

TABLE OF CONTENTS

Graduate Catalog 2021-2022	9	Department of English Language and Literature	19
College of Arts and Letters	9	Certificate in the Teaching of Writing	13
Graduate Degrees/Certificates Offered	9	M.A. and Ed. in Literature	23
M.A. in English	20	M.A. in English with a focus in Literature	23
M.A. with a Major in French	9	M.A. in English with a Concentration in Writing Studies	23
M.A. with a Major in Spanish	10	Department of Geography and Planning	24
M.A. with a Major in German	11	Certificate in GIS and Applied Geography	26
M.A. and Ph.D. in History	28	Certificate in Urban and Regional Planning	14
M.A. in Philosophy	35	M.A. and Ed. in Geography and Planning	27
M.A. in Art Education	14	M.A. in Geography	27
M.A. in Music	32	Department of History	28
M.A. in Liberal Studies	76	M.A. and Ed. in History	31
M.A. in Economics	16	M.A. in History	31
M.A. in Geography and Planning	24	PhD in History	31
M.A. in Political Science, Public Administration	37	Department of Music	32
M.A. and Ph.D. in Psychology	43	Master of Music in Music Education	33
M.A. in Sociology	66	Master of Music in Performance	33
Ph.D. in Spatially Integrated Social Science	78	Department of Philosophy and Religious Studies	35
Applied Social Research Certificate	11	M.A. in Philosophy	36
Certificate in Data Analytics in Economics	12	Department of Political Science and Public Administration	36
Certificate Disability Studies	12	Graduate Certificate in Health Care Policy and Administration	39
Certificate in Management of Non-Profit Organizations	12	Certificate in Management of Non-Profit Organizations	12
Certificate in Municipal Administration	13	Certificate in Municipal Administration	13
Certificate in the Teaching of Writing	13	Joint J.D./M.P.A. Degree	40
Certificate in Urban and Regional Planning	14	Master of Public Administration	41
Certificate in Women's and Gender Studies	75	Department of Psychology	43
College Policies (Graduate Handbook)	14	M.A. in Psychology	50
Departments	14	PhD in Psychology	51
Department of Art	14	Department of Sociology and Anthropology	66
M.Ed. in Art Education	15	M.A. and Ed. in Sociology	69
Department of Communication	15	M.A. in Sociology	69
Certificate in Communication Studies	16	Department of World Languages and Cultures	70
Department of Economics	16	M.A. with a Major in French	9
M.A. in Economics	18	M.A. with a Major in Spanish	10
M.A. in Economics and Education	19	Department of Women's and Gender Studies	75
M.A. in Economics with an Applied Econometrics Specialization	19	Certificate Program in Women's and Gender Studies	75

Master of Liberal Studies	76	Department of Civil and Environmental Engineering	117
Master of Liberal Studies Program	77	Department of Electrical Engineering and Computer Science	121
Spatially Integrated Social Science (SISS)	78	Department of Mechanical, Industrial, and Manufacturing Engineering	128
Ph.D. in Spatially Integrated Social Science	79	College of Health and Human Services	136
College of Engineering	81	Graduate Degrees/Certificates Offered	136
Graduate Degrees/Certificates Offered	81	Master of Public Health: Environmental and Occupational Health	137
M.S. in Bioengineering	81	Master of Public Health: Generalist	139
Ph.D. in Engineering (Bioengineering)	82	Master of Public Health: Health Promotion and Education	141
Ph.D. in Biomedical Engineering	83	Master of Public Health: Public Health Epidemiology	144
M.S. in Chemical Engineering	85	MS in Occupational Health	146
Ph.D. in Engineering (Chemical Engineering)	87	PhD in Health Education	148
M.S. in Civil Engineering	88	Doctor of Physical Therapy/PhD Exercise Science	191
Ph.D. in Engineering (Civil Engineering)	89	Occupational Therapy Doctorate/PhD in Exercise Science	149
Master of Cyber Security	90	Occupational Therapy Doctorate/PhD in Health Education	149
M.S. in Cyber Security	91	MS Applied Biomechanics, Exercise Physiology, Athletic Training	193
M.S. in Electrical Engineering	93	MA in Recreation and Leisure Studies	150
Ph.D. in Engineering (Electrical Engineering)	95	PhD in Exercise Science	152
M.S. in Engineering (Computer Science & Engineering)	96	Doctor of Physical Therapy Program	153
Ph.D. in Engineering (Computer Science & Engineering)	98	Occupational Therapy Doctorate	155
M.S. in Industrial Engineering	99	MA in Speech Language Pathology	158
Ph.D. in Engineering (Industrial Engineering)	99	MA in Counselor Education	160
M.S. in Mechanical Engineering	100	PhD in Counselor Education	167
Ph.D. in Engineering (Mechanical Engineering)	102	EdS in School Psychology	169
M.S. in Engineering (Energy Engineering - online)	103	MA in Criminal Justice	171
M.S. in Engineering (General Engineering-online)	105	Joint M.A. in Criminal Justice/Juris Doctor	171
J.D./M.S. Dual Degree Program	107	MSW in Social Work	172
Graduate Certificate in Cyber Security	108	Certificate in Advanced Intervention for Listening and Spoken Language	173
Graduate Certificate in Manufacturing	108	Certificate in Biostatistics and Epidemiology	173
Graduate Certificate in Materials Science & Engineering	108	Certificate in Contemporary Gerontological Practice	174
Graduate Certificate in Mechatronics	109	Certificate in Disaster Preparedness and Response	175
College Policies (Graduate Handbook)	109	Certificate in Epidemiology	175
Admission	110	Certificate in Occupational Health	175
Master of Science Programs	110	Certificate in Public Health and Emergency Response	176
Doctoral Degree Program	111	College Policies (Graduate Handbook)	177
Departments	112		
Department of Bioengineering	112		
Department of Chemical Engineering	114		

Schools	177	College of Medicine & Life Sciences	248
School of Exercise and Rehabilitation Sciences	177	Graduate Degrees/Certificates Offered	248
Doctor in Physical Therapy/PhD in Exercise Science	191	Ph.D in Biomedical Science - Cancer Biology	249
Masters of Athletic Training	191	Ph.D in Biomedical Science - Molecular Medicine	252
MS in Exercise Science	193	Ph.D in Biomedical Science - Medical Microbiology & Immunology	254
School of Intervention and Wellness	195	Ph.D in Biomedical Science - Neuroscience & Neurological Disorders Track	255
Certificate in Advanced Intervention for Listening and Spoken Language	173	Bioinformatics, PhD	258
EdS in School Psychology	169	MSBS Assistant in Pathology	260
MA in Counselor Education	160	MSBS in Bioinformatics and Proteomics-Genomics	261
MA in School Psychology	214	MSBS Biomarkers and Diagnostics (PSM)	263
MA in Speech Language Pathology	158	MSBS in Cancer Biology	263
PhD in Counselor Education	167	MSBS in Clinical Research	265
School of Population Health	220	MSBS in Molecular Medicine	265
Certificate in Biostatistics and Epidemiology	173	MSBS in Medical Microbiology & Immunology	266
Certificate in Contemporary Gerontological Practice	174	Biomedical Science: Transplantation and Donation Sciences	267
Certificate in Disaster Preparedness and Response	175	Medical Physics Programs	268
Certificate in Epidemiology	175	MSBS in Medical Science	270
Certificate in Occupational Health	175	MSBS in Oral Biology	271
Certificate in Public Health and Emergency Response	176	MSBS in Orthopedic Sciences	271
Master of Public Health: Environmental and Occupational Health	137	MSBS in Physician Assistant Studies	272
Master of Public Health: Generalist	139	Certificate in Bioinformatics and Biomarkers	279
Master of Public Health: Health Promotion and Education	141	Certificate in Pathology Fellowship	280
Master of Public Health: Public Health Epidemiology	144	College Policies (Graduate Handbook)	281
MS in Occupational Health	146	Graduate Programs	281
PhD in Health Education	148	Departments/Divisions	281
School of Social Justice	241	Department of Cancer Biology	281
College of Law	246	Ph.D in Biomedical Science - Cancer Biology	249
Graduate Degrees/Certificates Offered	246	Department of Family Medicine	285
Sample Master's Areas of Concentration	246	Department of Medical Microbiology & Immunology	286
College Policies (Graduate Handbook)	246	MSBS in Medical Microbiology & Immunology	266
Application	246	Ph.D in Biomedical Science - Medical Microbiology & Immunology	254
Grading	246	Department of Neurosciences	290
Programs Offered	247	Department of Orthopedic Surgery	291
Requirements	247	Department of Pathology	292
		Department of Physiology & Pharmacology	294
		MSBS in Molecular Medicine	265

Ph.D in Biomedical Science - Molecular Medicine	252	Doctor of Nursing Practice: (Post-Baccalaureate to DNP)	347
Department of Radiology and Department of Radiation Oncology	299	Doctor of Nursing Practice: (Post-Master's to DNP)	353
Department of Urology	303	DNP Adult Gerontology Acute Care Nurse Practitioner Track	358
Division of Dentistry	303	MS in Nursing Adult Gerontology Acute Care Nurse Practitioner	358
College of Natural Sciences and Mathematics	305	MS in Nursing: Adult Gerontology Primary Care Nurse Practitioner	359
Graduate Degrees/Certificates Offered	305	MS in Nursing: Family Nurse Practitioner	360
MS in Biology	305	MS in Nursing: Nurse Educator	361
MSE in Biology	306	MS in Nursing: Pediatric Primary Care Nurse Practitioner	361
PhD in Biology	306	MS in Nursing: Psychiatric Mental Health Nurse Practitioner	361
MS in Chemistry	307	Graduate Entry Master of Science in Nursing	362
MSE in Chemistry	308	Graduate Certificate: Adult Gerontology Acute Care Nurse Practitioner Program	363
PhD in Chemistry	308	Graduate Certificate: Adult Gerontology Primary Care Nurse Practitioner	363
MS in Geology	309	Graduate Certificate: Family Nurse Practitioner	364
MSE Geology	309	Graduate Certificate: Pediatric Primary Care Nurse Practitioner	364
PhD in Biology (Ecology Track)	310	College Policies	365
Master of Science in Biology (Ecology Track)	310	Administration of Programs	365
MA in Mathematics	311	Admission Requirements	365
MAE in Mathematics	311	Admission to Graduate Programs	367
MS in Mathematics	311	Advising	367
MSE in Mathematics	312	State Authorization and Professional Licensure Information	367
PhD in Mathematics	312	College of Pharmacy & Pharmaceutical Sciences	368
MS in Physics	313	Degrees/Certificates Offered	368
MSE in Physics	314	PhD in Experimental Therapeutics	368
PhD in Physics	314	PhD in Medicinal Chemistry	370
PSM in Photovoltaics	315	MS in Medicinal Chemistry	371
College Policies (Graduate Handbook)	315	Master of Science in Pharmaceutical Sciences	375
Departments	315	MSPS in Health Outcomes & Socioeconomic Sciences	373
Department of Biological Sciences	315	MSPS in Industrial Pharmacy	374
Department of Chemistry and Biochemistry	318	M.S. in Pharmacology and Toxicology	375
Department of Environmental Sciences	324	Combined Pharm.D. – Ph.D. in Medicinal Chemistry Program	376
MS in Geology	309	BS in Pharmaceutical Sciences and MS in Medicinal Chemistry	372

M.A. with a Major in French

Students must complete a minimum of 30 semester credit hours for the master of arts and a minimum of 30 semester credit hours for the master of arts and education.

For the degree of master of arts or master of arts and education with a major in French, students must meet the following departmental requirements:

- present an undergraduate major in the language of interest from an accredited college or university;
- satisfactorily complete at least 18 hours of graduate credit in the major language (including courses FREN 5010 and FREN 5020);
- satisfactorily complete an additional 12 hours in the major language or in approved, cognate courses;
- pass a comprehensive examination; and
- demonstrate a reading proficiency in a foreign language other than the major. This may be done either by earning a passing grade in a foreign language course at or above the 3000 level, by passing an examination administered by the Department of Foreign Languages, or by successfully completing a graduate reading course offered by the department.

A thesis may be presented for an additional six hours of credit in lieu of the comprehensive examination.

1. Speaking objectives. French MA students are able to handle a variety of communicative tasks, including those required in university classes which are taught entirely in the target language. French masters students are able to converse in French about academic, professional, and social topics in a formal setting as well as in informal context. They can express and defend their opinions in the target language; they can discuss abstract topics and articulate hypotheses. They can narrate and describe in all major time frames (past, present and future) in paragraph length discourse. They can handle appropriately the linguistic challenges presented by a complication or unexpected turn of events that occurs within the context of a routine situation or communicative task with which they are otherwise familiar. They contribute to the conversation with sufficient accuracy, clarity, and precision to convey their intended message without misrepresentation or confusion, and it can be understood by native speakers unaccustomed to dealing with non-natives.

2. Writing objectives. French masters students are able to write extensive factual and analytical texts on a variety of topics for academic, professional or personal purposes. They demonstrate the ability to narrate and describe in major time frames and demonstrate a high degree of control of tense aspect. They are able to combine and link sentences into texts of paragraph length and structure. They demonstrate an ability to incorporate cohesive transitional devices. Subordination in the expression of ideas is present, structurally coherent and regularly correct. Their writing is understood by natives not used to the writing of non-natives although some additional effort may be required in the reading of the text.

3. Grammar objectives. Masters students in French demonstrate mastery of sophisticated and subtle grammatical topics. Students are able to communicate clearly and correctly in the target language. Clear communication is based on the accurate use and understanding of correct forms and structures. Students are able to identify forms and structures that they have mastered.

4. Literature Objectives. Masters students in French demonstrate a broad reading knowledge of literary periods, genres and styles. They give evidence of intensive critical reading skills or literary analysis of a given text. They also give evidence of comprehension of basic literary theories.

a) Literary history. Students are able to situate literary texts into their literary, political and social-historical contexts and to classify literary texts according to historical genres (essay, novel, lyric poetry, drama etc.) and style periods (Renaissance, Classicism, Romanticism, etc.). They are able to indicate which texts do not easily fit into given generic or stylistic categories and why. Masters students are able to use the library as well as electronic sources to gain access to relevant materials in and about literature in the target language.

b) Critical reading. Students are able to respond coherently and react critically to texts they have read, formulate relevant questions and problems, and show how these concerns may be clarified. They are able to identify, understand, and analyze the texts they have read.

5. Culture Objectives. Masters students in French demonstrate advanced knowledge of cultural differences among selected francophone cultures as manifested in literature and film. Students can identify a number of texts, artifacts, monuments, terms, names, places, concepts, behavior, dates, and other cultural facts from periods of the target culture's history, geography, and institutions. They can establish these concepts within relevant contexts and explain in the target language their meaning or

importance. Students can use the library and electronic sources to gain access to relevant materials on the target civilization.

M.A. with a Major in Spanish

Students must complete a minimum of 30 semester credit hours for the master of arts and a minimum of 30 semester credit hours for the master of arts and education.

For the degree of master of arts or master of arts and education with a major in Spanish, students must meet the following departmental requirements:

- present an undergraduate major in the language of interest from an accredited college or university;
- satisfactorily complete at least 18 hours of graduate credit in the major language, including SPAN 5110
- satisfactorily complete an additional 12 hours in the major language or in approved, cognate courses;
- pass a comprehensive examination; and
- demonstrate a reading proficiency in a foreign language other than the major. This may be done either by earning a passing grade in a foreign language course at or above the 3000 level, by passing an examination administered by the Department of Foreign Languages, or by successfully completing a graduate reading course offered by the department.

A thesis may be presented for an additional six hours of credit in lieu of the comprehensive examination.

1. Speaking objectives. Spanish MA students are able to handle a variety of communicative tasks, including those required in university classes which are taught entirely in the target language. They should be able to handle with ease and confidence a large number of communicative tasks, and to demonstrate the ability to narrate and describe in all major time frames (past, present and future) in paragraph length discourse. They can handle appropriately the linguistic challenges presented by a complication or unexpected turn of events that occurs within the context of a routine situation or communicative task with which they are otherwise familiar. They contribute to the conversation with sufficient accuracy, clarity, and precision to convey their intended message without misrepresentation or confusion, and it can be understood by native speakers unaccustomed to dealing with non-natives. They are able to participate in most informal and some formal conversations on topics related to school, home, and leisure activities. They can also speak about some topics related to employment, current events, and matters of public and community interest.

2. Writing objectives. Students are able to meet basic work and/or academic writing needs, produce routine social correspondence, write about familiar topics by means of narratives and descriptions of a factual nature, and write summaries. They demonstrate the ability to narrate and describe in major time frames with some control of aspect. They are able to combine and link sentences into texts of paragraph length and structure. They demonstrate an ability to incorporate some cohesive devices. Subordination in the expression of ideas is present and structurally coherent. They demonstrate sustained control of simple target-language sentence structures and partial control of more complex structures. Their writing is understood by natives not used to the writing of non-natives although some additional effort may be required in the reading of the text.

3. Grammar objectives. Students are able to communicate clearly and correctly in the target language. Clear communication is based on the accurate use and understanding of correct forms and structures. Students are able to identify forms and structures that they have mastered and to specifically and thoroughly apply them within the contexts.

4. Literature Objectives. Students should be familiar with a range of texts written by various authors from different historical periods and several Hispanic areas and be able both to place them in relevant contexts and to discuss them in the target language using critical concepts derived from philosophical, stylistic, aesthetic and hermeneutical approaches, among others. The literary knowledge objective has two components: knowledge of literary history and critical reading skills.

a) Literary history. Students are able to situate literary texts into their literary, political and social-historical contexts and to classify literary texts according to historical genres (essay, novel, lyric poetry, drama etc.) and style periods (Renaissance, Classicism, Romanticism, etc.). They should also be able to indicate which texts do not easily fit into given generic or stylistic categories and why, as well as to value their current relevance and the ongoing contributions to the tradition to which they belong. Majors should be able to use the library as well as electronic sources to gain access to relevant materials in and about literature in the target language.

b) Critical reading. Students can identify the underlying message and some supporting details across major time frames in descriptive informational texts. They can demonstrate their understanding of conventional narrative and descriptive texts, such as expanded descriptions of persons, places, and things and narrations about past, present, and future events. They can demonstrate an understanding of the main ideas, and some supporting details. They may derive some meaning from texts that are structurally and/or conceptually more complex. They are able to respond coherently and react critically to texts they have read, formulate relevant questions and problems, and show how these concerns may be clarified. They are able to identify, understand, and analyze the texts they have read.

5. Linguistic objectives. Students not only learn the correct usage of the target language but also its structure, history, and varieties (dialectal, sociolectal, etc.). Students gain knowledge of the main branches of linguistics as they apply to Spanish (phonetics, phonology, morphology, syntax, semantics, and pragmatics) and apply this knowledge to their own use of the target language through the study of stylistics.

6. Culture Objectives. Students can explain how a variety of products of public and personal interest are related to perspectives in their own culture and Hispanic culture. They can also explain how a variety of practices within familiar and social situations are related to perspectives. They can identify a number of texts, songs, films, plays, documentaries, social network and social media contents, artifacts, monuments, terms, names, places, concepts, behavior, dates, and other cultural facts from periods of the target culture's history, geography, and institutions. They can establish these concepts within relevant contexts and explain in the target language critically, factually and objectively their meaning or importance. Students can demonstrate awareness of subtle differences among cultural behaviors and adjust their behavior accordingly in familiar and some unfamiliar situations. They can converse comfortably with others from Spanish-speaking countries in familiar and some unfamiliar situations and show some understanding of cultural differences. Students can use the library and electronic sources to gain access to relevant materials on the target civilization.

M.A. with a Major in German

Students must complete a minimum of 30 semester credit hours for the master of arts and a minimum of 30 semester credit hours for the master of arts and education.

For the degree of master of arts or master of arts and education with a major in German, students must meet the following departmental requirements:

- present an undergraduate major in the language of interest from an accredited college or university;
- satisfactorily complete at least 18 hours of graduate credit in the major language (including courses GERM 5010 and GERM 5020);
- satisfactorily complete an additional 12 hours in the major language or in approved, cognate courses;
- pass a comprehensive examination; and
- demonstrate a reading proficiency in a foreign language other than the major. This may be done either by earning a passing grade in a foreign language course at or above the 3000 level, by passing an examination administered by the Department of Foreign Languages, or by successfully completing a graduate reading course offered by the department.

A thesis may be presented for an additional six hours of credit in lieu of the comprehensive examination.

Applied Social Research Certificate

The Applied Social Research Certificate is an interdisciplinary, 15-hour program of study administered by the Department of Sociology and Anthropology. It is designed to provide students with the opportunity to acquire practical and communicative research tools.

Students must complete SOC 6270 (Advanced Social Research Methods), SOC 6290 (Advanced Social Research Statistics), and at least nine hours of electives.

To be accepted into the certificate program, students must have earned at least nine hours of graduate credit and a graduate GPA of 3.0 or higher. Those who have not earned at least nine hours of graduate credit are required to have a baccalaureate degree. Applicants with an undergraduate GPA of less than 3.0 must submit GRE scores.

Students should consult with the graduate director for additional information about program requirements and options.

Code	Title	Hours
SOC 6270	Advanced Social Research Methods	3
SOC 6290	Advanced Social Research Statistics	3
<i>Electives</i>		9
SOC 5100	Community Organizing And Development	
SOC 5450	Exploring the City	
SOC 5830	Social Movements	
SOC 5840	Globalization	
SOC 6280	Applied Social Research Methods	
SOC 5530	Qualitative Approaches in Social Science Research	
SOC 5440	Methods Of Population Analysis	

ANTH 5300	Cultural Resource Management
BUAD 6400	Results-Based Management
PSC 5590	Law, Policy And The Politics of Sexuality
GEPL 5110	Geographic Information Systems
GEPL 5420	Quantitative methods in geographic research
SOC 5560	Fieldwork in Sociology

Total Hours**15**

Certificate in Data Analytics in Economics

The data analytics in economics MA certificate will provide any graduate student the foundational social science data analysis skills employers desire. Methods covered will include causal inference and forecasting, as well as complementary programming skills to collect, prepare, and analyze data sets. To learn more please speak with Dr. Oleg Smirnov, graduate director, department of economics.

The department of economics currently teaches two sequenced graduate data analysis courses every year, one in the fall semester, ECON 5810: Econometrics Models and Methods I (4 credits) and one in the spring semester, ECON 5820: Econometrics Models and Methods II (4 credits). These courses are foundational for understanding causal inference for applied data analysis. Once the students have these two courses to build their data analysis toolbox, they apply the toolbox to a graduate economics course, or any graduate course, that requires an empirical component. If the course is 3 credits, then the student must register for a one hour independent study with the course instructor to demonstrate their applied data analysis skills in the course. Otherwise, the course is a 4 credit course with the data analysis component as imbedded in the course. Lastly, for a graduate student to complete the Data Analytics in Economics graduate certificate they must complete a Master's paper or Master's thesis (in economics or other) further demonstrating their data analysis application skills.

"Data Analytics in Economics" graduate certificate. The proposed certificate requires the student to complete three courses and an applied data analysis Master's paper.

Code	Title	Hours
ECON 5810	Econometrics Models And Methods I	4
ECON 5820	Econometrics Models And Methods II	4
ECON 5000 level elective course that includes a required data analysis component (4 credits) or suitable substitution of one of the above courses with permission of the economics graduate director.		4
Completed Master's paper (or Master's thesis) that includes a required data analysis component (minimum of a zero credit course with assigned research advisor).		

1. Formalize a research question that can be studied with empirical data,
2. collect and prepare data for analysis,
3. choose and apply the appropriate empirical method for the data and research question of interest,
4. explain and communicate the empirical results in writing and verbally.

Certificate Disability Studies

As many as one in five people can be considered disabled, making knowledge about disability issues beneficial for all professions. This certificate enhances understanding of disability as a unique identity, history and culture. It is 100% online, and is ideal for working professionals and graduate students seeking advancement in a wide range of areas related to Disability Studies.

Code	Title	Hours
DST 6000	Disability Studies in Theory and Practice	3
DST 6200	Representations of Disability and the Rise of Disability Culture	3
DST 6400	Disability History and Rights	3
DST 6600	Disability Ethics and Policy	3
Total Hours		12

Certificate in Management of Non-Profit Organizations

This program is intended both for professionals already working or volunteering in the nonprofit sector, and for students without professional experience who seek to prepare themselves for nonprofit careers.

The fundamental organizational and management principles provided by this program can be used by leaders in the nonprofit sector to strengthen both their systems and service delivery. The Certificate will prepare students to lead and administer nonprofit organizations as paid staff, directors, board members, philanthropists or volunteers in human-service, cultural, educational, religious and community organizations. In addition, students in the MPA and other graduate programs can use their elective hours to earn this certificate.

The nonprofit management certificate consists of 12 graduate credit hours of which 6 hours are from required courses:

Code	Title	Hours
PSC 5410	Public and Nonprofit Management	3
PSC 5480	Introduction to Nonprofits	3

Select 2 of the following:

PSC 5220	Advocacy Groups in US Politics
PSC 5380	Fundraising
PSC 5430	Human Resources Management in Public and Nonprofit Organizations
MKTG 5170	Marketing For Non-Profit Organizations
THR 5250	Administration and Management of the Arts
THR 5260	Promoting the Visual and Performing Arts
Other related course approved by the MPA director	

Currently enrolled MPA students may not apply their required courses (PSC 5430 and PSC 5440) toward this certificate.

First Term		Hours
PSC 5480	Introduction to Nonprofits	3
PSC 5430	Human Resources Management in Public and Nonprofit Organizations	3
Hours		6
Second Term		
PSC 5380	Fundraising	3
PSC 5410	Public and Nonprofit Management	3
Hours		6
Total Hours		12

1. Identify and describe best practices in the management of nonprofit organizations.
2. Identify and describe challenges and opportunities facing nonprofit organizations in the 21st century.
3. Identify, define, and demonstrate skills necessary for effectively managing nonprofit organizations.

Certificate in Municipal Administration

The primary purpose of this certification is to strengthen the professional management skills of personnel in responsible local government administrative positions. These include supervisors, department heads, administrative assistants and others who need more management training to enhance their career prospects. Students in the M.P.A. program may also use their electives to receive this certificate. In addition, this certificate program is appropriate for graduate students in geography and planning and civil engineering who wish to improve their knowledge of administration.

Municipal Administration Certificate (12 hours of which 6 hours are from required courses)

- PSC 5320 Urban Politics and Administration (3 hours, *required*)
- PSC 5360 Ethics in Public Administration (3 hours)
- PSC 5410 Public and Nonprofit Management (3 hours, *required*)
- PSC 5430 Human Resources Management in Public and Nonprofit Organizations (3 hours)
- PSC 5440 Budgeting and Financial Administration (3 hours)
- PSC 6420 Program Evaluation (3 hours)
- PSC 6430 Public Policy Process (3 hours)
- GEPL 5110 Geographic Information Systems (3 hours)
- GEPL 5180 Geographic Information Systems Applications (3 hours)
- GEPL 5210 Land Use Planning (3 hours)
- GEPL 5530 Principles of Urban Planning (3 hours)
- GEPL 5750 Transportation Geography (3 hours)
- Other related graduate electives approved by the MPA director

Currently enrolled MPA students may not apply their required courses (PSC 5430, PSC 5440 and PSC 6430) toward this certificate.

The primary purpose of this certification is to strengthen the professional management skills of personnel in responsible local government

administrative positions. These include supervisors, department heads, administrative assistants and others who need more management training to enhance their career prospects. Students in the M.P.A. program may also use their electives to receive this certificate. In addition, this certificate program is appropriate for graduate students in geography and planning and civil engineering who wish to improve their knowledge of administration.

Municipal Administration Certificate (12 hours of which 6 hours are from required courses)

- GEPL 5180 Geographic Information Systems Applications (3 hours)
- GEPL 5210 Land Use Planning (3 hours)
- GEPL 5530 Principles of Urban Planning (3 hours)
- GEPL 5750 Transportation Geography (3 hours)
- Other related graduate electives approved by the MPA director

Currently enrolled MPA students may not apply their required courses (PSC 5430, PSC 5440 and PSC 6430) toward this certificate.

First Term		Hours
GEPL 5110	Geographic Information Systems	3
PSC 5320	Urban Policy & Administration	3
Hours		6
Second Term		
PSC 5440	Budgeting And Financial Administration	3
PSC 5410	Public and Nonprofit Management	3
Hours		6
Total Hours		12

1. Identify and describe best practices in municipal government.
2. Identify and describe challenges and opportunities facing local governments in the 21st century.
3. Identify, define, and demonstrate skills necessary for effectively managing municipal governments.

Certificate in the Teaching of Writing Application

Those applying for both the M.A. in English and the certificate in the teaching of writing program should submit application materials for each to the College of Graduate Studies.

Those applying to work on the certificate alone must hold an undergraduate degree in English and submit an application form, a letter

of interest, all college and graduate school transcripts, and two letters of recommendation to the College of Graduate Studies.

A certificate in the teaching of writing can be earned as part of the master's degree in English (either literature or Writing Studies concentration). The certificate also can be earned separately from the degree.

The certificate is designed to offer continuing education for regional high school teachers of English and composition; to offer specialized education in composition to those earning master's degrees who wish to pursue work as teachers of writing at regional community colleges and area universities; and to provide graduate students with the opportunity to earn job credentials in composition, as well as in literature.

Fifteen hours of course work are required for completion of the certificate:

Code	Title	Hours
Theory		
ENGL 5780	Contemporary Literary Theories And Criticism	3
ENGL 5090	Current Writing Theory	3
Praxis		
ENGL 6010	Seminar In English Instruction: Composition ¹	3
Methods		
ENGL 6180	Methods In Composition Research, Course Design And Assessment	3
Research		
ENGL 6890	Certificate Capstone	3
Total Hours		15

¹ This course assumes experience in teaching. Those not presently teaching will be asked to work with a teacher to gain that experience.

Those students working on the master's degree also must fulfill all requirements of that degree.

No transfer of credits from other institutions will be allowed, although those students who complete ENGL 4090 while undergraduates at The University of Toledo will not be required to take ENGL 5090 if they received a grade of B or higher.

Certificate in Urban and Regional Planning

Code	Title	Hours
GEPL 5530	Principles Of Urban Planning	3
GEPL 5700	Community Planning Workshop	3

Choose 6 hrs from the following:

PSC 5320	Urban Policy & Administration
PSC 6430	Public Policy Process
GEPL 5110	Geographic Information Systems
GEPL 5180	Geographic Information Systems Applications
GEPL 5210	Land Use Planning
GEPL 5710	Urban Environments

GEPL 5750	Transportation Geography
GEPL 6530	Seminar-Urban/Regional Planning Applications
GEPL 6550	Seminar In Environment Planning
Total Hours	6

1. Gain a broad understanding of the discipline and practice of urban and regional planning
2. Understand important approaches and tools underlying urban and regional planning
3. Apply planning ideas and tools to real-world cases
4. Demonstrate skills necessary to be an effective urban planning professional

Degrees Offered

- M.Ed. in Art Education (p. 15)

AED 5000 Research In Art Education

[4 credit hours]

This course will provide an overview of empirical and historical research structures, application of research to classroom activities and development of research for publication.

Term Offered: Spring, Fall

AED 5140 Art Education For The Special Child

[3 credit hours]

This course introduces and surveys a wide variety of art strategies and instructional adaptations for use with the child with physical, emotional or mental differences.

Term Offered: Spring, Fall

AED 5150 Setting The Stage For Early Childhood Learning: Inspirations From Reggio Emilia

[3 credit hours]

This course will explore Reggio's philosophy of early childhood education and the numerous ways that children explore the "hundred languages." Reggio uses these languages (art, clay, wire, sculpture, light, shadow, etc.) as a way to help children represent their world and what they know about it.

AED 5200 Computer Graphics In Art Education

[3 credit hours]

This course examines the tools, technology and instructional application of computer graphics education settings. The course is appropriate for art educators as well as others interested in using graphics and the microcomputer.

Term Offered: Spring

AED 5220 Issues In Therapeutic Art

[3 credit hours]

The study of art processes that provide physical, emotional and intellectual development. Topics covered include art history, art appreciation, aesthetics, making art and art materials.

Term Offered: Fall

AED 5240 Adaptive Methods In Art Education For Special Populations

[3 credit hours]

This course is designed to provide understanding of how art experiences relate to special populations. Students will research and develop strategies and instructional adaptations for use with special populations in a therapeutic or rehabilitative setting.

