hours]

This course will examine critical information technologies that provide a basis for electronic commerce. Topics include problems surrounding electronic commerce such as security, privacy, content selection and rating, intellectual property rights, authentication, encryption, acceptable use policies, UETA, UCITA and E-Sign.

Term Offered: Spring, Summer

LAWI 9030 Administrative Law

[3 credit hours]

The law and operation of administrative agencies, including agency adjudication, rulemaking, and other forms of policy implementation. The course covers agencies' place in the constitutional structure, legislative and executive controls on agency action, and judicial review of agency fact-finding, statutory interpretation, and exercise of discretion. The course examines state agencies as well as federal agencies and the federal Administrative Procedure Act.

Term Offered: Spring, Summer, Fall

LAWI 9060 Sales and Leases of Goods

[2-3 credit hours]

A detailed study of sales of goods under Article 2 of the Uniform Commercial Code and a survey of both Article 2A of the Uniform Commercial Code (leases of goods) and the U.N. Convention on Contracts for the International Sale of Goods. Topics include contract formation and interpretation, warranties, express and implied terms, risk of loss, performance obligations and breach, and remedies for breach. Consideration may also be given to other state and federal laws affecting sales and leases of goods.

Prerequisites: LAWD 9210 with a minimum grade of C and LAWD 9220 with a minimum grade of C

LAWI 9070 Antitrust

[2-3 credit hours]

This course will cover the role of competition in a modern market economy, federal antitrust law, regulation and policies. Topics covered include horizontal restraints (price fixing, conspiracy, data dissemination, concerted refusals to deal, etc.); monopolization, attempts to monopolize, and oligopoly; problems concerning the relationship of antitrust to patent law; vertical restraints (restricted distribution, tying arrangements, exclusive dealing etc.); mergers (horizontal, vertical and conglomerate); selected Robinson-Patman Act problems, remedies and enforcement.

Term Offered: Fall

LAWI 9080 Gender and the Law

[2-3 credit hours]

This course covers issues of gender and the law with a primary focus on how the law addresses sex discrimination. Students will discuss constitutional and statutory protections against sex discrimination from a doctrinal and theoretical perspective. Subjects covered in this class include employment discrimination, family law, public benefits, domestic violence and sexual orientation and the law.

LAWI 9090 Disability Law

[2-3 credit hours]

This course examines the growing area of disability law. Topics to be covered include discrimination based on disability in employment and public accommodations, as well as the requirement for educational institutions to provide special education services to disabled students. Relevant federal statutes will be examined, including the Americans with Disabilities Act (with special emphasis on the ADA Amendments Act of 2009), Section 504 of the Rehabilitation Act, and the Individuals with Disabilities in Education Act.

Term Offered: Spring, Fall

LAWI 9100 International Law

[3 credit hours]

This course focuses on the legal processes of the international community. The creation of law among nation states, the law-making activities of international organizations, the enforcement (and non-enforcement) of international law in both national and international forums, the limits of national jurisdiction, the responsibility of states for the injuries to the persons or property of aliens, and the rules governing international agreements are surveyed. Particular attention is given to the law of treaties and the role of lawyers in foreign policy decision making.

Term Offered: Spring, Summer, Fall

LAWI 9110 Commercial Paper

[3 credit hours]

A study of payment systems. Initial emphasis is upon commercial paper (Article 3 of the Uniform Commercial Code) and bank deposits and collections (Article 4 of the Uniform Commercial Code), followed by credit cards (Truth in Lending, Consumer Credit Protection, and Fair Credit Billing Acts), commercial funds transfer (Article 4A of the Uniform Commercial Code), and consumer electronic funds transfer (Electronic Funds Transfers Act).

Term Offered: Spring, Summer, Fall

LAWI 9130 Business Enterprise Tax

[2-3 credit hours]

An examination of the federal income tax treatment of business enterprises (including corporations, partnerships and limited liability companies) and their owners. The course considers the tax consequences of entity-owner transactions (formation and property contributions, distributions, redemptions and liquidations) as well as entity-level transactions (business operations, mergers, acquisitions and other business combinations).

Prerequisites: LAWG 9500 with a minimum grade of D or LAWI 9500 with a minimum grade of D

Term Offered: Spring

LAWI 9200 Jurisprudence

[2-3 credit hours]

Jurisprudence is the philosophy of law. The two primary goals of this class are 1) to give students a basic background and understanding of important legal thinkers and theory and 2) to stimulate critical thinking through assigned readings and rollicking in-class discussions about concepts of law from Plato to present day. We will philosophically analyze concepts of precedence, interpretation, rights, civil disobedience, semantics, and virtues such as justice, desert and compassion.

LAWI 9210 Copyright Law

[2-3 credit hours]

A substantive examination of the Copyright Act. This course will cover the fundamentals of copyright law and practice and the challenges to the existing copyright regime by new technologies.

Term Offered: Spring, Summer, Fall

LAWI 9220 Civil Rights Litigation Simulation

[2-3 credit hours]

This course will explore how to litigate constitutional claims, and how to enforce individual constitutional rights, including 4th, 8th, and 14th Amendment claims. The course will cover the relevant case law for a doctrinal overview, as well as the historical and factual backgrounds to the landmark cases in constitutional litigation. The course will also involve simulated law practice problems and other exercises to provide a hands-on approach to the problems and issues that arise in litigating constitutional claims.

Term Offered: Spring, Summer, Fall

LAWI 9260 Race and American Law

[2-3 credit hours]

This course addresses the racial and legal history of the major racial groups in the U.S., including African Americans, Native Americans, Asian Americans, Latinos, and Whites. In addition to these histories, the course includes the following topics: competing definitions of race and racism; race, voting, and participation in democracy; developing notions of equality; segregation and education; and responses to racism, including resistance, coalitions, and healing.

Term Offered: Spring, Summer, Fall

LAWI 9270 Creditor and Debtor Law

[2-3 credit hours]

Explores creditors' rights under state law including judgment liens, execution liens, fraudulent conveyances, set off, assignments to benefit creditors, and statutory liens. Debtor defenses under state and federal law including constitutional protections, exemptions, and counterclaims are evaluated. Following this overview of general creditor execution, the majority of the course is devoted to resolution of claims in federal bankruptcy law.

Term Offered: Spring, Summer, Fall**LAWI 9280 Criminal Procedure-Adjudications**

[3 credit hours]

A study of the criminal processes from arrest through sentencing and appeal. Topics covered include bail, preliminary hearing, grand jury, plea bargaining and guilty pleas, discovery, fair trial, free press, jury trial, sentencing, and double jeopardy.

Term Offered: Spring, Fall**LAWI 9300 Employment Discrimination**

[3 credit hours]

This course focuses on the main federal statutes prohibiting employment discrimination and the policies underlying these laws, with the majority of time spent on Title VII of the Civil Rights Act of 1964, the Age Discrimination in Employment Act, and the Americans with Disabilities Act. Additional topics and subtopics include sexual harassment, discrimination based on sexual orientation, defenses, and reasonable accommodation of religion.

Term Offered: Spring, Fall**LAWI 9310 Employment Law**

[2-3 credit hours]

This course focuses on the major state and federal employment laws affecting individual employees, excluding laws on unions and employment discrimination. Coverage includes the legal regulation of the hiring and firing process, testing and privacy issues, wage and hour laws, occupational health and safety, workers' compensation, unemployment insurance, covenants not to compete, and related topics.

Term Offered: Spring, Summer, Fall**LAWI 9330 Environmental Law**

[2-3 credit hours]

This course provides an introduction to U.S. environmental law by examining major federal statutes and the policy goals underlying them. Key statutes explored include the Clean Air Act, Clean Water Act, Resource Conservation and Recovery Act (RCRA), and Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Through analyzing and comparing different environmental statutes, students develop an understanding not only of the current environmental regulatory framework, but also of alternative approaches that may be employed to prevent pollution, clean up contamination, and protect the environment.

Term Offered: Spring, Fall**LAWI 9350 Estate Planning**

[2-3 credit hours]

This course focuses on the practical and tax aspects of estate planning. Emphasis is placed on the application of estate planning and wealth preservation techniques to commonly encountered estate planning problems.

Prerequisites: LAWG 9710 with a minimum grade of D**Term Offered:** Spring**LAWI 9360 Estate and Gift Tax**

[2-3 credit hours]

A study of the federal estate and gift tax structure and its impact on the gratuitous transfer of property. Income taxation of trusts and estates and the generation skipping transfer tax are also discussed.

Term Offered: Spring, Fall**LAWI 9380 Federal Courts and Federal Rights**

[3 credit hours]

An intensive examination of the jurisdiction of federal courts, the role of the federal courts within the federal government, and within our federalist system. Topics surveyed include the law applied by federal courts in civil actions, the original and removal jurisdiction of federal courts, the relationship of the federal courts to state courts, congressional power over federal courts, the enforceability of federal law against states, and states' sovereign immunity.

Term Offered: Spring, Summer, Fall**LAWI 9390 Natural Resources Law**

[2-3 credit hours]

This course provides an introduction to natural resources law and policy affecting both public lands and private property. Conflicts over natural resources, including their protection and use, are among the most contentious legal and policy issues of our time. Students explore the reasons why, the roles governmental authorities play in the management of natural resources, and the laws and policies pertaining to wildlife, preservation, conservation, protected lands, forestry, mining, oil and gas, water rights, and other natural resources. Key federal statutes such as the National Environmental Policy Act and the Endangered Species Act are reviewed as well as cases, regulations, and commentary.

Term Offered: Spring**LAWI 9400 American Legal History**

[2-3 credit hours]

This seminar/course (students may elect either to write a paper or to take an examination) follows the profession's development from the American Revolution through the 1920's and the emergence of university-based professional education, the advent of new client constituencies including corporations, labor organizations, and anti-slavery and other social action groups, the development of standards of professional ethnic and racial minorities. The teaching approach emphasizes comparisons with current practice, critical use of original source materials and development of research and writing skills.

LAWI 9440 Immigration Law

[2-3 credit hours]

The course is designed to present a survey of immigration and nationality law. It will cover issues of citizenship as well as admissions to the United States. The course will address issues of removal and deportation, as well as relief from removal.

Term Offered: Spring, Fall

LAWI 9460 Insurance Law

[2-3 credit hours]

A study of property, liability and life insurance, and the insurer-insured relationship from a legal vantage point. Numerous concepts are examined during the course, including insurable interest, concealment and misrepresentation, the duty of good faith and fair dealing, scope of coverage, policy interpretation, change of beneficiary, duty to defend, bad faith refusal to settle, measures of recovery, multiple interests coverage, subrogation and other insurance clauses. Several insurance policies are examined in detail.

Term Offered: Summer, Fall

LAWI 9470 Intellectual Property and Licensing

[2-3 credit hours]

This course focuses on the commercialization of intellectual property through the use of assignments and licenses. The course will cover intellectual property assignments and licenses, including express and implied licenses, the scope of licenses, bankruptcy issues, anti-trust issues and international licensing. The course will also cover intellectual property audits and patent, trade secret, copyright and trademark law to the extent an understanding of the rights and obligations inherent in such intellectual property classifications are necessary to effectively assign or license intellectual property. Students will analyze several licenses.

Prerequisites: LAWI 9720 with a minimum grade of D or LAWI 9710 with a minimum grade of D or LAWI 9900 with a minimum grade of D or LAWI 9210 with a minimum grade of D

Term Offered: Spring, Fall

LAWI 9480 International Business Transactions

[2-3 credit hours]

This course introduces students to the issues, problems, and legal norms applicable to International Business Transactions. The course will examine various problems that occur in international business as a means of discerning pitfalls for the unwary, as well as the matters that must be considered to protect one's client. The course will begin with an examination of the issues arising in a basic international sale and will progress through increasingly complex types of business interaction, including distributorships, franchising, licensing, joint ventures, and incorporating abroad. Through the course, there will be an emphasis on the U.S., foreign, and international laws and standards that may affect the transaction. The course will emphasize contract negotiation and drafting skills.

Term Offered: Spring, Summer

LAWI 9490 Juvenile Law

[2-3 credit hours]

An examination of the relationship between children, their parents, siblings, and the state in the lives of delinquent, unruly, dependent, neglected, and abused children. The role of the court, judiciary, attorneys, police, and social services historically, and in modern practice, will be examined as to the impact on families and individuals brought before the juvenile court. Special emphasis will be given to the theory of the juvenile justice system; the various court alternatives to adjudication; dispositional considerations and the attorney's role in representing the child, parents, or serving as a guardian ad litem.

Term Offered: Spring, Fall

LAWI 9500 Federal Income Tax

[3-4 credit hours]

After a brief consideration of the federal income taxation system, this course examines the conceptual problems in defining income. A detailed treatment of the more significant personal and business deductions, exemptions, and credits follows. Statutory methodology and policy considerations (including the tax expenditure concept) are developed integrally with substantive topics. In addition, the course considers the tax treatment of gains and losses from the disposition of property, including the capital gains preference and deferral of taxation. Tax shelters and attempts by Congress and the Internal Revenue Service to limit their utilization may be explored as well.

Term Offered: Spring, Summer, Fall

LAWI 9510 Labor Law

[3 credit hours]

This course focuses on the law governing and policy issues surrounding the major facets of union-management relations in the private sector under the National Labor Relations Act (NLRA). These include union organizing, collective bargaining, contract enforcement, picketing, and the economic weapons of both sides, including strikes. The course also covers the procedural mechanisms by which rights under the NLRA are enforced and remedies for NLRA violations.

Term Offered: Spring, Fall

LAWI 9520 Health Care Finance

[2-3 credit hours]

This course will cover the different problems presented by government regulation versus the private market model focusing on managed care (risk allocation, standard of care, consumer information), insurance (basic models of insurance and underwriting), health care licensing, and related ERISA issues as they affect the delivery of health care services.

LAWI 9530 Consumer Law

[2-3 credit hours]

This course will study the practical application of Consumer Law including student loan law, credit card and debt collection law, Fair Credit Reporting Act, Lemon Law, Predatory Lending, etc.

Term Offered: Spring, Fall

LAWI 9550 Health Care Fraud and Abuse

[2-3 credit hours]

The high cost of health care in the United States is exacerbated by rampant fraud and abuse on state and federal health care systems. This course presents an overview of legal and policy issues related to health care fraud and practical issues related to the prosecution and defense of health care fraud-related suits. Pre- and post-litigation issues, such as corporate compliance programs, administrative investigations, and corporate integrity agreements, will also be explored. Course materials will cover major health care fraud and abuse statutes, including statutes addressing false claims, kickbacks, and self-referrals, as well as the regulatory regimes and administrative rulings that govern this area of the law. Students will be evaluated on one or more written assignments and exercises.

Term Offered: Spring

LAWI 9560 Real Estate Transactions

[2-3 credit hours]

The course will address the purchase and sale, financing and leasing of real property. Students will draft various documents common in real estate transactions. Assignments will be reviewed, critiqued and revised in order to enhance drafting skills.

Term Offered: Spring**LAWI 9570 Health Care Provider Liability**

[2-3 credit hours]

This advanced torts course covers quality control in health care, medical malpractice, informed consent, medical confidentiality and institutional liability for medical injury. It includes causes of action against individual and institutional health care providers as well as third party payors, including insurers and managed care organizations. Tort reform issues are also addressed.

LAWI 9630 Health Law

[2-3 credit hours]

This course provides an overview of the legal issues that arise in the health care field. Topics surveyed will include individual and institutional liability, public and private regulation, accreditation and licensure, hospital/medical staff relationships, and the challenge of achieving cost efficiencies, while also maintaining high quality care and improved access to care. Students will learn to identify key legal issues affecting the operation of a health care entity.

Term Offered: Spring, Fall**LAWI 9680 State and Local Government Law and Taxation**

[2-3 credit hours]

An overview of the law relating to the administration of municipalities and their dealings with other local governmental units. Topics include the powers and problems of urban governmental units, federalism, corporate powers and police powers. Coverage includes the basic law and rules relating to the financing of local government and the various sources of tax revenue for local governments.

Term Offered: Spring**LAWI 9700 Patent Practice and Procedure**

[2-3 credit hours]

A hands-on course focusing on both regulatory requirements and attorney skills relating to representation of inventors before the Patent and Trademark Office. The course will follow a patent attorney's relationship with an inventor and the written PTO responses, appeals, and finally, patent grant.

Term Offered: Spring, Fall**LAWI 9710 Patent Law**

[2-3 credit hours]

A survey of the legal protection of inventions. This course covers the requirements for obtaining and enforcing a patent and the rights of a patentee with respect to licensing, assignment, and patent misuse.

Term Offered: Spring, Fall**LAWI 9720 Intellectual Property Survey**

[2-3 credit hours]

A preparatory course covering Copyright, Patent, Trademark and Trade Secret Law. A broad coverage of intellectual property law is useful for those students who want to learn the fundamentals of intellectual property law either as basis for more advanced courses or to integrate intellectual property law into other substantive courses.

Term Offered: Spring, Summer, Fall**LAWI 9730 Pension and Employee Benefits**

[2-3 credit hours]

A study of the law regarding employment benefits, such as ERISA, focusing on various forms of pension plans, and health and welfare plans. The law will address issues of plan qualification under the tax code and also applicable labor laws and regulations. Some familiarity with tax concepts would be helpful but is not required.

Term Offered: Spring**LAWI 9750 Products Liability**

[2-3 credit hours]

An examination of the law relating to products liability. Particular emphasis will be given to strict liability in tort, with coverage of negligence and warranty-based products claims. Discussions will cover design and manufacturing defects and failure to warn. Applications to contemporary problem areas, such as pharmaceuticals, automobiles, and tobacco, will be explored.

Prerequisites: (LAWD 9510 with a minimum grade of D and LAWD 9220 with a minimum grade of D)

LAWI 9780 Remedies

[2-3 credit hours]

The course in Remedies is about the bottom line. It is about what a court can do for a litigant who has been wronged or is about to be wronged. The most common remedies are judgments for money and injunctions against defendants to prevent them from wronging plaintiffs or to require them to undo wrongs. The course takes up questions such as the measure of relief, the relationship between legal and equitable remedies, declaratory remedies, benefit to the defendant as the measure of relief in restitution, punitive remedies, enforcing judgments, equitable defenses, immunities and federal interference with state law enforcement.

Term Offered: Spring, Fall**LAWI 9790 Bar Exam Preparation**

[2-3 credit hours]

This is a pre-bar preparatory course designed to introduce students to certain critical and analytical and writing skills, techniques, protocols, and frameworks that are essential to maximize bar exam preparation and ultimately pass the bar exam. Students will review outlines for selected substantive topics, complete in-class and at-home simulated bar exam tests and assignments, and receive feedback. Through the use of problems and exercises in a bar exam format, students will become familiar with techniques for answering multiple choice questions, essays, and performance tests that comprise the bar exam in Ohio and other states. It is reserved for third year students and is graded on a satisfactory/unsatisfactory basis.

Term Offered: Spring, Fall**LAWI 9800 Securities Regulation**

[2-3 credit hours]

This course focuses on the disclosure requirements of the federal securities laws which apply when businesses raise capital and when their shares are publicly traded. It examines the requirements of the Securities Act of 1933, selected provisions of the Securities Exchange Act and state blue sky laws. It covers extensively the structuring of exempt transactions for small businesses. The course is taught primarily from a transactional, rather than a litigation, focus.

Prerequisites: LAWG 9010 with a minimum grade of D

Term Offered: Spring, Fall

LAWI 9810 Sentencing

[2-3 credit hours]

A survey of the law relating to the disposition of individuals convicted of crimes. Topics include sentencing authority, ex post facto laws, factual bases for sentencing, probation, parole, the death penalty, and state and federal sentencing guidelines.

Prerequisites: LAWD 9300 with a minimum grade of C and LAWD 9110 with a minimum grade of C

Term Offered: Spring, Summer, Fall

LAWI 9820 Land Use Planning

[2-3 credit hours]

This course explores the rapidly evolving area of public land use regulation in the context of private property development rights and constitutional protections of those rights. Regulatory areas examined include: zoning, subdivision controls, environmental land use controls, development exactions, aesthetic regulations, and growth controls, as well as land use planning requirements. First and Fifth Amendment issues are explored along with a variety of key public policy questions.

Term Offered: Fall

LAWI 9840 International and Domestic Arbitration

[2-3 credit hours]

This course conveys a thorough understanding of the law and practice of arbitration: its practical, doctrinal, theoretical, and policy aspects both in the domestic and international spheres.

Term Offered: Spring, Summer, Fall

LAWI 9870 Sports Law

[2-4 credit hours]

A substantive examination of concepts and cases from legal disciplines which affect professional and amateur sports including antitrust law, labor law, contracts, tax, and civil procedure.

Term Offered: Spring

LAWI 9880 Business Bankruptcy

[2-3 credit hours]

This course will explore basic principles of Federal Bankruptcy Law, with particular emphasis on corporate reorganizations under Chapter 11 of the Bankruptcy Code. Topics addressed will include business operations in Chapter 11; the rights and duties of a Chapter 11 debtor; allowance, disallowance, estimations, and subordination of creditor claims; the reduction of secured obligations to the value of collateral; debtor-in-possession financing; preference and fraudulent transfer avoidance actions; and using bankruptcy to effect a sale of assets. This course will also address special rules involving, among others, small business debtors, municipalities, and international (cross-border) insolvency cases.

Term Offered: Fall

LAWI 9900 Trademarks

[2-3 credit hours]

An introduction to the fundamentals of federal trademark law and practice with some discussion of common law trademarks and state trademark registration. This course will cover how trademarks are acquired, trademark registration and practice before the U.S. Patent and Trademark Office, and trademark infringement. False advertising and other forms of unfair competition actionable under the Lanham Act also will be studied.

Term Offered: Spring, Fall

LAWI 9930 Water Law

[2-3 credit hours]

This course focuses on the laws governing surface and ground water resources, with an emphasis on allocation and management issues. Because water is perhaps our most vital natural resource, and because it is often in scarce supply relative to demand, disputes over its use have been and will continue to be of crucial importance. Students explore common law, statutory, and constitutional issues at the state and federal levels, including the Clean Water and Safe Drinking Water Acts. Topics crucial to the Great Lakes region are particularly emphasized.

Term Offered: Spring, Summer

LAWI 9940 White Collar Crime

[2-3 credit hours]

A survey of the federal criminal law relating to crimes committed by corporations and non-traditional criminals. Topics include corporate criminal liability, wire and mail fraud, RICO, money laundering, false claims and false statements, tax crimes, environmental crimes, perjury, and obstruction of justice.

Prerequisites: LAWD 9300 with a minimum grade of C

Term Offered: Fall

Law (Law Revw and Moot Court) (LAWL)

LAWL 6110 Law Review I

[1-2 credit hours]

Course is graded on a Satisfactory/Unsatisfactory basis. Course requires the successful completion of a publishable manuscript as determined by the editor-in-chief and faculty adviser of the Law Review.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWL 6120 Law Review II

[1-2 credit hours]

Only students who have successfully completed Law Review I and who are serving as editors of the Law Review will be permitted to register for Law Review II. Enrollment is selective.

Prerequisites: LAWL 6110 with a minimum grade of S

LAWL 6150 Moot Court I

[1-2 credit hours]

Students participate in interscholastic Moot Court competitions, each of which deals with a particular area of law, such as: international law, labor and employment law, corporate law, sports law, tax, intellectual property, criminal law and constitutional law. Students will prepare a brief and present an appellate argument at a regional or national competition.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWL 6160 Moot Court II

[1-2 credit hours]

Students participate in or coach Moot Court or Trial Advocacy teams. Students are also required to judge rounds of the annual Fornoff Moot Court competition.

Prerequisites: LAWL 6150 with a minimum grade of S

LAWL 6180 Trial Advocacy I

[1-2 credit hours]

Students participate in interscholastic trial advocacy competitions. Students on the trial advocacy team will conduct a trial against counsel from other schools; including making opening and closing statements, introducing evidence and examining and cross-examining witnesses.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWL 6190 Trial Advocacy II

[1-2 credit hours]

Students participate in and/or judge interscholastic trial advocacy competitions. Students on the trial advocacy team will conduct a trial against counsel from other schools; including making opening and closing statements, introducing evidence and examining and cross-examining witnesses.

Prerequisites: LAWL 6180 with a minimum grade of S

LAWL 9110 Law Review I

[1-2 credit hours]

Course is graded on a Satisfactory/Unsatisfactory basis. Course requires the successful completion of a publishable manuscript as determined by the editor-in-chief and faculty adviser of the Law Review.

Term Offered: Spring, Fall

LAWL 9120 Law Review II

[1-2 credit hours]

Only students who have successfully completed Law Review I and who are serving as editors of the Law Review will be permitted to register for Law Review II. Enrollment is selective.

Prerequisites: LAWL 9110 with a minimum grade of S

Term Offered: Spring, Fall

LAWL 9150 Moot Court I

[1-2 credit hours]

Students participate in interscholastic Moot Court competitions, each of which deals with a particular area of law, such as: international law, labor and employment law, corporate law, sports law, tax, intellectual property, criminal law and constitutional law. Students will prepare a brief and present an appellate argument at a regional or national competition.

Term Offered: Spring, Fall

LAWL 9160 Moot Court II

[1-2 credit hours]

Students participate in or coach Moot Court or Trial Advocacy teams. Students are also required to judge rounds of the annual Fornoff Moot Court competition.

Prerequisites: LAWL 9150 with a minimum grade of S

Term Offered: Spring, Fall

LAWL 9180 Trial Advocacy I

[1-2 credit hours]

Students participate in interscholastic trial advocacy competitions. Students on the trial advocacy team will conduct a trial against counsel from other schools; including making opening and closing statements, introducing evidence and examining and cross-examining witnesses.

Term Offered: Spring, Fall

LAWL 9190 Trial Advocacy II

[1-2 credit hours]

Students participate in and/or judge interscholastic trial advocacy competitions. Students on the trial advocacy team will conduct a trial against counsel from other schools; including making opening and closing statements, introducing evidence and examining and cross-examining witnesses.

Prerequisites: LAWL 9180 with a minimum grade of S

Term Offered: Spring, Fall

Law (Masters Program) (LAWM)

LAWM 5000 Law And The Legal System

[2-3 credit hours]

This course introduces students to the U.S. legal system, including cases, statutes, and other sources of law; federal, state, trial, and appellate courts; legal reasoning; and principles of contracts, torts, property, criminal, and constitutional law. Not for J.D. degree credit; serves as prerequisite for non-J.D. students to take other College of Law courses.

Term Offered: Fall

Law (Special Topics) (LAWT)

LAWT 6600 Special Topics

[1-6 credit hours]

Courses covering special topics and current events.

Term Offered: Spring, Summer, Fall

LAWT 9600 Special Topics

[1-6 credit hours]

Courses covering special topics and current events.

Term Offered: Spring, Summer, Fall

Law (Upper Level Required) (LAWA)

LAWA 6000 Legal Ethics and Professional Responsibility

[3 credit hours]

An introduction to legal and ethical principles governing lawyers, the legal profession, and the practice of law. The course considers the principal ways in which lawyers are regulated through bar admission, professional codes, lawyer disciplinary actions, and civil liability. The course explores the lawyer-client relationship and the scope and limits of duties to the client, the legal system, and third parties.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

LAWA 6010 Civil Procedure - Jurisdiction

[3 credit hours]

Study of the rules controlling the jurisdiction of courts. State and federal systems are covered.

Prerequisites: LAWM 5000 with a minimum grade of C

LAWA 6120 Constitutional Law - Rights

[3 credit hours]

This course covers the state action doctrine and various individual rights, including those protected by the Equal Protection, Free Speech, and Religion Clauses.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

LAWA 6310 Evidence

[4 credit hours]

The rules and policies governing a trial court's fact-finding process, as exemplified by the Federal Rules of Evidence. Topics cover the full range of evidentiary issues at trial, including the content of admissible proof, the matter of presenting it, and the respective roles of the judge and jury.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring

LAWA 6400 Advanced Research and Writing

[1 credit hour]

This course involves an advanced writing project completed under the supervision of a full-time faculty member.

Term Offered: Spring, Summer, Fall

LAWA 9000 Legal Ethics and Professional Responsibility

[3 credit hours]

An introduction to legal and ethical principles governing lawyers, the legal profession, and the practice of law. The course considers the principal ways in which lawyers are regulated through bar admission, professional codes, lawyer disciplinary actions, and civil liability. The course explores the lawyer-client relationship and the scope and limits of duties to the client, the legal system, and third parties.

Term Offered: Spring, Summer, Fall

LAWA 9010 Civil Procedure - Jurisdiction

[3 credit hours]

Study of the rules controlling the jurisdiction of courts. State and federal systems are covered.

Term Offered: Spring, Summer, Fall

LAWA 9120 Constitutional Law - Rights

[3 credit hours]

This course covers the state action doctrine and various individual rights, including those protected by the Equal Protection, Free Speech, and Religion Clauses.

Term Offered: Spring, Summer, Fall

LAWA 9310 Evidence

[4 credit hours]

The rules and policies governing a trial court's fact-finding process, as exemplified by the Federal Rules of Evidence. Topics cover the full range of evidentiary issues at trial, including the content of admissible proof, the matter of presenting it, and the respective roles of the judge and jury.

Term Offered: Spring, Summer, Fall

LAWA 9400 Advanced Research and Writing

[1 credit hour]

This course involves an advanced writing project completed under the supervision of a full-time faculty member.

Prerequisites: LAWD 9750 with a minimum grade of C or LAWD 9760 with a minimum grade of C

Term Offered: Spring, Summer, Fall

Law (Writing and Indep Resrch) (LAWP)

LAWP 6000 Seminar

[2-3 credit hours]

Seminars are offered in a wide variety of subject areas. In addition to class work, seminars require a substantial research project.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

LAWP 6010 Honors Research I

[2 credit hours]

A student who has completed 30 semester hours in the College of Law and who has a cumulative grade point average of 3.0 or higher may apply to undertake honors research. The student must submit a topic and detailed research proposal four weeks prior to enrollment to a faculty member who agrees to take primary responsibility to supervise the student's work. Two other faculty members are appointed by the Dean to serve on the student's advisory committee. The research and writing take place over two semesters and culminate in a written thesis intended for publication. The student must orally defend his or her thesis before the advisory committee and interested members of the University community. The purpose of the program is to provide an opportunity for students to make a contribution to the professional literature through concentrated study in an area of interest. The advisory committee decides on the grade that will be awarded to the project.

Prerequisites: LAWM 5000 with a minimum grade of C

LAWP 6020 Honors Research II

[2 credit hours]

A student who has completed 30 semester hours in the College of Law and who has a cumulative grade point average of 3.0 or higher may apply to undertake honors research. The student must submit a topic and detailed research proposal four weeks prior to enrollment to a faculty member who agrees to take primary responsibility to supervise the student's work. Two other faculty members are appointed by the Dean to serve on the student's advisory committee. The research and writing take place over two semesters and culminate in a written thesis intended for publication. The student must orally defend his or her thesis before the advisory committee and interested members of the University community. The purpose of the program is to provide an opportunity for students to make a contribution to the professional literature through concentrated study in an area of interest. The advisory committee decides on the grade that will be awarded to the project.

Prerequisites: LAWP 6010 (may be taken concurrently)

LAWP 6050 Independent Research

[2 credit hours]

A student who has completed at least 30 semester hours in the College of Law and who has a grade point average of 2.0 or higher may undertake and complete individual research and writing for credit under an Independent Research Program. To enroll in the program, a student must submit a written proposal to the faculty member agreeing to take primary responsibility for that student. If the faculty member and the Dean approve the proposal, the student may then enroll for two hours of credit for one semester. The supervising faculty member decides on the grade that will be awarded to the project.

Prerequisites: LAWM 5000 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

LAWP 9000 Seminar

[2-3 credit hours]

Seminars are offered in a wide variety of subject areas. In addition to class work, seminars require a substantial research project.

Term Offered: Spring, Summer, Fall

LAWP 9010 Honors Research I

[2 credit hours]

A student who has completed 30 semester hours in the College of Law and who has a cumulative grade point average of 3.0 or higher may apply to undertake honors research. The student must submit a topic and detailed research proposal four weeks prior to enrollment to a faculty member who agrees to take primary responsibility to supervise the student's work. Two other faculty members are appointed by the Dean to serve on the student's advisory committee. The research and writing take place over two semesters and culminate in a written thesis intended for publication. The student must orally defend his or her thesis before the advisory committee and interested members of the University community. The purpose of the program is to provide an opportunity for students to make a contribution to the professional literature through concentrated study in an area of interest. The advisory committee decides on the grade that will be awarded to the project.

Term Offered: Fall

LAWP 9020 Honors Research II

[2 credit hours]

A student who has completed 30 semester hours in the College of Law and who has a cumulative grade point average of 3.0 or higher may apply to undertake honors research. The student must submit a topic and detailed research proposal four weeks prior to enrollment to a faculty member who agrees to take primary responsibility to supervise the student's work. Two other faculty members are appointed by the Dean to serve on the student's advisory committee. The research and writing take place over two semesters and culminate in a written thesis intended for publication. The student must orally defend his or her thesis before the advisory committee and interested members of the University community. The purpose of the program is to provide an opportunity for students to make a contribution to the professional literature through concentrated study in an area of interest. The advisory committee decides on the grade that will be awarded to the project.

Prerequisites: LAWP 9010 (may be taken concurrently)

Term Offered: Spring

LAWP 9050 Independent Research

[2 credit hours]

A student who has completed at least 30 semester hours in the College of Law and who has a grade point average of 2.0 or higher may undertake and complete individual research and writing for credit under an Independent Research Program. To enroll in the program, a student must submit a written proposal to the faculty member agreeing to take primary responsibility for that student. If the faculty member and the Dean approve the proposal, the student may then enroll for two hours of credit for one semester. The supervising faculty member decides on the grade that will be awarded to the project.

Term Offered: Spring, Summer, Fall

Legal Specialties (LGL)

LGL 6100 Legal Issues for the Elderly

[3 credit hours]

A comprehensive review of legal issues affecting elderly people, including estate planning, trusts, guardianships, powers of attorney, advance directives, social security, Medicare, Medicaid, grandparents' rights, and prenuptial agreements.

Term Offered: Summer, Fall

LGL 6200 Elderly Health Law and Ethical

[3 credit hours]

A study of elder health law and elder legal and ethical issues affecting our aging population including home, long term and hospice care, guardianship, housing, age discrimination and elder abuse.

Term Offered: Summer, Fall

LGL 6300 Introduction to Patient Advocacy

[3 credit hours]

An introduction to public and private health care delivery systems in the US. Basic legal and ethical issues are presented as they impact the provider and recipient of health care.

Term Offered: Fall

LGL 6400 Health Issues Patient Advocacy

[3 credit hours]

This course will focus on health related legal, regulatory and ethical matters, patient advocates may face. A review of the United States health system, medical ethics, ethics committees, and public health care policies will be discussed.

Term Offered: Spring

LGL 6500 Legal Issues in Patient Advocacy

[3 credit hours]

This course will focus on how the U.S. legal system functions and how it impacts health care institutions and the patients they serve.

Term Offered: Fall

LGL 6600 Guided Study Patient Advocacy

[3 credit hours]

An exploration of Patient Advocacy topics or issues through advanced study of journal articles, research, readings, case studies, on-line postings, and on-line discussions, culminating in the completion of a reflective paper or thesis on a topic in the field of Patient Advocacy.

Term Offered: Spring

LGL 6980 Special Topics

[3 credit hours]

Content may vary, covering some aspect of the law or some area of special interest to the student and instructor. Students may repeat the course for credit as topics vary.

Term Offered: Summer

Linguistics (LING)

LING 5150 Fundamentals Of Linguistics

[3 credit hours]

Formal techniques required for the synchronic and diachronic study of language.

Term Offered: Spring, Fall

LING 5190 Sociolinguistics

[3 credit hours]

Combines linguistic and societal concerns through empirical research.

Term Offered: Spring, Fall

LING 5210 Issues In Esl Writing

[3 credit hours]

Course content includes key concepts in ESL writing instruction and research; characteristics of second language writers and their texts; curricular options; and responding to and assessing ESL writing.

Term Offered: Spring, Fall

Management (MGMT)

MGMT 5110 Introduction To Management

[3 credit hours]

Course is designed to provide a comprehensive, accurate and up-to-date picture of the field of management. This course focuses on organizational behavior (individual and small group) and organizational theory (large group and total organization). Also included is a review of the key functions of management; (1) planning, (2) organizing, (3) leading, (4) staffing and (5) controlling.

Term Offered: Summer

MGMT 6100 Leading Through Ethical Decision-Making

[3 credit hours]

This course seeks to challenge students to discover their core values and how they shape beliefs and actions. Students will learn how to apply four theoretical perspectives to issues facing them as business persons.

Term Offered: Spring, Fall

MGMT 6150 Leading and Developing Yourself

[3 credit hours]

The course explores how one's own leadership competencies can be developed and applied most effectively in a variety of situations. This course explores how one's own leadership competencies can be developed and applied most effectively in a variety of situations. Contemporary theories and trends in leadership and leadership development are examined, and opportunities to improve leadership capabilities are provided. Self-assessments, as well as written and video cases, are used extensively.

Term Offered: Fall

MGMT 6160 Leading With Power and Influence

[3 credit hours]

Students will develop an understanding of the strategic use of power and influence to exercise leadership in organizations. Skill development in the diagnosis and practical use of power and influence to mobilize action, to negotiate, and to resolve conflicts will be emphasized.

Term Offered: Spring, Fall

MGMT 6190 Leading change and Organizational Improvement

[3 credit hours]

Students will learn and apply the key theories and practices of change management and organizational development processes.

Term Offered: Spring

MGMT 6930 Independent Research

[1-3 credit hours]

Independent research opportunities are provided to advanced students for pursuing topics in depth under the faculty supervision.

Term Offered: Spring, Summer, Fall

Manufacturing Management (MFGM)

MFGM 8480 Management of Technology

[3 credit hours]

This seminar covers conceptual framework and relevant research studies on technology management. The literature from Technology Management as it relates to the management of product, manufacturing and supply chain technologies will be discussed.

Term Offered: Spring, Fall

MFGM 8490 Supply Chain and E-Business Issues in Manufacturing

[3 credit hours]

This seminar focuses broadly on key issues relating effective management of product, information and financial flows in supply chains.

It also relates to E-business practices, and their impact on supply chain design and management.

Term Offered: Spring

MFGM 8510 Supply Chain and Technology Management Analytics

[3 credit hours]

This course focuses on advanced analytical methods and applications in supply chain and technology management. The first part of the course focuses on mathematical modeling and algorithms in supply chain management, while the second part focuses on how to use data to develop business insights and predictive capabilities.

MFGM 8630 Management Science

[3 credit hours]

This course is an applied study of deterministic and stochastic methods of management science. A variety of applications with emphasis on manufacturing and technology management are introduced.

Term Offered: Spring

MFGM 8640 Advanced Management Science

[3 credit hours]

The course introduces students to advanced theory, algorithms, and applications of management science techniques, including dynamic programming, nonlinear programming, game theory, etc. The methods have applications to supply chain management, manufacturing, transportation, marketing, and economics.

MFGM 8650 Stochastic Modeling

[3 credit hours]

This course covers basic principles and methods in applied probability and stochastic modeling. The topics covered in this course include advanced probability theory, stochastic processes, Markov chains, Markov Decision Processes, queuing theory, computer simulation, etc. Applications of these techniques in supply chain management, manufacturing, transportation, and finance are introduced.

MFGM 8660 Qualitative Research Methodology

[3 credit hours]

This course explores the use of qualitative methods within the fields of Information Systems and Operations Management. The seminar discusses the different qualitative methods that include Case Study, Ethnography, and Grounded Theory. In addition, we examine the differences between interpretive and positivist approaches using qualitative methods. This course covers research design and the various techniques in analyzing qualitative data. The course includes a discussion about mitigating bias in the areas of data collection and analysis.

MFGM 8670 Special Topics in Research Methods

[3 credit hours]

This course focuses on contemporary research methods within the fields of manufacturing and technology management, including Operations and Supply Chain Management, Information Systems, etc. The specific topic on contemporary research methods will change each time.

MFGM 8810 Seminar/Colloquia

[1 credit hour]

One credit hour requirement of these courses will be met by requiring the students to attend a reasonable number (10) of research seminars and colloquia in and outside the college, doctoral dissertation proposal and defenses at the college, etc., during one academic year.

Term Offered: Spring, Fall**MFGM 8840 Manufacturing Strategy**

[4 credit hours]

The seminar examines the theory and research related to the formulation and implementation of manufacturing strategy including the strategic planning process and techniques for industry and competitive analysis.

Prerequisites: MGMT 5110 with a minimum grade of D- or ORGD 7110 with a minimum grade of D-

MFGM 8850 Readings And Research In Manufacturing Management

[1-12 credit hours]

This individually designed course will provide advanced readings in areas needed by a doctoral student.

Term Offered: Spring, Summer, Fall**MFGM 8860 Advanced Statistics**

[3 credit hours]

This course discusses multivariate data analysis. Topics include: principal components analysis, factor analysis, multidimensional scaling, cluster analysis, multiple regression analysis and multivariate analysis of variance. Statistical software packages are used.

Prerequisites: OPMT 5510 with a minimum grade of D-

Term Offered: Summer, Fall**MFGM 8870 Seminar in Statistics/ Research Method**

[3 credit hours]

This is an advanced second course in Statistical methods or management science or research methods. This course is designed for individual needs of the student to provide more depth in the research method as required.

Term Offered: Summer**MFGM 8880 Research Methods-Theory Bldg**

[3 credit hours]

The course seeks to frame and discuss key issues that arise as social scientists conduct theoretically-relevant empirical research. In the course, the theory building in manufacturing management as well as research process and the literature, tools and techniques associated with each phase of the process will be introduced.

Term Offered: Spring, Fall**MFGM 8890 Advanced Manufacturing Systems**

[3 credit hours]

This seminar provides an understanding of the design and management of manufacturing systems. This begins with an understanding of how manufacturing has evolved over time, continues with descriptions of current trends and ideas in manufacturing system design and concludes with discussion of future changes,

Term Offered: Spring, Summer, Fall**MFGM 8900 Field Research**

[1-8 credit hours]

This course provides students with the opportunity to experience a realistic manufacturing problem and to develop approaches to solving that problem under the supervision of a faculty member.

Term Offered: Spring, Fall**MFGM 8960 Dissertation**

[1-8 credit hours]

Dissertation

Term Offered: Spring, Summer, Fall**MFGM 8980 Special Topics Seminar**

[3 credit hours]

This seminar focuses on current topics relating to manufacturing and technology management. The specific seminar topic will change each semester.

Term Offered: Spring, Fall

Marketing (MKTG)

MKTG 5170 Marketing For Non-Profit Organizations

[3 credit hours]

This course is an introduction to marketing for non-business students. Focus is on planning and executing marketing programs in not-for-profit organization. It is an accelerated look into marketing principles which focuses on the opportunities, challenges, and constraints confronting managers in not-for-profit settings – health care institutions, schools, churches, arts and community service organizations in the governmental and private sectors.

Term Offered: Spring, Fall

MKTG 5410 Marketing Systems

[3 credit hours]

Examines the areas of marketing management, marketing functions and institutions, and the role of marketing in the organization. The course explores the relationship between marketing and the environment.

Term Offered: Spring, Summer, Fall

MKTG 6140 Customer Relationship Marketing

[3 credit hours]

Course will examine the theoretical and managerial development of relationship marketing as an organizational strategy to build and maintain profitable customer relationships.

Prerequisites: BUAD 3010 with a minimum grade of C or MKTG 5410 with a minimum grade of C

Term Offered: Spring, Summer, Fall

MKTG 6220 Integrated Marketing Communications

[3 credit hours]

Course focuses on the integration of marketing communication tools in achieving desired changes in consumer attitudes and behaviors. This involves analyzing the competitive environment, defining the communications strategy and selecting media and vehicles to ensure consistency of messages and complementary use of media in order to maximize the impact on consumers.

Prerequisites: MKTG 5410 with a minimum grade of C or BUAD 3010 with a minimum grade of C

Term Offered: Spring, Summer, Fall

MKTG 6230 Digital Marketing Processes and Virtual Value Networks

[3 credit hours]

Course will examine how marketing processes can leverage e-commerce opportunities to create greater customer value in relational and transactional exchanges, and to build virtual value networks spanning functional, organizational and geographical boundaries.

Prerequisites: MKTG 5410 with a minimum grade of C or BUAD 3010 with a minimum grade of C

Term Offered: Spring

MKTG 6240 Sales Force Leadership and Strategy

[3 credit hours]

The purpose of this course is to expose students to the functions, problems, and strategies encountered by managers of a sales organization. Primarily, course material will be studied from the perspectives of the leader or manager whose responsibility it is to direct, supervise, motivate, and evaluate direct reporting sales people (i.e., "the salesforce"). This will be done using a variety of learning techniques tailored to the graduate level student studying in an online or blended learning environment.

Prerequisites: MKTG 5410 with a minimum grade of C or BUAD 3010 with a minimum grade of C

Term Offered: Spring, Summer, Fall

MKTG 6250 Global Sales and Strategic Customer Management

[3 credit hours]

In today's global business environment, it has become a strategic necessity for salespeople to take an approach centered on developing customer relationships. This course examines the roles and functions of the business-to-business salesperson in managing customers in a global environment and considered strategic to meeting organizational goals. Students will participate in critical thinking exercises, case study, and role play to develop skills in relationship selling, and strategic customer management of global firms.

Prerequisites: MKTG 5410 with a minimum grade of C or BUAD 3010 with a minimum grade of C

Term Offered: Spring, Fall

MKTG 6310 Managing Innovation and Product Commercialization

[3 credit hours]

Course will provide an understanding of how new products and services are designed and commercialized, and will take a strategic and managerial perspective in defining how to best plan, lead, and develop the processes of managing innovation and new products/services.

Prerequisites: BUAD 3010 with a minimum grade of C or MKTG 5410 with a minimum grade of C

MKTG 6320 Strategic Brand Management

[3 credit hours]

Course will address the strategic importance of branding and will focus on the design and implementation of marketing Programs and activities to build, measure, and manage brand equity.

Prerequisites: MKTG 5410 with a minimum grade of C or BUAD 3010 with a minimum grade of C

Term Offered: Spring, Summer, Fall

MKTG 6400 International Marketing

[3 credit hours]

This course focuses on identifying (via screening) and servicing foreign market opportunities via the export modality. Skills in research, strategic and tactical analysis, and adaptation are developed.

Prerequisites: BUAD 3010 with a minimum grade of C or MKTG 5410 with a minimum grade of C

Term Offered: Spring, Fall

MKTG 6980 Special Topics

[3 credit hours]

Current issues/developments in marketing, international business, or business economics are discussed.

Term Offered: Spring, Summer, Fall

MKTG 6990 Independent Study

[1-3 credit hours]

Independent study in marketing, international business, or business economics. A proposal for the independent study must be approved by faculty member and department chair.

Term Offered: Spring, Summer, Fall

MKTG 8240 Sale Force Leadership and Strategy

[3 credit hours]

The purpose of this course is to expose students to the functions, problems, and strategies encountered by managers of a sales organization. Primarily, course material will be studied from the perspectives of the leader or manager whose responsibility it is to direct, supervise, motivate, and evaluate direct reporting sales people (i.e., "the salesforce"). This will be done using a variety of learning techniques tailored to the graduate level student studying in an online or blended learning environment.

MKTG 8250 Strategic Account Management

[3 credit hours]

The purpose of this course is to expose students to the functions, problems, and strategies encountered by managers of a sales organization. Primarily, course material will be studied from the perspectives of the leader or manager whose responsibility it is to direct, supervise, motivate, and evaluate direct reporting sales people (i.e., "the salesforce"). This will be done using a variety of learning techniques tailored to the graduate level student studying in an online or blended learning environment.

Prerequisites: MKTG 5410 with a minimum grade of D-**Term Offered:** Spring**MKTG 8290 Business Marketing**

[3 credit hours]

Nature, structure, and managerial problems and processes in the field of business-to-business marketing.

Prerequisites: MKTG 5410 with a minimum grade of D- or MKTG 7410 with a minimum grade of D-**MKTG 8310 Managing Innovation and Product Commercialization**

[3 credit hours]

Course will provide an understanding of how new products and services are designed and commercialized, and will take a strategic and managerial perspective in defining how to best plan, lead, and develop the processes of managing innovation and new products/services.

Prerequisites: MKTG 5410 with a minimum grade of D-**Term Offered:** Spring**MKTG 8320 Strategic Brand Management**

[3 credit hours]

Course will address the strategic importance of branding and will focus on the design and implementation of marketing Programs and activities to build, measure, and manage brand equity.

Prerequisites: MKTG 5410 with a minimum grade of D-**Term Offered:** Spring**MKTG 8400 International Marketing**

[3 credit hours]

This course focuses developing an eclectic knowledge of the literature on identifying and servicing foreign market opportunities. Research skills dealing with literature synthesis, concept development, testing, data collection and academic paper writing are developed.

Prerequisites: BUAD 6500 with a minimum grade of D-**MKTG 8790 Integrated Marketing/CRM Seminar**

[3 credit hours]

A seminar in selected topics in Marketing. Ph.D. students are assigned readings from the Marketing academic literature. They will complete several research papers focusing on specific topics that advance the field and that are suitable for submission to an academic journal or conference.

Term Offered: Spring, Fall

Master of Liberal Studies (MLS)

MLS 6010 MLS Seminar in Humanities

[3 credit hours]

Introduction to the concerns and methods of graduate study in the Humanities. This course will demonstrate, through readings from different eras, the interrelated nature of literature, philosophy and history.

Term Offered: Spring, Summer, Fall**MLS 6020 Mls Seminar In Social Sciences**

[3 credit hours]

Drawing from major principles and concepts in the social sciences, this course examines issues of the individual and society from a range of disciplinary approaches. Special topics vary.

Term Offered: Spring, Summer, Fall**MLS 6030 Mls Seminar In Natural Sciences**

[3 credit hours]

This course discusses the major ideas of the natural sciences in terms of their impact upon the human species. Specific topics vary.

Term Offered: Spring, Summer, Fall**MLS 6040 Mls Seminar In The Visual And Performing Arts**

[3 credit hours]

An examination of the concept of creativity in the fields of visual art, theater, dance and music. Topics covered vary with instructor.

Term Offered: Spring, Summer, Fall**MLS 6100 Interdisciplinary Research Methods**

[3 credit hours]

Exploration of what it means to use interdisciplinary approaches to research and writing. The course focuses on the logic of interdisciplinary research and how to use disciplinary research epistemologies in interdisciplinary projects. The course also discusses Institutional Review Boards and ethical treatment of human subjects in research.

Term Offered: Spring, Fall**MLS 6400 Studies In Humanities**

[1-6 credit hours]

Individually supervised study in the humanities. Permission of the Director required. May be repeated for additional credit.

Term Offered: Spring, Summer, Fall**MLS 6500 Studies In Social Sciences**

[1-6 credit hours]

Individually supervised study in the social sciences. Permission of the Director required. May be repeated for additional credit.

Term Offered: Spring, Summer, Fall**MLS 6600 Studies In Natural Sciences**

[1-6 credit hours]

Individually supervised study in the natural sciences. Permission of the Director required. May be repeated for additional credit.

Term Offered: Spring, Fall

MLS 6700 Studies In The Visual And Performing Arts

[1-6 credit hours]

Individualized or small-group study in the visual and performing arts.

Term Offered: Spring, Summer, Fall

MLS 6970 Masters of Liberal Studies Project

[1-6 credit hours]

Creative or applied capstone project supervised by faculty advisor and committee.

Term Offered: Spring, Summer, Fall

MLS 6990 Mls Thesis

[1-6 credit hours]

Permission of the Director required. May be repeated for additional credit.

Term Offered: Spring, Summer, Fall

Mathematics (MATH)

MATH 5010 Functions And Modeling For Middle Grade Mathematics

[3 credit hours]

Introduction to the theory of functions through modeling. Subjects include polynomial, exponential, logarithmic and rational functions, interpolation and modeling of data sets through least squares and other methods. Graduate math credit for education students only.

MATH 5040 Concepts Of Calculus For Middle Grade Mathematics

[3 credit hours]

Introduction to the basic idea of calculus. Subjects include limits, continuity, the derivative and its applications, indefinite and definite integral, Fundamental Theorem of Calculus, evaluation of integrals. Graduate math credit for education students only.

Term Offered: Summer

MATH 5060 Number Theory Concepts For Middle Grade Mathematics

[3 credit hours]

Introduction to basic number theory. Subjects include history of number theory, prime numbers, unique factorization, Euclidean algorithm, Pythagorean relations, number systems, and transformations. Graduate math credit for education students only.

MATH 5070 Geometry Concepts For Middle School Mathematics

[3 credit hours]

Descriptive geometry in 2 and 3 dimensions, use of axioms and definitions in the proof theorems, formal Euclidean geometry, transformations. Graduate math credit for education students only.

MATH 5080 History Of Mathematics For Middle Grade Mathematics

[3 credit hours]

Study of the history of mathematics from antiquity to the 20th century concentrating on the development of arithmetic, algebra, geometry and calculus. Graduate math credit for education students only.

MATH 5110 Probability Concepts For Middle Grade Mathematics

[3 credit hours]

Introduction to the theory of probability, counting principles and combinatorics, risk, coincidence, expectation and conditional probability, probability distributions. Graduate math credit for education students only.

MATH 5120 Statistics Concepts For Middle Grade Mathematics

[3 credit hours]

Introduction to the fundamental ideas of statistics, including sampling techniques, descriptive, variance, confidence intervals, correlation and regression. Graduate math credit for education students only.

MATH 5220 Theory Of Interest

[3 credit hours]

This course covers the measurement of interest, certain annuities, yield rates, amortization and sinking funds, bonds and other securities and application of interest theory.

MATH 5260 Actuarial Mathematics I

[3 credit hours]

Survival distributions and life tables, life insurance, life annuities, benefit premiums and reserves and multiple life functions are some topics covered in this course.

Prerequisites: MATH 5680 with a minimum grade of D-

Term Offered: Fall

MATH 5300 Linear Algebra I

[3 credit hours]

Theory of vector spaces and linear transformations, including such topics as matrices, determinants, inner products, eigenvalues and eigenvectors, and rational and Jordan canonical forms.

Term Offered: Fall

MATH 5310 Linear Algebra II

[3 credit hours]

Hermitian and normal operators, multilinear forms, spectral theorem and other topics.

Prerequisites: MATH 5300 with a minimum grade of D-

MATH 5330 Abstract Algebra I

[3 credit hours]

Arithmetic of the integers, unique factorization and modular arithmetic; group theory including normal subgroups, factor groups, cyclic groups, permutations, homomorphisms, the isomorphism theorems, abelian groups and p-groups.

Prerequisites: MATH 3190 with a minimum grade of D-

Term Offered: Fall

MATH 5340 Abstract Algebra II

[3 credit hours]

Ring theory including integral domains, field of quotients, homomorphisms, ideals, Euclidean domains, polynomial rings, vector spaces, roots of polynomials and field extensions.

Prerequisites: MATH 5330 with a minimum grade of D-

Term Offered: Spring

MATH 5350 Applied Linear Algebra

[3 credit hours]

Matrices, systems of equations, vector spaces, linear transformations, determinants, eigenvalues and eigenvectors, generalized inverses, rank, numerical methods and applications to various areas of science.

Prerequisites: MATH 1890 with a minimum grade of D-

Term Offered: Spring, Summer

MATH 5380 Discrete Structures And Analysis Algorithms

[3 credit hours]

Discrete mathematical structures for applications in computer science such as graph theory, combinatorics, groups theory, asymptotics, recurrence relations and analysis of algorithms.

Prerequisites: MATH 3320 with a minimum grade of D- or MATH 5330 with a minimum grade of D-

Term Offered: Fall

MATH 5450 Introduction To Topology I

[3 credit hours]

Metric spaces, topological spaces, continuous maps, bases and sub-bases, closure and interior operators, products, subspaces, sums, quotients, separation axioms, compactness and local compactness.

Prerequisites: MATH 3190 with a minimum grade of D-

Term Offered: Fall

MATH 5460 Introduction To Topology II

[3 credit hours]

Connectedness and local connectedness, convergence, metrization, function spaces. The fundamental groups and its properties, covering spaces, classical applications, e.g. Jordan Curve Theorem, Fundamental Theorem of Algebra, Brouwer's Fixed Point Theorem.

Prerequisites: MATH 5450 with a minimum grade of D-

Term Offered: Spring

MATH 5540 Classical Differential Geometry I

[3 credit hours]

Smooth curves in Euclidean space including the Frenet formulae. Immersed surfaces with the Gauss map, principal curvatures and the fundamental forms. Special surfaces including ruled surfaces and minimal surfaces. Intrinsic Geometry including the Gauss Theorem Egregium.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-

MATH 5550 Classical Differential Geometry II

[3 credit hours]

Tensors, vector fields and the Cartan approach to surface theory, Bonnet's Theorem and the construction of surfaces via solutions of the Gauss Equation. Geodesics, parallel transport and Jacobi Fields. Theorems of a global nature such as Hilbert's Theorem or the Theorem of Hopf-Rinow.

Prerequisites: MATH 5540 with a minimum grade of D-

MATH 5600 Advanced Statistical Methods I

[3 credit hours]

Basics of descriptive statistics, study designs and statistical inference. Properties of, and assumptions required for, inference for means, variances, and proportions from one and two-sample paired and unpaired studies. Introduction to ANOVA with multiple comparisons and multiple regression. Model assessment and diagnostics. Statistical software will be employed. Opportunities to apply procedures to real data. Emphasis placed on the foundations to approaches in introductory statistics.

Term Offered: Fall

MATH 5610 Advanced Statistical Methods II

[3 credit hours]

Statistical/biostatistical concepts and methods. Broad subject categories that may be included are study design, longitudinal data analysis, survival analysis, logistic regression, random and mixed effects models. Other topics applicable to current statistical consulting projects, or related to modern data analytics, may be introduced. Appropriate statistical software will be employed.

Prerequisites: MATH 5600 with a minimum grade of C-

Term Offered: Spring

MATH 5620 Linear Statistical Models

[3 credit hours]

Multiple regression, analysis of variance and covariance, general linear models and model building for linear models. Experimental designs include one-way, randomized block, Latin square, factorial and nested designs.

Prerequisites: MATH 6650 with a minimum grade of D-

Term Offered: Spring

MATH 5630 Theory And Methods Of Sample Surveys

[3 credit hours]

The mathematical basis to estimation in various sampling contexts, including probability proportional to size sampling, stratified sampling, two-stage cluster sampling and double sampling, is developed.

Prerequisites: MATH 5680 with a minimum grade of D-

Term Offered: Spring, Fall

MATH 5640 Statistical Computing

[3 credit hours]

Modern statistical computing, including programming tools, modern programming methodologies, design of data structures and algorithms, numerical computing and graphics. Additional topics selected from simulation studies, inversion of probability integral transforms, rejection sampling, importance sampling, Monte Carlo integration, bootstrapping and optimization.

Term Offered: Fall

MATH 5680 Introduction To Theory Of Probability

[3 credit hours]

Probability spaces, random variables, probability distributions, moments and moment generating functions, limit theorems, transformations and sampling distributions.

Prerequisites: (MATH 3190 with a minimum grade of D- and MATH 5350 with a minimum grade of D-)

Term Offered: Summer, Fall

MATH 5690 Introduction To Mathematical Statistics

[3 credit hours]

Sampling distributions, point estimation, interval estimation, hypothesis testing, regression and analysis of variance.

Prerequisites: MATH 5680 with a minimum grade of D-

Term Offered: Spring

MATH 5710 Methods Of Numerical Analysis I

[3 credit hours]

Floating point arithmetic; polynomial interpolation; numerical solution of nonlinear equations; Newton's method. Likely topics include: numerical differentiation and integration; solving systems of linear equations; Gaussian elimination; LU decomposition; Gauss-Seidel method.

Term Offered: Spring, Fall

MATH 5720 Methods Of Numerical Analysis II

[3 credit hours]

Likely topics include: Computation of eigenvalues and eigenvectors; solving systems of nonlinear equations; least squares approximations; rational approximations; cubic splines; fast Fourier transforms; numerical solutions to initial value problems; ordinary and partial differential equations.

Prerequisites: MATH 5710 with a minimum grade of D-

Term Offered: Spring

MATH 5740 Advanced Applied Mathematics I

[3 credit hours]

Series and numerical solutions to ordinary differential equations, special functions, orthogonal functions, Sturm-Liouville Problems, self-adjointness, vector analysis.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-

Term Offered: Fall

MATH 5750 Advanced Applied Mathematics II

[3 credit hours]

Continuation of vector analysis, introduction to complex analysis, partial differential equations, Fourier series and integrals.

Prerequisites: MATH 5740 with a minimum grade of D-

Term Offered: Spring

MATH 5780 Advanced Calculus

[3 credit hours]

Extrema for functions of one or more variables, Lagrange multipliers, indeterminate forms, inverse and implicit function theorems, uniform convergences, power series, transformations, Jacobians, multiple integrals.

Prerequisites: MATH 2850 with a minimum grade of D-

MATH 5800 Ordinary Differential Equations

[3 credit hours]

Modern theory of differential equations; transforms and matrix methods; existence theorems and series solutions; and other selected topics.

Prerequisites: MATH 2860 with a minimum grade of D-

Term Offered: Spring, Fall

MATH 5810 Partial Differential Equations

[3 credit hours]

First and second order equations; numerical methods; separation of variables; solutions of heat and wave equations using eigenfunction techniques; and other selected topics.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-

Term Offered: Spring

MATH 5820 Introduction To Real Analysis I

[3 credit hours]

A rigorous treatment of the Calculus in one and several variables. Topics to include: the real number system; sequences and series; elementary metric space theory including compactness, connectedness and completeness; the Riemann Integral.

Prerequisites: MATH 3190 with a minimum grade of D-

Term Offered: Fall

MATH 5830 Introduction To Real Analysis II

[3 credit hours]

Differentiable functions on \mathbb{R}^n ; the Implicit and Inverse Function Theorems; sequences and series of continuous functions; Stone-Weierstrass Theorem; Arzela-Ascoli Theorem; introduction to measure theory; Lebesgue integration; the Lebesgue Dominated Convergence Theorem.

Prerequisites: MATH 5820 with a minimum grade of D-

Term Offered: Spring

MATH 5860 Calculus Of Variations And Optimal Control Theory I

[3 credit hours]

Conditions for an extreme (Euler's equations, Erdman corner conditions, conditions of Legendre, Jacobi and Weierstrass, fields of extremals, Hilbert's invariant integral); ; Raleigh-Ritz method; isoperimetric problems; Lagrange, Mayer-Bolza problems. Recommended: MATH 5820.

Prerequisites: MATH 1890 with a minimum grade of D-

Term Offered: Fall

MATH 5870 Calculus Of Variations And Optimal Control Theory II

[3 credit hours]

Pontryagin's maximum principle; necessary and sufficient conditions for optimal control, controllability, time optimal control, existence of optimal controls, relationship to the calculus of variations.

Prerequisites: MATH 5860 with a minimum grade of D-

Term Offered: Spring

MATH 5880 Complex Variables

[3 credit hours]

Analytic functions; Cauchy's theorem; Taylor and Laurent series; residues; contour integrals; conformal mappings, analytic continuation and applications.

Prerequisites: MATH 2860 with a minimum grade of D-

Term Offered: Spring, Summer

MATH 5970 Industrial Math Practicum

[1 credit hour]

Students must submit for approval by their adviser a report on the solution of a practical problem involving mathematics. The problem must be drawn from a company, university department of government unit.

MATH 5980 Topics In Mathematics

[3 credit hours]

Special topics in mathematics.

Term Offered: Spring, Summer

MATH 6180 Linear And Nonlinear Programming

[3 credit hours]

Simplex algorithm, ellipsoidal algorithm, Karmarkar's method, interior point methods, elementary convex analysis, optimality conditions and duality for smooth problems, convex programming, algorithms and their convergence.

Prerequisites: MATH 5820 with a minimum grade of D-

MATH 6190 Infinite Dimensional Optimization

[3 credit hours]

Introduction to nonlinear analysis, abstract optimization problems on abstract spaces, applications to calculus of variations, optimal control theory and game theory.

MATH 6300 Algebra I

[3 credit hours]

Group actions, Sylow's theorems, permutation groups, nilpotent and solvable groups, abelian groups, rings, unique factorization domains, fields.

Prerequisites: MATH 5340 with a minimum grade of D-

Term Offered: Fall

MATH 6310 Algebra II

[3 credit hours]

Field extensions, Galois theory, modules, Noetherian and Artinian rings, tensor products, primitive rings, semisimple rings and modules, the Wedderburn-Artin theorem.

Prerequisites: MATH 6300 with a minimum grade of D-

Term Offered: Spring

MATH 6400 Topology I

[3 credit hours]

Topological spaces, continuous functions, compactness, product spaces, Tychonov's theorem, quotient spaces, local compactness, homotopy theory, the fundamental group, covering spaces.

Prerequisites: MATH 4450 with a minimum grade of D- or MATH 5450 with a minimum grade of D- or MATH 7450 with a minimum grade of D-

Term Offered: Fall

MATH 6410 Topology II

[3 credit hours]

Homology theory, excision, homological algebra, the Brouwer fixed point theorem, cohomology, differential manifolds, orientation, tangent bundles, Sard's theorem, degree theory.

Prerequisites: MATH 6400 with a minimum grade of D-

Term Offered: Spring

MATH 6440 Differential Geometry I

[3 credit hours]

Introduction to differential geometry. Topics include differentiable manifolds, vector fields, tensor bundles, the Frobenius theorem, Stokes' theorem, Lie groups.

Prerequisites: MATH 6410 with a minimum grade of D-

Term Offered: Fall

MATH 6450 Differential Geometry II

[3 credit hours]

Topics include connections on manifolds, Riemannian geometry, the Gauss-Bonnet theorem. Further topics may include: homogeneous and symmetric spaces, minimal surfaces, Morse theory, comparison theory, vector and principal bundles.

Prerequisites: MATH 6440 with a minimum grade of D-

Term Offered: Spring

MATH 6500 Ordinary Differential Equations

[3 credit hours]

Existence, uniqueness and dependence on initial conditions and parameter, nonlinear planar systems, linear systems, Floquet theory, second order equations, Sturm-Liouville theory.

Term Offered: Summer, Fall

MATH 6510 Partial Differential Equations

[3 credit hours]

First order quasi-linear systems of partial differential equations, boundary value problems for the heat and wave equation, Dirichlet problem for Laplace equation, fundamental solutions for Laplace, heat and wave equations.

Term Offered: Spring, Summer

MATH 6520 Dynamical Systems I

[3 credit hours]

Topic include the flow-box theorem, Poincare maps, attractors, w limit sets, Lyapunov stability, invariant submanifolds, Hamiltonian systems and symplectic manifolds.

Prerequisites: MATH 6500 with a minimum grade of D-

MATH 6530 Dynamical Systems II

[3 credit hours]

Topics may include local bifurcations of vector fields, global stability, ergodic theorems, integrable systems, symbolic dynamics, chaos theory.

Prerequisites: MATH 6520 with a minimum grade of D-

MATH 6600 Statistical Consulting

[1-5 credit hours]

Real data applications of various statistical methods, project design and analysis including statistical consulting experience. May be repeated for credit.

Term Offered: Spring, Fall

MATH 6610 Statistical Consulting II

[3 credit hours]

Real data applications of various statistical methods, project design and analysis including statistical consulting experience.

Term Offered: Spring

MATH 6620 Categorical Data Analysis

[3 credit hours]

Important methods and modeling techniques using generalized linear models and emphasizing loglinear and logit modeling.

Prerequisites: MATH 5680 with a minimum grade of D-

Term Offered: Spring, Fall

MATH 6630 Nonparametric Statistics

[3 credit hours]

Statistical methods based on counts and ranks; methods designed to be effective in the presence of contaminated data or error distribution misspecification.

Prerequisites: MATH 5680 with a minimum grade of C-

Term Offered: Spring, Fall

MATH 6640 Topics In Statistics

[3 credit hours]

Topics selected from an array of modern statistical methods such as survival analysis, nonlinear regression, Monte Carlo methods, etc.

Term Offered: Spring, Fall

MATH 6650 Statistical Inference

[3 credit hours]

Estimation, hypothesis testing, prediction, sufficient statistics, theory of estimation and hypothesis testing, simultaneous inference, decision theoretic models.

Prerequisites: MATH 5680 with a minimum grade of D-

Term Offered: Fall

MATH 6670 Measure Theoretic Probability

[3 credit hours]

Real analysis, probability spaces and measures, random variables and distribution functions, independence, expectation, law of large numbers, central limit theorem, zero-one laws, characteristic functions, conditional expectations given a σ -algebra, martingales.

Prerequisites: MATH 5680 with a minimum grade of D-

Term Offered: Fall

MATH 6680 Theory Of Statistics

[3 credit hours]

Exponential families, sufficiency, completeness, optimality, equivariance, efficiency. Bayesian and minimax estimation. Unbiased and invariant tests, uniformly most powerful tests. Asymptotic properties for estimation and testing. Most accurate confidence intervals.

Prerequisites: MATH 5960 with a minimum grade of D- or (MATH 6650 with a minimum grade of D- and MATH 6670 with a minimum grade of D-)

Term Offered: Spring

MATH 6690 Multivariate Statistics

[3 credit hours]

Multivariate normal sampling distributions, T tests and MANOVA, tests on covariance matrices, simultaneous inference, discriminant analysis, principal components, cluster analysis and factor analysis.

Prerequisites: MATH 5690 with a minimum grade of D- or MATH 6650 with a minimum grade of D-

Term Offered: Spring

MATH 6720 Methods Of Mathematical Physics I

[3 credit hours]

Analytic functions, residues, method of steepest descent, complex differential equations, regular singularities, integral representation, real and complex vector spaces, matrix groups, Hilbert spaces, coordinate transformations.

Term Offered: Fall

MATH 6730 Methods Of Mathematical Physics II

[3 credit hours]

Self-adjoint operators, special functions, orthogonal polynomials, partial differential equations and separation of variables, boundary value problems, Green's functions, integral equations, tensor analysis, metrics and curvature, calculus of variations, finite groups and group representations.

Prerequisites: MATH 6720 with a minimum grade of D-

Term Offered: Spring, Fall

MATH 6800 Real Analysis I

[3 credit hours]

Completeness, connectedness and compactness in metric spaces, continuity and convergence, the Stone-Weierstrass Theorem, Lebesgue measure and integration on the real line, convergence theorems, Egorov's and Lusin's theorems, derivatives, functions of bounded variation.

Prerequisites: MATH 4830 with a minimum grade of D- or MATH 5830 with a minimum grade of D-

Term Offered: Fall

MATH 6810 Real Analysis II

[3 credit hours]

The Vitali covering theorem, absolutely continuous functions, Lebesgue-Stieltjes integration, the Riesz representation theorem, Banach spaces, L_p -spaces, abstract measures, the Radon-Nikodym theorem, measures on locally compact Hausdorff spaces.

Prerequisites: MATH 6800 with a minimum grade of D-

Term Offered: Spring

MATH 6820 Functional Analysis I

[3 credit hours]

Topics include Topological vector spaces, Banach spaces, convexity, the Hahn-Banach theorem, weak and strong topologies, L_p spaces and duality.

Prerequisites: MATH 6810 with a minimum grade of D-

Term Offered: Fall

MATH 6830 Functional Analysis II

[3 credit hours]

Topics include the Mackey-Arens Theorem, Banach algebras, spectra in Banach algebras, commutative Banach algebras, unbounded operators, the spectral theorem, topics in functional analysis.

Prerequisites: MATH 6820 with a minimum grade of D-

Term Offered: Spring, Fall

MATH 6840 Complex Analysis I

[3 credit hours]

Elementary analytic functions, complex integration, the residue theorem, infinite sequences of analytic functions, Laurent expansions, entire functions.

Prerequisites: MATH 6800 with a minimum grade of D-

Term Offered: Fall

MATH 6850 Complex Analysis II

[3 credit hours]

Meromorphic functions, conformal mapping, harmonic functions and the Dirichlet problem, the Riemann mapping theorem, monodromy, algebraic functions, Riemann surfaces, elliptic functions and the modular function.

Prerequisites: MATH 6840 with a minimum grade of D-

Term Offered: Spring

MATH 6860 Measure Theoretic Probability I

[3 credit hours]

Focus on measure theory and probability. Measures and their extensions, integration, convergence theorems, product measures. Probability spaces, random variables and distribution functions, independence, expectation, law of large numbers, central limit theorem, zero-one laws, characteristic functions.

Prerequisites: MATH 5680 with a minimum grade of D-

Corequisites: MATH 6800

MATH 6870 Nonlinear Analysis I

[3 credit hours]

The instructor will select a subset among the following topics: Finite-dimensional degree theory, some applications to nonlinear equations. Preliminaries on Operator Theory and Differential Calculus in Normed Spaces; Topological Degree in Banach Spaces (Schuder fixed point theorem and Leray-Schauder theory), non-resonance and topological degree, Lazer-Leach conditions and variations, variational techniques including Ekeland principle and its applications and Mountain Pass theorem, resonance and periodic solutions, Lusternik-Schnirelmann Theory, Poincare'-Birkhoff Theorem. Bifurcation theory: Morse lemma and its applications. Rabinowitz theorem and Krasnoselski theorem and its applications. Stability of solutions and number of global solutions to a nonlinear problem.

Prerequisites: MATH 6500 with a minimum grade of D- and MATH 6510 with a minimum grade of D-

Term Offered: Fall

MATH 6880 Nonlinear Analysis II

[3 credit hours]

The instructor will select a subset among the following topics: Geometric singular perturbation theory. Further topological methods: extensions of Leray-Schauder degree and applications to partial differential equations. Framed cobordism and stable cohomotopy theorem. Applications to existence of global solutions. Monotone operators and mini-max theorem. Generalized implicit function theorems, KAM and Conjugacy problems. Critical Points Theory and Hamiltonian Systems Topological Degree methods in Nonlinear Boundary Value Problems Normal forms, center manifold reduction and bifurcations in infinite dimensional dynamical systems.

Prerequisites: MATH 6500 with a minimum grade of D- and MATH 6510 with a minimum grade of D- and MATH 6870 with a minimum grade of D-

Term Offered: Spring

MATH 6930 Colloquium

[1 credit hour]

Lectures by visiting mathematicians and staff members on areas of current interest in mathematics.

Term Offered: Spring, Fall

MATH 6940 Proseminar

[1-5 credit hours]

Problems and techniques of teaching elementary college mathematics, supervised teaching, seminar in preparation methods.

Term Offered: Spring, Fall

MATH 6960 Master Thesis

[3-6 credit hours]

MATH 6980 Topics In Mathematical Sciences

[3 credit hours]

Special topics in Mathematics or Statistics.

Term Offered: Spring, Summer, Fall

MATH 6990 Readings In Mathematics

[1-5 credit hours]

Readings in areas of Mathematics of mutual interest to the student and the professor.

Term Offered: Spring, Summer, Fall

MATH 7300 Linear Algebra I

[3 credit hours]

Theory of vector spaces and linear transformations, including such topics as matrices, determinants, inner products, eigenvalues and eigenvectors, and rational and Jordan canonical forms.

Term Offered: Fall

MATH 7310 Linear Algebra II

[3 credit hours]

Hermitian and normal operators, multilinear forms, spectral theorem and other topics.

Prerequisites: MATH 5300 with a minimum grade of D-

MATH 7330 Abstract Algebra I

[3 credit hours]

Arithmetic of the integers, unique factorization and modular arithmetic; group theory including normal subgroups, factor groups, cyclic groups, permutations, homomorphisms, the isomorphism theorems, abelian groups and p-groups.

Prerequisites: MATH 3190 with a minimum grade of D-

Term Offered: Fall

MATH 7340 Abstract Algebra II

[3 credit hours]

Ring theory including integral domains, field of quotients, homomorphisms, ideals, Euclidean domains, polynomial rings, vector spaces, roots of polynomials and field extensions.

Prerequisites: MATH 5330 with a minimum grade of D-

Term Offered: Spring

MATH 7350 Applied Linear Algebra

[3 credit hours]

Matrices, systems of equations, vector spaces, linear transformations, determinants, eigenvalues and eigenvectors, generalized inverses, rank, numerical methods and applications to various areas of science.

Prerequisites: MATH 1890 with a minimum grade of D-

Term Offered: Spring

MATH 7380 Discrete Structures And Analysis Algorithms

[3 credit hours]

Discrete mathematical structures for applications in computer science such as graph theory, combinatorics, groups theory, asymptotics, recurrence relations and analysis of algorithms.

Prerequisites: MATH 3320 with a minimum grade of D- or MATH 5330 with a minimum grade of D-

Term Offered: Fall

MATH 7450 Introduction To Topology I

[3 credit hours]

Metric spaces, topological spaces, continuous maps, bases and sub-bases, closure and interior operators, products, subspaces, sums, quotients, separation axioms, compactness and local compactness.

Prerequisites: MATH 3190 with a minimum grade of D-

Term Offered: Fall

MATH 7460 Introduction To Topology II

[3 credit hours]

Connectedness and local connectedness, convergence, metrization, function spaces. The fundamental groups and its properties, covering spaces, classical applications, e.g. Jordan Curve Theorem, Fundamental Theorem of Algebra, Brouwer's Fixed Point Theorem.

Prerequisites: MATH 5450 with a minimum grade of D-

Term Offered: Spring

MATH 7540 Classical Differential Geometry I

[3 credit hours]

Smooth curves in Euclidean space including the Frenet formulae. Immersed surfaces with the Gauss map, principal curvatures and the fundamental forms. Special surfaces including ruled surfaces and minimal surfaces. Intrinsic Geometry including the Gauss Theorem Egregium.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-

MATH 7550 Classical Differential Geometry II

[3 credit hours]

Tensors, vector fields and the Cartan approach to surface theory, Bonnet's Theorem and the construction of surfaces via solutions of the Gauss Equation. Geodesics, parallel transport and Jacobi Fields. Theorems of a global nature such as Hilbert's Theorem or the Theorem of Hopf-Rinow.

Prerequisites: MATH 5540 with a minimum grade of D-

MATH 7600 Advanced Statistical Methods I

[3 credit hours]

Basics of descriptive statistics, study designs and statistical inference. Properties of, and assumptions required for, inference for means, variances, and proportions from one and two-sample paired and unpaired studies. Introduction to ANOVA with multiple comparisons and logistic and multiple regression. Model assessment and diagnostics. Statistical software will be employed. Opportunities to apply procedures to real data. Emphasis placed on the foundations to approaches in introductory statistics.

Term Offered: Fall

MATH 7610 Advanced Statistical Methods II

[3 credit hours]

Statistical/biostatistical concepts and methods. Broad subject categories that may be included are study design, longitudinal data analysis, survival analysis, logistic regression, random and mixed effects models and Bayesian Statistics. Other topics applicable to current statistical consulting projects, or related to modern data analytics, may be introduced. Appropriate statistical software will be employed.

Prerequisites: MATH 5600 with a minimum grade of C-

Term Offered: Spring

MATH 7620 Linear Statistical Models

[3 credit hours]

Multiple regression, analysis of variance and covariance, general linear models and model building for linear models. Experimental designs include one-way, randomized block, Latin square, factorial and nested designs.

Prerequisites: MATH 6650 with a minimum grade of D-

Term Offered: Spring

MATH 7630 Theory And Methods Of Sample Surveys

[3 credit hours]

The mathematical basis to estimation in various sampling contexts, including probability proportional to size sampling, stratified sampling, two-stage cluster sampling and double sampling, is developed.

Prerequisites: MATH 5680 with a minimum grade of D-

Term Offered: Spring

MATH 7640 Statistical Computing

[3 credit hours]

Modern statistical computing, including programming tools, modern programming methodologies, design of data structures and algorithms, numerical computing and graphics. Additional topics selected from simulation studies, inversion of probability integral transforms, rejection sampling, importance sampling, Monte Carlo integration, bootstrapping and optimization.

Term Offered: Fall

MATH 7680 Introduction To Theory Of Probability

[3 credit hours]

Probability spaces, random variables, probability distributions, moments and moment generating functions, limit theorems, transformations and sampling distributions.

Prerequisites: MATH 3190 with a minimum grade of D-

Term Offered: Fall

MATH 7690 Introduction To Mathematical Statistics

[3 credit hours]

Sampling distributions, point estimation, interval estimation, hypothesis testing, regression and analysis of variance.

Prerequisites: MATH 5680 with a minimum grade of D-

Term Offered: Spring

MATH 7710 Methods Of Numerical Analysis I

[3 credit hours]

Floating point arithmetic; polynomial interpolation; numerical solution of nonlinear equations; Newton's method. Likely topics include: numerical differentiation and integration; solving systems of linear equations; Gaussian elimination; LU decomposition; Gauss-Seidel method.

Term Offered: Fall

MATH 7720 Methods Of Numerical Analysis II

[3 credit hours]

Likely topics include: Computation of eigenvalues and eigenvectors; solving systems of nonlinear equations; least squares approximations; rational approximations; cubic splines; fast Fourier transforms; numerical solutions to initial value problems; ordinary and partial differential equations.

Prerequisites: MATH 5710 with a minimum grade of D-

Term Offered: Spring

MATH 7740 Advanced Applied Mathematics I

[3 credit hours]

Series and numerical solutions to ordinary differential equations, special functions, orthogonal functions, Sturm-Liouville Problems, self-adjointness, vector analysis.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-

Term Offered: Fall

MATH 7750 Advanced Applied Mathematics II

[3 credit hours]

Continuation of vector analysis, introduction to complex analysis, partial differential equations, Fourier series and integrals.

Prerequisites: MATH 5740 with a minimum grade of D-

Term Offered: Spring

MATH 7800 Ordinary Differential Equations

[3 credit hours]

Modern theory of differential equations; transforms and matrix methods; existence theorems and series solutions; and other selected topics.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-

Term Offered: Fall

MATH 7810 Partial Differential Equations

[3 credit hours]

First and second order equations; numerical methods; separation of variables; solutions of heat and wave equations using eigenfunction techniques; and other selected topics.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-

Term Offered: Spring

MATH 7820 Introduction To Real Analysis I

[3 credit hours]

A rigorous treatment of the Calculus in one and several variables. Topics to include: the real number system; sequences and series; elementary metric space theory including compactness, connectedness and completeness; the Riemann Integral.

Prerequisites: MATH 3190 with a minimum grade of D-

Term Offered: Fall

MATH 7830 Introduction To Real Analysis II

[3 credit hours]

Differentiable functions on \mathbb{R}^n ; the Implicit and Inverse Function Theorems; sequences and series of continuous functions; Stone-Weierstrass Theorem; Arzela-Ascoli Theorem; introduction to measure theory; Lebesgue integration; the Lebesgue Dominated Convergence Theorem.

Prerequisites: MATH 5820 with a minimum grade of D-

Term Offered: Spring

MATH 7860 Calculus Of Variations And Optimal Control Theory I

[3 credit hours]

Conditions for an extreme (Euler's equations, Erdman corner conditions, conditions of Legendre, Jacobi and Weierstrass, fields of extremals, Hilbert's invariant integral); Raleigh-Ritz method; isoperimetric problems; Lagrange, Mayer-Bolza problems.

Prerequisites: MATH 5820 with a minimum grade of D-

MATH 7870 Calculus Of Variations And Optimal Control Theory II

[3 credit hours]

Pontryagin's maximum principle; necessary and sufficient conditions for optimal control, controllability, time optimal control, existence of optimal controls, relationship to the calculus of variations.

Prerequisites: MATH 5860 with a minimum grade of D-

MATH 7880 Complex Variables

[3 credit hours]

Analytic functions; Cauchy's theorem; Taylor and Laurent series; residues; contour integrals; conformal mappings, analytic continuation and applications.

Prerequisites: MATH 3860 with a minimum grade of D-

Term Offered: Spring

MATH 7980 Topics In Mathematics

[3 credit hours]

Special topics in mathematics.

MATH 8180 Linear And Nonlinear Programming

[3 credit hours]

Simplex algorithm, ellipsoidal algorithm, Karmarkar's method, interior point methods, elementary convex analysis, optimality conditions and duality for smooth problems, convex programming, algorithms and their convergence.

Prerequisites: MATH 5820 with a minimum grade of D- or MATH 7820 with a minimum grade of D-

MATH 8190 Infinite Dimensional Optimization

[3 credit hours]

Introduction to nonlinear analysis, abstract optimization problems on abstract spaces, applications to calculus of variations, optimal control theory and game theory.

Prerequisites: MATH 6150 with a minimum grade of D- or MATH 6810 with a minimum grade of D- or MATH 8150 with a minimum grade of D- or MATH 8810 with a minimum grade of D-

MATH 8300 Algebra I

[3 credit hours]

Group actions, Sylow's theorems, permutation groups, nilpotent and solvable groups, abelian groups, rings, unique factorization domains, fields.

Prerequisites: MATH 5340 with a minimum grade of D- or MATH 7340 with a minimum grade of D-

Term Offered: Fall

MATH 8310 Algebra II

[3 credit hours]

Field extensions, Galois theory, modules, Noetherian and Artinian rings, tensor products, primitive rings, semisimple rings, and modules, the Wedderburn-Artin theorem.

Prerequisites: MATH 6300 with a minimum grade of D- or MATH 8300 with a minimum grade of D-

Term Offered: Spring

MATH 8320 Ring Theory I

[3 credit hours]

Radical theory, rings of quotients, Goldie's Theorem, chain conditions, dimensions of rings, module theory, topics in commutative rings.

Prerequisites: MATH 6310 with a minimum grade of D- or MATH 8310 with a minimum grade of D-

MATH 8330 Ring Theory II

[3 credit hours]

Advanced topics in ring theory. Possible topics include group rings, enveloping algebras, almost split sequences, PI-rings, division rings, self-injective rings, and ordered rings.

Prerequisites: MATH 6310 with a minimum grade of D- or MATH 8310 with a minimum grade of D-

MATH 8340 Group Theory I

[3 credit hours]

Fundamental topics in group theory. Possible topics include free groups, presentations, free products and amalgams, permutation groups, abelian groups, nilpotent and solvable groups, subnormality, extensions, the Schur-Zassenhaus theorem, the transfer homomorphism, linear methods, local analysis.

Prerequisites: MATH 6310 with a minimum grade of D- or MATH 8310 with a minimum grade of D-

MATH 8350 Group Theory II

[3 credit hours]

Advanced topics in group theory. Possible topics include cohomology of groups, locally finite groups, character theory, modular representation theory, representation theory of symmetric and classical groups, finite simple groups, geometric group theory.

Prerequisites: MATH 6310 with a minimum grade of D- or MATH 8310 with a minimum grade of D-

MATH 8400 Topology I

[3 credit hours]

Topological spaces, continuous functions, compactness, product spaces, Tychonov's theorem, quotient spaces, local compactness, homotopy theory, the fundamental group, covering spaces.

Prerequisites: MATH 7450 with a minimum grade of D- or MATH 4450 with a minimum grade of D- or MATH 5450 with a minimum grade of D-

Term Offered: Fall

MATH 8410 Topology II

[3 credit hours]

Homology theory, excision, homological algebra, the Brouwer fixed point theorem, cohomology, differential manifolds, orientation, tangent bundles, Sard' theorem, degree theory.

Prerequisites: MATH 6400 with a minimum grade of D- or MATH 8400 with a minimum grade of D-

Term Offered: Spring

MATH 8440 Differential Geometry I

[3 credit hours]

Introduction to differential geometry. Topics include differentiable manifolds, vector fields, tensor bundles, the Frobenius theorem, Stokes' theorem, Lie groups.

Prerequisites: MATH 6410 with a minimum grade of D- or MATH 8410 with a minimum grade of D-

Term Offered: Fall

MATH 8450 Differential Geometry II

[3 credit hours]

Topics include connections on manifolds, Riemannian geometry, the Gauss-Bonnet theorem. Further topics may include: homogeneous and symmetric spaces, minimal surfaces. Morse theory, comparison theory, vector and principal bundles.

Prerequisites: MATH 6440 with a minimum grade of D- or MATH 8440 with a minimum grade of D-

Term Offered: Spring

MATH 8500 Ordinary Differential Equations

[3 credit hours]

Existence, uniqueness and dependence on initial conditions and parameter, nonlinear planar systems, linear systems, Floquet theory, second order equations, Sturm-Liouville theory.

Term Offered: Fall

MATH 8510 Partial Differential Equations

[3 credit hours]

First order quasi-linear systems of partial differential equations, boundary value problems for the heat and wave equation, Dirichlet problem for Laplace equation, fundamental solutions for Laplace, heat and wave equations.

Term Offered: Spring

MATH 8520 Dynamical Systems I

[3 credit hours]

Topic include the flow-box theorem, Poincare maps, attractors, w-limit sets, Lyapunov stability, invariant submanifolds, Hamiltonian systems and symplectic manifolds.

Prerequisites: MATH 6500 with a minimum grade of D- or MATH 8500 with a minimum grade of D-

MATH 8530 Dynamical Systems II

[3 credit hours]

Topics may include local bifurcations of vector fields, global stability, ergodic theorems, integrable systems, symbolic dynamics, chaos theory.

Prerequisites: MATH 6520 with a minimum grade of D- or MATH 8520 with a minimum grade of D-

MATH 8540 Partial Differential Equations I

[3 credit hours]

Possible topics may include: the Cauchy-Kovalevskaya Theorem, nonlinear partial differential equations of the first order, theory of Sobolev spaces, linear second order PDE's of elliptic, hyperbolic and parabolic type.

Prerequisites: MATH 6510 with a minimum grade of D- or MATH 8510 with a minimum grade of D-

Term Offered: Fall

MATH 8550 Partial Differential Equations II

[3 credit hours]

Selected topics in Partial Differential Equations of current interest emphasizing nonlinear theory. Possible topics may include: Minimal surfaces, applications of the Hopf maximum principle, free boundary value problems, harmonic maps, geometric evolution equations and the Navier-Stokes equation.

Prerequisites: MATH 6540 with a minimum grade of D- or MATH 8540 with a minimum grade of D-

Term Offered: Spring

MATH 8600 Statistical Consulting

[1-5 credit hours]

Real data applications of various statistical methods, project design and analysis including statistical consulting experience. May be repeated for credit.

Term Offered: Spring, Fall

MATH 8610 Statistical Consulting II

[2 credit hours]

Real data applications of various statistical methods, project design and analysis including statistical consulting experience.

Term Offered: Spring

MATH 8620 Categorical Data Analysis

[3 credit hours]

Important methods and modeling techniques using generalized linear models and emphasizing loglinear and logit modeling.

Prerequisites: MATH 5680 with a minimum grade of D- or MATH 7680 with a minimum grade of D-

Term Offered: Spring, Fall

MATH 8630 Nonparametric Statistics

[3 credit hours]

Statistical methods based on counts and ranks; methods designed to be effective in the presence of contaminated data or error distribution misspecification.

Prerequisites: MATH 5680 with a minimum grade of C- or MATH 7680 with a minimum grade of C-

Term Offered: Spring, Fall

MATH 8640 Topics In Statistics

[3 credit hours]

Topics selected from an array of modern statistical methods such as survival analysis, nonlinear regression, Monte Carlo methods, etc.

Term Offered: Spring, Fall

MATH 8650 Statistical Inference

[3 credit hours]

Estimation, hypothesis testing, prediction, sufficient statistics, theory of estimation and hypothesis testing, simultaneous inference, decision theoretic models.

Prerequisites: MATH 5680 with a minimum grade of D- or MATH 7680 with a minimum grade of D-

Term Offered: Fall

MATH 8670 Measure Theoretic Probability

[3 credit hours]

Real analysis, probability spaces and measures, random variables and distribution functions, independence, expectation, law of large numbers, central limit theorem, zero-one laws, characteristic functions, conditional expectations given a σ -algebra, martingales.

Prerequisites: MATH 5680 with a minimum grade of D- or MATH 7680 with a minimum grade of D-

Term Offered: Fall

MATH 8680 Theory Of Statistics

[3 credit hours]

Exponential families, sufficiency, completeness, optimality, equivariance, efficiency. Bayesian and minimax estimation. Unbiased and invariant tests, uniformly most powerful tests. Asymptotic properties for estimation and testing. Most accurate confidence intervals.

Term Offered: Spring

MATH 8690 Multivariate Statistics

[3 credit hours]

Multivariate normal sampling distributions, T tests and MANOVA, tests on covariance matrices, simultaneous inference, discriminant analysis, principal components, cluster analysis and factor analysis.

Prerequisites: MATH 5690 with a minimum grade of D- or MATH 6650 with a minimum grade of D- or MATH 8650 with a minimum grade of D-

Term Offered: Spring

MATH 8720 Methods Of Mathematical Physics I

[3 credit hours]

Analytic functions, residues, method of steepest descent, complex differential equations, regular singularities, integral representation, real and complex vector spaces, matrix groups, Hilbert spaces, coordinate transformations.

Term Offered: Fall

MATH 8730 Methods Of Mathematical Physics II

[3 credit hours]

Self-adjoint operators, special functions, orthogonal polynomials, partial differential equations and separation of variables, boundary value problems, Green's functions, integral equations, tensor analysis, metrics and curvature, calculus of variations, finite groups and group representations.

Prerequisites: MATH 6720 with a minimum grade of D- or MATH 8720 with a minimum grade of D-

MATH 8800 Real Analysis I

[3 credit hours]

Completeness, connectedness and compactness in metric spaces, continuity and convergence, Stone-Weierstrass Theorem, Lebesgue measure and integration on the real line, convergence theorems, Egorov's and Lusin's theorems, derivatives, functions of bounded variation.

Prerequisites: MATH 7830 with a minimum grade of D- or MATH 4830 with a minimum grade of D- or MATH 5830 with a minimum grade of D-

Term Offered: Fall

MATH 8810 Real Analysis II

[3 credit hours]

The Vitali covering theorem, absolutely continuous functions, Lebesgue-Stieltjes integration, the Riesz representation theorem, Banach spaces, L_p -spaces, abstract measures, the Radon-Nikodym theorem, measures on locally compact Hausdorff spaces.

Prerequisites: MATH 6800 with a minimum grade of D- or MATH 8800 with a minimum grade of D-

Term Offered: Spring

MATH 8820 Functional Analysis I

[3 credit hours]

Topics include Topological vector spaces, Banach spaces, convexity, the Hahn-Banach theorem, weak and strong topologies, L_p spaces and duality.

Prerequisites: MATH 6810 with a minimum grade of D- or MATH 8810 with a minimum grade of D-

Term Offered: Fall

MATH 8830 Functional Analysis II

[3 credit hours]

Topics include the Mackey-Arens Theorem, Banach algebras, spectra in Banach algebras, commutative Banach algebras, unbounded operators, the spectral theorem, topics in functional analysis.

Prerequisites: MATH 6820 with a minimum grade of D- or MATH 8820 with a minimum grade of D-

Term Offered: Spring, Fall

MATH 8840 Complex Analysis I

[3 credit hours]

Elementary analytic functions, complex integration, the residue theorem, infinite sequences of analytic functions, Laurent expansions, entire functions.

Prerequisites: MATH 6800 with a minimum grade of D- or MATH 8800 with a minimum grade of D-

Term Offered: Fall

MATH 8850 Complex Analysis II

[3 credit hours]

Meromorphic functions, conformal mapping, harmonic functions and the Dirichlet problem, the Riemann mapping theorem, monodromy, algebraic functions, Riemann surfaces, elliptic functions and the modular function.

Prerequisites: MATH 6840 with a minimum grade of D- or MATH 8840 with a minimum grade of D-

Term Offered: Spring

MATH 8860 Nonlinear Analysis I

[3 credit hours]

Topological Degree in Banach Spaces (Schuder fixed point theorem and Leray-Schauder theory), non-resonance and topological degree, Lazer-Leach conditions and variations, variational techniques including Ekeland principle and its applications and Mountain Pass theorem, resonance and periodic solutions, Lusternik-Schnirelmann Theory, Poincare'-Birkhoff Theorem. Bifurcation theory: Morse lemma and its applications. Rabinowitz theorem and Krasnoselski theorem and its applications. Stability of solutions and number of global solutions to a nonlinear problem.

Prerequisites: MATH 8500 with a minimum grade of D- and MATH 8510 with a minimum grade of D-

Term Offered: Fall

MATH 8870 Measure Theoretic Probability II

[3 credit hours]

Focus on stochastic processes. Conditional expectations, martingales, random walks, markov chains, ergodic theorem, brownian motion.

Prerequisites: MATH 5680 with a minimum grade of D- and MATH 6860 with a minimum grade of D- and MATH 8860 with a minimum grade of D-

Corequisites: MATH 6800

MATH 8880 Nonlinear Analysis II

[3 credit hours]

The instructor based in his/her interests and on the interests and needs of the students attending the course will select a subset among the following topics: Geometric singular perturbation theory Further topological methods: extensions of Leray-Schauder degree and applications to partial differential equations. Framed cobordism and stable cohomotopy theorem. Applications to existence of global solutions. Monotone operators and mini-max theorem. Generalized implicit function theorems, KAM and Conjugacy problems. Critical Points Theory and Hamiltonian Systems.

Prerequisites: MATH 8500 with a minimum grade of D- and MATH 8510 with a minimum grade of D- and MATH 8870 with a minimum grade of D-

Term Offered: Spring

MATH 8890 Problems In Algebra, Topology, And Analysis

[1 credit hour]

Practicum in solving problems in graduate algebra, topology and analysis. Supplements 6300-10, 6400-10 and 6800-10 and prepares students for doctoral qualifying examination.

MATH 8930 Colloquium

[1 credit hour]

Lectures by visiting mathematicians and staff members on areas of current interest in mathematics.

Term Offered: Spring, Fall

MATH 8940 Proseminar

[1-5 credit hours]

Problems and techniques of teaching elementary college mathematics, supervised teaching, seminar in preparation methods.

Term Offered: Spring, Fall

MATH 8960 Dissertation

[1-6 credit hours]

Student works toward their dissertation.

Term Offered: Spring, Summer, Fall

MATH 8980 Topics In Mathematical Sciences

[3 credit hours]

Special topics in Mathematics or Statistics.

Term Offered: Spring, Summer, Fall

MATH 8990 Readings In Mathematics

[1-5 credit hours]

Readings in areas of Mathematics of mutual interest to the student and the professor.

Term Offered: Spring, Summer, Fall

Mechanical Industrial and Manufacturing Engineering (MIME)

MIME 5060 Manufacturing Engineering

[3 credit hours]

The course provides an overview of advanced manufacturing processes, manufacturing management, nano- and bio-manufacturing processes and their applications.

Term Offered: Spring, Fall

MIME 5070 Computer-Aided Manufacturing

[3 credit hours]

The study of machining processes using numerical control machine tools and controllers. Development of programs to machine parts on mills and lathes. Conversion of CAD models to programs through software interfaces.

Term Offered: Fall

MIME 5080 Operations Research I

[3 credit hours]

This course focuses on the mathematical methods of Operations Research and their applications in engineering. Topics include the optimal solution of deterministic and stochastic mathematical models, modeling process, linear programming, the simplex method, duality theory and sensitivity analysis.

Term Offered: Spring, Fall

MIME 5100 Manufacturing Systems Simulation

[3 credit hours]

Discrete and continuous simulation models are used to study queuing networks, manufacturing and related engineering systems. Simulation languages and animation are covered. Statistical inference is used to draw conclusions and to identify the best system.

Term Offered: Spring, Fall

MIME 5230 Dynamics Of Human Movement

[3 credit hours]

The goal of this course is for students to be able to describe motions of the human body. Three-dimensional analysis and measurements of human body movements including kinematics, kinetics and energetics of human gait, anthropometry and application to bioengineering and orthopedics will be presented. Euler angles and the screw axis method will be used to describe three-dimensional motions.

Term Offered: Spring, Fall**MIME 5240 Experimental Methods in Orthopaedic Biomechanics**

[3 credit hours]

Experimental techniques used in orthopedics and in the study of the musculoskeletal system including mechanical testing, experimental and analytical methods for stress analysis, strain gages, methods used in human motion analysis to include motion capture, force plates and EMG's. Course prerequisites: For undergraduate students: (BIOE 2200 or MIME 1650) and (BIOE 3110 or CIVE 1160) For graduate students: None
Prerequisites: (BIOE 2200 with a minimum grade of D- or MIME 1650 with a minimum grade of D-) and (BIOE 3110 with a minimum grade of D- or CIVE 1160 with a minimum grade of D-)

Term Offered: Spring, Fall**MIME 5280 Cad - Finite Element Methods**

[3 credit hours]

Numerical solutions of boundary value problems, variational calculus and the principle of minimum potential energy, finite element formulation of two dimensional field and elasticity problems, axisymmetric elements, finite element programming.

Term Offered: Summer, Fall**MIME 5300 Advanced Mechanics Of Materials**

[3 credit hours]

Theory of elasticity, plane stress and plane strain problems, yield criteria and failure theories, bending of beams, energy methods, curved flexural members, unsymmetric bending, torsion, shear center and axisymmetrically loaded members.

Term Offered: Fall**MIME 5310 Mechanics Of Composite Materials**

[3 credit hours]

Review of elasticity of anisotropic solids, determination of mechanical properties of fiber-reinforced lamina, analysis and performance of laminated composites.

Term Offered: Spring**MIME 5320 Fatigue Of Materials & Structures**

[3 credit hours]

Fatigue design methods; fatigue mechanisms; cyclic deformation behavior and material cyclic properties; stress-based and fracture mechanics-based methodologies to fatigue life prediction of smooth and notched members subjected to constant or variable amplitude loadings.

Term Offered: Spring**MIME 5350 Advanced Ceramics**

[3 credit hours]

This course provides greater knowledge on the atomic bonding, crystal structure, crystal imperfections, phases and interfaces, microstructures, phase diagrams, phase transformation, transport and diffusion, metal deformation, fracture of materials, deterioration of materials, electronic and physical properties of ceramics.

Prerequisites: MIME 1650 with a minimum grade of C- and PHYS 2130 with a minimum grade of C-

Term Offered: Spring, Fall**MIME 5370 Advanced Materials for Automotive Structures**

[3 credit hours]

An in#depth study of the broad range of engineering materials used in the construction of motor vehicles. Inter#relations between materials microstructure, components manufacturing process and components service behavior.

Prerequisites: (MIME 1650 with a minimum grade of C- and PHYS 2130 with a minimum grade of C-)

Term Offered: Spring, Fall**MIME 5380 Engineering Polymers and Rubbers**

[3 credit hours]

Polymers and rubber are introduced through lecture and lab components at three levels- 1) synthesis and characterization, 2) thermal, molecular and mechanical properties, and 3) design considerations for engineering applications.

Prerequisites: (MIME 1650 with a minimum grade of C- and PHYS 2130 with a minimum grade of C-)

Term Offered: Spring, Fall**MIME 5390 Failure Analysis of Materials**

[3 credit hours]

The failure analysis is a procedure to determine the physical cause of the failure of an element, component or industrial equipment. The course will be focused on material related and will present an introduction to the principles of failure analysis and the fundamental aspects to conduct a failure analysis investigation. A key component of the course is the discussion of real cases of failures (case studies), i.e. failures in mining machinery, chemical processing equipment, energy production, systems, aircraft and petrochemical industry components. This course provides the connection between mechanisms that are responsible for material failures and will address the characterization techniques used in failure analysis. Fundamental failure mechanisms in various materials applications including fracture of metals and alloys, failure in electronic devices, and environmental factor induced failures will be covered. Each categorized phenomenon will be approached by historical events to reveal the application and connection between the mechanism and the incidents.

Prerequisites: (MIME 1650 with a minimum grade of C- and PHYS 2130 with a minimum grade of C-)

Term Offered: Spring, Fall

MIME 5410 Alternative Energy

[3 credit hours]

This course focuses on the technical aspects of sustainable energy technologies, such as wind, solar, biomass, ocean, eaves/tides, geothermal, and hydropower; it also covers issues and applications related to storage, transportation, distribution, industrial usage, and buildings. The course investigates the progress, challenges, and opportunities of each technology to be both technically feasible and economically viable.

Term Offered: Spring, Fall

MIME 5420 Modeling and Control of Engineering Systems

[3 credit hours]

In this course students study physical modeling and feedback principles for control of mechanical and electrical systems. Transient response, root locus and frequency response principles are applied to the control of basic mechanical and electrical systems. PID control laws are emphasized.

Term Offered: Spring, Fall

MIME 5430 Advanced Automotive Control Systems

[3 credit hours]

This course covers the major aspects of automotive control, including engine, driveline, and complete vehicle control. This includes applications such as fuel and ignition control, ABS systems, gear-shifting, and vehicle velocity estimation.

Term Offered: Spring, Summer, Fall

MIME 5440 Advanced Mechatronics

[3 credit hours]

This course will give students hands-on experience with mechatronic systems and components. The mechatronics lab (NE-1063) will be used to demonstrate several mechatronics systems including inverted pendulums, suites of sensors and motors, and other more complex systems. A major part of the course will be a semester-long project where the students conceive, design, and build a mechatronic device. The components for this device, namely a Raspberry Pi and a variety of sensors and actuators, will be directly funded by the course fee.

Term Offered: Spring, Fall

MIME 5450 Advanced Automation Design

[3 credit hours]

This course will introduce the range of common components used in automation, including actuators, sensors, motors, linear guides, energy chain, industrial robots and light curtains. Students will practice (with feedback) walking through the design process in specifying, sizing, laying out and integrating these components. The course will use some elements of CAD, where CAD experience would be helpful, but this would also be a good opportunity to quickly build competence with CAD.

Term Offered: Spring, Fall

MIME 5460 Advanced MATLAB for Engineers

[3 credit hours]

MATLAB is a useful 'tool' for each engineer to have in their 'toolkit'. This course will review the basics of using MATLAB, identify best-practices (applicable to other programming languages as well), and then move on to examples of more-advanced functionality, e.g. image processing, Simulink control of mechatronic systems, numerically solving differential equations, GPU computation, and optimization. Programming experience would be helpful, but this would also be a good opportunity to rapidly grow programming skills with an easy-to-learn language. A major component of the course is a semester-long project where the student can choose a topic that is most relevant to their research or professional interests, or simply a new area that they're curious about, e.g. mechatronics and programming embedded systems.

Term Offered: Spring, Summer, Fall

MIME 5510 Turbomachinery

[3 credit hours]

Theory of energy transfer between fluid and rotor in turbomachines. Design of turbomachine components, axial flow compressors and fans, centrifugal compressors and pumps, axial flow turbines. Design theory and principles, performance analysis, and computational methods

Term Offered: Spring, Summer, Fall

MIME 5520 Heating, Ventilating & Air Conditioning

[3 credit hours]

Control of the thermal environment within enclosed spaces including psychrometric properties of air heating and cooling, loads and factors affecting human comfort. Analysis of basic heating and refrigeration systems, heat pumps, heaters, utilization of solar energy, humidifiers, energy conservation and controls for systems.

Term Offered: Fall

MIME 5530 Internal Combustion Engines

[3 credit hours]

Study of Otto, Diesel, and Miller Cycles, performance characteristics, and construction details of internal combustion engines. Analysis of problems associated with air flow, fuel injection, combustion, cooling, supercharging, friction, lubrication, emissions, testing, and control.

Term Offered: Spring

MIME 5540 Jet Propulsion

[3 credit hours]

Aerothermodynamic analysis of jet propulsion systems and components: diffuser, compressor, combustor, turbine and nozzle. Investigation of characteristics of ramjets, turbojets, turbofans and turboprops. Design theory and principles, performance analysis, and computational methods

Term Offered: Summer, Fall

MIME 5550 Aerodynamics

[3 credit hours]

Fundamentals of aerodynamics, potential flow theory, aerodynamic forces and moments, introduction to numerical analysis, application to external and internal flows, theory of lift for infinite and finite wings, induced drag.

Term Offered: Spring, Fall

MIME 5560 Gas Dynamics

[3 credit hours]

Analysis of compressible flow phenomena including shock and detonation waves. Topics include wave propagation, isentropic flow, normal shock waves, oblique shock waves, Prandtl-Meyer flow, and analysis and application to supersonic airfoil theory, inlet, and nozzle.

Term Offered: Spring**MIME 5690 Reliability**

[3 credit hours]

Reliability of components and multicomponent systems. Static and dynamic reliability models for both independent and dependent failures. Effects of redundancy. Reliability testing consideration.

Term Offered: Spring, Fall**MIME 5800 Design For Manufacturability**

[3 credit hours]

The course is an introduction to modern manufacturing methodologies used in the fabrication and analysis of new and existing product designs with three areas of emphasis: manufacturing processes, materials, and product development. The course exposes the students to the product development methods and the relationship of design to production processes, product material, material handling, quality costs, and CAD/CAM are presented. Emphasis is primarily on assembled products. Cost estimation software and other design analysis tools are employed. Lean manufacturing and Six Sigma concepts in the design context are also introduced.

Prerequisites: MIME 2650 with a minimum grade of D-**Term Offered:** Spring, Fall**MIME 5820 Sustainability Analysis and Design**

[3 credit hours]

The course is intended to introduce students to sustainability analysis and design in manufacturing and service settings as related to mechanical and industrial engineering. It will cover solid waste minimization for manufacturers, life cycle analysis, and environmentally conscious design.

Term Offered: Spring, Fall**MIME 5830 Additive Manufacturing**

[3 credit hours]

Additive manufacturing (AM) is a method of manufacturing that has been growing rapidly. In this course the students will learn about various AM technologies. They will also work with the required design software packages to create 3D models and 3D-print objects from the designed models.

Prerequisites: MIME 2650 (may be taken concurrently) with a minimum grade of D-**Term Offered:** Spring, Fall**MIME 5980 Special Topics**

[1-6 credit hours]

A special topic at the graduate level in Mechanical, Industrial or Manufacturing Engineering to be offered as a course during a term by a faculty member.

Term Offered: Spring, Summer, Fall**MIME 6000 Advanced Engineering Mathematics I**

[3 credit hours]

An advanced course in mathematical analysis for engineers. Topics include matrix methods, eigenvalues and eigenvectors, systems of equations, series representations including FFT, ordinary differential equations and Bessel functions. This course will make use of computer-aided-mathematics techniques and include engineering applications.

Term Offered: Fall**MIME 6100 Advanced Engineering Mathematics II**

[3 credit hours]

Partial differential equations for engineering applications including elliptic, parabolic, hyperbolic differential and non-linear systems of equations. Solution procedures include separation of variables, Laplace transform methods, solutions using complex analysis including conformal mapping and numerical methods.

Prerequisites: MIME 6000 with a minimum grade of D-**Term Offered:** Spring**MIME 6200 Advanced Dynamics**

[3 credit hours]

Study of dynamics of a system of particles and rigid bodies using Newtonian and Lagrangian Mechanics including multi-body systems. Principles of nonlinear system dynamics and stability.

Term Offered: Spring**MIME 6210 Advanced Mechanical Vibrations**

[3 credit hours]

Advanced concepts in normal mode theory for discrete systems and vibration of continuous systems such as bars, beams and plates.

Term Offered: Spring**MIME 6300 Continuum Mechanics**

[3 credit hours]

A unified approach to the study of the mechanics of continuous media; analysis of tensors; kinematics of material media; analysis of deformation and stress; the mathematical statement of the laws of conservation of mass, momentum and energy; formulation of the mechanical constitutive equations for various classes of solids and fluids.

Term Offered: Spring, Fall**MIME 6350 Elasticity**

[3 credit hours]

Review of tensor analysis, analysis of stress and strain, three dimensional equations of elasticity, plane problems in rectangular Cartesian and polar coordinates.

Term Offered: Fall**MIME 6360 Plasticity**

[3 credit hours]

Review of elastic stress-strain relations, analysis of strain rate and concept of stress rate, criteria of yielding and rules of plastic flow, elastoplastic bending and torsion, theory of slip line fields, mechanics of metal forming processes.

Term Offered: Spring

MIME 6380 Fracture Mechanics

[3 credit hours]

Principles of fracture mechanics and its applications to the prevention of fractures in components and structures, linear elastic and elastic-plastic fracture mechanics, fracture mechanisms, fracture toughness, applications to fatigue crack propagation.

Term Offered: Fall**MIME 6440 Computational Fluid Dynamics I**

[3 credit hours]

Properties of various partial differential equations. Basics of finite difference methods. Governing equations of fluid mechanics and heat transfer. Numerical solution of inviscid flow equations. Methods for solving Euler equations. Treatment of shock waves. Applications to simple compressible flows. Numerical methods for boundary-layer type equations.

Term Offered: Fall**MIME 6450 Experimental Fluid Mechanics**

[3 credit hours]

Digital data acquisition and analysis; limitations and interpretation of physical measurements; sources of errors and difficulties in experimental technique; advanced experimental methods for static and dynamic measurements in thermal systems and fluid flow.

Term Offered: Spring**MIME 6460 Intermediate Fluid Mechanics and Heat Transfer**

[3 credit hours]

Development of the Navier-Stokes and the convective equations. Analysis of boundary-layer flows including similarity solutions, potential flows as well as convective heat transfer topics. This course is intended to provide a solid theoretical foundation in fluid mechanics and convective heat transfer for graduate students, preparing them for more specialized courses in Heat Transfer and Fluid Mechanics.

Term Offered: Fall**MIME 6470 Advanced Computational Fluid Dynamics**

[3 credit hours]

This course presents numerical methods to solve hyperbolic equations for compressible fluids. The eigensystem and characteristics of the system of equations representing one-dimensional Euler flows are detailed in terms of conservative and primitive variables. The focus of this course is to introduce concepts of finite-volume upwinding schemes and numerical flux formulations. Numerical solution methods using both explicit and implicit schemes will be introduced in the class and be selectively exercised in the CFD coding project.

Prerequisites: MIME 3430 with a minimum grade of D- and MIME 3400 with a minimum grade of D-

Term Offered: Spring, Fall**MIME 6540 Computational Fluid Dynamics II**

[3 credit hours]

Finite difference procedures applied to the solution of reduced forms of the Navier-Stokes equations. Numerical solution of compressible and incompressible forms of the Navier-Stokes equations for laminar and turbulent flows. Fundamental turbulence models. Solution enhancement methods including multi-grid schemes and the use of preconditioning. Grid generation procedures using algebraic and differential equation methods. Structured versus unstructured grid methods. Grid adaptation procedures. Computer program applications.

Prerequisites: MIME 6440 with a minimum grade of D-

Term Offered: Spring**MIME 6570 Advanced Fluid Mechanics**

[3 credit hours]

Review of general governing equations, stability of laminar flows, transition to turbulence, incompressible turbulent flows, compressible boundary layer flow, and a selected topic chosen with the class.

Prerequisites: MIME 6460 with a minimum grade of D-

Term Offered: Spring**MIME 6580 Advanced Heat Transfer**

[3 credit hours]

Analytical and numerical methods for steady and transient heat conduction, convective heat transfer in boundary layers, models for external and internal forced flows, free flows, influence of turbulence, and phase change.

Prerequisites: MIME 6460 with a minimum grade of D-

Term Offered: Spring**MIME 6590 Advanced Gas Dynamics**

[3 credit hours]

One-dimensional steady flows of perfect gases: fundamental laws and basic equations for subsonic, transonic, and supersonic processes. Multidimensional flows: exact solutions; linearized flows; characteristics; supersonic nozzle design. Unsteady one-dimensional flows with discontinuities. Measurements in compressible flows. A selected topics in viscous, heat conducting compressible flows and boundary layers.

Prerequisites: MIME 4560 with a minimum grade of D-

Term Offered: Spring**MIME 6650 Advanced Material Science and Engineering**

[3 credit hours]

The course provides an overview of structure, properties, design considerations, processing and engineering application of engineering materials. Hard and Soft materials are introduced through lecture and demonstrations at three levels- 1) synthesis and characterization, 2) thermal, molecular and mechanical properties, and 3) design considerations for engineering applications.

Term Offered: Fall**MIME 6720 Design of Experiments**

[3 credit hours]

Design and analysis of experiments including analysis of variance and regression analysis. Factorial, blocked and nested models are considered together with appropriate estimation and post ANOVA tests.

Term Offered: Fall

MIME 6800 Advanced Manufacturing Systems Engineering

[3 credit hours]

The course is an advanced-level course focusing on advanced studies of traditional manufacturing processes and advanced manufacturing systems with emphasis on manufacturing engineering processes and equipment, machine tools, process planning, design and operation of manufacturing systems.

Term Offered: Spring, Fall**MIME 6810 Assembly And Joining Processes**

[3 credit hours]

This course is comprised of two parts: joining processes and assembly systems. Commonly used joining methods, such as welding, mechanical fastening and adhesion are discussed. General principles of assembly are presented with extensive use of automobile assembly as an example.

Term Offered: Spring**MIME 6900 Independent Research**

[1-16 credit hours]

Research credit hours toward the Master of Science degree in Mechanical, Industrial and Manufacturing Engineering Department. Students are to use the section number of their thesis/dissertation adviser.

Term Offered: Spring, Summer, Fall**MIME 6910 Engineering Analysis of Smart Material Systems**

[3 credit hours]

In this course the students will study the fundamental concepts behind different types of active materials. The course emphasizes current research topics and engineering applications of active materials.

MIME 6920 Special Projects

[1-6 credit hours]

A special project by the student to investigate or solve an acceptable problem in industrial or mechanical engineering. This course is primarily intended for graduate students interested in mechanical, industrial or manufacturing engineering.

Term Offered: Spring, Summer, Fall**MIME 6930 Graduate Seminar**

[0 credit hours]

This is a seminar for graduate students in Mechanical, Industrial and Manufacturing Engineering. Topics include orientation to the graduate program and special topics by speakers from industry and other universities. Credit does not apply toward a graduate degree.

Term Offered: Spring, Fall**MIME 6960 Graduate Research and Thesis**

[1-9 credit hours]

Masters thesis research.

Term Offered: Spring, Summer, Fall**MIME 6970 Graduate Engineering Internship**

[1 credit hour]

Faculty advisor approved industry, government, or agency internship to provide an experiential learning component to the Master's/Doctoral degree program.

Prerequisites: GNEN 5000 with a minimum grade of S**Term Offered:** Spring, Summer, Fall**MIME 6980 Special Topics**

[1-6 credit hours]

A special topic at the graduate level in Mechanical, Industrial or Manufacturing Engineering to be offered as a course during a term by a faculty member.

Term Offered: Spring, Summer, Fall**MIME 6990 Independent Study**

[1-6 credit hours]

An independent study by the student to investigate or solve an acceptable problem in industrial or mechanical engineering. This course is primarily intended for graduate students in mechanical, industrial or manufacturing engineering.

Term Offered: Fall**MIME 7550 Aerodynamics**

[3 credit hours]

MIME 7690 Reliability

[3 credit hours]

MIME 8000 Advanced Engineering Mathematics I

[3 credit hours]

An advanced course in mathematical analysis for engineers. Topics include matrix methods, eigenvalues and eigenvectors, systems of equations, series representations including FFT, ordinary differential equations and Bessel functions. This course will make use of computer-aided-mathematics techniques and include engineering applications.

Term Offered: Fall**MIME 8100 Advanced Engineering Mathematics II**

[3 credit hours]

Partial differential equations for engineering applications including elliptic, parabolic, hyperbolic differential and non-linear systems of equations. Solution procedures include separation of variables, Laplace transform methods, solutions using complex analysis including conformal mapping and numerical methods.

Prerequisites: MIME 8000 with a minimum grade of D-**Term Offered:** Spring**MIME 8120 Advanced Measurement Systems**

[3 credit hours]

Sensor selection, data acquisition system selection, evaluation of system response, digital sampling theory, statistical data analysis, space-time correlations, spectral analysis, analog and digital signal conditioning, and static and dynamic measurements.

Term Offered: Fall**MIME 8200 Advanced Dynamics**

[3 credit hours]

Study of dynamics of a system of particles and rigid bodies using Newtonian and Lagrangian Mechanics including multi-body systems. Principles of nonlinear system dynamics and stability.

Term Offered: Spring**MIME 8210 Advanced Mechanical Vibrations**

[3 credit hours]

Advanced concepts in normal mode theory for discrete systems and vibration of continuous systems such as bars, beams and plates.

Term Offered: Spring

MIME 8300 Continuum Mechanics

[3 credit hours]

A unified approach to the study of the mechanics of continuous media; analysis of tensors; kinematics of material media; analysis of deformation and stress; the mathematical statement of the laws of conservation of mass, momentum and energy; formulation of the mechanical constitutive equations for various classes of solids and fluids.

Term Offered: Spring, Fall

MIME 8350 Elasticity

[3 credit hours]

Review of tensor analysis, analysis of stress and strain, three dimensional equations of elasticity, plane problems in rectangular Cartesian and polar coordinates.

Term Offered: Fall

MIME 8360 Plasticity

[3 credit hours]

Review of elastic stress-strain relations, analysis of strain rate and concept of stress rate, criteria of yielding and rules of plastic flow, elastoplastic bending and torsion, theory of slip line fields, mechanics of metal forming processes.

Term Offered: Spring

MIME 8380 Fracture Mechanics

[3 credit hours]

Principles of fracture mechanics and its applications to the prevention of fractures in components and structures, linear elastic and elastic-plastic fracture mechanics, fracture mechanisms, fracture toughness, applications to fatigue crack propagation.

Term Offered: Fall

MIME 8440 Computational Fluid Dynamics I

[3 credit hours]

Properties of various partial differential equations. Basics of finite difference methods. Governing equations of fluid mechanics and heat transfer. Numerical solution of inviscid flow equations. Methods for solving Euler equations. Treatment of shock waves. Applications to simple compressible flows. Numerical methods for boundary-layer type equations.

Term Offered: Fall

MIME 8450 Experimental Fluid Mechanics

[3 credit hours]

Digital data acquisition and analysis; limitations and interpretation of physical measurements; sources of errors and difficulties in experimental technique; advanced experimental methods for static and dynamic measurements in thermal systems and fluid flow.

Term Offered: Spring

MIME 8460 Intermediate Fluid Mechanics and Heat Transfer

[3 credit hours]

Development of the Navier-Stokes and the convective equations. Analysis of boundary-layer flows including similarity solutions, potential flows as well as convective heat transfer topics. This course is intended to provide a solid theoretical foundation in fluid mechanics and convective heat transfer for graduate students, preparing them for more specialized courses in Heat Transfer and Fluid Mechanics.

Term Offered: Fall

MIME 8470 Advanced Computational Fluid Dynamics

[3 credit hours]

This course presents numerical methods to solve hyperbolic equations for compressible fluids. The eigensystem and characteristics of the system of equations representing one-dimensional Euler flows are detailed in terms of conservative and primitive variables. The focus of this course is to introduce concepts of finite-volume upwinding schemes and numerical flux formulations. Numerical solution methods using both explicit and implicit schemes will be introduced in the class and be selectively exercised in the CFD coding project.

Prerequisites: MIME 3430 with a minimum grade of D- and MIME 3400 with a minimum grade of D-

Term Offered: Spring, Fall

MIME 8540 Computational Fluid Dynamics II

[3 credit hours]

Finite difference procedures applied to the solution of reduced forms of the Navier-Stokes equations. Numerical solution of compressible and incompressible forms of the Navier-Stokes equations for laminar and turbulent flows. Fundamental turbulence models. Solution enhancement methods including multi-grid schemes and the use of preconditioning. Grid generation procedures using algebraic and differential equation methods. Structured versus unstructured grid methods. Grid adaptation procedures. Computer program applications.

Prerequisites: MIME 8440 with a minimum grade of D-

Term Offered: Spring

MIME 8570 Advanced Fluid Mechanics

[3 credit hours]

Review of general governing equations, stability of laminar flows, transition to turbulence, incompressible turbulent flows, compressible boundary layer flow, and a selected topic chosen with the class.

Prerequisites: MIME 8460 with a minimum grade of D-

Term Offered: Spring

MIME 8580 Advanced Heat Transfer

[3 credit hours]

Analytical and numerical methods for steady and transient heat conduction, convective heat transfer in boundary layers, models for external and internal forced flows, free flows, influence of turbulence, and phase change.

Prerequisites: MIME 8460 with a minimum grade of D-

Term Offered: Spring

MIME 8590 Advanced Gas Dynamics

[3 credit hours]

One-dimensional steady flows of perfect gases: fundamental laws and basic equations for subsonic, transonic, and supersonic processes. Multidimensional flows: exact solutions; linearized flows; characteristics; supersonic nozzle design. Unsteady one-dimensional flows with discontinuities. Measurements in compressible flows. A selected topics in viscous, heat conducting compressible flows and boundary layers.

Prerequisites: MIME 4560 with a minimum grade of D-

Term Offered: Spring

MIME 8650 Advanced Material Science and Engineering

[3 credit hours]

The course provides an overview of structure, properties, design considerations, processing and engineering application of engineering materials. Hard and Soft materials are introduced through lecture and demonstrations at three levels- 1) synthesis and characterization, 2) thermal, molecular and mechanical properties, and 3) design considerations for engineering applications.

Term Offered: Fall**MIME 8720 Design of Experiments**

[3 credit hours]

Design and analysis of experiments including analysis of variance and regression analysis. Factorial, blocked and nested models are considered together with appropriate estimation and post ANOVA tests.

Term Offered: Fall**MIME 8800 Advanced Manufacturing Systems Engineering**

[3 credit hours]

Advanced studies of traditional manufacturing processes and advanced manufacturing systems with emphasis on manufacturing engineering processes and equipment, machine tools, process planning, design and operation of manufacturing systems.

MIME 8810 Assembly And Joining Processes

[3 credit hours]

This course is comprised of two parts: joining processes and assembly systems. Commonly used joining methods, such as welding, mechanical fastening and adhesion are discussed. General principles of assembly are presented with extensive use of automobile assembly as an example.

Term Offered: Spring**MIME 8900 Independent Research**

[1-16 credit hours]

Research credit hours toward the doctoral degree for students in the Mechanical, Industrial and Manufacturing Engineering Department. Students are to use the section number of their dissertation adviser.

Term Offered: Spring, Summer, Fall**MIME 8910 Engineering Analysis of Smart Material Systems**

[3 credit hours]

In this course the students will study the fundamental concepts behind different types of active materials. The course emphasizes current research topics and engineering applications of active materials.

MIME 8920 Special Projects

[1-6 credit hours]

A special project by the student to investigate or solve an acceptable problem in industrial or mechanical engineering. This course is primarily intended for graduate students interested in mechanical, industrial or manufacturing engineering.

Term Offered: Spring, Summer, Fall**MIME 8930 Graduate Seminar**

[0 credit hours]

This is a seminar for graduate students in Mechanical, Industrial and Manufacturing Engineering. Topics include orientation to the graduate program and special topics by speakers from industry and other universities. Credit does not apply toward a graduate degree.

Term Offered: Spring, Fall**MIME 8960 Dissertation**

[1-9 credit hours]

Doctoral dissertation research credit hours for students in the Mechanical, Industrial and Manufacturing Engineering Department. Students are to use the section number of their dissertation adviser.

Term Offered: Spring, Summer, Fall**MIME 8970 Graduate Engineering Internship**

[1 credit hour]

Faculty advisor approved industry, government, or agency internship to provide an experiential learning component to the Master's/Doctoral degree program.

Prerequisites: GNEN 5000 with a minimum grade of S**Term Offered:** Spring, Summer, Fall**MIME 8980 Special Topics**

[1-6 credit hours]

A special topic at the graduate level in Mechanical, Industrial or Manufacturing Engineering to be offered as a course during a term by a faculty member.

Term Offered: Spring, Summer, Fall**MIME 8990 Independent Study**

[1-6 credit hours]

An independent study by the student to investigate or solve an acceptable problem in industrial or mechanical engineering. This course is primarily intended for graduate students in mechanical, industrial or manufacturing engineering.

Term Offered: Summer, Fall

Medical Microbiology and Immunology (MMIM)

MMIM 6020 Advanced Immunology

[1 credit hour]

Student led discussion of recent literature supporting key concepts in the human immune response. Discussions will focus on how current research impacts our understanding of specific responses.

MMIM 6030 Current Topics in MMI

[1 credit hour]

This course includes attendance at biweekly seminars given by invited speakers and, on an alternating biweekly basis, the presentation of papers related to the seminar topics. May be repeated for credit.

Term Offered: Spring, Fall**MMIM 6040 Advanced Microbiology**

[1 credit hour]

Student led discussion of recent literature supporting key concepts in the microbiology field, with an emphasis on bacteria and viruses. Discussions will focus on how current research impacts our understanding of specific pathogens.

MMIM 6890 Research in MMI

[1-9 credit hours]

Intensive study in field of interest, including experimental work before the qualifying exam. May be repeated for credit.

MMIM 6990 Thesis Research in MMI

[1-9 credit hours]

Intensive study in field of interest, including experimental work after master's student passes the qualifying exam. May be repeated for credit.

MMIM 8020 Advanced Immunology

[1 credit hour]

Student led discussion of recent literature supporting key concepts in the human immune response. Discussions will focus on how current research impacts our understanding of specific responses.

MMIM 8030 Current Topics in MMI

[1 credit hour]

This course includes attendance at biweekly seminars given by invited speakers and, on an alternating biweekly basis, the presentation of papers related to the seminar topics. May be repeated for credit.

Term Offered: Spring, Fall

MMIM 8040 Advanced Microbiology

[1 credit hour]

Student led discussion of recent literature supporting key concepts in the microbiology field, with an emphasis on bacteria and viruses. Discussions will focus on how current research impacts our understanding of specific pathogens.

MMIM 8890 Research in MMI

[1-9 credit hours]

Intensive study in field of interest, including experimental work before the qualifying exam. May be repeated for credit.

MMIM 9990 Dissertation Research in MMI

[1-9 credit hours]

Intensive study in field of interest, including experimental work after Ph. D. student passes the qualifying exam. May be repeated for credit.

Medical Physics (MPHY)

MPHY 6010 Survey of Diagnostic Medical Imaging I

[3 credit hours]

This course provides a survey of diagnostic imaging modalities including the physical principles and instrumentation of diagnostic imaging equipment. Radiographic and fluoroscopic imaging systems, x-ray computed tomography, Ultrasound, MRI, and basics of Nuclear Medicine will be covered. The course builds upon basic reviews of atomic and nuclear properties, production of x-rays, and interaction or radiation with matter.

Term Offered: Fall

MPHY 6020 Survey of Diagnostic Medical Imaging II

[3 credit hours]

This course builds on the materials taught in MPHY 6010/8010, and discusses advanced concepts in medical imaging including functioning MRI, SPECT, and PET imaging. Details of radioactivity and nuclear transformation, radionuclide production and radiopharmaceutics, radiation detection and measurement and scintillation camera will be covered. Advanced discussions on CT and US will also be presented.

Term Offered: Spring

MPHY 6040 Diagnostic Radiological Physic

[0-5 credit hours]

This course considers the physical principles and instrumentation of diagnostic image formation including radiography, fluoroscopy, computed tomography, ultrasound, nuclear medicine and magnetic resonance imaging.

Term Offered: Spring, Fall

MPHY 6060 Nuclear Medicine

[3 credit hours]

Course covers the physical aspects of diagnostic and therapeutic applications of radionuclides. This includes radiation detectors and imaging systems, emission tomography, counting statistics, equipment testing, radiopharmaceuticals and internal radiation dosimetry.

Term Offered: Summer, Fall

MPHY 6100 Clinical Imaging Review

[0-4 credit hours]

Review of the clinical aspect of diagnostic imaging of clinical modalities and anatomy as approved by instructor. Review typically will include reading, discussion, and clinical image review covering radiological anatomy, physiology, disease states, and considerations for diagnostic interpretation of images. May be repeated for credit.

Term Offered: Summer

MPHY 6110 Survey Clinical Radi Therapy

[2 credit hours]

A series of lectures on various topics in radiation therapy give an overview of radiation therapy in the clinical care of patients and familiarize students with a variety of options for treatment of cancer patients.

Term Offered: Fall

MPHY 6120 Radiation Dosimetry I

[3 credit hours]

Series of lectures covering basic concepts of radiation physics, interactions of ionizing radiation physics, interactions of ionizing radiation with matter, and fundamentals of radiation dosimetry techniques and instrumentation. An overview of principles of radiation therapy, radiation protection, nuclear medicine, and diagnostic radiology is given.

Term Offered: Fall

MPHY 6130 Radiation Dosimetry II

[3 credit hours]

Series of lectures covering interactions of ionizing radiation with matter and radiation dosimetry physics fundamentals in-depth. Cavity theories, integrating and pulse-mode dosimeters, dosimetry and calibration of photon and electron beams, and neutron dosimetry are considered in details.

Term Offered: Spring

MPHY 6160 Radiation Biology

[3 credit hours]

A series of introductory lectures on radiation biology with emphasis on the effects of radiation on cells and cellular components, tissues, and organisms. Dose-response relationships, dose-effect modifiers, and considerations applicable to radiation therapy treatments are among covered topics.

Term Offered: Spring

MPHY 6180 Physics of Radiation Therapy

[3 credit hours]

Basic radiation physics and physical aspects of treatment planning, using photon and electron beams as well as brachytherapy sources will be taught.

Term Offered: Spring, Fall

MPHY 6190 Brachytherapy

[3 credit hours]

Fundamental information about the physical characteristics of the sources used in brachytherapy, the methods used for implant planning and evaluation of plans.

Term Offered: Summer**MPHY 6200 Radiation Protection and Regulation**

[3 credit hours]

Course considers the hazards associated with radioactivity and electromagnetic radiation, including types and sources of radiation, radiation measurement and units, dosimetry, radiation protection practices required by governmental regulation and medical facility accrediting bodies.

Term Offered: Summer**MPHY 6240 Physics of Medicine and Biology**

[3 credit hours]

Overview of physics as applied to physiological and biological systems, including body mechanics, osmosis, respiratory and cardiovascular mechanisms, electric signals, speech, hearing, and sight.

Term Offered: Spring**MPHY 6260 Computer Radiation Therapy**

[2 credit hours]

Computer fundamentals and problem solving through programming. Typical problems include PDD, TAR, TMR, MU calculations, scatter summation, TMR for arc and dose distributions.

MPHY 6280 Electronics for Medical Physicists

[2 credit hours]

Basics of electronics circuit design to perform specific tasks as it relates to medical physics applications.

MPHY 6300 Radiation Detection/Measurement

[3 credit hours]

Introduces the student to the various equipment and methods used in radiation detection and measurement. Introduces advanced concepts in error analysis, energy spectra unfolding, fit results with function, etc. The lab portion of this course, PHYS6180, is taught through the University of Toledo.

Term Offered: Spring**MPHY 6310 Anatomy/Physiology**

[4 credit hours]

The course will cover an overview of physiology at a cellular, and organ system levels. This will include normal function of human body and some clinical manifestations of human diseases. There will also be some introduction to basic skeletal system.