Prerequisites: AED 5200 with a minimum grade of D-

AED 5300 Media And Methods In Therapeutic Art

[3 credit hours]

An investigation into group and individual processes as they relate to art media and methods in therapeutic art will be presented. Experiences in art media will be explored.

Prerequisites: AED 5220 with a minimum grade of D-

Term Offered: Spring

AED 5320 The Art Museum And The Art/Humanities Educator

[3 credit hours]

This course will introduce the role of the museum for the art/humanities educator and will examine the installation and design of exhibitions and the implications for teaching. Life center issues, museum education, curriculum issues, interactive galleries and technology will be presented.

Term Offered: Spring, Summer, Fall

AED 5930 Advanced Seminar In Philosophy Of Art Education

[1-4 credit hours]

Guest lecturers from other institutions of higher learning are invited to The Toledo Museum of Art or The University of Toledo Department of Art to present seminars relevant to their endeavors.

Term Offered: Spring, Summer, Fall

AED 5990 Individual Study Of Art For The Graduate Student

[1-4 credit hours]

Individual study is designed to provide a student with the opportunity to work independently on professional problems under the direction of the faculty in the Department of Art.

Term Offered: Spring, Summer, Fall

AED 6920 Masters Research Project In Art Education

[1-4 credit hours]

This course is open to graduate students who elect the completion of a master's project in fulfilling the research requirement of the master's degree program.

AED 6940 Internship

[1-4 credit hours]

This course will incorporate advanced recreational therapy program concepts in therapeutic art within an internship environment using expressive techniques.

Term Offered: Spring, Fall

AED 6960 Master's Research Thesis In Art Education

[1-4 credit hours]

This course is open to graduate students who elect the completion of a master's thesis in fulfilling the research requirement of the master's degree program.

Term Offered: Summer

M.Ed. in Art Education

For requirements of the master of arts in art education degree, students must meet requirements for the degree as stated in the Judith Herb College of Education (<http://www.utoledo.edu/education/depts/ci/programs/artED.html>) graduate section of the catalog.

Department of Communication

W. Benjamin Myers, Chair

Degrees Offered

- Certificate in Communication Studies (p. 16)

COMM 6200 Communication Research Methods

[3 credit hours]

Research methods, design and conventions in social scientific communication research including measurement, operationalizations, experimental and quasi-experimental design, analysis interpretation and reporting of findings, including quantitative and qualitative approaches.

Term Offered: Spring

COMM 6210 Principles And Practices Of Visual Communication

[3 credit hours]

This course explores the influence of factors like color and design on human visual communication, the role of Gestalt principles, and the impact of various forms of visual communication.

Term Offered: Fall**COMM 6220 Communication, Technology, And Society**

[3 credit hours]

This course covers issues in communication technology including media, policy and strategic planning. Particular emphasis is given to the information revolution, communication industry development, and the marketplace for communication products.

Term Offered: Fall**COMM 6230 Communication, Propaganda And Persuasion**

[3 credit hours]

This seminar examines techniques of persuasion in social science research and applications and how this knowledge is used for the engineering of perception, mobilization and consent in organizations and society.

Term Offered: Spring**COMM 6240 Communication, Ethics And The Workplace**

[3 credit hours]

This course evaluates the impact of ethics on job performance, public perception of companies or agencies, and the ramifications of personal decision-making on the worker's job satisfaction and long-range goals.

COMM 6260 Business, Communication And Technology

[3 credit hours]

The course examines how organizations use media and communication strategies. Effective tools of communication to be studied include face-to-face interaction, dissemination of information through mass media, and communication through technologies.

Term Offered: Spring, Summer**COMM 6980 Special Topics In Communication Studies**

[3 credit hours]

Examination of emerging issues and topics in the field of communication. May be repeated for credit in different specialized topics.

Term Offered: Spring, Summer, Fall

Certificate in Communication Studies

The graduate certificate in communication studies is designed to provide advanced study in professional and organizational communication. The certificate of communication studies requires the successful completion of 18 credit hours in communication studies. The certificate can be earned separately or as a part of the master of liberal studies degree. See the master of liberal studies (p. 76) program for details on the master of liberal studies with a certificate in communication studies.

Application

Applications are not currently being accepted.

The certificate consists of 18 credit hours of graduate courses in communication studies. Students may use the courses completed for the certificate in the electives portion of the master of liberal studies degree.

Curriculum

Code	Title	Hours
Required Courses		
COMM 6200	Communication Research Methods	3
COMM 6980	Special Topics In Communication Studies	3
The remaining 12 hours must be selected from the following courses:		15
COMM 6210	Principles And Practices Of Visual Communication	
COMM 6220	Communication, Technology, And Society	
COMM 6230	Communication, Propaganda And Persuasion	
COMM 6240	Communication, Ethics And The Workplace	
COMM 6260	Business, Communication And Technology	
Total Hours		21

Department of Economics

Kristen Keith, *Chair*Oleg Smirnov, *Director of Graduate Studies*

For a full-time student, our M.A. in economics is completed in one year. The degree offers a balanced mix of foundational theory in macro and micro economics with an overall emphasis on applied data analysis skills in the required ECON 5810 Econometrics Models and Methods I and the follow-up course in the spring ECON 5820: Econometrics Models and Methods II and a faculty-advised applied data analysis master's paper, as well as applied data analysis in the spring semester field courses.

Degrees Offered

- M.A. in Economics (p. 18)
- M.A. in Economics and Education (p. 19)
- M.A. in Economics with an Applied Econometrics Specialization (p. 19)

ECON 5050 Population Economics

[4 credit hours]

Interaction of economic changes and demographic variables; topics include birth rates, women's employment, marriage and divorce, aging and mortality, migration and overpopulation.

Prerequisites: (ECON 1150 (may be taken concurrently) with a minimum grade of D- or ECON 1200 (may be taken concurrently) with a minimum grade of D-) and ECON 2810 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring**ECON 5120 Monetary Theory**

[4 credit hours]

Modern theories of financial markets, money and the theory of interest rates, money's role in general equilibrium and growth models and money's ability to cause inflation.

Prerequisites: ECON 2120 with a minimum grade of D- or ECON 3120 with a minimum grade of D- or ECON 3150 with a minimum grade of D-

Term Offered: Spring

ECON 5130 Monetary And Fiscal Policy

[3 credit hours]

Changes in the quantity of money and alternative government spending, taxation and debt policies, interrelations of fiscal and monetary policies in stabilization programs.

Prerequisites: ECON 3150 with a minimum grade of D- or ECON 4120 with a minimum grade of D-

Term Offered: Spring

ECON 5150 Advanced Macroeconomic Theory

[4 credit hours]

Theories of consumption and investment. Empirical estimates. Cycle and growth theory, multiplier-accelerator analysis and growth models. The theory and instruments of macroeconomic policy. Dynamic Macroeconomic Theory.

Prerequisites: ECON 3150 with a minimum grade of D-

Term Offered: Fall

ECON 5200 Advanced Microeconomic Theory

[4 credit hours]

Advanced topics in microeconomic theory, consumer behavior, the firm and market structure, distribution theory, equilibrium conditions, welfare economics.

Prerequisites: ECON 3200 with a minimum grade of D-

Term Offered: Fall

ECON 5240 Applied Environmental Economics

[3 credit hours]

The economics of the environment and natural resources using applied welfare theory, benefit-cost analyses, and nonmarket valuation. Examination of economic instruments, such as marketable permits, for solving environmental problems.

Prerequisites: ECON 1200 with a minimum grade of D- or ECON 3240 with a minimum grade of D- or ECON 3270 with a minimum grade of D-

Term Offered: Spring

ECON 5250 Labor Economics

[4 credit hours]

The labor market is studied. Topics include labor force characteristics, wage determination, hours and condition of work, human capital models, unemployment, labor union structure and growth, and modern labor legislation.

Prerequisites: ECON 1200 (may be taken concurrently) with a minimum grade of D- and ECON 2810 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring

ECON 5280 Energy Economics

[4 credit hours]

This course explores the theoretical and empirical perspectives on the demand and supply sides of the energy markets. This course starts with an energy outlook in both domestic and global scales. Then it discusses the natural resource modelling, energy supply, and the behavioral underpinnings of the energy demand. The course continues with current and historical aspects of national and global markets for oil, natural gas, coal, electricity, nuclear power, and renewable energy.

Prerequisites: ECON 1150 with a minimum grade of D- or ECON 1200 with a minimum grade of D-

ECON 5300 Mathematical Economics

[3 credit hours]

Development and applications of the mathematical tools used by economists. Differential and integral calculus, linear algebra, transcendental functions and series.

Prerequisites: ECON 1150 with a minimum grade of D- or ECON 1200 with a minimum grade of D-

Term Offered: Fall

ECON 5410 American Economic History

[3 credit hours]

Exploration of economic growth in America from pre-Columbian times to the present day. Analysis of economic institutions, technological change, industrialization and standards of living.

Prerequisites: ECON 1150 with a minimum grade of D- or ECON 1200 with a minimum grade of D- or ECON 1880 with a minimum grade of D-

ECON 5510 International Economics I

[4 credit hours]

Theory of international trade; commercial policy; costs and benefits, economic integration; trade and economic growth and balance of payments problems.

Prerequisites: ECON 1150 with a minimum grade of D-

Term Offered: Spring

ECON 5550 Economic Development

[3 credit hours]

Economic problems and policies in less-developed countries, including such topics as schooling, population growth, urbanization, landholding, income distribution, capital formation and development strategies.

Prerequisites: ECON 1150 with a minimum grade of D- or ECON 1200 with a minimum grade of D-

ECON 5620 Regional Economics

[3 credit hours]

Examination of regional income estimates and social accounts, regional multipliers, diverse location theories, supplemented with techniques of regional analysis.

Prerequisites: ECON 1200 with a minimum grade of D-

ECON 5660 Public Finance Economics

[4 credit hours]

An analysis of the government sector in the economy, government expenditures, taxation and borrowing and their effects on employment, price levels and growth.

Prerequisites: ECON 1200 with a minimum grade of D-

Term Offered: Spring

ECON 5750 Health Economics

[3 credit hours]

Economic analysis of health and health services. Topics currently include medical and allied manpower, hospitals, drugs and cost-benefit analysis of selected health programs.

Prerequisites: ECON 1200 (may be taken concurrently) with a minimum grade of D- and ECON 2810 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring

ECON 5810 Econometrics Models And Methods I

[4 credit hours]

An introduction to econometric methods and their use in quantitative analysis of economic theories. Diagnostics for problems typically encountered are detailed along with techniques for correcting these problems.

Prerequisites: MATH 2600 with a minimum grade of D- or ECON 2810 with a minimum grade of D- or PSY 2100 with a minimum grade of D- or SOC 3290 with a minimum grade of D- or GEPL 4420 with a minimum grade of D-

Term Offered: Fall

ECON 5820 Econometrics Models And Methods II

[4 credit hours]

An introduction to forecasting methods for economic time-series including Bayesian methods. Both theory and application of forecasting models and methods are covered.

Prerequisites: ECON 5810 with a minimum grade of D-

Term Offered: Spring

ECON 5830 Econometrics Models And Methods III

[3 credit hours]

Econometric methods that apply to survey, spatial and cross-sectional/ time-series data along with other specialized modeling techniques are covered.

Prerequisites: ECON 5810 with a minimum grade of D-

Term Offered: Spring, Fall

ECON 5980 Current Economic Problems

[3 credit hours]

Course content changes from time to time as important economic problems arise.

Prerequisites: ECON 1150 with a minimum grade of D- or ECON 1200 with a minimum grade of D-

ECON 6260 Behavioral Economics

[4 credit hours]

Economic analysis of decisions made by people. Topics include decision-making under risk and uncertainty, strategic decision-making, and experimental economics.

Prerequisites: ECON 1200 (may be taken concurrently) with a minimum grade of D- and ECON 2810 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring

ECON 6810 Seminar in Applied Econometrics I

[2 credit hours]

ECON 6820 Seminar in Applied Econometrics II

[2 credit hours]

ECON 6830 Seminar in Applied Econometrics III

[2 credit hours]

ECON 6900 Graduate Research

[1-7 credit hours]

ECON 6950 Capstone Project

[0 credit hours]

Demonstration of applied economic analysis through a Master's paper or equivalent.

Term Offered: Spring, Summer, Fall

ECON 6960 Thesis

[1-8 credit hours]

ECON 6990 Graduate Readings

[1-7 credit hours]

M.A. in Economics

EARLY ADMISSION TO MASTER'S DEGREE PROGRAM IN ECONOMICS

A special opportunity exists for undergraduate students at the University of Toledo interested in pursuing a Master's of Arts Degree in Economics. Being evaluated by the same criteria as graduate students, undergraduate students have the opportunity to apply advanced-level work to their undergraduate degree requirements while, at the same time, securing a significant "head start" toward satisfying the requirements for a master's degree in Economics. Qualifying undergraduate students are allowed to apply particular courses (and associated credit hours) towards **both** their undergraduate and graduate degree requirements.

If accepted into this program undergraduate students may register for up to 2 graduate-level Economics courses (8 credit hours). Because the M.A. degree in Economics requires 30 credit hours of graduate-level work, students who complete 8 of those hours as an undergraduate student have to complete only 22 additional credit hours as a graduate student to receive their master's degree.

Undergraduate students with a declared major or minor in Economics and a cumulative GPA in Economics courses of 3.3 or higher are eligible for this program. Students accepted into this program must consult and receive prior approval from the Department of Economics' graduate director as to which courses at the University of Toledo may be applied for dual credit toward both undergraduate and graduate degree requirements. Students interested in this program are encouraged to speak with the Department of Economics' Chair, graduate director, or undergraduate advisor for additional information and the application form for this program.

REQUIREMENTS FOR THE MASTER'S PROGRAM

The economics department offers the Master of Arts in Economics degree, the Master of Arts in Economics degree with an applied econometrics specialization, and the Master of Arts in Economics and Education degree. In all cases, students must complete a minimum of 30 hours of graduate work that includes the following:

1. At least one course from each of two different fields, in addition to the following basic theory requirements (or their equivalents):

Code	Title	Hours
ECON 5150	Advanced Macroeconomic Theory	4
ECON 5200	Advanced Microeconomic Theory	4
ECON 5300	Mathematical Economics	3
ECON 5810	Econometrics Models And Methods I	4

The graduate director may waive the ECON 5300 requirement for students who have an adequate background in mathematics.

2. Any courses taken at the graduate level outside of the department of economics must be approved by the graduate director.

3. Credits in excess of seven hours in economics courses numbered 6000 through 6990 will not ordinarily be applicable to the 30 hours.

4. Candidates for either degree are required to pass a comprehensive written examination in macroeconomics and microeconomics. In addition, the department may require an oral examination.

5. In addition to the 30 hours of course work, candidates must satisfy a writing requirement of either a thesis or a capstone project.

A candidate who elects the thesis option must submit a thesis for review by a committee of at least three faculty members and satisfy College of Graduate Studies thesis requirements. Such a candidate may receive a maximum of seven credit hours following the successful defense of that thesis. A candidate who elects the non-thesis option must submit a capstone project, or its equivalent, for review by at least two faculty members. No credit hours will be earned for the capstone project.

Students will demonstrate an understanding of economic theory via the use of analytical and quantitative tools, such as calculus and econometric techniques.

Students will be able to derive demand functions by considering a constrained maximization model of utility-maximizing behavior coupled with a description of the underlying economic constraints. Using these demand functions, students will be able to show how consumers' demand changes as prices and income changes.

Students will be able to derive supply functions by considering an unconstrained maximization model of profit maximizing behavior.

Students will be able to modify this model depending on whether firms are operating in competitive or non-competitive industries.

Students will be able to build a macroeconomic model and analyze business cycles, inflation, unemployment, and interest rates. They will be able to analyze policy options and to examine the costs and benefits of the use of monetary and fiscal policy decisions.

Students will be able to analyze the causes of economic growth in an economic model and examine how short-run policy choices impact long run economic growth.

Students will be able to discuss economic data.

Students demonstrate their ability to analyze data and their ability at employing econometric techniques.

M.A. in Economics and Education

For the degree of Master of Arts and Education, students must meet requirements for the degree as stated in the Judith Herb College of Education (p. 441) graduate section of this catalog.

M.A. in Economics with an Applied Econometrics Specialization

The master's program with an applied econometrics specialization is designed to afford interested, well-qualified candidates for the master's in economics an opportunity to study econometrics on a more intensive and applied basis. The applied econometrics specialization would enable candidates to develop applied econometric skills through hands-on research.

The specialization in applied econometrics is an option in the M.A. program in economics. Students who elect the specialization option will normally need two full years of study to complete the program. In the first year, an M.A. candidate in the specialization will complete the regular M.A. core requirements, an additional econometric course (ECON 5820), and field/related course work. Further, the M.A. candidate is required to pass a written comprehensive examination in econometrics, as well as the usual written comprehensive examinations required of all students. In the second year of the program, the candidate will enroll in a sequence of two applied econometrics seminars (ECON 6810 and ECON 6820) and engage in thesis work.

EARLY ADMISSION TO MASTER'S DEGREE PROGRAM IN ECONOMICS

A special opportunity exists for undergraduate students at the University of Toledo interested in pursuing a Master's of Arts Degree in Economics. Being evaluated by the same criteria as graduate students, undergraduate students have the opportunity to apply advanced-level work to their undergraduate degree requirements while, at the same time, securing a significant "head start" toward satisfying the requirements for a master's degree in Economics. Qualifying undergraduate students are allowed to apply particular courses (and associated credit hours) towards **both** their undergraduate and graduate degree requirements.

If accepted into this program undergraduate students may register for up to 2 graduate-level Economics courses (8 credit hours). Because the M.A. degree in Economics requires 30 credit hours of graduate-level work, students who complete 8 of those hours as an undergraduate student have to complete only 22 additional credit hours as a graduate student to receive their master's degree.

Undergraduate students with a declared major or minor in Economics and a cumulative GPA in Economics courses of 3.3 or higher are eligible for this program. Students accepted into this program must consult and receive prior approval from the Department of Economics' graduate director as to which courses at the University of Toledo may be applied for dual credit toward both undergraduate and graduate degree requirements. Students interested in this program are encouraged to speak with the Department of Economics' Chair, graduate director, or undergraduate advisor for additional information and the application form for this program.

1. **Completion of the M.A. in Economics requirements**
2. **Internships**

The department offers a public service internship, requiring seven credit hours of internship. In addition, the intern is allowed to include up to three credit hours of either ECON 6900 or ECON 6990 toward the 30 credit hours required for a Master of Arts degree.

Department of English Language and Literature

Sara Lundquist, Chair

Christina Fitzgerald, Director of Graduate Studies, Advisor for Graduate Students in the Literature Focus

Anthony Edgington, Advisor for Graduate Students in Writing Studies Concentration

Students completing the MA in English may choose between two concentrations: the Focus in Literature and the Concentration in Writing Studies. A Certificate in the Teaching of Writing is also offered.

Degrees Offered

- Certificate in the Teaching of Writing (p. 13)
- M.A. and Ed. in Literature (p. 23)
- M.A. in English with a Focus in Literature (p. 23)
- M.A. in English with a Concentration in Writing Studies (p. 23)

ENGL 5090 Current Writing Theory

[3 credit hours]

An intensive study of current theories and research connecting reading, critical thinking and writing with applications of theory to students' literate practices and research.

Term Offered: Spring, Fall

ENGL 5100 The History Of English

[3 credit hours]

Study of the changes that have taken place in the English language from the earliest days to the present.

Term Offered: Spring, Summer, Fall

ENGL 5110 Old English

[3 credit hours]

Study of the phonology, morphology and syntax of Old English, with special attention to literary and cultural backgrounds. Representative readings in verse and prose.

Term Offered: Fall

ENGL 5120 Middle English

[3 credit hours]

Study of the phonology, morphology and syntax of Middle English, with special attention to literary and cultural background. Representative readings in verse and prose.

ENGL 5150 Linguistic Principles

[3 credit hours]

Intensive study of modern linguistic theories about the nature and structure of language, with emphasis on English.

Term Offered: Spring, Fall

ENGL 5200 British Fiction: 18th Century

[3 credit hours]

A course in 18th Century fiction with emphasis on the novels of Defoe, Richardson, Fielding, Smollett, and Sterne and their relation to historical background and literary theory.

ENGL 5210 Issues in ESL Writing

[3 credit hours]

Course content

Term Offered: Spring, Fall

ENGL 5280 American Fiction: 20th and 21st Century

[3 credit hours]

Major developments in the 20th-century and 21st Century American short story and novel. Recommended: ENGL 3600 or 3790.

Term Offered: Spring, Fall

ENGL 5300 Medieval and Early Tudor Drama

[3 credit hours]

A study of drama and performance from the British Isles and relevant continental traditions in the late middle ages through the early 16th century, in their cultural, material, and performance contexts. Course may include performance traditions and texts such as monastic and liturgical drama, civic Creation-to-Doomsday play cycles manuscript collections of drama, morality plays, miracle and saints' plays, folk plays, courtly interludes and mummings, and royal entries, as well as modern revivals.

ENGL 5310 British Drama: 1580-1642

[3 credit hours]

A study of early British drama exclusive of Shakespeare, with particular attention to Elizabethan drama and its background.

ENGL 5410 Old And Middle English Literature

[3 credit hours]

Study of Old and Middle English Literature, using translations where necessary, with emphasis on major works and genres, cultural, philosophical, and historical contexts and backgrounds.

Term Offered: Spring, Fall

ENGL 5420 English Renaissance

[3 credit hours]

Poetry and prose of the English Renaissance, including the sonnet tradition; "Spenser's Fairie Queene"; Shakespeare's longer poems; the prose of Raleigh, Hoby, Ascham, and Elyot; "Defense of Poesy"; More's "Utopia."

Term Offered: Spring, Fall

ENGL 5440 Early 17th Century English Literature

[3 credit hours]

Early and mid-17th Century texts, primarily non-dramatic. Including such authors as Milton, Donne, Jonson, Lanyer, Herrick, Wroth, Herbert, Pulter, Marvell, Bacon, Hobbes, Philips, Browne, Cavendish, and others.

Term Offered: Spring

ENGL 5460 Restoration And 18th Century British Literature

[3 credit hours]

Drama, poetry, and prose of the Restoration, Neo-classical and pre-Romantic periods, focusing on literary strategies and themes, political and cultural contexts.

ENGL 5500 British Literature: The Romantic Period

[3 credit hours]

Study of major authors and genres of the Romantic period: approximately 1789 to 1837.

Term Offered: Spring, Fall

ENGL 5520 British Literature: The Victorian Period

[3 credit hours]

Study of major authors, genres and ideas of the Victorian period: approximately 1837 to 1901.

Term Offered: Spring, Fall

ENGL 5540 British Literature: The 20th and 21st Centuries

[3 credit hours]

Study of major authors, genres, and ideas of 20th-century and 21st-century British literature.

ENGL 5550 Literature of the British Empire, Beginnings to 1850

[3 credit hours]

Study of the development of race, empire, and colonialism through literary texts written in (or translated into) English from the late-thirteenth century to the abolition of the British slave trade in the early-nineteenth.

Term Offered: Spring, Fall

ENGL 5560 Literature of the British Empire 1850 to The Present

[3 credit hours]

Studies in texts from Britain and its former colonies. Genres may include the novel, travel writing, memoir, and film. Recommended: ENGL 2800 or 3790

Term Offered: Spring, Fall

ENGL 5600 Early American Literature

[3 credit hours]

The poetry and prose writings of the New England Puritans and the American Enlightenment with emphasis on Bradford, Bradstreet, Taylor, Franklin, Jefferson, Paine and Wheatley.

ENGL 5620 American Literary Romanticism

[3 credit hours]

American literature from 1798 to 1865, from the beginnings of Romanticism in Bryant and Cooper through the Transcendental movement, with emphasis on Hawthorne, Melville, Stowe and Douglass.

Term Offered: Spring

ENGL 5630 American Literary Realism

[3 credit hours]

American literature from the post-Civil War period to the early 20th century: some emphasis on naturalism and humor; such writers as Twain, James, Howells, Dreiser and Wharton.

Term Offered: Fall

ENGL 5640 Early 20th Century American Literature

[3 credit hours]

Study of American literature from 1900 to World War II, focusing on literary modernism and its social, political and philosophical contexts.

Term Offered: Spring, Fall

ENGL 5650 African American Writing Before The 20th Century

[3 credit hours]

Study of African American prose, poetry, drama and fiction from 1760 to 1915.

Term Offered: Fall

ENGL 5660 African American Literature In The 20th and 21st Century

[3 credit hours]

A course focused on 20th and 21st century African American poetry, fiction, nonfiction, and drama.

Term Offered: Spring, Summer, Fall

Multicultural US Diversity

ENGL 5680 American Literature Since World War II

[3 credit hours]

Major trends in postwar American literature, including traditional and uncanonical writers. Emphasis may be on poetry or prose by instructor's option.

Term Offered: Spring, Fall

ENGL 5690 Native American Literature And Culture

[3 credit hours]

Native American literature interrogates a selection of texts by and about Native Americans, including the oral traditions of storytelling and mythology.

Term Offered: Spring

ENGL 5750 History Of Literary Criticism

[3 credit hours]

A chronological examination of literary criticism, analyzing the variety of claims and practices which contribute to the current frameworks used to interpret and analyze literary texts.

Term Offered: Spring

ENGL 5780 Contemporary Literary Theories And Criticism

[3 credit hours]

An intensive examination of contemporary literary theories and criticism, focusing on selected issues and on representative theorists and critics.

Term Offered: Spring

ENGL 5790 Approaches To Research In English

[3 credit hours]

An introduction to the discipline(s) of English, the methods and resources of scholarship in the field.

Term Offered: Fall

ENGL 5800 Chaucer

[3 credit hours]

A study of Chaucer's major works and historical contexts, with emphasis on either Troilus and Criseyde and the dream visions, or on The Canterbury Tales in their entirety.

Term Offered: Spring, Fall

ENGL 5810 Shakespeare

[3 credit hours]

A study of Shakespeare's plays with emphasis on his development as a dramatist and with readings in major Shakespearean criticism.

Term Offered: Fall

ENGL 5820 Milton

[3 credit hours]

A study of the poetry and selected prose. Particular attention is given to biography and criticism.

Term Offered: Spring, Fall

ENGL 5850 Studies In The Work Of A British Author

[3 credit hours]

Author changes with each offering. Consult Time Schedules for authors to be studied.

Term Offered: Spring, Fall

ENGL 5860 Studies In The Work Of An American Author

[3 credit hours]

Author changes with each offering. Consult Time Schedules for authors to be studied.

Term Offered: Spring, Fall

ENGL 5980 Special Topics

[3 credit hours]

Consideration of a special topic in literature and language.

Term Offered: Spring, Fall

ENGL 6010 Seminar In English Instruction: Composition

[3 credit hours]

For prospective college instructors of composition. Includes supervised teaching of composition. Graded S/U only.

Term Offered: Fall

ENGL 6180 Methods In Composition Research, Course Design And Assessment

[3 credit hours]

Students will learn to use rhetorical analysis, discourse analysis and ethnographic research methodologies to write a substantial research proposal, and to design a course and write criteria for assessment of student writing accomplished in such a course.

Prerequisites: ENGL 4090 with a minimum grade of D- or ENGL 5090 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

ENGL 6190 Environments For Esl Learning

[3 credit hours]

In the course, students learn how to identify English as a Second Language learners' linguistic needs and to design and evaluate environments for ESL learning.

Prerequisites: ENGL 3150 with a minimum grade of D- or ENGL 5150 with a minimum grade of D- or ENGL 7150 with a minimum grade of D- or LING 3150 with a minimum grade of D- or LING 5150 with a minimum grade of D- or LING 7150 with a minimum grade of D-

Term Offered: Fall

ENGL 6410 Seminar: Studies In Early English Literature

[3 credit hours]

Seminar on a specialized topic in Old and/or Middle English literature.

Term Offered: Spring, Fall

ENGL 6420 Seminar: Studies In English Renaissance Literature

[3 credit hours]

Seminar on a specialized topic in English Renaissance literature.

ENGL 6440 Seminar: Studies In Early 17th Century Literature

[3 credit hours]

Seminar on a specialized topic in early 17th century English literature.

Term Offered: Fall

ENGL 6460 Seminar: Studies In Restoration And 18th Century British Literature

[3 credit hours]

Seminar on a specialized topic in Restoration and 18th century British literature.

ENGL 6500 Seminar: Studies In British Romantic Literature

[3 credit hours]

Seminar on a specialized topic in British Romantic literature.

ENGL 6520 Seminar: Studies In Victorian Literature

[3 credit hours]

Seminar on a specialized topic in Victorian literature.

Term Offered: Spring, Fall

ENGL 6620 Seminar: Studies In American Literary Romanticism

[3 credit hours]

Seminar on a specialized topic in American literary Romanticism.

ENGL 6630 Seminar: Studies In American Literary Realism

[3 credit hours]

Seminar on a specialized topic in American literary realism.

ENGL 6640 Seminar: Studies In 20th Century American Literature

[3 credit hours]

Seminar on a specialized topic in 20th century American literature.

Term Offered: Spring, Fall

ENGL 6890 Certificate Capstone

[3 credit hours]

This course completes the certificate program. Students will fulfill research on writing piloted in ENGL 6180, culminating in a research essay that will be submitted for publication to an appropriate scholarly journal.

Prerequisites: (ENGL 5090 with a minimum grade of D- and ENGL 5780 with a minimum grade of D- and ENGL 6010 with a minimum grade of D- and ENGL 6180 with a minimum grade of D-)

Term Offered: Spring, Summer, Fall

ENGL 6940 Internship in English as a Second Language

[2 credit hours]

Supervised practice teaching in the form of a community-service internship in English as a Second Language. Must be taken twice with different content. Graded S/U only.

Term Offered: Spring, Fall

ENGL 6960 Master's Research

[1-3 credit hours]

Research on, and writing of the master's paper or thesis.

Term Offered: Spring, Summer, Fall

ENGL 6970 Master's Thesis

[1-3 credit hours]

Research on and writing of the master's thesis in the concentration in English as a Second Language.

Term Offered: Spring, Summer, Fall

ENGL 6980 Seminar: Literary Types And Special Topics

[3 credit hours]

Seminar on a specialized topic in English studies.

Term Offered: Spring, Summer, Fall

ENGL 6990 Independent Study

[1-3 credit hours]

By permission of department; may be repeated for additional credit.

Term Offered: Spring, Summer, Fall

ENGL 8990 Independent Study

[1-3 credit hours]

By permission of department; may be repeated for additional credit.

Term Offered: Spring, Fall

Certificate in the Teaching of Writing Application

Those applying for both the M.A. in English and the certificate in the teaching of writing program should submit application materials for each to the College of Graduate Studies.

Those applying to work on the certificate alone must hold an undergraduate degree in English and submit an application form, a letter of interest, all college and graduate school transcripts, and two letters of recommendation to the College of Graduate Studies.

A certificate in the teaching of writing can be earned as part of the master's degree in English (either literature or Writing Studies

concentration). The certificate also can be earned separately from the degree.

The certificate is designed to offer continuing education for regional high school teachers of English and composition; to offer specialized education in composition to those earning master's degrees who wish to pursue work as teachers of writing at regional community colleges and area universities; and to provide graduate students with the opportunity to earn job credentials in composition, as well as in literature.

Fifteen hours of course work are required for completion of the certificate:

Code	Title	Hours
Theory		
ENGL 5780	Contemporary Literary Theories And Criticism	3
ENGL 5090	Current Writing Theory	3
Praxis		
ENGL 6010	Seminar In English Instruction: Composition ¹	3
Methods		
ENGL 6180	Methods In Composition Research, Course Design And Assessment	3
Research		
ENGL 6890	Certificate Capstone	3
Total Hours		15

¹ This course assumes experience in teaching. Those not presently teaching will be asked to work with a teacher to gain that experience.

Those students working on the master's degree also must fulfill all requirements of that degree.

No transfer of credits from other institutions will be allowed, although those students who complete ENGL 4090 while undergraduates at The University of Toledo will not be required to take ENGL 5090 if they received a grade of B or higher.

M.A. and Ed. in Literature

For the degree of Master of Arts and Education, students must meet requirements for the degree as stated in the Judith Herb College of Education (p. 441) Graduate Catalog. Specialization courses require approval of faculty advisors of the collaborating departments.

M.A. in English with a focus in Literature

The M.A. degree (literature concentration) requires 33 hours of course work. Graduate students who are accepted into the program as teaching assistants are further required to take ENGL 6010, an additional three-hour course, for a total of 36 hours.