Term Offered: Fall**MPHY 6320 Practical Measurements in Radiation**

[2 credit hours]

Basic practical considerations in measurements of photon and electron beam parameters of the linear accelerator.

Term Offered: Summer**MPHY 6400 Intro to LINAC in Radiation Therapy**

[3 credit hours]

The electron linear accelerator will be described in theory and operation as it relates to medical physics and cancer patients. The physics aspect of particle acceleration and x-ray and electron generation using these units as well as dose delivery to the patient is considered.

MPHY 6500 Medical Physics Seminar

[1 credit hour]

Recent developments, special topics, critical analysis of recent publications, and literature reviews in specific areas of medical physics. May be repeated for credit.

Term Offered: Spring, Fall**MPHY 6520 Radiation Safety and Measurement**

[3 credit hours]

Review of fundamentals of radiation safety and protection, instrumentation, radioactivity, radiation interaction with matter, and biological effects of radiation. Also, measurement methods, safety practices and regulations for use of radiation in research and medicine is presented.

MPHY 6610 Clinical Training Radiation Oncology Physics I

[4 credit hours]

This course offers clinical training in radiation oncology physics to graduate students. This will include clinical dosimetry concepts, anatomy & physiology, clinical radiobiology, and overview of special procedures including SRS, SBRT, IORT, HDR, LDR, Rad Safety and Regulations. QA of equipment and clinical responsibilities; review of TG 142, 51, 66 and other related reports.

Term Offered: Fall**MPHY 6620 Clinical Training Radiation Oncology Physics II**

[4 credit hours]

This course offers advanced clinical training in radiation oncology physics to senior level graduate students. Advanced dosimetry concepts, Brachytherapy, IMRT, IGRT, adaptive IGRT. Other special procedures are covered. Also, lectures and hands-on training are provided so that students can refine their techniques in Treatment Planning, QA Issues, daily clinical responsibilities and operation as a medical physicist are taught.

Term Offered: Spring, Summer, Fall**MPHY 6630 Clinical Training Radiation Oncology Physics III**

[5 credit hours]

Clinical training in radiation therapy physics to graduate students who have obtained an MS or Ph.D. degree in the field of medical physics or related area. May be repeated for credit

Term Offered: Summer**MPHY 6730 Medical Physics Research**

[0-4 credit hours]

Students will participate in selected ongoing research programs of members of the department faculty. May be repeated for credit.

Term Offered: Summer**MPHY 6840 Independent Study: Medical Physics**

[0-12 credit hours]

Combination of reading, lecture and discussion within a defined area of medical physics. Defined topics are: dosimetry, internal dosimetry, radiobiology, monte carlo analysis, image processing, topical study. May be repeated for credit.

Term Offered: Spring, Summer, Fall

MPHY 6860 Independent Study in Radiology

[0-12 credit hours]

Combination of reading, lecture and discussion within a defined area of radiology. Defined topics are: radiographic imaging, computed tomography, magnetic resonance imaging, nuclear medicine, diagnostic ultrasound, diagnostic quality control, digital imaging. May be repeated for credit.

Term Offered: Spring, Summer, Fall

MPHY 6880 Independent Study: Rad Therapy

[0-12 credit hours]

Combination of reading, lecture, and discussion within a defined area of radiation therapy. Defined topics are: 3-D conformal treatment planning, 3-D dose compensators, stereotactic radiosurgery, electron arc therapy, photon and electron algorithms, treatment planning dosimetry verification, total body irradiation, total body skin. May be repeated for credit.

MPHY 8010 Survey of Diagnostic Medical Imaging I

[3 credit hours]

This course provides a survey of diagnostic imaging modalities including the physical principles and instrumentation of diagnostic imaging equipment. Radiographic and fluoroscopic imaging systems, x-ray computed tomography, Ultrasound, MRI, and basic of Nuclear Medicine will be covered. The course builds upon basic review of atomic and nuclear properties, production of x-rays, and interaction of radiation with matter.

Term Offered: Fall

MPHY 8020 Survey of Diagnostic Medical Imaging II

[3 credit hours]

This course builds on the material taught in MPHY 6010/8010, and discusses advanced concepts in medical imaging including functional MRI, SPECT, and PET imaging. Details of radioactivity & nuclear transformation, radionuclide production & radiopharmaceuticals, radiation detection and measurement and scintillation camera will be covered. Advanced discussions on CT and US will also be presented.

Term Offered: Spring

MPHY 8040 Diag Radiological Physics

[0-5 credit hours]

This course considers the physical principles and instrumentation of diagnostic image formation including radiography, fluoroscopy, computed tomography, ultrasound, nuclear medicine and magnetic resonance imaging.

Term Offered: Spring, Fall

MPHY 8060 Nuclear Medicine

[3 credit hours]

Course covers the physical aspects of diagnostic and therapeutic applications of radionuclides. This includes radiation detectors and imaging systems, emission tomography, counting statistics, equipment testing, radiopharmaceuticals and internal radiation dosimetry.

Term Offered: Fall

MPHY 8110 Survey Clinical Radi Therapy

[2 credit hours]

A series of lectures on various topics in radiation therapy give an overview of radiation therapy in the clinical care of patients and familiarize students with a variety of options for treatment of cancer patients.

Term Offered: Fall

MPHY 8120 Radiation Dosimetry I

[3 credit hours]

Series of lectures covering basic concepts of radiation physics, interactions of ionizing radiation with matter, and fundamentals of radiation dosimetry techniques and instrumentation. An overview of principles of radiation therapy, radiation protection, nuclear medicine, and diagnostic radiology is given.

Term Offered: Fall

MPHY 8130 Radiation Dosimetry II

[3 credit hours]

Series of lectures covering interactions of ionizing radiation with matter and radiation dosimetry physics fundamentals in-depth. Cavity theories, integrating and pulse-mode dosimeters, dosimetry and calibration of photon and electron beams, and neutron dosimetry are considered in details.

Term Offered: Spring

MPHY 8160 Radiation Biology

[3 credit hours]

A series of introductory lectures on radiation biology with emphasis on the effects of radiation on cells and cellular components, tissues, and organisms. Dose-response relationships, dose-effect modifiers, and considerations applicable to radiation therapy treatments are among covered topics.

Term Offered: Spring

MPHY 8180 Physics of Radiation Therapy

[3 credit hours]

Basic radiation physics and physical aspects of treatment planning, using photon and electron beams as well as brachytherapy sources will be taught.

Term Offered: Spring, Fall

MPHY 8190 Brachytherapy

[3 credit hours]

Fundamental information about the physical characteristics of the sources used in brachytherapy, the methods used for implant planning and evaluation of plans.

Term Offered: Summer

MPHY 8200 Radiatn Protect and Regulation

[3 credit hours]

Course considers the hazards associated with radioactivity and electromagnetic radiation, including types and sources of radiation, radiation measurement and units, dosimetry, radiation protection practices required by governmental regulation and medical facility accrediting bodies.

Term Offered: Summer

MPHY 8240 Physics of Medicine and Biol

[3 credit hours]

Overview of physics as applied to physiological and biological systems, including body mechanics, osmosis, respiratory and cardiovascular mechanisms, electric signals, speech, hearing, and sight.

MPHY 8260 Computer in Radiation Therapy

[2 credit hours]

Computer fundamentals and problem solving through programming. Typical problems include PDD, TAR, TMR, MU calculations, scatter summation, TMR for arc and dose distributions.

MPHY 8280 Electronics for Med Physicists

[2 credit hours]

Basics of electronics circuit design to perform specific tasks as it relates to medical physics applications.

MPHY 8300 Radiation Detection/Measurement

[3 credit hours]

Introduces the student to the various equipment and methods used in radiation detection and measurement. Introduces advanced concepts in error analysis, energy spectra unfolding, fit results with function, etc. The lab portion of this course, PHYS6180, is taught through the University of Toledo.

Term Offered: Spring

MPHY 8310 Anatomy & Physiology

[4 credit hours]

The course will cover an overview of physiology at a cellular, and organ system levels. This will include normal function of human body and some clinical manifestations of human diseases. There will also be some introduction to basic skeletal system.

Term Offered: Fall

MPHY 8320 Practical Measurements in Rad

[2 credit hours]

Basic practical considerations in measurements of photon and electron beam parameters of the linear accelerator.

Term Offered: Summer

MPHY 8400 Intro to LINAC in Radiation Th

[3 credit hours]

The electron linear accelerator will be described in theory and operation as it relates to medical physics and cancer patients. The physics aspect of particle acceleration and x-ray and electron generation using these units as well as dose delivery to the patient is considered.

MPHY 8500 Medical Physics Seminar

[1 credit hour]

Recent developments, special topics, critical analysis of recent publications, and literature reviews in specific areas of medical physics. May be repeated for credit.

Term Offered: Spring, Fall

MPHY 8520 Radiation Safety and Measurement

[3 credit hours]

Review of fundamentals of radiation safety and protection, instrumentation, radioactivity, radiation interaction with matter, and biological effects of radiation. Also, measurement methods, safety practices and regulations for use of radiation in research and medicine is presented.

MPHY 8610 Clin Trng Radi Oncol Physics I

[4 credit hours]

This course offers clinical training in radiation oncology physics to graduate students. This will include clinical dosimetry concepts, anatomy & physiology, clinical radiobiology, and overview of special procedures including SRS, SBRT, IORT, HDR, LDR, Rad Safety and Regulations. QA of equipment and clinical responsibilities; review of TG 142, 51, 66 and other related reports.

Term Offered: Fall

MPHY 8620 Clin Trng Radi Oncol Physcs II

[4 credit hours]

This course offers advanced clinical training in radiation oncology physics to senior level graduate students. Advanced dosimetry concepts, Brachytherapy, IMRT, IGRT, adaptive IGRT, other special procedures are covered. Also, lectures and hands-on training are provided so that students can fine tune their techniques in Treatment Planning, QA Issues, daily clinical responsibilities and operations as a medical physicist are taught.

Term Offered: Spring

MPHY 8630 Clin Trng Radi Oncol Physc III

[5 credit hours]

Clinical training in radiation therapy physics to graduate students who have obtained an MS or Ph.D. degree in the field of medical physics or related area. May be repeated for credit

Term Offered: Summer

MPHY 8730 Medical Physics Research

[0-4 credit hours]

Students will participate in selected ongoing research programs of members of the department faculty. May be repeated for credit.

MPHY 8840 Independent Study: Med Physics

[0-12 credit hours]

Combination of reading, lecture and discussion within a defined area of medical physics. Defined topics are: dosimetry, internal dosimetry, radiobiology, monte carlo analysis, image processing, topical study. May be repeated for credit.

Term Offered: Summer, Fall

MPHY 8860 Independent Study in Radiology

[0-12 credit hours]

Combination of reading, lecture and discussion within a defined area of radiology. Defined topics are: radiographic imaging, computed tomography, magnetic resonance imaging, nuclear medicine, diagnostic ultrasound, diagnostic quality control, digital imaging. May be repeated for credit.

MPHY 8880 Independent Study: Rad Therapy

[0-12 credit hours]

Combination of reading, lecture, and discussion within a defined area of radiation therapy. Defined topics are: 3-D conformal treatment planning, 3-D dose compensators, stereotactic radiosurgery, electron arc therapy, photon and electron algorithms, treatment planning dosimetry verification, total body irradiation, total body skin. May be repeated for credit.

MPHY 8960 Dissertation Research

[0-15 credit hours]

Disciplinary or interdisciplinary investigation of significant problems at the doctoral level leading to the preparation of a scientific project for presentation as a dissertation.

Term Offered: Spring, Summer, Fall

Medicinal-Biological Chemistry (MBC)

MBC 5100 Ethical Conduct Research

[1 credit hour]

Consideration of the scientific, ethical and legal obligations of the graduate student researcher.

Term Offered: Spring, Summer

MBC 5310 Medicinal Chemistry I: Drug Action And Design

[2 credit hours]

An introductory course presenting the basic chemical principles governing the behavior of drugs and the design of new therapeutics.

Prerequisites: MBC 3310 with a minimum grade of D-

Term Offered: Fall

MBC 5380 Medicinal And Poisonous Plants

[3 credit hours]

Lecture/field course examining medicinal and harmful properties of herbals and plants using pharmacognosy, clinical trials and local plant examples.

Term Offered: Summer

MBC 5550 Physiological Chemistry I: Structure And Function Of Biological Macromolecules

[3 credit hours]

An examination of the levels of structure of proteins, nucleic acids, other biomolecules and biomolecular assemblies.

Term Offered: Fall

MBC 5552 Physiological Chemistry II Cellular Metabolism and Homeostasis

[2 credit hours]

An examination of the chemistry and regulation of metabolic processes in cells, interacting cells and tissues.

Prerequisites: MBC 3550 with a minimum grade of D- or MBC 5550 with a minimum grade of D-

Term Offered: Spring

MBC 5620 Biochemical Techniques

[2 credit hours]

A detailed study of biochemical laboratory techniques necessary for the development of novel therapeutics, including bioassays and data analysis.

Term Offered: Fall

MBC 5860 Microbiology for Pharmaceutical Professionals

[2 credit hours]

This is a lecture and laboratory course with emphasis on microorganisms that cause disease. Special attention will be paid to structures and mechanisms present in microorganisms that can be exploited to inhibit the growth and survival of these organisms in a human host.

Prerequisites: MBC 3550 with a minimum grade of D- or MBC 5550 with a minimum grade of D-

Term Offered: Spring

MBC 5900 Medicinal Chemistry Seminar

[1 credit hour]

Presentation and discussion of advanced research topics in medicinal chemistry, with an emphasis on evaluating and criticizing emerging data as a way of testing hypotheses.

Term Offered: Spring, Summer, Fall

MBC 6100 Advanced Immunology

[2 credit hours]

Readings in and critical analysis of the recent literature in immunology and basic immunologic responses, especially as considered in immunotherapy.

Term Offered: Spring, Fall

MBC 6190 Advanced Medicinal Chemistry

[4 credit hours]

Discussion of the qualitative and quantitative aspects of the design of new therapeutic agents. Approaches to the design of drugs and new therapeutic modalities directed at enzymes, receptors, membrane transport proteins and nucleic acids are examined.

Term Offered: Fall

MBC 6200 Biomedical Chemistry

[4 credit hours]

Examination of the primary literature on approaches to the design of new therapeutic agents. Recent novel directions in the design of drugs will be examined and compared.

Prerequisites: MBC 6190 with a minimum grade of D-

Term Offered: Spring

MBC 6300 Biomedical Chemistry Laboratory I

[1 credit hour]

Experimental research problems in biomedical chemistry.

Prerequisites: (MBC 6190 with a minimum grade of D- and MBC 6550 with a minimum grade of D-)

Term Offered: Spring, Fall

MBC 6310 Biomedical Chemistry Laboratory II

[3 credit hours]

Additional experimental research problems in biomedical chemistry (see MBC 6300/8300).

Prerequisites: (MBC 6190 with a minimum grade of D- and MBC 6550 with a minimum grade of D-)

Term Offered: Spring, Summer, Fall

MBC 6400 Cannabis Science: Plants and Products

[3 credit hours]

CS Plants & Products considers in-depth the growth of Cannabis sativa and its subspecies as well as the production and physical properties of both chemical and consumer products derived from them. Examining the factors, procedures, and techniques that make for optimal medicinal and recreational outcomes, the course is designed for learners with diverse backgrounds, interests, and intents

Term Offered: Spring, Fall

MBC 6420 Protein Chemistry

[4 credit hours]

A detailed analysis of the structure and function of proteins: current methodology for the analysis of structure, the basis for molecular associations, and relationships between structure and biological function.

Prerequisites: MBC 6550 with a minimum grade of D-

MBC 6430 Nucleic Acid Chemistry

[4 credit hours]

The chemical basis for storage and transmission of genetic information.

Prerequisites: MBC 6550 with a minimum grade of D-

MBC 6440 Enzymology

[4 credit hours]

The principles of chemical catalysis applied to molecular enzymology.

MBC 6450 Advanced Synthetic and Medicinal Chemistry

[2 credit hours]

Readings in and critical analysis of recent literature in synthetic and medicinal chemistry research.

Term Offered: Spring, Fall**MBC 6550 Biochemistry**

[4 credit hours]

A consideration of the structure and function of biological macromolecules as well as the basic and regulated metabolism of cells.

Term Offered: Fall**MBC 6960 M.s. Thesis Research In Medicinal Chemistry**

[1-15 credit hours]

Development and pursuit of research leading to an M.S. thesis in medicinal chemistry.

Term Offered: Spring, Summer, Fall**MBC 6980 Special Topics In Biomedical Chemistry**

[1-5 credit hours]

Selected study of topics in medicinal chemistry. New chemical and biochemical strategies in drug design are examined in detail.

Term Offered: Spring, Summer, Fall**MBC 7100 Ethical Conduct of Research**

[1 credit hour]

Consideration of the scientific, ethical and legal obligations of the graduate student researcher.

Term Offered: Spring, Summer**MBC 7620 Biochemical Techniques**

[2 credit hours]

A detailed study of biochemical laboratory techniques necessary for the development of novel therapeutics, including bioassays and data analysis.

Term Offered: Fall**MBC 7900 Medicinal Chemistry Seminar**

[1 credit hour]

Presentation and discussion of advanced research topics in medicinal chemistry, with an emphasis on evaluating and criticizing emerging data as a way of testing hypotheses.

Term Offered: Spring, Summer, Fall**MBC 8100 Advanced Immunology**

[2 credit hours]

Readings in and critical analysis of the recent literature in immunology and basic immunologic responses, especially as considered in immunotherapy.

Term Offered: Spring, Fall**MBC 8190 Advanced Medicinal Chemistry**

[4 credit hours]

Discussion of the qualitative and quantitative aspects of the design of new therapeutic agents. Approaches to the design of drugs and new therapeutic modalities directed at enzymes, receptors, membrane transport proteins and nucleic acids are examined.

Term Offered: Fall**MBC 8200 Biomedical Chemistry**

[4 credit hours]

Examination of the primary literature on approaches to the design of new therapeutic agents. Recent novel directions in the design of drugs will be examined and compared.

Prerequisites: MBC 8190 with a minimum grade of D-**Term Offered:** Spring**MBC 8300 Biomedical Chemistry Laboratory I**

[1 credit hour]

Experimental research problems in biomedical chemistry.

Prerequisites: (MBC 6190 with a minimum grade of D- and MBC 8550 with a minimum grade of D-)**Term Offered:** Spring, Fall**MBC 8310 Biomedical Chemistry Laboratory II**

[3 credit hours]

Additional experimental research problems in biomedical chemistry (see MBC 6300/8300).

Prerequisites: (MBC 6190 with a minimum grade of D- and MBC 8550 with a minimum grade of D-)**Term Offered:** Spring, Summer, Fall**MBC 8420 Protein Chemistry**

[4 credit hours]

A detailed analysis of the structure and function of proteins: current methodology for the analysis of structure, the basis for molecular associations, and relationships between structure and biological function.

MBC 8430 Nucleic Acid Chemistry

[4 credit hours]

The chemical basis for storage and transmission of genetic information.

MBC 8440 Enzymology

[4 credit hours]

The principles of chemical catalysis applied to molecular enzymology.

MBC 8450 Advanced Synthetic and Medicinal Chemistry

[2 credit hours]

Readings in and critical analysis of recent literature in synthetic and medicinal chemistry research.

Term Offered: Spring, Fall**MBC 8550 Biochemistry**

[4 credit hours]

A consideration of the structure and function of biological macromolecules as well as the basic and regulated metabolism of cells.

Term Offered: Fall**MBC 8960 Ph.d. Dissertation Research In Medicinal Chemistry**

[1-15 credit hours]

Development and pursuit of research leading to a Ph.D. dissertation in medicinal chemistry.

Term Offered: Spring, Summer, Fall**MBC 8980 Special Topics In Biomedical Chemistry**

[1-5 credit hours]

Selected study of topics in medicinal chemistry. New chemical and biochemical strategies in drug design are examined in detail.

Term Offered: Spring, Summer, Fall

Medicine (MEDI)

MEDI 6050 Advanced Biostatistics

[1-3 credit hours]

Application of advanced statistical techniques with particular emphasis on problems in the biomedical sciences. Multiple regression, methods of analysis of variance, categorical data analysis including logistic regression, nonparametric and survival analysis. Problems whose solutions involve using a statistical program (SAS or SPSS).

MEDI 6200 Managed Health Care

[2 credit hours]

This course will enable the health care professional to understand those forces driving change in the managed care era and will help prepare them for the future.

MEDI 6720 Current Topics in Medicine

[0-4 credit hours]

A lecture and/or seminar course on topics of current interest in medicine with special emphasis on the fundamentals of human life under normal, experimental, or pathological conditions. May be repeated for credit.

MEDI 8890 Independent Study in Medicine

[0-12 credit hours]

Intensive study in field of interest, including theoretical and experimental work. May be repeated for credit.

Microbiology (MICB)

MICB 5020 Medical Microbiology II

[5 credit hours]

MICB 6200 Microbiology Human Infections

[3 credit hours]

A series of lectures describing the classification, replication strategies and structural composition of the major families of animal viruses that infect humans.

MICB 6210 Advanced Virology

[3 credit hours]

An in-depth analysis of current research in virology including the reading and analysis of recently published papers on the replication and molecular biology of animal viruses, particularly viruses belonging to the Togaviridae and coronaviridae and the bacterial and plant viruses that are homologous to these two families of animal viruses.

MICB 6220 Laboratory Molecular Virology

[4 credit hours]

A laboratory course in which the students will learn to grow tissue culture cells and grow, quantify, purify, and analyze animal viruses. The student will complete a research project on a problem concerning the molecular biology of animal virus replication.

MICB 6890 Independent Study Microbiology

[0-15 credit hours]

Intensive study in field of interest, including theoretical and experimental work. May be repeated for credit

Term Offered: Spring, Summer, Fall

MICB 8200 Microbiology Human Infections

[3 credit hours]

A series of lectures describing the classification, replication strategies and structural composition of the major families of animal viruses that infect humans.

MICB 8210 Advanced Virology

[3 credit hours]

An in-depth analysis of current research in virology including the reading and analysis of recently published papers on the replication and molecular biology of animal viruses, particularly viruses belonging to the Togaviridae and coronaviridae and the bacterial and plant viruses that are homologous to these two families of animal viruses.

MICB 8220 Laboratory Molecular Virology

[4 credit hours]

A laboratory course in which the students will learn to grow tissue culture cells and grow, quantify, purify, and analyze animal viruses. The student will complete a research project on a problem concerning the molecular biology of animal virus replication.

MICB 8890 Independent Study Microbiology

[0-15 credit hours]

Intensive study in field of interest, including theoretical and experimental work. May be repeated for credit

Term Offered: Spring, Summer, Fall

Music (MUS)

MUS 5010 University Band

[1 credit hour]

Students will perform a wide variety of band literature.

Term Offered: Spring, Fall

MUS 5020 Jazz Ensemble

[1 credit hour]

Students rehearse and perform a diverse repertoire for large jazz ensemble. Open to qualified students by audition in the first week of each semester and/or permission of instructor.

Term Offered: Spring, Fall

MUS 5030 Brass Choir

[1 credit hour]

Open to a limited number of qualified students.

Term Offered: Spring

MUS 5040 University Wind Ensemble

[1 credit hour]

Open to a limited number of qualified students.

MUS 5050 Chamber Music Ensembles

[1 credit hour]

The study and performance of chamber music literature in classical or jazz styles. Groups are determined by audition at the beginning of each semester, and are open to a limited number of qualified students upon sufficient demand and with the permission of the instructor.

Term Offered: Spring, Fall

MUS 5060 Symphonic Band

[1 credit hour]

Students rehearse and perform a diverse concert band repertoire. Open to all students through audition or permission of instructor.

Term Offered: Spring, Fall

MUS 5070 Varsity Band

[1 credit hour]

Students rehearse and perform a diverse athletic band repertoire. Open to all students through audition or permission of instructor.

Term Offered: Spring**MUS 5090 University Orchestra**

[1 credit hour]

Open to any qualified student.

Term Offered: Spring, Fall**MUS 5130 University Chorus**

[1 credit hour]

This non-auditioned mixed (SATB) choral ensemble is open to any student. Performing music in a variety of styles, this ensemble places a primary focus on developing musicianship and basic vocal technique.

Term Offered: Spring, Fall**MUS 5140 Concert Chorale**

[1 credit hour]

This auditioned mixed (SATB) choral ensemble is the premiere choral ensemble at the University of Toledo. With a focus on advanced vocal techniques and performance, this ensemble requires an audition and instructor approval.

Term Offered: Spring, Fall**MUS 5150 Jazz Vocalstra**

[1 credit hour]

Students rehearse and perform traditional vocal jazz literature. Open to qualified students by audition at the beginning of each semester and/or permission of instructor.

Term Offered: Spring, Fall**MUS 5160 Women's Chorus**

[1 credit hour]

This non-auditioned treble voice (SSAA) choral ensemble is open to any student. Performing music in a variety of styles, this ensemble focuses on developing musicianship and basic vocal technique.

Term Offered: Spring, Fall**MUS 5180 Men's Chorus**

[1 credit hour]

This non-auditioned Tenor/Bass voiced (TTBB) choral ensemble is open to any student. Performing music in a variety of styles, this ensemble focuses on developing musicianship and basic vocal technique.

Term Offered: Spring, Fall**MUS 5190 Opera Workshop**

[1 credit hour]

Open to any qualified student.

Term Offered: Spring, Fall**MUS 5410 Music History And Literature: World Music**

[3 credit hours]

Explores the function and styles of music in various cultures.

Term Offered: Spring**MUS 5440 Music History And Literature: Special Topics**

[3 credit hours]

The area of study will be announced at the time the course is offered.

Term Offered: Spring**MUS 5490 Music History And Literature: The Twentieth Century**

[3 credit hours]

An intensive study of the literature, composers, theorists, trends and musical styles during the 20th century.

MUS 5510 Choral Conducting

[2 credit hours]

Conducting techniques and rehearsal routine, especially concerned with choral groups. Opportunities to direct student choral groups.

Prerequisites: MUS 3500 with a minimum grade of C**Term Offered:** Spring, Summer, Fall**MUS 5520 Instrumental Conducting**

[2 credit hours]

Conducting techniques and rehearsal routine especially concerned with instrumental ensembles. Opportunities to direct student instrumental groups.

Prerequisites: MUS 3500 with a minimum grade of C**Term Offered:** Spring**MUS 5590 Piano Pedagogy**

[3 credit hours]

Exploration of techniques and materials for comprehensive, private and group instruction.

Term Offered: Spring, Fall**MUS 5610 Analytical Techniques**

[3 credit hours]

Application of various analytical theories of music to selected works from different style periods to further the understanding of musical forms and works.

Prerequisites: MUS 3500 with a minimum grade of C**Term Offered:** Fall**MUS 5630 Counterpoint: Comparison Of Styles**

[3 credit hours]

A study of 16th, 18th and 20th century polyphony. Analysis of selected works and composition exercises will be the basis for comparing and contrasting these three styles.

Prerequisites: MUS 3500 with a minimum grade of C**Term Offered:** Spring**MUS 5800 Applied Music**

[1-2 credit hours]

Private studio music lessons intended primarily for music education graduate students or for music performance graduate students on a secondary instrument. 1 or 2 credit hours.

Term Offered: Spring, Summer, Fall**MUS 5900 Graduate Studies In Music**

[3 credit hours]

The study of sources and bibliographical materials in music.

Term Offered: Fall**MUS 6000 Master's Recital**

[0 credit hours]

Required for the Master of Music Performance degree. A passing grade documents successful completion of the recital requirement. Must be taken during the semester in which the recital is presented.

Corequisites: MUS 6800**Term Offered:** Spring, Summer, Fall

MUS 6450 Jazz history, Style and Analysis

[3 credit hours]

An in-depth study of jazz styles, trends, performers and composers through historical and analytical research.

Term Offered: Spring

MUS 6560 Jazz Pedagogy and Conducting

[2 credit hours]

An in-depth study of jazz pedagogical materials and methods as well as rehearsal and conducting techniques.

Term Offered: Spring, Fall

MUS 6600 Jazz Composition and Arranging Seminar

[2 credit hours]

Examination and analysis of jazz scores with creative assignments in jazz orchestration and composition in traditional and contemporary styles. May be repeated one time.

Term Offered: Fall

MUS 6650 Seminar In Music Arranging

[3 credit hours]

Examination and analysis of scores of varied composers and styles; creative assignments in orchestration exploring traditional and contemporary textures and timbres.

Prerequisites: MUS 3500 with a minimum grade of C

MUS 6690 Seminar In Music Composition

[2 credit hours]

May be repeated, but maximum accumulated credit is six hours.

Beginning composition, including writing in the smaller musical forms, to advanced compositions for large.

Term Offered: Spring, Fall

MUS 6700 Jazz Improvisation Seminar

[2 credit hours]

Practical application and analysis of jazz improvisation methods and techniques as applied to contemporary jazz composition and performance. May be repeated one time.

Term Offered: Spring, Fall

MUS 6800 Applied Music

[2-5 credit hours]

Private studio music lessons for music performance graduate students, including the study of performance methods and literature of the highest levels. Preparation for professional-level performance. May be repeated for credit with permission of the instructor.

Term Offered: Spring, Summer, Fall

MUS 6980 Seminar: Special Topics

[1-3 credit hours]

Selected subjects in music in areas of special interest to the advanced master's degree student. The seminar topic will be announced in the semester schedule of classes.

Term Offered: Spring, Summer, Fall

MUS 6990 Independent Study

[1-3 credit hours]

Designed to meet the needs of individual students who wish to pursue projects in the area of music.

Term Offered: Spring, Summer, Fall

Music Education (MED)

MED 5340 Curriculum Development In Music Education

[3 credit hours]

The impact of historical, sociological and philosophical influences on various music curricula, past and present. Integration of skill development and content learning for designing comprehensive and sequential objectives for school music programs.

Term Offered: Spring, Fall

MED 5360 Pedagogy Of Aural Perception

[3 credit hours]

Theory and techniques for teaching of musical skills. Sequences for development of tonal and rhythm skills, techniques and materials for instruction plus measurement and evaluation of music learning.

Term Offered: Spring, Fall

MED 5370 Psychology Of Music

[3 credit hours]

Study of theories of musical behavior and pattern perception.

Term Offered: Spring, Fall

MED 5990 Independent Study In Music Education

[1-3 credit hours]

Individual study is designed to provide a student the opportunity to work independently on professional problems under the direction of the faculty of the Department of Music.

Term Offered: Spring, Summer, Fall

MED 6920 Master's Research Project In Music Education

[1-3 credit hours]

Open to the graduate student who elects a research project to fulfill the research requirement of the master's degree program.

Term Offered: Spring, Summer, Fall

MED 6930 Seminar - Selected Topics In Music Education

[1-3 credit hours]

Critical inquiry into specific topics through lectures, class seminar reports and discussion. Seminar topics announced in schedule of classes.

MED 6960 Master's Research Thesis In Music Education

[1-3 credit hours]

Open to the graduate student who elects a master's thesis to fulfill the research requirement of the master's degree program.

Term Offered: Spring, Summer, Fall

MED 6980 Music Education: Special Topics

[1-3 credit hours]

The area of study will be announced at the time the course is offered.

Term Offered: Summer

Neurosciences and Neurological Disorders (NNDP)

NNDP 5810 Neuroscience

[5 credit hours]

A survey of medical neuroscience, taught as part of the medical school curriculum. It includes lectures, laboratories, and patient-presentation sessions.

NNDP 6010 Neurosciences Neurolog Disease

[2 credit hours]

NNDP 6500 Seminar in Neuroscience

[1 credit hour]

Training and practice in presenting seminars on neuroscience research. May be repeated for credit.

Term Offered: Spring**NNDP 6540 Jrnl Paper Review Neuroscience**

[2 credit hours]

A weekly report on recent advances in neurobiology taken from original papers to give the students an opportunity to find, critically assess, and report on these studies. Students will develop skills for communicating scientific ideas in a seminar format. May be repeated for credit.

Term Offered: Spring**NNDP 6560 Readings in Neuroscience**

[1-4 credit hours]

Tutorial course between major advisor and student to acquaint student with important writings relevant to neuroscience concepts. May be repeated for credit.

Term Offered: Summer, Fall**NNDP 6720 Current Topics in Neuroscience**

[1-4 credit hours]

Tutorial course between major advisor and student to acquaint student with the range of topics of current major interest in neuroscience research. May be repeated for credit.

Term Offered: Fall**NNDP 6730 Research in NNDP**

[1-15 credit hours]

NNDP 6890 Independ Study in Neuroscience

[1-12 credit hours]

Independent library and laboratory work under the supervision of the major advisor. May be repeated for credit.

Term Offered: Summer, Fall**NNDP 6990 Thesis Research Neurosci Neuro**

[1-15 credit hours]

NNDP 7810 Neuroscience

[6 credit hours]

A survey of medical neuroscience, taught as part of the medical school curriculum. It includes lectures, laboratories, and patient-presentation sessions.

Term Offered: Spring**NNDP 8010 Neurosci Neuro Diseases**

[2 credit hours]

The objectives of the course are to study nervous system development, organization and structure and of nervous system-related diseases.

NNDP 8500 Seminar in Neuroscience

[1 credit hour]

Training and practice in presenting seminars on neuroscience research. May be repeated for credit.

Term Offered: Spring**NNDP 8540 Jrnl Paper Review Neuroscience**

[2 credit hours]

A weekly report on recent advances in neurobiology taken from original papers to give the students an opportunity to find, critically assess, and report on these studies. Students will develop skills for communicating scientific ideas in a seminar format. May be repeated for credit.

Term Offered: Spring**NNDP 8560 Readings in Neuroscience**

[1-4 credit hours]

Tutorial course between major advisor and student to acquaint student with important writings relevant to neuroscience concepts. May be repeated for credit.

Term Offered: Spring, Summer, Fall**NNDP 8720 Current Topics in Neuroscience**

[1-4 credit hours]

Tutorial course between major advisor and student to acquaint student with the range of topics of current major interest in neuroscience research. May be repeated for credit.

Term Offered: Spring, Summer, Fall**NNDP 8890 Independ Study in Neuroscience**

[1-12 credit hours]

Independent library and laboratory work under the supervision of the major advisor. May be repeated for credit.

Term Offered: Spring, Summer, Fall**NNDP 8990 Research in Neuroscience**

[1-15 credit hours]

Training in neuroscience research techniques through laboratory experience. May be repeated for credit.

Term Offered: Spring, Summer, Fall**NNDP 9990 Dissertation Research in NNDP**

[1-15 credit hours]

Neuroscience (NERS)

NERS 5810 Neuroscience

[6 credit hours]

The content of the medical neuroscience course includes not only the basic science concepts introduced in more traditional neuroanatomy courses, it also incorporates neurohistology, neuroembryology, neurophysiology, neuropathology, and neuroradiology. The usefulness of these concepts are reinforced by numerous clinically-based lectures which emphasize the importance of integrating basic neuroanatomical knowledge with the clinical symptoms presented by a neurological deficit. Other clinically-based lectures present current medical concepts concerning neuroimmunology, neurodegenerative diseases, pain, sleep, epilepsy, substance abuse, and memory and learning.

Term Offered: Spring

Nursing (NURS)

NURS 5000 Population Focused Nursing

[4 credit hours]

Focus on exploring population and community health, applying nursing and other related sciences to assess populations, communities, and aggregates to design effective nursing systems in collaboration with partners to improve health.

Corequisites: NURS 5001, NURS 5002, NURS 5003

Term Offered: Fall

NURS 5001 Health Assessment and Technical Competencies I

[5 credit hours]

Focus on holistic assessment of diverse populations across the lifespan. Emphasis on the application of knowledge and skills through experiential and interprofessional activities, while laying the foundation for scholarly inquiry.

Corequisites: NURS 5000, NURS 5002, NURS 5003

Term Offered: Fall

NURS 5002 Physiology and Pathophysiology I

[3 credit hours]

Examine physical, biological, nutritional, microbiological sciences and principles related to human physiology. Focus on advanced physiologic and pathophysiologic mechanisms underlying human responses of nutritional, genetic, inflammatory, immune, and nervous system diseases.

Corequisites: NURS 5000, NURS 5001, NURS 5003

Term Offered: Fall

NURS 5003 Professional Socialization

[3 credit hours]

Understanding of the professional nursing role including historical, legal, ethical, political, economic, and cultural diversity that impact nursing practice. Examine nursing theories and models of professional nursing practice.

Corequisites: NURS 5000, NURS 5001, NURS 5002

Term Offered: Fall

NURS 5004 Nursing Care of Adults in Health and Illness

[5 credit hours]

Focus on health promotion, disease prevention, and implementation of evidence-based care with emphasis on nursing interventions, management, and the evaluation of effectiveness in the care of adults with chronic health problems.

Prerequisites: NURS 5000 with a minimum grade of B and NURS 5001 with a minimum grade of B and NURS 5002 with a minimum grade of B

Corequisites: NURS 5005, NURS 5006, NURS 5007

Term Offered: Spring

NURS 5005 Health Assessment and Technical Competencies II

[3 credit hours]

Focus on application of assessment skills and demonstrating safe procedures for high-risk interventions in simulated experiences. Emphasis on the concepts of clinical judgment, professional behaviors, and interprofessional collaboration.

Prerequisites: NURS 5000 with a minimum grade of B and NURS 5001 with a minimum grade of B and NURS 5002 with a minimum grade of B

Corequisites: NURS 5004, NURS 5006, NURS 5007

Term Offered: Spring

NURS 5006 Physiology and Pathophysiology II

[3 credit hours]

Focus on advanced physiologic and pathophysiologic mechanisms underlying disease processes across the life span and prevention strategies. Examine cardiovascular, respiratory, endocrine, musculoskeletal, nervous, genitourinary, hepatobiliary, renal, integumentary and gastrointestinal systems.

Prerequisites: NURS 5002 with a minimum grade of B

Corequisites: NURS 5004, NURS 5005, NURS 5007

Term Offered: Spring

NURS 5007 Pharmacology for the Graduate Entry Nurse

[3 credit hours]

Focus on pharmacologic principles with emphasizes on physiological responses to drugs, expected outcomes, and potential drug interactions. Prepares for critical thinking in application of pharmacotherapy principles to nursing practice.

Prerequisites: NURS 5000 with a minimum grade of B and NURS 5001 with a minimum grade of B and NURS 5002 with a minimum grade of B and NURS 5003 with a minimum grade of B

Corequisites: NURS 5004, NURS 5005, NURS 5006

Term Offered: Spring, Summer

NURS 5008 Healthcare for Women and Children

[5 credit hours]

Using Orem's SCDT, students design and implement nursing systems that assist individuals and families with complex problems to achieve and maintain optimal health. End of life care is addressed.

Prerequisites: NURS 5004 with a minimum grade of B and NURS 5005 with a minimum grade of B and NURS 5006 with a minimum grade of B and NURS 5007 with a minimum grade of B

Corequisites: INDI 6000, NURS 5009

Term Offered: Summer

NURS 5009 Mental Health and Therapeutic Communications

[3 credit hours]

Students will develop a psychotherapeutic relationship with individuals, groups, and families who are experiencing complex mental health disorders, including substance abuse, trauma, serious mental illness, and impaired functioning.

Corequisites: INDI 6000, NURS 5008

Term Offered: Summer

NURS 5040 Hlth Assess and Nrs Prmng Hlth

[6 credit hours]

Using Orem's SCDT, students assess individuals and families and apply the nursing process in order to promote the health of individuals and families across the life span. Includes 30 clinical hours.

Term Offered: Fall

NURS 5050 Integrative Hlth Science I

[3 credit hours]

Examines foundational chemical, physical, cellular biological, and microbiological principles of human physiology. Focuses on advanced physiologic and pathophysiologic mechanisms underlying human responses to genetic, defense, and nervous system disease.

Term Offered: Fall

NURS 5140 Designing Nursing Systems to Promote Self-Care

[6 credit hours]

Apply Orem's SCDT in the design and implementation of nursing systems that assist individuals and families in achieving and maintaining optimal health. Includes 90 clinical hours.

Prerequisites: NURS 5040 with a minimum grade of B

Term Offered: Spring

NURS 5190 Advance Interpersonal Intervention

[3 credit hours]

Integrates interpersonal strategies and complementary modalities through peer counseling and supervision. Analyzes personal abilities and limitations in developing therapeutic relationships with individuals and groups. Includes 60 hours lab.

Term Offered: Spring, Fall

NURS 5220 Field Experience Seminar

[1-3 credit hours]

Program capstone experience that integrates nursing theory, research, and practice to fulfill the requirements of the MSN degree.

Term Offered: Spring, Summer, Fall

NURS 5240 Designing Nursing Systems for Compromised Health States

[6 credit hours]

Using Orem's SCDT, students design and implement nursing systems that assist individuals and families with complex problems to achieve and maintain optimal health. End of life care is addressed. Includes 120 clinical hours.

Prerequisites: NURS 5140 with a minimum grade of B

Term Offered: Summer

NURS 5250 Health Science II

[3 credit hours]

Focuses on advanced physiologic and pathophysiologic mechanisms underlying disease across the life span. Examines cardiovascular, respiratory, endocrine, muscular skeletal, nervous, genitourinary, hepatobiliary, renal, integumentary and gastrointestinal systems.

Prerequisites: NURS 5040 with a minimum grade of B and NURS 5060 with a minimum grade of B and NURS 5070 with a minimum grade of B

Corequisites: NURS 5050

Term Offered: Spring

NURS 5330 Health Assessments

[3 credit hours]

Focuses on acquisition of graduate level skills in collection and documentation of assessment data across the life-span. Differentiates normal from abnormal findings. Supervised laboratory practice is required.

Term Offered: Summer

NURS 5400 Theoretical and Ethical Found

[3 credit hours]

Explores roots of nursing as a science and art. Examines personal and professional values in the context of ethical decision-making. Emphasis is on analysis and evaluation of selected nursing and ethical theories. Course Enrollment is Limited.

Term Offered: Spring, Fall

NURS 5440 Population Focused Care

[6 credit hours]

Students apply epidemiological principles and Orem's SCDT to improve the health status of aggregates, vulnerable populations and communities. Includes 90 clinical hours.

Prerequisites: INDI 6000 with a minimum grade of B

Corequisites: NURS 5240

Term Offered: Fall

NURS 5500 Family and Cultural Diversity

[3 credit hours]

Explores family and cultural diversity theories and processes. Examines assessment, analysis and evaluation of family function. Analyzes cultural competence of advanced practice nursing. Course Enrollment is Limited.

Term Offered: Spring, Fall

NURS 5510 Advanced Clinical Seminar: Nursing

[4 credit hours]

Application of nursing theory and research with clients in wellness promotion or complex care states. Emphasis is on the assessment and analysis of human responses and outcomes of care.

Prerequisites: NURS 5330 with a minimum grade of B and NURS 5400 with a minimum grade of B and NURS 5680 with a minimum grade of B

Term Offered: Fall

NURS 5530 Public Policy and Health Care

[3 credit hours]

Explores the public policy process from agenda setting through program evaluation. Focus is on how health problems are brought to the attention of government and solutions are obtained. Some field work is expected.

Term Offered: Spring, Summer, Fall

NURS 5540 Adv Practicum Nurs Sys Design

[12 credit hours]

Students demonstrate integration of nursing knowledge and skill in designing and implementing nursing systems in a capstone clinical experience. Includes 300 clinical hours.

Term Offered: Spring

NURS 5610 Psychiatric-Mental Health Nurse Practitioner Theory and Clinical I Adults

[7 credit hours]

The first course in the Psychiatric-Mental Health Nurse Practitioner track focuses on preparing the student in the advanced practice role of assessment, diagnosis, and treatment planning of select acute and chronic psychiatric disorders and mental health care needs of individuals across the lifespan.

Prerequisites: NURS 5740 with a minimum grade of B

Corequisites: NURS 5680, NURS 5690

NURS 5620 Psychiatric-Mental Health Nurse Practitioner Theory and Clinical II Child, Adolescent, Family

[7 credit hours]

The course explores the major group and family psychotherapeutic approaches. Theories and models of group and family psychotherapy are examined as they can be applied across the lifespan, with diverse populations, and in traditional and non-traditional settings.

Prerequisites: NURS 5610 with a minimum grade of B and NURS 5690 with a minimum grade of B and NURS 5680 with a minimum grade of B

NURS 5630 Psychiatric-Mental Health Nurse Practitioner Theory and Clinical III Older Adults

[9 credit hours]

Focuses on the role of the advanced practice nurse in management of children, adolescents, adults, older adults with acute or chronic psychiatric or mental health concerns.

Prerequisites: NURS 5610 with a minimum grade of B and NURS 5620 with a minimum grade of B and NURS 5680 with a minimum grade of B and NURS 5690 with a minimum grade of B

NURS 5670 Pharmacology

[3 credit hours]

Focuses on fundamental pharmacological principles. Prepares for critical thinking in application of pharmacotherapy principles to nursing. Emphasizes physiological responses to drugs, expected outcomes, and potential drug interactions.

Prerequisites: NURS 5050 with a minimum grade of B and NURS 5040 with a minimum grade of B and NURS 5060 with a minimum grade of B and NURS 5070 with a minimum grade of B

Term Offered: Spring, Summer

NURS 5680 Advanced Physiology and Pathophysiology

[3 credit hours]

Focuses on advanced physiologic and pathophysiologic mechanisms underlying human responses to illness across their life-span. Students will build on existing knowledge of human anatomy and physiology.

Term Offered: Spring, Fall

NURS 5690 Advanced Pharmacotherapeutics

[3 credit hours]

Focuses on advanced pharmacologic principles in decision making for pharmacotherapy. Emphasizes physiological responses to drugs, expected outcomes, adverse reactions, and potential drug interactions. Discusses professional responsibilities of prescriptive privileges.

Prerequisites: NURS 7680 with a minimum grade of B

Term Offered: Spring, Fall

NURS 5740 Advanced Health Assessment

[4 credit hours]

Focuses on acquisition of advanced skills in collection and documentation of assessment data across the life span. Differentiates normal from abnormal findings. Supervised laboratory practice is required. Course Enrollment is Limited. Includes 60 hours laboratory.

Prerequisites: NURS 5680 with a minimum grade of B

Term Offered: Spring

NURS 5810 Pediatric Nurse Practitioner Clinical I: Care of Children and Concepts of Wellness

[6 credit hours]

Focuses on the health care needs of children and adolescents and principles of health promotion and wellness. Students will have an opportunity to begin development of skills in primary and specialty care settings. Includes 180 hours clinical.

Prerequisites: NURS 5740 with a minimum grade of B and NURS 5680 with a minimum grade of B and NURS 5400 with a minimum grade of B

Term Offered: Summer

NURS 5820 PNP Clin II: Acute/Chronic

[6 credit hours]

Focuses on the care of children and adolescents with an emphasis on the management of common acute and stable chronic illnesses. Includes 180 hours clinical.

Term Offered: Fall

NURS 5830 Pediatric Nurse Practitioner Clinical III: Complex, Chronic Illnesses or Disabilities

[6 credit hours]

Focuses on management of common and complex acute and chronic conditions of children and adolescents. Issues of disability and developmental conditions are addressed. Emphasis is on integration of the advanced practice role.

Prerequisites: NURS 5820 with a minimum grade of B

Term Offered: Spring

NURS 5910 Advanced Research for Evidence Based Nursing Practice

[3 credit hours]

Critically evaluate published research for clinical relevance, identify a research problem, select a conceptual framework, review selected literature, and prepare a quantitative or qualitative research proposal.

Prerequisites: (NURS 5400 with a minimum grade of B and INDI 6000 with a minimum grade of C) or (NURS 7400 with a minimum grade of B and INDI 8000 with a minimum grade of C)

Term Offered: Spring, Summer, Fall

NURS 5980 Comprehensive Exam in Nursing

[3 credit hours]

Program capstone emphasizes independent comprehensive review preparation for exams with synthesis of knowledge from the total graduate nursing curriculum and review of relevant literature in selected field of study.

Term Offered: Spring, Summer, Fall

NURS 6001 Nursing Care of Adults with Complex Health Problems

[5 credit hours]

Focus on management and care of patients with complex health problems in acute-care settings. Emphasis is on utilization of the nursing process, evidence-based care, leadership, interprofessional collaboration, refinement of clinical judgement, and decision-making skills for safe and effective quality health care.

Prerequisites: NURS 5001 with a minimum grade of B and NURS 5002 with a minimum grade of B and NURS 5003 with a minimum grade of B and NURS 5004 with a minimum grade of B and NURS 5005 with a minimum grade of B and NURS 5006 with a minimum grade of B and NURS 5007 with a minimum grade of B

Corequisites: NURS 5530, NURS 5910, NURS 6002

Term Offered: Fall

NURS 6002 Quality and Informatics in Healthcare

[3 credit hours]

Exploration of informatics utilized in and supporting evidence-based practice, and quality in healthcare. Utilization of theory, methods, tools, and processes for identifying and analyzing issues, appraisal of appropriate action selection, implementation, and evaluation for improvement and control of quality outcomes in healthcare organizations.

Corequisites: NURS 5530, NURS 5910, NURS 6001

Term Offered: Fall

NURS 6003 Experiencing Nursing Systems Practicum

[7 credit hours]

Focus on integration of nursing knowledge and skills in designing, implementing and evaluating nursing systems addressing client needs while partnered with an expert registered nurse in clinical experiences.

Prerequisites: NURS 5000 with a minimum grade of B and NURS 5004 with a minimum grade of B and NURS 5008 with a minimum grade of B and NURS 6001 with a minimum grade of B

Corequisites: NURS 6004

Term Offered: Spring

NURS 6004 Professional Nurse Competency

[2 credit hours]

Focus on preparation for the National council Licensure Examination for Registered Nurses NCLEX-RN, through content review and test-taking practice.

Prerequisites: NURS 5000 with a minimum grade of B and NURS 5001 with a minimum grade of B and NURS 5002 with a minimum grade of B and NURS 5003 with a minimum grade of B and NURS 5004 with a minimum grade of B and NURS 5005 with a minimum grade of B and NURS 5006 with a minimum grade of B and NURS 5007 with a minimum grade of B and NURS 5008 with a minimum grade of B and NURS 5009 with a minimum grade of B and NURS 5530 with a minimum grade of B and NURS 5910 with a minimum grade of B and NURS 6001 with a minimum grade of B and NURS 6002 with a minimum grade of B and INDI 6000 with a minimum grade of B

Corequisites: NURS 6003

Term Offered: Spring

NURS 6070 Adv Comm Skills Grp Dynamics

[3 credit hours]

Focuses on advanced therapeutic communication skills in the nurse-client relationship and analysis of Self-care agency. Complementary modalities are explored. Includes 30 clinical hours.

Term Offered: Fall

NURS 6140 Advanced Practice Nurse: Roles and Issues

[2 credit hours]

Focuses on the issues and role of the advanced practice nurse, including historical and current perspectives of the advanced role. Examines health care system issues pertaining to advanced practice.

Term Offered: Spring, Fall

NURS 6210 Family Nurse Practitioner Clinic I: Primary Care of Adolescent and Adult

[7 credit hours]

Focuses on primary care of common and chronic illness of adolescents and adults. Clinical experiences will continue to incorporate women and children, adults, and target populations. Includes 180 clinical hours.

Prerequisites: NURS 5740 with a minimum grade of B and NURS 5680 with a minimum grade of B

Term Offered: Summer

NURS 6220 Family Nurse Practitioner Clinical II: Primary Care of Women and Children

[7 credit hours]

Focuses on the primary care of children and women's health and includes normal prenatal care. Emphasis is on health promotion and common acute illness. Includes 180 clinical hours.

Prerequisites: NURS 6210 with a minimum grade of B and NURS 5690 with a minimum grade of B

Term Offered: Fall

NURS 6230 Family Nurse Practitioner Clinical III: Primary Care of Adults and Older Adults

[8 credit hours]

Focuses on primary care management of acute and chronic conditions of adults and older adults. Urgent care issues are addressed. Emphasizes integration of primary care concepts across the life span. Includes 240 clinical hours.

Prerequisites: NURS 6220 with a minimum grade of B

Term Offered: Spring

NURS 6310 Adult Gerontology Nurse Practitioner Theory and Clinical I Adolescents and Young Adults

[7 credit hours]

Holistic care of culturally diverse adolescents and young adults in multiple care settings. Assessment and management of common acute and chronic health problems with emphasis on health promotion and risk reduction.

Prerequisites: NURS 5740 with a minimum grade of B and NURS 5680 with a minimum grade of B

NURS 6320 Adult Gerontology Nurse Practitioner Theory and Clinical II Adults

[7 credit hours]

Holistic care of culturally diverse adults in multiple care settings with emphasis on gender specific health care needs and principles of health promotion and wellness.

Prerequisites: NURS 6310 with a minimum grade of B and NURS 5690 with a minimum grade of B

NURS 6330 Adult Gerontology Nurse Practitioner Theory and Clinical III Older Adults

[8 credit hours]

Holistic care of culturally diverse older adults in multiple care settings with emphasis on care management of acute and chronic conditions, emergent issues and end of life concerns.

Prerequisites: NURS 6320 with a minimum grade of B

NURS 6420 Acute Care Nurse Practitioner Clinical I: Acute Management of Late Adolescents and Young Adults

[8 credit hours]

The purpose of this course is to provide students with a strong foundation in clinical decision-making, role development, and procedural skills in the acute care management of diverse populations of late adolescents and young adult patients.

Prerequisites: (NURS 5400 with a minimum grade of B and NURS 5680 with a minimum grade of B and NURS 5690 with a minimum grade of B and NURS 5740 with a minimum grade of B and INDI 6000 with a minimum grade of C) or (NURS 7400 with a minimum grade of B and NURS 7680 with a minimum grade of B and NURS 7740 with a minimum grade of B or NURS 7170 with a minimum grade of B and NURS 7690 with a minimum grade of B and INDI 8000 with a minimum grade of C)

Term Offered: Spring, Summer, Fall

NURS 6430 Acute Care Nurse Practitioner Clinical II: Acute Management of Adults and Older Adults

[7 credit hours]

The purpose of this course is to integrate evidence-based clinical knowledge in diagnosing and acute care management of adults and older adults with complex, acute and chronic conditions.

Prerequisites: NURS 6420 with a minimum grade of B

Term Offered: Spring, Summer, Fall

NURS 6440 Acute Care Nurse Practitioner Clinical III: Acute Management of Older Adults and Frail Elderly

[8 credit hours]

The purpose of this course is to utilize evidence-based knowledge and advanced clinical skills in diagnosing and managing older adults and frail elderly with complex acute and chronic conditions.

Prerequisites: NURS 6430 with a minimum grade of B

Term Offered: Spring, Fall

NURS 6710 Develop Instruc Progm Nursing

[3 credit hours]

Focuses on skills to develop curricular components for nursing instructional programs. Examines the relationships among mission, philosophy, goals, and outcomes for various learning environments.

Term Offered: Summer

NURS 6720 Tchg, Lrng and Evaluation Nurs

[4 credit hours]

Focuses on teaching-learning theories, processes, strategies, and styles. Examines evaluation principles and strategies in the classroom and clinical setting.

Term Offered: Spring

NURS 6730 Practicum/Seminar in Teaching

[4 credit hours]

Applies knowledge of learning and evaluation theories in the development and implementation of a program of instruction. Within a seminar format, emphasizes significant issues in healthcare education.

Prerequisites: NURS 6710 with a minimum grade of B and NURS 6720 with a minimum grade of B

Term Offered: Fall

NURS 6890 Independent Study in Nursing

[1-4 credit hours]

The student and faculty member agree on a course of study that will enable the student to achieve his/her objectives. An Independent Study Contract and Evaluation Form are submitted to the Associate Dean of the Graduate Nursing Program. May be repeated for credit.

Term Offered: Spring, Summer, Fall

NURS 6990 Thesis Research

[1-3 credit hours]

Research in nursing to fulfill the research requirement of the Nursing Master's Program. The (required) 3 credit hours may be divided and repeated across semesters. Only 3 credit hours are applicable for the degree. May be repeated for credit.

Term Offered: Spring, Summer, Fall

NURS 7000 BSN-DNP Orientation

[1 credit hour]

Focuses on pertinent information needed by incoming students in the BSN-DNP Program. Emphasis on requirements of The University of Toledo and the College of Nursing to matriculate in the Program

Term Offered: Spring, Fall

NURS 7010 Scientific Basis of Nursing Practice

[3 credit hours]

This course examines nursing science from a broad range of perspectives. The emphasis is on identification and analysis of nursing phenomena, use of nursing science to manage phenomena, and evaluation of outcomes.

Term Offered: Fall

NURS 7011 Implementation Science for Evidence-Based Practice

[3 credit hours]

This 3-credit course examines the inter-relationship between theory, research, and practice along with the nature of scientific knowledge development in nursing. Focus is on critical analysis and evaluation of theory and its use for designing evidence-based practice protocols.

Prerequisites: NURS 7400 with a minimum grade of B

Term Offered: Spring, Summer, Fall

NURS 7020 Org Systems Leadership in Hlth

[3 credit hours]

This course examines the application of organizational and leadership theories and strategies to assess process and outcomes in a variety of health care settings. Focus is on the role of the advanced practice nurse in analyzing clinical patterns and issues in complex practice settings, health care organizations, and communities.

Term Offered: Fall

NURS 7030 Qual Mgmt/Perf Improve Hlth Or

[3 credit hours]

Examines principles/practice of quality management/clinical performance in care delivery and outcomes. Focuses on role and accountability of the advanced practice nurse/collaborative team for maintaining safety and improving quality of care.

Term Offered: Spring, Fall

NURS 7040 Applied Nursing Research

[3 credit hours]

This course builds on knowledge of research and clinical practice with emphasis on evidence-based practice. Students learn to critically examine and apply nursing research within the practice setting.

Term Offered: Spring, Fall

NURS 7050 Information and Technology in Nursing and Health Care Systems

[3 credit hours]

Systematic assessment of clinical and administrative information needs of health care systems. Examines the technology and strategies needed to support patients, nurses, and health care delivery in dynamic environmental systems.

Term Offered: Spring, Fall**NURS 7060 Population Health**

[3 credit hours]

This course uses epidemiologic models to analyze interventions for health care-delivery systems. The focus is on safe, ethical, equitable and culturally-appropriate advanced nursing practice activities to meet emerging world needs for population health.

Prerequisites: INDI 6000 with a minimum grade of B or INDI 8000 with a minimum grade of B

Term Offered: Spring, Summer, Fall**NURS 7070 Mktg/Entrep Act Cmplx Hlth Cr**

[3 credit hours]

This course examines marketing and entrepreneurial strategies for advanced nursing practice in complex health care systems. The focus is on creating and evaluating marketing plans and entrepreneurial activities.

Term Offered: Spring**NURS 7080 Evidence Based Nursing Practice in Direct Care**

[3 credit hours]

This course examines diagnostic laboratory and imaging methods as foundational evidence for assessment and intervention in the care of patient populations. The focus is on examining the basis for diagnosis using laboratory and imaging procedures, assessing the quality and reliability/sensitivity of diagnostic test results, understanding the technology used in diagnostic testing, and utilizing cost-benefit data in ordering diagnostic testing.

Term Offered: Spring, Fall**NURS 7090 Project Seminar**

[1-3 credit hours]

This course provides a forum to articulate and explore advanced nursing practice roles and responsibilities. The focus will be on leading nursing practice in patient advocacy, teaching, collaboration, and the design and provision of care.

Prerequisites: NURS 7040 with a minimum grade of B

Term Offered: Summer, Fall**NURS 7100 Doctoral Project**

[1-3 credit hours]

This course is guided, independent project utilizing research to improve patient outcomes, health care delivery, or nursing practice.

Prerequisites: NURS 7011 with a minimum grade of B

Term Offered: Spring, Summer, Fall**NURS 7170 Advanced Health Assessment for the DNP**

[4 credit hours]

Focuses on acquisition of advanced skills in collection and documentation of assessment data across the life span. Differentiates normal from abnormal findings. Supervised laboratory practice is required.

Prerequisites: NURS 7680 with a minimum grade of B

Term Offered: Summer**NURS 7180 Evidence-based Leadership in Complex Health Systems**

[3 credit hours]

This course examines evidence practices in administrative health care settings. The focus is on examining current status and creating and evaluating innovative administrative practices based on best practices. Competencies include model application for finance and clinical outcomes.

Prerequisites: NURS 7060 with a minimum grade of B

Term Offered: Fall**NURS 7200 Transformational and Systems Leadership for the DNP**

[3 credit hours]

This course examines the application of organizational and leadership theories and strategies to assess process and outcomes in a variety of health care settings. Focus is on the role of the advanced practice nurse in analyzing clinical patterns and issues in complex practice settings, health care organizations and communities.

Term Offered: Spring, Summer, Fall**NURS 7210 Family Nurse Practitioner Clinical I: Primary Care of Adolescents and Adults**

[7 credit hours]

Focuses on primary care of common/chronic illness of adolescents, adults includes beginning understanding of role of APN in primary care includes development of therapeutic relationships. Clinical experiences include populations across the lifespan.

Prerequisites: NURS 7680 with a minimum grade of B and NURS 7400 with a minimum grade of B and (NURS 7740 with a minimum grade of B or NURS 7170 with a minimum grade of B)

Corequisites: NURS 7690**Term Offered:** Summer**NURS 7220 Family Nurse Practitioner Clinical II: Primary Care of Women and Children**

[7 credit hours]

Focuses on primary care of children/women's health. Emphasis on health promotion and common acute illness, role development,

Prerequisites: NURS 7210 with a minimum grade of B and NURS 7690 with a minimum grade of B

Term Offered: Fall**NURS 7230 Family Nurse Practitioner Clinical III: Primary Care of Adults and Older Adults**

[8 credit hours]

Focuses on primary care management of acute/chronic conditions of adults/older adults. Urgent care issues are addressed. Emphasizes holistic care across the lifespan integrating primary care concepts. Explores professional APN leadership role.

Prerequisites: NURS 7220 with a minimum grade of B

Term Offered: Spring, Fall**NURS 7240 Quality, Safety and Advocacy Strategies**

[3 credit hours]

Examines the principles and practice of quality management in health care organizations and clinical performance in care delivery and outcomes. Focus is on the role and accountability of the DNP prepared nurse working with a collaborative team for maintaining safety, and improving quality of care.

Term Offered: Spring, Summer, Fall

NURS 7310 Adult Gerontology Nurse Practitioner Theory and Clinical I Adolescents and Young Adults

[7 credit hours]

Holistic care of culturally diverse adolescents and young adults in multiple care settings. Assessment and management of common acute and chronic health problems with emphasis on health promotion and risk reduction. Clinical experiences across the lifespan with ongoing development of the nurse practitioner role and scope of practice.

Prerequisites: NURS 7400 with a minimum grade of B and NURS 7680 with a minimum grade of B and (NURS 7740 with a minimum grade of B or NURS 7170 with a minimum grade of B)

Corequisites: NURS 7690

Term Offered: Spring

NURS 7320 Adult Gerontology Nurse Practitioner Theory and Clinical II Adults

[7 credit hours]

Holistic care of culturally diverse adults in multiple care settings with emphasis on gender specific health care needs and principles of health promotion and wellness. Clinical experiences across the adult lifespan with ongoing development of the nurse practitioner role and scope of practice.

Prerequisites: NURS 7310 with a minimum grade of B and NURS 7690 with a minimum grade of B

Term Offered: Fall

NURS 7330 Adult Gerontology Nurse Practitioner Theory and Clinical III Older Adults

[8 credit hours]

Holistic care of culturally diverse older adults (and families) in multiple care settings with emphasis on care management of acute and chronic conditions, emergent issues and end of life concerns. Clinical experiences across the adult lifespan with ongoing development of the nurse practitioner role and scope of practice.

Prerequisites: NURS 7320 with a minimum grade of B

Term Offered: Spring

NURS 7400 Theoretical Foundations of Advanced Nursing Practice

[2 credit hours]

Explores nursing as science and art. Identifies practice theory in the context of the nursing metaparadigm, grand and middle range theory with emphasis on analysis/evaluation of selected nursing theories.

Term Offered: Spring, Summer, Fall

NURS 7410 Ethical Foundations of Advanced Nursing Practice

[2 credit hours]

Examines the inter-relationship between theory, research, practice in ethical decision-making. Focuses on critical analysis/evaluation of selected ethical theories, values, professional codes of ethics related to evidence-based practices.

Prerequisites: NURS 7000 (may be taken concurrently) with a minimum grade of B and NURS 7400 (may be taken concurrently) with a minimum grade of B

Corequisites: NURS 7000

Term Offered: Spring

NURS 7420 Acute Care Nurse Practitioner Clinical I: Acute Management of Late Adolescents and Young Adults

[8 credit hours]

The purpose of this course is to provide students with a strong foundation in clinical decision-making, role development, and procedural skills in the acute care management of diverse populations of late adolescents and young adult patients.

Prerequisites: (NURS 5400 with a minimum grade of B and NURS 5680 with a minimum grade of B and NURS 5690 with a minimum grade of B and NURS 5740 with a minimum grade of B and INDI 6000 with a minimum grade of C) or (NURS 7400 with a minimum grade of B and NURS 7680 with a minimum grade of B and NURS 7740 with a minimum grade of B or NURS 7170 with a minimum grade of B and NURS 7690 with a minimum grade of B and INDI 8000 with a minimum grade of C)

Term Offered: Spring, Summer, Fall

NURS 7430 Acute Care Nurse Practitioner Clinical II: Acute Management of Adults and Older Adults

[7 credit hours]

The purpose of this course is to integrate evidence-based clinical knowledge in diagnosing and acute care management of adults and older adults with complex, acute and chronic conditions.

Prerequisites: NURS 6420 with a minimum grade of B

Term Offered: Spring, Fall

NURS 7440 Acute Care Nurse Practitioner Clinical III: Acute Management of Older Adults and Frail Elderly

[8 credit hours]

The purpose of this course is to utilize evidence-based knowledge and advanced clinical skills in diagnosing and managing older adults and frail elderly with complex acute and chronic conditions.

Prerequisites: NURS 6430 with a minimum grade of B

Term Offered: Spring

NURS 7500 Family and Cultural Diversity Theories

[3 credit hours]

Explores family and cultural diversity theories and process. Examines assessment, analysis, and evaluation of family function. Analyzes cultural competence of advanced practice nursing.

Term Offered: Spring, Fall

NURS 7530 Public Policy and Health Care

[3 credit hours]

Explores the public policy process from agenda setting through program evaluation. Focus is on how health problems are brought to the attention of government and solutions are obtained. Some field work is expected.

Term Offered: Spring, Summer, Fall

NURS 7610 Psychiatric-Mental Health Nurse Practitioner Theory and Clinical I Adult

[7 credit hours]

The first course in the Psychiatric-Mental Health Nurse Practitioner track focuses on preparing the student in the advanced practice role of assessment, diagnosis, and treatment planning of select acute and chronic psychiatric disorders and mental health care needs of individuals across the lifespan. Students will be introduced to clinical approaches and methods for assessing and evaluating adults.

Prerequisites: NURS 7050 with a minimum grade of B and NURS 7400 with a minimum grade of B and NURS 7680 with a minimum grade of B and (NURS 7740 with a minimum grade of B or NURS 7170 with a minimum grade of B)

Corequisites: NURS 7690

Term Offered: Summer

NURS 7620 Psychiatric-Mental Health Nurse Practitioner Theory and Clinical II Child, Adolescent, Family

[7 credit hours]

Emphasis on increasing ability to assess, diagnose, and treat more complex mental health care needs of individuals and families with particular attention paid to those disorders found in childhood and adolescence.