All students working toward the Master of Arts with a concentration in literature must satisfy the following requirements:

The course work shall include:

Code	Title	Hours
One of the following two courses:		3
ENGL 5750	History Of Literary Criticism or ENGL 578 Contemporary Literary Theories And Criticism	
At least two literature seminars (seminars carry a 6000 level number),		6
ENGL 5790	Approaches To Research In English	3
At least one course on poetry and poetics,		3
At least one course on prose,		3
At least two courses covering pre-1915 material,		6
At least two courses covering post-1915 material,		6

Of the remaining hours of course work for the degree, students may take a maximum of two courses from other departments in the humanities, fine arts, or social sciences, as approved by the director of graduate studies. Students may count one independent study course toward the degree.

Candidates must submit a satisfactory MA Portfolio, details of which can be found on the department website: <http://www.utoledo.edu/al/english/programs/ma-literature/>

M.A. in English with a Concentration in Writing Studies

The M.A. degree (writing studies concentration) requires 33 hours of course work.

All students working toward the Master of Arts with a concentration in writing studies must satisfy the following requirements:

Required Courses (18 hours)

Code	Title	Hours
ENGL 5090	Current Writing Theory	3
LING 5190	Sociolinguistics	3
ENGL 5210	Issues in ESL Writing	3
ENGL 6010	Seminar In English Instruction: Composition	3
ENGL 6180	Methods In Composition Research, Course Design And Assessment	3
ENGL 6890	Certificate Capstone	3
Electives		18
Total Hours		36

Students will take eighteen credit hours in electives from Writing Studies, Linguistics, or Literature Courses, including special topics courses to be offered yearly.

Of these remaining 18 hours of course work for the degree, students may take a maximum of two courses from other departments in the humanities, fine arts or social sciences, as approved by the director of graduate studies. Students may count one independent study course toward the degree.

First Term	Hours
ENGL 6010 Seminar In English Instruction: Composition	3

LING 5190	Sociolinguistics	3
Elective		3
Hours		9
Second Term		
ENGL 5090	Current Writing Theory	3
Electives		6
Hours		9
Third Term		
ENGL 6180	Methods In Composition Research, Course Design And Assessment	3
ENGL 5210	Issues in ESL Writing	3
Elective		3
Hours		9
Fourth Term		
ENGL 6890	Certificate Capstone	3
Electives		6
Hours		9
Total Hours		36

1. Define key terms and ideas in the field of writing studies across various courses and content areas
2. Give examples of successful teaching practices for various classrooms and different student populations
3. Develop strong research skills in primary, secondary, and online research areas
4. Develop professional development documents, including doctoral statement of purpose, job application letters, and conference abstracts
5. Create program specific documents, including course syllabi, statement of teaching philosophy, course research papers, and a final portfolio

Department of Geography and Planning

Patrick Lawrence, Chair

Neil Reid, M.A. Program Director and M.A. Graduate Advisor

Degrees Offered

- Certificate in GIS and Applied Geography (p. 26)
- Certificate in Urban and Regional Planning (p. 14)
- M.A. and Ed. in Geography and Planning (p. 27)
- M.A. in Geography (p. 27)

GEPL 5040 Geography Education Strategies

[3 credit hours]

Graduate level preparation for K - 12 educators with geography specialization. Integrates social studies and standard geography curricula in response to state and federal mandates.

Term Offered: Fall

GEPL 5110 Geographic Information Systems

[3 credit hours]

Introduction to computerized methods for the capture, storage, management, analysis and display of spatially-referenced data for the solution of planning, management and research problems.

Term Offered: Spring, Summer, Fall

GEPL 5160 Patterns Of World Development

[3 credit hours]

Examination of contemporary global economic patterns and trends. Topics receiving special attention include population problems, the spread of multinational corporations, and the causes and consequences of the emergence of postindustrial economics.

Term Offered: Fall

GEPL 5180 Geographic Information Systems Applications

[3 credit hours]

Advanced applications in geographic information systems (GIS) with an emphasis on advanced GIS analysis techniques, Global Positioning System applications in GIS, database design, and a survey of vector- and raster-based GIS software and databases. Research project required.

Prerequisites: GEPL 5110 with a minimum grade of D- or GEPL 4110 with a minimum grade of D-

Term Offered: Spring

GEPL 5210 Land Use Planning

[3 credit hours]

A broad review of urban and regional planning in the US and Western Europe, introducing land use planning concepts and practices and their role in shaping the direction of urban development.

Term Offered: Spring

GEPL 5310 Geography of Gypsies (Romanies) and Travelers

[3 credit hours]

Explorations into identities and distributions of Gypsies (Romanies) and Travelers (GR&T peoples) worldwide and the challenges that their study presents to Geography and to other social science disciplines.

Term Offered: Spring, Summer, Fall

GEPL 5420 Quantitative methods in geographic research

[3 credit hours]

An examination of quantitative methods commonly used in geographic research with an emphasis on spatial statistics and cartographic analysis.

Term Offered: Fall

GEPL 5490 Remote Sensing Of The Environment

[3 credit hours]

Introduction to theory, methods and techniques used to gather and analyze remote sensor data. Topics range from low altitude air photo interpretation through satellite image acquisition. Recommended: GEPL 3550.

Term Offered: Fall

GEPL 5500 Digital Image Analysis

[3 credit hours]

Using imagery captured by earth orbiting satellites, students will document changes on the surface of the earth addressing environmental issues. Students will have the opportunity to learn applications of this technology including project based work in the classroom.

Prerequisites: GEPL 4490 with a minimum grade of D- or EEES 4490 with a minimum grade of D- or GEPL 5490 with a minimum grade of C or EEES 5490 with a minimum grade of C

Term Offered: Spring

GEPL 5520 Analytical And Computer Cartography

[4 credit hours]

The theoretical and mathematical foundations of the mapping process in a digital environment. An introduction to the structure and manipulation of graphic and nongraphic geographical data to produce maps.

Prerequisites: GEPL 5510 with a minimum grade of D-

Term Offered: Spring

GEPL 5530 Principles Of Urban Planning

[3 credit hours]

Elaborations on planning theory. The planner's role in land use regulation, economic development, housing and social service delivery is reviewed.

Term Offered: Fall

GEPL 5540 Weather And Climate

[3 credit hours]

Survey analysis of meteorology and climatology. The physical processes of weather and the pattern of climate provide the basis for this course.

Term Offered: Summer, Fall

GEPL 5570 Land Development And Planning

[4 credit hours]

The exploration of theoretical location analysis, pragmatic land development issues and analytic feasibility tools, and the consequences of land use policies that affect development.

Term Offered: Spring

GEPL 5580 Location Analysis

[4 credit hours]

The application of geographic location theory, spatial interaction modeling, optimization techniques and geographic information system processing to the solution of facility location problems.

Prerequisites: GEPL 5570 with a minimum grade of D-

Term Offered: Spring

GEPL 5600 Urban Design

[3 credit hours]

Concepts and procedures for the organization, design and development of public and private urban forms and spaces at the micro-level, including a survey of intraurban elements, cultural, ecological and aesthetic considerations, historic preservation, and interdisciplinary collaboration. Research project required.

Term Offered: Fall

GEPL 5650 Physical Geography

[3 credit hours]

This course will introduce you to the fundamental aspects of physical geography: the understanding of the physical elements and processes which comprise the environment and the spatial patterns of these elements and processes.

Term Offered: Spring

GEPL 5700 Community Planning Workshop

[3 credit hours]

This course introduces the skills and techniques used by practitioners in the planning process. Assignments will focus on the collection, analysis and communication of information by following community planning approaches.

Term Offered: Spring

GEPL 5710 Urban Environments

[3 credit hours]

Examines urban areas, the approaches to studying them, and explanations offered for urban processes and forms.

Term Offered: Spring, Fall

GEPL 5750 Transportation Geography

[3 credit hours]

The role of transportation and communication in the economic development of places. Theories of geographic interaction, location of transport routes and the developmental implications of transport investments are explored.

Term Offered: Spring, Fall

GEPL 5810 Political Geography

[3 credit hours]

Space and place facets of population size, growth, migration, distribution and composition with emphasis on the population trends and patterns in both developing and developed nations.

Term Offered: Spring, Fall

GEPL 5910 Directed Research

[1-3 credit hours]

GEPL 5920 Readings in Geography

[1-3 credit hours]

GEPL 6100 Philosophy & General Methodology

[3 credit hours]

Past and current trends in geographic thought and related methodological implications, with elaborations by current faculty members.

Term Offered: Fall

GEPL 6150 Seminar In Research Methods

[3 credit hours]

A computer-based course in geographic research methodology. The course includes an introduction to research design, data measurement, spatial sampling and multivariate approaches to the study of areal networks and spatial distributions.

Term Offered: Spring

GEPL 6160 Seminar In Spatial Analysis

[4 credit hours]

A computer-based laboratory course in multivariate spatial analysis methodologies. The course includes the study of spatial graphics and mapping, computerized regionalization, areal forecasting and predictive modeling techniques.

Prerequisites: GEPL 6150 with a minimum grade of D-

GEPL 6190 Advanced Geographic Information Systems Seminar

[4 credit hours]

Seminar in advanced GIS topics which include database design, spatial analysis and specialized application to spatial problems.

Prerequisites: GEPL 5180 with a minimum grade of D- or GEPL 6180 with a minimum grade of D-

GEPL 6200 Earth System Science Through Inquiry-Based Learning

[3 credit hours]

The course is geared towards in-service teachers. Teachers will explore four natural events affecting the earth as a system, using inquiry-based learning and lesson plan development.

Term Offered: Summer

GEPL 6300 Seminar In Resource Management

[3 credit hours]

Intensive group study of major themes in the resource management literature. Primary emphasis is placed on individual student research projects oriented toward resource management problems.

GEPL 6530 Seminar-Urban/Regional Planning Applications

[3 credit hours]

The course applies forecasting and projection techniques to urban and regional problems. Population, economic base, land use, retail and fiscal impact analyses are examined.

GEPL 6550 Seminar In Environment Planning

[3 credit hours]

Intensive group study of major goals and methodologies of environmental planning. Major emphasis is placed upon individual student research projects oriented toward specific environmental planning problems.

GEPL 6570 Seminar In Neighborhood Revitalization

[3 credit hours]

Intensive group study of major themes in the revitalization of urban neighborhoods, both residential and commercial. Major emphasis is placed upon individual residential and commercial. Major emphasis is placed upon individual student research projects oriented toward specific revitalization problems.

GEPL 6580 Urban Development And Housing

[3 credit hours]

Course examines the changing land use and functions of metropolitan regions. City suburban linkages, urban restructuring, urban policy and metropolitan planning issues are examined.

GEPL 6700 Teaching Practicum In Geography

[1-6 credit hours]

Methods of teaching geography in a university of college setting. Supervision of labs or discussion.

Term Offered: Spring, Summer, Fall

GEPL 6890 Professional Development in Geography and Planning

[3 credit hours]

Study of professional practices, knowledge, and skills required for pursuing opportunities in the public or private sector in geography and planning, including important issues of considering career planning, networking, ethics, writing and publishing.

Term Offered: Spring

GEPL 6910 Comprehensive Exam Preparation

[2 credit hours]

The course is used for the completion of the comprehensive exam requirement for M.A. candidates.

Prerequisites: (GEPL 6100 with a minimum grade of D- and GEPL 6150 with a minimum grade of D-)

Term Offered: Spring, Fall

GEPL 6920 Research Design

[3 credit hours]

The course will have students prepare all the main components of a thesis proposal leading to the completion presentation of the proposal to their thesis advisory committee.

Prerequisites: (GEPL 6100 with a minimum grade of D- and GEPL 6150 with a minimum grade of D- and GEPL 6910 with a minimum grade of D-)

Term Offered: Spring, Fall

GEPL 6930 General Seminar

[3 credit hours]

GEPL 6940 Internship In Planning

[1-6 credit hours]

Professional work experience with a Greater Toledo planning organization related to academic education.

Term Offered: Spring, Summer, Fall

GEPL 6950 Applied Geographic Workshop

[3 credit hours]

Capstone course for GIS/Applied Geographics certificate program to provide hands-on experience in applying GIS, remote sensing and desktop mapping systems to spatially-oriented problems that are unique to their individual disciplines.

Term Offered: Spring, Fall

GEPL 6960 Thesis

[1-6 credit hours]

Work on a thesis is the culmination of graduate education and occupies most of the second year.

Term Offered: Spring, Summer, Fall

Certificate in GIS and Applied Geography

Requirements for Completion

Students enrolled full-time can complete the requirements for this 12-credit program in one year. Students admitted into the program for the fall semester should be able to enroll in all the necessary courses within the academic year and can complete their final project by the end of the spring semester.

Specific Requirements

- Students enrolling in the program will be required to complete a minimum of 9 credits from the list of approved GIS technical courses;
- Students must complete a final three credit project workshop based on a terminal project related to a research problem specific to their discipline;
- Students must maintain a minimum "B" average to complete the certificate program.
- Course selection and the sequence of courses will be agreed upon by the student and the program coordinator to help students complete the program and gain the necessary skills.

Course List

Code	Title	Hours
Select a minimum of 12 credits of the following:		12
GEPL 5180	Geographic Information Systems Applications	

GEPL 5490	Remote Sensing Of The Environment
GEPL 5500	Digital Image Analysis
GEPL 5520	Analytical And Computer Cartography
GEPL 6190	Advanced Geographic Information Systems Seminar
GEPL 6950	Applied Geographic Workshop

Apply and demonstrate the principles of geographic information science
 Formulate requirements and constraints in spatial analysis
 Complete spatial analysis with selected GIS software packages
 Develop skills for designing and implementing real-world GIS applications
 Gain hands-on experience with popular GIS software such as ArcGIS
 Learn how to communicate effectively via mapping and graphic presentation
 Apply GIS technology to evaluate real-world problems, and communicate the GIS project process and results in written and graphic media at a professional level.
 Locate, assess, and retrieve spatial data and knowledge across the GIS technical community to apply to GIS projects.
 Draw upon the underlying theory behind GIS technology (including projections and spatial databases) to optimize application of the technology and extend it into new areas.
 Understand the spatial aspects of an external client's GIS needs and develop a practical project plan for addressing those needs
 Design, compile, and develop a spatial database and a set of analytical tools into a system appropriate to the problem
 Demonstrate a mastery of geographic analysis and cartographic skills

Certificate in Urban and Regional Planning

Code	Title	Hours
GEPL 5530	Principles Of Urban Planning	3
GEPL 5700	Community Planning Workshop	3

Choose 6 hrs from the following:

PSC 5320	Urban Policy & Administration
PSC 6430	Public Policy Process
GEPL 5110	Geographic Information Systems
GEPL 5180	Geographic Information Systems Applications
GEPL 5210	Land Use Planning
GEPL 5710	Urban Environments
GEPL 5750	Transportation Geography
GEPL 6530	Seminar-Urban/Regional Planning Applications
GEPL 6550	Seminar In Environment Planning

Total Hours 6

1. Gain a broad understanding of the discipline and practice of urban and regional planning
2. Understand important approaches and tools underlying urban and regional planning
3. Apply planning ideas and tools to real-world cases
4. Demonstrate skills necessary to be an effective urban planning professional

M.A. and Ed. in Geography and Planning

For the degree of Master of Arts and Education, students must meet requirements for the degree as stated in the Judith Herb College of Education (p. 441) graduate section of this catalog.

M.A. in Geography

The master's program is designed to provide a quality multidisciplinary education, foster theoretical and applied research in geography and planning, promote multicultural understanding, complement interdisciplinary work, and support local community outreach programs and grass-roots organizations. Faculty interests and research facilities offer opportunities to pursue intensive programs in community and urban planning, economic geography, geographic information science, environmental geography and planning, or cultural and behavioral geography.

For the Master of Arts degree, students must meet the following departmental requirements, including 36 credit hours of graduate work:

1. 15 of the 36 minimum hours must be taken in the department at the 6000 level. Fifteen additional elective hours may be taken at the 5000 or 6000 level within the major. The following courses are mandatory:

Code	Title	Hours
GEPL 6100	Philosophy & General Methodology	3
GEPL 6150	Seminar In Research Methods	3
GEPL 6920	Research Design	3

This 15-hour requirement may not include the following courses: GEPL 6700, GEPL 6910, GEPL 6940 and GEPL 6960.

2. A minimum of one graduate-level (at least three hours) course or seminar, approved by the adviser, must be taken in a related area outside the department. This may not include an independent study or research course.
3. The selection of geography and planning courses and related courses should comprise a unified program chosen in consultation with the graduate adviser.
4. After completing 6150 and 9 hours of graduate coursework, the student may register for GEPL 6920. As part of this course, students complete a comprehensive exam and present and defend a thesis proposal. A grade of B or better in 6100, 6150, 6920, and B average or better for graduate work entitles the student to become a formal candidate for the M.A. degree.
5. The student should research and write an approved thesis under the direction of a thesis committee composed of departmental faculty members. The student may select an applied or traditional thesis option.
6. Upon completion of the thesis, an oral examination on the student's research, as it relates to general professional competence, will be required.
7. A minimum enrollment to qualify for the master's degree is two hours of thesis credits, but there may be as many as six hours within the 36 semester hours of graduate work.

Non-Thesis Option

For Students who not plan to seek additional graduate education beyond the MA degree, the department offers a non-thesis for the MA in Geography. This option includes a general exam and a major research paper completed in the context of GEPL 6980 during the Student's final spring semester in the program.

Minimum of 36 credit hours of graduate course work.

Required courses: GEPL 6100, 5110, 5530, 6150, 5180, 6980.

Elective courses: Select one from GEPL 5650, 5550, 5750, or 5700.

15 additional hours at the 5000 or 6000 level in Geography.

Minimum of one graduate level course taken in a related field out of Geography.

B grade or better in GEPL 6100, 6150, and 6980.

Department of History

Ami Pflugrad-Jackisch, Chair

Kristen Geaman, Director of Graduate Studies

The Graduate Program in History at The University of Toledo is committed, first and foremost, to the values and priorities of liberal arts education: fostering critical analysis and the skills of written and oral communication; the pursuit of knowledge as an organic and expansive universe of possibilities; a respect for diversity and difference, including difference of opinion; and the continuing relevance of the humanities as the search for and understanding of the human experience. Graduates from the history program have gone on to successful careers in academia, the private sector, and public venues such as museums and historical societies.

Degrees Offered

- M.A. and Ed. in History (p. 31)
- M.A. in History (p. 31)
- PhD in History (p. 31)

HIST 5010 Greek History

[3 credit hours]

Selected topics on the political and social institutions of Greece in the classical and Hellenistic periods.

Term Offered: Fall

HIST 5020 Roman History

[3 credit hours]

Selected topics on the political and social institutions of Rome during the Republic and Empire.

Term Offered: Spring

HIST 5030 Europe In The 14th-15th Centuries

[3 credit hours]

The waning of the Middle Ages and the development of the Renaissance in Western Europe with emphasis on Italy.

HIST 5060 Age Of Absolutism

[3 credit hours]

The growth and decline of the absolute monarchies in Europe and the development of a world market economy, c. 1550-1715.

HIST 5080 Age Of Revolution

[4 credit hours]

The age of the French Revolution and Napoleon, c. 1785-1848.

HIST 5100 Europe Since World War I

[3 credit hours]

Internal and international development of the major European states from World War I to the end of the twentieth century.

HIST 5150 Critics Of Victorian Society

[3 credit hours]

Principal critics of society like Ruskin, Carlyle, Cobbett, Marx, Engels, Morris and Mill are read with a view to understanding capitalism, industrialism and England.

HIST 5170 The British Empire: For And Against

[3 credit hours]

The emergence of England as a maritime power, as an empire, and as a financial force, with emphasis upon resistances and decolonization.

Term Offered: Fall

HIST 5200 Colonial Foundations Of The U.s.

[3 credit hours]

This course analyzes the colonial experience of the United States prior to 1763. It stresses the various cultures and social groups in America and how they related with one another.

HIST 5220 The American Revolution

[3 credit hours]

The background and progress of the War for Independence.

Term Offered: Spring, Fall

HIST 5230 United States Early Republic

[3 credit hours]

American politics and culture from the Federalist period to the Mexican - American War, 1789-1848.

Term Offered: Spring

HIST 5240 The Age Of Jackson

[3 credit hours]

Jacksonian democracy in politics and as a reform movement; the sectional controversy; the Mexican-American War.

HIST 5250 Civil War And Reconstruction

[3 credit hours]

Slavery and the Constitution in the sectional controversy, the political and military events of the Civil War, and the impact of the war on American society, 1848-1876.

Term Offered: Fall

HIST 5260 Emergence Of Modern America, 1876-1919

[3 credit hours]

American society in the late 19th and early 20th centuries, including industrialization, urbanization, immigration, agrarian and labor revolts, politics, economic expansion, overseas initiatives, Progressive reform and involvement in World War I.

Term Offered: Spring

HIST 5270 20th Century America, 1920-1945

[3 credit hours]

Social, political and economic development of the United States, 1920-1945. The Republican ascendancy, the car culture, Great Depression, New Deal and World War II.

Term Offered: Fall

HIST 5280 U.s. Since 1945: Affluence And Anxiety

[3 credit hours]

Social, economic and political development of the United States since 1945. The Cold War, McCarthyism, Eisenhower Equilibrium, the New Frontier and the Great Society, civil rights, Watergate and the Reagan Revolution.

Term Offered: Fall

HIST 5310 History Of Native American Religious Movements

[3 credit hours]

History of Native American revitalization movements as a response to European colonization and Indian dispossession.

HIST 5330 Western American Indians

[3 credit hours]

Native Americans of the Far West from prehistoric times through recent years. Emphasis on European contact and governmental policies.

Term Offered: Spring

HIST 5340 Far Western Frontier

[3 credit hours]

Native Americans; Spanish conquistadors and missionaries; American scientific and military exploration; mountain men and fur trade; international rivalries and Mexican War; gold rush of '49.

HIST 5360 American Intellectual History I

[3 credit hours]

Development and influence of major ideas from the colonial period to 1865. Topics include Puritanism, the Enlightenment, Democracy and Transcendentalism.

Term Offered: Spring

HIST 5370 American Intellectual History II

[3 credit hours]

Major developments in American thought from 1865, including Social Darwinism, pragmatism, ideological conflict, modern science, education.

Term Offered: Spring

HIST 5430 Slavery In America

[3 credit hours]

Stresses the African continuum among slaves within the context of variations in goals and policies of slaveowners, slave trade, slave economics, demographics, slave labor and formation of slave culture.

Term Offered: Spring, Summer

HIST 5450 United States and Latin America

[3 credit hours]

HIST 5460 Women In American History

[3 credit hours]

This course presents American history from early settlement to the present by examining the contributions of women, in interaction with men, to the immensely complex fabric of American life.

HIST 5470 Mexico

[3 credit hours]

Mexican history from pre-Hispanic times to the present. Emphasis on the political, social and economic changes imposed by the Spaniards; the legacy of colonialism on the modern nation; the Mexican Revolution and the "Mexican Miracle."

Term Offered: Summer, Fall

HIST 5480 American Labor And Working Class History

[3 credit hours]

Development of working class communities, cultures, organizations and ideology from colonial era to the present. Topics include industrialization, unionization, labor law, gender and race constructions.

HIST 5490 Witchcraft And Magic In Medieval And Early Modern Europe

[3 credit hours]

Witchcraft, religion and magic in western Europe from the 12th through 17th centuries, focusing on the origins of witchcraft belief, diabolical magic, the witchcraze and its decline.

Term Offered: Spring

HIST 5530 History Of The Middle East Since 1500

[3 credit hours]

History of the Middle East from the collapse of the Medieval Muslim States and the rise of the Ottoman Empire in the 16th century through the period of European intervention to the development of independent Middle Eastern States in the 20th century.

Term Offered: Spring, Fall

HIST 5620 Central Europe

[3 credit hours]

Central Europe from medieval times to the present. The Habsburg Empire, Poland, the Balkans, twentieth-century changes.

HIST 5660 Imperial Russia, 1700-1917

[3 credit hours]

Rise and fall of the Russian Empire. Politics and society from the time of Peter the Great to the 1917 Revolution.

HIST 5680 20th Century Russia

[3 credit hours]

Russia from the 1917 Revolution to the present. Topics include Marxism, Communism, Stalinism, Cold War.

HIST 5720 Modern Chinese History

[3 credit hours]

China in transition under the impact of the West; forces leading to the revolution of 1911, the Nationalists' struggle, the emergence of the People's Republic of China and aspects of post-revolutionary China.

Term Offered: Spring

HIST 5740 Modern Japanese History

[3 credit hours]

Japan in transition under Western influence, forces leading to the Meiji Restoration, the modernization of Japan, Japan's rise as a world power, war and postwar developments.

Term Offered: Spring

HIST 5750 Europe And Asia: Exploration And Exchange, 1415-1800

[3 credit hours]

Motivation and process of European expansion to Africa and Asia from 1415-1800.

HIST 5790 The Holocaust

[3 credit hours]

This advanced course deals with selected aspects of the history and memory of Nazi genocide against the Jews of Europe, with special emphasis on visual and survivor sources.

Term Offered: Spring**HIST 5830 Theory Of Public History**

[3 credit hours]

The definition, philosophy and evolution of public history as well as the current literature and debates within the field. Public history is the application of historical knowledge and methodology beyond academe.

HIST 5840 Public History Practicum

[3 credit hours]

Course provides students with hands-on experience in the practice of public history by completing a project using specialized techniques, client-oriented research and teamwork. May be repeated for credit.

HIST 5940 Public History Internship

[2-4 credit hours]

Supervised practical experience in the field of public history.

Term Offered: Fall**HIST 5980 Special Topics**

[1-4 credit hours]

Topics selected by various instructors.

Term Offered: Spring, Fall**HIST 6600 Historiography**

[3 credit hours]

The nature of historical writing. Concepts of the historical method. The history of the writing of history from the beginning to the present.

Term Offered: Spring, Fall**HIST 6930 Seminar**

[3 credit hours]

Focus on primary research and writing in various fields: 01: 17th and 18th century America, 05: 19th century America, 06: American Urban, 07: American West, 08: American Intellectual, 10: Local History, 11: American Labor, 12: American Foreign Relations, 15: 20th century America, 16: Public History, 17: U. S. Bibliography to 1865, 18: U. S. Bibliography since 1865, 35: Latin America, 39: Ancient, 40: Medieval Europe, 45: Early Modern Europe, 50: Modern Europe, 55: Central Europe and Balkans, 60: England, 65: British Empire, 70: Russia, 75: Modern East Asia, 80: Africa, 90: Special Topics

Term Offered: Spring, Fall**HIST 6950 Workshops**

[3 credit hours]

Introduction to essential pedagogical and academic skills including survey class design: syllabi, lectures, history writing, theses and prospectuses. And professional skills: constructing a CV, letter of introduction, teaching philosophy, and grant proposals.

Term Offered: Fall**HIST 6960 Thesis**

[1-16 credit hours]

M.A. thesis topic to be selected by the student with the approval of the thesis adviser.

Term Offered: Spring, Summer, Fall**HIST 6990 Independent Study**

[1-4 credit hours]

Readings: 01: 17th and 18th Century America, 05: 19th Century America, 06: American Urban, 07: American West, 08: American Intellectual, 10: Local History, 11: American Labor, 12: American Foreign Relations, 13: Public History, 15: 20th Century America, 16: Business, 17: Peace Movements, 18: Social, 35: Latin America, 40: Medieval Europe, 41: Renaissance and Reformation, 45: Early Modern Europe, 50: Modern Europe, 55: Central Europe and Balkans, 60: England, 65: British Empire, 70: Russia, 75: Modern East Asia, 80: Ancient Greece, 90: Ancient Rome, 92: Africa, 99: Any Title

Term Offered: Spring, Summer, Fall**HIST 7980 Special Topics**

[1-4 credit hours]

Study of secondary and primary sources in various fields: 01: Colonial and Revolutionary, 02: 19th century America, 03: 20th century America, 04: American South, 05: American West, 06: American Intellectual, 07: American Foreign Relations, 08: American Constitutional, 09: American Labor, 10: American Urban, 11: American Social, 12: American Urban Progressive Reform, 13: Public History, 16: American Business, 17: Peace Movements, 18: Ethnic, 19: Ancient, 20: Medieval Europe, 21: Renaissance and Reformation, 22: Europe, 1648-1815, 23: Europe, 1815-present, 24: Russia, 25: Great Britain, 26: Traditional East Asia to 1800, 27: Modern East Asia, 1800 to present, 28: Latin America, 29: Middle East, 30: Africa, 99: Any Title

Term Offered: Fall**HIST 8600 Historiography**

[3 credit hours]

The nature of historical writing. Concepts of the historical method. The history of the writing of history from the beginning to the present: 01: America 02: Asia 03: Europe 04: Latin America 05: Africa 06: Special Topics

Term Offered: Spring, Fall**HIST 8930 Seminar**

[3 credit hours]

Focus on primary research and writing in various fields: 01: 17th and 18th century America, 05: 19th century America, 06: American Urban, 07: American West, 08: American Intellectual, 10: Local History, 11: American Labor, 12: American Foreign Relations, 15: 20th century America, 16: Public History, 17: U. S. Bibliography to 1865, 18: U. S. Bibliography since 1865, 35: Latin America, 39: Ancient, 40: Medieval Europe, 45: Early Modern Europe, 50: Modern Europe, 55: Central Europe and Balkans, 60: England, 65: British Empire, 70: Russia, 75: Modern East Asia, 80: Africa, 90: Special Topics

Term Offered: Spring, Fall**HIST 8950 Workshops**

[3 credit hours]

Introduction to essential pedagogical and academic skills including survey class design: syllabi, lectures, history writing, theses and prospectuses. And professional skills: constructing a CV, letter of introduction, teaching philosophy, and grant proposals.

Term Offered: Fall

HIST 8960 Dissertation

[1-16 credit hours]

Ph.D. dissertation topic to be selected by the student with the approval of the dissertation adviser.

Term Offered: Spring, Summer, Fall

HIST 8990 Independent Study

[1-4 credit hours]

Readings: 01: 17th and 18th Century America, 05: 19th Century America, 06: American Urban, 07: American West, 08: American Intellectual, 10: Local History, 11: American Labor, 12: American Foreign Relations, 13: Public History, 15: 20th Century America, 16: Business, 17: Peace Movements, 18: Social, 35: Latin America, 40: Medieval Europe, 41: Renaissance and Reformation, 45: Early Modern Europe, 50: Modern Europe, 55: Central Europe and Balkans, 60: England, 65: British Empire, 70: Russia, 75: Modern East Asia, 80: Ancient Greece, 90: Ancient Rome, 92: Africa, 99: Any Title

Term Offered: Spring, Summer, Fall

M.A. and Ed. in History

For the degree of Master of Arts and Education, students must meet the requirements for the degree as stated in the Judith Herb College of Education (p. 441) graduate section of this catalog. The Master of Arts and Education degree in history requires at least 21 hours of graduate credit in history or social studies (including HIST 6600, and a history seminar HIST 6930) within the total of 36 hours presented for the degree. To complete the program, students may choose either a written examination or a final project supervised by the student's advisor in the department of history.

M.A. in History

All students seeking admission to graduate study are required to provide transcripts, GRE scores, three academic letters of recommendation, and a statement of research interests. The applicant's research interests should correlate to the expertise of the history department faculty. In addition, students whose native language is not English must submit TOEFL scores. For additional information, see the History Department's graduate handbook on the departmental website or contact the director of graduate studies.

The History program reviews applications in February for students to begin studies during the fall semester. The deadline for applications for admission with financial aid is January 31st. However, the College of Graduate Studies accepts applications throughout the year.

The student may earn the M.A. degree on a thesis or non-thesis track by completing either 30 graduate credits plus an additional 6 hours in thesis credits; or 36 graduate credits with an examination at the end of the second year of study. The choice between the two options should be made no later than the second semester of study. The student must maintain a B average, or better, in all graduate work. Each candidate for the M.A. degree must pass the following courses.

Code	Title	Hours
HIST 6600	Historiography	3
HIST 6930	Seminar (Two seminars with this course number)	3
HIST 6950	Workshops (Highly recommended)	3

Analyze current historical literature in chosen field of study.

Compose a clear historical argument supported by adequate evidence.

Develop aptitude with electronic research tools and source investigation (such as archival investigation and location of primary sources).

Write according to disciplinary standards.

PhD in History

All students seeking admission to graduate study are required to provide transcripts, GRE scores, three academic letters of recommendation, and a statement of research interests. The applicant's research interests should correlate to the expertise of the history department faculty. In addition, students whose native language is not English must submit TOEFL scores. For additional information, see the History Department's graduate handbook on the departmental website or contact the director of graduate studies.

The History program reviews applications in February for students to begin studies during the fall semester. The deadline for applications for admission with financial aid is January 31st. However, the College of Graduate Studies accepts applications throughout the year.

The doctoral degree in history requires a minimum of 62 hours beyond the master's degree, including 24 hours for the dissertation. Doctoral students must complete four seminars, a course in historiography, (HIST 8600), and a Professional Workshop (HIST 8950).

General Field

The student must stand for an examination, written and oral, over one general field, such as U.S. history or modern European history. See the departmental Graduate Handbook for additional details.

Secondary Concentration

The student must stand for examination in one major area of concentration. This normally will be the area in which the student will write the dissertation and in which the student has completed seminars and course work.

Minor Field

The student will be examined in a minor area outside the general field. Selection of this field will be made by the student in consultation with the advisor.

Foreign Language Competency

Every student, before taking the comprehensive examination, must pass an examination in a foreign language. The choice of the language required will lie with the student's advisor.

1. Evaluate current historical literature in chosen field of study.
2. Compose a clear historical argument supported by adequate evidence.
3. Develop aptitude with electronic research tools and source investigation (such as archival investigation and location of primary sources).
4. Write according to disciplinary standards.
5. Discover new sources, new information from sources, and use new methodologies that lead to new contributions.
6. Create an original contribution and argument.

Department of Music

Lee Heritage, Chair

David Jex, Graduate Adviser

The University of Toledo offers master's level degrees in music performance and music education. Our graduate music performance degree provides in-depth studies for instrumentalists, singers, composers, and conductors. Our graduate music education degree includes both research and education experiences.

Degrees Offered

- Master of Music in Music Education (p. 33)
- Master of Music in Performance (p. 33)

MUS 5010 University Band

[1 credit hour]

Students will perform a wide variety of band literature.

Term Offered: Spring, Fall

MUS 5020 Jazz Ensemble

[1 credit hour]

Students rehearse and perform a diverse repertoire for large jazz ensemble. Open to qualified students by audition in the first week of each semester and/or permission of instructor.

Term Offered: Spring, Fall

MUS 5030 Brass Choir

[1 credit hour]

Open to a limited number of qualified students.

Term Offered: Spring

MUS 5040 University Wind Ensemble

[1 credit hour]

Open to a limited number of qualified students.

MUS 5050 Chamber Music Ensembles

[1 credit hour]

The study and performance of chamber music literature in classical or jazz styles. Groups are determined by audition at the beginning of each semester, and are open to a limited number of qualified students upon sufficient demand and with the permission of the instructor.

Term Offered: Spring, Fall

MUS 5060 Symphonic Band

[1 credit hour]

Students rehearse and perform a diverse concert band repertoire. Open to all students through audition or permission of instructor.

Term Offered: Spring, Fall

MUS 5070 Varsity Band

[1 credit hour]

Students rehearse and perform a diverse athletic band repertoire. Open to all students through audition or permission of instructor.

Term Offered: Spring

MUS 5090 University Orchestra

[1 credit hour]

Open to any qualified student.

Term Offered: Spring, Fall

MUS 5130 University Chorus

[1 credit hour]

This non-auditioned mixed (SATB) choral ensemble is open to any student. Performing music in a variety of styles, this ensemble places a primary focus on developing musicianship and basic vocal technique.

Term Offered: Spring, Fall

MUS 5140 Concert Chorale

[1 credit hour]

This auditioned mixed (SATB) choral ensemble is the premiere choral ensemble at the University of Toledo. With a focus on advanced vocal techniques and performance, this ensemble requires an audition and instructor approval.

Term Offered: Spring, Fall

MUS 5150 Jazz Vocalstra

[1 credit hour]

Students rehearse and perform traditional vocal jazz literature. Open to qualified students by audition at the beginning of each semester and/or permission of instructor.

Term Offered: Spring, Fall

MUS 5160 Women's Chorus

[1 credit hour]

This non-auditioned treble voice (SSAA) choral ensemble is open to any student. Performing music in a variety of styles, this ensemble focuses on developing musicianship and basic vocal technique.

Term Offered: Spring, Fall

MUS 5180 Men's Chorus

[1 credit hour]

This non-auditioned Tenor/Bass voiced (TTBB) choral ensemble is open to any student. Performing music in a variety of styles, this ensemble focuses on developing musicianship and basic vocal technique.

Term Offered: Spring, Fall

MUS 5190 Opera Workshop

[1 credit hour]

Open to any qualified student.

Term Offered: Spring, Fall

MUS 5410 Music History And Literature: World Music

[3 credit hours]

Explores the function and styles of music in various cultures.

Term Offered: Spring

MUS 5440 Music History And Literature: Special Topics

[3 credit hours]

The area of study will be announced at the time the course is offered.

Term Offered: Spring

MUS 5490 Music History And Literature: The Twentieth Century

[3 credit hours]

An intensive study of the literature, composers, theorists, trends and musical styles during the 20th century.

MUS 5510 Choral Conducting

[2 credit hours]

Conducting techniques and rehearsal routine, especially concerned with choral groups. Opportunities to direct student choral groups.

Prerequisites: MUS 3500 with a minimum grade of C

Term Offered: Spring, Summer, Fall

MUS 5520 Instrumental Conducting

[2 credit hours]

Conducting techniques and rehearsal routine especially concerned with instrumental ensembles. Opportunities to direct student instrumental groups.

Prerequisites: MUS 3500 with a minimum grade of C

Term Offered: Spring

MUS 5590 Piano Pedagogy

[3 credit hours]

Exploration of techniques and materials for comprehensive, private and group instruction.

Term Offered: Spring, Fall

MUS 5610 Analytical Techniques

[3 credit hours]

Application of various analytical theories of music to selected works from different style periods to further the understanding of musical forms and works.

Prerequisites: MUS 3500 with a minimum grade of C

Term Offered: Fall

MUS 5630 Counterpoint: Comparison Of Styles

[3 credit hours]

A study of 16th, 18th and 20th century polyphony. Analysis of selected works and composition exercises will be the basis for comparing and contrasting these three styles.

Prerequisites: MUS 3500 with a minimum grade of C

Term Offered: Spring

MUS 5800 Applied Music

[1-2 credit hours]

Private studio music lessons intended primarily for music education graduate students or for music performance graduate students on a secondary instrument. 1 or 2 credit hours.

Term Offered: Spring, Summer, Fall

MUS 5900 Graduate Studies In Music

[3 credit hours]

The study of sources and bibliographical materials in music.

Term Offered: Fall

MUS 6000 Master's Recital

[0 credit hours]

Required for the Master of Music Performance degree. A passing grade documents successful completion of the recital requirement. Must be taken during the semester in which the recital is presented.

Corequisites: MUS 6800

Term Offered: Spring, Summer, Fall

MUS 6450 Jazz history, Style and Analysis

[3 credit hours]

An in-depth study of jazz styles, trends, performers and composers through historical and analytical research.

Term Offered: Spring

MUS 6560 Jazz Pedagogy and Conducting

[2 credit hours]

An in-depth study of jazz pedagogical materials and methods as well as rehearsal and conducting techniques.

Term Offered: Spring, Fall

MUS 6600 Jazz Composition and Arranging Seminar

[2 credit hours]

Examination and analysis of jazz scores with creative assignments in jazz orchestration and composition in traditional and contemporary styles. May be repeated one time.

Term Offered: Fall

MUS 6650 Seminar In Music Arranging

[3 credit hours]

Examination and analysis of scores of varied composers and styles; creative assignments in orchestration exploring traditional and contemporary textures and timbres.

Prerequisites: MUS 3500 with a minimum grade of C

MUS 6690 Seminar In Music Composition

[2 credit hours]

May be repeated, but maximum accumulated credit is six hours.

Beginning composition, including writing in the smaller musical forms, to advanced compositions for large.

Term Offered: Spring, Fall

MUS 6700 Jazz Improvisation Seminar

[2 credit hours]

Practical application and analysis of jazz improvisation methods and techniques as applied to contemporary jazz composition and performance. May be repeated one time.

Term Offered: Spring, Fall

MUS 6800 Applied Music

[2-5 credit hours]

Private studio music lessons for music performance graduate students, including the study of performance methods and literature of the highest levels. Preparation for professional-level performance. May be repeated for credit with permission of the instructor.

Term Offered: Spring, Summer, Fall

MUS 6980 Seminar: Special Topics

[1-3 credit hours]

Selected subjects in music in areas of special interest to the advanced master's degree student. The seminar topic will be announced in the semester schedule of classes.

Term Offered: Spring, Summer, Fall

MUS 6990 Independent Study

[1-3 credit hours]

Designed to meet the needs of individual students who wish to pursue projects in the area of music.

Term Offered: Spring, Summer, Fall

Master of Music in Music Education

For requirements of the master of music education degree, students must meet requirements for the degree as stated in the Judith Herb College of Education (p. 441) graduate section of the catalog.

Master of Music in Performance

For the master of music in performance degree, students must take a minimum of 30 hours of formal course work. Of the 30 hours, a minimum of 10 hours is required in applied study, leading to a graduate recital. In addition, students will be advised to select a balance of courses (minimum of 10 hours) among music theory, music history and literature,

and pedagogy. The remaining 10 hours include the required Graduate Studies in Music course - MUS 5900 (three hours), ensembles (two hours), a document (two hours) and electives (three hours).

Applicants are required to audition for the applied faculty. A diagnostic music theory and history exam will be administered before the first semester of enrollment. The Department of Music observes the UT Graduate College requirements for admission as a graduate student. All applicants must have achieved a minimum 2.7 GPA in their undergraduate degree program in music from an accredited institution. Applicants who do not have a minimum undergraduate GPA of 2.70 are required to take the GRE and report the results to the College of Graduate Studies and the Department. The department assessment of the applicant's submitted application includes examination of the applicant's transcript and letters of recommendation.

Applicants for the Masters degree in Music Performance, with an undergraduate GPA below 2.7, must achieve a combined verbal and quantitative score of at least 280 [if taken in August 2011 or later]. If they score below these standards, a student may receive provisional entrance upon the determination by the department's Graduate Committee with stipulations on achievements expected in their first semester. Students with lower scores may still be considered for admission if their academic record and audition shows a strong musical aptitude and promise. GRE scores must be sent directly from ETS to The University of Toledo. The ETS code for the university is 1845. Test scores for the GRE cannot be older than 5 years from the first day of the term that the student begins their program.

Students applying for the Masters in Performance degree must audition. When scheduling an audition, please consult the Department of Music home pages for information about dates and repertoire. If assistance is needed, contact the Music Office at 419.530.2448 or the Graduate Advisor. While it is preferred that performance majors audition in person, high quality audio/video recordings may be considered.

Comprehensive Examinations³**Total Hours****30**

- ¹ Students are required to give a graduate recital. Students must be registered for applied music during the semester in which the recital is given.
- ² A paper of 15 to 20 pages, which covers a theoretical analysis and/or historical review of the music performed on the graduate recital and/or related topics.
- ³ Students will be required to pass comprehensive written and oral examinations, normally given during the last semester of work.

1. Students will perform with a high degree of musicianship, technical security, and artistry.
2. Students will demonstrate a wide range of repertoire appropriate for their instrument or voice.
3. Students will demonstrate their performance ability in both solo and ensemble music, and will be able to demonstrate successful rehearsal techniques appropriate to each setting.
4. Students will be able to articulate appropriate pedagogical strategies and techniques to enable them to function as studio teachers.
5. Students will be able to evaluate and select appropriate performance and teaching literature for students at various levels of development.

Department of Philosophy and Religious Studies

John Sarnecki, Chair

Benjamin Grazzini, Graduate Adviser

The department is historically oriented and pluralistic in scope and interests. UToledo is thus an ideal place to pursue a variety of philosophical areas, including American philosophy, environmental ethics and issues surrounding sustainability, philosophy of religion, philosophy of mathematics, and medical ethics, in addition to philosophy of mind, logic, philosophy of science, epistemology, ancient philosophy, and social and political philosophy. Students from our master's program have gone on to outstanding Ph.D. programs and to top tier law schools.

Degrees Offered

- M.A. in Philosophy (p. 36)

PHIL 5010 Islamic Law and Society

[3 credit hours]

This course will survey Islamic law in historical and comparative modern contexts. This course will provide (a) basic introduction to the sources and methods of classical Islamic legal interpretation, (b) survey of the most pressing areas in which traditional Islamic norms remain relevant today—criminal law, family law, and commercial law, (c) the challenges and transformations introduced by colonialism, modernity, and the nation-state, and (d) comparison with the American law and the constitution, highlighting comparative interpretive methods such as originalism versus progressivism, and innovative dimensions of Islamic law such as legal pluralism, wide room for local custom, religious diversity, and restorative justice.

Term Offered: Spring

PHIL 5210 Ancient Philosophy Seminar

[3 credit hours]

An intensive study of the texts and arguments of Presocratic philosophers, Plato, Aristotle, or Hellenistic philosophers. Course may be repeated as topics vary.

Term Offered: Spring, Fall

PHIL 5230 Modern Philosophy Seminar

[3 credit hours]

An intensive study of one or more Continental or British philosophers from the sixteenth through eighteenth centuries. Course may be repeated as topics vary.

Term Offered: Spring, Fall

PHIL 5240 19th Century European Philosophy

[3 credit hours]

An intensive study of European philosophy after Kant, including Hegel, Marx, Kierkegaard and Nietzsche.

Term Offered: Spring, Fall

PHIL 5250 Phenomenology

[3 credit hours]

An intensive study of major works from phenomenological philosophers, such as Husserl, Heidegger, Sartre, or Merleau-Ponty. Course may be repeated as topics and texts vary.

Term Offered: Spring, Fall

PHIL 5260 Recent European Philosophy

[3 credit hours]

An examination of texts and problems in the Frankfurt School, post-structuralism, deconstruction, post-modernism, or of such thinkers as Habermas, Foucault, Derrida and Lyotard. Course may be repeated as topics vary.

Term Offered: Spring, Fall

PHIL 5270 American Philosophy

[3 credit hours]

A study of the development of American philosophy, or of one or more of Pierce, James, Dewey, or Mead. Course may be repeated as topics vary.

Term Offered: Fall

PHIL 5280 20th Century Analytic Philosophy

[3 credit hours]

Selected readings from Frege, the Russell, Wittgenstein, the Vienna Circle, the Ordinary Language school and American neopragmatists such as Quine, Rorty and Davidson. Course may be repeated as topics vary.

Term Offered: Spring, Fall

PHIL 5300 Philosophy Of Natural Science

[3 credit hours]

A study of scientific inquiry including the structure of scientific explanations, relation of evidence and confirmation, the metaphysics of theoretical entities, and the nature of scientific change and progress.

Term Offered: Spring, Fall

PHIL 5400 Ethics Seminar

[3 credit hours]

Selected topics or philosophers in ethical theory. Course may be repeated as topics vary.

Term Offered: Spring

PHIL 5650 Philosophy Of Mind

[3 credit hours]

Advanced study of issues in the philosophy of mind such as: intentionality and misrepresentation, rationality and interpretation, supervenience and reductionism, folk psychology and eliminative materialism. Course may be repeated as topics vary.

Term Offered: Spring**PHIL 5750 Political Philosophy Seminar**

[3 credit hours]

Selected topics or philosophers in political philosophy. Course may be repeated as topics vary.

Term Offered: Spring, Fall**PHIL 5920 Readings In Philosophy**

[3 credit hours]

Critical inquiry into selected works of a particular philosopher or a specific philosophical problem.

Term Offered: Spring, Fall**PHIL 5990 Independent Study**

[1-3 credit hours]

Directed study in philosophy under supervision of a philosophy faculty member.

Term Offered: Spring, Summer, Fall**PHIL 6000 Advanced Logic**

[3 credit hours]

A study of propositional and predicate logic, as well as examination of issues in the philosophy of logic.

Term Offered: Spring, Fall**PHIL 6800 Proseminar**

[1-6 credit hours]

Participation in departmental faculty-graduate student colloquia and mentoring program. Credit will carry the grade of S or U, and will not count toward credit hour requirements for the M.A. degree.

Term Offered: Spring, Fall**PHIL 6930 Seminar**

[3 credit hours]

Advanced philosophy seminar open only to graduate students.

PHIL 6960 Thesis

[1-16 credit hours]

M.A. in Philosophy

The Department of Philosophy offers a two-year program of study towards the completion of Master of Arts degree in Philosophy. Prior experience in academic philosophy is preferred, but admissions are open to qualified students with undergraduate degrees in any discipline. This program is designed to prepare students for higher level graduate study in philosophy and related fields as well as prepare students to teach philosophy in graduate school or at the community college level.

Our degree program includes both a thesis option (which includes an extended written treatment of a topic in the candidate's area of specialization) and an exam option (which involves additional courses and a qualifying exam in an area of specialization). Both tracks require a minimum of 33 credit hours. Students may opt for either track, though

students who do not pass the thesis proposal defense must satisfy the exam requirements to complete their MA.

For the degree of Master of Arts, students must meet the following departmental requirements:

Thesis Option

- Completion of at least 27 semester hours of graduate credit in courses offered by the department of philosophy;
- Pass a qualifying or prospectus examination in the area of the student's thesis;
- A written thesis for 6 semester hours of credit;
- An oral examination covering the material of the student's thesis and a general competency in the subject areas relevant to the thesis.

EXAM Option

- Completion of 33 semester hours of graduate credit in courses offered by the department of philosophy, excluding readings and research courses;
- Completion of an examination in one sub-field or area of competency in contemporary philosophy chosen by the student in consultation with the faculty.

For Both Options

- Completion of PHIL 3000 or PHIL 6000 (or its equivalent or satisfied as an undergraduate);
- Completion of PHIL 3210 and PHIL 3230 (or their equivalents in the student's undergraduate program);
- Completion of at least 42 semester hours of graduate and undergraduate credit in philosophy.

Students must also satisfy the requirements of the College of Graduate Studies as specified in the graduate student handbook.

Historical Engagement: Students will explain and analyze a variety of figures, concepts, and traditions in the history of philosophy.

Analysis and Expression: Students will analyze and evaluate problems in accordance with disciplinary norms of clarity, interpretation, and argumentation; students will be able to present and explain both their own and others reasoning in written and oral formats.

Critical Engagement: Students will explain and evaluate positions in relation to historical and intellectual context and assumptions

Specialization: Students will make an original contribution to a recognized area of contemporary philosophical research.

Formal Symbolic Systems: Students will recognize and apply relevant techniques of formal logic.

Professional Development: Students will develop and teach a syllabus for at least one Gen Ed course offered by the department.

Department of Political Science and Public Administration

Sam Nelson, Chair

Jami Taylor, Director, M.P.A. Program

The master of public administration (MPA) is a professional degree for those pursuing administrative careers in government and nonprofit

organizations. The program can be done on a part-time or full-time basis. It is an appropriate degree path for recent college graduates to those in mid-career who are looking to bolster their credentials or make a career change. The required classes emphasize traditional public management concerns like human resources, budgeting, law, quantitative analysis, and policymaking. With elective courses, students may choose to specialize in municipal governance, nonprofit management, urban and regional planning, geographic information systems (GIS), data analytics, or health care policy and administration.

Degrees Offered

- Graduate Certificate in Health Care Policy and Administration (p. 39)
- Graduate Certificate in Management of Non-Profit Organizations
- Graduate Certificate in Municipal Administration
- Joint J.D./M.P.A. Degree (p. 40)
- Master of Public Administration (p. 41)

PSC 5220 Advocacy Groups in US Politics

[3 credit hours]

This course investigates the role of advocacy groups in American politics. It develops practical lobbying skills through experiential learning and covers topics such as the role of advocacy groups in campaigns and elections, grass roots mobilization, and agenda setting.

Term Offered: Spring, Fall

PSC 5230 Presidency

[3 credit hours]

The nomination, election, responsibilities and performance of the American president. The course includes decision making, policy making, personality, and relations with Congress, the Courts, news media and interest groups.

Term Offered: Spring

PSC 5280 Legislative Process

[3 credit hours]

An intensive study of the development, functions, committees, party and factional organizations of the U.S. Congress, state legislatures and non-American legislative bodies.

Term Offered: Summer, Fall

PSC 5300 Principles of Public Administration

[3 credit hours]

This course provides an overview of public administration. It addresses organization theory, decision making, budgeting, public policy, and the changing role of public institutions. It covers important democratic, professional, ethical and human values that are central to public administration.

PSC 5320 Urban Policy & Administration

[3 credit hours]

What does it take to govern a city and its environs? In this course, we examine the balance between the pressing needs of a city and the many economic and political constraints that citizens, leaders, and experts must navigate to achieve their goals.

Term Offered: Spring, Summer, Fall

PSC 5340 Environmental Policy And Administration

[3 credit hours]

Policy for air and water pollution control, hazardous wastes, nuclear wastes. Examination of EPA, Congressional committees, state and city agencies as well as some international issues.

Term Offered: Fall

PSC 5360 Ethics In Public Policy And Administration

[3 credit hours]

Examination of values and principles which guide public policy formation and public administration. Applications of philosophical concepts to policy problems and the responsibilities of public administrators will be emphasized.

Term Offered: Spring, Summer, Fall

PSC 5380 Fundraising

[3 credit hours]

This course examines the theoretical, practical and ethical issues related to public and nonprofit organizations fundraising. This course will prepare students who plan to work in public and nonprofit organizations to win and manage grants as well as philanthropic donations from multiple sources.

Term Offered: Spring, Summer, Fall

PSC 5390 Applied Politics Internship

[3 credit hours]

A study of electoral politics, public decision-making or policy implementation through internships with candidates, political parties, public officials or governmental or nonprofit agencies.

Term Offered: Spring, Summer, Fall

PSC 5410 Public and Nonprofit Management

[3 credit hours]

This course examines management techniques, organizational design, strategic planning and the theoretical and practical behavioral skills that are necessary for effective public and nonprofit management. These skills include communication, organizational, and leadership skills within public and nonprofit organizations.

Term Offered: Spring, Summer, Fall

PSC 5430 Human Resources Management in Public and Nonprofit Organizations

[3 credit hours]

This course is a study of human resource management in public and nonprofit organizations. The course explores broad themes within public personnel administration such as recruitment, retention, motivation, and diversity to provide students with the opportunity to develop technical skills necessary for effectively managing human resources in contemporary public agencies, including government and nonprofit organizations.

Term Offered: Spring, Summer, Fall

PSC 5440 Budgeting And Financial Administration

[3 credit hours]

An examination of the institutions and techniques of financial administration, including government accounting, budgeting, financial management and government choice.

Term Offered: Spring, Summer, Fall

PSC 5480 Introduction to Nonprofits

[3 credit hours]

This course provides an overview of the voluntary sector with an emphasis on the historical, philosophical, and theoretical justifications of the nonprofit sector, voluntary action, and philanthropy. The course will explore the administration and management of nonprofit organizations as well as the impact nonprofit organizations have on public policy.

Term Offered: Spring, Summer, Fall**PSC 5530 Civil Rights**

[3 credit hours]

A study of policy-making and implementation related to issues of race, gender and sexual orientation.

Term Offered: Summer, Fall**PSC 5550 Contemporary Issues In Law and Politics**

[3 credit hours]

Examines current controversies in U.S. law and politics, drawing on recent research in political theory, constitutional history, and legal doctrine. Includes issues such as freedom of speech, presidential powers, and religious freedom.

Term Offered: Spring**PSC 5560 Law And Public Administration**

[3 credit hours]

Survey of law topics that are relevant for managers of public and nonprofit organizations.

Term Offered: Spring, Summer, Fall**PSC 5580 International Law**

[3 credit hours]

A study of the legal system governing interstate relations. Cases will be reviewed. State jurisdiction and responsibilities will be examined, emphasizing the rules of war.

PSC 5590 Law, Policy And The Politics of Sexuality

[3 credit hours]

This course explores the public policies that affect the lesbian, gay, bisexual and transgender communities in the United States and in other countries. It examines the factors that affect policymaking in this area.

Term Offered: Spring, Fall**PSC 5640 The European Union**

[3 credit hours]

An analysis of the evolution, institutional structure and operation of the European Unions.

Term Offered: Spring**PSC 5650 International Political Economy**

[3 credit hours]

An analysis of the interaction of the international political and economic systems with focus on the political aspects of the international economy. Topics include economic development, interdependence, trade and multilateral institutions.

PSC 5680 Politics of Latin America

[3 credit hours]

This course provides a survey of the Latin American region, its political transformation, and place in international politics. It covers an array of issues that have shaped and continue to shape the region: its history, its people, institutions and politics, and social and economic issues. Themes are approached both from a regional and country-level perspective.

PSC 5710 Theories Of International Politics

[3 credit hours]

An analysis of the leading approaches to the study of international politics that contribute to the construction of a general theory.

PSC 5720 International Organizations

[3 credit hours]

A study of the background, aims, purposes and problems of international organizations. An examination of the functions of the specialized agencies and other organizations of the United Nations system.

Term Offered: Fall**PSC 5740 International Relations - Middle East**

[3 credit hours]

A survey of geopolitical, economic and sociocultural factors affecting foreign policy processes; an examination of the role of the Big Powers and the United Nations. Conferences with the instructor are required.

PSC 5750 Terrorism in International Relations

[3 credit hours]

This course will give students a comparative historical, empirical, and theoretical overview of the causes, strategies, and goals of terrorists and counter-terrorism. The primary focus of the course is on the comparative and international nature of terrorism. Global and regional case studies will be used to better understand issues related to terrorism.

PSC 5950 Mpa Research Report

[2 credit hours]

Independent research, under the direction of a faculty adviser, analyzing experience as a public official.

Term Offered: Spring, Summer, Fall**PSC 5980 Current Topics In Political Science**

[3 credit hours]

Examination of emerging issues within the various segments and subfields of the discipline of political science.

Term Offered: Spring, Fall**PSC 5990 Independent Study In Political Science**

[1-3 credit hours]

Individual study in selected topic.

Term Offered: Spring, Summer, Fall**PSC 6110 Public Policy Methods and Analysis**

[3 credit hours]

This course explores research methodology as used in public affairs and public administration. We will analyze political phenomena in a rigorous and scientific manner and connect research methods to practice of administration. Topics include research design, research ethics, quantitative and qualitative methodological approaches, basic statistical techniques for data analysis through measures of association and regression. By doing so, this course assists in the professional development of in-service and pre-service practitioners of public management.

Term Offered: Spring, Summer, Fall

PSC 6420 Program Evaluation

[3 credit hours]

Evaluating the effectiveness of programs and policies is an essential component of public, nonprofit and private sector management. This class is an introduction to the field of program evaluation. Evaluation uses research methodology to investigate the formation, implementation and administration of public policies and public programs.

Term Offered: Spring, Summer, Fall

PSC 6430 Public Policy Process

[3 credit hours]

Application of current theories of the public policy process to current issues in public policy and management. Emphasis on the dominant theories of the process, including policy streams, advocacy coalitions, punctuated equilibrium, institutional and rational choice models.

Term Offered: Spring, Summer, Fall

PSC 6490 Public Administration Capstone

[2 credit hours]

This course concludes the MPA curriculum at the University of Toledo. It is designed to integrate theoretical and practical knowledge to help students further their public and non-profit sector careers.

Term Offered: Spring, Summer, Fall

PSC 6940 Professional Experience

[1 credit hour]

Professional experience, such as an internship or professional project, in public or nonprofit agency and preparation for the MPA Capstone course.

Term Offered: Spring, Summer, Fall

PSC 6960 Thesis Seminar

[1-6 credit hours]

Supervision of master's thesis writing.

Term Offered: Spring, Summer, Fall

Graduate Certificate in Health Care Policy and Administration

1. Identify and describe best practices in the management of health care related organizations.
2. Understand healthcare related policymaking.
3. Understand how health care policy in the United States affects health care related organizations.

Certificate in Management of Non-Profit Organizations

This program is intended both for professionals already working or volunteering in the nonprofit sector, and for students without professional experience who seek to prepare themselves for nonprofit careers.

The fundamental organizational and management principles provided by this program can be used by leaders in the nonprofit sector to strengthen both their systems and service delivery. The Certificate will prepare students to lead and administer nonprofit organizations as paid staff, directors, board members, philanthropists or volunteers in human-service, cultural, educational, religious and community organizations. In addition, students in the MPA and other graduate programs can use their elective hours to earn this certificate.

The nonprofit management certificate consists of 12 graduate credit hours of which 6 hours are from required courses:

Code	Title	Hours
PSC 5410	Public and Nonprofit Management	3
PSC 5480	Introduction to Nonprofits	3
Select 2 of the following:		
PSC 5220	Advocacy Groups in US Politics	
PSC 5380	Fundraising	
PSC 5430	Human Resources Management in Public and Nonprofit Organizations	
MKTG 5170	Marketing For Non-Profit Organizations	
THR 5250	Administration and Management of the Arts	
THR 5260	Promoting the Visual and Performing Arts	
Other related course approved by the MPA director		

Currently enrolled MPA students may not apply their required courses (PSC 5430 and PSC 5440) toward this certificate.

First Term		Hours
PSC 5480	Introduction to Nonprofits	3
PSC 5430	Human Resources Management in Public and Nonprofit Organizations	3
Hours		6
Second Term		
PSC 5380	Fundraising	3
PSC 5410	Public and Nonprofit Management	3
Hours		6
Total Hours		12

1. Identify and describe best practices in the management of nonprofit organizations.
2. Identify and describe challenges and opportunities facing nonprofit organizations in the 21st century.
3. Identify, define, and demonstrate skills necessary for effectively managing nonprofit organizations.

Certificate in Municipal Administration

The primary purpose of this certification is to strengthen the professional management skills of personnel in responsible local government administrative positions. These include supervisors, department heads, administrative assistants and others who need more management training to enhance their career prospects. Students in the M.P.A. program may also use their electives to receive this certificate. In addition, this certificate program is appropriate for graduate students in geography and planning and civil engineering who wish to improve their knowledge of administration.

Municipal Administration Certificate (12 hours of which 6 hours are from required courses)

- PSC 5320 Urban Politics and Administration (3 hours, *required*)
- PSC 5360 Ethics in Public Administration (3 hours)
- PSC 5410 Public and Nonprofit Management (3 hours, *required*)
- PSC 5430 Human Resources Management in Public and Nonprofit Organizations (3 hours)
- PSC 5440 Budgeting and Financial Administration (3 hours)
- PSC 6420 Program Evaluation (3 hours)
- PSC 6430 Public Policy Process (3 hours)
- GEPL 5110 Geographic Information Systems (3 hours)
- GEPL 5180 Geographic Information Systems Applications (3 hours)
- GEPL 5210 Land Use Planning (3 hours)
- GEPL 5530 Principles of Urban Planning (3 hours)
- GEPL 5750 Transportation Geography (3 hours)
- Other related graduate electives approved by the MPA director

Currently enrolled MPA students may not apply their required courses (PSC 5430, PSC 5440 and PSC 6430) toward this certificate.

3. Identify, define, and demonstrate skills necessary for effectively managing municipal governments.

Joint J.D./M.P.A. Degree

The J.D./M.P.A. dual degree program offers graduate students the opportunity to earn two graduate degrees evidencing the completion of the curriculum for the juris doctor (J.D.) from the College of Law and the curriculum for the master of public administration (M.P.A.) from the College of Arts and Letters department of political science and public administration. The program is administered jointly by the College of Law and the department of political science and public administration. The program is designed for students who wish to be effective in

administrative and regulatory positions in public and in private, nonprofit organizations.

To be admitted to the J.D./M.P.A. program, a student must first be admitted to both the College of Law and the M.P.A. program in the department of political science and public administration. The student must qualify for admission to each degree program, make separate application for admission to each program, and be admitted to each program in order to be eligible for the J.D./M.P.A. program. After admission to the College of Law and the M.P.A. program in the department of political science and public administration, the student must be admitted to the J.D./M.P.A. program by the coordinating committee.

Juris Doctor: In order to qualify for the juris doctor from the College of Law, a student must comply with all the academic and nonacademic rules of the college, with respect to the admission process and during the period after initial enrollment in the college until the granting of the degree. The College of Law will grant credit toward the J.D. for certain courses taken in the department of political science and public administration under the J.D./M.P.A. program, as detailed below.