Prerequisites: NURS 7610 with a minimum grade of B and NURS 7690 with a minimum grade of B

Term Offered: Fall

NURS 7630 Psychiatric-Mental Health Nurse Practitioner Theory and Clinical III Older Adult

[9 credit hours]

Focus on acute or chronic psychiatric or mental health issues faced by older adults and their families- dementia, delirium, and depression.

Prerequisites: NURS 7610 with a minimum grade of B and NURS 7620 with a minimum grade of B

Term Offered: Spring, Fall

NURS 7680 Advanced Physiology and Pathophysiology

[3 credit hours]

Focuses on advanced physiologic and pathophysiologic mechanisms underlying human responses to illness across their life-span. Students will build on existing knowledge of human anatomy and physiology.

Term Offered: Spring, Fall

NURS 7690 Advanced Pharmacotherapeutics

[3 credit hours]

Focuses on advanced pharmacologic principles in decision making for pharmacotherapy. Emphasizes physiological responses to drugs, expected outcomes, adverse reactions, and potential drug interactions. Discusses professional responsibilities of prescriptive privileges.

Prerequisites: NURS 7680 with a minimum grade of B

Term Offered: Spring, Fall

NURS 7740 Advanced Health Assessment

[4 credit hours]

Focuses on acquisition of advanced skills in collection and documentation of assessment data across the life span. Differentiates normal from abnormal findings. Supervised laboratory practice is required. Course Enrollment is Limited. Includes 60 hours laboratory.

Prerequisites: NURS 5680 with a minimum grade of B

Term Offered: Spring

NURS 7810 Pediatric Nurse Practitioner Clinical I: Care of Children and Concepts of Wellness

[6 credit hours]

Health care for children/adolescents, principles of health promotion/wellness. Understanding of APN role in primary care, development of therapeutic relationships. Competencies in primary care for children from birth to 21 years and families.

Prerequisites: NURS 7400 with a minimum grade of B and NURS 7680 with a minimum grade of B and (NURS 7740 with a minimum grade of B or NURS 7170 with a minimum grade of B)

Corequisites: NURS 7690

Term Offered: Spring

NURS 7820 Pediatric Nurse Practitioner Clinical II: Common Acute, and Stable Chronic Illnesses

[6 credit hours]

Care of children/adolescents with an emphasis on the management of common acute and stable chronic illnesses and APN role development. Includes therapeutic communication skills development with individuals and groups.

Prerequisites: NURS 7810 with a minimum grade of B and NURS 7690 with a minimum grade of B

Term Offered: Fall

NURS 7830 Pediatric Nurse Practitioner Clinical III: Complex Chronic Illnesses or Disabilities

[6 credit hours]

Management of complex acute/chronic conditions in children/adolescents. Holistic care for children and families including developmental concerns and disability. Explores APN leadership role. Integration of the advanced practice role.

Prerequisites: NURS 7820 with a minimum grade of B

Term Offered: Spring

NURS 7890 Independent Study

[1-4 credit hours]

NURS 7890 is an academic course completed outside of the required classroom, clinical or college laboratory experiences that provide the learner with an opportunity to pursue an area of interest in depth. This course may not be used to substitute for required courses. The course is supervised by a faculty member and approved by the Program director. A contract must be completed by the student and approved by the faculty member and the program director prior to the semester in which the Independent Study is to be conducted. Faculty approval is required before the student can register for this course.

Term Offered: Spring, Summer, Fall

NURS 7910 Advanced Research for Evidence Based Nursing Practice

[3 credit hours]

Critically evaluate published research for clinical relevance, identify a research problem, select a conceptual framework, review selected literature, and prepare a quantitative or qualitative research proposal.

Prerequisites: (NURS 5400 with a minimum grade of B and INDI 6000 with a minimum grade of C) or (NURS 7400 with a minimum grade of B and INDI 8000 with a minimum grade of C)

Term Offered: Spring, Summer, Fall

NURS 7920 Outcomes Methods for Advanced Practice Nurses

[3 credit hours]

Emphasis on statistical methods associated with outcome measurement, experimental and quasi-experimental designs, meta-analysis and meta-synthesis. Evaluates nursing evidence in support of evidence-based practice protocol, development and evaluation.

Prerequisites: INDI 8000 with a minimum grade of B and NURS 7910 with a minimum grade of B

Corequisites: NURS 7040

Term Offered: Fall

NURS 7970 Final Practicum (Direct Care)

[1-6 credit hours]

Individually precepted practicum that requires advanced nursing practice with individuals and groups. Includes seminar that facilitates synthesis and application of all prior learning for evidence-based practice.

Prerequisites: NURS 7010 with a minimum grade of B and NURS 7011 with a minimum grade of B

Term Offered: Spring, Summer, Fall

NURS 7980 Final Practicum (Indirect Care)

[1-6 credit hours]

Individually precepted practicum that requires leadership and practice at the aggregate/systems/organizational level of health care. Includes required seminar that facilitates application, synthesis, and evaluation of prior learning in applied practice.

Term Offered: Spring, Summer, Fall

NURS 8010 Proposal/Practicum DNP Project 1

[5 credit hours]

First of three DNP project courses to prepare student to develop a project proposal for defense.

Prerequisites: NURS 7400 with a minimum grade of B and NURS 7910 with a minimum grade of B and INDI 8000 with a minimum grade of B and NURS 7011 with a minimum grade of B

Term Offered: Spring, Summer, Fall

NURS 8020 Implementation/Practicum DNP Project 2

[5 credit hours]

Advance the scholarship of nursing through the implementation of a rigorous DNP project including the interpretation, analysis, and application of evidence-based practice to improve health outcomes of a focused population.

Prerequisites: NURS 8010 with a minimum grade of S

Term Offered: Spring, Summer, Fall

NURS 8030 Implementation/Practicum DNP Project 3

[5 credit hours]

Provide analysis and evaluation of strategies that facilitate knowledge dissemination in clinical and academic settings. Facilitate the student developing two scholarly manuscripts and a scholarly presentation of their DNP project.

Prerequisites: NURS 8020 with a minimum grade of S

Term Offered: Spring, Summer, Fall

NURS 8210 Management and Leadership Skills for the DNP Nurse Executive

[6 credit hours]

This course builds on core DNP leadership and management skills by focusing on the professional role of the nurse executive including their leadership potential in context of healthcare reform and transformation.

Prerequisites: NURS 7400 with a minimum grade of B and NURS 7910 with a minimum grade of B and NURS 7011 with a minimum grade of B and NURS 7530 with a minimum grade of B and NURS 7050 with a minimum grade of B and INDI 8000 with a minimum grade of B and NURS 7060 with a minimum grade of B and NURS 7200 with a minimum grade of B and NURS 7240 with a minimum grade of B

Term Offered: Spring, Summer, Fall

NURS 8220 Business Skills for the DNP Nurse Executive

[6 credit hours]

This course is designed to teach essential business skills necessary for the nurse executive. Business skills include financial management, human resource management strategic management, and information management and technology.

Prerequisites: NURS 8210 with a minimum grade of B

Term Offered: Spring, Summer, Fall

NURS 8230 Entrepreneurship Seminar for the DNP Nurse Executive

[6 credit hours]

This seminar is designed to teach entrepreneurial critical thinking skills for the identification and resolution of business problems in the healthcare setting. The course includes the design of a business plan.

Prerequisites: NURS 8220 with a minimum grade of B

Term Offered: Spring, Summer, Fall

Occupational Therapy (OCCT)

OCCT 7000 Foundations of Occupational Therapy

[3 credit hours]

This course introduces students to the history, philosophy, core concepts, ethics, and the domain and process of occupational therapy. Students also explore the basic tenets of therapeutic occupation and investigate the role that chosen occupations play within an individual's daily life. Professional skills in occupational analysis and professional communication are introduced and applied. Students also complete concurrent lab experiences with students from other health care professions as part of the university-wide Interprofessional Education Program. Prerequisite: Admission to OTD Program

Term Offered: Fall

OCCT 7010 OT Models of Practice I

[5 credit hours]

Examines the biomechanical model of practice including its musculoskeletal and kinesiological foundations. Includes assessments and interventions for prevention, adaptation, and compensation.

Prerequisite: Admission to OTD Program

Term Offered: Fall

OCCT 7020 OT Models of Practice II

[5 credit hours]

An introduction to the nervous system, with emphasis on the neurological basis of human occupation and the effects of neurological conditions (disease, injury, and mental illness) on occupational performance. Explores neuroplasticity and neuro rehabilitation. Labs include neuroanatomy and clinical assessment. Prerequisite: Occupational Therapy Models of Practice I Co-requisite: Occupational Therapy Models of Practice III

Term Offered: Spring**OCCT 7030 OT Models of Practice III**

[4 credit hours]

Explores historical and alternative conceptual frameworks of occupation and therapeutic occupation. Examines cognitively based and general models of practice. Presents related assessments and interventions for prevention, adaptation, and compensation. Prerequisite: Occupational Therapy Models of Practice I Co-requisite: Occupational Therapy Models of Practice II

Term Offered: Spring**OCCT 7040 OT Models of Practice IV**

[5 credit hours]

Focuses on the occupational therapy process and models of practice for intervention with children and individuals with neurological impairments, including assessment and intervention. Prerequisite: Occupational Therapy Models of Practice II

Term Offered: Summer**OCCT 7110 Research in OT I**

[4 credit hours]

Examines quantitative and qualitative research methodologies. Includes critical analysis of occupational therapy research. Explores areas of possible research interest with guidance from potential major advisors. Fall Prerequisite: Admission to the OTD Program

Term Offered: Fall**OCCT 7210 OT Advocacy I**

[2 credit hours]

Explores the role of occupational therapist as educator. Examines educational theory, instructional methods and technology, and evaluation of teaching effectiveness with patients, families, peers, supervisees, and community groups. Fall Prerequisite: Admission to OTD Program

Term Offered: Fall**OCCT 7220 OT Advocacy II**

[2 credit hours]

Applies teaching principles as students assume the role of educators to the community. Explores the role of the therapist in design, development, implementation, and evaluation of occupational therapy curricula. Integrates presentation of self and professionalism. Summer Prerequisite: Occupational Therapy Advocacy I

Term Offered: Summer**OCCT 7310 FW and Professional Dev I**

[1 credit hour]

Introduces Level I and Level II Fieldwork, and the Capstone Experience, including policy, procedures, and documentation and the portfolio assignment. Defines professional behavior and health care communication. Encourages discussion of Level I fieldwork experiences. Includes Level I fieldwork experience. Prerequisite: Admission to the OTD Program

Term Offered: Fall**OCCT 7320 FW and Professional Dev II**

[1 credit hour]

Emphasizes interviewing clients for an occupational profile. Encourages discussion of Level I fieldwork experiences. Introduces the course sequence of the Capstone Experience. Includes Level I fieldwork experience. Prerequisite: Fieldwork and Professional Development Seminar I

Term Offered: Spring**OCCT 7330 FW and Professional Dev III**

[1 credit hour]

Introduces Capstone Seminar opportunities in teaching, research, program development, or clinical practice. Introduces Capstone Manual and structure for planning the individualized Capstone Experience. Provides a forum for discussion fieldwork experiences. Summer Prerequisite: Fieldwork and Professional Development Seminar II

Term Offered: Summer**OCCT 7400 Conditions in OT**

[2 credit hours]

Reviews the physical and mental health conditions that challenge successful and satisfying occupational performance, with an emphasis on the aspects of medical management and rehabilitation relevant to the role of the occupational therapist. Spring Prerequisite: Occupational Therapy Advocacy I

Term Offered: Spring**OCCT 7610 Orientation to Interprofessional Teaming**

[1 credit hour]

Orientation to the Graduate Certificate in Teaming in Early Childhood. Focus on individual competencies needed to work collaboratively to meet the needs of young children with disabilities and their families.

Prerequisites: SPED 5270 with a minimum grade of D-**Term Offered:** Summer**OCCT 7620 Leadership and Advocacy in Interprofessional Teaming**

[1 credit hour]

This second seminar in the Graduate Certificate in Teaming in Early Childhood focuses on skills and policies that promote best practices in teaming to support young children with disabilities.

Prerequisites: SPED 5270 with a minimum grade of D- and OCCT 7610 with a minimum grade of D-**Term Offered:** Summer, Fall

OCCT 7630 Evidence-Based Practice and Innovation in Interprofessional Teaming

[1 credit hour]

This third seminar in the Graduate Certificate in Teaming in Early Childhood provides students the opportunity to reflect on their practicum experiences in teaming to support young children with disabilities.

Prerequisites: OCCT 7620 with a minimum grade of D-

Corequisites: OCCT 7640

Term Offered: Spring, Summer

OCCT 7640 Practicum in Interprofessional Teaming

[2 credit hours]

The practicum is provides an opportunity to engage in interprofessional teaming in order to provide integrated services to young children with special needs in an inclusive setting.

Prerequisites: OCCT 7620 with a minimum grade of D-

Corequisites: OCCT 7630

Term Offered: Spring, Summer

OCCT 8050 OT Models of Practice V

[5 credit hours]

Advances clinical reasoning for occupational therapy practice to support occupational performance throughout the lifespan, including prevention of occupational impairment. Prerequisite: Occupational Therapy Models of Practice IV Co-requisite: Occupational Therapy Models of Practice VI

Term Offered: Spring, Fall

OCCT 8060 OT Models of Practice VI

[4 credit hours]

Examines compensation-oriented models of practice including assistive technology, positioning, patient handling, and mobility. Presents occupational and non-occupational assessments and interventions for prevention, adaptation, and compensation. Prerequisite: Occupational Therapy Models IV Co-requisite: Occupational Therapy Models V

Term Offered: Fall

OCCT 8070 OT Models of Practice VII

[4 credit hours]

Examines contemporary and possible models of practice emphasizing wellness, health promotion, community care, population-based intervention and other emerging trends. Provides students with leadership experiences in program development. Prerequisite: Occupational Therapy Models of Practice VI Corequisite: Occupational Therapy Models of Practice VIII

Term Offered: Spring

OCCT 8080 OT Models of Practice VIII

[3 credit hours]

Models of practice emphasizing group occupational forms, group process, and therapeutic use of self in groups. Involves practice in assessment and intervention with persons experiencing both physical and mental health conditions. Prerequisite: Occupational Therapy Models of Practice VI Co-requisite: Occupational Therapy Models of Practice VII

Term Offered: Spring, Fall

OCCT 8120 Research in OT II

[3 credit hours]

Provides structure for student, guided by faculty mentor, to define a research question, investigate the literature, explore the site(s) for data collection, and prepare preliminary research proposal. Involves individual faculty contact. Spring Prerequisite: Research in Occupational Therapy I

Term Offered: Spring

OCCT 8130 Research in Occ Therapy III

[3 credit hours]

Provides structure for student to begin data collection after obtaining official approval of project by major advisor and institutional review board. Involves individual faculty contact. Fall, Spring, Summer

Prerequisite: Research in Occupational Therapy II

Term Offered: Spring, Fall

OCCT 8140 Research in OT IV

[3 credit hours]

Includes completion of data collection, analysis of results, submission of approved final project in journal article format, and formal presentation of the research project. Involves individual faculty contact. Fall, Spring, Summer Prerequisite: Research in Occupational Therapy III

Term Offered: Spring, Summer, Fall

OCCT 8230 OT Advocacy III

[2 credit hours]

Identifies advocacy issues relevant to occupational therapy and introduces community resources that can enhance successful and satisfying reintegration back into home, school, work, and/or community. Explores legislation and ethical issues that influence health care provision. Fall Prerequisite: Occupational Therapy Advocacy II

Term Offered: Fall

OCCT 8240 OT Advocacy IV

[3 credit hours]

Examines leadership, management, and supervision of occupational therapy services in a dynamic health care system. Addresses legislative, regulatory, and payment issues affecting program development. Encourages leadership development. Spring Prerequisite: Occupational Therapy Advocacy III

Term Offered: Spring

OCCT 8340 FW and Professional Dev IV

[1 credit hour]

Addresses communication with children, family members, and health care professionals; ethics and safety; and cultural diversity. Students identify Capstone Practicum sites, site mentor(s), and the faculty mentor. A forum for discussion of Level I fieldwork experiences is provided. Level I fieldwork experience is included. Prerequisite: Fieldwork and Professional Development Seminar II

Term Offered: Fall

OCCT 8350 FW and Professional Dev V

[3 credit hours]

Addresses issues of clinical supervision; Level II fieldwork policy, procedures, and documentation; and professional development. A forum for discussion of Level I fieldwork experiences is provided. Students develop a comprehensive Capstone Proposal. Includes Level I fieldwork experience. Prerequisite: Fieldwork and Professional Development Seminar IV

Term Offered: Spring

OCCT 8360 Fieldwork Level II

[3 credit hours]

Provides a 12 - week, full-time, supervised fieldwork experience where students refine entry-level abilities to integrate occupational therapy theory, research, and practice under supervision and with collaboration of the academic institution. An on-line forum for discussion of Level II fieldwork experiences is provided. Prerequisite: Completion of academic content except research, which may be taken concurrently

Term Offered: Spring, Summer, Fall**OCCT 8370 Fieldwork Level II**

[6 credit hours]

Provides a 12 - week, full-time, supervised fieldwork experience where students refine entry-level abilities to integrate occupational therapy theory, research, and practice under supervision and with collaboration of the academic institution. An on-line forum for discussion of Level II fieldwork experiences is provided. Prerequisite: OCCT 8360 and completion of academic content except research, which may be taken concurrently

Prerequisites: OCCT 8360 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall**OCCT 8380 Capstone Practicum**

[6 credit hours]

Students develop skills in teaching, research, program development, advocacy or clinical practice with mentorship by faculty and on-site practitioners. This course, in combination with OCCT 8900 and OCCT 8910 requires documentation of 560 hours. Prerequisite: Level II FW, competency exam, all courses except research

Corequisites: OCCT 8900, OCCT 8910**Term Offered:** Spring, Summer, Fall**OCCT 8400 Phys Agent Mod and Non Occ Met**

[2 credit hours]

Addresses non-occupational methods including physical agent modalities and technology used with medically complex patients. Covers scientific underpinnings and regulatory guidelines for appropriate use of physical agent modalities in occupational therapy. Summer Prerequisite: Occupational Models of Practice VI

Term Offered: Summer**OCCT 8800 Independent Study OT**

[0-12 credit hours]

Intensive study in a field of interest, including theoretical and experimental work. May be repeated for credit. Prerequisite: Admission to OTD program or consent of instructor Fall, Spring, Summer

Term Offered: Summer, Fall**OCCT 8900 Mentored Capstone Dissemination**

[3 credit hours]

Focuses on individualized issues arising in the Capstone Practicum. Involves mentorship by site and faculty practitioners and culminates in a paper and a presentation dealing with a specific area within occupational therapy. Spring Prerequisite: Level II fieldwork and completion of academic content except research, which may be taken concurrently Co-requisites: Mentored Studies in Capstone Area or approved elective and Capstone Practicum

Term Offered: Spring, Summer, Fall**OCCT 8910 Mentored Studies:Capstone Area**

[3 credit hours]

Focuses on mastery of literature and in-depth knowledge of an area within occupational therapy through exploration of library, electronic, and clinical resources. Lends theoretical and research support to the Capstone Practicum. Spring Prerequisite: Level II fieldwork and completion of academic content except research, which may be taken concurrently Co-requisites: Mentored Capstone Dissemination and Capstone Fieldwork Practicum

Term Offered: Spring, Summer, Fall

Operations & Supply Chain Management (OSCM)

OSCM 5510 Business Statistics With Computer Applications

[3 credit hours]

The application of statistics to business problem solving. Topics include descriptive statistics, probability theory, confidence intervals, hypothesis testing, sampling, ANOVA, chi-square tests, regression and correlation analysis, and concepts of business analytics.

OSCM 5520 Analysis of Manufacturing and Service Systems

[3 credit hours]

Concepts, methods, tools and techniques for designing and managing manufacturing and service systems in the context of a supply chain are discussed. Topics include creating flexible and efficient systems for producing services and goods, total quality management, inventory management, and scheduling.

Prerequisites: OPMT 5510 with a minimum grade of C or OSCM 5510 with a minimum grade of C

OSCM 6250 Essentials of Business Analytics

[3 credit hours]

This course provides a broad understanding of tools, techniques and business issues in using business analytics. It extends data visualization and predictive analysis tools gained in statistics courses. It also introduces decision analysis and develops comprehension of evaluative tools such as spreadsheet modeling. Skills in problem identification and analysis will be developed through the use of cases.

OSCM 6270 Simulation and Waiting Lines

[3 credit hours]

Students are introduced to modeling uncertainty in supply chain systems using simulation. Simulation will be introduced through spread sheet as well as simulation software (e.g., @Risk, Simul8, ARENA). Topics such as fitting distributions, validation, verification, confidence intervals, experimental design as well as an introduction to waiting line models and comparison of simulation with analytical models will be covered.

Prerequisites: OPMT 5520 with a minimum grade of C or OSCM 5520 with a minimum grade of C or BUAD 3020 with a minimum grade of C

OSCM 6350 Prescriptive Analytics

[3 credit hours]

This course requires students to apply software tools that are used within businesses for advanced modeling practices. In particular, students will explore prescriptive analytics techniques used in optimization and simulation. Students are expected to demonstrate the skills learned in this class with course assignments based on real-world cases.

Term Offered: Spring, Fall

OSCM 6550 Business Analytics and Cases

[3 credit hours]

The goal of this course is to present an emerging or new topic in business analytics, for which we do not have a regular course. Students learn how to make optimal business strategy/decision by applying business analytics techniques and tools through case-based study.

Prerequisites: OSCM 5520 with a minimum grade of D-

Term Offered: Spring

OSCM 6680 Quality Management and Six Sigma

[3 credit hours]

The course introduces students to the TQM philosophy, concepts and statistical theory behind the tools will be discussed. It also addresses process improvement, lean, six sigma and related topics. Provides students with an overall approach for the design of a system to manage quality and reliability along the entire value chain.

Prerequisites: OPMT 5520 with a minimum grade of C or OSCM 5520 with a minimum grade of C or BUAD 3020 with a minimum grade of C

OSCM 6690 Supply Chain Resources Management

[3 credit hours]

Study of operations planning, scheduling, and inventory systems with tools such as MRP, JIT and bottleneck approaches in the context of supply chains through business cases where appropriate.

Prerequisites: OPMT 5520 with a minimum grade of C or OSCM 5520 with a minimum grade of C or BUAD 3020 with a minimum grade of C

OSCM 6780 ERP Systems Process Management

[3 credit hours]

This course will provide students an overview of the fundamental business processes and examination of the application of business enterprise software using SAP. Issues include software deployment that supports transaction processing in the business supply chain. Also, students will work on various hands-on exercises including process of entire business cycle with a fictitious company and implementation of simple application with netweaver development platform.

Term Offered: Fall

OSCM 6950 Capstone Project

[3 credit hours]

In this culminating project, students draw on the breadth and depth of the curriculum to address an industry supplied problem in small teams. Students will explore descriptive, prescriptive and/or prescriptive analytics as is appropriate to their design project.

Prerequisites: INFS 6450 with a minimum grade of D- and OSCM 6350 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

OSCM 6960 Masters Thesis

[1-6 credit hours]

Master's thesis: To study a research problem in depth and solve the problem and write an academic or scholarly paper or develop a teaching instrument such as case or game based on the research.

Prerequisites: OPMT 5520 with a minimum grade of C or OSCM 5520 with a minimum grade of C

OSCM 6980 Special Topics in Operations and Supply Chain Management

[3 credit hours]

The goal of this course is to present an emerging or new topic in Operations and Supply Chain Management for which we do not have a regular course.

Prerequisites: OSCM 5520 with a minimum grade of C or OPMT 5520 with a minimum grade of C

OSCM 7520 Analysis of Manufacturing and Service Systems

[3 credit hours]

Concepts, methods, tools and techniques for designing and managing manufacturing and service systems in the context of a supply chain are discussed. Topics include creating flexible and efficient systems for producing services and goods, total quality management, inventory management, and scheduling.

Prerequisites: OPMT 5510 with a minimum grade of C or OSCM 5510 with a minimum grade of C

OSCM 8270 Simulation and Waiting Lines

[3 credit hours]

Students are introduced to modeling uncertainty in supply chain systems using simulation. Simulation will be introduced through spread sheet as well as simulation software (e.g., @Risk, Simul8, ARENA). Topics such as fitting distributions, validation, verification, confidence intervals, experimental design as well as an introduction to waiting line models and comparison of simulation with analytical models will be covered.

Prerequisites: OPMT 5520 with a minimum grade of C or OSCM 5520 with a minimum grade of C

OSCM 8680 Quality Management and Six Sigma

[3 credit hours]

The course introduces students to the TQM philosophy, concepts and statistical theory behind the tools will be discussed. It also addresses process improvement, lean, six sigma and related topics. Provides students with an overall approach for the design of a system to manage quality and reliability along the entire value chain.

Prerequisites: OPMT 5520 with a minimum grade of C or OSCM 5520 with a minimum grade of C

OSCM 8690 Supply Chain Resources Management

[3 credit hours]

Study of Operations planning, scheduling, and inventory systems with tools such as MRP, JIT and bottleneck approaches in the context of Supply Chains through business cases where appropriate.

Prerequisites: OPMT 5520 with a minimum grade of C or OSCM 5520 with a minimum grade of C or BUAD 5520 with a minimum grade of C

Orthopedics (ORTH)

ORTH 5700 Orthopaedic X-Ray Conference

[2 credit hours]

Weekly discussion of interesting and challenging clinical orthopaedic cases through X-ray conference discussion. Management and treatment options of each case presented also are discussed. May be repeated for credit.

Term Offered: Spring, Summer, Fall

ORTH 5800 Ortho Bone Physiology

[3 credit hours]

Lecture topics will include the physiology of bone fracture healing process, bone adaptation, molecular genetics of the musculoskeletal system, bone tumor process, etc. This course serves to provide the student with a good general knowledge of bone physiology and its function.

Term Offered: Spring, Fall**ORTH 5850 Introduction to Clinical Orthopaedics**

[3 credit hours]

Introduction to Clinical Orthopaedics provides an overview of the various sub-specialties within Orthopaedic Surgery. Students are familiarized to the clinic and operating room setting. They will be taught the importance of common physical exam findings, interpretation of radiographic studies and the importance of routine laboratory tests as they relate to conditions of the musculoskeletal system.

Term Offered: Spring, Summer, Fall**ORTH 5900 Orthopaedic Biomechanics I**

[3 credit hours]

Introduction to the basic biomechanics concept in orthopaedics. Lectures will include statistics and dynamics analysis of forces as applied to the musculoskeletal system. Topics to be covered will also include biomechanics of fixation devices, modeling effects of bone, stress shielding, micro- and macroscopic analysis of bone mechanics, etc.

Term Offered: Summer, Fall**ORTH 5910 Thesis Research Neurosci Neuro**

[3 credit hours]

This course concentrates on the studies of body joint mechanics and the dynamics of joint motion. Lectures also will include artificial joint prosthesis designs, including new orthopaedic devices and implants.

Term Offered: Spring**ORTH 5920 Orthopaedic Biomechanics III**

[3 credit hours]

This course will cover principally motion analysis, gait, and rehabilitation biomechanics as they apply to the orthopaedic patient. Lectures will include 3-D motion analysis as well as a force plate quantification of gait and movement.

Term Offered: Fall**ORTH 6500 Orthopaedic Basic Science Sem**

[3 credit hours]

Weekly lectures on various orthopaedic topics ranging from bone histology to biomechanics. The lectures focus on the basic science of orthopaedics, including the physiology, biochemistry, genetics, anatomy, etc. of the musculoskeletal system. May be repeated for credit.

Term Offered: Spring, Fall**ORTH 6550 Jrnl Rev Orthopaedic Science**

[1 credit hour]

Orthopaedic Grand Rounds is a conference format where nationally known authorities on orthopaedic topics present a talk, followed by discussion of challenging clinical cases presented to the speaker. Usually the topics involve the latest state-of-the-art orthopaedic treatments or breakthroughs. The Journal Club meetings are seminar discussions of the latest scientific research articles from professionally recognized journals. May be repeated for credit.

Term Offered: Spring, Summer, Fall**ORTH 6750 Biomaterials in Medicine**

[3 credit hours]

Biomaterials use in wide variety range of applications in medicine including drug delivery carriers and replacement of tissues.

Term Offered: Spring**ORTH 6910 Orthopaedic Trauma**

[1 credit hour]

Topics could include the trauma of musculoskeletal system, the pathogenesis, treatment options and clinical outcomes; may involve theoretical and/or experimental work. May be repeated for credit.

Term Offered: Summer, Fall**ORTH 6920 Orthopaedic Spine**

[1 credit hour]

Focus will be on spine mechanics, anatomy, spine fixation devices, clinical outcome of spine surgeries, etc. May involve theoretical and/or experimental work. May be repeated for credit.

Term Offered: Summer, Fall**ORTH 6940 Adult Reconstruction & Tumor**

[1-3 credit hours]

ORTH 6940 is a clinical elective in Adult Reconstruction and Orthopaedic Oncology. Students will gain familiarity with concepts in joint replacement and the problems associated with it. Students will have the opportunity to observe hip and knee replacement surgeries. There is also exposure to tumors of the musculoskeletal system and reconstructive options for their treatment. Students will spend 1 – 3 hours per week with a physician in those specialties.

Term Offered: Spring, Summer, Fall**ORTH 6960 Upper Extremity and Hand**

[3 credit hours]

Topics will include (but are not limited to) study of the biomechanics of the upper extremity and hand, brachial plexus injuries, treatment options, surgical exposures, detail anatomy, etc. May involve theoretical and/or experimental work. May be repeated for credit.

Term Offered: Spring, Fall**ORTH 6990 Thesis Research**

[3-6 credit hours]

Each student is required to work with a mentor on a research project that may include laboratory and/or clinical research on a project of interest to Orthopaedics..... Each student will be expected to have a committee consisting of no less than 3 faculty members, including the student's mentor as the chair of the committee. Regular meetings will be scheduled to review the thesis project and ensure progress towards completion of the thesis research in a timely manner. The student will be expected to write a thesis at the completion of their project and defend this to their committee and give a public presentation.

Term Offered: Spring, Summer, Fall**ORTH 8750 Biomaterials in Medicine**

[3 credit hours]

Biomaterials use in wide variety range of applications in medicine including drug delivery carriers and replacement of tissues.

Term Offered: Spring

Pathology (PATH)

PATH 6040 Pathology Assistants: Medical Ethics

[1 credit hour]

This course is an introduction to Medical Ethics for the Pathology Assistant. Focus is on the issues faced by the pathologist and pathology assistants. The course will be seminar based and will involve presentations and case discussions.

Term Offered: Spring

PATH 6050 Clinical Neuropathology

[1 credit hour]

PATH 6060 Surgical Clinical Rotation

[0-4 credit hours]

Introduces students to surgical pathology and cytology including gross evaluation of tissues, tissue processing and microscopic evaluation of diseased human tissues to render a diagnosis, recommend treatment and evaluate prognosis. In addition, students will attend and/or present case materials at conferences.

Term Offered: Spring, Summer, Fall

PATH 6070 Intro Clinical Lab Medicine

[0-4 credit hours]

An introductory course designed to acquaint students with the laboratory tests that are available in the clinical laboratory, prioritization of test ordering, how the tests are performed and their usefulness in clinical diagnosis and clinical investigation.

Term Offered: Spring, Summer, Fall

PATH 6080 Postmortem Clinical Rotation

[0-4 credit hours]

An introductory course designed to acquaint students with the autopsy. It consists of a series of lectures, demonstrations and readings pertaining to the human autopsy. Students will be involved in the actual performance of autopsies, the selection of appropriate tissues for microscopic examination, microscopic examination of tissues, rendering a diagnosis and completing autopsy reports. The autopsies are performed at MCO and the Lucas County Coroner's Office.

Term Offered: Spring, Summer, Fall

PATH 6720 Current Topics in Pathology

[1-4 credit hours]

A lecture and/or seminar course in topics of current interest in pathology with special emphasis on the fundamentals of mammalian, especially human, life under normal, experimental, or pathological conditions. Students and department faculty will present and moderate the discussion of original research publications. May be repeated for credit.

PATH 6730 Research in Pathology

[1-4 credit hours]

Students will participate in selected ongoing research programs of the department faculty. May be repeated for credit.

PATH 6770 Embryology and Teratology

[1 credit hour]

This course provides a post-graduate level understanding of molecular, genetic, cellular and environmental mechanisms involved in: 1. Early human embryonic development i.e. primordial germ cell information, gamete formation, fertilization, blastulation, implantation and gastrulation (formation of bilaminar and trilaminar germ discs) and associated pathological malformations or diseases and 2. Normal and abnormal development of selected tissues, body organs and systems, and their pathological manifestations.

Term Offered: Spring

PATH 6780 Histology and Cell Physiology I

[2 credit hours]

The course is intended to introduce histologic techniques including tissue fixation, processing, staining, microtomy, and the special techniques of histochemistry and immunocytochemistry for light microscopy: in addition basic optics and the use of bright field, phase contrast and fluorescence microscopy will be addressed. The course will integrate microscopic anatomy. The course is intended to integrate microscopic anatomy with tissue specific physiology. The course schedule is designed to meld with the disease content of the organ systems of the medical school curriculum to provide a basis of normal microscopic anatomy (histology) and specific functions of organ specific cell types. There is a strong emphasis on independent study of cell physiology to accompany didactic presentations of microscopic anatomy including utilization of virtual tissue slides.

Prerequisites: ANAT 5000 with a minimum grade of D-

PATH 6790 Histology and Cell Physiology II

[2 credit hours]

The course is intended to integrate microscopic anatomy with tissue specific physiology. The course schedule is designed to meld with the disease content of the organ systems of the medical school curriculum to provide a basis of normal microscopic anatomy (histology) and specific functions of organ specific cell types. There is a strong emphasis on independent study of cell physiology to accompany didactic presentations of microscopic anatomy including utilization of virtual tissue slides.

Prerequisites: PATH 6780 with a minimum grade of D-

PATH 6890 Independent Study in Pathology

[0-12 credit hours]

Intensive study in field of interest, including theoretical and experimental work. May be repeated for credit.

Term Offered: Spring, Summer, Fall

PATH 7050 Clinical Neuropathology

[1 credit hour]

PATH 7130 Pathology Case Studies

[1-6 credit hours]

Present, discuss and provide clinical pathologic correlation on various disease process. Interpret lab tests related to various diseases. Utilize laboratory testing to diagnose and manage various disease. Interact professionally with peers in the discussion of the cases.

Term Offered: Spring, Summer, Fall

PATH 8050 Clinical Neuropathology

[1 credit hour]

PATH 8060 Intro Surgical Path and Cytolo

[1-4 credit hours]

Introduces students to surgical pathology and cytology including gross evaluation of tissues, tissue processing and microscopic evaluation of diseased human tissues to render a diagnosis, recommend treatment and evaluate prognosis. In addition, students will attend and/or present case materials at conferences.

PATH 8070 Intro Clinical Lab Medicine

[1-4 credit hours]

An introductory course designed to acquaint students with the laboratory tests that are available in the clinical laboratory, prioritization of test ordering, how the tests are performed and their usefulness in clinical diagnosis and clinical investigation.

PATH 8080 Intro Postmortem Pathology

[1-4 credit hours]

An introductory course designed to acquaint students with the autopsy. It consists of a series of lectures, demonstrations and readings pertaining to the human autopsy. Students will be involved in the actual performance of autopsies, the selection of appropriate tissues for microscopic examination, microscopic examination of tissues, rendering a diagnosis and completing autopsy reports. The autopsies are performed at MCO and the Lucas County Coroner's Office.

PATH 8720 Current Topics in Pathology

[1-4 credit hours]

A lecture and/or seminar course in topics of current interest in pathology with special emphasis on the fundamentals of mammalian, especially human, life under normal, experimental, or pathological conditions. Students and department faculty will present and moderate the discussion of original research publications. May be repeated for credit.

PATH 8730 Research in Pathology

[1-4 credit hours]

Students will participate in selected ongoing research programs of the department faculty. May be repeated for credit.

PATH 8890 Independent Study in Pathology

[1-12 credit hours]

Intensive study in field of interest, including theoretical and experimental work. May be repeated for credit.

Pharmacology (PHCL) (PHCL)

PHCL 5100 Experimental Therapeutics I

[3 credit hours]

The course will cover the application of basic principles of pharmacology to the development of new therapies for human disease. A primary focus will be the translation of laboratory discoveries into clinical applications.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 (may be taken concurrently) with a minimum grade of B-

Term Offered: Fall**PHCL 5140 Interpretation Of Pharmaceutical Data**

[2 credit hours]

A course designed to emphasize the presentation, analysis and interpretation of data in the pharmaceutical sciences. The concepts of statistics will be discussed. Experimental design as well as appropriateness of analytical methodology and conclusions will be emphasized.

Term Offered: Summer**PHCL 5200 Experimental Therapeutics II**

[3 credit hours]

The course will expand upon material covered in Experimental Therapeutics I and focus on the drug development process. Practical applications include the design of in vitro and in vivo screens for drug activity, improvement of pharmacokinetic properties and integration of medicinal chemistry with pharmacology in a drug development paradigm.

Prerequisites: PHCL 5100 with a minimum grade of B-

Term Offered: Spring**PHCL 5440 Current Topics in Interpretation of Pharmaceutical Data**

[1 credit hour]

The basic statistical techniques learned in PHCL 5140 will be further explored using research articles and real data sets to conduct statistical analyses. The use of different software programs will be used to provide students with hands-on practice in conducting statistical analyses.

Prerequisites: PHCL 5140 (may be taken concurrently) with a minimum grade of B-

Term Offered: Summer**PHCL 5460 Current Topics in Pharmacokinetics Toxicokinetics**

[1 credit hour]

An advanced discussion of the theory and practice of using kinetic principles to model the time course of drugs and toxic chemicals in the body and in the environment. The student should understand the relationship between chemical time courses and outcomes and application to risk assessment. Additionally, students will gain hands-on practice using kinetic analysis methods and software.

Prerequisites: PHCL 4760 with a minimum grade of B- or PHCL 5760 (may be taken concurrently) with a minimum grade of B-

Term Offered: Spring, Fall**PHCL 5500 From Experimental to Applied Therapeutics**

[4 credit hours]

The course focuses on bridging the gap between experimental and clinical applications of drugs. It will discuss groups of structurally related drugs designed to treat certain conditions, their basic molecular pharmacological action and how that is applied clinically. The course will also include discussing toxicity of some drugs and xenobiotics manufactured for certain applications, their basic molecular actions and their clinical toxicity.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 (may be taken concurrently) with a minimum grade of B-

Term Offered: Fall**PHCL 5700 Pharmacology I: Principles of Pharmacology, Autonomic Pharmacology and Related Pharmacology**

[3 credit hours]

An introduction to the principles of pharmacology and the pharmacology of the autonomic nervous system."

Term Offered: Fall**PHCL 5720 Pharmacology II: Endocrine And Cns Pharmacology**

[3 credit hours]

The pharmacology of drugs acting upon the endocrine and reproductive systems will be discussed, followed by a treatment of drugs used in the management of sleep disorders, anxiety, affective illness, schizophrenia and seizure disorders.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 with a minimum grade of C

Term Offered: Spring

PHCL 5730 Toxicology I

[3 credit hours]

This course reviews the basic elements of toxicology. It includes those principles most frequently involved in a full understanding of toxicologic events, such as dose-response, lethal dose-50 (LD50) and margin of safety. It also identifies toxic chemicals and their systemic sites and mechanisms of action. Finally, this course provides information about the kinds of toxic injuries produced in specific organs or systems and the toxic agents that produce these effects. Information about the possible management of some cases of intoxication or poisonings by some agents will be briefly reviewed.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 (may be taken concurrently) with a minimum grade of C

Term Offered: Fall

PHCL 5750 Toxicology II

[3 credit hours]

This course provides the students with an overview of environmental toxicology, which emphasizes both air and water pollution. It also reviews the applications of different areas of toxicology, such as food toxicology emphasizing the safety standards of food and methods of evaluation of food safety, analytic toxicology and its applications in forensic toxicology, and occupational toxicology, emphasizing the health effects of industrial chemicals on workers. General methodologies for toxicity testing are also discussed.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 with a minimum grade of C

Term Offered: Spring

PHCL 5760 Toxicokinetics

[3 credit hours]

The theory and practice of using kinetic principles to model the time course of toxic chemicals in the body and in the environment. Relation of the chemical time course to negative outcomes and application to risk assessment. Hands-on practice with kinetic analysis methods and software.

Term Offered: Summer, Fall

PHCL 5770 Current Topics in Toxicology I

[1 credit hour]

The course focuses on the most recently published studies that cover advances in the field of toxicology, including risk assessment of toxic chemicals, toxicokinetics, chemically induced mutations, cancer and developmental toxicity, toxic responses of various body systems to different chemicals and drugs, toxicity of pesticides and heavy metals.

Prerequisites: PHCL 4730 with a minimum grade of B- or PHCL 5730 (may be taken concurrently) with a minimum grade of B-

Term Offered: Fall

PHCL 5990 Problems In Pharmacology

[1-6 credit hours]

Tutorial or directed individual research in pharmacology.

Term Offered: Spring, Summer, Fall

PHCL 6160 Biopharmaceutics & Pharmacokinetics

[3 credit hours]

This course will provide the theoretical basis and clinical application of pharmacokinetics as relates to drug dosing, absorption, distribution, biotransformation, and excretion.

Term Offered: Spring

PHCL 6300 Research Experience in Experimental Therapeutics

[2-6 credit hours]

The course is intended for laboratory rotations to familiarize students with research topics in various clinical/basic science laboratories. A primary focus is to allow students to shadow, learn, experience and perform specific laboratory techniques.

Term Offered: Spring, Summer, Fall

PHCL 6320 NEUROLOGICAL AND PSYCHIATRIC PHARMACOLOGY

[1 credit hour]

A course analyzing the pharmacology of neurologically based attributes and disorders.

Corequisites: MBC 6320, PHPR 6140

Term Offered: Spring

PHCL 6390 Problems in Experimental Therapeutics

[1-6 credit hours]

The course will examine current topics and trends in the field of experimental therapeutics. The nature of the course will vary from student to student, depending on their background in the field, and the nature of their interest. For example, a new student may be assigned a literature search to identify papers that describe current approaches toward the treatment of human disease. A more advanced student might be given the task of researching and developing new laboratory techniques to initiate a research project. The overall goal will be to introduce students to current problems in experimental therapeutics, and help them identify an approach toward solving these problems.

Term Offered: Spring, Summer, Fall

PHCL 6400 Cannabis Science – Risks & Benefits

[3 credit hours]

Cannabis Science – Risks and Benefits – delves into the pharmacology, biochemistry, pharmacokinetics, and toxicology of cannabis products. The course will also cover the neuropsychopharmacology of cannabis and the effects of short term and long term uses of cannabis in the central nervous and peripheral systems.

Term Offered: Spring, Fall

PHCL 6600 Seminar In Pharmacology

[1 credit hour]

Pharmacology students will attend seminar presentations offered in the departments of , and must present at least one seminar.

Term Offered: Fall

PHCL 6650 Seminar in Experimental Therapeutics

[2 credit hours]

The course includes seminars presented by scientists from academia, industry and government who are invited by the department to speak about their research. Research subjects to be covered by the seminars are within the field of therapeutics and related areas, such as toxicology, molecular and genetic mechanisms in drug/chemical action, risk assessment, biomarkers and others.

Term Offered: Spring, Fall

PHCL 6700 Pharmacology III: Cns And Cardiovascular/Renal Pharmacology

[3 credit hours]

The pharmacology of central nervous system active agents . Agents acting on the cardiovascular and renal systems are discussed.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 (may be taken concurrently) with a minimum grade of C

Term Offered: Fall

PHCL 6720 Pharmacology IV; Chemotherapeutics

[3 credit hours]

The pharmacology of anti-infective chemotherapeutic agents is presented. Issues such as the mechanism of antimicrobial action, disposition, resistance and problems attending the use of antimicrobial drugs will be discussed.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 with a minimum grade of C

Term Offered: Spring

PHCL 6900 M.s. Thesis Research In Pharmacology

[1-6 credit hours]

M.S. thesis research in pharmacology.

Term Offered: Spring, Summer, Fall

PHCL 6920 M.s. Thesis Research In Pharmacology

[1-6 credit hours]

M.S. thesis research in pharmacology.

Term Offered: Spring, Summer, Fall

PHCL 7100 Experimental Therapeutics I

[3 credit hours]

The course will cover the application of basic principles of pharmacology to the development of new therapies for human disease. A primary focus will be the translation of laboratory discoveries into clinical applications.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 (may be taken concurrently) with a minimum grade of B-

Term Offered: Fall

PHCL 7200 Experimental Therapeutics II

[3 credit hours]

The course will expand upon material covered in Experimental Therapeutics I and focus on the drug development process. Practical applications include the design of in vitro and in vivo screens for drug activity, improvement of pharmacokinetic properties and integration of medicinal chemistry with pharmacology in a drug development paradigm.

Prerequisites: PHCL 5100 with a minimum grade of B- or PHCL 7100 with a minimum grade of B-

Term Offered: Spring

PHCL 7440 Current Topics in Interpretation of Pharmaceutical Data

[1 credit hour]

The basic statistical techniques learned in PHCL 4140/5140 will be further explored using research articles and real data sets to conduct statistical analyses. The use of different software programs will be used to provide students with hands-on practice in conducting statistical analyses.

Prerequisites: PHCL 5140 (may be taken concurrently) with a minimum grade of B-

Term Offered: Summer

PHCL 7460 Current Topics in Pharmacokinetics Toxicokinetics

[1 credit hour]

An advanced discussion of the theory and practice of using kinetic principles to model the time course of drugs and toxic chemicals in the body and in the environment. The student should understand the relationship between chemical time courses and outcomes and application to risk assessment. Additionally, students will gain hands-on practice using kinetic analysis methods and software.

Prerequisites: PHCL 4760 with a minimum grade of B- or PHCL 5760 (may be taken concurrently) with a minimum grade of B-

Term Offered: Spring, Fall

PHCL 7500 From Experimental to Applied Therapeutics

[4 credit hours]

The course focuses on bridging the gap between experimental and clinical applications of drugs. It will discuss groups of structurally related drugs designed to treat certain conditions, their basic molecular pharmacological action and how that is applied clinically. The course will also include discussing toxicity of some drugs and xenobiotics manufactured for certain applications, their basic molecular actions and their clinical toxicity.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 (may be taken concurrently) with a minimum grade of B-

Term Offered: Fall

PHCL 7770 Current Topics in Toxicology I

[1 credit hour]

The course focuses on the most recently published studies that cover advances in the field of toxicology, including risk assessment of toxic chemicals, toxicokinetics, chemically induced mutations, cancer and developmental toxicity, toxic responses of various body systems to different chemicals and drugs, toxicity of pesticides and heavy metals.

Prerequisites: PHCL 4730 with a minimum grade of B- or PHCL 5730 (may be taken concurrently) with a minimum grade of B-

Term Offered: Fall

PHCL 8300 Research Experience in Experimental

[2-6 credit hours]

The course is intended for laboratory rotations to familiarize students with research topics in various clinical/basic science laboratories. A primary focus is to allow students to shadow, learn, experience and perform specific laboratory techniques.

Term Offered: Spring, Summer, Fall

PHCL 8390 Problems in Experimental Therapeutics

[1-6 credit hours]

The course will examine current topics and trends in the field of experimental therapeutics. The nature of the course will vary from student to student, depending on their background in the field, and the nature of their interest. For example, a new student may be assigned a literature search to identify papers that describe current approaches toward the treatment of human disease. A more advanced student might be given the task of researching and developing new laboratory techniques to initiate a research project. The overall goal will be to introduce students to current problems in experimental therapeutics, and help them identify an approach toward solving these problems.

Term Offered: Spring, Summer, Fall

PHCL 8650 Seminar in Experimental Therapeutics

[2 credit hours]

The course includes seminars presented by scientists from academia, industry and government who are invited by the department to speak about their research. Research subjects to be covered by the seminars are within the field of therapeutics and related areas, such as toxicology, molecular and genetic mechanisms in drug/chemical action, risk assessment, biomarkers and others.

Term Offered: Spring, Fall

PHCL 8960 Dissertation Research in Experimental Therapeutics

[1-15 credit hours]

The course entails laboratory and/or clinical research focused on the development of experimental therapeutics directed toward human disease. Students engaged in PH.D. dissertation research will identify a significant research problem and develop a strategy for addressing an area of unmet need. Together with the major advisor and dissertation committee members, the student will develop a research plan that addresses major questions in the chosen field using an hypothesis driven approach.

Term Offered: Spring, Summer, Fall

Pharmacy (PHM)

PHM 5000 Integrated Pharmaceutical and Clinical Sciences 1

[6 credit hours]

An integrated course that includes Pharmacology, Medicinal and Physiological Chemistry, Pharmacokinetics and Pharmacy Practice, to study etiology, pathophysiology, clinical presentation, diagnosis and treatments. The course focuses on clinical laboratory tests and monitoring, hypertension, hyperlipidemia, diabetes and endocrine related disorders.

Prerequisites: MBC 5310 with a minimum grade of D- and PHCL 5700 with a minimum grade of D-

Corequisites: PHPR 5460

Term Offered: Spring

PHM 6000 Integrated Pharmaceutical and Clinical Sciences 4

[7 credit hours]

An integrated course that includes Pharmacology, Medicinal and Physiological Chemistry, Pharmacokinetics and Pharmacy Practice, to study etiology, pathophysiology, clinical presentation, diagnosis, and treatment of fluids, electrolytes and kidney disease, cardiology and gastrointestinal disorders.

Corequisites: PHPR 6460

Term Offered: Fall

PHM 6010 Cardiology II

[3 credit hours]

An integrated course that includes Pharmacology, Medicinal and Physiological Chemistry, and Pharmacy Practice to study the etiology, pathophysiology, clinical presentation, diagnosis, and treatment of cardiovascular diseases.

Corequisites: PHPR 6460

PHM 6030 Gastrointestinal

[2 credit hours]

An integrated course that includes Pharmacology, Medicinal and Physiological Chemistry, and Pharmacy Practice to study the etiology, pathophysiology, clinical presentation, diagnosis, and treatment of gastrointestinal disorders.

Corequisites: PHPR 6460

PHM 6100 Oncology

[2 credit hours]

An integrated course that includes Pharmacology, Medicinal and Physiological Chemistry, and Pharmacy Practice, to study of etiology, pathophysiology, clinical presentation, diagnosis, and treatment of cancer.

Corequisites: PHPR 6470

PHM 6200 Integrated Pharmaceutical and Clinical Sciences 5

[5 credit hours]

An integrated course that includes Pharmacology, Medicinal and Physiological Chemistry, Pharmacokinetics and Pharmacy Practice, to study etiology, pathophysiology, clinical presentation, diagnosis, and treatment of oncology and special populations related disorders.

Corequisites: PHPR 6470

Term Offered: Spring

PHM 6400 Physical and Mental Effects of Psychoactive Substances

[2 credit hours]

Pharmacology, pathophysiology, social impact of substance use, mis-use, and abuse and treatments available (pharmacological and non-pharmacological). Legal issues surrounding substance use, mis-use, and abuse will also be discussed.

Term Offered: Summer, Fall

PHM 6500 Integrated Pharmaceutical and Clinical Sciences 2

[8 credit hours]

An integrated course that includes Pharmacology, Medicinal and Physiological Chemistry, Pharmacokinetics and Pharmacy Practice, to study etiology, pathophysiology, clinical presentation, diagnosis, and treatment of immunologic disorders, pharmacokinetic considerations and infectious diseases.

Prerequisites: MBC 5310 with a minimum grade of D- and PHCL 5700 with a minimum grade of D- and PHCL 6160 with a minimum grade of D- and PHM 5000 with a minimum grade of D-

Corequisites: PHPR 6350

Term Offered: Fall

PHM 6600 Integrated Pharmaceutical and Clinical Sciences 3

[8 credit hours]

An integrated course that includes Pharmacology, Medicinal and Physiological Chemistry, Pharmacokinetics and Pharmacy Practice, to study etiology, pathophysiology, clinical presentation, diagnosis, and treatment of pulmonary hematologic, psychiatric, neurologic and pain and substance abuse disorders.

Prerequisites: MBC 5310 with a minimum grade of D- and PHCL 5700 with a minimum grade of D- and PHM 5000 with a minimum grade of D-

Corequisites: PHPR 6360

Pharmacy Practice (PHPR)

PHPR 5000 Residency and Postgraduate Training Preparation

[1 credit hour]

Instruction on the various aspects of obtaining a position within a pharmacy residency training program or other postgraduate training program.

Term Offered: Spring

PHPR 5010 Advanced Evidence Based Medicine

[2 credit hours]

This course expands upon the principles and practice of evidence based medicine (EBM) in guiding clinical decision making in pharmacy practice. This course will emphasize advanced concepts in drug literature evaluation and critique of landmark clinical trials.

Term Offered: Fall

PHPR 5020 Pharmaceutics and Dosage Form Design

[5 credit hours]

The lectures and labs in Pharmaceutics and Dosage Form Design have an overarching theme of drug product knowledge. Topics for the lectures and labs include drug product design, pharmaceutical calculations, and an emphasis on contemporary pharmacy compounding.

Term Offered: Fall**PHPR 5050 Interprofessional Approach to Patient Care**

[1 credit hour]

This course has been designed to prepare all health professions students to deliberately and constructively work together with the common goal of building a safer, better patient-centered and community/population-oriented U.S. health care system. Students will be assigned to small-group interprofessional teams, and given opportunities to interact and collaborate with students from other healthcare professions.

Term Offered: Fall**PHPR 5250 Introduction to Self Care**

[1 credit hour]

The course will provide an introduction to the over-the-counter marketplace and discussion of the pharmacist's patient care process. Special emphasis will be placed on how pharmacists should help patients safely and effectively treat common medical problems.

Prerequisites: PHPR 5450 with a minimum grade of D- or PHCL 5700 with a minimum grade of D-

Corequisites: PHPR 6200**Term Offered:** Spring**PHPR 5260 Pharmacy and Healthcare Administration**

[2 credit hours]

Description and analysis of the organization, financing and delivery of healthcare in the U.S.

Term Offered: Spring, Fall**PHPR 5300 DESIGN AND APPLICATIONS OF CANCER CHEMOTHERAPY**

[1 credit hour]

In depth discussion of the principles of drug design and development within the framework of the pharmacotherapeutic management of cancer and cancer prevention.

Corequisites: MBC 5300**Term Offered:** Fall**PHPR 5310 Introduction to Pharmacy Law**

[1 credit hour]

The purpose of this course is to introduce students to laws that regulate the practice of pharmacy. Federal drug laws and specific state laws that regulate the filling and dispensing of prescriptions will be reviewed and applied.

Term Offered: Spring**PHPR 5320 Commonly Prescribed Meds and Med Term 1**

[1 credit hour]

This course introduces students to commonly prescribed medications and medical terminology.

Term Offered: Fall**PHPR 5450 Pharmacy Skills Development-1**

[2 credit hours]

This course is designed to introduce students to the Pharmacists' Patient Care Process as it is applied to the Community Pharmacy Setting in order to prepare them for their Community Pharmacy Introductory Pharmacy Practice Experiences.

Term Offered: Fall**PHPR 5460 Pharmacy Skills Development-2**

[2 credit hours]

Building on competencies from prerequisite courses, this course is designed to enhance skills in the Pharmacists' Patient Care Process (PPCP) as they are applied to the Community Pharmacy Setting.

Prerequisites: PHPR 3450 with a minimum grade of D-**Term Offered:** Spring**PHPR 5520 Pharmaceutical Marketing and Management**

[3 credit hours]

Introduction to administrative sciences (marketing/management, etc.) in the provision of pharmaceutical care. Topics include multicultural communication, operation of various pharmacy practice settings, barriers to health care access, facilitation of patient access to pharmaceutical care.

Term Offered: Spring**PHPR 5590 Readings in Access and Cultural Competence**

[2 credit hours]

Examination of the literature related to access and cultural competence in the US health care system. Various types of readings will be used to analyze the relationships that exist between access, cultural competence and positive healthcare outcomes.

Prerequisites: PHPR 4520 (may be taken concurrently) with a minimum grade of C

Term Offered: Spring, Summer**PHPR 5610 Pharmacoeconomics and Outcomes Research I**

[2 credit hours]

This course emphasizes advanced concepts, methods, and practical procedures for pharmacoeconomic analysis and outcomes research. The student will learn through readings and experience assessment of patient health status, quality of life, satisfaction and cost-effectiveness for pharmacoeconomic and health outcomes research and interpretation of economic and outcomes data.

Term Offered: Spring**PHPR 5620 Pharmacoeconomics and Outcomes Research II**

[3 credit hours]

This course emphasizes advanced concepts, methods and practical procedures for pharmacoeconomic analysis and outcomes research. The student will learn through readings and experience assessment of patient health status, quality of life, cost-effectiveness for pharmacoeconomic and health outcomes research and interpretation of economic and outcomes data.

Prerequisites: PHPR 5610 with a minimum grade of C**Term Offered:** Fall

PHPR 5680 Parenteral Manufacturing

[2 credit hours]

The theory and technology of parenteral and ophthalmic formulation design, production, sterilization, packaging and stability.

Prerequisites: (PHPR 3010 with a minimum grade of D- and PHPR 3070 with a minimum grade of D-)

Term Offered: Fall

PHPR 5690 Dosage Form Design

[3 credit hours]

The utilization of pharmaceutical principles and practices for the design and manufacture of modern commercial dosage forms such as tablets, aerosols, emulsions, suspensions and solutions emphasizing biopharmaceutically efficacious products.

Prerequisites: (PHPR 3010 with a minimum grade of D- and PHPR 3070 with a minimum grade of D-)

Term Offered: Spring, Fall

PHPR 5700 Equilibrium Phenomenon

[2 credit hours]

A theoretical and practical examination of the principles of chemical equilibrium and the techniques used in their calculation. Physical and chemical concepts focus on pharmaceutical systems as well as selected areas of chemistry.

Term Offered: Spring

PHPR 5710 Selected Topics In Pharmaceutical Technology

[2-3 credit hours]

Discussion, evaluation, experimentation and production of selected dosage forms. A forum for the discussion of new dosage form technology and advances.

Prerequisites: (PHPR 3010 with a minimum grade of D- and PHPR 3070 with a minimum grade of D-)

Term Offered: Spring, Summer, Fall

PHPR 5720 Pharmaceutical Rate Processes

[3 credit hours]

A theoretical and practical application of kinetic principles applied to pharmaceutical and cosmetic systems in liquid and solid state. A mathematical treatment and development of the equations which support each reaction mechanism.

Term Offered: Fall

PHPR 5770 Advanced Drug Delivery Systems – I

[3 credit hours]

The development of drug delivery systems relies on the broad understanding of many different physiological, chemical, and biological factors. This course is designed to introduce advanced drug delivery systems for oral, ocular, transdermal and buccal delivery. The course design is based on the premise that the student desires knowledge about the latest developments in formulation and drug delivery. Students are required to design a project proposal for presentation.

Term Offered: Spring, Fall

PHPR 5780 Advanced Drug Delivery Systems-2

[2 credit hours]

This course is designed to provide students with an understanding of the current state of the art for novel drug delivery systems with a particular focus on nanocarrier systems such as nanoparticles, polymeric micelles and solid lipid nanoparticles, for delivering small molecules. This course will introduce students to recent topics in the areas of cancer therapy and site-specific drug delivery.

Prerequisites: PHPR 3020 with a minimum grade of D- and PHPR 3030 with a minimum grade of D-

PHPR 5810 FINANCE AND PERSONAL PLANNING FOR PHARMACISTS

[2 credit hours]

Practical topics on financial, professional, and personal situation to better prepare students to make knowledgeable decisions that affect future security and success. (Prerequisites: Third Professional Year PharmD or permission of instructor.)

Term Offered: Spring, Summer

PHPR 5870 Compounding Boot Camp

[2 credit hours]

This course is a companion to the Professional Compounding Center of America Boot Camp held at the college every year. Students will complete the boot camp lab experience and work through cases and webinars and other problem solving exercises to master techniques for creating new dosage forms.

Prerequisites: PHPR 3080 with a minimum grade of D-

Term Offered: Summer, Fall

PHPR 5910 Drug-Induced Diseases

[1 credit hour]

An elective course that examines the epidemiology, public impact, contributing factors and causes for various Drug-Induced Diseases. This course will also examine Pharmacology, Medicinal and Physiological Chemistry, Pharmacokinetics and Pharmacotherapy, to study the etiology, pathophysiology, clinical presentation, diagnosis, and treatment Drug-Induced Diseases.

Term Offered: Spring

PHPR 5920 Introductory Pharmacy Practice Experience I

[1 credit hour]

First professional year course designed to enhance professional growth through an introduction to clinical skill development and direct patient care activities within institutional and community pharmacy practice settings. Prerequisite: Admission into the Pharm.D. Program.

Term Offered: Spring, Summer, Fall

PHPR 5930 Introductory Pharmacy Practice Experience 2

[1 credit hour]

First professional year course designed to enhance professional growth through an introduction to clinical skill development and direct patient care activities within institutional and community pharmacy practice settings. Prerequisite: Admission into the Pharm.D Program.

Prerequisites: PHPR 3920 with a minimum grade of C

Term Offered: Spring

PHPR 5990 Problems In Pharmacy Practice

[1-6 credit hours]

Tutorial or directed, individual research problems in administrative pharmacy, or other related fields.

Term Offered: Spring, Summer, Fall

PHPR 6000 Drug Information Seminar

[2 credit hours]

An advanced seminar course which applies evidence based medicine through literature searching, drug literature evaluation skills, and formal writing and presentation skills to complete a written literature summary and patient population based therapeutic recommendation, as well as a verbal presentations such as case presentations, disease state and pharmacotherapy reviews and other topic discussions.

PHPR 6010 Leadership and the Military Pharmacist

[2 credit hours]

This two-part online course will cover various advanced leadership discussions and topics, including continuous process improvements, management, followership, difficult conversations/leadership pearls, and the development of the team and individual. Innovation and continuous process improvement (CPI) will be explored and students will have the opportunity to design their own process and program. Additionally, students will explore military pharmacy and therapeutic topics including readiness, emergency management (chemical, biological, radiological, nuclear events), deployment therapeutics, management of personnel/ pharmacy, and clinical pharmacy program design, implementation, and evaluation.

Term Offered: Spring**PHPR 6070 PPD-5**

[3 credit hours]

Laboratory course to enhance the application of knowledge gained in the PPT courses, the development of clinical skills and critical thinking required for the provision of patient centered pharmaceutical care.

Prerequisites: PHPR 4080 with a minimum grade of D-**Corequisites:** PHPR 6130, PHPR 6340**Term Offered:** Fall**PHPR 6080 PPD-6**

[3 credit hours]

Application of knowledge gained in the PPT, drug literature evaluation, and self care courses and the development of clinical skills and critical thinking required for the provision of pharmaceutical care.

Prerequisites: PHPR 6070 with a minimum grade of C**Corequisites:** PHPR 6140, PHPR 6250**Term Offered:** Spring**PHPR 6120 PPT-5**

[3 credit hours]

Discussion of pathophysiology, clinical presentation, etiologic causes, laboratory findings, diagnosis and therapy of pulmonary and hematologic diseases.

Term Offered: Summer**PHPR 6130 PPT-6**

[4 credit hours]

Discussion of pathophysiology, clinical presentation, etiologic causes, laboratory findings, diagnosis and therapy of cardiovascular disorders and nutrition.

Prerequisites: PHPR 6120 with a minimum grade of C**Corequisites:** PHPR 6070**Term Offered:** Fall**PHPR 6140 PPT-7**

[4 credit hours]

Discussion of pathophysiology, clinical presentation, etiologic causes, laboratory findings, diagnosis and therapy of psychiatric/neurologic disorders, pediatrics, and toxicology.

Corequisites: MBC 6320, PHCL 6320**Term Offered:** Spring**PHPR 6160 Advanced Applied Pharmacokinetic**

[3 credit hours]

Detailed discussion of pharmacokinetic characteristics of drugs which are commonly included in therapeutic drug monitoring including clinical application.

Prerequisites: PHPR 4160 with a minimum grade of C**Term Offered:** Fall**PHPR 6170 Special Populations and Topics**

[3 credit hours]

This course discusses population related differences of geriatric, pediatric, and critically ill populations. The pathophysiology, pharmacokinetics, pharmacodynamics, clinical presentation, etiology, diagnostic findings, and pharmacotherapy of common diseases as well as clinical issues specific to these populations will be presented. Enteral and parenteral nutrition therapies and poison evaluation and management will also be discussed.

Corequisites: PHPR 6470**PHPR 6200 Patient Centered Care**

[2 credit hours]

This course focuses on learning various aspects of Patient Centered Care including: Medication Therapy Management (MTM) services, Motivational Interviewing, Patient Assessment, and Cultural Competence.

PHPR 6210 Introduction To Research Methods

[2 credit hours]

General overview and introduction to research process as it pertains to clinical pharmacy practice. Special emphasis given to design issues, particularly those involving human subjects.

PHPR 6220 Pharmacoeconomics and Outcomes Research

[1 credit hour]

This course allows students to gain and expand their knowledge base in areas such as application of pharmacoeconomic and effectiveness measures to the practice of health care.

PHPR 6230 Patient Care Rounds I

[3 credit hours]

The course will provide students with advanced experiences in applying and integrating biomedical, psychosocial and pharmacoeconomic principles to patient care. Students will present and discuss how they would identify, prevent and resolve the medication-related problems encountered by a diversity of patient populations.

PHPR 6240 Patient Care Rounds II

[3 credit hours]

The course will provide students with advanced experiences in applying and integrating biomedical, psychosocial and pharmacoeconomic principles to patient care. Students will present and discuss how they would identify, prevent and resolve the medication-related problems encountered by a diversity of patient populations.

Prerequisites: PHPR 6230 with a minimum grade of D-

PHPR 6250 Advanced Self Care

[3 credit hours]

The course will discuss issues surrounding the self-medication decision-making process. Special emphasis will be placed on how pharmacists should help patients safely and effectively treat common medical problems. The course will provide information about how pharmacists should educate and counsel patients about diagnostic tests that the public can purchase without a prescription.

Prerequisites: PHPR 6460 with a minimum grade of D-

Corequisites: PHPR 6470

Term Offered: Spring

PHPR 6260 PHCAD-3

[1 credit hour]

The course will offer in depth teaching and discussions on human resource management, inventory control, and organizational financial management in the respective practice settings.

Prerequisites: PHPR 4520 with a minimum grade of D-

Term Offered: Fall

PHPR 6270 Business Aspects of Pharmacy

[2 credit hours]

This course will provide students with a foundation in the business aspects of the practice of pharmacy and their important role in the provision of pharmaceutical care.

Prerequisites: PHPR 6450 with a minimum grade of C

PHPR 6280 PHCAD-4

[2 credit hours]

This course focuses on developing, implementing, and evaluating Medication Therapy Management (MTM) and Disease State Management (DSM) programs.