Master of Public Administration Degree: In order to be eligible for the M.P.A. degree from the department of political science and public administration in the College of Arts and Letters, a student must complete at least 12 graduate-level courses (36 credit hours), with an overall minimum GPA of 3.0. A student must complete any prerequisite courses and all required courses (except PSC 5560 Law and Administration from which College of Law students are exempt).

Master of Public Administration

Accepting new applicants for Fall 2021, click here to learn more (<https://www.utoledo.edu/Programs/grad/Public-Administration/>).

The Master of Public Administration (MPA) is a professional degree for those pursuing administrative careers in government and nonprofit organizations. The program serves part-time and mid-career, as well as full-time students.

Applicants to the MPA program must satisfy the following requirements:

1. An undergraduate degree with a minimum GPA of 2.5 calculated on a 4.0 basis or 5 years of relevant work experience;
2. GRE and TOEFL scores: GRE scores are not required. However, in addition to the requirements for regular admission, all applicants from non-English speaking countries must take either the Test of English as a Foreign Language Internet-Based Test (TOEFL iBT) or the International English Language Testing System (IELTS). Admission to graduate study in the Department of Political Science and Public Administration requires a TOEFL iBT score of at least 100 or a IELTS score of at least 7.0 overall;
3. Three letters of recommendation, which must be academically or employment related. These should be from individuals familiar with the applicant's academic abilities and professional goals. Applicants who obtained their undergraduate degrees in the last five years must submit at least one academic letter;
4. A thoughtfully drafted statement of purpose; and

5. Official transcripts from all previous colleges or universities you have attended (both graduate and undergraduate).

Early Admission to M.A. in Political Science and Master of Public Administration Programs

Applicants to the MPA program must satisfy the following requirements:

1. An undergraduate degree with a minimum GPA of 2.5 calculated on a 4.0 basis or 5 years of relevant work experience;
2. GRE and TOEFL scores: GRE scores are not required. However, in addition to the requirements for regular admission, all applicants from non-English speaking countries must take either the Test of English as a Foreign Language Internet-Based Test (TOEFL iBT) or the International English Language Testing System (IELTS). Admission to graduate study in the Department of Political Science and Public Administration requires a TOEFL iBT score of at least 100 or a IELTS score of at least 7.0 overall;
3. Three letters of recommendation, which must be academically or employment related. These should be from individuals familiar with the applicant's academic abilities and professional goals. Applicants who obtained their undergraduate degrees in the last five years must submit at least one academic letter;
4. A thoughtfully drafted statement of purpose; and
5. Official transcripts from all previous colleges or universities you have attended (both graduate and undergraduate).

Description

The Early Admission option allows advanced undergraduates to enroll for graduate level-credit in up to 9 hours of 5000-level classes that will simultaneously contribute towards their bachelor's degree and their Master of Public Administration degree. Students accepted in the Early Admission Program receive both graduate and undergraduate credit for these classes; undergraduate instructional fees will apply to these courses.

Eligibility

To be eligible for the Early Admission program, students must:

- Major in any social science bachelor's degree program and/or be enrolled in another bachelor's degree program and minor in political science or public administration.
- Grade point average: For students majoring or minoring in Political Science or minoring in Public Administration a minimum GPA of 3.0 and a 3.2 GPA within the major/minor is required. For other social science majors, a cumulative GPA of 3.2 is required. Grade point average shall be calculated solely on University of Toledo earned credits.
- Undergraduate advisor's approval
- Permission of the Political Science department chair
- Permission of the MPA program director
- Have at least junior standing when applying for the program.

Application Process

To apply for the Early Admission program, students should submit to the Chair of the Department of Political Science and Public Administration (email: sam.nelson@utoledo.edu):

1. An application for Early Admission (See <https://www.utoledo.edu/al/pspa/pdfs/MPAEarlyAdmissionsApplication.pdf>)
2. A letter of interest (which may be reused in the graduate school application)
3. Two letters of recommendation (from an undergraduate advisor and one undergraduate course instructor)
4. After initial approval from the Chair of the Department of Political Science and Public Administration and MPA Director, students must also apply for admission to the College of Graduate Studies for the semester in which they intend to matriculate. See <https://www.utoledo.edu/graduate/apply/>

Students accepted into this option will initially be granted provisional graduate admission to allow them to enroll in 5000-level courses that are approved for the MPA program. To receive dual (undergraduate and graduate) credit, the following conditions apply:

- Courses must be taken at The University of Toledo after acceptance into the Early Admission option.
- Only 5000-level courses that are approved for the MPA program may be taken.
- Students must complete all graduate-level requirements in the course and be evaluated by the same criteria as graduate students.
- Students complete a graduate plan of study indicating courses that will receive graduate and undergraduate credit.

Degree Requirements

The MPA is a graduate program comprised of 36 hours. 21 hours of required courses are:

Code	Title	Hours
PSC 5300	Principles of Public Administration	3
PSC 5430	Human Resources Management in Public and Nonprofit Organizations	3
PSC 5440	Budgeting And Financial Administration	3
PSC 5560	Law And Public Administration	3
PSC 6110	Public Policy Methods and Analysis	3
PSC 6430	Public Policy Process	3
PSC 6490	Public Administration Capstone	2
PSC 6940	Professional Experience	1
Electives (15 hours of 5000 or 6000 MPA related electives) from the list of MPA electives. Students develop a coherent area of focus with courses selected in consultation with the MPA director:		15
PSC 5220	Advocacy Groups in US Politics	
PSC 5320	Urban Policy & Administration	
PSC 5340	Environmental Policy And Administration	
PSC 5360	Ethics In Public Policy And Administration	
PSC 5380	Fundraising	
PSC 5410	Public and Nonprofit Management	
PSC 5480	Introduction to Nonprofits	

PSC 6420	Program Evaluation
DST 6600	Disability Ethics and Policy
ECON 5620	Regional Economics
ECON 5660	Public Finance Economics
ECON 5750	Health Economics
ECON 5810	Econometrics Models And Methods I
ECON 5820	Econometrics Models And Methods II

Total Hours		36

At the end of the program, students will be able to:

- lead and manage in public governance;
- participate in and contribute to the policy process;
- analyze, synthesize, think critically, solve problems and make decisions;
- articulate and apply a public service perspective;
- communicate and interact productively with a diverse and changing workforce and citizenry.

Department of Psychology

Kim Gratz, Chair

Peter Mezo, Associate Chair

Jason Rose, Experimental Program Coordinator

Sarah Francis, Director of Clinical Training

The Psychology department features a nationally-ranked and APA-accredited clinical psychology doctoral program (<https://www.utoledo.edu/al/psychology/grad/clinical/>), as well as a nationally-

ranked experimental doctoral program (<https://www.utoledo.edu/al/psychology/grad/experimental/>) that provides training in social psychology, developmental psychology, cognitive psychology, and psychobiology and learning. Students in both programs also have multiple opportunities for advanced integrative training in clinical and experimental psychology through our joint mentoring program (<https://www.utoledo.edu/al/psychology/pdfs/resources/Joint%20Mentoring%20Guidelines.pdf>) and minor specializations (https://www.utoledo.edu/al/psychology/pdfs/minors/Graduate%20Minors%20in%20Psychology_F2019.pdf) in quantitative psychology, health psychology, and experimental psychopathology.

Degrees Offered

- M.A. in Psychology (p. 50)
- PhD in Psychology (p. 51)

PSY 5000 History Of Psychology

[3 credit hours]

An historical treatment of the development of modern psychology, starting in the mid 19th century, with some consideration of earlier approaches. Theoretical developments are emphasized.

Prerequisites: PSY 1010 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PSY 6000 History Of Psychology

[3 credit hours]

Intensive historical treatment of the development of modern psychology from the 19th century. Theoretical psychological and related philosophical positions are emphasized.

PSY 6030 Research Practicum

[1-3 credit hours]

Developing, conducting, analyzing and preparing reports of research projects under faculty supervision. May be repeated.

Term Offered: Spring, Summer, Fall

PSY 6040 Teaching Practicum

[3 credit hours]

Supervised experience in the teaching of psychology. May be repeated for credit.

Term Offered: Fall

PSY 6050 Culture And Psychology

[3 credit hours]

A theoretical and empirical analysis of the systematic functioning of culture in psychological phenomena, with a focus on key concepts in clinical, cognitive, developmental and social psychology.

Term Offered: Spring

PSY 6070 The Science of Emotion

[3 credit hours]

An integrative course focusing on emotion in the context of affective and biological aspects of behavior.

Term Offered: Spring, Summer, Fall

PSY 6080 Grant Writing in Psychology

[3 credit hours]

Provides an overview of the federal grant writing process in Psychology.

Term Offered: Spring, Summer, Fall

PSY 6100 Quantitative Methods In Psychology I

[3 credit hours]

Probability theory, descriptive and inferential statistics, hypothesis testing, correlation.

Term Offered: Spring, Summer, Fall

PSY 6110 Quantitative Methods In Psychology II

[3 credit hours]

Analysis of variance, regression analyses, non-parametric analyses.

Term Offered: Spring, Fall

PSY 6130 Design And Evaluation Of Psychological Research

[3 credit hours]

Readings and discussion of problems of research design and analysis.

Term Offered: Fall

PSY 6150 Psychometrics and Scale Development

[3 credit hours]

Procedures for developing and examining the reliability and validity of test scales, including theories of measurement, item analysis, factor analysis, and diagnostic efficiency statistics.

Prerequisites: PSY 6100 with a minimum grade of D- and PSY 6110 with a minimum grade of D-

Term Offered: Spring

PSY 6160 Advanced Research Seminar in Psychology

[3 credit hours]

Advanced research seminar focusing on selected topics from the general science of psychology.

Prerequisites: PSY 6130 with a minimum grade of B- and PSY 7130 with a minimum grade of B-

Term Offered: Spring, Summer, Fall

PSY 6200 Systems Of Personality

[3 credit hours]

Advanced historical overview of the main systems for understanding human beings: sources of motivation, coping, dysfunction, strengths/virtues. Emphasizes philosophical understandings of personality systems, analysis of major contributions and multi-perspective critiques.

Term Offered: Spring, Fall

PSY 6210 Psychopathology

[3 credit hours]

Critical analysis of diagnostic classification models, etiological conceptualizations and therapeutic interventions form mental disorders.

Term Offered: Fall

PSY 6220 Cognitive Assessment

[4 credit hours]

Assessment of cognitive functioning, utilizing tests of cognitive abilities and achievement.

Term Offered: Spring, Fall

PSY 6230 Personality Assessment

[4 credit hours]

Assessment of personality functioning utilizing objective tests.

Prerequisites: PSY 6220 with a minimum grade of D-

Term Offered: Spring

PSY 6240 Assessment I

[4 credit hours]

This course is designed to provide clinical psychology doctoral students with the training to attain the profession-wide competency in assessment, as required by the APA Commission on Accreditation. Students will learn foundational skills in psychometrics and integrative multimethod assessment in the process of learning to administer, score, interpret, and communicate about the most commonly used standardized measures for behavioral and cognitive assessment in order to be prepared to engage in evidence-based assessment practice.

Corequisites: PSY 6290, PSY 6360

Term Offered: Fall

PSY 6250 Seminar In Clinical Psychology

[3 credit hours]

Advanced seminar focusing on selected topics from the general area of clinical psychology. -001 Clinical neuropsychology -002 Child psychopathology -003 Child Clinical Intervention -004 Marital & Family Therapy -005 Psychotherapy research & program evaluation.

Term Offered: Spring, Summer, Fall

PSY 6260 Professional And Ethical Issues

[3 credit hours]

Exploration of ethical and professional issues faced by clinical psychologists. Detailed analysis of the American Psychological Association's Ethical Principles of Psychologists and Code of Conduct.

Term Offered: Spring, Fall

PSY 6280 Assessment II

[4 credit hours]

This course is designed to provide clinical psychology doctoral students with the training to attain the profession-wide competency in assessment, as required by the APA Commission on Accreditation. Students will learn foundational skills in psychometrics and integrative multimethod assessment in the process of learning to administer, score, interpret, and communicate about the most commonly used standardized measures for neuropsychological and personality and psychopathology assessment in order to be prepared to engage in evidence-based assessment practice.

Prerequisites: PSY 6240 with a minimum grade of D-

Corequisites: PSY 6300, PSY 6370

Term Offered: Spring

PSY 6290 Foundations of Clinical Practice I

[3 credit hours]

The goal of this course is to provide an introduction to the basic clinical skills needed to conduct intake assessments and provide therapy. Foundational clinical skills central to all forms of assessment and therapy will be reviewed and practiced, and basic tenets of professionalism and ethics relevant to clinical psychology will be discussed. Application of skills to diverse populations and cultural competence considerations for assessment and therapy will also be discussed.

Corequisites: PSY 6240, PSY 6360

Term Offered: Fall

PSY 6300 Foundations of Clinical Practice II

[3 credit hours]

The goal of this course is to provide a continued introduction, building upon the content of PSY 6300 Foundations of Clinical Practice I, to the basic clinical skills needed to conduct intake and diagnostic assessments, administer structured diagnostic interviews, and provide therapy. Foundational clinical skills central to all forms of assessment and therapy will be reviewed and practiced, including assessment and treatment techniques relevant to vulnerable and at-risk groups.

Prerequisites: PSY 6290 with a minimum grade of D-**Corequisites:** PSY 6280, PSY 6370**Term Offered:** Spring**PSY 6310 Psychotherapy With Children And Adolescents**

[3 credit hours]

Presentation and explanation of techniques of psychotherapy with children and adolescents.

Prerequisites: PSY 6390 with a minimum grade of D-**Term Offered:** Fall**PSY 6330 Psychodynamic Psychotherapy**

[3 credit hours]

Didactic course covering psychoanalytic/psychodynamic theories, case conceptualization, therapy techniques, and relevant empirical research.

Term Offered: Spring, Fall**PSY 6340 Cognitive-Behavioral Psychotherapy**

[3 credit hours]

Presentation and exploration of the theory and techniques of cognitive-behavioral assessment and therapy. Emphasis on understanding the theoretical and empirical base for cognitive-behavioral interventions and implications for application in clinical and clinical-research settings.

Term Offered: Spring**PSY 6350 Family And Couple Therapy**

[3 credit hours]

Presentation and exploration of family and couple therapy as a discipline, theoretical perspectives and empirical research on couple/family interaction and therapeutic techniques used with families and couples.

Prerequisites: PSY 6390 with a minimum grade of D-**Term Offered:** Fall**PSY 6360 Foundations of Psychotherapy I**

[3 credit hours]

This course is designed to provide a basis for the attainment of the profession-wide competency of intervention, with a specific focus on preparing students to develop competence in evidence-based interventions consistent with the scope of Health Service Psychology. This course will present an overview of psychopathology and various classification models of the major disorder areas, as well as provide an introduction to the major theories of psychology and the principles underlying behavioral and cognitive therapy.

Corequisites: PSY 6240, PSY 6290**Term Offered:** Fall**PSY 6370 Foundations of Psychotherapy II**

[3 credit hours]

This course is designed to provide a basis for the attainment of the profession-wide competency of intervention, with a specific focus on preparing students to develop competence in evidence-based interventions consistent with the scope of Health Service Psychology. This course will present an overview of and foundational knowledge relevant to four key areas of psychological intervention: (1) Cognitive Behavioral Therapy, (2) Family and Couple Therapy, (3) Psychodynamic Psychotherapy, and (4) Child and Adolescent Therapy.

Prerequisites: PSY 6360 with a minimum grade of D-**Corequisites:** PSY 6280, PSY 6300**Term Offered:** Spring**PSY 6380 Empirically Supported Interventions and Processes of Change**

[3 credit hours]

This course is designed to provide advanced knowledge in empirically-supported interventions in clinical psychology. Specifically, this course will provide in-depth instruction in the use of psychological interventions for treatment numerous psychological conditions. All interventions or approaches taught in this course have been well researched with substantial data existing to support their effectiveness.

Prerequisites: PSY 6240 with a minimum grade of D- and PSY 6280 with a minimum grade of D- and PSY 6290 with a minimum grade of D- and PSY 6300 with a minimum grade of D- and PSY 6360 with a minimum grade of D- and PSY 6370 with a minimum grade of D-

Term Offered: Spring, Fall**PSY 6390 Clinical Laboratory**

[3 credit hours]

Clinical interviewing, diagnostic assessment, case conceptualization and oral presentation of clinical cases. Diagnostic, therapeutic and professional issues are addressed via didactic coursework and practicum work with clients in the Psychology Clinic.

Term Offered: Spring**PSY 6400 Cognitive Psychology**

[3 credit hours]

An intensive examination of human information processing. Topics include neural bases of cognition, perceptual and attentional processing, mental imagery, memory, problem solving and reasoning.

Term Offered: Spring, Summer, Fall**PSY 6410 Seminar In Cognitive Psychology**

[3 credit hours]

An advanced seminar focusing on selected topics from the general area of Cognitive Psychology.

Term Offered: Spring, Fall**PSY 6500 Developmental Psychology**

[3 credit hours]

Advanced treatment of the theoretical and empirical literature in developmental psychology, and of the major issues of the field.

Term Offered: Spring, Fall**PSY 6510 Seminar In Developmental Psychology**

[3 credit hours]

Readings and evaluative discussions of the primary research literature in developmental psychology.

Prerequisites: PSY 6500 with a minimum grade of D-**Term Offered:** Spring, Fall

PSY 6600 Behavioral Neuroscience

[3 credit hours]

Structure and function of neurons and the neural mediation of behavior, both normal and abnormal.

Term Offered: Summer

PSY 6610 Seminar In Psychobiology And Learning

[3 credit hours]

Readings and evaluative discussions of the primary research literature in psychobiology, behavioral neuroscience, neuroanatomy, learning, motivation and perception.

Term Offered: Fall

PSY 6700 Social Psychology

[3 credit hours]

Social cognition and behavior, interpersonal influence and social relations will be addressed.

Term Offered: Spring, Fall

PSY 6710 Seminar In Social Psychology

[3 credit hours]

In-depth treatment of selected topics in Social Psychology.

Term Offered: Spring, Fall

PSY 6720 Social Cognition

[3 credit hours]

This course examines how people make sense of other people, themselves, and social situations by examining the cognitive structures and processes involved in judgments, decisions, perceptions, beliefs, and behavior. The topics include (but are not limited to) attribution, counterfactual thinking, judgment heuristics, schemas, person perception, attitudes, and stereotypes/prejudice.

Term Offered: Spring, Fall

PSY 6810 Clinical Practicum I

[0 credit hours]

This first-year practicum course includes observation of and entry-level participation in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D-

Term Offered: Spring, Fall

PSY 6820 Clinical Practicum II

[3 credit hours]

This second-year practicum course includes participation, as a beginning student therapist, in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D-

PSY 6830 Clinical Practicum III

[3 credit hours]

This third-year practicum course includes participation, as an experienced student therapist, in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D- and PSY 6810 with a minimum grade of D- and PSY 6820 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PSY 6840 Clinical Practicum IV

[1-3 credit hours]

This fourth-year practicum course includes participation, as a senior-level student therapist, in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D- and PSY 6810 with a minimum grade of D- and PSY 6820 with a minimum grade of D- and PSY 6830 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PSY 6850 Family And Couple Practicum

[3 credit hours]

Supervision of psychotherapy with families and couples seen through The University of Toledo Psychology Clinic.

Term Offered: Spring, Fall

PSY 6860 Advanced Assessment Practicum

[3 credit hours]

Clinical supervision of psychological assessments using multiple methods of assessment with clients seen through The University of Toledo Psychology Clinic.

Prerequisites: PSY 6210 with a minimum grade of D- and PSY 6220 with a minimum grade of D- and PSY 6230 with a minimum grade of D-

Term Offered: Spring, Fall

PSY 6930 Seminar In Psychology

[3 credit hours]

Readings and evaluative discussions of the primary research literature in psychology.

Term Offered: Spring, Fall

PSY 6940 Supervised Clinical Practicum

[1-3 credit hours]

Supervised applied assessment, therapeutic and consultative experience in community settings.

Term Offered: Summer, Fall

PSY 6950 Community Placement in Clinical Psychology

[0 credit hours]

The Externship in Clinical Psychology is a field placement program in which students are placed in structured clinical service settings with psychologists and other behavioral healthcare providers. Students obtain supervised clinical training in the application of basic clinical psychological service skills.

Term Offered: Spring, Summer, Fall

PSY 6960 M.a. Thesis

[1-6 credit hours]

Developing, conducting and analyzing the thesis research project, writing the thesis.

Term Offered: Spring, Summer, Fall

PSY 6980 Special Topics

[1-3 credit hours]

Professional issues in academic and scientific psychology.

Term Offered: Spring, Summer, Fall

PSY 6990 Independent Study

[1-15 credit hours]

Directed reading and/or experimentation on a topic selected by the study in conjunction with a faculty mentor.

Term Offered: Spring, Summer, Fall

PSY 7000 History Of Psychology

[3 credit hours]

Intensive historical treatment of the development of modern psychology from the 19th century. Theoretical psychological and related philosophical positions are emphasized.

PSY 7030 Research Practicum

[1-3 credit hours]

Developing, conducting, analyzing and preparing reports of research projects under faculty supervision. May be repeated.

Term Offered: Spring, Summer, Fall

PSY 7040 Teaching Practicum

[3 credit hours]

Supervised experience in the teaching of psychology. May be repeated for credit.

Term Offered: Spring, Fall

PSY 7050 Culture And Psychology

[3 credit hours]

A theoretical and empirical analysis of the systematic functioning of culture in psychological phenomena, with a focus on key concepts in clinical, cognitive, developmental and social psychology.

Term Offered: Spring

PSY 7070 The Science of Emotion

[3 credit hours]

An integrative course focusing on emotion in the context of affective and biological aspects of behavior.

Term Offered: Spring, Summer, Fall

PSY 7080 Grant Writing in Psychology

[3 credit hours]

Provides an overview of the federal grant writing process in Psychology.

Term Offered: Spring, Summer, Fall

PSY 7100 Quantitative Methods In Psychology I

[3 credit hours]

Probability theory, descriptive and inferential statistics, hypothesis testing, correlation.

Term Offered: Fall

PSY 7110 Quantitative Methods In Psychology II

[3 credit hours]

Analysis of variance, regression analyses, non-parametric analyses.

Term Offered: Spring, Fall

PSY 7130 Design And Evaluation Of Psychological Research

[3 credit hours]

Readings and discussion of problems of research design and analysis.

Term Offered: Fall

PSY 7150 Psychometrics and Scale Development

[3 credit hours]

Procedures for developing and examining the reliability and validity of test scales, including theories of measurement, item analysis, factor analysis, and diagnostic efficiency statistics.

Prerequisites: PSY 7100 with a minimum grade of D- and PSY 7110 with a minimum grade of D-

PSY 7160 Advanced Research Seminar in Psychology

[3 credit hours]

Advanced research seminar focusing on selected topics from the general science of psychology.

Prerequisites: PSY 6130 with a minimum grade of B- and PSY 7130 with a minimum grade of B-

Term Offered: Spring, Summer, Fall

PSY 7200 Systems Of Personality

[3 credit hours]

Advanced historical overview of the main systems for understanding human beings: sources of motivation, coping, dysfunction, strengths/ virtues. Emphasizes philosophical understandings of personality systems, analysis of major contributions and multi-perspective critiques.

Term Offered: Spring, Fall

PSY 7210 Psychopathology

[3 credit hours]

Critical analysis of diagnostic classification models, etiological conceptualizations and therapeutic interventions form mental disorders.

Term Offered: Fall

PSY 7220 Cognitive Assessment

[4 credit hours]

Assessment of cognitive functioning, utilizing tests of cognitive abilities and achievement.

Term Offered: Spring, Fall

PSY 7230 Personality Assessment

[4 credit hours]

Assessment of personality functioning utilizing objective tests.

Prerequisites: PSY 6220 with a minimum grade of D- or PSY 7220 with a minimum grade of D-

Term Offered: Spring

PSY 7240 Assessment I

[4 credit hours]

This course is designed to provide clinical psychology doctoral students with the training to attain the profession-wide competency in assessment, as required by the APA Commission on Accreditation. Students will learn foundational skills in psychometrics and integrative multimethod assessment in the process of learning to administer, score, interpret, and communicate about the most commonly used standardized measures for behavioral and cognitive assessment in order to be prepared to engage in evidence-based assessment practice.

Corequisites: PSY 6290, PSY 6360

Term Offered: Fall

PSY 7250 Seminar In Clinical Psychology

[3 credit hours]

Advanced seminar focusing on selected topics from the general area of clinical psychology. -001 Clinical neuropsychology -002 Child psychopathology -003 Child Clinical Intervention -004 Marital & Family Therapy -005 Psychotherapy research & program evaluation.

Term Offered: Spring, Summer, Fall

PSY 7260 Professional And Ethical Issues

[3 credit hours]

Exploration of ethical and professional issues faced by clinical psychologists. Detailed analysis of the American Psychological Association's Ethical Principles of Psychologists and Code of Conduct.

Term Offered: Spring, Fall

PSY 7280 Assessment II

[4 credit hours]

This course is designed to provide clinical psychology doctoral students with the training to attain the profession-wide competency in assessment, as required by the APA Commission on Accreditation. Students will learn foundational skills in psychometrics and integrative multimethod assessment in the process of learning to administer, score, interpret, and communicate about the most commonly used standardized measures for neuropsychological and personality and psychopathology assessment in order to be prepared to engage in evidence-based assessment practice.

Prerequisites: PSY 7240 with a minimum grade of D-

Corequisites: PSY 7300, PSY 7370

Term Offered: Spring

PSY 7290 Foundations of Clinical Practice I

[3 credit hours]

The goal of this course is to provide an introduction to the basic clinical skills needed to conduct intake assessments and provide therapy. Foundational clinical skills central to all forms of assessment and therapy will be reviewed and practiced, and basic tenets of professionalism and ethics relevant to clinical psychology will be discussed. Application of skills to diverse populations and cultural competence considerations for assessment and therapy will also be discussed.

Corequisites: PSY 7240, PSY 7360

Term Offered: Fall

PSY 7300 Foundations of Clinical Practice II

[3 credit hours]

The goal of this course is to provide a continued introduction, building upon the content of PSY 6300 Foundations of Clinical Practice I, to the basic clinical skills needed to conduct intake and diagnostic assessments, administer structured diagnostic interviews, and provide therapy. Foundational clinical skills central to all forms of assessment and therapy will be reviewed and practiced, including assessment and treatment techniques relevant to vulnerable and at-risk groups.

Prerequisites: PSY 7290 with a minimum grade of D-

Corequisites: PSY 7280, PSY 7370

Term Offered: Spring

PSY 7310 Psychotherapy With Children And Adolescents

[3 credit hours]

Presentation and explanation of techniques of psychotherapy with children and adolescents.

Prerequisites: PSY 6390 with a minimum grade of D-

Term Offered: Fall

PSY 7330 Psychodynamic Psychotherapy

[3 credit hours]

Didactic course covering psychoanalytic/psychodynamic theories, case conceptualization, therapy techniques, and relevant empirical research.

Prerequisites: PSY 7390 with a minimum grade of D-

Term Offered: Spring, Fall

PSY 7340 Cognitive-Behavioral Psychotherapy

[3 credit hours]

Presentation and exploration of the theory and techniques of cognitive-behavioral assessment and therapy. Emphasis on understanding the theoretical and empirical base for cognitive-behavioral interventions and implications for application in clinical and clinical-research settings.

Term Offered: Spring

PSY 7350 Family And Couple Therapy

[3 credit hours]

Presentation and exploration of family and couple therapy as a discipline, theoretical perspectives and empirical research on couple/family interaction and therapeutic techniques used with families and couples.

Prerequisites: PSY 6390 with a minimum grade of D-

Term Offered: Fall

PSY 7360 Foundations of Psychotherapy I

[3 credit hours]

This course is designed to provide a basis for the attainment of the profession-wide competency of intervention, with a specific focus on preparing students to develop competence in evidence-based interventions consistent with the scope of Health Service Psychology. This course will present an overview of psychopathology and various classification models of the major disorder areas, as well as provide an introduction to the major theories of psychology and the principles underlying behavioral and cognitive therapy.

Corequisites: PSY 7240, PSY 7290

Term Offered: Fall

PSY 7370 Foundations of Psychotherapy II

[3 credit hours]

This course is designed to provide a basis for the attainment of the profession-wide competency of intervention, with a specific focus on preparing students to develop competence in evidence-based interventions consistent with the scope of Health Service Psychology. This course will present an overview of and foundational knowledge relevant to four key areas of psychological intervention: (1) Cognitive Behavioral Therapy, (2) Family and Couple Therapy, (3) Psychodynamic Psychotherapy, and (4) Child and Adolescent Therapy.

Prerequisites: PSY 7360 with a minimum grade of D-

Corequisites: PSY 7280, PSY 7300

Term Offered: Spring

PSY 7380 Empirically Supported Interventions and Processes of Change

[3 credit hours]

This course is designed to provide advanced knowledge in empirically-supported interventions in clinical psychology. Specifically, this course will provide in-depth instruction in the use of psychological interventions for treatment numerous psychological conditions. All interventions or approaches taught in this course have been well researched with substantial data existing to support their effectiveness.

Prerequisites: PSY 6240 with a minimum grade of D- or PSY 7240 with a minimum grade of D- or PSY 6280 with a minimum grade of D- or PSY 7280 with a minimum grade of D- or PSY 6290 with a minimum grade of D- or PSY 7290 with a minimum grade of D- or PSY 6300 with a minimum grade of D- or PSY 7300 with a minimum grade of D- or PSY 6360 with a minimum grade of D- or PSY 7360 with a minimum grade of D- or PSY 6370 with a minimum grade of D- or PSY 7370 with a minimum grade of D-

Term Offered: Spring, Fall

PSY 7390 Clinical Laboratory

[3 credit hours]

Clinical interviewing, diagnostic assessment, case conceptualization and oral presentation of clinical cases. Diagnostic, therapeutic and professional issues are addressed via didactic coursework and practicum work with clients in the Psychology Clinic.

Term Offered: Spring**PSY 7400 Cognitive Psychology**

[3 credit hours]

An intensive examination of human information processing. Topics include neural bases of cognition, perceptual and attentional processing, mental imagery, memory, problem solving and reasoning.

Term Offered: Spring, Fall**PSY 7410 Seminar In Cognitive Psychology**

[3 credit hours]

An advanced seminar focusing on selected topics from the general area of Cognitive Psychology.

Term Offered: Spring, Fall**PSY 7500 Developmental Psychology**

[3 credit hours]

Advanced treatment of the theoretical and empirical literature in developmental psychology, and of the major issues of the field.

Term Offered: Spring, Fall**PSY 7510 Seminar In Developmental Psychology**

[3 credit hours]

Readings and evaluative discussions of the primary research literature in developmental psychology.

Prerequisites: PSY 6500 with a minimum grade of D-**Term Offered:** Spring, Fall**PSY 7600 Behavioral Neuroscience**

[3 credit hours]

Structure and function of neurons and the neural mediation of behavior, both normal and abnormal.

Term Offered: Summer**PSY 7610 Seminar In Psychobiology And Learning**

[3 credit hours]

Readings and evaluative discussions of the primary research literature in psychobiology, behavioral neuroscience, neuroanatomy, learning, motivation and perception.

Term Offered: Fall**PSY 7700 Social Psychology**

[3 credit hours]

Social cognition and behavior, interpersonal influence and social relations will be addressed.

Term Offered: Spring, Fall**PSY 7710 Seminar In Social Psychology**

[3 credit hours]

In depth treatment of selected topics in Social Psychology.

Term Offered: Spring, Fall**PSY 7720 Social Cognition**

[3 credit hours]

This course examines how people make sense of other people, themselves, and social situations by examining the cognitive structures and processes involved in judgments, decisions, perceptions, beliefs, and behavior. The topics include (but are not limited to) attribution, counterfactual thinking, judgment heuristics, schemas, person perception, attitudes, and stereotypes/prejudice.

Term Offered: Spring, Fall**PSY 7810 Clinical Practicum I**

[0 credit hours]

Supervision of psychotherapy with children and adolescents seen through the The University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D-**Term Offered:** Spring, Fall**PSY 7820 Clinical Practicum II**

[3 credit hours]

This second-year practicum course includes participation, as a beginning student therapist, in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D-**PSY 7830 Clinical Practicum III**

[3 credit hours]

This third-year practicum course includes participation, as an experienced student therapist, in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D- and PSY 6810 with a minimum grade of D- and PSY 7810 with a minimum grade of D- and PSY 6820 with a minimum grade of D- and PSY 7820 with a minimum grade of D-**Term Offered:** Spring, Summer, Fall**PSY 7840 Clinical Practicum IV**

[1-3 credit hours]

This fourth-year practicum course includes participation, as a senior-level student therapist, in a practicum team providing supervision of clinical services provided to children, adolescents, and/or adults seen through the University of Toledo Psychology Clinic.

Prerequisites: PSY 6390 with a minimum grade of D- and PSY 6810 with a minimum grade of D- and PSY 7810 with a minimum grade of D- and PSY 6820 with a minimum grade of D- and PSY 7820 with a minimum grade of D- and PSY 6830 with a minimum grade of D- and PSY 7830 with a minimum grade of D-**Term Offered:** Spring, Summer, Fall**PSY 7850 Family And Couple Practicum**

[3 credit hours]

Supervision of psychotherapy with families and couples seen through The University of Toledo Psychology Clinic.

Term Offered: Spring, Fall

PSY 7860 Advanced Assessment Practicum

[3 credit hours]

Clinical supervision of psychological assessments using multiple methods of assessment with clients seen through The University of Toledo Psychology Clinic.

Prerequisites: PSY 7210 with a minimum grade of D- and PSY 7220 with a minimum grade of D- and PSY 7230 with a minimum grade of D-

Term Offered: Spring, Fall

PSY 7930 Seminar In Psychology

[3 credit hours]

Readings and evaluative discussions of the primary research literature in psychology.

Term Offered: Spring, Fall

PSY 7940 Supervised Clinical Practicum

[1-3 credit hours]

Supervised applied assessment, therapeutic and consultative experience in community settings.

Term Offered: Summer, Fall

PSY 7950 Community Placement in Clinical Psychology

[0 credit hours]

The Externship in Clinical Psychology is a field placement program in which students are placed in structured clinical service settings with psychologists and other behavioral healthcare providers. Students obtain supervised clinical training in the application of basic clinical psychological service skills.

Term Offered: Spring, Summer, Fall

PSY 7980 Special Topics

[1-3 credit hours]

Professional issues in academic and scientific psychology.

Term Offered: Spring, Summer, Fall

PSY 7990 Independent Study

[1-15 credit hours]

Directed reading and/or experimentation on a topic selected by the study in conjunction with a faculty mentor.

Term Offered: Spring, Summer, Fall

PSY 8940 APA Accredited Clinical Internship

[0-1 credit hours]

Full-time supervised training in an APA accredited predoctoral internship entity. Students will complete clinical work under direct supervision and with guidance of the program training director and internship training director. Grades will be awarded as Credit/No Credit.

Term Offered: Spring, Summer, Fall

PSY 8960 Phd Dissertation

[1-15 credit hours]

Developing, conducting and analyzing the dissertation research project; writing the dissertation.

Term Offered: Spring, Summer, Fall

M.A. in Psychology

Students enrolled in the doctoral program earn the M.A. degree in partial fulfillment of requirements for the Ph.D. degree.

A minimum of 38 semester hours beyond the bachelor's degree is required. Each student must complete specific course requirements and must complete a master's thesis. Although the program is designed to

provide broad training in general psychology, it is expected that the thesis will be conducted within one of the following domains:

- clinical psychology,
- cognitive psychology,
- developmental psychology,
- psychobiology and learning, or
- social psychology.

PSY 6710/7710	Seminar In Social Psychology
2. Research Practicum	
PSY 6030	Research Practicum
Total Hours	38

- ¹ For the core content courses, experimental students should take Cognitive (PSY6400), Developmental (PSY6500), Behavioral Neuroscience (PSY6600), Social (PSY6700), or Science of Emotion (PSY67070).
- ² If a student earns a grade of C+ or below in a course, that course will not be allowed to fill a requirement.
If a student earns a second grade of C+ or below, that student will be dismissed from the doctoral program.
- ³ Chosen in area of specialization (i.e., social, cognitive, developmental, psychobiology), courses chosen outside of specialization must be approved by advisor and experimental coordinator.

PhD in Psychology

A minimum of 92 semester hours of course work is required in the Ph.D. program in psychology, 45 hours of core requirements, and a minimum of 47 hours in one of two areas of concentration – experimental or clinical psychology. Training in clinical psychology, which is fully accredited by the American Psychological Association, provides students with a broad educational foundation in the science and the practice of clinical psychology. Training in experimental psychology allows students to focus on various aspects of cognitive psychology and language, developmental psychology, psychobiology and learning, and social psychology.

Applicants must satisfy admission requirements of the College of Graduate Studies, the College of Arts and Letters, and the department. Each applicant must submit an application, transcripts of previous academic work, three letters of recommendation, and GRE scores. A statement of purpose, which describes the student's research interests and career goals, is also required from each applicant.

The purpose of the doctoral program is to prepare students for careers in academia (teaching, research, clinical work), in mental health programs, in clinical intervention settings, as well as in other settings. Doctoral training emphasizes the inculcation of scientific attitudes with regard to the gathering and evaluation of information; the solving of basic and applied research problems; and clinical assessment and psychotherapy. Each student must complete specific course requirements, a master's thesis, doctoral examinations, and a doctoral dissertation. An individual plan of study is developed by the student in consultation with the academic advisor and advisory committee.

By concentrations:

- Concentration in Experimental Psychology (with no specialization) (p. 51)
- Concentration in Experimental Psychology; specialization in Quantitative Psychology (p. 52)
- Concentration in Experimental Psychology; specialization in Health Psychology (p. 54)

- Concentration in Experimental Psychology; specialization in Experimental Psychopathology (p. 57)
- Concentration in Clinical Psychology (with no specialization) (p. 59)
- Concentration in Clinical Psychology; specialization in Quantitative Psychology (p. 60)
- Concentration in Clinical Psychology; specialization in Health Psychology (p. 62)
- Concentration in Clinical Psychology; specialization in Experimental Psychopathology (p. 64)

¹ Students must demonstrate foundational knowledge in the current body of research and methods in *each* of these core areas. This can be demonstrated upon entry to the program by either (1) an undergraduate transcript indicating a grade of B- or higher and the syllabus for the relevant course or (2) a score at or above the 70th percentile on the relevant GRE subject test section. If this is not demonstrated upon entry to the program, the relevant core content courses must be taken during the time of the student's matriculation through the program. Alternatives to courses in this list must be coordinated with your Faculty Mentor and approved by the DCT. It is very important that the student and their mentor check with the APA C-7 discipline specific knowledge requirements. For the approved alternative, students should complete the **Current Student Psychology Discipline Specific Knowledge (DSK) Course Alternative Form** (see Appendix C) and place copies of all material in their file. For students demonstrating foundational knowledge in each core area, the courses to be taken during the program of study are PSY 6/7070, PSY 6/7720, and PSY 6/7510.

² Students also must fulfill a History and Systems of Psychology requirement. This can be fulfilled by either (1) an undergraduate transcript indicating a grade of B- or higher and the syllabus for a course pertaining to the History and Systems of Psychology, or (2) successfully completing PSY 5000 (History of Psychology) as an elective course in the program.

³ For the core content courses, experimental students should take Cognitive (PSY6400), Developmental (PSY6500), Behavioral Neuroscience (PSY6600), Social (PSY6700), or Science of Emotion (PSY6/7070).

⁴ For clinical students, one 3-hour elective course used to fulfill this requirement must be a core content course not previously fulfilled in the above list. For example, if the student has taken 6/7070 and 6/7720 to fulfill the core content course requirement above, one of the electives to fulfill the elective requirement must be 6/7510, or a course equivalent as described in footnote '1' to the core course requirements.

This can be demonstrated upon entry to the program by either (1) an undergraduate transcript indicating a grade of B- or higher and the syllabus for the relevant course or (2) a score at or above the 70th percentile on the relevant GRE subject test section. If this is not demonstrated upon entry to the program, the relevant core content courses must be taken during the time of the student's matriculation through the program. Alternatives to courses in this list must be coordinated with your Faculty Mentor and approved by the DCT. It is very important that the student and their mentor check with the APA C-7 discipline specific knowledge requirements. For the approved alternative, students should complete the **Current Student Psychology Discipline Specific Knowledge (DSK) Course Alternative Form** (see Appendix C) and place copies of all material in their file. For students demonstrating foundational knowledge in each core area, the courses to be taken during the program of study are PSY 6/7070, PSY 6/7720, and PSY 6/7510.
- ² Students also must fulfill a History and Systems of Psychology requirement. This can be fulfilled by either (1) an undergraduate transcript indicating a grade of B- or higher and the syllabus for a course pertaining to the History and Systems of Psychology, or (2) successfully completing PSY 5000 (History of Psychology) as an elective course in the program.
- ³ For the core content courses, experimental students should take Cognitive (PSY6400), Developmental (PSY6500), Behavioral Neuroscience (PSY6600), Social (PSY6700), or Science of Emotion (PSY6/7070).
- ⁴ For clinical students, one 3-hour elective course used to fulfill this requirement must be a core content course not previously fulfilled in the above list. For example, if the student has taken 6/7070 and 6/7720 to fulfill the core content course requirement above, one of the electives to fulfill the elective requirement must be 6/7510, or a course equivalent as described in footnote '1' to the core course requirements.

ADDITIONAL REQUIREMENTS FOR SPECIALIZATION

The addition of the specialization area does not change the degree requirements for earning the Ph.D. (i.e., the number of credit hours to earn a Ph.D. in psychology did not change with the addition of this new set of specializations). Students who pursue specialization will arrange their coursework and research activities around the area of specialization. The student will work with the specialization area and concentration area coordinators to ensure that they draft a Plan of Study that fulfills general curriculum requirements while also meeting the specialization requirements. Below we outline the requirements for the specialization in Quantitative Psychology. Note: For this specialization area, students take 2 required and 3 elective courses to satisfy the specialization. Some coursework overlaps with general requirements for the degree, whereas other coursework can be taken as electives (see *General Curriculum B3 and B4*) or as strategic choices within specific requirement areas (see *General Curriculum A1, A2, A3, B1, B5*).

SPECIALIZATION AREA 2: QUANTITATIVE PSYCHOLOGY

Code	Title	Hours
Must complete 2 required courses and 3 elective courses in statistics, measurement, or methodology.		
PSY 6110	Quantitative Methods In Psychology II ^{Required}	3
PSY 6930/7930	Seminar In Psychology (Structural Equation Modelling; Take 6150 OR 6930) ^{Required or elective (if not taken for required)}	3
Select 3 of the following elective courses:		9
PSY 6150	Psychometrics and Scale Development (Take 6930 OR 6150) ^{required or elective (if not taken for required)}	
PSY 6930/7930	Seminar In Psychology (TBD seminars (e.g., Data Analysis with R))	
PUBH 6060	Advanced Biostatistics	
PUBH 6110	Categorical Data Analysis	
MATH 5610/7610	Advanced Statistical Methods II	
MATH 5620/7620	Linear Statistical Models	
MATH 5640	Statistical Computing	
MATH 6690	Multivariate Statistics	
MATH 6630	Nonparametric Statistics	
Note: Other courses (inside or outside the department) can be taken as electives but must be approved by the quantitative specialization coordinator.		
Total Hours		15

THESIS/DISSERTATION REQUIREMENTS

Student thesis AND dissertation must utilize a design and/or analytic technique relevant to advanced quantitative training/coursework. Determination of relevance is made by the quantitative specialization coordinator. For students entering the doctoral program with a Master's degree from a different institution, their thesis can count towards this requirement if it meets the above criteria. This determination will be made by the quantitative specialization coordinator. If a Master's thesis completed at a different institution does not meet the above criteria, the student has the option of completing an independent research project that satisfies the required thesis criteria for this specialization concentration.

DEMONSTRATED COMPETENCE OUTSIDE OF COURSEWORK

Student must demonstrate competence in the specialization topic by submitting at least one relevant manuscript to a peer-reviewed journal. The content of the manuscript must be relevant to advanced quantitative training/coursework. Determination of relevance is made by the quantitative specialization coordinator.

- ¹ Students must demonstrate foundational knowledge in the current body of research and methods in *each* of these core areas. This can be demonstrated upon entry to the program by either (1) an undergraduate transcript indicating a grade of B- or higher and the syllabus for the relevant course or (2) a score at or above the 70th percentile on the relevant GRE subject test section. If this is not demonstrated upon entry to the program, the relevant core content courses must be taken during the time of the student's matriculation through the program. Alternatives to courses in this list must be coordinated with your Faculty Mentor and approved by the DCT. It is very important that the student and their mentor check with the APA C-7 discipline specific knowledge requirements. For the approved alternative, students should complete the **Current Student Psychology Discipline Specific Knowledge (DSK) Course Alternative Form** (see Appendix C) and place copies of all material in their file. For students demonstrating foundational knowledge in each core area, the courses to be taken during the program of study are PSY 6/7070, PSY 6/7720, and PSY 6/7510.
- ² Students also must fulfill a History and Systems of Psychology requirement. This can be fulfilled by either (1) an undergraduate transcript indicating a grade of B- or higher and the syllabus for a course pertaining to the History and Systems of Psychology, or (2) successfully completing PSY 5000 (History of Psychology) as an elective course in the program.
- ³ For the core content courses, experimental students should take Cognitive (PSY6400), Developmental (PSY6500), Behavioral Neuroscience (PSY6600), Social (PSY6700), or Science of Emotion (PSY6/7070).
- ⁴ For clinical students, one 3-hour elective course used to fulfill this requirement must be a core content course not previously fulfilled in the above list. For example, if the student has taken 6/7070 and 6/7720 to fulfill the core content course requirement above, one of the electives to fulfill the elective requirement must be 6/7510, or a course equivalent as described in footnote '1' to the core course requirements.

ADDITIONAL REQUIREMENTS FOR SPECIALIZATION AREA

The addition of the specialization area does not change the degree requirements for earning the Ph.D. (i.e., the number of credit hours to earn a Ph.D. in psychology did not change with the addition of this new set of specializations). Students who pursue specialization will arrange their coursework and research activities around the area of specialization. The student will work with the specialization area and concentration area coordinators to ensure that they draft a Plan of Study that fulfills general curriculum requirements while also meeting the specialization requirements. Below we outline the requirements for the specialization in experimental psychopathology. Note: For this specialization area, students take 2 required and 3 elective courses to satisfy the specialization. Some coursework overlaps with general requirements for the degree, whereas other coursework can be taken as electives (see *General Curriculum B3 and B4*) or as strategic choices within specific requirement areas (see *General Curriculum A1, A2, A3, B1, B5*).

SPECIALIZATION AREA 3: EXPERIMENTAL PSYCHOPATHOLOGY

Code	Title	Hours
In addition to the quantitative methods (I and II) and research design courses required of all students in the department, the specialization in experimental psychopathology requires 2 additional required courses and 3 elective courses from the lists below.		
PSY 6210/7210	Psychopathology ^{Required}	3
PSY 6250/7250	Seminar In Clinical Psychology (Experimental Psychopathology) ^{Required}	3
Select 3 of the following elective courses:		9
PSY 6250/7250	Seminar In Clinical Psychology (Emotion Research)	
PSY 6250/7250	Seminar In Clinical Psychology (Psychophysiology)	
PSY 6410/7410	Seminar In Cognitive Psychology (Judgment and Decision Making)	
PSY 6710/7710	Seminar In Social Psychology (Social Psychology & Health)	
PSY 6720/7720	Social Cognition	
Note: Other courses (inside or outside the department) can be taken as electives but must be approved by the experimental psychopathology specialization coordinator. For example, certain advanced statistics courses might be relevant to certain experimental designs and could be approved as an elective course.		
Total Hours		15

Mentorship

The student is required to identify a research mentor (in addition to their primary mentor) with expertise in the use of experimental and/or laboratory-based methods for examining psychopathology-relevant outcomes or mechanisms.

Thesis/Dissertation Requirements

Student thesis AND dissertation must utilize an experimental design and focus on a psychopathology-relevant outcome or mechanism broadly defined. Determination of relevance is made by the experimental psychopathology specialization coordinator. For students entering the doctoral program with a Masters degree from a different institution, their thesis can count towards this requirement if it meets the above criteria. This determination will be made by the experimental psychopathology specialization coordinator. If a Masters thesis completed at a different institution does not meet the above criteria, the student has the option of completing an independent research project that satisfies the required thesis criteria for this specialization concentration.

Demonstrated Competence Outside of Coursework

Student must demonstrate competence in the specialization topic by submitting at least one relevant manuscript to a peer-reviewed journal. The topic of the manuscript must be relevant to experimental psychopathology training/ coursework. Determination of relevance is made by the experimental psychopathology specialization coordinator.

Alternatives to courses in this list must be coordinated with your Faculty Mentor and approved by the DCT. It is very important that the student and their mentor check with the APA C-7 discipline specific knowledge requirements. For the approved alternative, students should complete the **Current Student Psychology Discipline Specific Knowledge (DSK) Course Alternative Form** (see Appendix C) and place copies of all material in their file. For students demonstrating foundational knowledge in each core area, the courses to be taken during the program of study are PSY 6/7070, PSY 6/7720, and PSY 6/7510.

- ² Students also must fulfill a History and Systems of Psychology requirement. This can be fulfilled by either (1) an undergraduate transcript indicating a grade of B- or higher and the syllabus for a course pertaining to the History and Systems of Psychology, or (2) successfully completing PSY 5000 (History of Psychology) as an elective course in the program.
- ³ For the core content courses, experimental students should take Cognitive (PSY6400), Developmental (PSY6500), Behavioral Neuroscience (PSY6600), Social (PSY6700), or Science of Emotion (PSY6/7070).
- ⁴ For clinical students, one 3-hour elective course used to fulfill this requirement must be a core content course not previously fulfilled in the above list. For example, if the student has taken 6/7070 and 6/7720 to fulfill the core content course requirement above, one of the electives to fulfill the elective requirement must be 6/7510, or a course equivalent as described in footnote '1' to the core course requirements.

ADDITIONAL REQUIREMENTS FOR SPECIALIZATION AREA

The addition of the specialization area does not change the degree requirements for earning the Ph.D. (i.e., the number of credit hours to earn a Ph.D. in psychology did not change with the addition of this new set of specializations). Students who pursue specialization will arrange their coursework and research activities around the area of specialization. The student will work with the specialization area and concentration area coordinators to ensure that they draft a Plan of Study that fulfills general curriculum requirements while also meeting the specialization requirements. Below we outline the requirements for the specialization in Quantitative Psychology. **Note:** For this specialization area, students take 2 required and 3 elective courses to satisfy the specialization. Some coursework overlaps with general requirements for the degree, whereas other coursework can be taken as electives (see *General Curriculum B3 and B4*) or as strategic choices within specific requirement areas (see *General Curriculum A1, A2, A3, B1, B5*).

SPECIALIZATION AREA 2: QUANTITATIVE PSYCHOLOGY

Code	Title	Hours
Must complete 2 required courses and 3 elective courses in statistics, measurement, or methodology.		
PSY 6110	Quantitative Methods In Psychology II	3 Required
PSY 6930/7930	Seminar In Psychology (Structural Equation Modelling; Take 6150 OR 6930)	3 Required or elective (if not taken for required)
Select 3 of the following elective courses:		9
PSY 6150	Psychometrics and Scale Development (Take 6930 OR 6150)	3 required or elective (if not taken for required)
PSY 6930/7930	Seminar In Psychology (TBD seminars (e.g., Data Analysis with R))	
PUBH 6060	Advanced Biostatistics	
PUBH 6110	Categorical Data Analysis	
MATH 5610/7610	Advanced Statistical Methods II	
MATH 5620/7620	Linear Statistical Models	

MATH 5640	Statistical Computing
MATH 6690	Multivariate Statistics
MATH 6630	Nonparametric Statistics
Note: Other courses (inside or outside the department) can be taken as electives but must be approved by the quantitative specialization coordinator.	
Total Hours	15

THESIS/DISSERTATION REQUIREMENTS

Student thesis AND dissertation must utilize a design and/or analytic technique relevant to advanced quantitative training/coursework. Determination of relevance is made by the quantitative specialization coordinator. For students entering the doctoral program with a Master's degree from a different institution, their thesis can count towards this requirement if it meets the above criteria. This determination will be made by the quantitative specialization coordinator. If a Master's thesis completed at a different institution does not meet the above criteria, the student has the option of completing an independent research project that satisfies the required thesis criteria for this specialization concentration.

DEMONSTRATED COMPETENCE OUTSIDE OF COURSEWORK

Student must demonstrate competence in the specialization topic by submitting at least one relevant manuscript to a peer-reviewed journal. The content of the manuscript must be relevant to advanced quantitative training/coursework. Determination of relevance is made by the quantitative specialization coordinator.

Concentration in Clinical Psychology; specialization in Health Psychology

PSY 6710/7710	Seminar In Social Psychology
2. Teaching	
PSY 7040	Teaching Practicum
3. Research Practicum	
PSY 6030/7030	Research Practicum
4. Experimental Core Courses	
Select two of the following not already taken	
PSY 6400/7400	Cognitive Psychology
PSY 6500/7500	Developmental Psychology
PSY 6700/7700	Social Psychology
PSY 6600/7600	Behavioral Neuroscience
PSY 6070/7070	The Science of Emotion

Total Hours **92**

¹ Students must demonstrate foundational knowledge in the current body of research and methods in *each* of these core areas. This can be demonstrated upon entry to the program by either (1) an undergraduate transcript indicating a grade of B- or higher and the syllabus for the relevant course or (2) a score at or above the 70th percentile on the relevant GRE subject test section. If this is not demonstrated upon entry to the program, the relevant core content courses must be taken during the time of the student's matriculation through the program. Alternatives to courses in this list must be coordinated with your Faculty Mentor and approved by the DCT. It is very important that the student and their mentor check with the APA C-7 discipline specific knowledge requirements. For the approved alternative, students should complete the **Current Student Psychology Discipline Specific Knowledge (DSK) Course Alternative Form** (see Appendix C) and place copies of all material in their file. For students demonstrating foundational knowledge in each core area, the courses to be taken during the program of study are PSY 6/7070, PSY 6/7720, and PSY 6/7510.

² Students also must fulfill a History and Systems of Psychology requirement. This can be fulfilled by either (1) an undergraduate transcript indicating a grade of B- or higher and the syllabus for a course pertaining to the History and Systems of Psychology, or (2) successfully completing PSY 5000 (History of Psychology) as an elective course in the program.

³ For the core content courses, experimental students should take Cognitive (PSY6400), Developmental (PSY6500), Behavioral Neuroscience (PSY6600), Social (PSY6700), or Science of Emotion (PSY6/7070).

⁴ For clinical students, one 3-hour elective course used to fulfill this requirement must be a core content course not previously fulfilled in the above list. For example, if the student has taken 6/7070 and 6/7720 to fulfill the core content course requirement above, one of the electives to fulfill the elective requirement must be 6/7510, or a course equivalent as described in footnote '1' to the core course requirements.

ADDITIONAL REQUIREMENTS FOR SPECIALIZATION AREA

The addition of the specialization area does not change the degree requirements for earning the Ph.D. (i.e., the number of credit hours to earn a Ph.D. in psychology did not change with the addition of this new set of specializations). Students who pursue specialization will arrange their coursework and research activities around the area of specialization. The student will work with the specialization area and concentration area coordinators to ensure that they draft a Plan of Study that fulfills general curriculum requirements while also meeting the specialization requirements. Below we outline the requirements for the specialization in health psychology. **Note:** For this specialization area, students take 2 required and 3 elective courses to satisfy the specialization. Some coursework overlaps with general requirements for the degree, whereas other coursework can be taken as electives (see *General Curriculum B3 and B4*) or as strategic choices within specific requirement areas (see *General Curriculum A1, A2, A3, B1, B5*).

SPECIALIZATION AREA 1: HEALTH PSYCHOLOGY

Code	Title	Hours
Must complete 2 required courses and 3 elective courses in health psychology.		
PSY 6980/7980	Special Topics (Psychophysiology)	3
PSY 6980/7980	Special Topics (Health Psychology)	3
Select 3 of the following elective courses:		9
PSY 6710/7710	Seminar In Social Psychology (Seminar in Social Psych & Health)	
PSY 6980/7980	Special Topics (Clinical Psychopharmacology)	
PSY 6980/7980	Special Topics (TBD seminar; e.g., Seminar in Stress & Health, Experimental Social Health Psych, Applied Health Psychology)	
HEAL 8600	Health Behavior	
HEAL 6280/8280	Health Communication	
HEAL 8460	Health Promotion Programs	
PUBH 6010	Public Health Epidemiology	
PUBH 6330/8330	Public Health and Aging	
PUBH 6600	Health Behavior	
PUBH 6800	Evaluation of Health Programs	
PUBH 6050	Concepts and Issues in Environmental Health	

Note: Other courses (inside or outside the department) can be taken as electives but must be approved by the health specialization coordinator. No more than 2 courses outside the department may be used to fulfill the health specialization requirement.

Total Hours 15

THESIS/DISSERTATION REQUIREMENTS

Student thesis AND dissertation must be relevant to advanced health psychology training/ coursework. Determination of relevance is made by the health psychology specialization coordinator. For students entering the doctoral program with a Masters degree from a different institution, their thesis can count towards this requirement if it meets the above criteria. This determination will be made by the health specialization coordinator. If a Master's thesis completed at a different institution does not meet the above criteria, the student has the option of completing an independent research project that satisfies the required thesis criteria for this specialization concentration.

DEMONSTRATED COMPETENCE OUTSIDE OF COURSEWORK

Student must demonstrate competence in the specialization topic by submitting a manuscript to a peer reviewed journal. The topic of the manuscript must be relevant to advanced health psychology training/ coursework. Determination of relevance is made by the health psychology specialization coordinator.

¹ Students must demonstrate foundational knowledge in the current body of research and methods in *each* of these core areas. This can be demonstrated upon entry to the program by either (1) an undergraduate transcript indicating a grade of B- or higher and the syllabus for the relevant course or (2) a score at or above the 70th percentile on the relevant GRE subject test section. If this is not demonstrated upon entry to the program, the relevant core content courses must be taken during the time of the student's matriculation through the program. Alternatives to courses in this list must be coordinated with your Faculty Mentor and approved by the DCT. It is very important that the student and their mentor check with the APA C-7 discipline specific knowledge requirements. For the approved alternative, students should complete the **Current Student Psychology Discipline Specific Knowledge (DSK) Course Alternative Form** (see Appendix C) and place copies of all material in their file. For students demonstrating foundational knowledge in each core area, the courses to be taken during the program of study are PSY 6/7070, PSY 6/7720, and PSY 6/7510.

² Students also must fulfill a History and Systems of Psychology requirement. This can be fulfilled by either (1) an undergraduate transcript indicating a grade of B- or higher and the syllabus for a course pertaining to the History and Systems of Psychology, or (2) successfully completing PSY 5000 (History of Psychology) as an elective course in the program.

³ For the core content courses, experimental students should take Cognitive (PSY6400), Developmental (PSY6500), Behavioral Neuroscience (PSY6600), Social (PSY6700), or Science of Emotion (PSY6/7070).

⁴ For clinical students, one 3-hour elective course used to fulfill this requirement must be a core content course not previously fulfilled in the above list. For example, if the student has taken 6/7070 and 6/7720 to fulfill the core content course requirement above, one of the electives to fulfill the elective requirement must be 6/7510, or a course equivalent as described in footnote '1' to the core course requirements.

ADDITIONAL REQUIREMENTS FOR SPECIALIZATION AREA

The addition of the specialization area does not change the degree requirements for earning the Ph.D. (i.e., the number of credit hours to earn a Ph.D. in psychology did not change with the addition of this new set of specializations). Students who pursue specialization will arrange their coursework and research activities around the area of specialization. The student will work with the specialization area and concentration area coordinators to ensure that they draft a Plan of Study that fulfills general curriculum requirements while also meeting the specialization requirements. Below we outline the requirements for the specialization in experimental psychopathology. **Note:** For this specialization area, students take 2 required and 3 elective courses to satisfy the specialization. Some coursework overlaps with general requirements for the degree, whereas other coursework can be taken as electives (see *General Curriculum B3 and B4*) or as strategic choices within specific requirement areas (see *General Curriculum A1, A2, A3, B1, B5*).

SPECIALIZATION AREA 3: EXPERIMENTAL PSYCHOPATHOLOGY

Code	Title	Hours
In addition to the quantitative methods (I and II) and research design courses required of all students in the department, the specialization in experimental psychopathology requires 2 additional required courses and 3 elective courses from the lists below.		
PSY 6210/7210	Psychopathology ^{Required}	3
PSY 6250/7250	Seminar In Clinical Psychology (Experimental Psychopathology) ^{Required}	3
Select 3 of the following elective courses:		9
PSY 6250/7250	Seminar In Clinical Psychology (Emotion Research)	
PSY 6250/7250	Seminar In Clinical Psychology (Psychophysiology)	
PSY 6410/7410	Seminar In Cognitive Psychology (Judgment and Decision Making)	
PSY 6710/7710	Seminar In Social Psychology (Social Psychology & Health)	
PSY 6720/7720	Social Cognition	

Note: Other courses (inside or outside the department) can be taken as electives but must be approved by the experimental psychopathology specialization coordinator. For example, certain advanced statistics courses might be relevant to certain experimental designs and could be approved as an elective course.

Total Hours

15

Mentorship

The student is required to identify a research mentor (in addition to their primary mentor) with expertise in the use of experimental and/or laboratory-based methods for examining psychopathology-relevant outcomes or mechanisms.

Thesis/Dissertation Requirements

Student thesis AND dissertation must utilize an experimental design and focus on a psychopathology-relevant outcome or mechanism broadly defined. Determination of relevance is made by the experimental psychopathology specialization coordinator. For students entering the doctoral program with a Masters degree from a different institution, their thesis can count towards this requirement if it meets the above criteria. This determination will be made by the experimental psychopathology specialization coordinator. If a Masters thesis completed at a different institution does not meet the above criteria, the student has the option of completing an independent research project that satisfies the required thesis criteria for this specialization concentration.

Demonstrated Competence Outside of Coursework

Student must demonstrate competence in the specialization topic by submitting at least one relevant manuscript to a peer-reviewed journal. The topic of the manuscript must be relevant to experimental psychopathology training/ coursework. Determination of relevance is made by the experimental psychopathology specialization coordinator.

Ethical and Legal Standards Demonstrate knowledge of and operate in a manner consistent with the APA Ethical Principles of Psychologists and Code of Conduct as well as with all relevant laws, regulations, rules, and policies regulating the scholarly and professional activities of psychologists.

Professional Values and Attitudes Act in a professional manner, employing and demonstrating self-reflection, an openness to constructive feedback on scholarly products, and the ability to apply and integrate constructive feedback in scholarly activities.

Communication Skills Create oral and written communications that are well-integrated and informative to the field of study. Evaluate oral and written communications of peers and professionals in the field. Interpersonal Skills - Demonstrate effective interpersonal skills with relevant colleagues, supervisors, and organizations.

Research Comprehension - Critically evaluate research and other scholarly activities.

Research Production - Formulate and produce research and other scholarly activities (including critical literature reviews and theoretical papers) at a level that can contribute to the scientific literature. Disseminate research and other scholarly activities via peer-reviewed journals and local, regional, and national conference presentations.

Knowledge of Individual and Cultural Diversity Describe and discuss how personal and cultural history, attitudes, and biases might influence interactions with, or research examining, persons of dissimilar histories, attitudes, and biases.

Integration of Individual and Cultural Diversity - Integrate knowledge of individual and cultural differences into research and other scholarly activities.

Department of Sociology and Anthropology

Dwight Haase, Chair

Barbara Coventry, Graduate Director

The Sociology and Anthropology Department offers a Master of Arts in Sociology. The program includes required courses in methods, theory and statistics, and electives. The courses are organized within three degree options: courses + project; courses + thesis; or courses + internship.

Degrees Offered

- M.A. and Ed. in Sociology (p. 69)
- M.A. in Sociology (p. 69)

ANTH 5300 Cultural Resource Management

[3 credit hours]

Course explores the history, theory, and contemporary issues behind the historic preservation movement and emergence of Cultural Resource Management in the United States; topics engaged include legislation, federal and state programs, the national register, regional planning, and research orientations.

Term Offered: Spring, Summer, Fall

ANTH 5450 Exploring the City

[3 credit hours]

This course takes an interdisciplinary approach to life in cities around the world, with emphasis on the ethnographic exploration of how power, cultural difference, and social inequality in cities are produced and experienced.