Prerequisites: PHPR 6260 with a minimum grade of D-

Term Offered: Spring

PHPR 6290 Medication Therapy and Disease State Management for Masters Students

[2 credit hours]

Focuses on developing, implementing, and evaluating Medication Therapy Management and Disease State Management programs.

PHPR 6300 Fluids Electrolytes and Kidney Disease

[2 credit hours]

This course discusses the pharmacology, pathophysiology, diagnosis and therapeutics related to fluids, electrolytes, acid and base disorders, diuretics and kidney disease. Selected disorders of the kidney including acute, chronic and end stage kidney disease, and renal replacement therapy.

Corequisites: PHPR 6460

PHPR 6310 Jurisprudence and Ethics

[1 credit hour]

Discussion of federal, state and local laws affecting the profession and practice of pharmacy. Ethical principles involved in patient care will be reviewed and applied.

Term Offered: Spring

PHPR 6330 Health Systems

[1.5 credit hours]

This course will provide an overview of the organization, financing and delivery of healthcare in the U.S.

Term Offered: Spring

PHPR 6340 RESEARCH DESIGN AND DRUG LITERATURE EVALUATION 2

[2 credit hours]

Concepts of research design, statistical analysis, drug literature evaluation and evidence based medicine are expanded from PHPR 4330 to depict their practical relevance to pharmacy practice.

Prerequisites: PHPR 4330 with a minimum grade of D-

Corequisites: PHPR 6070

Term Offered: Fall

PHPR 6350 Pharmacy Skills Development - 3

[2 credit hours]

Building on competencies from prerequisite courses, this course is designed to enhance skills in the Pharmacists' Patient Care Process (PPCP) as they are applied to the Community and Ambulatory Care Pharmacy settings.

Prerequisites: PHPR 5460 with a minimum grade of D-

Corequisites: PHPR 6200

Term Offered: Fall

PHPR 6360 Pharmacy Skills Development - 4

[2 credit hours]

Building on competencies from prerequisite courses, this course is designed to enhance skills in the Pharmacists' Patient Care Process (PPCP) as they are applied to the Institutional Pharmacy setting.

Prerequisites: PHPR 4350 with a minimum grade of D- and PHPR 4530 with a minimum grade of D-

Term Offered: Spring

PHPR 6370 Nutrition

[1 credit hour]

An overview of the fundamental principles of nutritional support and the pharmacist's role in providing nutritional support services.

PHPR 6380 Pathophysiology And Pharmacotherapy: Endocrinology

[2 credit hours]

Discussion of the pathophysiology, clinical presentation, etiologic causes, laboratory findings, diagnosis and therapy of endocrine disorders.

Term Offered: Spring

PHPR 6390 Commonly Prescribed Meds and Med Term II

[1 credit hour]

This course introduces students to commonly prescribed medications and medical terminology.

Prerequisites: PHPR 5320 with a minimum grade of D-

Corequisites: PHPR 6350

Term Offered: Fall

PHPR 6400 Topics in Internal Medicine

[2 credit hours]

This course is designed to focus on complex and/or controversial pharmacotherapy topics and the evaluation of primary literature and guidelines to promote effective abilities in evaluating, selecting, and recommending pharmacotherapeutic regimens, and educating patients and health care professionals utilizing the principles of evidence based decision making.

Term Offered: Spring, Summer

PHPR 6410 Leadership: Principles and Practice

[2 credit hours]

This course will facilitate student self-discovery first and foremost. Through reflection activities, and discussion students will learn about themselves, the idea of leadership, and how they relate to others. This is not a passive process. Students are expected to actively participate in the course to get the most out of it. The course is meant to help students take a critical look at their relationships with others by answering the following questions; 1) how am I a problem for others? 2) how can I be more helpful to others? 3) how can I help things go right?

Term Offered: Summer, Fall**PHPR 6460 Pharmacy Skills Development - 5**

[2 credit hours]

This advanced course will enhance confidence in application of knowledge and skills to prepare students for competent participation in the Pharmacists Patient Care Process and transitions of care in Advanced Pharmacy Practice Experiences.

PHPR 6470 Pharmacy Skills Development - 6

[2 credit hours]

This course is designed to further develop fundamental skills in the Pharmacists Patient Care Process and to enhance confidence in clinical skills necessary for roles in transitions of care.

Term Offered: Spring**PHPR 6520 Analysis Of The Pharmaceutical Environment**

[2 credit hours]

A theoretical and practical examination of the pharmaceutical environment and drug distribution system using administrative pharmacy sciences as a tool for analysis.

Prerequisites: PHPR 4520 with a minimum grade of D-**Term Offered:** Spring, Fall**PHPR 6530 Research Methods In Pharmacy Practice**

[2 credit hours]

An introduction to research methods and principles used in designing, planning, implementing, analyzing and interpreting research projects in pharmacy practice.

Term Offered: Spring, Fall**PHPR 6540 Evidence Based Medicine 1**

[3 credit hours]

This course introduces the principles and practice of evidence based medicine (EBM) in guiding clinical decision making in pharmacy practice.

Prerequisites: MATH 2640 with a minimum grade of D- or MATH 2600 with a minimum grade of D-**Term Offered:** Fall**PHPR 6550 Management Topics For Clinical Practice**

[2 credit hours]

Description of nature of management, basic management concepts and tools and environmental concerns pertinent to pharmacy practice in all of its practice settings.

PHPR 6560 Evidence Based Medicine 2

[2 credit hours]

This course expands upon the principles and practice of evidence based medicine (EBM) in guiding clinical decision making in pharmacy practice. Students will develop their formal oral presentation skills.

Prerequisites: PHPR 6540 with a minimum grade of D-**Corequisites:** PHPR 6360**Term Offered:** Spring**PHPR 6600 Seminar In Administrative Pharmacy**

[1 credit hour]

A critical analysis of current problems in pharmacy practice with individual case presentations.

Prerequisites: MBC 5310 with a minimum grade of D- and PHCL 5700 with a minimum grade of D- and PHM 5000 with a minimum grade of D-**Corequisites:** PHPR 6360**Term Offered:** Spring, Fall**PHPR 6610 Seminar I**

[1 credit hour]

Instruction on preparation and presentation of clinical and/or scientific seminars.

Term Offered: Spring, Fall**PHPR 6670 Chemical Dependency And The Pharmacist**

[3 credit hours]

Overview of chemical dependency and substance abuse, with emphasis on the neuropathophysiology of dependency and the pharmacology of drugs of abuse. Also include extensive review of the impact of chemical dependency on the healthcare professional, with as focus on their impact to pharmacists.

Term Offered: Summer, Fall**PHPR 6700 Special Topics in Diabetes Care**

[2 credit hours]

This course focuses on advanced and special poluation topics in the area of diabetes care and management through discussions, lecture-based teaching and group activities.

Term Offered: Fall**PHPR 6800 Monitoring Therapy**

[1 credit hour]

An introduction to medical terminology and procedures with reference to physical exam, patient history, common diagnostic procedures and applications to drug and disease state monitoring.

PHPR 6810 Hospital Pharmacy Administration

[3 credit hours]

An examination of the administrative and supervisory aspects of hospital pharmacy practice. Emphasis is placed on management techniques rather than functions performed.

PHPR 6820 Selected Topics In Hospital Pharmacy

[3 credit hours]

A treatment of contemporary trends which influence the practice of hospital pharmacy such as drug distribution systems. Emphasis is placed upon these concepts in light of the resources present.

PHPR 6830 Advanced Community Pharmacy Administration

[3 credit hours]

An advanced analysis of concepts, practices and issues related to retail pharmacy management.

Term Offered: Fall**PHPR 6840 Selected Topics In Community Pharmacy**

[3 credit hours]

Examination of contemporary trends influencing community pharmacy, such as home healthcare and prescription drug programs. Emphasis is placed on the impact of these trends on community pharmacy management.

Term Offered: Fall

PHPR 6850 Product Development Laboratory

[2 credit hours]

A study of various stages of development of pharmaceutical products. The student will develop formulations, using stability data and production technology for three products.

Prerequisites: PHPR 5690 with a minimum grade of D-

Term Offered: Spring

PHPR 6860 Advanced Drug Delivery Lab

[2 credit hours]

This lab course is designed to provide students hands-on experience and improve their practical knowledge in areas of industrial pharmacy and advanced pharmaceuticals. This course would introduce students to the wide range of cutting-edge techniques in the pharmaceutical industry.

Term Offered: Spring, Fall

PHPR 6890 M.s. Project In Administrative Pharmacy

[1-4 credit hours]

Development of a practical project in the pharmacy environment on a practicum basis. A written, bound report and oral presentation are required.

Term Offered: Spring, Fall

PHPR 6920 Introductory Pharmacy Practice Experience 5

[1 credit hour]

Third professional year course designed to enhance professional growth through application of skills and knowledge gained in IPPE-1 and IPPE-2 to various areas of pharmacy practice to provide the best possible patient care.

Prerequisites: PHPR 4920 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PHPR 6930 Introductory Pharmacy Practice Experience 3

[1 credit hour]

The purpose of this course is to increase students' awareness and involvement in areas related to the contemporary practice of pharmacy. Students will participate in projects that nurture their professional growth.

Prerequisites: PHPR 3930 with a minimum grade of C and PHPR 5930 with a minimum grade of C

Term Offered: Spring, Summer, Fall

PHPR 6940 Early Practice Exposure

[2 credit hours]

Supervised instruction and participation in pharmacy practice at actual practice sites such as community, hospital, managed care, long-term care and nuclear pharmacies.

PHPR 6950 Seminar In Industrial Pharmacy

[1 credit hour]

A seminar course composed of graduate student presentations on their research and special topics as well as outside speakers from both the community and pharmaceutical industry.

Term Offered: Spring, Summer, Fall

PHPR 6960 M.s. Thesis Research In Pharmacy

[1-6 credit hours]

Advanced and in-depth study of an issue pertinent to contemporary pharmacy practice. Part of degree requirement for M.S. in Pharmaceutical Sciences.

Term Offered: Spring, Summer, Fall

PHPR 6970 Introductory Pharmacy Practice Experience 4

[1 credit hour]

The purpose of this course is to increase students' awareness and involvement in areas related to the contemporary practice of pharmacy. Students will participate in projects that nurture their professional growth.

Prerequisites: PHPR 4920 with a minimum grade of C or PHPR 6930 with a minimum grade of D-

Term Offered: Spring, Summer

PHPR 6980 Special Topics

[1-5 credit hours]

Selected study of topics in Pharmacy Practice. New pharmacy and healthcare strategies are examined in detail.

Term Offered: Spring, Summer, Fall

PHPR 8260 Jurisprudence & Ethics For Pharmacy

[1 credit hour]

Discussion of federal, state and local laws affecting the profession and practice of pharmacy. Ethical principles involved in patient care will be reviewed and applied.

PHPR 8540 Patient Monitoring Principles

[3 credit hours]

Application of didactic geriatric drug therapy principles in a geriatric patient care environment. Emphasis will be placed on geriatric drug monitoring skills.

Prerequisites: PHPR 4140 with a minimum grade of D-

Corequisites: PHPR 8500

Term Offered: Summer

PHPR 8620 Seminar II

[2 credit hours]

Discussion of current topics relating to pharmacy practice.

Prerequisites: PHPR 6610 with a minimum grade of D-

PHPR 8630 Longitudinal Drug Information

[2 credit hours]

Presentation of clinical and/or scientific seminar and completion of in-depth pharmacy practice related paper.

Term Offered: Spring, Summer, Fall

PHPR 8940 Clinical Clerkship

[4 credit hours]

The APPE sequence is a fulltime onsite clinical experience designed to allow students to apply knowledge and skills gained in the didactic and IPPE curriculum. The APPE sequence consists of 9 fulltime (40 hour per week) rotations.

Term Offered: Spring, Summer, Fall

PHPR 8980 Special Topics

[1-5 credit hours]

Selected study of topics in Pharmacy Practice. New Pharmacy and healthcare strategies are examined in detail.

Term Offered: Spring, Summer, Fall

Pharmacology HSC (PHRM)

PHRM 8200 Read Mechanism Hormone Actio

[0-4 credit hours]

The properties of hormone receptors and the biochemical consequences of hormone-receptor interactions. May be repeated for credit.

Term Offered: Fall

Philosophy (PHIL)

PHIL 5010 Islamic Law and Society

[3 credit hours]

This course will survey Islamic law in historical and comparative modern contexts. This course will provide (a) basic introduction to the sources and methods of classical Islamic legal interpretation, (b) survey of the most pressing areas in which traditional Islamic norms remain relevant today—criminal law, family law, and commercial law, (c) the challenges and transformations introduced by colonialism, modernity, and the nation-state, and (d) comparison with the American law and the constitution, highlighting comparative interpretive methods such as originalism versus progressivism, and innovative dimensions of Islamic law such as legal pluralism, wide room for local custom, religious diversity, and restorative justice.

Term Offered: Spring

PHIL 5210 Ancient Philosophy Seminar

[3 credit hours]

An intensive study of the texts and arguments of Presocratic philosophers, Plato, Aristotle, or Hellenistic philosophers. Course may be repeated as topics vary.

Term Offered: Spring, Fall

PHIL 5230 Modern Philosophy Seminar

[3 credit hours]

An intensive study of one or more Continental or British philosophers from the sixteenth through eighteenth centuries. Course may be repeated as topics vary.

Term Offered: Spring, Fall

PHIL 5240 19th Century European Philosophy

[3 credit hours]

An intensive study of European philosophy after Kant, including Hegel, Marx, Kierkegaard and Nietzsche.

Term Offered: Spring, Fall

PHIL 5250 Phenomenology

[3 credit hours]

An intensive study of major works from phenomenological philosophers, such as Husserl, Heidegger, Sartre, or Merleau-Ponty. Course may be repeated as topics and texts vary.

Term Offered: Spring, Fall

PHIL 5260 Recent European Philosophy

[3 credit hours]

An examination of texts and problems in the Frankfurt School, post-structuralism, deconstruction, post-modernism, or of such thinkers as Habermas, Foucault, Derrida and Lyotard. Course may be repeated as topics vary.

Term Offered: Spring, Fall

PHIL 5270 American Philosophy

[3 credit hours]

A study of the development of American philosophy, or of one or more of Pierce, James, Dewey, or Mead. Course may be repeated as topics vary.

Term Offered: Fall

PHIL 5280 20th Century Analytic Philosophy

[3 credit hours]

Selected readings from Frege, the Russell, Wittgenstein, the Vienna Circle, the Ordinary Language school and American neopragmatists such as Quine, Rorty and Davidson. Course may be repeated as topics vary.

Term Offered: Spring, Fall

PHIL 5300 Philosophy Of Natural Science

[3 credit hours]

A study of scientific inquiry including the structure of scientific explanations, relation of evidence and confirmation, the metaphysics of theoretical entities, and the nature of scientific change and progress.

Term Offered: Spring, Fall

PHIL 5400 Ethics Seminar

[3 credit hours]

Selected topics or philosophers in ethical theory. Course may be repeated as topics vary.

Term Offered: Spring

PHIL 5650 Philosophy Of Mind

[3 credit hours]

Advanced study of issues in the philosophy of mind such as: intentionality and misrepresentation, rationality and interpretation, supervenience and reductionism, folk psychology and eliminative materialism. Course may be repeated as topics vary.

Term Offered: Spring

PHIL 5750 Political Philosophy Seminar

[3 credit hours]

Selected topics or philosophers in political philosophy. Course may be repeated as topics vary.

Term Offered: Spring, Fall

PHIL 5920 Readings In Philosophy

[3 credit hours]

Critical inquiry into selected works of a particular philosopher or a specific philosophical problem.

Term Offered: Spring, Fall

PHIL 5990 Independent Study

[1-3 credit hours]

Directed study in philosophy under supervision of a philosophy faculty member.

Term Offered: Spring, Summer, Fall

PHIL 6000 Advanced Logic

[3 credit hours]

A study of propositional and predicate logic, as well as examination of issues in the philosophy of logic.

Term Offered: Spring, Fall

PHIL 6800 Proseminar

[1-6 credit hours]

Participation in departmental faculty-graduate student colloquia and mentoring program. Credit will carry the grade of S or U, and will not count toward credit hour requirements for the M.A. degree.

Term Offered: Spring, Fall

PHIL 6930 Seminar

[3 credit hours]

Advanced philosophy seminar open only to graduate students.

PHIL 6960 Thesis

[1-16 credit hours]

Physical Therapy (PHYT)

PHYT 5000 Gross Anatomy

[5 credit hours]

Students will study the structure of the human body using the structure-function relationship as the course paradigm. Musculoskeletal, vascular, and peripheral nervous system anatomy will be emphasized, as will the coordinated role of these structures, both locally and regionally, in producing movement of the axial skeleton and extremities. Competencies serve as a foundation for clinical science coursework, particularly in the musculoskeletal and neuromuscular areas of practice.

Term Offered: Summer

PHYT 5020 Lifespan I

[2 credit hours]

The first of two, this course examines typical lifespan development from birth to adolescence. Emphasis is on theoretical constructs, gross motor development, physical therapy examination, diagnosis, prognosis and evaluation of findings. Also includes an overview of fine motor development, cognitive development, reflex development, interaction with families, public laws and child abuse.

Term Offered: Summer

PHYT 5050 Analysis of Movement I

[2 credit hours]

This is the first of two courses that will integrate anatomy and biomechanics in order to gain an understanding of normal and abnormal human movement. In this course, foundational concepts will be introduced including biomechanical principles and tissue and muscle mechanics and applied to understanding movement of the upper extremity joints.

Term Offered: Summer

PHYT 5060 Analysis of Movement II

[3 credit hours]

This is the second of two courses that will integrate anatomy and biomechanics in order to gain an understanding of normal and abnormal human movement. In this course biomechanical principles of human movement will be reviewed and applied to understanding movement of the spine, pelvis, and lower extremity joints. Concepts of human movement analysis will be introduced and applied to common functional movements such as standing, transferring, walking, stair negotiation, and running.

Prerequisites: PHYT 5000 with a minimum grade of C and PHYT 5050 with a minimum grade of C and PHYT 5350 with a minimum grade of C

Term Offered: Fall

PHYT 5090 Neuroscience

[5 credit hours]

An introduction to the nervous system, including fundamental concepts in neuroanatomy and neurophysiology as they relate to human movement and basic bodily function mediated by the central and peripheral nervous systems. Emphasis is placed on the effects of neurological conditions (disease, injury, mental illness) relevant to physical therapy and functional performance. Basic clinical assessment skills of neurological impairments will integrate neuroscience information with clinical practice.

Term Offered: Spring

PHYT 5110 Clinical Pathophysiology I

[3 credit hours]

Integrated study of physiological and pathophysiological processes that influence the human body at the cellular, organ and systemic levels. Emphasis on mechanisms of and clinical manifestations of common diseases with discussion of potential impact on the delivery of PT services. Content to serve as the basis for discussion of pharmacology in subsequent courses.

Term Offered: Fall

PHYT 5120 Clinical Pathophysiology II

[1 credit hour]

Second of 2 courses that address the integrated study of normal physiological and pathophysiological processes in human body at cellular, organ, and systemic levels - emphasizes on clinical manifestations and impact on PT plan of care.

Term Offered: Summer

PHYT 5130 Evidence Based Practice

[4 credit hours]

Introduction to the principles of measurement and research design, with an emphasis on critically evaluating the design of research studies relevant to clinical practice.

Term Offered: Fall

PHYT 5170 Evidence Based Practice I

[2 credit hours]

Introduction to the principles of measurement and research design, with an emphasis on critically evaluating the design of research studies relevant to clinical practice.

Term Offered: Spring

PHYT 5180 Evidence Based Practice II

[2 credit hours]

The second of a two course series on the principles of measurement and research design, with an emphasis on the statistical analysis procedures commonly used in clinical research. The critical evaluation and analysis of research studies relevant to clinical practice will also be emphasized.

Term Offered: Summer

PHYT 5270 Applied Exercise Physiology

[3 credit hours]

Exploration of exercise physiology principles as related to promotion of PT patients/clients' health and wellness. Emphasizes physiological and biochemical changes with exercise/training and exercise testing and prescription for PT patients/clients.

Term Offered: Spring

PHYT 5280 Therapeutic Interventions I

[2 credit hours]

The theory and practice of physical therapy in the acute care setting as it relates to improvement of functional mobility, prevention of complications, and preparation for next level of care.

Term Offered: Spring**PHYT 5290 Therapeutic Interventions II**

[2 credit hours]

Study of the theoretical basis for, and the application of thermal, mechanical, and electrical modalities used for the PT management of clients. Emphasis is on evidence-based practice, critical thinking, and clinical decision-making using a case-based format, and review of the scientific literature will be used in determining the most appropriate use of modalities within a comprehensive PT plan of care.

Term Offered: Summer**PHYT 5300 Principles of Therapeutic Exer**

[2 credit hours]

Application of scientific principles in anatomy, applied biomechanics, and exercise physiology to develop sound therapeutic exercise procedures. Emphasis on development of skills associated with therapeutic exercise for patients with musculoskeletal and/or general movement dysfunction. Students will learn how to use and apply a variety of common fitness and rehabilitation exercise apparatus and develop appropriate PT treatment plans that include exercise for a given patient problem.

Term Offered: Spring**PHYT 5350 Intro to Examination**

[2 credit hours]

Introduction to the physical examination process, including history-taking, systems review and screening. Emphasis on basic PT examination skills of the cardiovascular, musculoskeletal, and integumentary systems. Skills include: assessment of tolerance to functional activity (vital signs), posture, pain, peripheral pulses and edema; goniometry; and strength testing.

Term Offered: Summer, Fall**PHYT 5450 Foundations of PT**

[2 credit hours]

Addresses the professional socialization process. Professional codes and guides of behavior will be discussed in relation to delivery of competent, ethical, legal and compassionate PT services. Topics include: therapeutic communication, cultural competency, stress management and conflict resolution. Introduction to basic principles of teaching and learning for the role of educator is included.

Term Offered: Fall**PHYT 5610 Orientation to Interprofessional Teaming**

[1 credit hour]

Orientation to the Graduate Certificate in Teaming in Early Childhood. Focus on individual competencies needed to work collaboratively to meet the needs of young children with disabilities and their families.

Prerequisites: SPED 5270 with a minimum grade of D-**Term Offered:** Summer**PHYT 5620 Leadership and Advocacy in Interprofessional Teaming**

[1 credit hour]

This second seminar in the Graduate Certificate in Teaming in Early Childhood focuses on skills and policies that promote best practices in teaming to support young children with disabilities.

Prerequisites: SPED 5270 with a minimum grade of D- and PHYT 5610 with a minimum grade of D-**Term Offered:** Summer, Fall**PHYT 5630 Evidence-Based Practice and Innovation in Interprofessional Teaming**

[1 credit hour]

This third seminar in the Graduate Certificate in Teaming in Early Childhood provides students the opportunity to reflect on their practicum experiences in teaming to support young children with disabilities.

Prerequisites: SPED 5270 with a minimum grade of D- and PHYT 5610 with a minimum grade of D- and PHYT 5620 with a minimum grade of D-**Corequisites:** PHYT 5640**Term Offered:** Spring, Summer, Fall**PHYT 5640 Practicum in Interprofessional Teaming**

[2 credit hours]

The practicum provides an opportunity to engage in interprofessional teaming in order to provide integrated services to young children with special needs in an inclusive setting.

Prerequisites: PHYT 5620 with a minimum grade of D-**Corequisites:** PHYT 5630**Term Offered:** Spring, Summer, Fall**PHYT 5650 Pharmacology of PT**

[1 credit hour]

Integrated study of pharmacology that presents the pharmacodynamics and pharmacotherapeutics of common classes of drugs. Drugs covered include: anti-inflammatory, analgesic, muscle relaxant, psychotropic, anti-microbial, and diabetic medications. Emphasis on indications, contraindications, adverse drug reactions, and the implications for physical therapy care.

Term Offered: Summer**PHYT 5750 Clinical Reasoning**

[1 credit hour]

Introduction to theoretical models that guide clinical decision making, including patient management, clinical reasoning, disablement, and evidence-based practice models. Documentation will be discussed as a tool to aid clinical reasoning.

Term Offered: Spring, Fall**PHYT 5850 Clinical Education Experience I**

[3 credit hours]

The first in a series of four full-time, supervised clinical education experiences. Students are engaged in supervised practice in a 6-week integrated clinical education experience that emphasizes the early phases of development toward entry-level PT competencies in professional practice and patient management in either an inpatient or outpatient practice setting.

Term Offered: Summer

PHYT 5860 Clinical Practicum II

[1 credit hour]

Clinical observation and supervised application of advancing physical therapy skills at the same clinical facility as Clinical Practicum I. An emphasis will be on continued progression in the generic abilities and a more focused approach toward the development of specific technical, cognitive or affective areas in need of improvement as identified during Clinical Practicum I.

Term Offered: Summer

PHYT 5900 Medical Imaging

[2 credit hours]

This course provides the student with the tools needed to interpret information obtained from the radiology report and apply it to management of the physical therapy patient. Musculoskeletal imaging is emphasized, but imaging for other body systems is also addressed. This course strengthens the student's competency to perform a comprehensive patient evaluation, establish a diagnosis and prognosis, develop a physical therapy plan of care, and to communicate and collaborate with other health care providers.

Term Offered: Spring, Summer

PHYT 6020 Lifespan II

[2 credit hours]

The principles of normal aging including the physiological, functional, and psychosocial changes associated with aging, and a review of diseases and disorders common to the aging population.

Term Offered: Spring, Summer

PHYT 6050 Hlth Care Policy and Delivery

[1 credit hour]

Overview of the origins and components of the American health care system and major policy initiatives that influence it. Access, cost, and quality factors in health care delivery will be explored. Serves as a starting point for the student's study of the continuously expanding sector of the American economy in which they will practice.

Term Offered: Spring, Fall

PHYT 6100 Health Promotion

[2 credit hours]

Discussion and application of the elements of health and wellness as described by Healthy People 2010. Emphasis on health assessment, obesity, physical activity, nutrition, complementary/alternative management, and behavior modification strategies.

Term Offered: Fall

PHYT 6170 Scholarly Project I

[2 credit hours]

The first in a series that will culminate in the oral and written presentation of a scholarly project. This will include the development and presentation of a project proposal.

Term Offered: Summer, Fall

PHYT 6180 Scholarly Project II

[2 credit hours]

The second in a series that will culminate in the oral and written presentation of a scholarly project. This is a continuation of the project initiated in PHYT 6170.

Term Offered: Spring

PHYT 6190 Scholarly Project III

[1 credit hour]

Includes the final preparation of a scholarly paper which must meet the guidelines established by the College of Graduate Studies, and the oral defense/presentation of the scholarly project as required by the College of Graduate Studies.

Term Offered: Summer, Fall

PHYT 6260 Cardiovascular-Pulmonary PT

[3 credit hours]

Integrative study of the role of PT in interdisciplinary management of patients with cardiovascular and/or pulmonary dysfunction. Application of skills associated with PT examination, evaluation, diagnosis, prognosis and interventions for patients with CV-P dysfunction.

Term Offered: Fall

PHYT 6460 Teaching and Learning

[2 credit hours]

Study of a physical therapist's role as educator of peers, patients and families, community members, and students in the clinical setting. Emphasis on instructional design, instructional strategies, teaching methods, and evaluation of learning.

Term Offered: Fall

PHYT 6500 Musculoskeletal Rehab I

[3 credit hours]

First of two courses, focused on the synthesis of principles of pathophysiology and screening and examination of musculoskeletal system. Emphasis on pertinent special examination techniques, principles of evaluation, PT diagnosis and prognosis, and intervention for the upper and lower extremities. Case-based discussion of role of common M-S pharmacological management, radiographic procedures and findings, and interpretation of special tests for diagnostic purposes.

Term Offered: Fall

PHYT 6510 Musculoskeletal Rehab II

[3 credit hours]

Second of two courses, continued discussion of the principles of pathophysiology and musculoskeletal examination, evaluation, PT diagnosis and prognosis, and intervention. Emphasis on spine and lower quarter biomechanical examination and evaluation as it relates to lumbopelvic dysfunction. Includes discussion of: pharmacological management of inflammation and pain, and synthesis of radiological findings (radiographs, MRI, CT scans), as they relate to rendering PT diagnosis and prognosis.

Term Offered: Spring

PHYT 6600 Neuromuscular Rehab I

[3 credit hours]

Theories and principles of client examination, evaluation, PT diagnosis, prognosis, and therapeutic intervention for clients with stroke and spinal cord injury. Historic and modern evidence-based treatment approaches for the neurologic patient, in general, will be discussed with emphasis on the approach's influence in the design of a PT plan of care.

Term Offered: Fall

PHYT 6610 Neuromuscular Rehab II

[3 credit hours]

Second course in the series on rehabilitation of patients with neuromuscular diagnoses, including amputations, and neurodegenerative diseases. Emphasis on theories, philosophies, and the PT plan of care including examination, evaluation, and intervention strategies. Prostheses and orthoses prescription, application and training included.

Term Offered: Spring**PHYT 6620 Pediatric Rehabilitation**

[2 credit hours]

Principles of rehabilitation for pediatric clients with neuromuscular impairments and developmental disabilities. Preparation for physical therapy practice in pediatric settings using interdisciplinary family-centered practice; normal and abnormal development, standardized assessment, service-delivery settings, interventions, management strategies specific to pediatrics. Emphasis on essential pediatric core competencies and the PT Management including examination, evaluation, diagnosis/prognosis, and intervention strategies.

Term Offered: Spring**PHYT 6700 Professional Issues**

[1 credit hour]

Prerequisite: PHYT685 Discussion of current events and issues faced by the profession of physical therapy as identified by the APTA and other pertinent sources, and as encountered during clinical education experiences.

Term Offered: Fall**PHYT 6720 Special Topics in PT**

[1 credit hour]

Intensive exploration of a topic related to the profession of physical therapy and designed to meet the student's special interest and professional goals. Subject matter will vary depending upon student interest.

Term Offered: Spring, Fall**PHYT 6740 Clinical Seminar I**

[2 credit hours]

The first of a series of two courses, this course emphasizes the application of clinical psychomotor skills, problem-solving and critical thinking for a variety of diagnoses and practice settings using patient scenarios including patients with movement dysfunction involving multiple body systems. An emphasis is placed on evidence-based decision-making, comprehensive evaluation, progressive intervention planning, and evaluation of one's own clinical reasoning processes and skills.

Term Offered: Fall**PHYT 6750 Clinical Seminar II**

[2 credit hours]

The second of a series of two courses, this course emphasizes the application of clinical psychomotor skills, problem-solving and critical thinking for a variety of diagnoses and practice settings using patient scenarios including patients with movement dysfunction involving multiple body systems. An emphasis is placed on evidence-based decision-making, comprehensive evaluation, progressive intervention planning, and evaluation of one's own clinical reasoning processes and skills.

Term Offered: Spring**PHYT 6850 Clinical Education Experience II**

[5 credit hours]

The second in a series of four full-time, supervised clinical education experiences. Students are engaged in supervised practice in a 10 week clinical education experience that emphasizes development toward entry-level PT competencies in professional practice and patient management in an inpatient or outpatient practice setting.

Term Offered: Summer**PHYT 6990 Independent Study in PT**

[0-4 credit hours]

In-depth exploration and study of clinically related problems or topic of interest. May be repeated for credit.

Term Offered: Spring, Summer, Fall**PHYT 7050 Practice Management**

[2 credit hours]

Examination of management and supervisory issues encountered in contemporary physical therapy practice. Discussion will include identification, analysis, and resolution of issues that compromise the delivery of effective and efficient PT services in a variety of practice settings. Topics include: organizational structure and behavior, human resources, finance and operations management, and marketing.

Term Offered: Spring, Fall**PHYT 7100 Integrated Patient Management**

[3 credit hours]

This integrative course emphasizes comprehensive patient management using the International Classification of Function model. This course focuses on the PT examination, evaluation, diagnosis, prognosis, and plan of care for patients with complex movement dysfunctions involving multiple body systems, managing clinical ambiguity, and determining need for referral.

Prerequisites: PHYT 685 with a minimum grade of D- or PHYT 6850 with a minimum grade of D-

Term Offered: Summer, Fall**PHYT 7200 Scholarly Project IV**

[1 credit hour]

The course includes the final preparation of a scholarly paper including the oral defense/presentation and submission of the final paper to the Department of Physical Therapy.

Prerequisites: PHYT 617 with a minimum grade of D- or PHYT 6170 with a minimum grade of D-

Term Offered: Spring, Summer, Fall**PHYT 7320 Medical Screening**

[1 credit hour]

Preparation to work within a collaborative medical model and application of threshold detection to recognize to identify impairments or "red flags" in medical screening that warrant contact with a physician or other health care provider. Patient cases illustrate important medical screening principles. Emphasis on an examination scheme to promote efficient, effective patient data collection and professional communication with patients, physicians and other health providers.

Term Offered: Spring, Fall

PHYT 7890 Clinical Education Experience III

[4 credit hours]

The third in a series of four full-time, supervised clinical education experiences. Students are engaged in supervised practice in a 8-week terminal clinical education experience that emphasizes development toward entry-level PT competencies in professional practice and patient management in an inpatient or outpatient practice setting.

Term Offered: Summer, Fall

PHYT 7900 Internship II

[6 credit hours]

The final full-time, supervised internship completed following the culmination of the didactic portion of the DPT program. Students are engaged in supervised practice in a 12 week internship that emphasizes development of entry-level PT competencies in all the components of professional practice and patient management in various clinical practice and specialty settings.

Term Offered: Spring

PHYT 7990 Specialty Internship

[4 credit hours]

Extended period of supervised, advanced clinical practice and/or formal experience in administrative or professional organizational environments, which is designed to meet the student's special interests and professional goals.

Term Offered: Spring, Fall

Physician Assistant (PHYA)

PHYA 5010 Introduction to PA Profession

[1 credit hour]

An overview of the history and philosophy of the physician assistant profession. Includes a review of current professional issues relevant to the PA profession.

Term Offered: Spring, Fall

PHYA 5100 Principle Interview/Medical History

[3 credit hours]

An introduction to the art of patient/practitioner communication and effective interviewing for the purpose of establishing a health database and follow-up care.

Term Offered: Fall

PHYA 5130 Patient Evaluation

[3 credit hours]

Students will develop the knowledge and skills to competently perform a complete physical examination, recognizing normal and abnormal findings and communicating their findings verbally and in written form.

Term Offered: Spring

PHYA 5140 Health Care Teams and Systems

[2 credit hours]

Introduction to issues and systems related to the delivery of health care in the U.S. to include settings, costs, and reimbursement issues and the evaluation of health care quality.

Term Offered: Summer, Fall

PHYA 5210 Diagnostic and Therapeutic Skills I

[2 credit hours]

Introduction to the use and interpretation of commonly used diagnostic and therapeutic tools, including laboratory studies, radiographic studies, and electrocardiography.

Term Offered: Spring

PHYA 5220 Diagnostic and Therapeutic Skills II

[2 credit hours]

Introduction to the use and interpretation of commonly used diagnostic and therapeutic tools, with practical experience in radiology including laboratory studies, radiographic studies and electrocardiography.

Prerequisites: PHYA 5130 with a minimum grade of D- and PHYA 5100 with a minimum grade of D- and PHYA 5210 with a minimum grade of D-

Term Offered: Summer

PHYA 5230 Diagnostic and Therapeutic Skills III

[2 credit hours]

Introduction to the use and interpretation of commonly used diagnostic and therapeutic tools, including laboratory studies, radiographic studies, and electrocardiography.

Term Offered: Fall

PHYA 5310 Clinical Medicine I

[4 credit hours]

An intensive, three semester sequence of study which examines human diseases and disorders from the perspectives of etiology, epidemiology, clinical manifestations, diagnosis, management, potential complications and prognosis.

Term Offered: Spring

PHYA 5330 Clinical Medicine III

[6 credit hours]

An intensive, three semester sequence of study which examines human diseases and disorders from the perspectives of etiology, epidemiology, clinical manifestations, diagnosis, management, potential complications, and prognosis.

Term Offered: Fall

PHYA 5340 Clinical Medicine II

[3 credit hours]

An intensive, three semester sequence of study which examines human diseases and disorders from the perspectives of etiology, epidemiology, clinical manifestations, diagnosis, management, potential complications and prognosis.

Prerequisites: ANAT 5000 with a minimum grade of D- and PHSL 5050 with a minimum grade of D- and PHYA 5010 with a minimum grade of D-

Term Offered: Summer

PHYA 5400 Pathophysiology I

[2 credit hours]

This is the first module of this three-semester course series. It will provide an overview of the pathologic processes that influence the development of diseases in humans at the cellular, organ, and systemic levels. The course will include a discussion of normal function, pathophysiological processes in the development of diseases, and the impact of disease on patient health.

Prerequisites: ANAT 5000 with a minimum grade of B and PHSL 5050 with a minimum grade of B

Term Offered: Spring

PHYA 5410 Pathophysiology II

[2 credit hours]

This is the second module of this three-semester course series. It will provide an overview of the pathologic processes that influence the development of diseases in humans at the cellular, organ, and systemic levels. The course will include a discussion of normal function, pathophysiological processes in the development of diseases, and the impact of disease on patient health.

Prerequisites: ANAT 5000 with a minimum grade of B and PHSL 5050 with a minimum grade of B and PHYA 5400 with a minimum grade of B

Term Offered: Summer

PHYA 5430 Pathophysiology III

[1 credit hour]

This is the first module of this three-semester course series. It will provide an overview of the pathologic processes that influence the development of diseases in humans at the cellular, organ, and systemic levels. The course will include a discussion of normal function, pathophysiological processes in the development of diseases, and the impact of disease on patient health.

Prerequisites: PHYA 5400 with a minimum grade of B and PHYA 5410 with a minimum grade of B and PHSL 5050 with a minimum grade of B and ANAT 5000 with a minimum grade of B

Term Offered: Summer, Fall

PHYA 5510 Fundamentals of Pharmacology I

[2 credit hours]

A study of the general principles of pharmacotherapeutics and the rational use of drugs for the diagnosis, prevention and treatment of diseases.

Term Offered: Spring

PHYA 5520 Fundamentals of Pharmacology II

[2 credit hours]

A study of the general principles of pharmacotherapeutics and the rational use of drugs for the diagnosis, prevention and treatment of diseases.

Term Offered: Summer

PHYA 5530 Fundamentals of Pharmacology III

[2 credit hours]

A study of the general principles of pharmacotherapeutics and the rational use of drugs for the diagnosis, prevention and treatment of diseases.

Term Offered: Fall

PHYA 6010 Clinical Genetics

[1 credit hour]

Clinical Genetics, a 1 credit hour course, is offered in the fall semester of the 2020-2021 academic year. The course describes the application of genetics to medical care and the application of these principles in the Primary Care Physician Assistant clinical practice. The discussions include: the basic structures and behavior of genes, the human genome, the role of genetics in medicine, genetic basics of human disease, application of genetics, and ethical considerations.

Term Offered: Fall

PHYA 6050 Ethics for PA Profession

[2 credit hours]

This course provides the foundation for ethics in the primary care clinical setting. Analyze common bioethical issues confronting physician assistants, and give the student the opportunity to share their experiences with peers.

Term Offered: Spring

PHYA 6110 Health Promo Disease Prevention

[1 credit hour]

An introduction to basic concepts of health promotion and disease prevention, analysis of risk factors for disease, and an emphasis on strategies to modify lifestyles to promote health in the individual and community.

Term Offered: Summer

PHYA 6130 Principle of Research and Statistics

[3 credit hours]

This course presents methods of research and their application to clinical research and practice. It emphasizes use of current research evidence in healthcare decision-making, an activity known as evidence-based practice. Topics include biostatistics, introduction to research methods, clinical analysis of the health-related information, and application of EBP to healthcare. Students develop a focused research question for their scholarly project and develop an introductory literature review on the topic. Scholarly project advisors will be identified.

Term Offered: Fall

PHYA 6150 Behavioral Science

[2 credit hours]

Study of concepts and practices related to evaluation and management of psychiatric diseases and conditions as well as behavioral issues which impact upon the health and well-being of patients.

Term Offered: Fall

PHYA 6310 Clinical Rotation - Behavior Health

[5 credit hours]

A three semester practicum, covering eight 4-week clinical rotations, which provides supervised long term care, inpatient, emergency services and ambulatory primary care clinical experiences for physical assistant students. Students will demonstrate the ability to integrate knowledge and skill in the evaluation and treatment of patients and their families. Emphasis will also be placed on assimilation of the physician assistant professional role. Students will be required to return to campus for an End of Rotation Day (EOR Day) on the last day of each clinical rotation.

Prerequisites: PHYA 6500 (may be taken concurrently) with a minimum grade of D- or PHYA 650 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PHYA 6320 Clinical Rotation - Elective

[2-5 credit hours]

A three semester practicum, covering eight 4-week clinical rotations, which provides supervised long term care, inpatient, emergency services and ambulatory primary care clinical experiences for physical assistant students. Students will demonstrate the ability to integrate knowledge and skill in the evaluation and treatment of patients and their families. Emphasis will also be placed on assimilation of the physician assistant professional role. Students will be required to return to campus for an End of Rotation Day (EOR Day) on the last day of each clinical rotation.

Prerequisites: PHYA 6500 (may be taken concurrently) with a minimum grade of D- or PHYA 650 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PHYA 6330 Clinical Rotation - Emergency Medicine

[2-5 credit hours]

A three semester practicum, covering eight 4-week clinical rotations, which provides supervised long term care, inpatient, emergency services and ambulatory primary care clinical experiences for physical assistant students. Students will demonstrate the ability to integrate knowledge and skill in the evaluation and treatment of patients and their families. Emphasis will also be placed on assimilation of the physician assistant professional role. Students will be required to return to campus for an End of Rotation Day (EOR Day) on the last day of each clinical rotation.

Prerequisites: PHYA 6500 (may be taken concurrently) with a minimum grade of D- or PHYA 650 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PHYA 6340 Clinical Rotation - Family Medicine

[2-5 credit hours]

A three semester practicum, covering eight 4-week clinical rotations, which provides supervised long term care, inpatient, emergency services and ambulatory primary care clinical experiences for physical assistant students. Students will demonstrate the ability to integrate knowledge and skill in the evaluation and treatment of patients and their families. Emphasis will also be placed on assimilation of the physician assistant professional role. Students will be required to return to campus for an End of Rotation Day (EOR Day) on the last day of each clinical rotation.

Prerequisites: PHYA 6500 (may be taken concurrently) with a minimum grade of D- or PHYA 650 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PHYA 6350 Clinical Rotation - Internal Medicine

[2-5 credit hours]

A three semester practicum, covering eight 4-week clinical rotations, which provides supervised long term care, inpatient, emergency services and ambulatory primary care clinical experiences for physical assistant students. Students will demonstrate the ability to integrate knowledge and skill in the evaluation and treatment of patients and their families. Emphasis will also be placed on assimilation of the physician assistant professional role. Students will be required to return to campus for an End of Rotation Day (EOR Day) on the last day of each clinical rotation.

Prerequisites: PHYA 6500 (may be taken concurrently) with a minimum grade of D- or PHYA 650 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PHYA 6360 Clinical Rotation - Pediatrics

[2-5 credit hours]

A three semester practicum, covering eight 4-week clinical rotations, which provides supervised long term care, inpatient, emergency services and ambulatory primary care clinical experiences for physical assistant students. Students will demonstrate the ability to integrate knowledge and skill in the evaluation and treatment of patients and their families. Emphasis will also be placed on assimilation of the physician assistant professional role. Students will be required to return to campus for an End of Rotation Day (EOR Day) on the last day of each clinical rotation.

Prerequisites: PHYA 6500 (may be taken concurrently) with a minimum grade of D- or PHYA 650 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PHYA 6370 Clinical Rotation - Surgery

[5 credit hours]

A three semester practicum, covering eight 4-week clinical rotations, which provides supervised long term care, inpatient, emergency services and ambulatory primary care clinical experiences for physical assistant students. Students will demonstrate the ability to integrate knowledge and skill in the evaluation and treatment of patients and their families. Emphasis will also be placed on assimilation of the physician assistant professional role. Students will be required to return to campus for an End of Rotation Day (EOR Day) on the last day of each clinical rotation.

Prerequisites: PHYA 6500 (may be taken concurrently) with a minimum grade of D- or PHYA 650 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PHYA 6380 Clinical Rotation - Women's Health

[5 credit hours]

A three semester practicum, covering eight 4-week clinical rotations, which provides supervised long term care, inpatient, emergency services and ambulatory primary care clinical experiences for physical assistant students. Students will demonstrate the ability to integrate knowledge and skill in the evaluation and treatment of patients and their families. Emphasis will also be placed on assimilation of the physician assistant professional role. Students will be required to return to campus for an End of Rotation Day (EOR Day) on the last day of each clinical rotation.

Prerequisites: PHYA 6500 (may be taken concurrently) with a minimum grade of D- or PHYA 650 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PHYA 6500 Introduction to Clinical Practice

[4 credit hours]

This course is designed to prepare students for their clinical rotation. Students will have the opportunity to refine skills that they have learned during their didactic training, review clinical pearls, and review important professional, legal, and safety information that is pertinent to clinical rotations.

Term Offered: Spring

PHYA 6610 Scholarly Project I

[1 credit hour]

Continuation of Principles of Research & Statistics. Students will continue to implement the scholarly project by meeting the student instructional objectives and as negotiated between the student and the student's major advisor.

Prerequisites: PHYA 6130 with a minimum grade of D-

Term Offered: Spring, Fall

PHYA 6620 Scholarly Project II

[1 credit hour]

Continuation of PHYA 6610. Students will continue to implement the scholarly project per the student instructional objectives and as negotiated between the student and the student's major advisor.

Prerequisites: PHYA 6610 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PHYA 6630 Scholarly Project III

[1 credit hour]

Continuation of PHYA 6620: Scholarly Project II. Students will complete their scholarly project per the student instructional objectives and as negotiated between the student and the student's major advisor.

The student will present the project to faculty and students during the scholarly project presentation sessions. If the project is not completed, this class may be repeated with major advisor's approval.

Prerequisites: PHYA 6620 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PHYA 6760 Clinical Preceptorship

[4 credit hours]

Final clinical experience designed to provide physician assistant students the opportunity to fully integrate and apply the six medical competencies of the physician assistant profession in clinical practice. This is an eight-week experience in a primary care practice.

Term Offered: Spring, Summer, Fall

PHYA 6800 Clinical Rotation Remediation

[5 credit hours]

A 5-week self-study setting for physician assistant students. Students will demonstrate the ability to integrate knowledge and skill in the evaluation and treatment of patients and their families in a self-directed manner. Emphasis will also be placed on reviewing PAEA End of Rotation topics as well as the NCCPA and PANCE Blueprint. Students will be required to take the Specific PAEA End of Rotation Examination on the End of the Rotation Day.

Term Offered: Spring, Summer, Fall

PHYA 6890 PA Independent Study

[0-4 credit hours]

The student and instructor will agree on a program of study that will enable the student to achieve his/her objectives. Requires approval of the Program Director. May be repeated for credit.

Term Offered: Spring, Summer, Fall

Physics (PHYS)

PHYS 5210 Theoretical Mechanics

[3 credit hours]

Kinematics and dynamics of particles and rigid bodies. Lagrangian and Hamiltonian equations of motion.

Term Offered: Fall

PHYS 5230 Classical Electricity And Magnetism I

[3 credit hours]

Electrostatics: the equations of Laplace and Poisson-Maxwell's equations and their solutions.

Term Offered: Fall

PHYS 5240 Electricity And Magnetism II

[3 credit hours]

Maxwell's equations and their solutions; electromagnetic radiation.

Prerequisites: PHYS 5230 with a minimum grade of D-

Term Offered: Spring

PHYS 5310 Quantum Mechanics

[3 credit hours]

Formalism and applications of quantum mechanics: Hilbert space, time independent and time-dependent perturbation theories, atomic and molecular structure and spectra, and scattering theory.

Term Offered: Spring

PHYS 5510 Condensed Matter Physics

[3 credit hours]

Crystal lattices and structures, reciprocal lattice and kinematical diffraction theory. Survey of binding in crystals. Lattice dynamics and phonons. Thermodynamic, electronic, and optical properties of insulators, semiconductors, metals and alloys.

Term Offered: Spring, Fall

PHYS 5620 The Physics Of Lasers

[3 credit hours]

Longitudinal and transverse coherence, stimulated emission, optical pumping, resonator structures, Q-switching, mode-locking and laser systems (gas, dye, diode, doped insulator and free electron lasers).

PHYS 5800 Astronomy In The Planetarium

[3 credit hours]

Theory and practice of astronomical outreach programming. Sky and calendar, mythology, constellations, astrophysics, buying and using small telescopes, operating and maintaining planetarium projectors, sky simulation software, projects and program production.

PHYS 5810 Astrophysics I

[3 credit hours]

Spherical coordinate systems, astronomical time, celestial mechanics, the solar system and planetary physics, photometry, radiative transfer, stellar spectra and classification, binary stars and stellar masses.

Term Offered: Fall

PHYS 5820 Astrophysics II

[3 credit hours]

Stellar structure and evolution, close binaries, origin of the elements, the sun, variable stars, star clusters, the interstellar medium, the Milky Way Galaxy, stellar statistics, galaxy structure and evolution, cosmology.

Prerequisites: PHYS 5810 with a minimum grade of D-

Term Offered: Spring

PHYS 5880 Astrophysics Laboratory

[3 credit hours]

Astronomical, optical and electronic principles of operation of a modern astronomical observatory. Observing with the 1-meter telescope of Ritter Observatory, reduction, analysis and interpretation of astronomical spectra, Six hours laboratory per week.

Corequisites: PHYS 5810

Term Offered: Fall

PHYS 5900 Research Techniques In Physics And Astronomy

[1-6 credit hours]

Research work under the guidance of a member of the graduate faculty. Designed to prepare the student to propose and carry out the thesis research required for the M.S. degree.

Term Offered: Summer

PHYS 5950 Education Workshop In The Physical Sciences

[1-4 credit hours]

For teachers in grades K-12. Introduction to modern physical science concepts suitable for classroom use; lecture and laboratory. Not acceptable for physics degree program.

PHYS 6010 Physics And Astronomy Colloquium

[2 credit hours]

Topical lectures by visiting and local professionals.

Term Offered: Spring, Fall

PHYS 6020 Physics And Astronomy Journal Seminar

[1 credit hour]

Literature review seminar.

Term Offered: Spring, Fall

PHYS 6040 Physics and Astronomy Professional Development Seminar

[1 credit hour]

This seminar is intended to help graduate students assess future career options and develop skills that will enhance their productivity and marketability for those careers. The class will involve strong faculty-student and peer student interaction with the goal of getting students to actively consider potential career paths and to start mapping out the steps necessary to achieve them. There will be periodic small homework assignments and grades will be assigned as pass/fail.

Term Offered: Spring, Summer, Fall

PHYS 6130 Computational Physics For Research

[3 credit hours]

Software packages for display and analytic manipulation, numerical methods for linear and non-linear systems of differential equations, matrix algebra, and the Schrodinger equation. Vector and parallel processing.

PHYS 6140 Fundamentals Of Modern Physics

[3 credit hours]

An intensive course which reviews the fundamentals of atomic, statistical and condensed matter physics. Provides a common foundation for entering graduate students for succeeding courses in physics and astronomy.

Term Offered: Fall

PHYS 6180 Advanced Atomic And Nuclear Physics Laboratory

[2-3 credit hours]

Experiments in nuclear, atomic, and condensed matter physics, such as gamma-ray and X-ray spectroscopies, beta and alpha particle spectroscopies, NMR, ESR, Mossbauer effect, neutron shielding, detectors and electronics, and atomic emission spectroscopy. One four-hour lab and one hour lecture per week.

Prerequisites: PHYS 6140 with a minimum grade of D-

Term Offered: Spring

PHYS 6220 Classical Mechanics

[3 credit hours]

Advanced classical mechanics, including the variational principles, Lagrange and Hamilton mechanics, and linear and nonlinear systems.

Term Offered: Fall

PHYS 6250 Classical Electrodynamics I

[3 credit hours]

Solutions to Poisson's equation in Cartesian, spherical and cylindrical coordinates with Dirichlet, Neuman and mixed boundary conditions. Maxwell's equations and their solutions applied to waveguides and nonlinear materials.

Term Offered: Spring

PHYS 6260 Classical Electrodynamics II

[3 credit hours]

Solutions to the wave equation with time dependent source terms, energy loss from high energy charged particles in dense materials, special relativity, classical field theory, invariant Lagrangians and conserved quantities.

Prerequisites: PHYS 6250 with a minimum grade of D-

Term Offered: Fall

PHYS 6280 Photovoltaic Materials And Device Physics Laboratory

[3 credit hours]

Fabrication and characterization of solar cell materials and devices, addressing materials science and physics of substrate preparation, absorber and window deposition processes, metal contact formation, and measurement of physical properties. One four-hour lab and one-hour lecture per week.

Prerequisites: PHYS 6140 with a minimum grade of D- and PHYS 7140 with a minimum grade of D-

Term Offered: Fall

PHYS 6320 Quantum Mechanics I

[3 credit hours]

Quantum theory and its application to physical problems. Topics include dynamics in the Schrodinger and Heisenberg pictures, invariance principles and angular momentum theory, perturbation theory, the variational method.

Term Offered: Fall

PHYS 6330 Quantum Mechanics II

[3 credit hours]

The quantum theory of scattering, electromagnetic interactions, quantization of the electromagnetic field and introduction to the Dirac equation.

Term Offered: Spring

PHYS 6450 Statistical Mechanics

[3 credit hours]

A fundamental quantum-mechanical development of statistical thermodynamics. Non-interacting and weakly interacting many-particle systems in the classical and quantum regimes, with applications to various fields of physics.

Term Offered: Spring

PHYS 6490 Current Issues In Theoretical Physics

[3 credit hours]

Problems in theory relative to the research programs pursued at the University.

PHYS 6520 Condensed Matter Physics I

[3 credit hours]

A study of the electromagnetic, thermal and elastic properties of condensed matter through the quantum-mechanical treatment of the electrons and elementary excitations.

Prerequisites: PHYS 6330 with a minimum grade of D-

PHYS 6530 Condensed Matter Physics II

[3 credit hours]

A survey of condensed matter phenomena of interest to experimentalists, as elucidated by theory.

Prerequisites: PHYS 6330 with a minimum grade of D-

PHYS 6540 Structure, Defects And Diffusion

[4 credit hours]

A generic materials science approach to the study of crystalline structure, defects (point, line and planar) in crystalline materials, and the mechanisms and kinetics of diffusion in the condensed state.

Term Offered: Fall

PHYS 6550 Thermodynamics And Phase Transformations In Condensed Systems

[4 credit hours]

A materials science approach to the thermodynamics of condensed state equilibria and phase transformation kinetics.

Prerequisites: PHYS 6450 with a minimum grade of D-

Term Offered: Spring

PHYS 6630 Semiconductors I

[3 credit hours]

Review of modern theory of solids. Semiconducting and metallic materials. Semiconductor devices including p-n junctions and solar cells.

Prerequisites: PHYS 4510 with a minimum grade of D- and EECS 4400 with a minimum grade of D-

Term Offered: Fall

PHYS 6640 Fundamentals of Solar Cells

[3 credit hours]

Worldwide status of Photovoltaics, Semiconductors. P-n junction diodes. Ideal solar cells. Efficiency losses. Single crystals and thin films technologies. PV systems.

Prerequisites: PHYS 4510 with a minimum grade of D- and EECS 4400 with a minimum grade of D-

Term Offered: Spring

PHYS 6690 Current Issues In Optics

[3 credit hours]

Current research in optics and the optical excitation of material modes.

PHYS 6710 Atomic Physics

[3 credit hours]

A study of the fundamental properties of atoms, their theoretical description and experimental measurement. Topics include atomic structure, radiative transitions, external field interactions and atomic collisions.

Term Offered: Fall

PHYS 6720 Atomic & Molecular Spectroscopy

[3 credit hours]

Theory and experimental methods of atomic and molecular spectroscopy. Topics include the theory of interpretation of atomic and molecular spectra and the experimental means to measure the spectra.

Prerequisites: PHYS 6710 with a minimum grade of D-

PHYS 6770 Accelerator Physics

[3 credit hours]

Basic electrodynamic functioning of charged-particle accelerators, particle dynamics of non-relativistic and relativistic accelerators, accelerator applications, static field and dynamic field accelerator designs.

PHYS 6810 Stellar Astrophysics I

[3 credit hours]

Stellar atmospheres and their emergent spectra. Physics of radiation, matter and their interaction. Radiative transfer, hydrostatic and radiative equilibrium, convection, line formation and spectral signatures of atmospheric physics.

Term Offered: Fall

PHYS 6820 Stellar Astrophysics II

[3 credit hours]

Stellar structure and evolution. Equation of state, nuclear reactions and nucleosynthesis, stellar formation, evolution and death, enrichment of the interstellar medium, formation of planetary systems, solar physics and helioseismology.

Term Offered: Spring

PHYS 6830 Galactic Astronomy I

[3 credit hours]

Stellar spectra, colors, compositions and ages; star clusters; pulsating stars; calibration of distance indicators. Interstellar dust, interstellar extinction, interstellar gas, nebulae; structure of the interstellar medium.

Term Offered: Fall

PHYS 6840 Galactic Astronomy II

[3 credit hours]

Structure and dynamics of the Galaxy, shocks and explosions, stellar kinematics, galactic rotation, and dynamical and chemical evolution.

Term Offered: Spring

PHYS 6940 Industrial Internship

[1-6 credit hours]

Experiential learning in an academic advisor-approved business, industry, or non-profit. Six credits are required for the PSM degree.

Term Offered: Spring, Summer, Fall

PHYS 6960 M.s. Thesis Research

[1-15 credit hours]

Thesis research required for the M.S. degree.

Term Offered: Spring, Summer, Fall

PHYS 6980 Special Topics

[1-4 credit hours]

Course reserved for visiting lecturers and topics not covered otherwise.

Term Offered: Spring, Summer, Fall

PHYS 6990 Independent Study

[1-4 credit hours]

PHYS 7130 Computational Physics For Research

[3 credit hours]

Software packages for display and analytic manipulation, numerical methods for linear and non-linear systems of differential equations, matrix algebra, and the Schrodinger equation. Vector and parallel processing.

PHYS 7140 Fundamentals Of Modern Physics

[3 credit hours]

An intensive course which reviews the fundamentals of atomic, statistical and condensed matter physics. Provides a common foundation for entering graduate students for succeeding courses in physics and astronomy.

Term Offered: Fall

PHYS 7180 Advanced Atomic and Nuclear Physics Laboratory

[2-3 credit hours]

Experiments in nuclear, atomic, and condensed matter physics, such as gamma-ray and X-ray spectroscopies, betas and alpha particle spectroscopies, NMR, ESR, Mossbauer effect, neutron shielding, detectors and electronics, and atomic emission spectroscopy. One four-hour lab and one hour lecture per week.

Prerequisites: PHYS 6140 with a minimum grade of D- or PHYS 7140 with a minimum grade of D-

Term Offered: Spring

PHYS 7220 Classical Mechanics

[3 credit hours]

Advanced classical mechanics, including the variational principles, Lagrange and Hamilton mechanics, and linear and nonlinear systems.

Term Offered: Fall

PHYS 7250 Classical Electrodynamics I

[3 credit hours]

Solutions to Poisson's equation in Cartesian, spherical and cylindrical coordinates with Dirichlet, Neuman and mixed boundary conditions. Maxwell's equations and their solutions applied to waveguides and nonlinear materials.

Term Offered: Spring

PHYS 7260 Classical Electrodynamics II

[3 credit hours]

Solutions to the wave equation with time dependent source terms, energy loss from high energy charged particles in dense materials, special relativity, classical field theory, invariant Lagrangians and conserved quantities.

Prerequisites: PHYS 6250 with a minimum grade of D- or PHYS 7250 with a minimum grade of D-

Term Offered: Fall

PHYS 7280 Photovoltaic Materials And Device Physics Laboratory

[3 credit hours]

Detailed fabrication and characterization of solar cell materials and devices, addressing materials science and physics of substrate preparation, absorber and window deposition processes, metal contact formation, and measurement of physical properties. One four-hour lab and one-hour lecture per week.

Prerequisites: PHYS 6140 with a minimum grade of D- and PHYS 7140 with a minimum grade of D-

Term Offered: Fall

PHYS 7320 Quantum Mechanics I

[3 credit hours]

Quantum theory and its application to physical problems. Topics include dynamics in the Schrodinger and Heisenberg pictures, invariance principles and angular momentum theory, perturbation theory, the variational method.

Term Offered: Fall

PHYS 7330 Quantum Mechanics II

[3 credit hours]

The quantum theory of scattering, electromagnetic interactions, quantization of the electromagnetic field and introduction to the Dirac equation.

Term Offered: Spring

PHYS 7450 Statistical Mechanics

[3 credit hours]

A fundamental quantum-mechanical development of statistical thermodynamics. Non-interacting and weakly interacting many-particle systems in the classical and quantum regimes, with applications to various fields of physics.

Term Offered: Spring

PHYS 7520 Condensed Matter Physics I

[3 credit hours]

A study of the electromagnetic, thermal and elastic properties of condensed matter through the quantum-mechanical treatment of the electrons and elementary excitations.

Prerequisites: PHYS 6330 with a minimum grade of D-

PHYS 7530 Condensed Matter Physics II

[3 credit hours]

A survey of condensed matter phenomena of interest to experimentalists, as elucidated by theory.

Prerequisites: PHYS 6330 with a minimum grade of D-

PHYS 7710 Atomic Physics

[3 credit hours]

A study of the fundamental properties of atoms, their theoretical description and experimental measurement. Topics include atomic structure, radiative transitions, external field interactions and atomic collisions.

Term Offered: Fall

PHYS 7720 Atomic & Molecular Spectroscopy

[3 credit hours]

Theory and experimental methods of atomic and molecular spectroscopy. Topics include the theory of interpretation of atomic and molecular spectra and the experimental means to measure the spectra.

Prerequisites: PHYS 6710 with a minimum grade of D-

PHYS 7810 Stellar Astrophysics I

[3 credit hours]

Stellar atmospheres and their emergent spectra. Physics of radiation, matter and their interaction. Radiative transfer, hydrostatic and radiative equilibrium, convection, line formation, and spectral signatures of atmospheric physics.

Term Offered: Fall

PHYS 7820 Stellar Astrophysics II

[3 credit hours]

Stellar structure and evolution. Equation of state, nuclear reactions and nucleosynthesis, stellar formation, evolution and death, enrichment of the interstellar medium, formation of planetary systems, solar physics and helioseismology.

Term Offered: Spring

PHYS 7830 Galactic Astronomy I

[3 credit hours]

Stellar spectra, colors, compositions, and ages; star clusters; pulsating stars; calibration of distance indicators. Interstellar dust, interstellar extinction, interstellar gas, nebulae; structure of the interstellar medium.

Term Offered: Fall**PHYS 7840 Galactic Astronomy II**

[3 credit hours]

Structure and dynamics of the Galaxy, shocks and explosions, stellar kinematics, galactic rotation, and dynamical and chemical evolution.

PHYS 7910 Advanced Research In Physics And Astronomy

[1-15 credit hours]

Research work under the guidance of a member of the graduate faculty. Designed to prepare the student to propose and carry out the thesis research required for the Ph.D. degree.

Term Offered: Spring, Summer, Fall**PHYS 8010 Physics And Astronomy Colloquium**

[2 credit hours]

Topical lectures by visiting and local professionals.

Term Offered: Spring, Fall**PHYS 8020 Physics And Astronomy Journal Seminar**

[1 credit hour]

Literature review seminar.

Term Offered: Spring, Fall**PHYS 8040 Physics and Astronomy Professional Development Seminar**

[1 credit hour]

This seminar is intended to help graduate students assess future career options and develop skills that will enhance their productivity and marketability for those careers. The class will involve strong faculty-student and peer student interaction with the goal of getting students to actively consider potential career paths and to start mapping out the steps necessary to achieve them. There will be periodic small homework assignments and grades will be assigned as pass/fail.

Term Offered: Spring, Summer, Fall**PHYS 8490 Current Issues In Theoretical Physics**

[3 credit hours]

Problems in theory relative to the research programs pursued at the University.

PHYS 8540 Structure, Defects And Diffusion

[4 credit hours]

A generic materials science approach to the study of crystalline structure, defects (point, line and planar) in crystalline materials, and the mechanisms and kinetics of diffusion in the condensed state.

Term Offered: Fall**PHYS 8550 Thermodynamics And Phase Transformations In Condensed Systems**

[4 credit hours]

A materials science approach to the thermodynamics of condensed state equilibria and phase transformation kinetics.

Prerequisites: PHYS 6540 with a minimum grade of D- or PHYS 8540 with a minimum grade of D-

Term Offered: Spring**PHYS 8590 Current Issues In Condensed Matter And Material Science**

[3 credit hours]

A survey of various areas in the physics of condensed matter and materials. Content will vary with instructor and from year to year.

PHYS 8630 Semiconductors I

[3 credit hours]

Review of modern theory of solids. Semiconducting and metallic materials. Semiconductor devices including p-n junctions and solar cells.

Prerequisites: PHYS 4510 with a minimum grade of D- and EECS 4400 with a minimum grade of D-

Term Offered: Spring, Fall**PHYS 8640 Fundamentals of Solar Cells**

[3 credit hours]

Worldwide status of Photovoltaics, Semiconductors. P-n junction diodes. Ideal solar cells. Efficiency losses. Single crystals and thin films technologies. PV systems.

Prerequisites: PHYS 4510 with a minimum grade of D- and EECS 4400 with a minimum grade of D-

Term Offered: Spring**PHYS 8690 Current Issues In Optics**

[3 credit hours]

Current research in optics and the optical excitation of material modes.

PHYS 8860 General Relativity

[3 credit hours]

Differential geometry, exterior calculus of tensors, the stress-energy tensor and Einstein field equation, stellar evolution and black holes, gravitational lensing, tests of the theory, and gravitational wave detection.

Prerequisites: PHYS 7260 with a minimum grade of D-

Term Offered: Fall**PHYS 8870 Cosmology**

[3 credit hours]

Cosmological solutions for Einstein's field equation, the standard cosmological model, particle physics, nucleosynthesis and the cosmic background radiation. Inflation, dark matter and mass distribution, gravitational evolution, and formation of galaxies.

Prerequisites: PHYS 8860 with a minimum grade of D-

Term Offered: Spring**PHYS 8960 Ph. D. Thesis Research**

[1-15 credit hours]

Thesis research required for the Ph.D. degree.

Term Offered: Spring, Summer, Fall**PHYS 8980 Special Topics**

[1-4 credit hours]

Course reserved for visiting lecturers and topics not covered otherwise.

Term Offered: Spring, Summer**PHYS 8990 Independent Study**

[1-4 credit hours]

Physiology (PHSL)

PHSL 5050 Human Physiology

[3 credit hours]

This course addresses cellular, regulatory and organ system physiology including blood and immune system, cardiovascular, respiratory, gastrointestinal, renal reproductive and endocrine physiology

Corequisites: ANAT 5000

Term Offered: Fall

Political Science (PSC)

PSC 5220 Advocacy Groups in US Politics

[3 credit hours]

This course investigates the role of advocacy groups in American politics. It develops practical lobbying skills through experiential learning and covers topics such as the role of advocacy groups in campaigns and elections, grass roots mobilization, and agenda setting.

Term Offered: Spring, Fall

PSC 5230 Presidency

[3 credit hours]

The nomination, election, responsibilities and performance of the American president. The course includes decision making, policy making, personality, and relations with Congress, the Courts, news media and interest groups.

Term Offered: Spring

PSC 5280 Legislative Process

[3 credit hours]

An intensive study of the development, functions, committees, party and factional organizations of the U.S. Congress, state legislatures and non-American legislative bodies.

Term Offered: Summer, Fall

PSC 5300 Principles of Public Administration

[3 credit hours]

This course provides an overview of public administration. It addresses organization theory, decision making, budgeting, public policy, and the changing role of public institutions. It covers important democratic, professional, ethical and human values that are central to public administration.

PSC 5320 Urban Policy & Administration

[3 credit hours]

What does it take to govern a city and its environs? In this course, we examine the balance between the pressing needs of a city and the many economic and political constraints that citizens, leaders, and experts must navigate to achieve their goals.

Term Offered: Spring, Summer, Fall

PSC 5340 Environmental Policy And Administration

[3 credit hours]

Policy for air and water pollution control, hazardous wastes, nuclear wastes. Examination of EPA, Congressional committees, state and city agencies as well as some international issues.

Term Offered: Fall

PSC 5360 Ethics In Public Policy And Administration

[3 credit hours]

Examination of values and principles which guide public policy formation and public administration. Applications of philosophical concepts to policy problems and the responsibilities of public administrators will be emphasized.

Term Offered: Spring, Summer, Fall

PSC 5380 Fundraising

[3 credit hours]

This course examines the theoretical, practical and ethical issues related to public and nonprofit organizations fundraising. This course will prepare students who plan to work in public and nonprofit organizations to win and manage grants as well as philanthropic donations from multiple sources.

Term Offered: Spring, Summer, Fall

PSC 5390 Applied Politics Internship

[3 credit hours]

A study of electoral politics, public decision-making or policy implementation through internships with candidates, political parties, public officials or governmental or nonprofit agencies.

Term Offered: Spring, Summer, Fall

PSC 5410 Public and Nonprofit Management

[3 credit hours]

This course examines management techniques, organizational design, strategic planning and the theoretical and practical behavioral skills that are necessary for effective public and nonprofit management. These skills include communication, organizational, and leadership skills within public and nonprofit organizations.

Term Offered: Spring, Summer, Fall

PSC 5430 Human Resources Management in Public and Nonprofit Organizations

[3 credit hours]

This course is a study of human resource management in public and nonprofit organizations. The course explores broad themes within public personnel administration such as recruitment, retention, motivation, and diversity to provide students with the opportunity to develop technical skills necessary for effectively managing human resources in contemporary public agencies, including government and nonprofit organizations.

Term Offered: Spring, Summer, Fall

PSC 5440 Budgeting And Financial Administration

[3 credit hours]

An examination of the institutions and techniques of financial administration, including government accounting, budgeting, financial management and government choice.

Term Offered: Spring, Summer, Fall

PSC 5480 Introduction to Nonprofits

[3 credit hours]

This course provides an overview of the voluntary sector with an emphasis on the historical, philosophical, and theoretical justifications of the nonprofit sector, voluntary action, and philanthropy. The course will explore the administration and management of nonprofit organizations as well as the impact nonprofit organizations have on public policy.

Term Offered: Spring, Summer, Fall

PSC 5530 Civil Rights

[3 credit hours]

A study of policy-making and implementation related to issues of race, gender and sexual orientation.

Term Offered: Summer, Fall

PSC 5550 Contemporary Issues In Law and Politics

[3 credit hours]

Examines current controversies in U.S. law and politics, drawing on recent research in political theory, constitutional history, and legal doctrine. Includes issues such as freedom of speech, presidential powers, and religious freedom.

Term Offered: Spring

PSC 5560 Law And Public Administration

[3 credit hours]

Survey of law topics that are relevant for managers of public and nonprofit organizations.

Term Offered: Spring, Summer, Fall

PSC 5580 International Law

[3 credit hours]

A study of the legal system governing interstate relations. Cases will be reviewed. State jurisdiction and responsibilities will be examined, emphasizing the rules of war.

PSC 5590 Law, Policy And The Politics of Sexuality

[3 credit hours]

This course explores the public policies that affect the lesbian, gay, bisexual and transgender communities in the United States and in other countries. It examines the factors that affect policymaking in this area.

Term Offered: Spring, Fall

PSC 5640 The European Union

[3 credit hours]

An analysis of the evolution, institutional structure and operation of the European Unions.

Term Offered: Spring

PSC 5650 International Political Economy

[3 credit hours]

An analysis of the interaction of the international political and economic systems with focus on the political aspects of the international economy. Topics include economic development, interdependence, trade and multilateral institutions.

PSC 5680 Politics of Latin America

[3 credit hours]

This course provides a survey of the Latin American region, its political transformation, and place in international politics. It covers an array of issues that have shaped and continue to shape the region: its history, its people, institutions and politics, and social and economic issues. Themes are approached both from a regional and country-level perspective.

PSC 5710 Theories Of International Politics

[3 credit hours]

An analysis of the leading approaches to the study of international politics that contribute to the construction of a general theory.

PSC 5720 International Organizations

[3 credit hours]

A study of the background, aims, purposes and problems of international organizations. An examination of the functions of the specialized agencies and other organizations of the United Nations system.

Term Offered: Fall

PSC 5740 International Relations - Middle East

[3 credit hours]

A survey of geopolitical, economic and sociocultural factors affecting foreign policy processes; an examination of the role of the Big Powers and the United Nations. Conferences with the instructor are required.

PSC 5750 Terrorism in International Relations

[3 credit hours]

This course will give students a comparative historical, empirical, and theoretical overview of the causes, strategies, and goals of terrorists and counter-terrorism. The primary focus of the course is on the comparative and international nature of terrorism. Global and regional case studies will be used to better understand issues related to terrorism.

PSC 5950 Mpa Research Report

[2 credit hours]

Independent research, under the direction of a faculty adviser, analyzing experience as a public official.

Term Offered: Spring, Summer, Fall

PSC 5980 Current Topics In Political Science

[3 credit hours]

Examination of emerging issues within the various segments and subfields of the discipline of political science.

Term Offered: Spring, Fall

PSC 5990 Independent Study In Political Science

[1-3 credit hours]

Individual study in selected topic.

Term Offered: Spring, Summer, Fall

PSC 6110 Public Policy Methods and Analysis

[3 credit hours]

This course explores research methodology as used in public affairs and public administration. We will analyze political phenomena in a rigorous and scientific manner and connect research methods to practice of administration. Topics include research design, research ethics, quantitative and qualitative methodological approaches, basic statistical techniques for data analysis through measures of association and regression. By doing so, this course assists in the professional development of in-service and pre-service practitioners of public management.

Term Offered: Spring, Summer, Fall

PSC 6420 Program Evaluation

[3 credit hours]

Evaluating the effectiveness of programs and policies is an essential component of public, nonprofit and private sector management. This class is an introduction to the field of program evaluation. Evaluation uses research methodology to investigate the formation, implementation and administration of public policies and public programs.

Term Offered: Spring, Summer, Fall

PSC 6430 Public Policy Process

[3 credit hours]

Application of current theories of the public policy process to current issues in public policy and management. Emphasis on the dominant theories of the process, including policy streams, advocacy coalitions, punctuated equilibrium, institutional and rational choice models.

Term Offered: Spring, Summer, Fall

PSC 6490 Public Administration Capstone

[2 credit hours]

This course concludes the MPA curriculum at the University of Toledo. It is designed to integrate theoretical and practical knowledge to help students further their public and non-profit sector careers.

Term Offered: Spring, Summer, Fall

PSC 6940 Professional Experience

[1 credit hour]

Professional experience, such as an internship or professional project, in public or nonprofit agency and preparation for the MPA Capstone course.

Term Offered: Spring, Summer, Fall

PSC 6960 Thesis Seminar

[1-6 credit hours]

Supervision of master's thesis writing.

Term Offered: Spring, Summer, Fall

Psychology (PSY)

PSY 5000 History Of Psychology

[3 credit hours]

An historical treatment of the development of modern psychology, starting in the mid 19th century, with some consideration of earlier approaches. Theoretical developments are emphasized.

Prerequisites: PSY 1010 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PSY 6000 History Of Psychology

[3 credit hours]

Intensive historical treatment of the development of modern psychology from the 19th century. Theoretical psychological and related philosophical positions are emphasized.

PSY 6030 Research Practicum

[1-3 credit hours]

Developing, conducting, analyzing and preparing reports of research projects under faculty supervision. May be repeated.

Term Offered: Spring, Summer, Fall

PSY 6040 Teaching Practicum

[3 credit hours]

Supervised experience in the teaching of psychology. May be repeated for credit.

Term Offered: Fall

PSY 6050 Culture And Psychology

[3 credit hours]

A theoretical and empirical analysis of the systematic functioning of culture in psychological phenomena, with a focus on key concepts in clinical, cognitive, developmental and social psychology.

Term Offered: Spring

PSY 6070 The Science of Emotion

[3 credit hours]

An integrative course focusing on emotion in the context of affective and biological aspects of behavior.

Term Offered: Spring, Summer, Fall

PSY 6080 Grant Writing in Psychology

[3 credit hours]

Provides an overview of the federal grant writing process in Psychology.

Term Offered: Spring, Summer, Fall

PSY 6100 Quantitative Methods In Psychology I

[3 credit hours]

Probability theory, descriptive and inferential statistics, hypothesis testing, correlation.

Term Offered: Spring, Summer, Fall

PSY 6110 Quantitative Methods In Psychology II

[3 credit hours]

Analysis of variance, regression analyses, non-parametric analyses.

Term Offered: Spring, Fall

PSY 6130 Design And Evaluation Of Psychological Research

[3 credit hours]

Readings and discussion of problems of research design and analysis.

Term Offered: Fall

PSY 6150 Psychometrics and Scale Development

[3 credit hours]

Procedures for developing and examining the reliability and validity of test scales, including theories of measurement, item analysis, factor analysis, and diagnostic efficiency statistics.

Prerequisites: PSY 6100 with a minimum grade of D- and PSY 6110 with a minimum grade of D-

Term Offered: Spring

PSY 6160 Advanced Research Seminar in Psychology

[3 credit hours]

Advanced research seminar focusing on selected topics from the general science of psychology.

Prerequisites: PSY 6130 with a minimum grade of B- and PSY 7130 with a minimum grade of B-

Term Offered: Spring, Summer, Fall

PSY 6200 Systems Of Personality

[3 credit hours]

Advanced historical overview of the main systems for understanding human beings: sources of motivation, coping, dysfunction, strengths/virtues. Emphasizes philosophical understandings of personality systems, analysis of major contributions and multi-perspective critiques.

Term Offered: Spring, Fall

PSY 6210 Psychopathology

[3 credit hours]

Critical analysis of diagnostic classification models, etiological conceptualizations and therapeutic interventions form mental disorders.

Term Offered: Fall

PSY 6220 Cognitive Assessment

[4 credit hours]

Assessment of cognitive functioning, utilizing tests of cognitive abilities and achievement.

Term Offered: Spring, Fall

PSY 6230 Personality Assessment

[4 credit hours]

Assessment of personality functioning utilizing objective tests.

Prerequisites: PSY 6220 with a minimum grade of D-**Term Offered:** Spring**PSY 6240 Assessment I**

[4 credit hours]

This course is designed to provide clinical psychology doctoral students with the training to attain the profession-wide competency in assessment, as required by the APA Commission on Accreditation. Students will learn foundational skills in psychometrics and integrative multimethod assessment in the process of learning to administer, score, interpret, and communicate about the most commonly used standardized measures for behavioral and cognitive assessment in order to be prepared to engage in evidence-based assessment practice.

Corequisites: PSY 6290, PSY 6360**Term Offered:** Fall**PSY 6250 Seminar In Clinical Psychology**

[3 credit hours]

Advanced seminar focusing on selected topics from the general area of clinical psychology. -001 Clinical neuropsychology -002 Child psychopathology -003 Child Clinical Intervention -004 Marital & Family Therapy -005 Psychotherapy research & program evaluation.

Term Offered: Spring, Summer, Fall**PSY 6260 Professional And Ethical Issues**

[3 credit hours]

Exploration of ethical and professional issues faced by clinical psychologists. Detailed analysis of the American Psychological Association's Ethical Principles of Psychologists and Code of Conduct.

Term Offered: Spring, Fall**PSY 6280 Assessment II**

[4 credit hours]

This course is designed to provide clinical psychology doctoral students with the training to attain the profession-wide competency in assessment, as required by the APA Commission on Accreditation. Students will learn foundational skills in psychometrics and integrative multimethod assessment in the process of learning to administer, score, interpret, and communicate about the most commonly used standardized measures for neuropsychological and personality and psychopathology assessment in order to be prepared to engage in evidence-based assessment practice.

Prerequisites: PSY 6240 with a minimum grade of D-**Corequisites:** PSY 6300, PSY 6370**Term Offered:** Spring**PSY 6290 Foundations of Clinical Practice I**

[3 credit hours]

The goal of this course is to provide an introduction to the basic clinical skills needed to conduct intake assessments and provide therapy. Foundational clinical skills central to all forms of assessment and therapy will be reviewed and practiced, and basic tenets of professionalism and ethics relevant to clinical psychology will be discussed. Application of skills to diverse populations and cultural competence considerations for assessment and therapy will also be discussed.

Corequisites: PSY 6240, PSY 6360**Term Offered:** Fall**PSY 6300 Foundations of Clinical Practice II**

[3 credit hours]

The goal of this course is to provide a continued introduction, building upon the content of PSY 6300 Foundations of Clinical Practice I, to the basic clinical skills needed to conduct intake and diagnostic assessments, administer structured diagnostic interviews, and provide therapy. Foundational clinical skills central to all forms of assessment and therapy will be reviewed and practiced, including assessment and treatment techniques relevant to vulnerable and at-risk groups.

Prerequisites: PSY 6290 with a minimum grade of D-**Corequisites:** PSY 6280, PSY 6370**Term Offered:** Spring**PSY 6310 Psychotherapy With Children And Adolescents**

[3 credit hours]

Presentation and explanation of techniques of psychotherapy with children and adolescents.

Prerequisites: PSY 6390 with a minimum grade of D-**Term Offered:** Fall**PSY 6330 Psychodynamic Psychotherapy**

[3 credit hours]

Didactic course covering psychoanalytic/psychodynamic theories, case conceptualization, therapy techniques, and relevant empirical research.

Term Offered: Spring, Fall**PSY 6340 Cognitive-Behavioral Psychotherapy**

[3 credit hours]

Presentation and exploration of the theory and techniques of cognitive-behavioral assessment and therapy. Emphasis on understanding the theoretical and empirical base for cognitive-behavioral interventions and implications for application in clinical and clinical-research settings.

Term Offered: Spring**PSY 6350 Family And Couple Therapy**

[3 credit hours]

Presentation and exploration of family and couple therapy as a discipline, theoretical perspectives and empirical research on couple/family interaction and therapeutic techniques used with families and couples.

Prerequisites: PSY 6390 with a minimum grade of D-**Term Offered:** Fall**PSY 6360 Foundations of Psychotherapy I**

[3 credit hours]

This course is designed to provide a basis for the attainment of the profession-wide competency of intervention, with a specific focus on preparing students to develop competence in evidence-based interventions consistent with the scope of Health Service Psychology. This course will present an overview of psychopathology and various classification models of the major disorder areas, as well as provide an introduction to the major theories of psychology and the principles underlying behavioral and cognitive therapy.

Corequisites: PSY 6240, PSY 6290**Term Offered:** Fall

PSY 6370 Foundations of Psychotherapy II

[3 credit hours]

This course is designed to provide a basis for the attainment of the profession-wide competency of intervention, with a specific focus on preparing students to develop competence in evidence-based interventions consistent with the scope of Health Service Psychology. This course will present an overview of and foundational knowledge relevant to four key areas of psychological intervention: (1) Cognitive Behavioral Therapy, (2) Family and Couple Therapy, (3) Psychodynamic Psychotherapy, and (4) Child and Adolescent Therapy.

Prerequisites: PSY 6360 with a minimum grade of D-

Corequisites: PSY 6280, PSY 6300

Term Offered: Spring

PSY 6380 Empirically Supported Interventions and Processes of Change

[3 credit hours]

This course is designed to provide advanced knowledge in empirically-supported interventions in clinical psychology. Specifically, this course will provide in-depth instruction in the use of psychological interventions for treatment numerous psychological conditions. All interventions or approaches taught in this course have been well researched with substantial data existing to support their effectiveness.

Prerequisites: PSY 6240 with a minimum grade of D- and PSY 6280 with a minimum grade of D- and PSY 6290 with a minimum grade of D- and PSY 6300 with a minimum grade of D- and PSY 6360 with a minimum grade of D- and PSY 6370 with a minimum grade of D-

Term Offered: Spring, Fall

PSY 6390 Clinical Laboratory

[3 credit hours]

Clinical interviewing, diagnostic assessment, case conceptualization and oral presentation of clinical cases. Diagnostic, therapeutic and professional issues are addressed via didactic coursework and practicum work with clients in the Psychology Clinic.

Term Offered: Spring

PSY 6400 Cognitive Psychology

[3 credit hours]

An intensive examination of human information processing. Topics include neural bases of cognition, perceptual and attentional processing, mental imagery, memory, problem solving and reasoning.

Term Offered: Spring, Summer, Fall

PSY 6410 Seminar In Cognitive Psychology

[3 credit hours]

An advanced seminar focusing on selected topics from the general area of Cognitive Psychology.

Term Offered: Spring, Fall

PSY 6500 Developmental Psychology

[3 credit hours]

Advanced treatment of the theoretical and empirical literature in developmental psychology, and of the major issues of the field.

Term Offered: Spring, Fall

PSY 6510 Seminar In Developmental Psychology

[3 credit hours]

Readings and evaluative discussions of the primary research literature in developmental psychology.

Prerequisites: PSY 6500 with a minimum grade of D-

Term Offered: Spring, Fall

PSY 6600 Behavioral Neuroscience

[3 credit hours]

Structure and function of neurons and the neural mediation of behavior, both normal and abnormal.

Term Offered: Summer

PSY 6610 Seminar In Psychobiology And Learning

[3 credit hours]

Readings and evaluative discussions of the primary research literature in psychobiology, behavioral neuroscience, neuroanatomy, learning, motivation and perception.

Term Offered: Fall

PSY 6700 Social Psychology

[3 credit hours]

Social cognition and behavior, interpersonal influence and social relations will be addressed.

Term Offered: Spring, Fall

PSY 6710 Seminar In Social Psychology

[3 credit hours]

In-depth treatment of selected topics in Social Psychology.

Term Offered: Spring, Fall

PSY 6720 Social Cognition

[3 credit hours]

This course examines how people make sense of other people, themselves, and social situations by examining the cognitive structures and processes involved in judgments, decisions, perceptions, beliefs, and behavior. The topics include (but are not limited to) attribution, counterfactual thinking, judgment heuristics, schemas, person perception, attitudes, and stereotypes/prejudice.

Term Offered: Spring, Fall

PSY 6810 Clinical Practicum I

[0 credit hours]

This first-year practicum course includes observation of and entry-level participation in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D-

Term Offered: Spring, Fall

PSY 6820 Clinical Practicum II

[3 credit hours]

This second-year practicum course includes participation, as a beginning student therapist, in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D-

PSY 6830 Clinical Practicum III

[3 credit hours]

This third-year practicum course includes participation, as an experienced student therapist, in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D- and PSY 6810 with a minimum grade of D- and PSY 6820 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PSY 6840 Clinical Practicum IV

[1-3 credit hours]

This fourth-year practicum course includes participation, as a senior-level student therapist, in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D- and PSY 6810 with a minimum grade of D- and PSY 6820 with a minimum grade of D- and PSY 6830 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PSY 6850 Family And Couple Practicum

[3 credit hours]

Supervision of psychotherapy with families and couples seen through The University of Toledo Psychology Clinic.

Term Offered: Spring, Fall

PSY 6860 Advanced Assessment Practicum

[3 credit hours]

Clinical supervision of psychological assessments using multiple methods of assessment with clients seen through The University of Toledo Psychology Clinic.

Prerequisites: PSY 6210 with a minimum grade of D- and PSY 6220 with a minimum grade of D- and PSY 6230 with a minimum grade of D-

Term Offered: Spring, Fall

PSY 6930 Seminar In Psychology

[3 credit hours]

Readings and evaluative discussions of the primary research literature in psychology.

Term Offered: Spring, Fall

PSY 6940 Supervised Clinical Practicum

[1-3 credit hours]

Supervised applied assessment, therapeutic and consultative experience in community settings.

Term Offered: Summer, Fall

PSY 6950 Community Placement in Clinical Psychology

[0 credit hours]

The Externship in Clinical Psychology is a field placement program in which students are placed in structured clinical service settings with psychologists and other behavioral healthcare providers. Students obtain supervised clinical training in the application of basic clinical psychological service skills.

Term Offered: Spring, Summer, Fall

PSY 6960 M.a. Thesis

[1-6 credit hours]

Developing, conducting and analyzing the thesis research project, writing the thesis.

Term Offered: Spring, Summer, Fall

PSY 6980 Special Topics

[1-3 credit hours]

Professional issues in academic and scientific psychology.

Term Offered: Spring, Summer, Fall

PSY 6990 Independent Study

[1-15 credit hours]

Directed reading and/or experimentation on a topic selected by the study in conjunction with a faculty mentor.

Term Offered: Spring, Summer, Fall

PSY 7000 History Of Psychology

[3 credit hours]

Intensive historical treatment of the development of modern psychology from the 19th century. Theoretical psychological and related philosophical positions are emphasized.

PSY 7030 Research Practicum

[1-3 credit hours]

Developing, conducting, analyzing and preparing reports of research projects under faculty supervision. May be repeated.

Term Offered: Spring, Summer, Fall

PSY 7040 Teaching Practicum

[3 credit hours]

Supervised experience in the teaching of psychology. May be repeated for credit.

Term Offered: Spring, Fall

PSY 7050 Culture And Psychology

[3 credit hours]

A theoretical and empirical analysis of the systematic functioning of culture in psychological phenomena, with a focus on key concepts in clinical, cognitive, developmental and social psychology.

Term Offered: Spring

PSY 7070 The Science of Emotion

[3 credit hours]

An integrative course focusing on emotion in the context of affective and biological aspects of behavior.

Term Offered: Spring, Summer, Fall

PSY 7080 Grant Writing in Psychology

[3 credit hours]

Provides an overview of the federal grant writing process in Psychology.

Term Offered: Spring, Summer, Fall

PSY 7100 Quantitative Methods In Psychology I

[3 credit hours]

Probability theory, descriptive and inferential statistics, hypothesis testing, correlation.

Term Offered: Fall

PSY 7110 Quantitative Methods In Psychology II

[3 credit hours]

Analysis of variance, regression analyses, non-parametric analyses.

Term Offered: Spring, Fall

PSY 7130 Design And Evaluation Of Psychological Research

[3 credit hours]

Readings and discussion of problems of research design and analysis.

Term Offered: Fall

PSY 7150 Psychometrics and Scale Development

[3 credit hours]

Procedures for developing and examining the reliability and validity of test scales, including theories of measurement, item analysis, factor analysis, and diagnostic efficiency statistics.

Prerequisites: PSY 7100 with a minimum grade of D- and PSY 7110 with a minimum grade of D-

PSY 7160 Advanced Research Seminar in Psychology

[3 credit hours]

Advanced research seminar focusing on selected topics from the general science of psychology.

Prerequisites: PSY 6130 with a minimum grade of B- and PSY 7130 with a minimum grade of B-

Term Offered: Spring, Summer, Fall

PSY 7200 Systems Of Personality

[3 credit hours]

Advanced historical overview of the main systems for understanding human beings: sources of motivation, coping, dysfunction, strengths/virtues. Emphasizes philosophical understandings of personality systems, analysis of major contributions and multi-perspective critiques.

Term Offered: Spring, Fall

PSY 7210 Psychopathology

[3 credit hours]

Critical analysis of diagnostic classification models, etiological conceptualizations and therapeutic interventions form mental disorders.

Term Offered: Fall

PSY 7220 Cognitive Assessment

[4 credit hours]

Assessment of cognitive functioning, utilizing tests of cognitive abilities and achievement.

Term Offered: Spring, Fall

PSY 7230 Personality Assessment

[4 credit hours]

Assessment of personality functioning utilizing objective tests.

Prerequisites: PSY 6220 with a minimum grade of D- or PSY 7220 with a minimum grade of D-

Term Offered: Spring

PSY 7240 Assessment I

[4 credit hours]

This course is designed to provide clinical psychology doctoral students with the training to attain the profession-wide competency in assessment, as required by the APA Commission on Accreditation. Students will learn foundational skills in psychometrics and integrative multimethod assessment in the process of learning to administer, score, interpret, and communicate about the most commonly used standardized measures for behavioral and cognitive assessment in order to be prepared to engage in evidence-based assessment practice.

Corequisites: PSY 6290, PSY 6360

Term Offered: Fall

PSY 7250 Seminar In Clinical Psychology

[3 credit hours]

Advanced seminar focusing on selected topics from the general area of clinical psychology. -001 Clinical neuropsychology -002 Child psychopathology -003 Child Clinical Intervention -004 Marital & Family Therapy -005 Psychotherapy research & program evaluation.

Term Offered: Spring, Summer, Fall

PSY 7260 Professional And Ethical Issues

[3 credit hours]

Exploration of ethical and professional issues faced by clinical psychologists. Detailed analysis of the American Psychological Association's Ethical Principles of Psychologists and Code of Conduct.

Term Offered: Spring, Fall

PSY 7280 Assessment II

[4 credit hours]

This course is designed to provide clinical psychology doctoral students with the training to attain the profession-wide competency in assessment, as required by the APA Commission on Accreditation. Students will learn foundational skills in psychometrics and integrative multimethod assessment in the process of learning to administer, score, interpret, and communicate about the most commonly used standardized measures for neuropsychological and personality and psychopathology assessment in order to be prepared to engage in evidence-based assessment practice.

Prerequisites: PSY 7240 with a minimum grade of D-

Corequisites: PSY 7300, PSY 7370

Term Offered: Spring

PSY 7290 Foundations of Clinical Practice I

[3 credit hours]

The goal of this course is to provide an introduction to the basic clinical skills needed to conduct intake assessments and provide therapy. Foundational clinical skills central to all forms of assessment and therapy will be reviewed and practiced, and basic tenets of professionalism and ethics relevant to clinical psychology will be discussed. Application of skills to diverse populations and cultural competence considerations for assessment and therapy will also be discussed.

Corequisites: PSY 7240, PSY 7360

Term Offered: Fall

PSY 7300 Foundations of Clinical Practice II

[3 credit hours]

The goal of this course is to provide a continued introduction, building upon the content of PSY 6300 Foundations of Clinical Practice I, to the basic clinical skills needed to conduct intake and diagnostic assessments, administer structured diagnostic interviews, and provide therapy. Foundational clinical skills central to all forms of assessment and therapy will be reviewed and practiced, including assessment and treatment techniques relevant to vulnerable and at-risk groups.

Prerequisites: PSY 7290 with a minimum grade of D-

Corequisites: PSY 7280, PSY 7370

Term Offered: Spring

PSY 7310 Psychotherapy With Children And Adolescents

[3 credit hours]

Presentation and explanation of techniques of psychotherapy with children and adolescents.

Prerequisites: PSY 6390 with a minimum grade of D-

Term Offered: Fall

PSY 7330 Psychodynamic Psychotherapy

[3 credit hours]

Didactic course covering psychoanalytic/psychodynamic theories, case conceptualization, therapy techniques, and relevant empirical research.

Prerequisites: PSY 7390 with a minimum grade of D-

Term Offered: Spring, Fall

PSY 7340 Cognitive-Behavioral Psychotherapy

[3 credit hours]

Presentation and exploration of the theory and techniques of cognitive-behavioral assessment and therapy. Emphasis on understanding the theoretical and empirical base for cognitive-behavioral interventions and implications for application in clinical and clinical-research settings.

Term Offered: Spring**PSY 7350 Family And Couple Therapy**

[3 credit hours]

Presentation and exploration of family and couple therapy as a discipline, theoretical perspectives and empirical research on couple/family interaction and therapeutic techniques used with families and couples.

Prerequisites: PSY 6390 with a minimum grade of D-**Term Offered:** Fall**PSY 7360 Foundations of Psychotherapy I**

[3 credit hours]

This course is designed to provide a basis for the attainment of the profession-wide competency of intervention, with a specific focus on preparing students to develop competence in evidence-based interventions consistent with the scope of Health Service Psychology. This course will present an overview of psychopathology and various classification models of the major disorder areas, as well as provide an introduction to the major theories of psychology and the principles underlying behavioral and cognitive therapy.

[3 credit hours]

An intensive examination of human information processing. Topics include neural bases of cognition, perceptual and attentional processing, mental imagery, memory, problem solving and reasoning.

Term Offered: Spring, Fall**PSY 7410 Seminar In Cognitive Psychology**

[3 credit hours]

An advanced seminar focusing on selected topics from the general area of Cognitive Psychology.

Term Offered: Spring, Fall**PSY 7500 Developmental Psychology**

[3 credit hours]

Advanced treatment of the theoretical and empirical literature in developmental psychology, and of the major issues of the field.

Term Offered: Spring, Fall**PSY 7510 Seminar In Developmental Psychology**

[3 credit hours]

Readings and evaluative discussions of the primary research literature in developmental psychology.

Prerequisites: PSY 6500 with a minimum grade of D-**Term Offered:** Spring, Fall**PSY 7600 Behavioral Neuroscience**

[3 credit hours]

Structure and function of neurons and the neural mediation of behavior, both normal and abnormal.

Term Offered: Summer**PSY 7610 Seminar In Psychobiology And Learning**

[3 credit hours]

Readings and evaluative discussions of the primary research literature in psychobiology, behavioral neuroscience, neuroanatomy, learning, motivation and perception.

Term Offered: Fall**PSY 7700 Social Psychology**

[3 credit hours]

Social cognition and behavior, interpersonal influence and social relations will be addressed.

Term Offered: Spring, Fall**PSY 7710 Seminar In Social Psychology**

[3 credit hours]

In depth treatment of selected topics in Social Psychology.

Term Offered: Spring, Fall

PSY 7720 Social Cognition

[3 credit hours]

This course examines how people make sense of other people, themselves, and social situations by examining the cognitive structures and processes involved in judgments, decisions, perceptions, beliefs, and behavior. The topics include (but are not limited to) attribution, counterfactual thinking, judgment heuristics, schemas, person perception, attitudes, and stereotypes/prejudice.

Term Offered: Spring, Fall

PSY 7810 Clinical Practicum I

[0 credit hours]

Supervision of psychotherapy with children and adolescents seen through the The University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D-

Term Offered: Spring, Fall

PSY 7820 Clinical Practicum II

[3 credit hours]

This second-year practicum course includes participation, as a beginning student therapist, in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D-

PSY 7830 Clinical Practicum III

[3 credit hours]

This third-year practicum course includes participation, as an experienced student therapist, in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D- and PSY 6810 with a minimum grade of D- and PSY 7810 with a minimum grade of D- and PSY 7820 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PSY 7840 Clinical Practicum IV

[1-3 credit hours]

This fourth-year practicum course includes participation, as a senior-level student therapist, in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D- and PSY 6810 with a minimum grade of D- and PSY 7810 with a minimum grade of D- and PSY 7820 with a minimum grade of D- and PSY 7830 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PSY 7850 Family And Couple Practicum

[3 credit hours]

Supervision of psychotherapy with families and couples seen through The University of Toledo Psychology Clinic.

Term Offered: Spring, Fall

PSY 7860 Advanced Assessment Practicum

[3 credit hours]

Clinical supervision of psychological assessments using multiple methods of assessment with clients seen through The University of Toledo Psychology Clinic.

Prerequisites: PSY 7210 with a minimum grade of D- and PSY 7220 with a minimum grade of D- and PSY 7230 with a minimum grade of D-

Term Offered: Spring, Fall

PSY 7930 Seminar In Psychology

[3 credit hours]

Readings and evaluative discussions of the primary research literature in psychology.

Term Offered: Spring, Fall

PSY 7940 Supervised Clinical Practicum

[1-3 credit hours]

Supervised applied assessment, therapeutic and consultative experience in community settings.

Term Offered: Summer, Fall

PSY 7950 Community Placement in Clinical Psychology

[0 credit hours]

The Externship in Clinical Psychology is a field placement program in which students are placed in structured clinical service settings with psychologists and other behavioral healthcare providers. Students obtain supervised clinical training in the application of basic clinical psychological service skills.

Term Offered: Spring, Summer, Fall

PSY 7980 Special Topics

[1-3 credit hours]

Professional issues in academic and scientific psychology.

Term Offered: Spring, Summer, Fall

PSY 7990 Independent Study

[1-15 credit hours]

Directed reading and/or experimentation on a topic selected by the study in conjunction with a faculty mentor.

Term Offered: Spring, Summer, Fall

PSY 8940 APA Accredited Clinical Internship

[0-1 credit hours]

Full-time supervised training in an APA accredited predoctoral internship entity. Students will complete clinical work under direct supervision and with guidance of the program training director and internship training director. Grades will be awarded as Credit/No Credit.

Term Offered: Spring, Summer, Fall

PSY 8960 Phd Dissertation

[1-15 credit hours]

Developing, conducting and analyzing the dissertation research project; writing the dissertation.

Term Offered: Spring, Summer, Fall

Public Health and Occupational Health (PUBH)

PUBH 5020 Occupational Health

[3 credit hours]

Hazardous materials, mathematics, anatomy, and physiology; hazard recognition for harmful agents; methods, standards, recommendations, and instruments used to evaluate hazards; techniques for hazard control; occupational health programs and regulations; communication and ethics.

Term Offered: Fall

PUBH 5060 Occupational Safety

[3 credit hours]

Scientific, regulatory and management principles applicable to safety and health programs, administration, and controlling unsafe conditions/acts. Includes a field component.

Term Offered: Fall

PUBH 5160 Environmental Health

[3 credit hours]

Scientific, regulatory and management principles applicable to human disease associated with food, water, air and soil contamination. Focuses on biology and chemistry of contamination, exposure monitoring and contaminant control. Includes a field component.

Term Offered: Spring, Fall

PUBH 5260 Haz Mat and Emerg Response

[3 credit hours]

Scientific, regulatory and management principles applicable to characteristics, control, storage, transport and disposal of chemical, biological and radiological agents; disaster preparedness and emergency response; personal protective equipment and site assessment/monitoring. Includes a field component.

Term Offered: Spring, Summer, Fall

PUBH 5310 Chemical Agents

[3 credit hours]

Scientific and management principles applicable to the qualitative and quantitative evaluation of chemical agents associated with human diseases resulting from various occupational and environmental exposures. Introduction to the exposure assessment process including basic characterization, establishing exposure groups, and judging exposure profiles. Includes laboratory and field components.

Term Offered: Spring, Fall

PUBH 5410 Hazard Control

[3 credit hours]

Scientific and management principles of air contaminant modeling; control of indoor and outdoor (ambient) air pollution; operation of dilution and location exhaust ventilation systems; design of ventilation systems; respiratory and other personal protective equipment and programs commonly used in the workplace. Includes a laboratory component.

Term Offered: Spring

PUBH 5520 Biological Agents

[3 credit hours]

Scientific principles and practices applicable to the pathogenicity, evaluation and control of microbiological agents, parasitic agents, and some biological vectors associated with human diseases resulting from various environmental exposures. Content includes normal/abnormal human physiology relative to exposure, exposure assessment, and exposure control.

Term Offered: Spring, Summer, Fall

PUBH 5620 Physical Agents

[3 credit hours]

Scientific, regulatory, and management principles applicable to the assessment and control of exposure to physical agents (noise, thermal stress, ionizing and non-ionizing radiation). Includes laboratory and field components.

Term Offered: Spring

PUBH 5700 Risk Assessment

[3 credit hours]

Scientific and management principles of human health risk assessment including hazard identification, toxicity assessment, exposure assessment, risk characterization and communication relative to public, environmental, and occupational health.

Term Offered: Summer, Fall

PUBH 5720 Exposure Assessment Strategies

[3 credit hours]

Exposure assessment is an integral part of occupational and environmental health. This course will focus on the statistics and methods needed to assess exposures in the workplace.

Prerequisites: PUBH 6000 with a minimum grade of D- or PUBH 600 with a minimum grade of D-

Term Offered: Spring

PUBH 6000 Quantitative and Qualitative Data Analysis in Public Health

[3 credit hours]

This course includes introductory content on both quantitative and qualitative methods and relevant data analyses. Quantitative: Statistical methods and principles necessary for understanding and interpreting data used in public health. Topics include descriptive statistics, statistical comparison groups, correlation, and regression. Includes a lab component using SPSS statistical package. Qualitative: Methods for gathering qualitative data and thematic analysis of data in health service research. Activities include analyzing data for emergent themes as well as interpreting and presenting findings.

Term Offered: Spring, Fall

PUBH 6001 Biostatistics for Medical Sciences

[3 credit hours]

An introduction to descriptive statistics including measurement of central tendency, dispersion, correlation and regression, hypothesis testing, and select nonparametric methods, including the use of statistical package(s).

Term Offered: Fall

PUBH 6010 Public Health Epidemiology

[3 credit hours]

The course will present principles of the epidemiology method including problem solving. Various study designs will be discussed, including prospective and retrospective studies, analytic, and experimental methods.

Term Offered: Spring, Fall

PUBH 6020 Management and Leadership in Public Health

[3 credit hours]

An introduction to the leadership and management principles necessary for the delivery of public health programs, intervention, and outreach, including fostering collaboration, effective communication, consensus building, negotiation, cultural awareness, budget and resource management, evaluation, coalition building, vision creation, mediation, empowering others, and guiding decision making.

Term Offered: Spring, Summer, Fall

PUBH 6030 Advanced Epidemiology

[3 credit hours]

This course covers principles and methods of epidemiology in depth. The topics include causal inference, risk and effect, confounding, interaction, randomization, and matching. Special emphasis is given to design and interpretation of epidemiological studies.

Term Offered: Summer

PUBH 6050 Concepts and Issues in Environmental Health

[3 credit hours]

The course will review environmental concepts, focusing on water, soil, food, and diseases as they pertain to public health. Emergency preparedness for environmental events will be discussed. The impact of environmental events on public health, preparations, and appropriate responses will be included. The relationship between environmental health and public health will be emphasized.

Term Offered: Spring, Summer, Fall

PUBH 6060 Advanced Biostatistics

[3 credit hours]

Advanced statistical techniques with particular emphasis on problems in public health. Multiple regression, methods of analysis of variance, categorical data analysis including logistic regression, non parametric and survival analysis. Problems whose solution involves using a statistical program (e.g., SPSS).

Term Offered: Spring, Fall

PUBH 6070 Genetic Epidemiology

[3 credit hours]

Introduces genetic epidemiology methods, principles of population genetics including linkage and association studies used in assessing familial aggregation, and transmission patterns for identifying the genetic basis of common diseases.

Prerequisites: (PUBH 6000 with a minimum grade of C or PUBH 8000 with a minimum grade of C) and (PUBH 6010 with a minimum grade of C or PUBH 8010 with a minimum grade of C) or (PUBH 600 with a minimum grade of C or PUBH 800 with a minimum grade of C) and (PUBH 601 with a minimum grade of C or PUBH 801 with a minimum grade of C)

Term Offered: Summer

PUBH 6080 Social Determinants of Health

[3 credit hours]

Social determinants of health are social conditions, factors, and systems that place people from different socio-demographic and socioeconomic group (social class, gender, race/ethnicity, and place of birth) at differential risk of poor health and premature mortality. Mechanisms through which these factors are hypothesized to influence health, such as stress and access to health resources and constraints, will be discussed, as well as the ways in which these mechanisms can operate across the life course.

Term Offered: Spring, Fall

PUBH 6090 Issues in Public Health

[3 credit hours]

Examination of various contemporary issues in public health. Includes social, economic, political, and community problems in the provision of health services, health manpower, and payment for health care.

PUBH 6100 Environ/Occup Epidemiology

[3 credit hours]

The course focuses on the application of epidemiological techniques to the study of effects of occupational and environmental exposures.

Prerequisite: PUBH600 and 601.

PUBH 6110 Categorical Data Analysis

[3 credit hours]

This course introduces the theory and application of methods for categorical data, with emphasis on biomedical and public health applications. Topics include contingency tables, log-linear, logistic regression and Raush models, multivariate methods for matched pairs and longitudinal data. The methods are illustrated with SAS and/or SPSS, R.

Term Offered: Spring, Summer

PUBH 6120 Epidemiology Infectious Diseases

[3 credit hours]

Provides an overview of major infectious diseases affecting public health in the U.S. and worldwide; introducing the basic epidemiologic methods for surveillance and investigation of infectious disease outbreaks.

Term Offered: Spring, Fall

PUBH 6130 Molecular Epidemiology

[3 credit hours]

The course focuses on the application of epidemiological techniques to the study of effects of occupational and environmental exposures.

Term Offered: Fall

PUBH 6150 Clinical Epidemiology

[3 credit hours]

This course focuses on epidemiologic concepts and methods in clinical medicine. Topics include clinical measurements and outcomes, risk, prognostic factors, clinical diagnosis, study design, decision analysis, clinical research and meta-analysis.

Term Offered: Spring

PUBH 6160 Reproductive Epidemiology

[3 credit hours]

Reproductive health issues from the pre-conception, prenatal delivery, and postnatal periods and emphasizes health issues affecting women, men, and infants. A focus on current research, controversial issues and methodological issues.

Prerequisites: PUBH 6010 with a minimum grade of D- or PUBH 601 with a minimum grade of D-

Term Offered: Spring

PUBH 6170 Molec and Genomic Epidemiology

[3 credit hours]

Presents concepts and methods of molecular and genetic epidemiology relevant to the study of prevalent diseases in the population. Topics include biomarkers, polymorphism and gene-environment interaction.

The evolution and function of the genomics and a synopsis of epidemiological design and analysis are included.

PUBH 6180 Cancer Epidemiology

[3 credit hours]

Focuses on a number of cancers, including the most incident cancers in the United States. Provides a broad overview of cancer epidemiology and basic substantive knowledge regarding many cancers and their risk factors, prevention, and biology and pathogenesis.

Term Offered: Spring, Summer, Fall

PUBH 6190 Statistical Packages for Public Health

[3 credit hours]

The purpose of this 3 credit course is to develop analysis skills using the SAS statistical package, SPSS, and R for students that already have a basic knowledge of biostatistics.

Prerequisites: PUBH 6000 with a minimum grade of D- or PUBH 8000 with a minimum grade of D-

Term Offered: Fall

PUBH 6200 Methods, Materials for PUBH

[3 credit hours]

Introduces students to resource materials and methods appropriate for public health education. Students will use various mediums of instruction in direct application to public health programs.

Term Offered: Spring, Fall

PUBH 6250 Nutritional Epidemiology

[3 credit hours]

PUBH 6300 Community Health Organization

[3 credit hours]

Focuses on techniques to bring about change in a community's health status through assessment, public advocacy, coalition building, decision-making, planning, policy development, and political influence. Applications will be emphasized.

Term Offered: Spring

PUBH 6310 Public Health Assessment and Planning

[3 credit hours]

This course introduces the principles of health promotion program assessment and planning. Students learn the process of community health assessment, precursors to program planning, as well as the purposes, procedures, terminology, and specific techniques in the planning process.

Term Offered: Fall

PUBH 6320 Implementation of Public Health Programs

[3 credit hours]

This course is designed to prepare students to implement health education programs in the community. Emphasis will be placed on a variety of health education methods and strategies to plan, promote, present and evaluate health promotion activities.

Prerequisites: PUBH 6310 with a minimum grade of D-

Term Offered: Spring

PUBH 6330 Public Health and Aging

[3 credit hours]

Examines public health and aging issues in contemporary society. Introduces physical, cognitive and affective function from a public health perspective. Prevention and health promotion models are included.

Term Offered: Summer

PUBH 6410 Global Perspectives on Public Health and Disaster Preparedness

[3 credit hours]

This course introduces the introductory healthcare learner (including but not limited to MD, MPH, PA, MSN, MSBS, OT, PT) to specific principles of global perspectives on disaster management and response. Covers epidemiology of various diseases and population health issues from a global and domestic perspective. Employs an all-hazards framework, providing essential skills to function in the event of a catastrophe.

Guest speakers from healthcare disciplines who work internationally will present first-hand experiences in managing disasters.

Term Offered: Spring

PUBH 6420 Social Marketing in Health

[3 credit hours]

The Centers for Disease Control and Prevention (CDC) identify social marketing as a practice allied with Health Education and Health Promotion. The CDC encourages programs to apply the principles of social marketing to health behavior change efforts in order to increase the effectiveness of interventions. Social marketing uses audience research to determine target audience segmentation into groups with common risk behaviors, motivations, and information channel preferences. Key audience segments are then reached with the mix of intervention strategies formed by the "4 P's" of social marketing, namely product, price, place, and promotion. The final product is designed based on the needs and desires of the consumer and persuasive messages promoting behavior change are promoted to the target audience. Continuous evaluation and message revision allows for ongoing refinement on the basis of consumer feedback.

Term Offered: Spring

PUBH 6430 Community Mental Health

[3 credit hours]

In this course, mental health is examined from a public health perspective with a focus on epidemiological, behavioral, sociological and cultural issues. Particular emphasis is placed on the prevention of mental illness, social responses to illness, as well as the social determinants of mental health. Mental health, mental health promotion and community mental health issues are analyzed at individual and population level.

Term Offered: Spring, Summer

PUBH 6460 Health Promotion Programs

[3 credit hours]

PUBH 6500 Disaster Preparedness/Response

[3 credit hours]

PUBH 6510 Issues in Pandemic Preparedness and Response

[3 credit hours]

By means of synchronous, asynchronous, audiovisual, and simulation platforms, the learner will develop an in-depth knowledge concerning how the healthcare infrastructure of a community must plan for, respond to, and recover from a pandemic. The course is divided into four topic areas: 1) introduction; 2) preparedness; 3) response; and 4) recovery.

Term Offered: Spring, Fall

PUBH 6520 Public Health Nutrition

[3 credit hours]

PUBH 6550 Chronic Disease Epidemiology

[3 credit hours]

Epidemiology of selected chronic diseases and non-infectious conditions: cancer, cardiovascular diseases, musculoskeletal diseases and other chronic diseases. Emphasis on classification, rates, associations, etiology, prevention and control.

Prerequisites: PUBH 6010 with a minimum grade of C or PUBH 601 with a minimum grade of C

Term Offered: Spring, Summer, Fall

PUBH 6560 Interdisciplinary Crisis Management for Medical and Public Health Professionals

[3 credit hours]

The purpose of this semester course is to introduce the interdisciplinary healthcare learner (including but not limited to MD, PA, MPH, MSN, OT and PT students) to specific principles of epidemiology and disaster medicine employing an all-hazards framework and to provide essential skills enabling proper functioning in the event a catastrophe arises in the near future. The course will include lectures, simulation exercises and independent web-assisted content.

Term Offered: Spring, Fall

PUBH 6600 Health Behavior

[3 credit hours]

Examines the role of behaviors on health status and how to influence and understand behavior through use of cognitive models and change theory.

Term Offered: Spring, Summer, Fall

PUBH 6620 Introduction to Health Policy and Health Systems

[3 credit hours]

This course examines public health and healthcare policy from a public health perspective. It emphasizes the interrelatedness of law, the policymaking process, and governmental public health; addresses essential issues in health policy and law (e.g., health insurance, health economics, government health insurances, the uninsured); and introduces health policy analysis.

Term Offered: Fall

PUBH 6630 Public Health Advocacy

[3 credit hours]

An examination of the importance of advocacy for the individual, community, and public health professionals. Special emphasis will be place on developing advocacy-based skills to effectively advocate at the micro and macro level. In addition, students will participate in advocacy efforts external to the university to gain experience that enriches the student's training.

Term Offered: Spring

PUBH 6690 Public Health Research Design

[3 credit hours]

This course will cover the components of public health research methods. After completing the course, students will be able to write a research proposal to answer a question of interest. Additionally, students will be able to analyze evidence in order to engage in evidence-based public health practice. The course will be offered at the masters and doctoral levels with a focus on research methods utilized in public health and health education. The course is relevant for students in all majors within the M.P.H. program, and is required for students in the Health Education Ph.D. program.

Term Offered: Spring, Fall

PUBH 6730 Research Environmental Health

[3 credit hours]

Students will participate in selected ongoing research programs of members of the faculty. May be repeated for credit.

Term Offered: Spring, Summer, Fall

PUBH 6790 Indep Study in Biostatistics

[0-3 credit hours]

This courses addresses areas of biostatistics not covered by a regular course offering. It is intended to provide students the knowledge and experience needed in that area. This course is designed for public health students and could be beneficial to Ph.D. students, specifically those who need advanced statistical techniques for their dissertation. Topics include survival analysis, statistical models in carcinogenesis, statistical genetics, nonparametric statistics and multivariate techniques. May be repeated for credit.

Term Offered: Spring, Summer, Fall

PUBH 6800 Evaluation of Health Programs

[3 credit hours]

An exploration of types of program evaluation, evaluation models, data collection, types of data, data quality, evaluation reports, standard data collection instruments and ethical issues in health program evaluation (UT-Main). Prerequisites: HEAL 6460/HEAL 8460; co-requisite: HEAL 6750.

Term Offered: Spring, Fall

PUBH 6890 Indep Study in Public Health

[1-3 credit hours]

The student and instructor will agree on a program of study that will enable the student to achieve specific learning objectives in environmental health. May be repeated for credit.

Term Offered: Spring, Summer, Fall

PUBH 6900 Interprofessional Education for Public Health

[1 credit hour]

This 1-Credit hour course for Public Health students has been designed to provide a variety of interprofessional learning activities and educational experiences that include learning modules related to current health topics and issues in our communities such as social determinants of health, human trafficking, poverty, and resilience. Students are required to complete selected educational experiences that provides opportunities to collaborate with students from other health care professions (Athletic Training, Medicine, Nursing, Occupational Therapy, Pharmacy, Physical Therapy, Physician Assistant, Public Health, Respiratory Therapy, Social Work, and Speech Language Pathology) using an experiential learning approach.

Term Offered: Spring

PUBH 6940 Internship in Occupational Health

[1-3 credit hours]

Comprehensive or focused practical training in industrial hygiene/occupational health at a designated agency, organization, or company.

Term Offered: Spring, Summer, Fall

PUBH 6950 Integrative Learning Experience

[2 credit hours]

Seminar course which serves as the culminating experience of the MPH program. Students are required to produce a high-quality written product that is appropriate to the student's educational and professional objectives and that must demonstrate both Foundational and Major Competencies.

Term Offered: Spring, Summer, Fall

PUBH 6960 Internship in Public Health

[1-4 credit hours]

Comprehensive or focused practical training in environmental and occupational health at a designated agency, organization, or company.

Term Offered: Spring, Summer, Fall

PUBH 6970 Project in Public Health

[1-4 credit hours]

Independent development by a student with approval and guidance by a Major Advisor, of a paper, manual, software, etc. applicable to a specific area of environmental and occupational health.

Term Offered: Spring, Summer, Fall

PUBH 6980 Seminar in Public Health

[1-3 credit hours]

A systematic study of selected topics in public health. Course meets for three consecutive semesters. Students may begin any semester, but must complete in sequence. Students register for one credit each term for a cumulative total of three consecutive semesters. May be repeated for credit.

PUBH 6990 Thesis Research

[1-4 credit hours]

PUBH 8000 Quantitative and Qualitative Data Analysis in Public Health

[3 credit hours]

This course includes introductory content on both quantitative and qualitative methods and relevant data analyses. Quantitative: Statistical methods and principles necessary for understanding and interpreting data used in public health. Topics include descriptive statistics, statistical comparison groups, correlation, and regression. Includes a lab component using SPSS statistical package. Qualitative: Methods for gathering qualitative data and thematic analysis of data in health service research. Activities include analyzing data for emergent themes as well as interpreting and presenting findings.

Term Offered: Spring, Fall

PUBH 8010 Public Health Epidemiology

[3 credit hours]

This course will present principles of the epidemiology method including problem solving. Various study designs will be discussed, including prospective and retrospective studies, analytical, and experimental methods.

Term Offered: Spring, Fall

PUBH 8020 Management and Leadership in Public Health

[3 credit hours]

An introduction to the leadership and management principles necessary for the delivery of public health programs, intervention, and outreach, including fostering collaboration, effective communication, consensus building, negotiation, cultural awareness, budget and resource management, evaluation, coalition building, vision creation, mediation, empowering others, and guiding decision making.

Term Offered: Spring, Summer, Fall

PUBH 8030 Advanced Epidemiology

[3 credit hours]

The course covers principles and methods of epidemiology in depth. The topics include causal inference, risk and effect, confounding, interaction, randomization, and matching. Special emphasis is given to design and interpretation of epidemiological studies.

Term Offered: Summer

PUBH 8060 Advanced Biostatistics

[3 credit hours]

PUBH 8090 Issues in Public Health

[3 credit hours]

Examination of various contemporary issues in public health. Included are social, economic, political and community problems in the provision of health services, health manpower and payment for health care.

PUBH 8110 Categorical Data Analysis

[3 credit hours]

PUBH 8120 Epidemiology Infectious Disease

[3 credit hours]

Provides an overview of major infectious diseases affecting public health in the U.S. and worldwide; introducing the basic epidemiologic methods for surveillance and investigation of infectious disease outbreaks.

Term Offered: Fall

PUBH 8130 Molecular Epidemiology

[3 credit hours]

This course covers both the major theoretical and practical issues of conducting an epidemiology study involving molecular and genomic techniques. The course will emphasize from infectious disease, chronic disease, and cancer research literature.

Term Offered: Fall

PUBH 8150 Clinical Epidemiology

[3 credit hours]

This course focuses on epidemiologic concepts and methods in clinical medicine. Topics include clinical measurements and outcomes, risk, prognostic factors, clinical diagnosis, study design, decision analysis, clinical research and meta-analysis.

Term Offered: Spring

PUBH 8160 Reproductive Epidemiology

[3 credit hours]

Additional assignments are here for students who will take this course as PUBH 8160. Covers broad reproductive health issues from the pre-conception, pre-natal, delivery, and post-natal periods and emphasizes how these issues affect women, men, babies, and infants. Relevant methodological and programmatic issues will be presented with practical illustrations from domestic and international settings. Guest speakers, including health care providers, will give real world experience and insight to these topics of study.

Prerequisites: PUBH 6010 with a minimum grade of D- and PUBH 8010 with a minimum grade of D-

Term Offered: Spring

PUBH 8170 Molecular and Genomic Epi

[3 credit hours]

PUBH 8180 Cancer Epidemiology

[3 credit hours]

Focuses on a number of cancers, including the most incident cancers in the United States. Provides a broad overview of cancer epidemiology and basic substantive knowledge regarding many cancers and their risk factors, prevention, and biology and pathogenesis.

Term Offered: Summer, Fall

PUBH 8330 Public Health and Aging

[3 credit hours]

Examines public health and aging issues in contemporary society. Introduces physical, cognitive, and affective function from a public health perspective. Prevention and health promotion are included.

Term Offered: Summer

PUBH 8410 Global Perspectives on Public Health and Disaster Preparedness

[3 credit hours]

This course introduces the introductory healthcare learner (including but not limited to MD, MPH, PA, MSN, MSBS, OT, PT) to specific principles of global perspectives on disaster management and response. Covers epidemiology of various diseases and population health issues from a global and domestic perspective. Employs an all-hazards framework, providing essential skills to function in the event of a catastrophe.

Guest speakers from healthcare disciplines who work internationally will present first-hand experiences in managing disasters.

Term Offered: Spring

PUBH 8420 Social Marketing in Health

[3 credit hours]

The Centers for Disease Control and Prevention (CDC) identify social marketing as a practice allied with Health Education and Health Promotion. The CDC encourages programs to apply the principles of social marketing to health behavior change efforts in order to increase the effectiveness of interventions. Social marketing uses audience research to determine target audience segmentation into groups with common risk behaviors, motivations, and information channel preferences. Key audience segments are then reached with the mix of intervention strategies formed by the "4 P's" of social marketing, namely product, price, place, and promotion. The final product is designed based on the needs and desires of the consumer and persuasive messages promoting behavior change are promoted to the target audience. Continuous evaluation and message revision allows for ongoing refinement on the basis of consumer feedback.

Term Offered: Spring

PUBH 8430 Community Mental Health

[3 credit hours]

In this course, mental health is examined from a public health perspective with a focus on epidemiological, behavioral, sociological and cultural issues. Particular emphasis is placed on the prevention of mental illness, social responses to illness, as well as the social determinants of mental health. Mental health, mental health promotion and community mental health issues are analyzed at individual and population level.

Term Offered: Spring, Summer

PUBH 8500 Disaster Preparedness/Response

[3 credit hours]

PUBH 8510 Issues in Pandemic Preparedness and Response

[3 credit hours]

By means of synchronous, asynchronous, audiovisual, and simulation platforms, the learner will develop an in-depth knowledge concerning how the healthcare infrastructure of a community must plan for, respond to, and recover from a pandemic. The course is divided into four topic areas: 1) introduction; 2) preparedness; 3) response; and 4) recovery.

Term Offered: Spring, Fall

PUBH 8550 Chronic Disease Epidemiology

[3 credit hours]

Epidemiology of selected chronic diseases and non-infectious conditions: cancer, cardiovascular diseases, musculoskeletal diseases and other chronic diseases. Emphasis on classification, rates, associations, etiology, prevention and control.

Prerequisites: PUBH 6010 with a minimum grade of C or PUBH 601 with a minimum grade of C

Term Offered: Summer

PUBH 8560 Interdisciplinary Crisis Management for Medical and Public Health Professionals

[3 credit hours]

The purpose of this semester course is to introduce the interdisciplinary healthcare learner (including but not limited to MD, PA, MPH, MSN, OT and PT students) to specific principles of epidemiology and disaster medicine employing an all-hazards framework and to provide essential skills enabling proper functioning in the event a catastrophe arises in the near future. The course will include lectures, simulation exercises and independent web-assisted content.

Term Offered: Spring, Fall

PUBH 8620 Introduction to Health Policy and Health Systems

[3 credit hours]

In this course, mental health is examined from a public health perspective with a focus on epidemiological, behavioral, sociological and cultural issues. Particular emphasis is placed on the prevention of mental illness, social responses to illness, as well as the social determinants of mental health. Mental health, mental health promotion and community mental health issues are analyzed at individual and population level.

Term Offered: Fall**PUBH 8630 Public Health Advocacy**

[3 credit hours]

An examination of the importance of advocacy for the individual, community, and public health professionals. Special emphasis will be place on developing advocacy-based skills to effectively advocate at the micro and macro level. In addition, students will participate in advocacy efforts external to the university to gain experience that enriches the student's training.

Term Offered: Spring**PUBH 8900 Interprofessional Education for Public Health**

[1 credit hour]

This 1-Credit hour course for Public Health students has been designed to provide a variety of interprofessional learning activities and educational experiences that include learning modules related to current health topics and issues in our communities such as social determinants of health, human trafficking, poverty, and resilience. Students are required to complete selected educational experiences that provides opportunities to collaborate with students from other health care professions (Athletic Training, Medicine, Nursing, Occupational Therapy, Pharmacy, Physical Therapy, Physician Assistant, Public Health, Respiratory Therapy, Social Work, and Speech Language Pathology) using an experiential learning approach.

Term Offered: Spring

Recreation and Rec Therapy (RCRT)

RCRT 5100 Community Event Planning

[3 credit hours]

This course provides the graduate student with an advanced understanding of the event planning process including: risk and risk management, ethics, inclusivity, planning, budgeting, organizing, location selection, travel logistics, venue and guest requirements, marketing, and food and beverage considerations.

Term Offered: Summer, Fall**RCRT 5200 Planning and Promotion of Sport**

[3 credit hours]

This course provides the graduate student with an advanced understanding of the principles of marketing and delivery of services associated with intercollegiate athletics, professional, and multi-sport club operations, facilities and management of resources. This course also examines motivation and behavior of sports tourists.

Term Offered: Fall**RCRT 5310 Leisure And Popular Culture**

[3 credit hours]

This course provides the graduate student with an advanced understanding of leisure theory, philosophy, and behavior and its application to the delivery of leisure services within contemporary culture.

Term Offered: Fall**RCRT 5320 Administration In Recreation And Recreational Therapy**

[3 credit hours]

This course provides the graduate student with an advanced understanding of the administrative functions of delivering recreation and therapeutic recreation services. Students will master and apply the aspects of management principles including ethics, legislation, technology, quality management, risk management, financial and human resources, marketing, and accreditation..

Term Offered: Spring, Summer**RCRT 5340 Leisure, Recreation And Aging**

[3 credit hours]

This course provides the graduate student with an advanced understanding of the impacts of aging on leisure and recreation behavior and activity during middle and later adulthood by investigating the aging process, leisure across the lifespan, and the impact of leisure and recreation on quality of life and wellness.

Term Offered: Spring, Fall**RCRT 5410 Facility Planning and Design**

[3 credit hours]

This course provides the graduate student with an advanced understanding of, and ability to apply, the principles of design and the site design process to the development of recreation-based facilities. Specific areas of the design process presented include: tools of the trade, functional and aesthetic considerations, research, regional and site analysis, programming, final design development, construction, management, and evaluation.

Term Offered: Spring**RCRT 5420 Leisure Program Research Techniques**

[3 credit hours]

This course provides the graduate student with an advanced understanding of, and ability to apply, the basic components of research in the academic and professional practice setting including: ethics, human subject protection, research concepts, topic identification, theoretical roots, literature review development, sample selection, methodologies, instrument testing, data collection and analysis procedures, and research reporting.

Term Offered: Spring, Fall**RCRT 5610 Adventure Programming in Recreation and Recreation Therapy**

[3 credit hours]

This course provides the graduate student with an advanced understanding of, and ability to apply, theories and techniques of adventure programming as a treatment protocol and/or leisure education tool. Outdoor trips required.

Term Offered: Spring, Fall

RCRT 5620 Animal Assisted Therapy

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using a variety of animal-assisted modalities.

Term Offered: Spring, Fall

RCRT 5630 Therapeutic Activities

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using a variety of games, humor and play modalities.

Term Offered: Spring, Fall

RCRT 5640 Rt Intervention: Therapeutic Groups

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using therapeutic group techniques and processes as a modality.

Term Offered: Spring, Fall

RCRT 5660 Relaxation And Stress Management

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using relaxation and stress management techniques as a modality.

Prerequisites: (RCRT 1310 with a minimum grade of D- and RCRT 4720 with a minimum grade of D-)

Term Offered: Spring, Fall

RCRT 5670 Rt Intervention: Leisure Education

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using leisure education activities, including: social skills, values clarification, leisure awareness, resources and knowledge. Minimum

Term Offered: Spring, Fall

RCRT 5680 Rt Intervention: Assistive Technology & Techniques

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes utilizing assistive technology, techniques, and resources in therapeutic settings.

Term Offered: Spring, Fall

RCRT 5690 Rt Intervention: Aquatic Therapy

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes utilizing swimming, evidence-based aquatic programming methods, and resources.

Term Offered: Spring, Summer, Fall

RCRT 5720 Introduction To Therapeutic Recreation

[3 credit hours]

This course is designed to introduce graduate students who do not have a background in therapeutic recreation to the theories, models, principles, and history of therapeutic recreation service. Through lectures, discussions and self-directed learning activities, the student will examine the structure and function of therapeutic recreation processes in a variety of treatment settings.

Term Offered: Spring, Fall

RCRT 5730 Medical & Clinical Aspects Of Therapeutic Recreation

[3 credit hours]

This course provides the graduate student with an advanced understanding of health-related conditions or disabilities related to physical, neurological, sensory and metabolic impairments across the lifespan. Uses of pharmacological interventions, family involvement, programming, and other implications impacting Therapeutic Recreation practice are examined.

Term Offered: Fall

RCRT 5750 Group Dynamics In Recreational Therapy

[3 credit hours]

This course provides the graduate student with an advanced understanding, and ability to apply, concepts and theories of the therapeutic group process as applicable to professional practice. Students will be introduced to and practice: facilitation skills, behavior modification techniques, and effective communication and leadership skills.

Term Offered: Spring, Fall

RCRT 5760 APIE in Recreation Therapy

[3 credit hours]

This course addresses the procedures and processes of assessment, planning, implementation and evaluation of recreation therapy services.

RCRT 5790 Medical & Clinical Aspects Of Therapeutic Recreation II

[3 credit hours]

This course provides the graduate student with an advanced understanding of health-related conditions or disabilities related to intellectual and developmental disabilities and psychological impairments across the lifespan. Uses of pharmacological interventions, family involvement, programming, and other implications impacting Therapeutic Recreation practice will be examined.

Term Offered: Spring

RCRT 5800 Clinical: Physical Rehabilitation

[1 credit hour]

This course requires a 50-hour practicum experience in a community agency. The practicum experience provides the student a structured environment to apply the APIE(D) process with a physical rehabilitation population.

Term Offered: Spring, Summer, Fall

RCRT 5810 Clinical: Psychiatric Rehabilitation

[1 credit hour]

This course requires a 50-hour practicum experience in a community agency. The practicum experience provides the student a structured environment to apply the APIE(D) process with a psychiatric rehabilitation population.

Term Offered: Spring, Fall

RCRT 5820 Clinical: Mental Retardation/Developmental Disability

[1 credit hour]

This course requires a 50-hour practicum experience in a community agency. The practicum experience provides the student a structured environment to apply the APIE(D) process with an ID/DD rehabilitation population.

Term Offered: Spring, Fall

RCRT 5830 Clinical: Geriatric

[1 credit hour]

This course requires a 50-hour practicum experience in a community agency. The practicum experience provides the student a structured environment to apply the APIE(D) process with a geriatric population.

Term Offered: Spring, Fall

RCRT 5860 Therapeutic Fitness

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using therapeutic fitness modalities.

Term Offered: Spring, Fall

RCRT 5870 Program Planning In Recreational Therapy

[3 credit hours]

This course requires the graduate student to apply cumulative knowledge of the APIE(D) process through designing evidence-based: treatment programs, program evaluations, protocols and treatment plans in recreation therapy practice.

Term Offered: Spring

RCRT 5900 Rt Intervention: Craft Therapy

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using craft therapy modalities.

Term Offered: Spring, Fall

RCRT 5910 Rt Intervention: Horticulture Therapy

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using horticulture therapy modalities.

Term Offered: Spring, Fall

RCRT 5940 Internship In Recreation And Leisure

[1-6 credit hours]

This course provides the graduate student with the opportunity to complete an internship under the supervision of a recreation professional in partial fulfillment for the MA degree in recreation and leisure studies.

Term Offered: Spring, Summer, Fall

RCRT 6000 Issues And Trends In Recreation/Recreational Therapy

[3 credit hours]

This course provides the graduate student with an advanced understanding of the issues and trends impacting the delivery of recreation and recreation therapy services in diverse professional settings.

Term Offered: Spring

RCRT 6020 Financial Resources Of Recreation And Recreational Therapy

[3 credit hours]

This course provides the graduate student with an advanced understanding of the financial management concepts and resources supporting the delivery of recreation and recreation therapy services.