Term Offered: Spring, Fall

ANTH 5530 Qualitative Approaches in Social Science Research

[3 credit hours]

This course examines qualitative methods used in social science research. Focusing on ethnographic and qualitative methods, the course provides students the skills necessary to design and conduct qualitative research studies.

Term Offered: Spring

ANTH 5560 Fieldwork In Anthropology

[1-6 credit hours]

Consists of field work involving the student in meaningful research problems at the community level. Introduces the student to the methods and problems of participant research.

ANTH 5740 Nutritional Anthro-po-Logy

[3 credit hours]

An examination of the historical, social, political and economic factors that influence the production, distribution and consumption of food and the effects on world health and development.

Term Offered: Spring, Fall

ANTH 5760 Medical Anthropology

[3 credit hours]

An examination of the biocultural nature of health and illness.

Term Offered: Spring, Fall

ANTH 5860 The Irish-American Experience

[3 credit hours]

A survey of the sociohistorical and cultural factors related to the immigration and adaptation of the Irish in America.

ANTH 5920 Directed Readings In Anthropology

[1-3 credit hours]

Designed for those wishing to continue course work in greater depth or seeking contact with unlisted subject areas. Written proposal and consent required.

ANTH 5980 Problems In Anthropology

[3 credit hours]

Courses on varied anthropological specialties. May be repeated in different specialty areas such as religion, ethnohistory, ethnic conflict and area courses.

Term Offered: Spring, Summer, Fall

ANTH 6990 Independent Research In Anthropology

[1-3 credit hours]

Supervised independent research in anthropology.

Term Offered: Spring, Fall

SOC 5040 Classical Theory

[3 credit hours]

19th Century theory in sociology with emphasis on A. Comte, K. Marx, E. Durkheim, T. Veblen, M. Weber and H. Spencer.

Term Offered: Spring, Fall

SOC 5100 Community Organizing And Development

[3 credit hours]

This course will review the major forms of community and organizing since World War II. Practical issues and theoretical issues will be stressed. Students will engage in intensive case study research applying the course concepts in addition to reading and writing on the various topics.

SOC 5110 Political Sociology

[3 credit hours]

Examination of political institutions, organizations and behavior with special attention to participation, power, ideology, decision making and conflict.

SOC 5160 Health And Gender

[3 credit hours]

An examination of gender as a predisposing factor of health status, health behavior, health care delivery, and the structure and posture of health care professionals.

Term Offered: Spring, Summer, Fall

SOC 5170 Law And Society

[3 credit hours]

Dynamics of law and legal institutions; the relationship of sociocultural changes in substantive and procedural aspects of law to the concept of justice, and to the social control of deviance.

SOC 5180 Medical Sociology

[3 credit hours]

An analysis of the sociocultural factors in health and illness, and in medical and paramedical services, and in the field of health practice as a social institution.

Term Offered: Spring, Fall

SOC 5190 Social Gerontology

[3 credit hours]

A study of the changing proportions of older people in the population, their changing roles and statuses, and the problems and processes of adjustment.

SOC 5270 Social Research Methods

[3 credit hours]

Introduction to procedures used in the various phases of sociological research.

Term Offered: Spring, Fall

SOC 5290 Social Research Statistics

[3 credit hours]

Study of major statistical procedures and techniques in sociology.

Term Offered: Spring, Fall

SOC 5340 Population And Society

[3 credit hours]

Examination of the interaction among variables of population (fertility, mortality and migration) and other aspects of societal organization.

Term Offered: Fall

SOC 5440 Methods Of Population Analysis

[3 credit hours]

Methods of population analysis, including examination and evaluation of data sources.

SOC 5450 Exploring the City

[3 credit hours]

This course takes an interdisciplinary approach to life in cities around the world, with emphasis on the ethnographic exploration of how power, cultural difference, and social inequality in cities are produced and experienced.

Term Offered: Spring, Fall

SOC 5530 Qualitative Approaches in Social Science Research

[3 credit hours]

This course examines qualitative methods used in social science research. Focusing on ethnographic and qualitative methods, the course provides students the skills necessary to design and conduct qualitative research studies.

Term Offered: Spring

SOC 5560 Fieldwork in Sociology

[6 credit hours]

This course involves the student in meaningful social research at the community level. The student is introduced to methods in fieldwork in the social sciences.

Term Offered: Spring, Summer, Fall

SOC 5580 Science, Technology, And Social Change

[3 credit hours]

The impact of rapidly changing science and technology on North American society: social change in a technological age; the emergence of post industrial society.

SOC 5610 Sociology Of Organizations

[3 credit hours]

Study of the structure and processes of organizations; includes theory of bureaucratic and non-bureaucratic organizations, as well as structure and function of organizations.

Term Offered: Spring

SOC 5650 ADVANCED TOPICS IN LATIN AMERICAN AND CARIBBEAN

[3 credit hours]

An examination of social life in Latin America and the Caribbean, focusing on changing political economy, gender and ethnicity, globalization, culture and migration and in and out of the region.

Prerequisites: SOC 1010 with a minimum grade of D-

SOC 5710 Criminology

[3 credit hours]

Crime and criminal behavior: nature, types and extent of crime, societal reactions; problems in research and theory, prevention, control and treatment.

Term Offered: Summer

SOC 5720 Deviant Behavior

[3 credit hours]

Study of the analysis of the nature, meaning and process of deviant behavior in terms of social norms, control and societal reaction.

Term Offered: Summer

SOC 5740 Issues In Crime

[3 credit hours]

Topics may include legalizing drugs, police violence, plea bargaining, death sentence and mandatory sentencing. Emphasizes liberal/conservative ideology.

SOC 5750 Legal Issues

[3 credit hours]

Topics may include abortion, three strike sentencing, homosexual rights, hate speech and decriminalizing narcotics. Emphasizes liberal/conservative ideology.

SOC 5760 Juvenile Delinquency

[3 credit hours]

Delinquency and delinquent behavior, including definitions, extent, process, types and causes; methods of prevention, protective control and treatment; institutional and non-institutional facilities and services.

SOC 5800 Development Of Subordinate Nations

[3 credit hours]

The new emerging ideological, political, social and economic patterns which repeat themselves in and determine the Third World transition from a traditional to a new society.

Term Offered: Fall

SOC 5810 Gender In Cross-Cultural Perspective

[3 credit hours]

Analysis of gender stratification and its impact on culture in various nations and across ethnic groups in the United States.

SOC 5830 Social Movements

[3 credit hours]

This course will focus on social movements and their political context to understand the causes of social movement success and failure. Special attention will be given to the 1960s wave of protest, as well as to contemporary movement forms. Students will engage in intensive case study research applying the course concepts in addition to reading and writing on relevant topics.

Term Offered: Spring, Fall

SOC 5840 Globalization

[3 credit hours]

This course starts by looking at the historical context of globalization, showing this process is not necessarily something new. From there it focuses on three dimensions of globalization: economic, political, and cultural - stressing the interconnectedness of these issues. This course is not an exhaustive survey of all facets of globalization, but it does at least touch upon many of the major issues related to this phenomenon.

Term Offered: Spring

SOC 5980 Special Topics In Sociology

[3 credit hours]

Sociological examination of a developing social issue. May be repeated in different specialized topics.

Term Offered: Spring, Summer, Fall

SOC 5990 Directed Readings In Sociology

[1-3 credit hours]

Written proposal required. May be repeated for additional credit. For majors wishing to continue course work in greater depth or seeking contact with unlisted subject areas.

Term Offered: Spring, Summer

SOC 6000 Introduction To Graduate Studies In Sociology

[0 credit hours]

Graduate students are exposed to and get acquainted with the academic and professional nature of the field of sociology from the experience of several faculty members. Some of the topics that will be covered include writing theses, doing internships and seeking graduate work and careers.

Term Offered: Fall

SOC 6040 Advanced Sociological Theory

[3 credit hours]

Building on classical traditions, the course includes readings and lectures on functionalist, neo-Marxist, symbolic interactionist and other significant twentieth century sociological theories.

Prerequisites: SOC 4040 with a minimum grade of D- or SOC 5040 with a minimum grade of D-

Term Offered: Fall

SOC 6050 Advanced Social Theory And Political Economy

[3 credit hours]

This course will analyze and evaluate major social theories drawn from various 19th and 20th century intellectual and ideological traditions. The common subject focus of course readings is state, power and class relations.

Prerequisites: SOC 4040 with a minimum grade of D- or SOC 5040 with a minimum grade of D-

Term Offered: Spring

SOC 6270 Advanced Social Research Methods

[3 credit hours]

Examination of advanced methods of data collection in sociological research.

Prerequisites: SOC 5270 with a minimum grade of D-

Term Offered: Spring, Fall

SOC 6290 Advanced Social Research Statistics

[3 credit hours]

Examination of advanced methods of data analysis in sociological research.

Prerequisites: SOC 5290 with a minimum grade of D-

Term Offered: Spring

SOC 6640 Seminar in Diversity and Inequality

[3 credit hours]

This course examines theories and research on diversity and inequality. Possible topics include social class, race, gender, sexual orientation and disability, plus evaluating the interconnections between these areas.

SOC 6800 Seminar In Theories In Social Psychology

[3 credit hours]

Intensive sociological study of theory building in social psychology including, among others, paradigms of social cognition and belief, social influence, and social relations.

SOC 6900 Independent Research In Sociology

[1-3 credit hours]

Student-selected research topic under the supervision of a sociology faculty member. Permission to enroll is contingent on the instructor's acceptance of the student's research proposal.

Term Offered: Spring, Summer, Fall

SOC 6930 Seminars In Sociology

[3 credit hours]

Seminar on selected topics in the field of Sociology.

Term Offered: Spring, Fall

SOC 6940 Graduate Internship

[3 credit hours]

In applied setting in areas of student interest: community organizing - health-probation - gerontology.

Prerequisites: (SOC 6040 with a minimum grade of C or SOC 6050 with a minimum grade of C) and SOC 6270 with a minimum grade of C and SOC 6290 with a minimum grade of C

Term Offered: Spring, Summer, Fall

SOC 6960 Thesis

[1-6 credit hours]

Topic (proposal) is selected by the student and approved by a thesis committee.

Prerequisites: (SOC 6270 with a minimum grade of C and SOC 6290 with a minimum grade of C and SOC 6040 with a minimum grade of C or SOC 6050 with a minimum grade of C)

Term Offered: Spring, Summer, Fall

SOC 6970 Master of Sociology Project

[1-6 credit hours]

Applied capstone project supervised by faculty advisor and committee that integrates the knowledge and skills in the program.

Term Offered: Spring, Summer, Fall

SOC 6990 Independent Study In Sociology

[1-3 credit hours]

Written proposal required. May be repeated for additional credit. For majors wishing to continue course work in greater depth or seeking contact with unlisted subject areas.

Term Offered: Spring, Summer, Fall

M.A. and Ed. in Sociology

Regular admission to the Master of Arts and Master of Arts and Education degree programs in Sociology requires meeting the admission requirements of the College of Graduate Studies, including presentation of scores on the aptitude sections of the GRE for any applicant with an undergraduate GPA below 2.7

M.A. in Sociology

Regular admission to the Master of Arts and Master of Arts and Education degree programs in Sociology requires meeting the admission requirements of the College of Graduate Studies, including presentation of scores on the aptitude sections of the GRE for any applicant with an undergraduate GPA below 2.7.

The program requirements are:

Code	Title	Hours
Orientation		
SOC 6000	Introduction To Graduate Studies In Sociology	0
A. Required Background Courses		0-9
For students who have not completed these or equivalent undergraduate courses. If you need to take these courses, then you will reduce the number of program electives needed.		
SOC 5040	Classical Theory	
SOC 5270	Social Research Methods	
SOC 5290	Social Research Statistics	
B. Core Courses		9
SOC 6040	Advanced Sociological Theory	
	or SOC 6050 Advanced Social Theory And Political Economy	
SOC 6270	Advanced Social Research Methods	
SOC 6290	Advanced Social Research Statistics	
C. Program Electives		0-9
Select courses from 5000- and 6000-level courses offered in sociology (See below)		
D. Seminars		6
SOC 6640	Seminar in Diversity and Inequality	
SOC 6800	Seminar In Theories In Social Psychology	
	or SOC 6930 Seminars In Sociology	
E. Thesis/Internship/Academic Project		6
Select one of the following (See below):		
Complete a thesis		
SOC 6960	Thesis	
Complete an internship		
SOC 6940	Graduate Internship	
Complete a special project		
SOC 6970	Master of Sociology Project	

Program Electives

These courses may be completed by choosing from 5000- and 6000-level courses offered in sociology. Two courses must be Sociology seminar courses (e.g.SOC 6930). Students may use their elective hours to focus on a substantive area of the discipline, such as social inequality, disabilities, education, and community-based development towards electives.

Generally, students may take no more than six hours of independent study or research (SOC 5990, SOC 6900, SOC 6990) to complete their degree requirements. Also, students may apply no more than six hours taken outside the department toward completion of the degree

requirements. Exceptions may be approved by the graduate adviser to a maximum of six hours.

Typically, students may apply no more than six hours taken outside the department toward completion of the degree requirements. Exceptions may be approved by the graduate committee.

Thesis/Internship/Academic Project

Students may choose to complete a thesis, an internship, or an academic project. Each option will be graded on a S/U basis. The master's thesis is an original piece of research developed in collaboration with a full-time member of the departmental faculty who serves as thesis committee chair. Two additional full-time faculty members (at least one of whom is a member of the departmental faculty) must also serve as advisers to the student and are members of the thesis committee.

Students selecting the internship must develop this option in concert with a full-time faculty member, the Sociology Director of Graduate Studies, and a person from the field in which the internship is located. Examples of internship settings include community organizations, health facilities, criminal justice facilities, and government offices. Internships must place students in a position to make sociological observations about the setting. Students should incorporate these observations in the work that they submit to the faculty advisor (e.g., journals, progress reports, papers).

The academic project is a rigorous investigation of a sociological topic or concept done in collaboration with a full-time member of the departmental faculty who serves as the advisor.

4+1 BA to MA in Sociology

Undergraduate students at the University of Toledo interested in pursuing a Master's of Arts Degree in Sociology may apply for the 4+1 BA to MA in Sociology program option. If accepted, students are allowed to complete up to three graduate level classes (nine hours) during their final academic year of undergraduate studies. They will then continue in the 4+1 BA to MA in Sociology program upon completion of their undergraduate degree requirements.

In order to be accepted into this program, students must have: (1) a minimum 3.2 cumulative undergraduate grade point average (including credits transferred to UT); (2) undergraduate advisor's approval; and (3) permission of the chair of each department in which graduate credit is desired.

Applied Social Research Certificate

The Applied Social Research Certificate is an interdisciplinary, 15-hour program of study administered by the Department of Sociology and Anthropology. It is designed to provide students with the opportunity to acquire practical and communicative research tools. Students must complete SOC 6270 (Advanced Social Research Methods), SOC 6290 (Advanced Social Research Statistics), and at least nine hours of electives.

To be accepted into the certificate program, students must have earned at least nine hours of graduate credit and a graduate GPA of 3.0 or higher. Those who have not earned at least nine hours of graduate

credit are required to have a baccalaureate degree. Applicants with an undergraduate GPA of less than 3.0 must submit GRE scores.

Students should consult with the graduate director for additional information about program requirements and options.

Statistical Knowledge: Students will be able to model causal relationships, make inferences and predictions, and interpret findings. They also will be able to employ statistical software packages such as SPSS.

Theoretical Knowledge: Students will apply, critique, debate, and share opinions on multiple theoretical perspectives, and innovate new insights on those perspectives.

Methodological Knowledge: Students will describe and employ various methodologies used to collect, analyze, and interpret empirical evidence in sociological research. They also will be able to appraise the rigor of other scholars' methods and design their own research projects.

Communication and Critical Thinking: Be able to explain and debate complex ideas - both verbally and in writing effectively; be able to disseminate sociological understandings to other scholars and the general public; and be able to critically assess social relationships and the work in the discipline.

Department of World Languages and Cultures

Linda Rouillard, Chair

Linda Rouillard, French Graduate Advisor

An Chung Cheng, Spanish Graduate Advisor

Friederike Emonds, German Graduate Advisor

The University of Toledo offers an MA degree in Foreign Language with majors in French, German and Spanish. The degrees are tailored to student needs, and have a broad curriculum that includes creative writing components, as well as culture, film, literature and translation courses.

Degrees Offered

- M.A. and Ed with a Major in French, German or Spanish (<http://utoledo-public.courseleaf.com/graduate/arts-letters/departments-schools/world-languages-cultures/ma-ed-french-german-spanish/>)
- M.A. with a Major in French (p. 9)
- M.A. with a Major in German (p. 11)
- M.A. with a major in Spanish (p. 10)

FLAN 5160 Teaching Colloquia

[3 credit hours]

A course in the theory of second language acquisition and practice of teaching foreign / second languages in general.

Term Offered: Spring, Summer, Fall

FLAN 5980 Special Topics

[3 credit hours]

Study of a selected topic in foreign languages. Taught in English. May be repeated when topic varies. 3 Credit hours/contact hours

Term Offered: Spring, Fall

FLAN 5990 Independent Study in World Languages and Cultures

[3 credit hours]

Independent study of a selected topic in foreign languages, developed in consultation with a faculty member. May be repeated when the topic varies. 3 hours.

Term Offered: Spring, Summer, Fall

FREN 5010 Advanced French Grammar I

[3 credit hours]

Advanced study of structural and stylistic principles of French with emphasis on longer writing activities and various styles.

Term Offered: Spring

FREN 5020 Advanced French Grammar II

[3 credit hours]

Advanced study of structural and stylistic principles of French with emphasis on longer writing assignments.

Term Offered: Spring

FREN 5050 Advanced Conversation

[3 credit hours]

Intensive practice in speaking French.

Term Offered: Spring

FREN 5070 French Translation

[3 credit hours]

Practice in translation of texts from French into English and English into French. Subject matter area will include commerce, natural, physical, and social sciences and the humanities.

FREN 5160 Teaching Colloquia

[3 credit hours]

A course in the theory of second language acquisition and practice of teaching foreign / second languages in general.

Term Offered: Spring, Summer, Fall

FREN 5190 Study Abroad

[1-12 credit hours]

Graduate credit may be granted for foreign study on the basis of credentials that certify the nature of the student's academic achievements in a French-speaking country.

FREN 5200 Contemporary French And Francophone Civilization

[3 credit hours]

A study of contemporary France and/or Francophone cultures including discussion of economics, daily life, the family, social groups, industry, politics and education.

Term Offered: Spring, Fall

FREN 5210 French For Reading Knowledge I

[3 credit hours]

Course designed to develop sufficient reading proficiency to conduct and process research in French. (Not for majors)

Term Offered: Spring, Fall

FREN 5220 French For Reading Knowledge II

[3 credit hours]

Course designed to develop sufficient reading proficiency to conduct and process research in French. (Not for majors)

FREN 5310 Medieval Studies

[3 credit hours]

Introduction to Old French and readings in the major genres from the twelfth through fifteenth centuries.

Term Offered: Fall

FREN 5410 Renaissance Studies

[3 credit hours]

Literature reflecting major currents of the Renaissance.

Term Offered: Spring, Fall

FREN 5510 17th Century French Literature

[3 credit hours]

A study of the development of French Classicism.

Term Offered: Spring, Fall

FREN 5610 18th Century French Literature

[3 credit hours]

Readings from the novels, plays and prose of the major writers of the Enlightenment.

Term Offered: Fall

FREN 5710 19th Century French Literature I

[3 credit hours]

Literary and intellectual trends from Romanticism to Symbolism.

FREN 5810 Contemporary French & Francophone Literature I

[3 credit hours]

Literature of all genres from the period before World War I to the present.

Term Offered: Spring, Fall

FREN 5850 Le Cinema Francais

[3 credit hours]

A study of the development of French film and its place in world cinema.

Term Offered: Spring, Fall

FREN 5860 La Production Feminine

[3 credit hours]

This course deals with examples of feminine production which have influenced French culture in the areas of film, literary criticism, literature, philosophy, psychoanalysis and semiotics.

Term Offered: Fall

FREN 5980 Special Topics In French Studies

[3 credit hours]

Study of a selected topic in French or Francophone language, literature, or culture. May be repeated when topic varies.

Term Offered: Spring

FREN 5990 Independent Study In French

[1-3 credit hours]

Independent research in special topics. May be repeated once for additional credit.

FREN 6900 Research In French

[1-3 credit hours]

Independent research of a selected topic in French or Francophone language, literature, or culture. May be repeated once for additional credit.

Term Offered: Spring, Summer, Fall

GERM 5010 German Syntax And Stylistics I

[3 credit hours]

A review of German stylistic structures through the analysis of texts and written and oral exercises.

Term Offered: Fall

GERM 5020 German Syntax And Stylistics II

[4 credit hours]

Further review of German stylistic structures through the analysis of texts and written and oral exercises.

Prerequisites: GERM 5010 with a minimum grade of D-

Term Offered: Spring

GERM 5160 Teaching Colloquia

[3 credit hours]

A course in the theory of second language acquisition and practice of teaching foreign / second languages in general.

Term Offered: Spring, Summer, Fall

GERM 5190 Study Abroad

[1-12 credit hours]

Graduate credit may be granted for foreign study on the basis of credentials that certify the nature of the student's academic achievements in a German-speaking country.

Term Offered: Summer

GERM 5200 German Culture And Civilization

[3 credit hours]

Study of major trends and current developments in German Landeskunde. May be repeated when topic varies.

Term Offered: Spring, Fall

GERM 5210 German For Reading Knowledge I

[3 credit hours]

Elements of pronunciation, structure and vocabulary most appropriate to preparing graduate students to read effectively in German. (Not for major credit).

Term Offered: Spring

GERM 5620 German Classicism

[3 credit hours]

Study of Classical writers of Germany: Goethe, Schiller and their contemporaries.

Term Offered: Spring, Fall

GERM 5710 German Literature Of The 19th Century

[3 credit hours]

Study of selected works by authors from B chner to Fontane.

Term Offered: Spring

GERM 5720 German Romanticism

[3 credit hours]

Study of Romantic writers of Germany such as Novalis, Eichendorff, E.T.A. Hoffmann and Bettina Brentano.

GERM 5810 German Literature Of The 20th Century

[3 credit hours]

Study of selected works by authors from the turn of the century to the present.

Term Offered: Spring, Fall

GERM 5850 Genre Studies

[3 credit hours]

Study of a selected literary or film genre, its development, and its influence on German culture. May be repeated for credit when topic varies.

Term Offered: Spring, Fall

GERM 5980 Special Topics In German Studies

[1-3 credit hours]

Study of a selected topic in German language, literature, or culture. May be repeated for credit when topic varies.

Term Offered: Spring, Summer, Fall

GERM 5990 Independent Study In German

[1-3 credit hours]

Independent research in special topics. May be repeated once for additional credit.

Term Offered: Spring, Fall

GERM 6900 Research In German

[1-3 credit hours]

Independent research of a selected topic in German language, literature, or culture. May be repeated once for additional credit.

Term Offered: Spring, Summer, Fall

GERM 6930 Seminar: Selected Topics

[1-3 credit hours]

Study of selected topics in German language, literature, or culture. May be repeated once for additional credit.

Term Offered: Spring, Summer

SPAN 5000 Advanced Spanish Grammar

[3 credit hours]

An advanced study of Spanish grammar in preparation for higher levels of study in the language and for its use in professional pursuits.

Term Offered: Spring, Fall

SPAN 5010 Syntax And Stylistics

[4 credit hours]

A thorough study of the grammatical structure of Spanish with special attention to stylistic problems.

Term Offered: Spring, Fall

SPAN 5060 Translation & Interpretation In Spanish

[3 credit hours]

A study of the techniques of translation and interpretation as they relate to English and Spanish based on a contrastive analysis of two languages, both in theory and practice.

Term Offered: Spring

SPAN 5070 History Of The Spanish Language

[3 credit hours]

A study of the development of the Spanish language from Vulgar Latin to the present, illustrated with selected texts.

Term Offered: Spring

SPAN 5110 Introduction To Spanish Linguistics

[4 credit hours]

Basic concepts of linguistics as applied to the study of the Spanish language and its dialectal systems. Emphasis phonetics, phonology, morphology, syntax and semantics.

Term Offered: Spring, Fall

SPAN 5120 Teaching Colloquia

[3 credit hours]

A course in the theory of second language acquisition and practice of teaching foreign / second languages in general.

Term Offered: Spring, Summer, Fall

SPAN 5160 Latin American Novel I

[3 credit hours]

A study of the Latin American novel from the nineteenth century to the authors of the literary Boom of 1963.

Term Offered: Spring, Fall

SPAN 5170 Latin American Novel II

[3 credit hours]

A study of the major developments in Latin American novel from the Boom to the present.

Term Offered: Spring, Fall

SPAN 5210 Spanish For Reading Knowledge I

[3 credit hours]

Study of those elements of structure and vocabulary most appropriate for preparing graduate students to read effectively in Spanish. (Not for majors)

Term Offered: Spring, Fall

SPAN 5220 Spanish For Reading Knowledge II

[3 credit hours]

Study of those elements of structure and vocabulary most appropriate for preparing graduate students to read effectively in Spanish. (Not for majors)

SPAN 5250 Latin American Short Story

[3 credit hours]

Development of the Latin American short story from its origins with special emphasis on the contemporary authors such as Allende, Borges, Cortazar, Garcia Marquez and Rulfo among others.

Term Offered: Fall

SPAN 5310 Medieval & Renaissance Spanish Literature

[3 credit hours]

Study of major works from the Poema de Mio Cid to the early writers of the Siglo de Oro.

Term Offered: Spring

SPAN 5820 Modern Spanish Drama

[3 credit hours]

Critical readings of Spanish drama from Romanticism to the latest contemporary trends.

SPAN 5830 Hispanic Cinema

[3 credit hours]

Critical viewings of Spanish-language films from Spain and the Americas. Emphasis on cultural criticism.

Term Offered: Spring

SPAN 5980 Special Topics

[3 credit hours]

Study and research in specific areas or authors with considerable reading of Spanish texts plus written reports in Spanish.

Term Offered: Spring, Fall

SPAN 6900 Research In Spanish

[1-3 credit hours]

May be repeated for additional credit when topic varies.

Term Offered: Spring, Summer, Fall

SPAN 6930 Seminar: Selected Topics

[1-3 credit hours]

Selected topics from Spanish culture, linguistics, or literature.

Term Offered: Spring, Fall

M.A. with a Major in French

Students must complete a minimum of 30 semester credit hours for the master of arts and a minimum of 30 semester credit hours for the master of arts and education.

For the degree of master of arts or master of arts and education with a major in French, students must meet the following departmental requirements:

- present an undergraduate major in the language of interest from an accredited college or university;
- satisfactorily complete at least 18 hours of graduate credit in the major language (including courses FREN 5010 and FREN 5020);
- satisfactorily complete an additional 12 hours in the major language or in approved, cognate courses;
- pass a comprehensive examination; and
- demonstrate a reading proficiency in a foreign language other than the major. This may be done either by earning a passing grade in a foreign language course at or above the 3000 level, by passing an examination administered by the Department of Foreign Languages, or by successfully completing a graduate reading course offered by the department.

A thesis may be presented for an additional six hours of credit in lieu of the comprehensive examination.

1. Speaking objectives. French MA students are able to handle a variety of communicative tasks, including those required in university classes which are taught entirely in the target language. French masters students are able to converse in French about academic, professional, and social topics in a formal setting as well as in informal context. They can express and defend their opinions in the target language; they can discuss abstract topics and articulate hypotheses. They can narrate and describe in all major time frames (past, present and future) in paragraph length discourse. They can handle appropriately the linguistic challenges presented by a complication or unexpected turn of events that occurs within the context of a routine situation or communicative task with which they are otherwise familiar. They contribute to the conversation with sufficient accuracy, clarity, and precision to convey their intended message without misrepresentation or confusion, and it can be understood by native speakers unaccustomed to dealing with non-natives.

2. Writing objectives. French masters students are able to write extensive factual and analytical texts on a variety of topics for academic, professional or personal purposes. They demonstrate the ability to narrate and describe in major time frames and demonstrate a high degree of control of tense aspect. They are able to combine and link sentences into texts of paragraph length and structure. They demonstrate an ability to incorporate cohesive transitional devices. Subordination in the expression of ideas is present, structurally coherent and regularly correct. Their writing is understood by natives not used to the writing of non-natives although some additional effort may be required in the reading of the text. 3. Grammar objectives. Masters students in French demonstrate mastery of sophisticated and subtle grammatical topics. Students are able to communicate clearly and correctly in the target language. Clear communication is based on the accurate use and understanding of correct forms and structures. Students are able to identify forms and structures that they have mastered.

4. Literature Objectives. Masters students in French demonstrate a broad reading knowledge of literary periods, genres and styles. They give evidence of intensive critical reading skills or literary analysis of a given text. They also give evidence of comprehension of basic literary theories.

a) Literary history. Students are able to situate literary texts into their literary, political and social-historical contexts and to classify literary texts according to historical genres (essay, novel, lyric poetry, drama etc.) and style periods (Renaissance, Classicism, Romanticism, etc.). They are able to indicate which texts do not easily fit into given generic or stylistic categories and why. Masters students are able to use the library as well as electronic sources to gain access to relevant materials in and about literature in the target language.

b) Critical reading. Students are able to respond coherently and react critically to texts they have read, formulate relevant questions and problems, and show how these concerns may be clarified. They are able to identify, understand, and analyze the texts they have read.

5. Culture Objectives. Masters students in French demonstrate advanced knowledge of cultural differences among selected francophone cultures as manifested in literature and film. Students can identify a number of texts, artifacts, monuments, terms, names, places, concepts, behavior, dates, and other cultural facts from periods of the target culture's history, geography, and institutions. They can establish these concepts within relevant contexts and explain in the target language their meaning or importance. Students can use the library and electronic sources to gain access to relevant materials on the target civilization.

M.A. with a Major in Spanish

Students must complete a minimum of 30 semester credit hours for the master of arts and a minimum of 30 semester credit hours for the master of arts and education.

For the degree of master of arts or master of arts and education with a major in Spanish, students must meet the following departmental requirements:

- present an undergraduate major in the language of interest from an accredited college or university;
- satisfactorily complete at least 18 hours of graduate credit in the major language, including SPAN 5110
- satisfactorily complete an additional 12 hours in the major language or in approved, cognate courses;
- pass a comprehensive examination; and
- demonstrate a reading proficiency in a foreign language other than the major. This may be done either by earning a passing grade in a foreign language course at or above the 3000 level, by passing an examination administered by the Department of Foreign Languages, or by successfully completing a graduate reading course offered by the department.

A thesis may be presented for an additional six hours of credit in lieu of the comprehensive examination.

1. Speaking objectives. Spanish MA students are able to handle a variety of communicative tasks, including those required in university classes which are taught entirely in the target language. They should be able to handle with ease and confidence a large number of communicative tasks, and to demonstrate the ability to narrate and describe in all major time frames (past, present and future) in paragraph length discourse. They can handle appropriately the linguistic challenges presented by

a complication or unexpected turn of events that occurs within the context of a routine situation or communicative task with which they are otherwise familiar. They contribute to the conversation with sufficient accuracy, clarity, and precision to convey their intended message without misrepresentation or confusion, and it can be understood by native speakers unaccustomed to dealing with non-natives. They are able to participate in most informal and some formal conversations on topics related to school, home, and leisure activities. They can also speak about some topics related to employment, current events, and matters of public and community interest.

2. Writing objectives. Students are able to meet basic work and/or academic writing needs, produce routine social correspondence, write about familiar topics by means of narratives and descriptions of a factual nature, and write summaries. They demonstrate the ability to narrate and describe in major time frames with some control of aspect. They are able to combine and link sentences into texts of paragraph length and structure. They demonstrate an ability to incorporate some cohesive devices. Subordination in the expression of ideas is present and structurally coherent. They demonstrate sustained control of simple target-language sentence structures and partial control of more complex structures. Their writing is understood by natives not used to the writing of non-natives although some additional effort may be required in the reading of the text.

3. Grammar objectives. Students are able to communicate clearly and correctly in the target language. Clear communication is based on the accurate use and understanding of correct forms and structures. Students are able to identify forms and structures that they have mastered and to specifically and thoroughly apply them within the contexts.