Term Offered: Summer

RCRT 6920 Master's Project In Recreation And Leisure

[1-4 credit hours]

This course provides the graduate student with the opportunity to complete a Master's project under the supervision of a project committee in partial fulfillment for the MA degree in recreation and leisure studies.

Term Offered: Spring, Summer, Fall

RCRT 6940 Internship

[1-4 credit hours]

This course provides the graduate student with the opportunity to complete an advanced internship under the supervision of a recreation professional in partial fulfillment for the MA degree in recreation and leisure studies.

Term Offered: Spring, Fall

RCRT 6960 Master's Thesis In Recreation And Leisure

[1-4 credit hours]

This course provides the graduate student with the opportunity to complete a Master's Thesis under the supervision of a thesis committee in partial fulfillment for the MA degree in recreation and leisure studies.

Term Offered: Spring, Summer, Fall

RCRT 6990 Independent Study In Recreation And Leisure

[1-3 credit hours]

This course provides the graduate student with the opportunity to develop an advanced independent learning experience in support of academic and/or professional interests.

Term Offered: Spring, Summer, Fall

Religion (REL)

REL 5930 Seminar In Religion

[3 credit hours]

Advanced academic study of a thinker or topic in religion.

Research and Measurement (RESM)

RESM 5110 Quantitative Methods I

[3 credit hours]

This course introduces the major concepts of statistical description, including central tendency, dispersion, and relative position and relationship. Inferential methods such as t-tests, one-way analysis of variance, and multiple group analyses are also presented.

Term Offered: Spring, Summer, Fall

RESM 5210 Educational Testing And Grading

[3 credit hours]

This course introduces the development, administration and interpretation of teacher-made tests and other pupil assessments; basic principles underlying norm- and criterion-referenced tests; problems and issues in grading systems and assigning grades; standardized testing and Value-Added Models.

Term Offered: Spring, Summer, Fall

RESM 5220 Applied Assessment for Improved Practice

[3 credit hours]

This is an advanced course in classroom assessment with a focus on informed and applied evidence-based decision making. Key components are the analysis and reporting of results from assessment datasets, the creation of formative and summative assessment action plans based on analysis results, and the incorporation of 21st century technology tools to support assessment planning and instructional decisions.

Prerequisites: RESM 4200 with a minimum grade of C or RESM 5210 with a minimum grade of C

Term Offered: Summer

RESM 5310 Understanding and Consuming Research

[3 credit hours]

This course offers an introduction to the history and foundations of research processes from the consumer's perspective. It introduces qualitative, quantitative, and mixed methods approaches for understanding research problems.

Term Offered: Spring, Summer, Fall

RESM 5330 Qualitative Research I: Introduction And Basic Methods

[3 credit hours]

This course introduces history and theoretical underpinnings of qualitative research. Students then learn and practice fundamental methods of participant-observation, fieldnotes, interviewing, and transcription, and explore common models of qualitative research.

Term Offered: Summer, Fall

RESM 5550 Introduction to Research and Measurement (RESM) and Graduate Studies

[3 credit hours]

This course offers an introduction to the foundations of the research process and an exploration of the major program strands (research and evaluation design, data analysis and interpretation, development and validation of measures, and school-based classroom and program assessment). It also focuses on practical strategies and skills that promote successful graduate-level study.

Term Offered: Spring, Fall

RESM 5950 Workshop In Research And Measurement

[3 credit hours]

Each workshop is developed around a topic of interest and concern to inservice teachers and other educational personnel. Practical application of workshop topics will be emphasized.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer, Fall

RESM 6120 Quantitative Methods II

[3 credit hours]

This course covers the major inferential statistical techniques common to the behavioral sciences. Correlation, factorial analysis of variance, and linear regression are major topics. Computer applications are included.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer, Fall

RESM 6130 Multivariate Statistics

[3 credit hours]

This course covers multivariate analysis of variance, canonical correlation, discriminant analysis, repeated measures and factor analysis. Computer applications are included.

Prerequisites: RESM 6120 with a minimum grade of C or RESM 8120 with a minimum grade of C

Term Offered: Fall

RESM 6140 Advanced Quantitative Methods

[3 credit hours]

This course exposes students to various experimental designs, such as complete and fractional factorial designs, repeated measures designs, and nested designs. Both the conceptual rationale and the computational procedures are covered.

Prerequisites: RESM 6120 with a minimum grade of C or RESM 8120 with a minimum grade of C

RESM 6150 Structural Equation Modeling

[3 credit hours]

This course introduces structural equation modeling as a statistical method to assess the strengths of a priori relations among variables. Topics include path analysis and confirmatory factor analysis. Computer applications with AMOS are included.

Prerequisites: RESM 6120 with a minimum grade of C or RESM 8120 with a minimum grade of C

Term Offered: Spring

RESM 6160 Nonparametric Statistics

[3 credit hours]

This course introduces the most common nonparametric statistical techniques as well as recent developments in this field. Coverage includes contingency tables, binomial distribution tests, several rank tests and other distribution-free statistics.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Fall

RESM 6220 Measurement I

[3 credit hours]

This course introduces psychometric theories, with emphasis on classical test theory; reliability theory, including generalizability theory; approaches to validation; practical applications such as standard setting.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Fall

RESM 6230 Applied Measurement Research

[3 credit hours]

Applied practical experience in measurement analyses is emphasized and participants are introduced to a series of advanced measurement and research-related processes in this authentic experiential course.

Prerequisites: (RESM 6220 with a minimum grade of C or RESM 8220 with a minimum grade of C) and RESM 5110 with a minimum grade of C

Term Offered: Spring

RESM 6320 Research Design

[3 credit hours]

This course exposes students to quantitative and mixed method research approaches that are used in theses and dissertations. Competing designs for addressing research questions are compared. The purpose is to prepare students for their dissertation experience.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer, Fall

RESM 6340 Qualitative Research II: Design And Analysis

[3 credit hours]

This course takes student through the design, implementation, and write up a qualitative study. Topics include theoretical frameworks and research design; managing, analyzing and interpreting data; collaboration between researcher and researched; using computers in analysis.

Prerequisites: RESM 5330 with a minimum grade of C or RESM 7330 with a minimum grade of C

Term Offered: Spring

RESM 6350 Methods Of Survey Research

[3 credit hours]

This course contextualizes survey development within a broad theoretical framework and proceeds through the literature, problem, purpose, methods, and sampling. Particular emphasis is placed on the validity implications of each.

Prerequisites: RESM 6120 with a minimum grade of C

Term Offered: Fall

RESM 6360 Program Evaluation

[3 credit hours]

An overview of prominent human services program evaluation methods including objectives-based, experimental, statistical and economic approaches. Evaluation criteria, issues, ethics and politics are considered.

Prerequisites: RESM 5110 with a minimum grade of C or RESM 7110 with a minimum grade of C

Term Offered: Spring, Fall

RESM 6370 Fundamentals Of Grant Writing

[3 credit hours]

This seminar teaches participants about fundamentals of grant writing. Topics covered include: locating sources of funding, writing grants, designing evaluation instruments and administering grants.

Term Offered: Summer

RESM 6550 Statistical Analysis by Computer

[3 credit hours]

Course covers computer applications (SPSS, Excel) of statistical analyses. Statistical tests covered include descriptive, nonparametric, tests of mean differences, tests of association, and scaling techniques. Successful students generally will have completed a basic statistics class.

Prerequisites: RESM 5110 with a minimum grade of D- and RESM 7110 with a minimum grade of D-

Term Offered: Spring, Fall

RESM 6900 Research and Measurement Master's Portfolio

[1 credit hour]

This course is one of the program completion options available for the Research and Measurement master's degree. This course is intended to be longitudinal with one credit hour completed each semester of the three-semester (full-time study) master's program. Upon program completion, portfolio contents should reflect samples of best works completed in each of the 9 courses comprising the master's core, the research and measurement core, and research and measurement concentration.

Term Offered: Spring, Summer, Fall

RESM 6940 Internships In Measurement, Evaluation, Research & Statistics

[3 credit hours]

This is a supervised field experience in measurement, evaluation, research design, or statistics in a variety of settings.

Term Offered: Spring, Fall

RESM 6960 Master's Thesis In Educational Research

[1-3 credit hours]

This option is open to a graduate student who elects the completion of a research thesis in fulfilling the research requirement of the master's degree.

Term Offered: Spring, Summer, Fall

RESM 6980 Master's Project In Educational Research

[1-3 credit hours]

This is a formal independent project applying principles of research and/or measurement to solve a particular problem and culminating in a written discourse.

RESM 6990 Master's Independent Study In Educational Research

[1-3 credit hours]

This is a formal exploration of a current topic in educational research, measurement, statistics, or program evaluation. The student meets with the instructor at arranged intervals without formal classes.

Term Offered: Spring, Summer

RESM 7110 Quantitative Methods I

[3 credit hours]

This course introduces the major concepts of statistical description, including central tendency, dispersion, and relative position and relationship. Inferential methods such as t-tests, one-way analysis of variance, and multiple group analyses are also presented.

Term Offered: Spring, Summer, Fall

RESM 7210 Educational Testing And Grading

[3 credit hours]

This course introduces the development, administration and interpretation of teacher-made tests and other pupil assessments; basic principles underlying norm- and criterion-referenced tests; problems and issues in grading systems and assigning grades; standardized testing and Value-Added Models.

Term Offered: Spring, Summer, Fall

RESM 7220 Applied Assessment for Improved Practice

[3 credit hours]

This is an advanced course in classroom assessment with a focus on informed and applied evidence-based decision making. Key components are the analysis and reporting of results from assessment datasets, the creation of formative and summative assessment action plans based on analysis results, and the incorporation of 21st century technology tools to support assessment planning and instructional decisions.

Prerequisites: RESM 4200 with a minimum grade of D- or RESM 5210 with a minimum grade of C or RESM 7210 with a minimum grade of C

Term Offered: Summer

RESM 7310 Understanding and Consuming Research

[3 credit hours]

This course offers an introduction to the history and foundations of research processes from the consumer's perspective. It introduces qualitative, quantitative, and mixed methods approaches for understanding research problems.

Term Offered: Spring, Summer, Fall

RESM 7330 Qualitative Research I: Introduction And Basic Methods

[3 credit hours]

This course introduces history and theoretical underpinnings of qualitative research. Students then learn and practice fundamental methods of participant-observation, fieldnotes, interviewing, and transcription, and explore common models of qualitative research.

Term Offered: Summer, Fall

RESM 7950 Workshop In Research And Measurement

[3 credit hours]

Each workshop is developed around a topic of interest and concern to inservice teachers and other educational personnel. Practical application of workshop topics will be emphasized.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer

RESM 7980 Special Topics In Research, Measurement, Statistics And Evaluation

[3 credit hours]

The study of a current topic or set of related topics in educational research, measurement, statistics, program evaluation and computer applications in quantitative and qualitative data analysis. The course is typically taught as a seminar.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer

RESM 8120 Quantitative Methods II

[3 credit hours]

This course covers the major inferential statistical techniques common to the behavioral sciences. Correlation, factorial analysis of variance, and linear regression are major topics. Computer applications are included.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer, Fall

RESM 8130 Multivariate Statistics

[3 credit hours]

This course covers multivariate analysis of variance, canonical correlation, discriminant analysis, repeated measures and factor analysis. Computer applications are included.

Prerequisites: RESM 6120 with a minimum grade of C or RESM 8120 with a minimum grade of C

Term Offered: Fall

RESM 8140 Advanced Quantitative Methods

[3 credit hours]

This course exposes students to various experimental designs, such as complete and fractional factorial designs, repeated measures designs, and nested designs. Both the conceptual rationale and the computational procedures are covered.

Prerequisites: RESM 6120 with a minimum grade of C or RESM 8120 with a minimum grade of C

RESM 8150 Structural Equation Modeling

[3 credit hours]

This course introduces structural equation modeling as a statistical method to assess the strengths of a priori relations among variables. Topics include path analysis and confirmatory factor analysis. Computer applications with AMOS are included.

Prerequisites: (RESM 6120 with a minimum grade of C or RESM 8120 with a minimum grade of C) and RESM 5110 with a minimum grade of C

Term Offered: Spring

RESM 8160 Nonparametric Statistics

[3 credit hours]

This course introduces the most common nonparametric statistical techniques as well as recent developments in this field. Coverage includes contingency tables, binomial distribution tests, several rank tests and other distribution-free statistics.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Fall

RESM 8180 Interdisciplinary Seminar In Educational Psychology, Research, And Social Foundations

[1 credit hour]

This proseminar will enable doctoral students to improve their understanding of the research process. Students will learn to ask research questions, choose alternative methodologies and interpret the validity of conclusions.

RESM 8220 Measurement I

[3 credit hours]

This course introduces psychometric theories, with emphasis on classical test theory; reliability theory, including generalizability theory; approaches to validation; practical applications such as standard setting.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Fall

RESM 8230 Applied Measurement Research

[3 credit hours]

Applied practical experience in measurement analyses is emphasized and participants are introduced to a series of advanced measurement and research-related processes in this authentic experiential course.

Prerequisites: (RESM 6220 with a minimum grade of C or RESM 8220 with a minimum grade of C) and RESM 5110 with a minimum grade of C

Term Offered: Spring

RESM 8320 Research Design

[3 credit hours]

This course exposes students to quantitative and mixed method research approaches that are used in theses and dissertations. Competing designs for addressing research questions are compared. The purpose is to prepare students for their dissertation experience.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Summer, Fall

RESM 8340 Qualitative Research II: Design And Analysis

[3 credit hours]

This course takes student through the design, implementation, and write up a qualitative study. Topics include theoretical frameworks and research design; managing, analyzing and interpreting data; collaboration between researcher and researched; using computers in analysis.

Prerequisites: RESM 5330 with a minimum grade of C or RESM 7330 with a minimum grade of C

Term Offered: Spring, Fall

RESM 8350 Methods Of Survey Research

[3 credit hours]

This course contextualizes survey development within a broad theoretical framework and proceeds through the literature, problem, purpose, methods, and sampling. Particular emphasis is placed on the validity implications of each.

Prerequisites: RESM 8120 with a minimum grade of C

Term Offered: Fall

RESM 8360 Program Evaluation

[3 credit hours]

An overview of prominent human services program evaluation methods including objectives-based, experimental, statistical and economic approaches. Evaluation criteria, issues, ethics and politics are included.

Prerequisites: RESM 4100 with a minimum grade of D- or RESM 5110 with a minimum grade of C

Term Offered: Spring, Fall

RESM 8370 Fundamentals Of Grant Writing

[3 credit hours]

This seminar teaches participants about fundamentals of grant writing. Topics covered include: locating sources of funding, writing grants, designing evaluation instruments and administering grants.

Term Offered: Summer

RESM 8380 Methods of Normative Theory Construction

[3 credit hours]

This course explores prominent methods and approaches to normative theory construction. The two approaches covered deontological and teleological.

Term Offered: Spring, Fall

RESM 8390 Methods of Conceptual Analysis and Textual Interpretation

[3 credit hours]

This course explores prominent methods and approaches Central Analysis and Textual Interpretation. The central goal of the course is to equip doctoral students to engage in theoretical research, the understanding and skill necessary to engage in theoretical research.

RESM 8550 Statistical Analysis by Computer

[3 credit hours]

Course covers computer applications (SPSS, Excel) of statistical analyses. Statistical tests covered include descriptive, nonparametric, tests of mean differences, tests of association, and scaling techniques. Successful students generally will have completed a basic statistics class.

Prerequisites: RESM 5110 with a minimum grade of D- and RESM 7110 with a minimum grade of D-

Term Offered: Spring, Fall

RESM 8940 Internships In Measurement, Evaluation, Research & Statistics

[3 credit hours]

This is a supervised field experience in measurement, evaluation, research design, or statistics in a variety of settings.

Term Offered: Spring, Summer, Fall

RESM 8960 Dissertation Research In Foundations Of Education

[1-12 credit hours]

This is a formal independent study culminating in a written discourse central to the advancement of knowledge in educational research design, statistics, measurement, or evaluation.

Term Offered: Spring, Summer, Fall

RESM 8990 Doctoral-Independent Study

[1-6 credit hours]

This is a formal exploration of a current topic in educational research, measurement, statistics, or program evaluation. The student meets with the instructor at arranged intervals without formal classes.

Term Offered: Spring, Summer, Fall

School Psychology (SPSY)

SPSY 5030 Role And Function Of The School Psychologist

[3 credit hours]

Designed for school psychology students to develop an understanding of the school psychologist as a member of the school staff. It also serves as an introduction to each of the important concepts in current practice, as well as the values of our specific program. Current legal & ethical responsibilities, the history of the profession, as well as current theories of service delivery will be explored.

Term Offered: Fall

SPSY 5040 Legal And Ethical Issues For School Psychologists And Counselors

[4 credit hours]

Covers the ethical standards and legal regulation in school psychology and school counseling. Ethical standards, litigation and legal regulation are examined in regard to professional practice.

Term Offered: Summer, Fall

SPSY 5060 Prepractica in School Psychology

[2 credit hours]

A two semester pre-internship experience designed for first year school psychology graduate students to acquire knowledge of schools as systems and to gain familiarity with the role and function of the school psychologist and other related services staff. This course includes activities designed to build students' skills in delivering culturally responsive practices.

Term Offered: Spring, Fall

SPSY 5170 Consultation I: Theories And Techniques

[3 credit hours]

Designed to provide an overview of the major consultation theories and techniques and to help students develop consultation skills, which may be applied in the schools, community agencies, or other settings. Includes introduction to and practice in applying the problem solving process to school-based academic and behavior problems.

Term Offered: Spring, Summer, Fall

SPSY 5300 Psychoeducational Assessment And Interventions I

[4 credit hours]

Provides training in standardized and curriculum based academic assessment methods and linking assessment to intervention. Includes instruction in evidence-based interventions, administering, scoring, interpreting, and communicating assessment results in written reports.

Prerequisites: SPSY 5030 with a minimum grade of D-

Term Offered: Spring, Fall

SPSY 5310 Psychoeducational Assessment And Interventions II

[4 credit hours]

Provides training in standardized assessment methods for preschool and low-incidence populations. Includes instruction in evidence-based interventions, linking assessment to tiered interventions, and functional behavior assessment.

Prerequisites: SPSY 5300 (may be taken concurrently) with a minimum grade of B

Term Offered: Spring, Summer

SPSY 5610 Seminar I: Orientation to Interprofessional Teaming

[1 credit hour]

Orientation to the Graduate Certificate in Teaming in Early Childhood. Focus on individual competencies needed to work collaboratively to meet the needs of young children with disabilities and their families.

Prerequisites: SPED 5270 with a minimum grade of D-

Term Offered: Summer

SPSY 5620 Seminar II: Leadership and Advocacy Interprofessional Teaming

[1 credit hour]

This second seminar in the Graduate Certificate in Teaming in Early Childhood focusses on skills and policies that promote best practices in teaming to support young children with disabilities.

Prerequisites: SPED 5270 with a minimum grade of D- and SPSY 5610 with a minimum grade of D-

Term Offered: Summer, Fall

SPSY 5630 Seminar III: Evidence-Based Practice and Innovation in Interprofessional Teaming

[1 credit hour]

This third seminar in the Graduate Certificate in Teaming in Early Childhood provides students the opportunity to reflect on their practicum experiences in teaming to support young children with disabilities.

Prerequisites: SPED 5270 with a minimum grade of D- and SPSY 5610 with a minimum grade of D- and SPSY 5620 with a minimum grade of D-

Corequisites: SPSY 5640

Term Offered: Spring, Summer

SPSY 5640 Practicum in Interprofessional Teaming

[2 credit hours]

The practicum provides an opportunity to engage in interprofessional teaming in order to provide integrated services to young children with special needs in an inclusive setting.

Prerequisites: SPED 5270 with a minimum grade of D- and SPSY 5610 with a minimum grade of D- and SPSY 5620 with a minimum grade of D-

Corequisites: SPSY 5630

Term Offered: Spring, Summer

SPSY 5980 Special Topics In Counseling, Mental Health, And School Psychology

[1-3 credit hours]

This course is open to a graduate student pursuing a master's, specialist or doctoral degree program and may be a requirement of that program.

Term Offered: Spring, Summer

SPSY 6260 Developmental Child Psychopathology

[4 credit hours]

This course covers the influence of nature (e.g., prenatal, biological, genetic) and nurture (family, culture, and community) on typical and atypical child development. It emphasizes the development of disorders of infancy through adolescents from an ecological perspective, focusing on understanding characteristics and causes, diagnosis both medical and educational, and identifications of interventions for school and home.

Term Offered: Spring, Summer, Fall

SPSY 6990 Master's Independent Study

[1-4 credit hours]

Provides students the opportunity to work independently on professional problems under the direction of a faculty member in the Department of Counseling and Mental Health Services.

Term Offered: Spring, Summer

SPSY 7170 Consultation I: Theories And Techniques

[3 credit hours]

Designed to provide an overview of the major consultation theories and techniques and to help students develop consultation skills, which may be applied in the schools, community agencies, or other settings. Includes introduction to and practice in applying the problem solving process to school-based academic and behavior problems.

Term Offered: Spring, Summer

SPSY 7180 Consultation II: School and Home Collaboration

[3 credit hours]

Provides training in universal/system-level academic interventions with an emphasis on consultation practices used to develop and sustain home and school collaboration. Includes study and review of prevention programs for student academic success and system-level academic assessment methods.

Term Offered: Summer, Fall

SPSY 7190 Consultation III: School and Community

[4 credit hours]

Provides training in universal/system-level behavior interventions with an emphasis on practices used to develop and sustain school and community collaboration. Includes instruction in system change theory, prevention programs for promoting mental health, and crisis prevention and intervention.

Term Offered: Spring, Summer

SPSY 7260 Developmental Child Psychopathology

[4 credit hours]

This course covers the influence of nature (e.g., prenatal, biological, genetic) and nurture (family, culture, and community) on typical and atypical child development. It emphasizes the development of disorders of infancy through adolescents from an ecological perspective, focusing on understanding characteristics and causes, diagnosis both medical and educational, and identifications of interventions for school and home.

Term Offered: Spring, Summer, Fall

SPSY 7310 Psychoeducational Assessment And Interventions II

[4 credit hours]

Provides training in standardized assessment methods for preschool and low-incidence populations. Includes instruction in evidence-based interventions, linking assessment to tiered interventions, and functional behavior assessment.

Prerequisites: SPSY 5300 (may be taken concurrently) with a minimum grade of B

Term Offered: Summer, Fall

SPSY 7320 Psychoeducational Assessment And Interventions III

[4 credit hours]

Provides training and practice in assessment of cognitive and adaptive functioning for school-age children. Includes instruction in administering, scoring, interpreting, and communicating assessment results, and in writing comprehensive written reports.

Prerequisites: SPSY 7310 with a minimum grade of B or SPSY 5310 with a minimum grade of B

Term Offered: Spring, Fall

SPSY 7330 Practica in School Psychology

[1-4 credit hours]

A two semester pre-internship experience designed for second year school psychology students. Provides experience in tiered intervention design, implementation, and evaluation for behavior and academic problems. Includes practice in individual assessment for special education eligibility.

Term Offered: Spring, Summer, Fall

SPSY 7340 School Psychology Practicum II

[4 credit hours]

Practice in individual evaluation, assessment and intervention design, with preschool and other special populations. Includes practice in functional behavioral assessment.

Prerequisites: SPSY 7330 with a minimum grade of B

SPSY 7510 Supervision In Counseling And School Psychology

[3 credit hours]

Training in supervision models, methods, roles, ethical issues, research and evaluation. Advanced training in consultation.

SPSY 7530 Advanced Theories Of Counseling And Consultation

[4 credit hours]

Advanced preparation in theory pertaining to the principles and practice of individual counseling, group work and consultation.

SPSY 7920 Specialist Research Project

[1-3 credit hours]

In this capstone experience, specialist students review the literature, report implications and produce a project which can be applied in school psychology and counseling-related settings.

SPSY 7930 Doctoral Research Seminar

[3 credit hours]

Advanced preparation in research problems, design and implementation of quantitative and qualitative research and methodology in the fields of counseling and supervision.

SPSY 7940 Internship In School Psychology

[1-8 credit hours]

Academic year on-the-job internship experience for third year school psychology students. Conducted in a school and supervised by a school psychologist and coordinated by a university supervisor. Prepares students for the broad range of services to include tiered mental health and instructional interventions, assessment linked to intervention, consultation, special education assessment, home-school-community collaboration, and counseling.

Prerequisites: SPSY 7330 with a minimum grade of S

Term Offered: Spring, Summer, Fall

SPSY 8480 Advanced Training In Professional, Legal, And Ethical Issues

[3 credit hours]

Advanced training in contemporary professional, legal and ethical issues that regulate or affect the work of counselors, psychologists and other mental health professionals.

SPSY 8930 Advanced Doctoral Seminar

[3 credit hours]

This seminar will consider problems and provide advanced study. Open only to advanced graduate students.

SPSY 8950 Workshop In Counseling, Mental Health, And School Psychology

[1-6 credit hours]

Workshops developed around topics of interest and concern to counselors, school psychologists, or other mental health care professionals. Practical application of topics will be stressed.

SPSY 8960 Doctoral Research Dissertation

[1-12 credit hours]

Dissertation credit may not total less than 10 semester hours and no greater than 32 hours. A doctoral student may register for such credit in more than one semester.

SPSY 8980 Special Topics In Counseling, Mental Health, And School Psychology

[1-3 credit hours]

This course is open to a graduate student pursuing a master's, specialist or doctoral degree program and may be a requirement of that program.

Term Offered: Spring

SPSY 8990 Doctoral Independent Study

[1-4 credit hours]

Provides students the opportunity to work independently on professional problems under the direction of a faculty member in the Department of Counseling and Mental Health Services.

Social Work (SOCW)

SOCW 5010 Social Work Research Methods And Analysis

[3 credit hours]

Course introduces students to qualitative and quantitative research methodologies, supporting statistical methods as utilized within the social work profession, data analysis technology and evidenced based social work practice concepts.

Term Offered: Summer, Fall

SOCW 5110 Social Work Practice I

[3 credit hours]

Provides an overview of social work practice theory and paradigms to base practice with individuals, families and groups emphasizing strengths and empowerment, values and ethics, and understanding self.

Term Offered: Spring, Fall

SOCW 5120 Social Work Practice II

[3 credit hours]

Provides an overview of social work theories guiding social work practice with groups and organizations, including group development, leadership, and models of organizations within a social and economic justice framework.

Prerequisites: SOCW 5110 with a minimum grade of C and SOCW 5210 with a minimum grade of C

Term Offered: Spring, Fall

SOCW 5130 Social Work Practice III

[3 credit hours]

Provides historical and contemporary look at the social work profession, its roots in community organizing, theories underpinning group work and community organizing. Strengths and empowerment models and social justice emphasized.

Prerequisites: SOCW 5110 with a minimum grade of C

Term Offered: Spring

SOCW 5210 Micro Social Work Perspectives In Human Behavior And The Social Environment

[3 credit hours]

Course is organized on a developmental model including social work perspectives and theory on: biopsychosocial aspects of human growth and development. Critical analysis encouraged through social justice conceptualizations.

Prerequisites: SOCW 5010 (may be taken concurrently) with a minimum grade of C and SOCW 5110 (may be taken concurrently) with a minimum grade of C

Term Offered: Fall

SOCW 5220 Macro Social Work Perspectives In Human Behavior And The Social Environment

[3 credit hours]

Course views the behavior of groups, organizations, and communities and their environmental contexts through a social work perspective. Attention focuses on issues of diversity, oppression, and social and economic justice.

Prerequisites: SOCW 5210 with a minimum grade of C

Term Offered: Spring

SOCW 5330 Policy Issues And Analysis In Social Work

[3 credit hours]

Course covers the history of social work profession and major institutions. Through current policy issues, methods of policy analysis are provided. Students are introduced to various methods of policy practice.

Prerequisites: SOCW 5010 (may be taken concurrently) with a minimum grade of C and SOCW 5110 (may be taken concurrently) with a minimum grade of C and SOCW 5210 (may be taken concurrently) with a minimum grade of C

Term Offered: Fall

SOCW 5900 FOUNDATION FIELD EXPERIENCE AND INTEGRATIVE SEMINAR I

[3 credit hours]

Students participate in a weekly seminar to integrate classroom learning to the field experience; and during the 3rd week begin a 208 hour field experience in an assigned agency. The course must be taken in consecutive semesters with SOCW 5910.

Corequisites: SOCW 5010, SOCW 5110, SOCW 5210, SOCW 5330

Term Offered: Fall

SOCW 5910 FOUNDATION FIELD EXPERIENCE AND INTEGRATIVE SEMINAR II

[3 credit hours]

Students continue in the field agency assigned in SOCW 5900; complete 240 field hours; and participate in the same weekly integrative field seminar section. SOCW 5900 and 5910 must be taken in consecutive semesters.

Prerequisites: SOCW 5900 with a minimum grade of B or SOCW 5120 with a minimum grade of B or SOCW 5220 with a minimum grade of B

Corequisites: SOCW 5130

Term Offered: Spring, Summer

SOCW 6030 Research Methods For Macro Social Work Practice

[3 credit hours]

Covers research methods specific to macro social work practice especially needs assessment and program evaluation. Content on research ethics, data management, and evidence based practice are addressed. Prerequisites: All 5000 level courses, advanced standing status or permission of instructor.

Term Offered: Fall

SOCW 6040 Research Methods For Micro Social Work Practice

[3 credit hours]

Course covers evaluation of client accomplishments through subject design methods. Content on research Ethics, data management, and evidence based practice are addressed. Prerequisites: all 5000-level courses, advanced standing status or by permission of instructor.

Term Offered: Fall

SOCW 6110 Advanced Generalist Practice I

[3 credit hours]

Advanced study of generalist social work practice and theory when working with individuals, families, and groups with an intergenerational focus on social and economic justice. All SOCW 5000-level courses, Advanced Standing Status, or Permission.

Term Offered: Summer, Fall**SOCW 6120 Advanced Generalist Practice II**

[3 credit hours]

Course provides advanced content on social work practice in organizations including financial management, supervision and planning. Incorporates current theoretical perspectives and research on effective practice. Prerequisite: SOCW 6110 with a B or better, or permission of instructor.

Prerequisites: SOCW 6110 with a minimum grade of C**Term Offered:** Spring**SOCW 6130 Advanced Generalist Practice III**

[3 credit hours]

Course provides advanced content on social work practice within the community and with groups. Particular attention is paid to community change processes and social and economic justice. Prerequisite: SOCW 6110 and 6140 with a B or better.

Prerequisites: SOCW 6110 with a minimum grade of C**Term Offered:** Spring**SOCW 6140 Advanced Social Work Assessment**

[3 credit hours]

Course provides an overview of theories and methods of social work assessment with an emphasis on psychosocial assessment, macro assessments and various tools used by social workers for assessment purposes. Prerequisites all 5000 level courses, advanced standing status, or by permission.

Term Offered: Spring, Summer, Fall**SOCW 6200 Disparities, Diversity and Social Justice**

[2 credit hours]

This graduate social work course provides students with an understanding of the impact of social inequalities when working within diverse systems. Using self-reflection and critical analysis, students will build cultural and linguistic competence. This course examines the mechanisms of privilege and oppression that impact the experiences of diverse populations, using theories of critical multiculturalism and intersectionality. This course will enhance students' knowledge, values, and attitudes about social work practice at micro, mezzo, and macro levels.

Term Offered: Spring, Summer, Fall**SOCW 6410 Social Work Micro Practice with Children and Families**

[3 credit hours]

Course provides students with specialized knowledge about clinical practice with children and families. Included are major theoretical perspectives and practices currently accepted in the field, with an emphasis on strengths and empowerment.

Term Offered: Fall**SOCW 6430 Social Work Macro Practice involving Children and Families**

[3 credit hours]

This is the second of two Child and Family specialization courses. It provides knowledge about current social work issues and practices in the mezzo and macro practice arenas, including social work practice related to laws, regulations, and policies concerning services for children and families.

Prerequisites: SOCW 6410 with a minimum grade of C**Term Offered:** Spring**SOCW 6460 Social Work Journal Review Seminar I: Child And Family Services**

[1 credit hour]

This course enables students to gain a critical understanding and appreciation of the social work literature and research underpinning social work practice in child and family services. Prerequisite: All 5000-level classes and SOCW 6140. Corequisites: SOCW 6110, 6410, or permission of instructor

Term Offered: Fall**SOCW 6470 Social Work Journal Review Seminar II - Child And Family Services**

[1 credit hour]

Course provides a more in depth examination and appreciation of social work literature and research underpinning social work practice with children and family services. Prerequisite: SOCW 6110, 6140, 6410 with a B or better. Corequisite: 6430.

Prerequisites: SOCW 6460 with a minimum grade of B**Term Offered:** Spring**SOCW 6510 Social Work Micro Practice in Mental Health**

[3 credit hours]

This course Provides MSW students with specialized knowledge about clinical practice in mental-behavioral health settings. The focus includes social works history of involvement with the primary prevention, diagnosis and treatment of mental and emotional disorders. Major emphasis is placed on social work practice at these levels with emphasis on social and economic justice.

Prerequisites: SOCW 6140 with a minimum grade of C**Term Offered:** Fall**SOCW 6530 Social Work Macro Practice in Mental Health**

[3 credit hours]

This is the second of two mental health specialization courses. It provides knowledge about current social work issues in the mezzo-macro practice arena, including social work practice related to laws regulations and policies concerning mental health services. Major emphasis is placed on social work practice at these levels with emphasis on social and economic justice.

Prerequisites: SOCW 6510 with a minimum grade of C**Term Offered:** Spring**SOCW 6560 Social Work Journal Review Seminar I - Mental Health Practice**

[1 credit hour]

Course enables students to gain a critical understanding and appreciation of the social work literature and research underpinning social work practice in mental health settings. Prerequisites: All 5000-level classes, advanced standing status, and SOCW 6140. Corequisites: SOCW 6110, 6510, or permission of instructor.

Term Offered: Fall

SOCW 6570 Social Work Journal Review Seminar II - Mental Health Practice

[1 credit hour]

Course provides a more in depth examination and appreciation of social work literature and research underpinning social work practice in mental health settings. Prerequisites: SOCW 6110, 6140, 6510 with a B or better.

Prerequisites: SOCW 6560 with a minimum grade of B

Term Offered: Spring

SOCW 6610 Social Work Practice In The Aging Community

[3 credit hours]

Course provides an understanding of social worker's role in aging practice settings. Included are major theoretical perspectives currently accepted in the field with emphasis on strengths and empowerment.

SOCW 6630 Social Work Policy Issues In Aging

[3 credit hours]

Course provides knowledge about the current policy issues concerning social work services for the elderly. Major emphasis is placed on social and economic justice in the resolution of policy conflicts.

SOCW 6660 Social Work Journal Review Seminar I - Aging Services

[1 credit hour]

Course provides an understanding and appreciation of the social work literature and research underpinning social work practice with older adults.

SOCW 6670 Social Work Journal Review Summer II - Aging Services

[1 credit hour]

Course provides a more in depth examination and appreciation of the social work literature and research underpinning social work practice with older adults.

Prerequisites: SOCW 6660 with a minimum grade of D-

SOCW 6700 Perspectives on Child Maltreatment and Child Advocacy

[3 credit hours]

This course provides a foundation of in-depth information on the child protection system in the U.S., child neglect, child physical abuse, child sexual abuse the investigation, and substantiation of maltreatment, and the role of advocacy in the process.

Term Offered: Fall

SOCW 6900 ADVANCED FIELD EXPERIENCE AND INTEGRATIVE SEMINAR I

[5 credit hours]

Students are assigned to a field agency; complete 360 field hours; and attend a weekly seminar to integrate classroom learning to the field experience. SOCW 6900 and SOCW 6910 must be taken in consecutive semesters.

Prerequisites: SOCW 6460 with a minimum grade of B and SOCW 6410 (may be taken concurrently) with a minimum grade of B or SOCW 6510 (may be taken concurrently) with a minimum grade of B and SOCW 6560 with a minimum grade of B

Term Offered: Fall

SOCW 6910 ADVANCED FIELD EXPERIENCE AND INTEGRATIVE SEMINAR II

[5 credit hours]

Students continue placement in the field agency assigned in SOCW 6900; complete 360 field hours and participate in same weekly integrative field seminar section. SOCW 6900 and 6910 must be taken in consecutive semesters.

Prerequisites: SOCW 6900 with a minimum grade of B and SOCW 6430 (may be taken concurrently) with a minimum grade of B or SOCW 6530 (may be taken concurrently) with a minimum grade of B

Term Offered: Spring

SOCW 6960 Thesis

[1-6 credit hours]

This course involves research leading to a written thesis. Thesis topic, defense, and final thesis must be approved by the student's thesis committee.

Term Offered: Fall

SOCW 6980 Special Topics In Social Work

[1-3 credit hours]

Content will vary as instructors present a single concentration on developments, problems, and controversies in social work.

Term Offered: Spring, Summer, Fall

SOCW 6990 Independent Study In Social Work

[1-3 credit hours]

Directed study in social work under the supervision of a social work faculty member.

Term Offered: Spring, Summer, Fall

SOCW 7610 Orientation to Interprofessional Teaming

[1 credit hour]

Students will become familiar with and develop a plan of study which will lead to successful completion of the requirements for the Graduate Certificate in Teaming in Early Childhood. Students will demonstrate an understanding of conflict resolution and working with others whose values and beliefs differ significantly from their own.

Prerequisites: SPED 7270 with a minimum grade of D-

SOCW 7620 Leadership and Advocacy in Interprofessional Teaming

[1 credit hour]

This seminar focuses on developing the skills to promote best practice in teaming. Students will explore the factors that support and threaten interprofessional collaboration. They will become aware of policies affecting teaming. Finally, students will engage in advocacy for teaming that will benefit individuals with disabilities.

Prerequisites: SOCW 7610 with a minimum grade of D-

Term Offered: Summer

SOCW 7630 Evidence-Based Practice and Innovation in Interprofessional Teaming

[1 credit hour]

The purpose of this seminar is to provide an opportunity for students to reflect on their practicum experiences as well as examine issues related to principles of ethical practice, professional identity and advocacy to promote the well-being of young children with special needs and their families. Students will also explore ways in which technology can promote effective teaming practices with other professionals as well as with family members.

Corequisites: SOCW 7640

Term Offered: Spring, Summer

SOCW 7640 Practicum in Interprofessional Teaming

[2 credit hours]

The purpose of this practicum is to provide students enrolled in the Graduate Certificate in Teaming and Early Childhood program with an opportunity to engage in interprofessional teaming in order to provide integrated services to young children with special needs and their families in an inclusive setting. During this practicum, students will complete a minimum of 60 clock hours directly working with team members, young children with special needs, and their families.

Prerequisites: SOCW 7620 with a minimum grade of B

Corequisites: SOCW 7630

Term Offered: Summer

Sociology (SOC)

SOC 5040 Classical Theory

[3 credit hours]

19th Century theory in sociology with emphasis on A. Comte, K. Marx, E. Durkheim, T. Veblen, M. Weber and H. Spencer.

Term Offered: Spring, Fall

SOC 5100 Community Organizing And Development

[3 credit hours]

This course will review the major forms of community and organizing since World War II. Practical issues and theoretical issues will be stressed. Students will engage in intensive case study research applying the course concepts in addition to reading and writing on the various topics.

SOC 5110 Political Sociology

[3 credit hours]

Examination of political institutions, organizations and behavior with special attention to participation, power, ideology, decision making and conflict.

SOC 5160 Health And Gender

[3 credit hours]

An examination of gender as a predisposing factor of health status, health behavior, health care delivery, and the structure and posture of health care professionals.

Term Offered: Spring, Summer, Fall

SOC 5170 Law And Society

[3 credit hours]

Dynamics of law and legal institutions; the relationship of sociocultural changes in substantive and procedural aspects of law to the concept of justice, and to the social control of deviance.

SOC 5180 Medical Sociology

[3 credit hours]

An analysis of the sociocultural factors in health and illness, and in medical and paramedical services, and in the field of health practice as a social institution.

Term Offered: Spring, Fall

SOC 5190 Social Gerontology

[3 credit hours]

A study of the changing proportions of older people in the population, their changing roles and statuses, and the problems and processes of adjustment.

SOC 5270 Social Research Methods

[3 credit hours]

Introduction to procedures used in the various phases of sociological research.

Term Offered: Spring, Fall

SOC 5290 Social Research Statistics

[3 credit hours]

Study of major statistical procedures and techniques in sociology.

Term Offered: Spring, Fall

SOC 5340 Population And Society

[3 credit hours]

Examination of the interaction among variables of population (fertility, mortality and migration) and other aspects of societal organization.

Term Offered: Fall

SOC 5440 Methods Of Population Analysis

[3 credit hours]

Methods of population analysis, including examination and evaluation of data sources.

SOC 5450 Exploring the City

[3 credit hours]

This course takes an interdisciplinary approach to life in cities around the world, with emphasis on the ethnographic exploration of how power, cultural difference, and social inequality in cities are produced and experienced.

Term Offered: Spring, Fall

SOC 5530 Qualitative Approaches in Social Science Research

[3 credit hours]

This course examines qualitative methods used in social science research. Focusing on ethnographic and qualitative methods, the course provides students the skills necessary to design and conduct qualitative research studies.

Term Offered: Spring

SOC 5560 Fieldwork in Sociology

[6 credit hours]

This course involves the student in meaningful social research at the community level. The student is introduced to methods in fieldwork in the social sciences.

Term Offered: Spring, Summer, Fall

SOC 5580 Science, Technology, And Social Change

[3 credit hours]

The impact of rapidly changing science and technology on North American society: social change in a technological age; the emergence of post industrial society.

SOC 5610 Sociology Of Organizations

[3 credit hours]

Study of the structure and processes of organizations; includes theory of bureaucratic and non-bureaucratic organizations, as well as structure and function of organizations.

Term Offered: Spring

SOC 5650 ADVANCED TOPICS IN LATIN AMERICAN AND CARIBBEAN

[3 credit hours]

An examination of social life in Latin America and the Caribbean, focusing on changing political economy, gender and ethnicity, globalization, culture and migration and in and out of the region.

Prerequisites: SOC 1010 with a minimum grade of D-

SOC 5710 Criminology

[3 credit hours]

Crime and criminal behavior: nature, types and extent of crime, societal reactions; problems in research and theory, prevention, control and treatment.

Term Offered: Summer

SOC 5720 Deviant Behavior

[3 credit hours]

Study of the analysis of the nature, meaning and process of deviant behavior in terms of social norms, control and societal reaction.

Term Offered: Summer

SOC 5740 Issues In Crime

[3 credit hours]

Topics may include legalizing drugs, police violence, plea bargaining, death sentence and mandatory sentencing. Emphasizes liberal/conservative ideology.

SOC 5750 Legal Issues

[3 credit hours]

Topics may include abortion, three strike sentencing, homosexual rights, hate speech and decriminalizing narcotics. Emphasizes liberal/conservative ideology.

SOC 5760 Juvenile Delinquency

[3 credit hours]

Delinquency and delinquent behavior, including definitions, extent, process, types and causes; methods of prevention, protective control and treatment; institutional and non-institutional facilities and services.

SOC 5800 Development Of Subordinate Nations

[3 credit hours]

The new emerging ideological, political, social and economic patterns which repeat themselves in and determine the Third World transition from a traditional to a new society.

Term Offered: Fall

SOC 5810 Gender In Cross-Cultural Perspective

[3 credit hours]

Analysis of gender stratification and its impact on culture in various nations and across ethnic groups in the United States.

SOC 5830 Social Movements

[3 credit hours]

This course will focus on social movements and their political context to understand the causes of social movement success and failure. Special attention will be given to the 1960s wave of protest, as well as to contemporary movement forms. Students will engage in intensive case study research applying the course concepts in addition to reading and writing on relevant topics.

Term Offered: Spring, Fall

SOC 5840 Globalization

[3 credit hours]

This course starts by looking at the historical context of globalization, showing this process is not necessarily something new. From there it focuses on three dimensions of globalization: economic, political, and cultural - stressing the interconnectedness of these issues. This course is not an exhaustive survey of all facets of globalization, but it does at least touch upon many of the major issues related to this phenomenon.

Term Offered: Spring

SOC 5980 Special Topics In Sociology

[3 credit hours]

Sociological examination of a developing social issue. May be repeated in different specialized topics.

Term Offered: Spring, Summer, Fall

SOC 5990 Directed Readings In Sociology

[1-3 credit hours]

Written proposal required. May be repeated for additional credit. For majors wishing to continue course work in greater depth or seeking contact with unlisted subject areas.

Term Offered: Spring, Summer

SOC 6000 Introduction To Graduate Studies In Sociology

[0 credit hours]

Graduate students are exposed to and get acquainted with the academic and professional nature of the field of sociology from the experience of several faculty members. Some of the topics that will be covered include writing theses, doing internships and seeking graduate work and careers.

Term Offered: Fall

SOC 6040 Advanced Sociological Theory

[3 credit hours]

Building on classical traditions, the course includes readings and lectures on functionalist, neo-Marxist, symbolic interactionist and other significant twentieth century sociological theories.

Prerequisites: SOC 4040 with a minimum grade of D- or SOC 5040 with a minimum grade of D-

Term Offered: Fall

SOC 6050 Advanced Social Theory And Political Economy

[3 credit hours]

This course will analyze and evaluate major social theories drawn from various 19th and 20th century intellectual and ideological traditions. The common subject focus of course readings is state, power and class relations.

Prerequisites: SOC 4040 with a minimum grade of D- or SOC 5040 with a minimum grade of D-

Term Offered: Spring

SOC 6270 Advanced Social Research Methods

[3 credit hours]

Examination of advanced methods of data collection in sociological research.

Prerequisites: SOC 5270 with a minimum grade of D-

Term Offered: Spring, Fall

SOC 6290 Advanced Social Research Statistics

[3 credit hours]

Examination of advanced methods of data analysis in sociological research.

Prerequisites: SOC 5290 with a minimum grade of D-

Term Offered: Spring

SOC 6640 Seminar In Diversity and Inequality

[3 credit hours]

This course examines theories and research on diversity and inequality. Possible topics include social class, race, gender, sexual orientation and disability, plus evaluating the interconnections between these areas.

SOC 6800 Seminar In Theories In Social Psychology

[3 credit hours]

Intensive sociological study of theory building in social psychology including, among others, paradigms of social cognition and belief, social influence, and social relations.

SOC 6900 Independent Research In Sociology

[1-3 credit hours]

Student-selected research topic under the supervision of a sociology faculty member. Permission to enroll is contingent on the instructor's acceptance of the student's research proposal.

Term Offered: Spring, Summer, Fall**SOC 6930 Seminars In Sociology**

[3 credit hours]

Seminar on selected topics in the field of Sociology.

Term Offered: Spring, Fall**SOC 6940 Graduate Internship**

[3 credit hours]

In applied setting in areas of student interest: community organizing - health-probation - gerontology.

Prerequisites: (SOC 6040 with a minimum grade of C or SOC 6050 with a minimum grade of C) and SOC 6270 with a minimum grade of C and SOC 6290 with a minimum grade of C

Term Offered: Spring, Summer, Fall**SOC 6960 Thesis**

[1-6 credit hours]

Topic (proposal) is selected by the student and approved by a thesis committee.

Prerequisites: (SOC 6270 with a minimum grade of C and SOC 6290 with a minimum grade of C and SOC 6040 with a minimum grade of C or SOC 6050 with a minimum grade of C)

Term Offered: Spring, Summer, Fall**SOC 6970 Master of Sociology Project**

[1-6 credit hours]

Applied capstone project supervised by faculty advisor and committee that integrates the knowledge and skills in the program.

Term Offered: Spring, Summer, Fall**SOC 6990 Independent Study In Sociology**

[1-3 credit hours]

Written proposal required. May be repeated for additional credit. For majors wishing to continue course work in greater depth or seeking contact with unlisted subject areas.

Term Offered: Spring, Summer, Fall

Spanish (SPAN)

SPAN 5000 Advanced Spanish Grammar

[3 credit hours]

An advanced study of Spanish grammar in preparation for higher levels of study in the language and for its use in professional pursuits.

Term Offered: Spring, Fall**SPAN 5010 Syntax And Stylistics**

[4 credit hours]

A thorough study of the grammatical structure of Spanish with special attention to stylistic problems.

Term Offered: Spring, Fall**SPAN 5060 Translation & Interpretation In Spanish**

[3 credit hours]

A study of the techniques of translation and interpretation as they relate to English and Spanish based on a contrastive analysis of two languages, both in theory and practice.

Term Offered: Spring**SPAN 5070 History Of The Spanish Language**

[3 credit hours]

A study of the development of the Spanish language from Vulgar Latin to the present, illustrated with selected texts.

Term Offered: Spring**SPAN 5110 Introduction To Spanish Linguistics**

[4 credit hours]

Basic concepts of linguistics as applied to the study of the Spanish language and its dialectal systems. Emphasis phonetics, phonology, morphology, syntax and semantics.

Term Offered: Spring, Fall**SPAN 5120 Teaching Colloquia**

[3 credit hours]

A course in the theory of second language acquisition and practice of teaching foreign / second languages in general.

Term Offered: Spring, Summer, Fall**SPAN 5160 Latin American Novel I**

[3 credit hours]

A study of the Latin American novel from the nineteenth century to the authors of the literary Boom of 1963.

Term Offered: Spring, Fall**SPAN 5170 Latin American Novel II**

[3 credit hours]

A study of the major developments in Latin American novel from the Boom to the present.

Term Offered: Spring, Fall**SPAN 5210 Spanish For Reading Knowledge I**

[3 credit hours]

Study of those elements of structure and vocabulary most appropriate for preparing graduate students to read effectively in Spanish. (Not for majors)

Term Offered: Spring, Fall**SPAN 5220 Spanish For Reading Knowledge II**

[3 credit hours]

Study of those elements of structure and vocabulary most appropriate for preparing graduate students to read effectively in Spanish. (Not for majors)

SPAN 5250 Latin American Short Story

[3 credit hours]

Development of the Latin American short story from its origins with special emphasis on the contemporary authors such as Allende, Borges, Cortazar, Garcia Marquez and Rulfo among others.

Term Offered: Fall**SPAN 5310 Medieval & Renaissance Spanish Literature**

[3 credit hours]

Study of major works from the Poema de Mio Cid to the early writers of the Siglo de Oro.

Term Offered: Spring

SPAN 5820 Modern Spanish Drama

[3 credit hours]

Critical readings of Spanish drama from Romanticism to the latest contemporary trends.

SPAN 5830 Hispanic Cinema

[3 credit hours]

Critical viewings of Spanish-language films from Spain and the Americas. Emphasis on cultural criticism.

Term Offered: Spring

SPAN 5980 Special Topics

[3 credit hours]

Study and research in specific areas or authors with considerable reading of Spanish texts plus written reports in Spanish.

Term Offered: Spring, Fall

SPAN 6900 Research In Spanish

[1-3 credit hours]

May be repeated for additional credit when topic varies.

Term Offered: Spring, Summer, Fall

SPAN 6930 Seminar: Selected Topics

[1-3 credit hours]

Selected topics from Spanish culture, linguistics, or literature.

Term Offered: Spring, Fall

Spatially Integrated Social Sciences (SISS)

SISS 7010 Spatial Statistics

[3 credit hours]

The course deals with statistical theory and applied statistical techniques for spatial data analysis. Topics include descriptive statistics, statistical modeling and hypothesis testing for spatial dependence and spatial heterogeneity.

Term Offered: Spring, Fall

SISS 7020 GEOGRAPHICAL INFORMATION SCIENCE IN SISS

[3 credit hours]

The course emphasizes the fundamental elements of cartography, geodesy, statistics, mathematics and geo-computational methods that form the foundation for the development of GIS and spatial analysis tools.

Term Offered: Fall

SISS 8010 FOUNDATIONS OF SPATIALLY INTEGRATED SOCIAL SCIENCE

[3 credit hours]

This course will examine the historical development of the social sciences, their philosophical and methodological approaches to research, and the emergence of the spatial perspective in social science research.

Term Offered: Fall

SISS 8020 SISS THEORY

[3 credit hours]

Advanced study of SISS requiring preparedness in theoretical and methodological aspects of spatial analysis in social sciences focusing on the spatial organization of society and spatial human and social dynamics.

Prerequisites: SISS 8010 with a minimum grade of D-

Term Offered: Spring

SISS 8030 ADVANCED SPATIAL DATA ANALYSIS

[3 credit hours]

Examination of spatial processes: spatial autoregressive models, gaussian Markov random field models, auto-logistic models, spatial discrete choice models. The topics include spatial panel data models, their applications and estimation methods.

Prerequisites: SISS 7010 with a minimum grade of D-

Term Offered: Spring

SISS 8040 Research Design

[3 credit hours]

Introduces students to research and research technicalities, including what is research, how to write research papers and research proposals, and how to design and manage a research project.

Prerequisites: SISS 8010 with a minimum grade of B- and SISS 8020 with a minimum grade of B-

Term Offered: Spring

SISS 8150 ADVANCED QUALITATIVE ANALYSIS IN SISS

[3 credit hours]

Advanced qualitative analysis techniques and applications to a broad range of spatially oriented social science problems.

Prerequisites: SISS 7010 with a minimum grade of D- and SISS 7020 with a minimum grade of D- and SISS 8010 with a minimum grade of D-

SISS 8170 SPACE AND SOCIETY CRITICAL THEORY IN SISS

[3 credit hours]

Critical examination of both the role of spatial inquiry and its limitations to the understanding of society and space.

Prerequisites: SISS 7010 with a minimum grade of D- and SISS 7020 with a minimum grade of D- and SISS 8010 with a minimum grade of D-

Term Offered: Spring

SISS 8180 DISCRETE CHOICE SPATIAL PROCESS MODELING

[3 credit hours]

The study of the human factor in spatial processes with the aim to advance understanding of spatial aspects of social dynamics by modeling discrete choice spatial processes.

Prerequisites: SISS 7010 with a minimum grade of D- and SISS 7020 with a minimum grade of D- and SISS 8010 with a minimum grade of D-

SISS 8200 SPATIAL PERSPECTIVES ON THE ENVIRONMENT

[3 credit hours]

Examination of the relationship between SISS approaches and human interaction with the natural environment.

Prerequisites: SISS 7010 with a minimum grade of D- and SISS 7020 with a minimum grade of D- and SISS 8010 with a minimum grade of D-

Term Offered: Spring, Fall

SISS 8920 Directed Readings in SISS

[3 credit hours]

Independent study of research literature in Spatially Integrated Social Science and related fields.

Prerequisites: SISS 7010 with a minimum grade of D- and SISS 7020 with a minimum grade of D- and SISS 8010 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

SISS 8940 Seminar in Special Topics

[3 credit hours]

Discussion of the major advances in Spatially Integrated Social Science as presented in the primary research in a selected topic or set of topics.

Prerequisites: SISS 7010 with a minimum grade of D- and SISS 7020 with a minimum grade of D- and SISS 8010 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

SISS 8960 Doctoral Dissertation Research

[1-12 credit hours]

Original research on a comprehensive topic of a spatial nature in the social sciences under the direction of a SISS faculty member. 18 credits in SISS core with grades of B or higher; 9 credits in advanced SISS seminars and 9 credits in SISS electives, all with grades of B or higher. Must pass dissertation qualifying exam within first semester of dissertation.

Term Offered: Spring, Summer, Fall

Special Education (SPED)

SPED 5000 Issues In Special Education

[3 credit hours]

Examination of causes and characteristics, identification procedures, and potential of learners who significantly deviate from the norm mentally, physically and behaviorally. Issues related to services for persons with disabilities will be studied.

Term Offered: Spring, Summer, Fall

SPED 5010 Atypical Development In Early Childhood: Implications For Development

[3 credit hours]

Factors that contribute to atypical development in early childhood, appropriate intervention models and implications of delay on young children's development. The focus will be on conditions that may result in eligibility of children for early intervention and/or special education services in infancy (0-2), in the preschool (3-5) and primary grade (K-3) years (ages 5 to 8).

Term Offered: Summer

SPED 5080 Curriculum Adaptations and Strategies in Early Childhood Education

[3 credit hours]

[3 hours] Early childhood development, including learning and behavioral characteristics examined focusing on implications of developmental delay and risk. Implications for IEP-based instruction explored. Strategies that support inclusion discussed. Prerequisite: CIEC 5000, EDP 5210, SPED 5010.

Term Offered: Spring, Fall

SPED 5120 Students With Special Needs: Developmental And Educational Implication

[3 credit hours]

In-depth study of personality, psychological and physical development, and educational needs of atypical children: including current research issues in areas of social, legal and environmental aspects of exceptional populations.

SPED 5150 Advanced Practicum For Teaching Students With Moderate Educational Needs

[1 credit hour]

This course is taken with SPED 5160 to apply strategies and techniques for teaching students with moderate educational needs. Forty hours of required field.

Term Offered: Spring, Fall

SPED 5160 Advanced Instructional Methods For Teaching Students With Moderate Educational Needs

[3 credit hours]

This course focuses on a community-referenced functional curricula approach to teaching children and youths with moderate to severe delays. An in-depth study of inclusionary activities, community-based instruction, social skills.

SPED 5170 Supporting Youths And Adults With Disabilities Living And Working In The Community

[3 credit hours]

In-depth study of issues faced by adults with severe and multiple disabilities and their families. Emphasis on supported employment, residential options, self-determination, recreation and quality of life issues. Field experience required.

Term Offered: Fall

SPED 5180 Advanced Instructional Methods For Teaching Students With Intensive Educational Needs

[3 credit hours]

An in-depth examination of appropriate curriculum models, instructional strategies and adaptations, and related behavior problems for students with severe and multiple disabilities. A transdisciplinary team approach is explored.

Term Offered: Spring

SPED 5190 Advanced Practicum For Students With Intensive Needs

[1 credit hour]

This course is taken with SPED 5180 to apply strategies and techniques for teaching students with intensive needs. Forty field hours are required.

Term Offered: Spring

SPED 5210 Augmentative and Alternative Communication

[3 credit hours]

This course will provide an overview of alternative or augmentative modes of communication for children who are unable to meet their daily communication needs through natural modes such as speech, gestures or handwriting. It will provide a broad overview of AAC and its application, along with the history and terminology.

SPED 5220 Research And Practice In Teaching Phonics, Reading And Writing To Students With Special Needs

[3 credit hours]

Current trends and issues in teaching reading and writing to students with disabilities. Examination of research supporting various methods. Application of research-based methods into practical strategies for classroom implementation. Twenty-four hours of field required.

Term Offered: Summer, Fall

SPED 5230 Advanced Field Practicum In Diagnostic And Prescriptive Teaching

[1 credit hour]

Provides the laboratory to rehearse and refine the teaching skills presented in SPED 5/7220. Required of persons seeking initial special education certification. Forty field hours required. Taken concurrently with SPED 5220.

SPED 5240 Disorders and Characteristics of Students with Emotional Disturbance

[3 credit hours]

This course introduces conceptual models of emotional disturbance (ED) in children and adolescents. Definitive diagnostics categories and their etiology are presented in contexts of their use in a variety of educational settings appropriate for children and adolescents with ED.

Prerequisites: SPED 5000 with a minimum grade of C

SPED 5250 Career And Vocational Education For Students With Disabilities

[3 credit hours]

This course covers career and vocational education activities for youths with disabilities. Special emphasis placed on developing and implementing an Individual Transition Plan (ITP) and coordination with adult service providers.

Term Offered: Spring, Summer

SPED 5260 Family And Professional Relations In Special Education

[3 credit hours]

Effective parent and professional partnerships will be explored. Interpersonal communication skills, legal issues, effective models for home-school communication, and differences in culture, values and family expectations will be discussed.

Term Offered: Summer, Fall

SPED 5270 Team Models And Community Networking In Early Intervention

[3 credit hours]

This course will focus on the skills, knowledge and ethical practices essential to the provision of effective service coordination and teaming for early intervention and early childhood special education. In addition, students will examine various models of teaming and consultation approaches and address issues related to working with individuals from cultural backgrounds other than their own.

Term Offered: Spring, Fall

SPED 5280 Management Of The Learning Environment In Early Childhood Special Education

[3 credit hours]

Aspects of quality environments, in the home and in early childhood centers for young children with special needs. Of particular interest is identifying characteristics of natural environments that promote positive child outcomes.

Term Offered: Spring

SPED 5300 Teaching Literacy Skills To Adolescents With Disabilities

[3 credit hours]

This course will review existing theories and research regarding teaching literacy to students with disabilities in 4th through 12th grades (those who did not learn to read by 3rd grade).

Term Offered: Summer

SPED 5310 Advanced Instructional Methods For Teaching Students With Mild Educational Needs

[3 credit hours]

Theoretical considerations for designing instruction, lesson plan development using direct, explicit instructional approach, differentiation, co-teaching, and evidence-based practices to meet the needs of students with mild disabilities in school settings will be examined. Research-based approaches to teaching language arts, mathematics, science, and social studies, will be explored.

Term Offered: Spring, Fall

SPED 5320 Advanced Field Practicum For Students With Mild Educational Needs

[1 credit hour]

Provides opportunities for field experience to use and refine the strategies for persons with mild disabilities presented in SPED 5310. Forty hours of field required.

Term Offered: Spring, Fall

SPED 5330 Advanced Child Study Institute: Ebd

[1 credit hour]

Provides quality educational settings to inservice teachers to practice effective behavioral and academic managing of children and youth experiencing continuous emotional stress and trauma.

SPED 5340 Advanced Behavior Management

[3 credit hours]

This course provides training inservice teachers to become managers of intra-communication and interpersonal relationships in diverse special education settings. Nonviolent Crisis Prevention/Intervention (CPI) training required.

Term Offered: Spring

SPED 5450 Advanced Methods of Teaching Studeents With Emotional Disturbance

[3 credit hours]

This course provides evaluation and application techniques of research-based methodologies for teaching students with emotional disturbance in school-based settings within the least restrictive environment.

Prerequisites: SPED 5340 with a minimum grade of C

Term Offered: Fall

SPED 5510 Curriculum And Teaching Strategies: Physical And Other Health Impairments

[3 credit hours]

Appropriate curriculum models, learning objectives and teaching strategies for students with physical or health impairing conditions are examined. Modification of materials, assessment options and alternatives response modes will be discussed.

SPED 5600 ADVANCED PROFESSIONAL REFLECTIVE SEMINAR

[3 credit hours]

The focus of this seminar is on teaching as a profession. Student will complete The Student Teaching Portfolio Project, a performance-based assessment approach to licensure and professional development. Additionally, this internship seminar provides a forum for group sharing, reflection, professional issues, ethical behaviors, interview processes, and career development.

Corequisites: SPED 6940

Term Offered: Spring, Fall

SPED 5610 Seminar I: Orientation to Interprofessional Teaming

[1 credit hour]

Become familiar with requirements for the Certificate in Interprofessional Teaming. Focus on competencies needed to work collaboratively with professionals to meet the needs of individuals with disabilities and their families.

Prerequisites: SPED 5270 with a minimum grade of D-

Term Offered: Summer

SPED 5620 Seminar II: Working Effectively with Team Members

[1 credit hour]

Factors that support and threaten interprofessional collaboration. Become aware of policies affecting teaming. Engage in advocacy for teaming that will benefit individuals with disabilities.

Prerequisites: SPED 5610 with a minimum grade of D- and SPED 5270 with a minimum grade of D-

Term Offered: Summer, Fall

SPED 5630 Seminar III: Evidence-Based Practice and Innovation in Teaming

[1 credit hour]

Issues related to principles of ethical practice, professional and advocacy. Ways in which technology can promote effective teaming practices with other professionals as well as with family members.

Prerequisites: SPED 5620 with a minimum grade of D-

Corequisites: SPED 5640

Term Offered: Spring, Summer

SPED 5640 Practicum in Interprofessional Teaming

[2 credit hours]

Students will work as part of an inter-professional team to develop, implement, and evaluate integrated intervention plans designed to support the development of children who have special needs.

Prerequisites: SPED 5620 with a minimum grade of D-

Corequisites: SPED 5630

Term Offered: Spring, Summer

SPED 5950 Workshop In Special Education

[1-5 credit hours]

A workshop developed around topics of interest and concern for in-service teachers and other education personnel. Practical application of workshop topics will be emphasized.

Term Offered: Summer

SPED 5980 Special Topics In Special Education

[1-5 credit hours]

An advanced course for graduate students in special education or related fields. Topics are selected based on needs of the population. Student may repeat this course under different section numbers.

Term Offered: Spring, Summer, Fall

SPED 5990 Independent Study In Special Education

[1-5 credit hours]

Individual study provides graduate students with opportunities to work individually on professional problems with faculty of the Department of Special Education Services. Individual meetings with sponsoring faculty are held.

Term Offered: Spring, Summer, Fall

SPED 6060 K-3 Curr. Models and Int. Strategies

[3 credit hours]

Examination of appropriate curriculum models, instructional strategies and adaptations for young students (K-3 grade) with mild to intensive educational needs. A trans-disciplinary team approach is explored with an emphasis on collaboration and communication.

Term Offered: Spring

SPED 6070 Curriculum Models And Intervention Strategies In Early Childhood Special Education

[3 credit hours]

Atypical infant, toddler and early childhood development will be examined. Specialized intervention techniques, their research and practice base and appropriate curriculum models will be explored. 20 clock hour practicum required.

Term Offered: Fall

SPED 6080 Clinical And Educational Evaluation Of Students With Disabilities

[3 credit hours]

An in-depth study of instruments used by school psychologists and classroom teachers to access and evaluate students. The diagnostic uses and the understanding of the results will be the focus.

SPED 6220 Collaboration For Inclusive Schools

[3 credit hours]

Provides information and competencies to develop, implement and evaluate collaborative programs. Educators will enhance their ability to collaborate so that they can better meet the needs of their students.

SPED 6250 Issues And Research In Transition And Post-Secondary Outcomes For Student With Disabilities

[3 credit hours]

In-depth study of transition issues and outcomes focusing on: a) best practices, b) the roles and responsibilities of a transition specialist, c) inter-agency collaboration, d) team building, and e) program development, implementation and evaluation.

Term Offered: Spring

SPED 6350 Educational And Instructional Implications In Specific Learning Disabilities

[3 credit hours]

Students will examine current trends in research and program development in Specific Learning Disabilities. The focus will be on learning and study skills: their implication in the development of learning.

SPED 6360 Clinical Practicum: Learning Strategies For Students With Specific Learning Disabilities

[1 credit hour]

Provides advanced graduate student with supervised practice in developing and implementing strategies and study skills for persons with learning problems. Required 15 hours instructional practice and weekly meetings with supervisors.

SPED 6410 Theory And Research: Emotional Behavioral Disorders

[3 credit hours]

This course provides in-depth readings on problems of emotionally and behaviorally disturbed/disordered children and youth. Intense study on two levels: (1) theoretical considerations and (2) treatments pertinent to diverse educational settings.

Term Offered: Fall

SPED 6420 Public School Emotional Behavior Disorders

[1 credit hour]

This course provides supervised practice in classroom participation with students identified as Emotionally Behaviorally Disturbed/Disordered. Public School settings include: self-contained, resource, transition, mainstreamed and consultative-collaborative teaching roles.

Term Offered: Spring, Summer

SPED 6440 Teaching Children And Youth With Emotional Behavior Disorders

[3 credit hours]

This course provides evaluation and application techniques of research based methodologies for teaching students with emotional behavioral Disorders/disturbances. Psycho-social educational best practices within the least restrictive environment are presented.

Term Offered: Spring

SPED 6470 Theory And Research: Autism

[3 credit hours]

This course provides in-depth readings in the field of autism. The course includes intense study on two levels: (1) theoretical considerations and (2) treatment approaches pertinent to populations with autism.

SPED 6480 Teach Youth/Child With Autism

[3 credit hours]

This course provides research based methodologies for understanding and teaching children and youth with autism. Psycho-Social Educational best practices within the least restrictive environment are presented.

SPED 6900 Independent Research In Special Education

[1-5 credit hours]

Independent Research provides opportunities to work on individual research under the direction of faculty. The student meets with the instructor at intervals and conducts research without formal class meeting.

SPED 6920 Master's Research Project In Special Education

[1-5 credit hours]

The master's project is an individually designed product which meets the final activity requirement for completion of the masters degree.

Term Offered: Spring, Summer, Fall

SPED 6930 Seminars In Special Education

[1-5 credit hours]

Seminars will consider problems and provide advanced study in the field of Special Education. A student may register for more than one seminar during a graduate program.

Term Offered: Spring, Summer, Fall

SPED 6940 Internship/Externship In Special Education

[1-8 credit hours]

Provides the advanced graduate student with supervised practicum experiences at an off-campus site; including schools, hospitals, agencies, rehabilitation clinics, work training sites and other community sites where persons with disabilities are served.

Term Offered: Spring, Summer, Fall

SPED 6960 Master Research Thesis In Special Education

[1-5 credit hours]

The master's thesis is an individually designed research study which meets the final activity requirement for completion of the master's degree.

Term Offered: Spring, Summer, Fall

SPED 6990 Independent Study In Special Education

[1-5 credit hours]

Individual study provides advanced graduate students opportunities to work individually on professional problems with faculty of the Department of Special Education Services. Individual meetings with sponsoring faculty are held.

Term Offered: Spring, Summer, Fall

SPED 7000 Issues In Special Education

[3 credit hours]

Examination of causes and characteristics, identification procedures, and potential of learners who significantly deviate from the norm mentally, physically and behaviorally. Issues related to services for persons with disabilities will be studied.

Term Offered: Spring, Summer, Fall

SPED 7120 Students With Special Needs: Developmental And Educational Implication

[3 credit hours]

In-depth study of personality, psychological and physical development, and educational needs of atypical children: including current research issues in areas of social, legal and environmental aspects of exceptional populations.

SPED 7150 Advanced Practicum For Teaching Students With Moderate Educational Needs

[1 credit hour]

This course is taken with SPED 5160 to apply strategies and techniques for teaching students with moderate educational needs. Forty hours of required field.

Term Offered: Spring

SPED 7160 Advanced Instructional Methods For Teaching Students With Moderate Educational Needs

[3 credit hours]

This course focuses on a community-referenced functional curricula approach to teaching children and youths with moderate to severe delays. An in-depth study of inclusionary activities, community-based instruction, social skills.

Term Offered: Spring, Fall

SPED 7170 Supporting Youths And Adults With Disabilities Living And Working In The Community

[3 credit hours]

In-depth study of issues faced by adults with severe and multiple disabilities and their families. Emphasis on supported employment, residential options, self-determination, recreation and quality of life issues. Field experience required.

Term Offered: Fall

SPED 7180 Advanced Instructional Methods For Teaching Students With Intensive Educational Needs

[3 credit hours]

An in-depth examination of appropriate curriculum models, instructional strategies and adaptations, and related behavior problems for students with severe and multiple disabilities. A transdisciplinary team approach is explored.

Term Offered: Spring

SPED 7190 Advanced Practicum For Students With Intensive Needs

[1 credit hour]

This course is taken with SPED 7180 to apply strategies and techniques for teaching students with intensive needs. Forty field hours are required.

Term Offered: Spring

SPED 7210 Augmentative and Alternative Communication

[3 credit hours]

This course will provide an overview of alternative or augmentative modes of communication for children who are unable to meet their daily communication needs through natural modes such as speech, gestures or handwriting.

SPED 7220 Research And Practice In Teaching Phonics, Reading And Writing To Students With Special Needs

[3 credit hours]

Current trends and issues in teaching reading and writing to students with disabilities. Examination of research supporting various methods. Application of research-based methods into practical strategies for classroom implementation. Twenty-four hours of field required.

Term Offered: Summer, Fall

SPED 7230 Advanced Field Practicum In Diagnostic And Prescriptive Teaching

[1 credit hour]

Provides the laboratory to rehearse and refine the teaching skills presented in SPED 5/7220. Required of persons seeking initial special education certification. Forty field hours required. Taken concurrently with SPED 7220.

SPED 7250 Career And Vocational Education For Students With Disabilities

[3 credit hours]

This course covers career and vocational education activities for youths with disabilities. Special emphasis placed on developing and implementing an Individual Transition Plan (ITP) and coordination with adult service providers.

Term Offered: Spring, Summer

SPED 7260 Family And Professional Relations In Special Education

[3 credit hours]

Effective parent and professional partnerships will be explored. Interpersonal communication skills, legal issues, effective models for home-school communication, and differences in culture, values and family expectations will be discussed.

Term Offered: Spring, Summer, Fall

SPED 7270 Team Models And Community Networking In Early Intervention

[3 credit hours]

This course will focus on the skills, knowledge and ethical practices essential to the provision of effective service coordination and teaming for early intervention and early childhood special education. In addition, students will examine various models of teaming and consultation approaches and address issues related to working with individuals from cultural backgrounds other than their own.

Term Offered: Spring, Summer, Fall

SPED 7280 Management Of The Learning Environment In Early Childhood Special Education

[3 credit hours]

Aspects of quality environments, in the home and in early childhood centers for young children with special needs. Of particular interest is identifying characteristics of natural environments that promote positive child outcomes.

Term Offered: Spring, Fall

SPED 7310 Advanced Instructional Methods For Teaching Students With Mild Educational Needs

[3 credit hours]

Theoretical considerations for designing instruction, lesson plan development using direct, explicit instructional approach, differentiation, co-teaching, and evidence-based practices to meet the needs of students with mild disabilities in school settings will be examined. Research-based approaches to teaching language arts, mathematics, science, and social studies, will be explored.

Term Offered: Spring, Fall

SPED 7320 Advanced Field Practicum For Students With Mild Educational Needs

[1 credit hour]

Provides opportunities for field experience to use and refine the strategies for persons with mild disabilities presented in SPED 7310. Forty hours of field required.

Term Offered: Fall

SPED 7330 Advanced Child Study Institute: Ebd

[1 credit hour]

Provides quality educational settings to inservice teachers to practice effective behavioral and academic managing of children and youth experiencing continuous emotional stress and trauma.

SPED 7340 Advanced Behavior Management

[3 credit hours]

This course provides training inservice teachers to become managers of intra-communication and interpersonal relationships in diverse special education settings. Nonviolent Crisis Prevention/Intervention (CPI) training required.

Term Offered: Spring

SPED 7510 Curriculum And Teaching Strategies: Physical And Other Health Impairments

[3 credit hours]

Appropriate curriculum models, learning objectives and teaching strategies for students with physical or health impairing conditions are examined. Modification of materials, assessment options and alternatives response modes will be discussed.

SPED 7610 Seminar I: Orientation to Interprofessional Teaming

[1 credit hour]

Become familiar with requirements for the Certificate in Interprofessional Teaming. Focus on competencies needed to work collaboratively with professionals to meet the needs of individuals with disabilities and their families.

Prerequisites: SPED 7270 with a minimum grade of D-

Term Offered: Summer

SPED 7620 Seminar II: Working Effectively with Team Members

[1 credit hour]

Factors that support and threaten interprofessional collaboration. Become aware of policies affecting teaming. Engage in advocacy for teaming that will benefit individuals with disabilities.

Prerequisites: SPED 7610 with a minimum grade of D- and SPED 7270 with a minimum grade of D-

SPED 7630 Seminar III: Evidence-Based Practice and Innovation in Teaming

[1 credit hour]

Issues related to principles of ethical practice, professional and advocacy. Ways in which technology can promote effective teaming practices with other professionals as well as with family members.

Prerequisites: SPED 7620 with a minimum grade of D-

Corequisites: SPED 7640

Term Offered: Summer

SPED 7640 Practicum in Interprofessional Teaming

[2 credit hours]

Students will work as part of an inter-professional team to develop, implement, and evaluate integrated intervention plans designed to support the development of children who have special needs.

Prerequisites: SPED 7620 with a minimum grade of D-

Corequisites: SPED 7630

Term Offered: Summer

SPED 7800 Practical And Theoretical Implication Of Vision Impairment

[3 credit hours]

A study of the research on the anatomy and physiology of the eye, visual impairments and the practical implication for learning, working and independent living.

SPED 7810 Low Vision: Theory & Research

[3 credit hours]

An in-depth study of the field of low vision. Conditions, equipment and instruction will be reviewed and analyzed for their implication to the field of vision.

SPED 7880 Advanced Study Of Technology And Independent Daily Living For The Persons With Visual Impairment

[3 credit hours]

This course includes the research regarding technology, strategies and an analytical evaluation of the independent living of the blind and visually impaired.

SPED 7950 Workshop In Special Education

[1-5 credit hours]

A workshop developed around topics of interest and concern for in-service teachers and other education personnel. Practical application of workshop topics will be emphasized.

Term Offered: Summer

SPED 7980 Special Topics In Special Education

[1-5 credit hours]

An advanced course for graduate students in special education or related fields. Topics are selected based on needs of the population. Student may repeat this course under different section numbers.

Term Offered: Spring, Summer, Fall

SPED 7990 Independent Study In Special Education

[1-5 credit hours]

Individual study provides graduate students with opportunities to work individually on professional problems with special education faculty. Individual meetings with sponsoring faculty are held.

Term Offered: Spring, Summer, Fall

SPED 8060 K-3 Curr Models and Int Strate

[3 credit hours]

Examination of appropriate curriculum models, instructional strategies and adaptations for young students (K-3 grade) with mild to intensive educational needs. A trans-disciplinary team approach is explored with an emphasis on collaboration and communication.

Term Offered: Spring

SPED 8070 Curriculum Models And Intervention Strategies In Early Childhood Special Education

[3 credit hours]

Atypical infant, toddler and early childhood development will be examined. Specialized intervention techniques, their research and practice base, and appropriate curriculum models will be explored. 20 clock hour practicum required.

Term Offered: Spring, Summer, Fall

SPED 8080 Clinical And Educational Evaluation Of Students With Disabilities

[3 credit hours]

An in-depth study of instruments used by school psychologists and classroom teachers to access and evaluate students. The diagnostic uses and the understanding of the results will be the focus.

SPED 8220 Collaboration For Inclusive Schools

[3 credit hours]

Provides information and competencies to develop, implement and evaluate collaborative programs. Educators will enhance their ability to collaborate so that they can better meet the needs of their students.

SPED 8250 Issues And Research In Transition And Post-Secondary Outcomes For Students With Disabilities

[3 credit hours]

In-depth study of transition issues and outcomes focusing on: a) best practices, b) the roles and responsibilities of a transition specialist, c) inter-agency collaboration, d) team building, and e) program development, implementation and evaluation.

Term Offered: Spring

SPED 8350 Educational And Instructional Implications In Specific Learning Disabilities

[3 credit hours]

Students will examine current trends in research and program development in Specific Learning Disabilities. The focus will be on learning and study skills: their implication in the development of learning.

SPED 8360 Clinical Practicum: Learning Strategies For Students With Specific Learning Disabilities

[1 credit hour]

Provides advanced graduate student with supervised practice in developing and implementing strategies and study skills for persons with learning problems. Required 15 hours instructional practice and weekly meetings with supervisors.

SPED 8410 Theory And Research: Emotional Behavioral Disorders

[3 credit hours]

This course provides in-depth readings on problems of emotionally and behaviorally disturbed/disordered children and youth. Intense study on two levels: (1) theoretical considerations and (2) treatments pertinent to diverse educational settings.

SPED 8420 Public School Emotional Behavior Disorders

[1 credit hour]

This course provides supervised practice in classroom participation with students identified as Emotionally Behaviorally Disturbed/Disordered. Public School settings include: self-contained, resource, transition, mainstreamed and consultative-collaborative teaching roles.

SPED 8440 Teaching Children And Youth With Emotional Behavior Disorders

[3 credit hours]

This course provides evaluation and application techniques of research based methodologies for teaching students with emotional behavioral Disorders/disturbances. Psycho-social educational best practices within the least restrictive environment are presented.

Term Offered: Spring**SPED 8470 Theory And Research: Autism**

[3 credit hours]

This course provides in-depth readings in the field of autism. The course includes intense study on two levels: (1) theoretical considerations and (2) treatment approaches pertinent to populations with autism.

SPED 8480 Teach Youth/Child With Autism

[3 credit hours]

This course provides research based methodologies for understanding and teaching children and youth with autism. Psycho-Social Educational best practices within the least restrictive environment are presented.

SPED 8720 Advanced Language And Speech For Persons With Hearing Impairments

[3 credit hours]

Clinical evaluation model in descriptive linguistics and interaction in the use of a process approach to developing language with children with hearing impairments. Includes relation of hearing impairment to language development.

SPED 8730 Synthesis Of Principles Of Educating Children With Hearing Impairments

[3 credit hours]

Historical, Philosophical, psychological and social aspects of educating the hearing impaired. Factors affecting successful public school instruction is covered.

SPED 8740 Curriculum And Assessment Issues Of The Education Of Persons With Hearing Impairments

[3 credit hours]

Principles of educational assessment and curriculum development for students with hearing impairment. Assessment and curriculum issues will be discussed as they relate to current research trends in hearing impairment.

SPED 8900 Independent Research In Special Education

[1-5 credit hours]

Independent Research provides opportunities to work on individual research under the direction of faculty. The student meets with the instructor at intervals and conducts research without formal class meeting.

Term Offered: Spring, Summer, Fall**SPED 8930 Seminars In Special Education**

[1-5 credit hours]

Seminars will consider problems and provide advanced study in the field of Special Education. A student may register for more than one seminar during a graduate program.

Term Offered: Summer, Fall**SPED 8940 Internship/Externship In Special Education**

[1-8 credit hours]

Provides the advanced graduate student with supervised practicum experiences at an off-campus site; including schools, hospitals, agencies, rehabilitation clinics, work training sites and other community sites where persons with disabilities are served.

Term Offered: Spring, Summer, Fall**SPED 8960 Doctoral Dissertation In Curriculum & Instruction**

[1-12 credit hours]

The doctoral dissertation is an original scholarly product required of all students completing the doctoral degree in Special Education Services.

Term Offered: Spring, Summer, Fall**SPED 8990 Independent Study In Special Education**

[1-5 credit hours]

Individual study provides advanced graduate students opportunities to work individually on professional problems with faculty of the Department of Special Education Services. Individual meetings with sponsoring faculty are held.

Term Offered: Spring, Fall

Speech Language Pathology (SLP)

SLP 5440 Augmentative Communication Systems

[3 credit hours]

SLP 6000 Advanced Practicum In Communication Disorders

[2 credit hours]

Provides students with supervised therapeutic experiences with specific speech and language disorders. Students should have completed or be currently enrolled in graduate level communication disorders course addressing the specific practicum disorder selected.

Term Offered: Spring, Summer, Fall**SLP 6001 Advanced Practicum in Communication Disorders II**

[2 credit hours]

Provides students with supervised therapeutic experiences with specific speech and language disorders. Students should have completed or be currently enrolled in graduate level communication disorders course addressing the specific practicum disorder selected. SLP 6000 is a pre-requisite for this course.

Prerequisites: SLP 6000 with a minimum grade of D-**Term Offered:** Spring, Summer

SLP 6002 Advanced Practicum III

[2 credit hours]

Provides students with supervised therapeutic experiences with specific speech and language disorders. Students should have completed or be currently enrolled in graduate level communication disorders course addressing the specific practicum disorder selected. SLP 6000 and 6001 are a pre-requisite for this course.

Prerequisites: SLP 6000 with a minimum grade of D- and SLP 6001 with a minimum grade of D-

SLP 6010 Diagnostic Practicum In Communication Disorders

[2 credit hours]

Provides a minimum of 30 hours supervised diagnostic practicum with a variety of communicatively disordered cases.

Corequisites: SLP 6100

Term Offered: Spring, Summer, Fall

SLP 6011 Diagnostic Practicum in Communication Disorders II

[2 credit hours]

Provides students with supervised therapeutic experiences with specific speech and language disorders. Students should have completed or be currently enrolled in graduate level communication disorders course addressing the specific practicum disorder selected.

Prerequisites: SLP 6010 with a minimum grade of D-

Term Offered: Summer

SLP 6020 Audiological Practicum In Communication Disorders

[2 credit hours]

Provides the advanced student with supervised practicum hours in the screening, impedance and pure tone threshold testing for audiological diagnosis.

Term Offered: Spring, Summer, Fall

SLP 6030 Research in Speech-Language Pathology

[3 credit hours]

Early graduate course in research methods with emphasis on analysis of current research, application of single-subject research in clinic practicum, and development of research project.

Prerequisites: SLP 6010 (may be taken concurrently) with a minimum grade of D- or SLP 6020 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

SLP 6040 Exploring Research in Speech Language Pathology

[2 credit hours]

This course will guide graduate students in an exploration of the methods and process of research in Speech and Language Pathology. In addition, the students will be guided in the process of critically reviewing research pertinent to the field. The course will culminate in the development of an independent research project or paper, that will lead to their comprehensive exam/project required for graduation.

Term Offered: Spring, Fall

SLP 6100 Diagnosis Of Speech And Language Disorders

[3 credit hours]

Detailed analysis of formal and informal instruments and procedures designed to evaluate speech and language disorders.

Term Offered: Spring, Summer, Fall

SLP 6210 Language Development and Disorders:Early Childhood through Adolescence

[6 credit hours]

This course provides the conceptual framework for understanding language disorders in preschool through school-age children. Special emphasis is placed on application and theory of assessment as well as intervention strategies in private and school settings.

Term Offered: Spring, Fall

SLP 6300 Phonological And Articulatory Disorders

[3 credit hours]

Advanced study of phonological and articulatory disorders including developmental apraxia. Focus on phonological differences in multi-cultural society with emphasis on assessment of disorders and current advances in remediation.

Term Offered: Spring, Summer, Fall

SLP 6400 Adult Language and Cognitive Communication Disorders

[5 credit hours]

Advanced course exploring normal and disordered neural anatomy and physiology for communication and cognition. Student will demonstrate knowledge of assessment and treatment of cognitive and linguistics deficits due to trauma and disease to central nervous systems.

Term Offered: Spring, Fall

SLP 6500 Motor Speech Disorders

[3 credit hours]

Adult apraxia and dysarthrias are discussed in relation to neurological organization, disorders and speech characteristics.

Term Offered: Spring, Fall

SLP 6550 Trends in Technology for Communication Disorders

[3 credit hours]

Introduction to the study and application of assistive technology, including augmentative and alternative communication devices, to aid communication for persons incapable of producing functional oral communication. The course includes device characteristics, program features, and intervention strategies as well as current trends in technological advances that includes but are not limited to devices such as iPads, smartphone applications, and software.

Term Offered: Spring, Summer, Fall

SLP 6600 Voice and Resonance Disorders

[3 credit hours]

An advanced course in the nature, evaluation and treatment of voice and resonance disorders. Major voice and resonance disorders in adults and children are emphasized.

Term Offered: Summer

SLP 6650 Feeding and Swallowing Disorders

[3 credit hours]

This course introduces the student to the nature, evaluation, and management of feeding and swallowing disorders from infancy through adulthood.

Term Offered: Spring, Summer, Fall

SLP 6670 Voice Disorders

[3 credit hours]

SLP 6700 Assessment And Remediation Of Fluency Disorders

[3 credit hours]

An advanced course to develop skills in the assessment and remediation of fluency disorders with special emphasis on current trends in stuttering therapy.

Term Offered: Spring, Summer, Fall

SLP 6710 Counseling Skills for Speech-Language Pathologists

[3 credit hours]

Provides an overview of the skills necessary to counsel people with communication disorders and their families. Topics include patient-centered practice, interviewing, information-giving, psychological sequelae of communication disorders, and family systems.

SLP 6720 Advanced Readings in Fluency Disorders

[3 credit hours]

Reviews seminal and current research studies in fluency disorders. Topics include physiology, psychosocial effects of stuttering, evidence base for stuttering therapy, school-based stuttering therapy, and others based on student interests.

SLP 6730 Innovative Service Delivery in Stuttering

[3 credit hours]

Explores innovative service delivery models in stuttering including intensive programs, telepractice, and group therapy. Students will deliver therapy to at least one client who stutters as part of the course.

SLP 6750 Professional Issues in Speech Language Pathology

[2 credit hours]

This course will provide students with the opportunity to learn about specific issues related to working in a variety of professional settings.

Term Offered: Spring, Fall

SLP 6800 Aural Rehabilitation

[3 credit hours]

Aural (Re)Habilitation examines communication assessment and intervention approaches over the lifespan for individuals with both peripheral and central auditory perceptual issues. Emphasis is placed upon early identification and education to minimize and alleviate communication and related problems commonly associated with hearing impairment and auditory perceptual disorders.

Term Offered: Spring, Summer, Fall

SLP 6810 Facilitating Auditory Learning and Spoken Language for Children with Hearing Loss

[3 credit hours]

The impact of universal newborn hearing screening, early fitting of hearing technology (digital hearing aids and/or cochlear implants), and enrollment in comprehensive early intervention programs has created new opportunities for infants and toddlers with hearing loss to learn to listen and talk. In this course, students will learn the developmental processes that are the underpinning for audition and spoken language acquisition. Specific techniques, strategies, and teaching behaviors to develop listening and spoken language in young children who are deaf or hard of hearing will be demonstrated and explored.

Term Offered: Spring

SLP 6820 Hearing Technology

[3 credit hours]

This course will orient speech-language pathology students to hearing technologies that assist persons with hearing impairment (hearing aids, assistive listening and alerting devices, and implantable technologies). The focus will be on providing auditory access to children for the purpose of developing listening and spoken language. Equipment will be demonstrated, current issues will be discussed, and students will be given opportunities to check and troubleshoot equipment.

Term Offered: Fall

SLP 6830 Lang Lit Ac of Child Hear Loss

[3 credit hours]

This course examines the relevant research, best practices, and intervention strategies for infants and children with hearing loss.

Term Offered: Spring

SLP 6840 Team Models and Ed Leadership

[3 credit hours]

SLPs who work with children who are hearing impaired (HI) must work in collaboration educational professionals, parents, audiologists, and other medical professionals within a team-based model. This course will focus on the skills, knowledge and ethical practices essential to the provision of effective service coordination and teaming for SLPs who work in educational settings with children who are HI. Students will examine various models of teaming and consultation approaches and address issues related to supporting students' educational achievement in educational settings.

Term Offered: Summer

SLP 6900 Independent Research In Speech-Language Pathology

[1-5 credit hours]

Independent research provides opportunities to work on individual research under the direction of faculty. The student meets with the instructor at intervals and conducts research without formal class meeting.

Term Offered: Summer, Fall

SLP 6920 Master's Research Project In Speech-Language Pathology

[1-5 credit hours]

The Master's project is an individually designed product.

Prerequisites: SLP 6930 with a minimum grade of D-

SLP 6930 Seminars In Speech-Language Pathology

[1-5 credit hours]

Seminars will consider problems and provide advanced study in the field of Speech-Language Pathology. A student may register for more than one seminar during a graduate program.

Term Offered: Spring, Fall

SLP 6940 Adult Internship In Speech-Language Pathology

[6 credit hours]

Provides the advanced graduate student with supervised practicum experiences with the adult population at an off-campus site; including hospitals, agencies, rehabilitation clinics, work training sites and other community sites where persons with disabilities are served.

Term Offered: Spring, Summer, Fall

SLP 6941 Pediatric Internship in Speech-Language Pathology

[6 credit hours]

Provides the advanced graduate student with supervised practicum experiences with the pediatric population at an off-campus site; including schools, hospitals, agencies, rehabilitation clinics, and other community sites where persons with disabilities are served.

Term Offered: Spring, Summer, Fall

SLP 6942 Internship in Speech-Language Pathology III

[6 credit hours]

Provides the graduate student with supervised practicum experiences at an off-campus sites. This is the third internship in a sequence.

Prerequisites: SLP 6940 with a minimum grade of D- and SLP 6941 with a minimum grade of D-

SLP 6960 Master Research Thesis In Speech-Language Pathology

[1-5 credit hours]

The master's thesis is an individually designed investigation approved by the thesis committee and designed to contribute to the knowledge base of the speech-language pathology. Meets the final activity requirement for completion of the master's degree.

Prerequisites: SLP 6930 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

SLP 6990 Independent Study In Speech-Language Pathology

[1-5 credit hours]

Individual study provides advanced graduate students opportunities to work individually on professional problems with faculty of the Speech-Language Pathology program. Individual meetings with sponsoring faculty are held.

Term Offered: Spring, Summer, Fall

SLP 7610 Orientation to Interprofessional Teaming

[1 credit hour]

Orientation to the Graduate Certificate in Teaming in Early Childhood.

Focus on individual competencies needed to work collaboratively to meet the needs of young children with disabilities and their families.

Prerequisites: SPED 5270 with a minimum grade of D-

Term Offered: Summer

SLP 7620 Working Effectively With Team Members

[1 credit hour]

This second seminar in the Graduate Certificate in Teaming in Early Childhood focuses on skills and policies that promote best practices in teaming to support young children with disabilities.

Prerequisites: SLP 7610 with a minimum grade of D-

Term Offered: Fall

SLP 7630 Evidence-Based Practice and Innovation in Interprofessional Teaming

[1 credit hour]

This third seminar in the Graduate Certificate in Teaming in Early Childhood provides students the opportunity to reflect on their practicum experiences in teaming to support young children with disabilities.

Prerequisites: SLP 7620 with a minimum grade of D-

Corequisites: SLP 7640

Term Offered: Spring

SLP 7640 Practicum in Interprofessional Teaming

[2 credit hours]

The practicum is provides an opportunity to engage in interprofessional teaming in order to provide integrated services to young children with special needs in an inclusive setting.

Prerequisites: SLP 5620 with a minimum grade of D-

Corequisites: SLP 5630

Term Offered: Spring

SLP 8000 Advanced Practicum In Communication Disorders

[2 credit hours]

Provides students with supervised therapeutic experiences with specific speech and language disorders. Students should have completed or be currently enrolled in graduate level communication disorders course addressing the specific practicum disorder selected.

Term Offered: Summer

SLP 8010 Diagnostic Practicum In Communication Disorders

[2 credit hours]

Provides a minimum of 30 hours supervised diagnostic practicum with a variety of communicatively disordered cases.

Corequisites: SLP 8100

Term Offered: Summer

SLP 8020 Audiological Practicum In Communication Disorders

[2 credit hours]

Provides the advanced student with supervised practicum hours in the screening, impedance and pure tone threshold testing for audiological diagnosis.

SLP 8100 Diagnosis Of Speech And Language Disorders

[3 credit hours]

Detailed analysis of formal and informal instruments and procedures designed to evaluate speech and language disorders.

SLP 8210 Preschool Language Disorders

[3 credit hours]

The conceptual framework for understanding language disorders in young children. Application and theory of assessment and intervention strategies will be described and discussed.

SLP 8220 Language Disorders In School-Age Children

[2 credit hours]

The conceptual framework for understanding language disorders in school-age children with special emphasis on language assessment and language interventions in school settings.

SLP 8300 Phonological And Articulatory Disorders

[3 credit hours]

Advanced study of phonological and articulatory disorders including developmental apraxia. Focus on phonological differences in multi-cultural society with emphasis on assessment of disorders and current advances in remediation.

SLP 8400 Neurological Disorders: Aphasia

[3 credit hours]

Advanced course in deficits due to neurological alterations resulting in aphasia. Formal and informal assessment procedures for the diagnosis of aphasia as well as techniques and functional strategies for communicative compensation provide the focus of the course.

SLP 8450 Neurological Disorders: Brain Injury And Dementia

[2 credit hours]

Course in cognitive and linguistics deficits due to trauma and disease to central nervous system. Course focuses on identification and intervention in communication disorders as the result of acquired brain injury/disease. Traumatic brain injury, right hemisphere damage and dementia are addressed.

SLP 8500 Motor Speech Disorders

[3 credit hours]

Adult apraxia and dysarthrias are discussed in relation to neurological organization, disorders and speech characteristics.

SLP 8550 Augmentative And Alternative Communication

[2 credit hours]

The study and application of assistive communication technology for persons who are nonspeaking. The course includes characteristics of ACC consumers, design features of augmentative communication devices, assessment strategies to choose a system and intervention strategies to facilitate use of the ACC system.

SLP 8600 Voice Disorders: Diagnosis And Treatment

[3 credit hours]

Advanced course in the evaluation and treatment of voice disorders. Major voice disorders in children and adults are emphasized.

SLP 8650 Dysphagia And Oropharyngeal Disorders

[2 credit hours]

Evaluation and intervention procedures for individuals with communication problems related to structural impairments of the oral cavity and pharynx.

SLP 8670 Voice Disorders

[3 credit hours]

SLP 8700 Assessment And Remediation Of Fluency Disorders

[3 credit hours]

An advanced course to develop skills in the assessment and remediation of fluency disorders with special emphasis on current trends in stuttering therapy.

SLP 8800 Aural Rehabilitation

[3 credit hours]

Advanced care and training in the use of individual and group assistive listening devices, auditory trainers and other aids to augment hearing. Methods for using residual hearing and contextual factors to augment technology is addressed.

Prerequisites: SLP 3400 with a minimum grade of D-

SLP 8900 Independent Research In Speech-Language Pathology

[1-5 credit hours]

Independent Research provides opportunities to work on individual research under the direction of faculty. The student meets with the instructor at intervals and conducts research without formal class meeting.

SLP 8930 Seminars In Speech-Language Pathology

[1-5 credit hours]

Seminars will consider problems and provide advanced study in the field of Speech-Language Pathology. A student may register for more than one seminar during a graduate program.

SLP 8940 Internship In Speech-Language Pathology

[1-8 credit hours]

Provides the advanced graduate student with supervised practicum experiences at an off-campus site; including schools, hospitals, agencies, rehabilitation clinics, work training sites and other community sites where persons with disabilities are served.

SLP 8960 Master Research Thesis In Speech-Language Pathology

[1-5 credit hours]

The master's thesis is an individually designed investigation approved by the thesis committee and designed to contribute to the knowledge base of the speech-language pathology.

Prerequisites: SLP 6930 with a minimum grade of D-

SLP 8990 Independent Study In Speech-Language Pathology

[1-5 credit hours]

Individual study provides advanced graduate students opportunities to work individually on professional problems with faculty of the Speech-Language Pathology program. Individual meetings with sponsoring faculty are held.

Term Offered: Summer

Surgery (SURG)

SURG 702 Cardiothoracic Surgery

[3 credit hours]

Students will be give an individualized opportunity to participate in the activities of the Division of Cardiothoracic Surgery. Opportunities may be available for clinical experience in the operating room, in management of adult and pediatric cardiac surgical patients, or in clinical research. The focus will be the development of an understanding of the basic and clinical sciences as they pertain to cardiovascular surgical procedures and pulmonary resection.

Term Offered: Spring, Summer, Fall

ACGME/Clinical Med Elective

SURG 703 Surgery

[1-15 credit hours]

Surgery (10 weeks)

Term Offered: Spring, Summer, Fall

SURG 704 Cardiothoracic Surgery

[0-6 credit hours]

Students will be given an individualized opportunity to participate in the activities of the Division of Cardiothoracic Surgery. Opportunities may be available for clinical experience in the operating room, in management of adult and pediatric cardiac surgical patients, or in clinical research. The focus will be the development of an understanding of the basic and clinical sciences as they pertain to cardiovascular surgical procedures and pulmonary resection.

Prerequisites: SURG 703 with a minimum grade of P

Term Offered: Spring, Summer, Fall

ACGME/Clinical Med Elective

SURG 705 General/Trauma Surgery

[0-6 credit hours]

Students will be designated as an Acting Intern with increased responsibility for patient management & under supervision.

Prerequisites: SURG 703 with a minimum grade of P

Term Offered: Spring, Summer, Fall

ACGME/Clinical Med Elective

SURG 706 Trauma Surgical Intensive Care

[0-6 credit hours]

Students will be integral members of the SICU and Trauma service caring for the critically ill general surgery and trauma surgery patients. Students will work intimately with surgical and anesthesia residents assigned to the Trauma/SICU Service and the Trauma/SICU Attendings who round daily. Students attend daily rounds, trauma alerts, as well as M&M Conference and Grand Rounds. Students will gain experience in modern diagnosis and treatment of surgical disease and related professional skills such as the patient's personal reaction to disease and recognition of social personal factors contributing to disease, particularly in a trauma setting.

Prerequisites: SURG 703 with a minimum grade of P

Term Offered: Spring, Summer, Fall

ACGME/Clinical Med Elective

SURG 708 Ophthalmology

[0-6 credit hours]

The student will have the opportunity to evaluate eye disorders in the outpatient setting. Techniques for eye examination will be stressed with special emphasis on diagnosis of diabetic retinopathy, macular degeneration, cataract, and glaucoma. Viewing a series of slides will also be a part of the rotation

SURG 709 Cardiothoracic Surgery

[6 credit hours]

Students will be given an individualized opportunity to participate in the activities of the Division of Cardiothoracic Surgery. Opportunities may be available for clinical experience in the operating room, in management of adult and pediatric cardiac surgical patients, or in clinical research. The focus will be the development of an understanding of the basic and clinical sciences as they pertain to cardiovascular surgical procedures and pulmonary resection.

Prerequisites: SURG 703 with a minimum grade of P or SURG 740 with a minimum grade of P

Term Offered: Spring, Summer, Fall

ACGME/Clinical Med Elective

SURG 710 Pediatric Surgery

[6 credit hours]

SURG 711 Plastic Surgery

[6 credit hours]

The focus will be to develop a more sophisticated understanding of basic and clinical sciences as they pertain to reconstructive and cosmetic surgical procedures. Evaluation of pre and post operative management of the plastic surgical patient.

SURG 712 General Surgery

[6 credit hours]

Students will be integrated into the service as a member of the surgical team, participating in all aspects of patient management, both inpatient and outpatient.

Prerequisites: SURG 703 with a minimum grade of P or SURG 740 with a minimum grade of P

Term Offered: Spring, Summer, Fall

ACGME/Clinical Med Elective

SURG 713 SICU AI

[6 credit hours]

Students will be integral members of the SICU service caring for the critically ill general surgery and trauma surgery patients. Students will work closely with surgical, emergency medicine, and anesthesia residents assigned to the SICU Service and the SICU Attendings who round daily. Students attend daily rounds as well as Quality Improvement Conference and Grand Rounds. Students will gain experience in modern diagnosis and treatment of surgical disease and related professional skills such as the patient's personal reaction to disease and recognition of social personal factors contributing to disease. Required to perform 3 H&P's and participate in the discharge/transfer of the patient to step down unit.

Prerequisites: SURG 703 with a minimum grade of P

Term Offered: Spring, Summer, Fall

ACGME/Clinical Med Elective

SURG 714 Vascular Surgery

[0-6 credit hours]

Students will be designated as an Acting Intern with increased responsibility for patient management & under supervision.

Prerequisites: SURG 703 with a minimum grade of P

Term Offered: Spring, Summer, Fall

ACGME/Clinical Med Elective

SURG 715 Emergency Medicine

[0-6 credit hours]

Students will be designated as an Acting Intern with increased responsibility for patient management & under supervision.

SURG 716 Acting Internship in Surgery

[6 credit hours]

Students will be designated as an Acting Intern with increased responsibility for patient management & under supervision.

Prerequisites: SURG 703 with a minimum grade of P

Term Offered: Spring, Summer, Fall

ACGME/Clinical Med Elective

SURG 717 Vascular Surgery

[3 credit hours]

Exposure to the surgery of the vascular disease process with the physiological approach to understanding the pre and post operative patient with vascular disease. Particular emphasis is on fluids, clotting mechanisms, renal, pulmonary, and cardiac status. The student will spend time in the vascular lab to learn techniques and interpretation of vascular studies. Each acting intern must complete two on-line modules to prepare the acting intern for his/her roles as teachers of junior medical students.

Prerequisites: SURG 703 with a minimum grade of P

Term Offered: Spring, Summer, Fall

ACGME/Clinical Med Elective

SURG 718 HPB and Surgical Oncology

[6 credit hours]

Students will be integrated into the service as a member of the surgical team, participating in all aspects of HPB (hepatobiliary and pancreatic) and surgical oncology patient management, both inpatient and outpatient. The student will be expected to complete at least 40 hours per week on the service.

Prerequisites: SURG 703 with a minimum grade of P or SURG 740 with a minimum grade of P

ACGME/Clinical Med Elective

SURG 719 Colorectal Surgery

[3 credit hours]

Students will be integrated into the service as a member of the surgical team, participating in all aspects of patient management, both inpatient and outpatient. The student will be expected to complete at least 40 hours per week on the service.

Prerequisites: SURG 703 with a minimum grade of P or SURG 740 with a minimum grade of P
ACGME/Clinical Med Elective

SURG 720 Colorectal Surgery

[6 credit hours]

Students will be integrated into the service as a member of the surgical team, participating in all aspects of patient management both inpatient and outpatient. The student will be expected to complete at least 40 hours per week on the service.

Prerequisites: SURG 703 with a minimum grade of P or SURG 740 with a minimum grade of P
ACGME/Clinical Med Elective

SURG 721 General Surgery - ProMedica Surgeons

[6 credit hours]

Students will be integrated into the general surgery service as a member of the surgical team, participating in all aspects of patient management, both inpatient and outpatient, which includes daily rounding on inpatients, completing both history and physicals on clinic patients, working up the preoperative patient, assisting in the operating room and endoscopy. The student will be expected to complete at least 40 hours per week on the service.

Prerequisites: SURG 703 with a minimum grade of P
Term Offered: Spring, Summer, Fall
ACGME/Clinical Med Elective

SURG 722 Vascular Surgery Wound Care

[3 credit hours]

Students will be assigned to work with wound care faculty and midlevels on the Vascular Surgery Service. Students will learn the different types of wounds, how to treat them, the etiology and how to manage them. They will be overseen by the vascular surgery fellows, surgical residents, and Vascular, Infectious disease, Podiatry and Plastics faculty. There will be exposure to a wide variety of wound care. Students will work up and manage acute and chronic wounds. Students will spend time in the wound care clinic at The Toledo Hospital to understand the techniques of wound care dressing and how to manage them. Students will also participate in the OR when wound care requires anesthesia.

Prerequisites: SURG 703 with a minimum grade of P
Term Offered: Spring, Summer, Fall
ACGME/Clinical Med Elective

SURG 730 Ophthalmology

[0-3 credit hours]

The student will have the opportunity to evaluate eye disorders in the outpatient setting. Techniques for eye examination will be stressed with special emphasis on diagnosis of diabetic retinopathy, macular degeneration, cataract, and glaucoma. Viewing a series of slides will also be a part of the rotation

SURG 731 Cardiothoracic Surgery

[3 credit hours]

Students will be given an individualized opportunity to participate in the activities of the Division of Cardiothoracic Surgery. Opportunities may be available for clinical experience in the operating room, in management of adult and pediatric cardiac surgical patients, or in clinical research. The focus will be the development of an understanding of the basic and clinical sciences as they pertain to cardiovascular surgical procedures and pulmonary resection.

Prerequisites: SURG 703 with a minimum grade of P
Term Offered: Spring, Summer, Fall
ACGME/Clinical Med Elective

SURG 740 Surgery: Required Remediation

[7.5 credit hours]

SURG 745 Surgery Clinical Training for MD/PhD Students during Graduate Research Years

[1-2 credit hours]

In the summer after the second year of medical school, MD/PhD students will identify a clinical mentor. This faculty member will be responsible for the clinical training program of the student, and will provide formative and summative feedback concerning the development of clinical skills and a foundation for subsequent clinical clerkship training. The mentor may change during the course of the student's graduate school years, but any change should occur after the end of a semester. Although students may choose a clinical mentor from any department, the following specialties are particularly suited to training MD/PhD students with limited prior clinical training and restricted hours of availability: Emergency Department: Students schedule specific hours (which may include evenings or weekends) with their clinical mentor. Patients will be assigned to the student for evaluation, and students will be involved in all aspects of emergency patient care. Contact: Dr. Kris Brickman, Director of Emergency Medicine. Student time commitment: Students are expected to spend 8 hours per month in clinical training. This can be divided into weekly 2 hour session, biweekly 4 hour sessions or an 8 hour day per month. Students are encouraged to discuss the most appropriate schedule with their laboratory mentor to ensure that the clinical experience does not interfere with graduate coursework or research progress. The program should be formalized in writing, and submitted to the MD/PhD Director for approval. Students should see about one patient per hour of training. Students should keep a log of their patients, their diagnoses, and any procedures performed. An electronic logging system for patient experiences will be developed. Credit: Upon completion of 3 years of graduate training, assuming 40 weeks per year of participation, students will have accumulated about 300 hours of clinical experience. This is approximately equivalent to 2 months of clinical electives (8 h/d X 5 d/w X 4 weeks = 160 h/mo), and students will be awarded 2 months of 4th year elective credit for this training upon re-enrolling in the College of Medicine. This credit should allow further flexibility in 4th elective scheduling, enabling additional research months, off site rotations, etc. If students require more than 3 years of graduate work, continued participation in the clinical training program is strongly encouraged, but no more than 2 months of elective time will be awarded.
Term Offered: Spring, Summer, Fall

SURG 750 Surgery Away Elective

[0-6 credit hours]

SURG 751 Surgery Away Elective

[0-3 credit hours]

SURG 755 International Health

[0-6 credit hours]

SURG 760 Cardiothoracic Surgery

[6 credit hours]

Students will be given an individualized opportunity to participate in the activities of the Division of Cardiothoracic Surgery. Opportunities may be available for clinical experience in the operating room, in management of adult and pediatric cardiac surgical patients, or in clinical research. The focus will be the development of an understanding of the basic and clinical sciences as they pertain to cardiovascular surgical procedures and pulmonary resection.

Prerequisites: SURG 703 with a minimum grade of P

Term Offered: Spring, Summer, Fall

SURG 761 General Surgery

[6 credit hours]

SURG 762 Vascular Surgery

[6 credit hours]

SURG 789 Independent Study in Surgery

[0-6 credit hours]

SURG 6010 Leadership in Health Care

[3 credit hours]

Seminar course conducted on a weekly basis with the goal of developing skills and knowledge related to leadership. The seminars are based around guest moderators, selected pre-class readings, in class group discussion, supplemental blackboard discussion, and/or online video discussions.

Term Offered: Summer

SURG 6020 Medical Research, Simulation, Innovation, and Education

[3 credit hours]

Students will gain expertise in the areas of clinical, medical education, and simulation research through team-based learning and mentorship. Students will design and execute the steps of an education and/or simulation-based research project during the course, or alternatively a medical research question, culminating in production of an abstract reporting preliminary results. Specific learning in regards to qualitative-style research will be provided. Research can address any problem of the student's choice, provided it adequately demonstrates understanding of research theory, proper statistics and analysis, and manuscript writing.

Prerequisites: PUBH 6000 with a minimum grade of C and PUBH 6010 with a minimum grade of C

Term Offered: Summer

Theory and Social Foundations (TSOC)

TSOC 5000 Introduction to Educational Theory and Social Foundations

[3 credit hours]

This course prepares master's students for professional activity and research in the interdisciplinary field of Social Foundations of Education. It draws on social sciences and humanities to interpret and critique the relationship between school and society.

Term Offered: Fall

TSOC 5100 Network Theory and Educational Reform

[3 credit hours]

This course examines intrapersonal and interpersonal principles of high performing teams and the impact of meaningful relationships both in real-world and virtual environments. Individual and group dynamics are explored through foundational (sociological, philosophical) and political lenses. The course explores elements of effective group membership and leadership in both theoretical and practical applications.

Term Offered: Spring, Summer, Fall

TSOC 5110 Modern Educational Controversies

[3 credit hours]

Examines controversial contemporary educational issues, the forces that perpetuate them and the socio-cultural contexts in which they exist. Teachers' work and ethical tenets shaping practice are also examined.

Term Offered: Spring, Summer

TSOC 5190 Summer Institute On Diversity In Education

[3 credit hours]

School personnel collaborate with persons from higher education, the community, and scholars who have created model multicultural/urban education programs to learn new ways of teaching and learning among diverse populations.

TSOC 5200 Sociology of Education

[3 credit hours]

Introduction to sociological theory and method through critical examination of the socio-cultural foundations of schooling in the United States, including purposes of schooling in a multicultural society and the resulting nature of teacher work.

Term Offered: Spring, Summer, Fall

TSOC 5210 Social Justice in American Society

[3 credit hours]

Examines through models of social justice how race, class, gender, ethnicity and disability intersect with power, culture, knowledge and ideology in American schools and other institutions to influence the lives of citizens in a multicultural society.

Term Offered: Spring

TSOC 5230 Critical Responses to Deculturalization

[3 credit hours]

In-depth history of racial and ethnic minorities in the U.S. and the ongoing tension between deculturalization and democratic pluralism in P-12 and higher education including current theories and practical applications.

Term Offered: Spring

TSOC 5300 Philosophy of Education

[3 credit hours]

The course explores the nature of philosophical inquiry as foundational to the theory and practice of education, including teaching, through the exploration of competing philosophical traditions. The course provides an opportunity for students to articulate their own philosophy of education.

Term Offered: Spring, Summer

TSOC 5400 History of Education

[3 credit hours]

This course examines the evolving role of schooling and teaching over time in the US as an instrument of education. It uses history to reflect on the relationship of schooling to other social institutions, groups of people, and the process of social change. It encourages students from across the spectrum of educational areas of study to historically contextualize their discipline and their own practice.

Term Offered: Spring, Fall**TSOC 5500 Anthropology of Education**

[3 credit hours]

Examination of cross-cultural, comparative and other studies directed toward understanding processes of cultural transmission and transformation, and implications of anthropological research for contemporary issues in education.

Term Offered: Spring, Summer, Fall**TSOC 5600 Foundations of Peace Education**

[3 credit hours]

The purpose of this course is to introduce the basic concepts, theories, and approaches to peace education. The course explores the theories of peace education, including pedagogical approaches to peace-learning. The course also introduces the substantive areas of peace education.

Term Offered: Summer, Fall**TSOC 5950 Workshop In Educational Theory And Social Foundations**

[3 credit hours]

Each workshop is developed around a topic of interest and concern to inservice teachers and other educational personnel. Practical application of workshop topics will be emphasized.

Term Offered: Spring**TSOC 6000 Women, Culture And Pedagogy**

[3 credit hours]

This course surveys works of prominent feminist scholars in order to address the impact of dominant ideology upon the lives of women and girls in American schools.

TSOC 6120 International Education

[3 credit hours]

Complex interrelationships between global issues and education systems will be examined. Emphasis will be on how education can be used to build a more global society. Some sections of the course will include an international field trip.

Term Offered: Spring, Fall**TSOC 6140 School-State Relations**

[3 credit hours]

This course provides an examination of the historical, legal, and sociological interactions between state and schooling in the US. It explores the historical development of the social, political, and economic purposes of schooling and the impact on diverse populations. It offers students an opportunity to examine issues such as how schools have defined a good citizen and what they have done to create these in religious and secular means.

Term Offered: Spring, Fall**TSOC 6190 Seminar In Educational Theory/Social Foundations**

[3 credit hours]

The collaborative study of a specific topic in educational theory and social foundations by a group of advanced students under the direction of one or more professors.

Term Offered: Spring, Fall**TSOC 6220 Problems And Issues In Multicultural Education**

[3 credit hours]

Application of theoretical assumptions presented in TSOC 5210/7210 to US schools and classrooms, with particular attention given to program and curriculum issues, teachers and teaching policies, practices and procedures.

Prerequisites: TSOC 5210 with a minimum grade of D- or TSOC 7210 with a minimum grade of D-

TSOC 6240 Sociological Analyses Of Urban Education

[3 credit hours]

Development and dynamics of schooling in urban centers across the United States, including historical and critical analyses of current problems, issues and reform initiatives.

Prerequisites: TSOC 5200 with a minimum grade of D- or TSOC 5210 with a minimum grade of D- or TSOC 7200 with a minimum grade of D- or TSOC 7210 with a minimum grade of D-

Term Offered: Spring, Summer, Fall**TSOC 6310 Major Educational Theorists**

[3 credit hours]

An examination of selected educational philosophers who have addressed themselves to the problem of the ends and means of education from Classical Hellenic Times to the present.

TSOC 6320 Education And The Democratic Ethic

[3 credit hours]

Examination of the interdependence among education, democracy and ethics in the context of civic life. Applications made to the practice of schooling as cultural production in a democratic society.

Prerequisites: TSOC 5200 with a minimum grade of D- or TSOC 5300 with a minimum grade of D- or TSOC 5400 with a minimum grade of D- or TSOC 7200 with a minimum grade of D- or TSOC 7300 with a minimum grade of D- or TSOC 7400 with a minimum grade of D-

Term Offered: Spring, Fall**TSOC 6330 THE ETHICS OF WAR AND PEACE AND EDUCATION**

[3 credit hours]

The purpose of this seminar is to explore the ethics of war and peace and its implications for the moral and civic education of democratic citizens.

Term Offered: Spring**TSOC 6340 Human Rights Education**

[3 credit hours]

The purpose of this seminar is to explore the nature of human rights and human rights education. The origin, definition, content, scope, foundation, and correlative duties of human rights, as well as, the theory of human rights education will be explored.

Term Offered: Spring, Fall**TSOC 6350 Environmental Ethics and Education**

[3 credit hours]

The purpose of this seminar is to explore the nature of environmental ethics and its implications for educational theory, in particular moral and civic education.

Term Offered: Fall

TSOC 6360 Theories of Justice and Educational Policy

[3 credit hours]

The purpose of this class is to explore prominent theories of distributive justice in a liberal democratic republic and to analyze key educational policy issues from the perspective of those theories.

Term Offered: Spring, Fall

TSOC 6900 Master's Seminar in Educational Theory and Social Foundations

[3 credit hours]

Students are guided step by step to propose, research, and write a Master's thesis or project. Exact format and substance of the thesis or project is highly individualized, reflecting nature of students' interests, audiences, and purposes.

Term Offered: Spring, Fall

TSOC 6960 Master's Thesis In Educational Theory And Social Foundations

[1-3 credit hours]

A formal, independent study culminating in a written discourse that advances our understanding of educational theory or social foundations.

Term Offered: Spring, Summer, Fall

TSOC 6980 Master's Project In Educational Theory And Social Foundations

[1-3 credit hours]

A formal, independent project applying principles of educational theory or social foundations to analyze a particular problem and culminating in a written discourse.

Term Offered: Spring, Summer, Fall

TSOC 6990 Independent Study In Educational Theory And Social Foundations

[1-3 credit hours]

Directed study of a current topic in educational theory and social foundations. The student meets with the instructor at arranged intervals without formal classes.

Term Offered: Spring, Summer, Fall

TSOC 7100 Network Theory and Educational Reform

[3 credit hours]

This course examines intrapersonal and interpersonal principles of high performing teams and the impact of meaningful relationships both in real-world and virtual environments. Individual and group dynamics are explored through foundational (sociological, philosophical) and political lenses. The course explores elements of effective group membership and leadership in both theoretical and practical applications.

Term Offered: Spring, Summer, Fall

TSOC 7110 Modern Educational Controversies

[3 credit hours]

Examines controversial contemporary educational issues, the forces that perpetuate them and the socio-cultural contexts in which they exist. Teachers' work and ethical tenets shaping practice are also examined.

Term Offered: Spring, Summer

TSOC 7190 Summer Institute On Diversity In Education

[3 credit hours]

School personnel collaborate with persons from higher education, the community, and scholars who have created model multicultural/urban education programs to learn new ways of teaching and learning among diverse populations.

TSOC 7200 Sociology of Education

[3 credit hours]

Introduction to sociological theory and method through critical examination of the socio-cultural foundations of schooling in the United States, including purposes of schooling in a multicultural society and the resulting nature of teacher work.

Term Offered: Spring, Summer, Fall

TSOC 7210 Social Justice in American Society

[3 credit hours]

Examines through models of social justice how race, class, gender, ethnicity and disability intersect with power, culture, knowledge and ideology in American schools and other institutions to influence the lives of citizens in a multicultural society.

Term Offered: Spring

TSOC 7230 Critical Responses to Deculturalization

[3 credit hours]

In-depth history of racial and ethnic minorities in the U.S. and the ongoing tension between deculturalization and democratic pluralism in P-12 and higher education including current theories and practical applications.

Term Offered: Spring

TSOC 7300 Philosophy of Education

[3 credit hours]

The course explores the nature of philosophical inquiry as foundational to the theory and practice of education, including teaching, through the exploration of competing philosophical traditions. The course provides an opportunity for students to articulate their own philosophy of education.

Term Offered: Spring, Summer

TSOC 7400 History of Education

[3 credit hours]

This course examines the evolving role of schooling and teaching over time in the US as an instrument of education. It uses history to reflect on the relationship of schooling to other social institutions, groups of people, and the process of social change. It encourages students from across the spectrum of educational areas of study to historically contextualize their discipline and their own practice.

Term Offered: Spring, Fall

TSOC 7500 Anthropology of Education

[3 credit hours]

Examination of cross-cultural, comparative and other studies directed toward understanding processes of cultural transmission and transformation, and implications of anthropological research for contemporary issues in education.

Term Offered: Spring, Summer, Fall

TSOC 7600 Foundations of Peace Education

[3 credit hours]

The purpose of this course is to introduce the basic concepts, theories, and approaches to peace education. The course explores the theories of peace education, including pedagogical approaches to peace-learning. The course also introduces the substantive areas of peace education.

Term Offered: Summer, Fall

TSOC 7950 Workshop In Educational Theory And Social Foundations

[3 credit hours]

Each workshop is developed around a topic of interest and concern to inservice teachers and other educational personnel. Practical application of workshop topics will be emphasized.

TSOC 8000 Women, Culture, And Pedagogy

[3 credit hours]

This course surveys works of prominent feminist scholars in order to address the impact of dominant ideology upon the lives of women and girls in American schools.

TSOC 8100 Seminar in Social & Philosophical Foundations of Education

[3 credit hours]

This course prepares doctoral students for professional activity and research in the interdisciplinary field of Social Foundations of Education. It draws on social sciences and humanities to interpret and critique the relationship between school and society.

Term Offered: Fall**TSOC 8120 International Education**

[3 credit hours]

Complex interrelationships between global issues and education systems will be examined. Emphasis will be on how education can be used to build a more global society. Some sections of the course will include an international field trip.

Term Offered: Spring, Fall**TSOC 8140 School-State Relations**

[3 credit hours]

This course provides an examination of the historical, legal, and sociological interactions between state and schooling in the US. It explores the historical development of the social, political, and economic purposes of schooling and the impact on diverse populations. It offers students an opportunity to examine issues such as how schools have defined a good citizen and what they have done to create these in religious and secular means.

Term Offered: Spring, Fall**TSOC 8150 CULTURAL PERSPECTIVES IN LEARNING AND DEVELOPMENT**

[3 credit hours]

This course aims to develop a broader understanding of the role of culture in psychological processes and the implications of such psychological understanding for a culturally diverse society.

Term Offered: Spring**TSOC 8180 Interdisciplinary Seminar In Educational Psychology, Research, And Social Foundations**

[1 credit hour]

The proseminar will enable doctoral students to improve their understanding of the research process. Students will learn to ask research questions, choose alternative methodologies and interpret the validity of conclusions.

TSOC 8190 Seminar In Educational Theory/Social Foundations

[3 credit hours]

The collaborative study of a specific topic in educational theory and social foundations by a group of advanced students under the direction of one or more professors.

Term Offered: Spring, Fall**TSOC 8220 Problems And Issues In Multicultural Education**

[3 credit hours]

2Application of theoretical assumptions presented in TSOC 5210/7210 to US schools and classrooms, with particular attention given to program and curriculum issues, teachers and teaching policies, practices and procedures.

Prerequisites: TSOC 5210 with a minimum grade of D- or TSOC 7210 with a minimum grade of D-

TSOC 8240 Sociological Analyses Of Urban Education

[3 credit hours]

Development and dynamics of schooling in urban centers across the United States, including historical and critical analyses of current problems, issues and reform initiatives.

Prerequisites: TSOC 5200 with a minimum grade of D- or TSOC 5210 with a minimum grade of D- or TSOC 7200 with a minimum grade of D- or TSOC 7210 with a minimum grade of D-

Term Offered: Spring, Summer, Fall**TSOC 8310 Major Educational Theorists**

[3 credit hours]

An examination of selected educational philosophers who have addressed themselves to the problem of the ends and means of education from Classical Hellenic Times to the present.

Term Offered: Spring**TSOC 8320 Education And The Democratic Ethic**

[3 credit hours]

Examination of the interdependence among education, democracy and ethics in the context of civic life. Applications made to the practice of schooling as cultural production in a democratic society.

Prerequisites: TSOC 5200 with a minimum grade of D- or TSOC 5300 with a minimum grade of D- or TSOC 5400 with a minimum grade of D- or TSOC 7200 with a minimum grade of D- or TSOC 7300 with a minimum grade of D- or TSOC 7400 with a minimum grade of D-

Term Offered: Spring, Fall**TSOC 8330 THE ETHICS OF WAR AND PEACE AND EDUCATION**

[3 credit hours]

The purpose of this seminar is to explore the ethics of war and peace and its implications for the moral and civic education of democratic citizens.

Term Offered: Spring**TSOC 8340 Human Rights Education**

[3 credit hours]

The purpose of this seminar is to explore the nature of human rights and human rights education. The origin, definition, content, scope, foundation, and correlative duties of human rights, as well as, the theory of human rights education will be explored.

Term Offered: Spring, Fall**TSOC 8350 ENVIRONMENTAL ETHICS AND EDUCATION**

[3 credit hours]

The purpose of this seminar is to explore the nature of environmental ethics and its implications for educational theory, in particular moral and civic education.

Term Offered: Fall

TSOC 8360 Theories of Justice and Educational Policy

[3 credit hours]

The purpose of this class is to explore prominent theories of distributive justice in a liberal democratic republic and to analyze key educational policy issues from the perspective of those theories.

Term Offered: Spring, Fall

TSOC 8380 Methods of Normative Theory Construction

[3 credit hours]

The purpose of this course is to explore methods of and approaches to normative theory construction. The central goal of the course is to equip doctoral students in the field of educational theory and social foundations, among other students whose fields engage in normative theory, the understanding and skill necessary to engage in normative theory construction. Normative theory refers to systematic moral, political, social, and educational conceptions that rationally account for what ought to be (rather than empirical theory that accounts for what is). In the discipline of normative theorizing a number of methods of and approaches to theory construction have been developed as a means to the development and analysis of normative theory. There are two main approaches to theory construction in this field: deontological and teleological approaches.

Term Offered: Spring, Fall

TSOC 8390 Methods of Conceptual Analysis and Textual Interpretation

[3 credit hours]

The purpose of this research methods course is to explore prominent methods and approaches Central Analysis and Textual Interpretation. These methods and approaches constitute the research tools in the field of educational theory and social foundations, among other fields of inquiry. The central goal of the course is to equip doctoral students in field of educational theory and social foundations, among other students whose fields engage in theoretical research, the understanding and skill necessary to engage in theoretical research.

TSOC 8960 Dissertation Research In Foundations Of Education

[1-12 credit hours]

A formal, independent study culminating in a written discourse central to the advancement of knowledge in educational theory or social foundations.

Term Offered: Spring, Summer, Fall

TSOC 8990 Independent Study In Educational Theory And Social Foundations

[1-6 credit hours]

Directed study of a current topic in educational theory and social foundations. The student meets with the instructor at arranged intervals without formal classes.

Term Offered: Spring, Summer, Fall

Women and Gender Studies (WGST)

WGST 5860 Seminar in Feminist Theory

[3 credit hours]

This introduction to global feminist thought familiarizes students with feminist terminology and a variety of feminist theoretical frameworks.

Term Offered: Spring

WGST 5880 Queer and Sexuality Theories-WAC

[3 credit hours]

An overview of the complexities, contradictions, and conflicts in the rapidly shifting field sometimes known as Queer Studies. This course attempts to walk a line between the hyperabstraction of "classic theoretical" concepts/texts and their more "concrete" contextualized locations in communities and identities. This course focuses on the field that emerged from the g/l/b/t movement as it moved into the academy in the 1990's.

Term Offered: Spring

WGST 5900 Seminar in Women's Studies

[3 credit hours]

Seminar focused on timely topics in Women's Studies chosen by rotating faculty.

Term Offered: Spring

WGST 5980 Special Topics Gender

[3 credit hours]

A course on specialized topics in Women's and Gender Studies. Consult schedule of courses for topics to be studied and semester offered.

Term Offered: Spring, Summer, Fall

WGST 6240 Research and Methods in Women's and Gender Studies

[3 credit hours]

This course will present an overview of the ways in which women's/gender/feminist studies have informed and complicated traditional theories of research and methodologies. Students will examine and use various research methods and tools to prepare a final research project.

Term Offered: Fall

WGST 6250 Feminism and U.S. Film

[3 credit hours]

This course will focus on the representation of women in dominant U.S. cinema with a particular interest in the filmic responses created by independent women film makers. We will examine the celluloid construction of women and gender presented in classic Hollywood Cinema using the tools of feminist analysis and discourse. We will be particularly concerned with the ways in which gender, race, class and sexuality shape the cinematic representations of women.

Term Offered: Fall

WGST 6260 Women, Gender & Disability

[3 credit hours]

This course will be an interdisciplinary exploration of the intersections of gender and disability and the significance of these categories of analysis as they are understood and experienced by American women with and without disabilities.

Term Offered: Spring

WGST 6980 Directed Readings in Women's and Gender Studies

[1-4 credit hours]

Supervised independent reading and research on selected topics. Student meets individually with instructor to develop a detailed written proposal. The course provides students with the opportunity to read independently on a topic related to gender studies under the direction of a WGST faculty member.

Term Offered: Spring, Summer, Fall

WGST 6990 Independent Project in WGST

[1-4 credit hours]

Supervised independent project. Students work with a faculty member to design a semester long project that utilizes the knowledge and skills gained through the certificate program. The course provides students with the opportunity to develop an individual project related to gender studies under the close supervision of a WGST faculty member.

Term Offered: Spring, Fall

Medical Physics Programs	268	MSE in Biology	329
Medicinal-Biological Chemistry (MBC)	727	MSE in Chemistry	308
Medicine (MEDI)	729	MSE in Mathematics	312
Microbiology (MICB)	729	MSE in Physics	314
Minimum Enrollment	574	MSPS in Health Outcomes & Socioeconomic Sciences	373
MS Applied Biomechanics, Exercise Physiology, Athletic Training	193	MSPS in Industrial Pharmacy	374
MS in Biology	305	MSW in Social Work	172
MS in Chemistry	307	Music Education (MED)	731
MS in Exercise Science	193	Music (MUS)	729
MS in Geology	309	N	
MS in Geology	309	Neuroscience (NERS)	732
MS in Mathematics	311	Neurosciences and Neurological Disorders (NNDP)	731
MS in Medicinal Chemistry	371	Nursing (NURS)	733
MS in Nursing Adult Gerontology Acute Care Nurse Practitioner	358	O	
MS in Nursing: Adult Gerontology Primary Care Nurse Practitioner	359	Occupational Therapy Doctorate	155
MS in Nursing: Family Nurse Practitioner	360	Occupational Therapy Doctorate/PhD in Exercise Science	149
MS in Nursing: Nurse Educator	361	Occupational Therapy Doctorate/PhD in Health Education	149
MS in Nursing: Pediatric Primary Care Nurse Practitioner	361	Occupational Therapy (OCCT)	741
MS in Nursing: Psychiatric Mental Health Nurse Practitioner	361	Operations & Supply Chain Management (OSCM)	744
MS in Occupational Health	146	Orthopedics (ORTH)	745

Other Policies and Information 577

P

Pathology (PATH) 747

Ph.D in Biomedical Science - Cancer Biology 249

Ph.D in Biomedical Science - Cancer Biology 249

Ph.D in Biomedical Science - Medical Microbiology & Immunology 254

Ph.D in Biomedical Science - Medical Microbiology & Immunology 254

Ph.D in Biomedical Science - Molecular Medicine 252

Ph.D in Biomedical Science - Molecular Medicine 252

Ph.D in Biomedical Science - Neuroscience & Neurological Disorders Track 255

Ph.D in Engineering (Industrial Engineering) 99

Ph.D. in Biomedical Engineering 83

Ph.D. in Engineering (Bioengineering) 82

Ph.D. in Engineering (Chemical Engineering) 87

Ph.D. in Engineering (Civil Engineering) 89

Ph.D. in Engineering (Computer Science & Engineering) 98

Ph.D. in Engineering (Electrical Engineering) 95

Ph.D. in Engineering (Mechanical Engineering) 102

Ph.D. in Manufacturing and Technology Management 400

Ph.D. in Manufacturing and Technology Management 400

Ph.D. in Spatially Integrated Social Science 78

Ph.D. in Spatially Integrated Social Science 79

Pharm D./M.B.A. Dual Degree 437

Pharmacology (PHCL) (PHCL) 748

Pharmacy (PHM) 751

Pharmacy Practice (PHPR) 751

PharmD/M.A. of Business Administration 437

Pharmacology HSC (PHRM) 758

PhD in Biology 306

PhD in Biology (Ecology Track) 310

PhD in Biology (Ecology Track) 310

PhD in Chemistry 308

PhD in Counselor Education 167

PhD in Counselor Education 167

PhD in Curriculum and Instruction 471

PhD in Exercise Science 152

PhD in Experimental Therapeutics 368

PhD in Foundations of Education 479

PhD in Foundations of Education 479

PhD in Health Education 148

PhD in Health Education 148

PhD in Higher Education 488

PhD in Higher Education 488

PhD in History 31

PhD in Mathematics 312

PhD in Medicinal Chemistry 370

PhD in Physics 314

PhD in Psychology 51

Philosophy (PHIL) 758

Physical Therapy (PHYT) 759

Physician Assistant (PHYA) 763

Physics (PHYS) 766

Physiology (PHSL) 771

Plan of Study 573

Political Science (PSC) 771

Professional Programs 439

Programs Offered 247

PSM in Photovoltaics 315

Psychology (PSY) 773

Public Health and Occupational Health (PUBH) 780

R

Recreation and Rec Therapy (RCRT) 786

Religion (REL) 788

Requirements 247

Research and Measurement (RESM) 788

Residence Requirements for the Ph.D. and Ed.D. Degrees 576

Responsibilities of Graduate Students 572

S

Sample Master's Areas of Concentration 246

School of Exercise and Rehabilitation Sciences 177

School of Intervention and Wellness 195

School of Population Health 220

School of Social Justice 241

School Psychology (SPSY) 792

Schools 177

Social Work (SOCW) 795

Sociology (SOC) 798

Spanish (SPAN) 800

Spatially Integrated Social Sciences (SISS) 801

Spatially Integrated Social Science (SISS) 78

Special Education (SPED) 802

Speech Language Pathology (SLP) 808

State Authorization and Professional Licensure Information 367

Surgery (SURG) 812

T

The College of Graduate Studies 571

Theory and Social Foundations (TSOC) 815

Time Limitations for Degrees 576

Transfer of Credits 575

W

Women and Gender Studies (WGST) 819