4. Literature Objectives. Students should be familiar with a range of texts written by various authors from different historical periods and several Hispanic areas and be able both to place them in relevant contexts and to discuss them in the target language using critical concepts derived from philosophical, stylistic, aesthetic and hermeneutical approaches, among others. The literary knowledge objective has two components: knowledge of literary history and critical reading skills.

a) Literary history. Students are able to situate literary texts into their literary, political and social-historical contexts and to classify literary texts according to historical genres (essay, novel, lyric poetry, drama etc.) and style periods (Renaissance, Classicism, Romanticism, etc.). They should also be able to indicate which texts do not easily fit into given generic or stylistic categories and why, as well as to value their current relevance and the ongoing contributions to the tradition to which they belong. Majors should be able to use the library as well as electronic sources to gain access to relevant materials in and about literature in the target language.

b) Critical reading. Students can identify the underlying message and some supporting details across major time frames in descriptive informational texts. They can demonstrate their understanding of conventional narrative and descriptive texts, such as expanded descriptions of persons, places, and things and narrations about past, present, and future events. They can demonstrate an understanding of the main ideas, and some supporting details. They may derive some meaning from texts that are structurally and/or conceptually more complex. They are able to respond coherently and react critically to texts they have read, formulate relevant questions and problems, and show how these concerns may be clarified. They are able to identify, understand, and analyze the texts they have read.

5. Linguistic objectives. Students not only learn the correct usage of the target language but also its structure, history, and varieties (dialectal, sociolectal, etc.). Students gain knowledge of the main branches of linguistics as they apply to Spanish (phonetics, phonology, morphology, syntax, semantics, and pragmatics) and apply this knowledge to their own use of the target language through the study of stylistics.

6. Culture Objectives. Students can explain how a variety of products of public and personal interest are related to perspectives in their own culture and Hispanic culture. They can also explain how a variety of practices within familiar and social situations are related to perspectives. They can identify a number of texts, songs, films, plays, documentaries, social network and social media contents, artifacts, monuments, terms, names, places, concepts, behavior, dates, and other cultural facts from periods of the target culture's history, geography, and institutions. They can establish these concepts within relevant contexts and explain in the target language critically, factually and objectively their meaning or importance. Students can demonstrate awareness of subtle differences among cultural behaviors and adjust their behavior accordingly in familiar and some unfamiliar situations. They can converse comfortably with others from Spanish-speaking countries in familiar and some unfamiliar situations and show some understanding of cultural differences. Students can use the library and electronic sources to gain access to relevant materials on the target civilization.

Department of Women's and Gender Studies

Sharon Barnes, Chair

Asma Abdel-Halim, Graduate Advisor

The Graduate Certificate in Women's and Gender Studies is an interdisciplinary program of study which examines the significance and consequences of gender as a cultural category that shapes the experiences and knowledge of individuals and communities.

Degrees Offered

- Certificate Program in Women's and Gender Studies (p. 75)

WGST 5860 Seminar in Feminist Theory

[3 credit hours]

This introduction to global feminist thought familiarizes students with feminist terminology and a variety of feminist theoretical frameworks.

Term Offered: Spring

WGST 5880 Queer and Sexuality Theories-WAC

[3 credit hours]

An overview of the complexities, contradictions, and conflicts in the rapidly shifting field sometimes known as Queer Studies. This course attempts to walk a line between the hyperabstraction of "classic theoretical" concepts/texts and their more "concrete" contextualized locations in communities and identities. This course focuses on the field that emerged from the g/l/b/t movement as it moved into the academy in the 1990's.

Term Offered: Spring

WGST 5900 Seminar in Women's Studies

[3 credit hours]

Seminar focused on timely topics in Women's Studies chosen by rotating faculty.

Term Offered: Spring

WGST 5980 Special Topics Gender

[3 credit hours]

A course on specialized topics in Women's and Gender Studies. Consult schedule of courses for topics to be studied and semester offered.

Term Offered: Spring, Summer, Fall

WGST 6240 Research and Methods in Women's and Gender Studies

[3 credit hours]

This course will present an overview of the ways in which women's/gender/feminist studies have informed and complicated traditional theories of research and methodologies. Students will examine and use various research methods and tools to prepare a final research project.

Term Offered: Fall

WGST 6250 Feminism and U.S. Film

[3 credit hours]

This course will focus on the representation of women in dominant U.S. cinema with a particular interest in the filmic responses created by independent women film makers. We will examine the celluloid construction of women and gender presented in classic Hollywood Cinema using the tools of feminist analysis and discourse. We will be particularly concerned with the ways in which gender, race, class and sexuality shape the cinematic representations of women.

Term Offered: Fall

WGST 6260 Women, Gender & Disability

[3 credit hours]

This course will be an interdisciplinary exploration of the intersections of gender and disability and the significance of these categories of analysis as they are understood and experienced by American women with and without disabilities.

Term Offered: Spring

WGST 6980 Directed Readings in Women's and Gender Studies

[1-4 credit hours]

Supervised independent reading and research on selected topics. Student meets individually with instructor to develop a detailed written proposal. The course provides students with the opportunity to read independently on a topic related to gender studies under the direction of a WGST faculty member.

Term Offered: Spring, Summer, Fall

WGST 6990 Independent Project in WGST

[1-4 credit hours]

Supervised independent project. Students work with a faculty member to design a semester long project that utilizes the knowledge and skills gained through the certificate program. The course provides students with the opportunity to develop an individual project related to gender studies under the close supervision of a WGST faculty member.

Term Offered: Spring, Fall

Certificate Program in Women's and Gender Studies

The Graduate Certificate in Women's and Gender Studies is an interdisciplinary program of study which examines the significance

and consequences of gender as a cultural category that shapes the experiences and knowledge of individuals and communities. Women's and Gender Studies is grounded in feminist and gender theories that re-conceptualize and re-contextualize ideas and experiences as well as knowledge and knowledge production. This field of study allows for an in-depth exploration of the sociocultural, economic, and political implications of gender, race, class, ability, sexuality, and power relations - past, present, and cross-culturally.

The goal of the Certificate program is to offer a formal program of study for graduate students who seek to include Women's and Gender Studies as a specific area of concentration in their graduate or professional studies.

The Certificate Program in Women's and Gender Studies is flexible and designed to accommodate both full-time and part-time graduate students. The courses required for the certificate include evening, hybrid and online courses.

Those applying to work on the certificate alone must be admitted to the Graduate School and submit an application form and letter of interest to the Department of Women's and Gender Studies. Those applying to complete the certificate as well as a Master's degree in another program should consult with that graduate advisor as well.

The Certificate consists of 15 hours of graduate study from the courses listed below and others as approved by the Graduate Advisor. Research & Methods is required of all students pursuing the Certificate.

Code	Title	Hours
Required Seminars:		9
WGST 5860	Seminar in Feminist Theory	
WGST 5900	Seminar in Women's Studies	
WGST 6890/5890		
Select 6 hours of the following:		6
WGST 6250	Feminism and U.S. Film	
WGST 6260	Women, Gender & Disability	
WGST 5880	Queer and Sexuality Theories-WAC	
WGST 5980	Special Topics Gender	
WGST 6980	Directed Readings in Women's and Gender Studies	
WGST 6990	Independent Project in WGST	
Other related courses with the approval of the WGST Department Chair		

Master of Liberal Studies

Jerry Van Hoy, Director

The Master of Liberal Studies (MLS) Program at The University of Toledo seeks to provide an intellectually challenging and academically rigorous education to non-traditional students with bachelor's degrees who desire additional study in the liberal arts. By its very nature, the MLS Program encourages interdisciplinary thinking and respects diverse philosophical and methodological approaches to knowledge. Degree requirements are flexible, allowing students to design a customized program of study that reflects their unique academic interests. In designing the curriculum, students are able to choose from dozens of graduate courses taught

campus-wide. You can also earn a graduate certificate as part of your plan of study by incorporating certificate courses in MLS electives.

Recognizing the unique challenges facing non-traditional students, the MLS program attempts to provide course offerings in a variety of formats. The MLS degree may be completed via distance learning or on campus. For further information, please see the master of liberal studies web page at <http://www.utoledo.edu/al/mls> or contact the director at jerry.vanhoy@utoledo.edu. (jerry.vanhoy@utoledo.edu)

A Certificate in Women's and Gender Studies is available through the Master of Liberal Studies program. See the Women's and Gender Studies (p. 75) section of this catalog for details.

Degrees Offered

- Master of Liberal Studies Program (p. 77)

MLS 6010 MLS Seminar in Humanities

[3 credit hours]

Introduction to the concerns and methods of graduate study in the Humanities. This course will demonstrate, through readings from different eras, the interrelated nature of literature, philosophy and history.

Term Offered: Spring, Summer, Fall

MLS 6020 Mls Seminar In Social Sciences

[3 credit hours]

Drawing from major principles and concepts in the social sciences, this course examines issues of the individual and society from a range of disciplinary approaches. Special topics vary.

Term Offered: Spring, Summer, Fall

MLS 6030 Mls Seminar In Natural Sciences

[3 credit hours]

This course discusses the major ideas of the natural sciences in terms of their impact upon the human species. Specific topics vary.

Term Offered: Spring, Summer, Fall

MLS 6040 Mls Seminar In The Visual And Performing Arts

[3 credit hours]

An examination of the concept of creativity in the fields of visual art, theater, dance and music. Topics covered vary with instructor.

Term Offered: Spring, Summer, Fall

MLS 6100 Interdisciplinary Research Methods

[3 credit hours]

Exploration of what it means to use interdisciplinary approaches to research and writing. The course focuses on the logic of interdisciplinary research and how to use disciplinary research epistemologies in interdisciplinary projects. The course also discusses institutional Review Boards and ethical treatment of human subjects in research.

Term Offered: Spring, Fall

MLS 6400 Studies In Humanities

[1-6 credit hours]

Individually supervised study in the humanities. Permission of the Director required. May be repeated for additional credit.

Term Offered: Spring, Summer, Fall

MLS 6500 Studies In Social Sciences

[1-6 credit hours]

Individually supervised study in the social sciences. Permission of the Director required. May be repeated for additional credit.

Term Offered: Spring, Summer, Fall

MLS 6600 Studies In Natural Sciences

[1-6 credit hours]

Individually supervised study in the natural sciences. Permission of the Director required. May be repeated for additional credit.

Term Offered: Spring, Summer, Fall

MLS 6700 Studies In The Visual And Performing Arts

[1-6 credit hours]

Individualized or small-group study in the visual and performing arts.

Term Offered: Spring, Summer, Fall

MLS 6970 Masters of Liberal Studies Project

[1-6 credit hours]

Creative or applied capstone project supervised by faculty advisor and committee.

Term Offered: Spring, Summer, Fall

MLS 6990 Mls Thesis

[1-6 credit hours]

Permission of the Director required. May be repeated for additional credit.

Term Offered: Spring, Summer, Fall

Master of Liberal Studies Program

Jerry Van Hoy, Director

The Master of Liberal Studies (MLS) Program at The University of Toledo seeks to provide an intellectually challenging and academically rigorous education to non-traditional students with bachelor's degrees who desire additional study in the liberal arts. By its very nature, the MLS Program encourages interdisciplinary thinking and respects diverse philosophical and methodological approaches to knowledge. Degree requirements are flexible, allowing students to design a customized program of study that reflects their unique academic interests. In designing the curriculum, students are able to choose from dozens of graduate courses taught campus-wide. You can also earn a graduate certificate as part of your plan of study by incorporating certificate courses in MLS electives.

Recognizing the unique challenges facing non-traditional students, the MLS program attempts to provide course offerings in a variety of formats. The MLS degree may be completed via distance learning or on campus. For further information, please see the master of liberal studies web page at <http://www.utoledo.edu/al/mls> or contact the director at jerry.vanhoy@utoledo.edu. (jerry.vanhoy@utoledo.edu)

A Certificate in Women's and Gender Studies is available through the Master of Liberal Studies program. See the Women's and Gender Studies (p. 75) section of this catalog for details.

All students seeking admission to the master of liberal studies program must file an application with the College of Graduate Studies. Application materials consist of an application, a statement of purpose, writing sample, post-secondary transcripts (not necessary for applicants with a UT degree), and three letters of reference. Students with an undergraduate GPA of less than 2.70 must also submit GRE scores to be

considered for admission. Applicants may request or may be requested to have an interview with the director.

Early Admission to the Master of Liberal Studies Program

Students currently enrolled in the BA in Liberal Studies program of University College (UC) are given an opportunity to enroll in up to nine semester-hours of graduate course work in the Master of Liberal Studies (MLS) program of the College of Arts and Letters. Students may then apply those courses and credit hours to both their BA and MLS degree requirements for graduation from The University of Toledo.

Undergraduate students accepted into the LS/MLS option will be admitted to the MLS program and allowed to complete three graduate level classes. They will then continue in the MLS program upon completion of the BA degree requirements. The nine hours of graduate course work will be applied to completion of both LS and MLS degree requirements. It will be the joint responsibility of staff in UC and MLS to supervise students admitted to the LS/MLS option and to ensure that the limit of nine hours taken as an undergraduate is strictly enforced.

The following provisions apply to classes taken for graduate credit:

1. Graduate classes can be taken at The University of Toledo only *after* the student is accepted in to the LS/MLS joint program.
2. Only MLS classes numbered 6010-6040 may be included in the approved nine semester hours of graduate credit taken as an undergraduate.

Students must have a 3.3 cumulative undergraduate grade-point average to be considered for this option. Applications must contain:

1. A letter of application.
2. A completed "Regular Graduate Admission" form.
3. At least two letters of recommendation from faculty members teaching ALS/MLS classes, or upper-level classes in the students' proposed area of concentration at the graduate level.

The student and the MLS Graduate Adviser must develop an approved MLS plan of study and file this plan immediately after the student is granted graduate student status. The plan of study must specify the course work and credit hours that will be accepted as part of the LS/MLS early admission option.

For the master of liberal studies degree, students must complete the following requirements, totaling 33 hours of study:

Code	Title	Hours
Core Seminars		
MLS 6010	MLS Seminar in Humanities	3
MLS 6020	Mls Seminar In Social Sciences	3
MLS 6030	Mls Seminar In Natural Sciences	3
MLS 6040	Mls Seminar In The Visual And Performing Arts	3
Research Methods		
MLS 6100	Interdisciplinary Research Methods	3
Or another research methods course chosen in consultation with the director and an adviser		

Electives

Courses chosen in consultation with the director and an advisor

Capstone Requirement

Capstone

Thesis option: A thesis is a written report on original independent research conducted by the student under the supervision of his or her thesis adviser and thesis committee. The thesis must be written in scholarly format, with the appropriate citation format and extensive references. The literature review developed for the thesis proposal should serve as the initial component of the thesis. Typical thesis length: 50 to 70 pages including all tables, figures, and references.

Project option: A project is an applied or creative work. Generally a project will include a product that contributes knowledge via applied research or creative accomplishment (such as video, a course of study, short stories or essays). Projects must include an explanatory essay that includes an explanation of the methods and theory involved. In addition, the document will describe, in summarized fashion, the project development process. The literature review developed for the project proposal may serve as the basis of the explanatory essay. Typical explanatory essay length: 20 to 30 pages, including references.

1. Students will critically assess the assumptions and problem solving techniques associated with the disciplinary perspectives of the humanities, social sciences and natural sciences.
2. Students will examine social class, race, gender, and disability in their research and writing.
3. Students will write clearly, critically, and effectively.
4. Students will apply an integrative process to research, problem solving or creative endeavor.

Spatially Integrated Social Science (SISS)

Bhuiyan Alam, Director

This program is designed around the application of geographic information science, spatial statistics, spatial econometrics and spatial analysis to study the spatial dimension of human and social dynamics, including interaction of individuals and society, government, and market participants.

Degrees Offered

- Ph.D. in Spatially Integrated Social Science (p. 79)

SISS 7010 Spatial Statistics

[3 credit hours]

The course deals with statistical theory and applied statistical techniques for spatial data analysis. Topics include descriptive statistics, statistical modeling and hypothesis testing for spatial dependence and spatial heterogeneity.

Term Offered: Spring, Fall

SISS 7020 GEOGRAPHICAL INFORMATION SCIENCE IN SISS

[3 credit hours]

The course emphasizes the fundamental elements of cartography, geodesy, statistics, mathematics and geo-computational methods that form the foundation for the development of GIS and spatial analysis tools.

Term Offered: Fall

SISS 8010 FOUNDATIONS OF SPATIALLY INTEGRATED SOCIAL SCIENCE

[3 credit hours]

This course will examine the historical development of the social sciences, their philosophical and methodological approaches to research, and the emergence of the spatial perspective in social science research.

Term Offered: Fall

SISS 8020 SISS THEORY

[3 credit hours]

Advanced study of SISS requiring preparedness in theoretical and methodological aspects of spatial analysis in social sciences focusing on the spatial organization of society and spatial human and social dynamics.

Prerequisites: SISS 8010 with a minimum grade of D-

Term Offered: Spring

SISS 8030 ADVANCED SPATIAL DATA ANALYSIS

[3 credit hours]

Examination of spatial processes: spatial autoregressive models, gaussian Markov random field models, auto-logistic models, spatial discrete choice models. The topics include spatial panel data models, their applications and estimation methods.

Prerequisites: SISS 7010 with a minimum grade of D-

Term Offered: Spring

SISS 8040 Research Design

[3 credit hours]

Introduces students to research and research technicalities, including what is research, how to write research papers and research proposals, and how to design and manage a research project.

Prerequisites: SISS 8010 with a minimum grade of B- and SISS 8020 with a minimum grade of B-

Term Offered: Spring

SISS 8150 ADVANCED QUALITATIVE ANALYSIS IN SISS

[3 credit hours]

Advanced qualitative analysis techniques and applications to a broad range of spatially oriented social science problems.

Prerequisites: SISS 7010 with a minimum grade of D- and SISS 7020 with a minimum grade of D- and SISS 8010 with a minimum grade of D-

SISS 8170 SPACE AND SOCIETY CRITICAL THEORY IN SISS

[3 credit hours]

Critical examination of both the role of spatial inquiry and its limitations to the understanding of society and space.

Prerequisites: SISS 7010 with a minimum grade of D- and SISS 7020 with a minimum grade of D- and SISS 8010 with a minimum grade of D-

Term Offered: Spring

SISS 8180 DISCRETE CHOICE SPATIAL PROCESS MODELING

[3 credit hours]

The study of the human factor in spatial processes with the aim to advance understanding of spatial aspects of social dynamics by modeling discrete choice spatial processes.

Prerequisites: SISS 7010 with a minimum grade of D- and SISS 7020 with a minimum grade of D- and SISS 8010 with a minimum grade of D-

SISS 8200 SPATIAL PERSPECTIVES ON THE ENVIRONMENT

[3 credit hours]

Examination of the relationship between SISS approaches and human interaction with the natural environment.

Prerequisites: SISS 7010 with a minimum grade of D- and SISS 7020 with a minimum grade of D- and SISS 8010 with a minimum grade of D-

Term Offered: Spring, Fall

SISS 8920 Directed Readings in SISS

[3 credit hours]

Independent study of research literature in Spatially Integrated Social Science and related fields.

Prerequisites: SISS 7010 with a minimum grade of D- and SISS 7020 with a minimum grade of D- and SISS 8010 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

SISS 8940 Seminar in Special Topics

[3 credit hours]

Discussion of the major advances in Spatially Integrated Social Science as presented in the primary research in a selected topic or set of topics.

Prerequisites: SISS 7010 with a minimum grade of D- and SISS 7020 with a minimum grade of D- and SISS 8010 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

SISS 8960 Doctoral Dissertation Research

[1-12 credit hours]

Original research on a comprehensive topic of a spatial nature in the social sciences under the direction of a SISS faculty member. 18 credits in SISS core with grades of B or higher; 9 credits in advanced SISS seminars and 9 credits in SISS electives, all with grades of B or higher. Must pass dissertation qualifying exam within first semester of dissertation.

Term Offered: Spring, Summer, Fall

Ph.D. in Spatially Integrated Social Science

The Spatially Integrated Social Science (SISS) Ph.D. Program is a multidisciplinary degree program offered jointly by a consortium of academic departments in the College of Languages, Literature and Social Sciences that include Geography and Planning, Economics, Political Science and Public Administration, and Sociology and Anthropology. This program is designed around the application of geographic information science, spatial statistics, spatial econometrics and spatial analysis to study the spatial dimension of human and social dynamics, including interaction of individuals and society, government, and market participants.

Students entering this program must have completed a master's degree, preferably in a Social Science discipline. In addition, all students admitted into the program must have completed two courses covering geographic information systems and one course in multivariate statistics. New graduate students who are deficient in these requirements must

complete prerequisites prior to entering the program. All students seeking admission are required to provide transcripts, GRE scores, three academic letters of recommendation, and a statement of purpose. All students applying from universities outside of the U.S. are also required to submit TOEFL scores. Completion of the Ph.D. takes up to four years of study beyond the master's degree. The doctoral degree requires 60 semester hours beyond the Master's Degree with 36 course credits and 24 dissertation credits.

Course Work

The doctoral degree requires 72 semester hours beyond the Master's Degree with 36 course credits and 36 dissertation credits.

Code	Title	Hours
Mandatory Core Courses		
SISS 7010	Spatial Statistics	3
SISS 7020	GEOGRAPHICAL INFORMATION SCIENCE IN SISS	3
SISS 8010	FOUNDATIONS OF SPATIALLY INTEGRATED SOCIAL SCIENCE	3
SISS 8020	SISS THEORY	3
SISS 8030	ADVANCED SPATIAL DATA ANALYSIS	3
SISS 8040	Research Design	3
Advanced Seminar Courses		
Select two of the following:		6
SISS 8150	ADVANCED QUALITATIVE ANALYSIS IN SISS	
SISS 8170	SPACE AND SOCIETY CRITICAL THEORY IN SISS	
SISS 8180	DISCRETE CHOICE SPATIAL PROCESS MODELING	
SISS 8200	SPATIAL PERSPECTIVES ON THE ENVIRONMENT	
Elective Courses		
Select two courses within an allied social science department ¹		6
Additional Courses		
Select two courses from advanced seminar courses or electives		6
Dissertation		36
SISS 8960	Doctoral Dissertation Research	
Total Hours		72

¹ Selected within one of the allied social science departments participating in the program: Geography and Planning, Economics, Political Science and Public Administration, or Sociology and Anthropology.

All courses must be approved by the program director or dissertation advisor. Enrollment for dissertation credit is reserved for the third and fourth years of the program after course work has been completed and the qualifying exam has been passed.

Comprehensive Examination

A comprehensive examination will be scheduled for the summer following the end of the first year of the graduate program and will cover material presented in the first five core courses of the program. To qualify, a student must have a "B" or better in all five core courses. Upon successful completion of the examination, the student can begin taking the advanced seminars and electives in the second year of residence.

Dissertation

In the Spring Semester of the second year of residence, students can begin to establish a Dissertation Advisory Committee. Students will also enroll in the final core course (SISS 8040 (<https://catalog.utoledo.edu/search/?P=SISS%208040>): Research Design). It is during this time that the student should begin to focus on establishing a dissertation topic. A Qualifying Exam will be administered at the end of the Fall Semester of the student's third year. The Qualifying Exam will test each student on the basis of their knowledge and skills in the area(s) of their dissertation topic. As part of the Qualifying exam, students shall also prepare and present a draft dissertation proposal to their Dissertation Advisory Committee. Upon successful completion of the Qualifying Exam, each student will work on their dissertation for the remainder of Year 3 and up to Year 4.

Students will be able to identify the major epistemologies across the social sciences, explain the foundations of each epistemology and discuss the application of each in Spatially Integrated Social Sciences.

Students will be able to construct arguments highlighting the ability of Spatially Integrated Social Science to contribute to knowledge in the social sciences through its emphasis on space and spatial analysis as an integrating theme in the social sciences.

Students will identify leading spatial theorists, discuss key ideas in their work, and evaluate the significance of their contributions to Spatially Integrated Social Science.

Students will understand and appropriately apply a broad range of basic spatial statistics to the analysis of discrete and continuous spatial data.

Students will understand and manage the special issues posed by spatial data including spatial autocorrelation, the modifiable areal unit problem, and issues posed by spatial aggregation.

Students will master the use of advanced multivariate spatial statistics in a GIS environment and apply them to the analysis of spatial data.

Students will demonstrate an ability to use GIS software at an advanced level.

Students will understand the use of a range of remotely sensed imagery, and how that imagery might be analyzed within a GIS environment.

Students will identify a set of fundamental concepts (scale, aggregation, orientation, etc.) of spatial analysis, how each of these concepts can be managed with a GIS, and evaluate the ways that these basic concepts may fundamentally alter outcomes of social science research.

Students will be able to evaluate social science theories as they relate to space and spatial behavior, critique the theories, and identify and defend the strongest spatial social science theories.

Students will demonstrate an ability to synthesize and evaluate research in a chosen area of study within the social sciences, identify pertinent research questions, develop hypotheses, and apply appropriate GI Science, remote sensing, spatial statistics and/or spatial autoregressive analysis to evaluate those hypotheses.

College of Engineering

2021-2022 Graduate Catalog

Welcome to the UToledo College of Engineering. The College of Engineering offers graduate education at the doctoral, masters, and certificate levels. At the doctoral level, the College offers a PhD in Biomedical Engineering and a PhD in Engineering with concentrations in seven (7) areas: bioengineering, chemical, civil, electrical, industrial, and mechanical engineering, and computer science and engineering. The College offers ten (10) masters of science degrees, including two programs - general engineering and energy engineering - that are offered 100% online. For those interested in other continuing education options, specialized graduate certificates in cyber security, mechatronics, manufacturing, and materials science and engineering are also available.

Our traditional on-campus graduate programs prepare engineers for research and advanced engineering careers. Our online-programs for working professionals provide a blend of engineering and business courses to help advance your career.

Graduate Degrees/Certificates Offered

- M.S. in Bioengineering (p. 81)
- Ph.D. in Engineering (Bioengineering) (p. 82)
- Ph.D. in Biomedical Engineering (p. 83)
- M.S. in Chemical Engineering (p. 85)
- Ph.D. in Engineering (Chemical Engineering) (p. 87)
- M.S. in Civil Engineering (p. 88)
- Ph.D. in Engineering (Civil Engineering) (p. 89)
- Master of Cyber Security (p. 90)

- M.S. in Cyber Security (p. 91)
- M.S. in Electrical Engineering (p. 93)
- Ph.D. in Engineering (Electrical Engineering) (p. 95)
- M.S. in Engineering (Computer Science & Engineering) (p. 96)
- Ph.D. in Engineering (Computer Science & Engineering) (p. 98)
- M.S. in Industrial Engineering (p. 99)
- M.S. in Mechanical Engineering (p. 100)
- Ph.D. in Engineering (Industrial Engineering) (p. 99)
- Ph.D. in Engineering (Mechanical Engineering) (p. 102)
- M.S. in Engineering (Energy Engineering - online) (p. 103)
- M.S. in Engineering (General Engineering -online) (p. 105))
- J.D./M.S. Dual Degree Program (p. 107)

Certificates

- Graduate Certificate in Cyber Security (p. 108)
- Graduate Certificate in Manufacturing (p. 108)
- Graduate Certificate in Material Science and Engineering (p. 108)
- Graduate Certificate in Mechatronics (p. 109)

M.S. in Bioengineering

OVERVIEW

Bioengineers work at the interface of engineering and living systems. At UToledo, our master's program provides key training in focused areas. For example, learn how to design, build and test medical devices; build computational models to predict joint loading and surgical intervention outcomes; or develop sensors to better detect physiological signals – all to improve the human condition. The possibilities are endless. Please see our department website for details regarding faculty research areas. Our master's-level graduates often transition to successful careers in a range of bio-industries or continue on to pursue Ph.D. or M.D. degrees.

ADMISSIONS REQUIREMENTS

The MS graduate programs in the Department of Bioengineering are open to all qualified individuals with a Bachelor of Science (B.S.) or Master of Science (M.S.) in Engineering. Students with a B.S., B.A., or M.S./M.A. degree in a related field are also eligible provided they meet the minimum prerequisite coursework requirement of two (2) years of calculus through differential equations, and one (1) year of engineering physics.

To be competitive for admission, all applicants should have a grade point average of at least 3.0/4.0 for all previous undergraduate work and 3.3/4.0 for all previous graduate work. In some cases, additional prerequisite courses related to the program of study may be required (see Provisional Admission). Course credits for meeting undergraduate prerequisites are not applied toward the graduate degree.

The GRE exam is required of all students, and international students are expected to complete the TOEFL exam. The minimum scores for the GRE are set by the Department of Bioengineering; the minimum scores for the TOEFL exam are set by the College of Graduate Studies. The minimum scores considered are:

- GRE - 300 combined for the verbal and quantitative sections
- TOEFL - 550 (PBT); 213 (CBT); 80 (IBT)

PROGRAM REQUIREMENTS

The Master of Science program in bioengineering has three options:

- thesis,
- project and
- coursework.

The thesis option requires the completion of a minimum of 21 credit hours of approved graduate course work, 9 hours of thesis research and the successful defense of a research-based thesis. The project option requires the completion of a minimum of 24 credit hours of approved graduate course work and 6 hours of project research. The coursework option requires the completion of at least 30 hours of approved graduate course work only. All course work must be approved by the student's adviser (or the graduate director). The M.S. curriculum is designed to provide a general, flexible framework for students in selecting course work that is relevant to their specific area of research. Each student must meet the following minimum general course work requirements:

Code	Title	Hours
Required coursework		6
BIOE 5200 or BIOE 6100	Physiology And Anatomy For Bioengineers Computational Physiology	3
MIME 6000	Advanced Engineering Mathematics I	3
BIOE 5930	Bioengineering Seminar (Register and attend every semester)	0
Elective coursework		15-24
Elective coursework or hr requirements depend on capstone option. Up to 6 cr hr may be entrepreneurship elective coursework. All remaining coursework must be engineering, mathematics, or science-based. Elective coursework options include, but are not limited to, the courses listed below.		
BIOE 5260	Medical Imaging Systems I	3
BIOE 5650	Bioseparations	3
BIOE 5670	Ultrasound Principles And Medical Applications	3
BIOE 5730	Computational Bioengineering	3
BIOE 5740	Tissue Engineering	3
BIOE 5750	Experimental Methods In Orthopedic Biomechanics	3
BIOE 5780	Advanced Biomechanics	3
BIOE 5830	Additive Manufacturing	3
BIOE 6310	Cell and Tissue Engineering Laboratory	3
BIOE 6520	Orthopaedic Biomechanics	3
BIOE 6730	Biological Transport Phenomena	3
MIME 5280	Cad - Finite Element Methods	3
MIME 5460	Advanced MATLAB for Engineers	3
MIME 6650	Advanced Material Science and Engineering	3
CHEE 6120	Biofuels	3
CHEM 5170	Chemistry Instrumentation Techniques	2
BIOL 6300	Advanced Microscopy and Imaging	3

EFSB 6590	New Venture Creation	3
EFSB 6690	Strategic Management of Innovation	3
Capstone option		
<i>Thesis option:</i>		
BIOE 6960	Bioengineering Research And Thesis - Master's	9
Elective coursework		15
<i>Project option:</i>		
BIOE 6920	Bioengineering Project	6
Elective coursework		18
<i>Coursework option</i>		
Elective coursework		24

- 1) Solve problems using advanced mathematics, engineering and biomedical sciences
- 2) Communicate research rationale and results in scientific presentations and refereed publications
- 3) Independently design and conduct laboratory research
- 4) Lead research or project teams with direction from supervisors

Ph.D. in Engineering (Bioengineering)

OVERVIEW

The doctoral program in engineering (bioengineering) is a research-intensive program supported by internationally-recognized faculty with expertise covering a wide range of specialized fields in bio-related applications. Students in the doctoral program are provided opportunities to work on in-depth research problems sponsored by federal and state funding agencies, industries, and private foundations. Specifically, this program prepares students to pursue careers in academia, bio-industries, and clinical settings.

Departmental Research Focus Areas include:

- Biofuels and bio-products
- Environmental and bio-sensors
- Biomechanics and biomaterials
- Cellular and tissue engineering
- Plasma medicine
- Drug delivery platforms
- Biomedical imaging, instrumentation, and artificial intelligence

ADMISSIONS REQUIREMENTS

The Ph.D. graduate program in the Department of Bioengineering is open to all qualified individuals with a Bachelor of Science (B.S.) or Master of Science (M.S.) in Engineering. Students with a B.S., B.A., or M.S./M.A. degree in a related field are also eligible provided they meet the minimum prerequisite coursework requirement of: two (2) years of calculus through differential equations; and one (1) year of engineering physics.

To be competitive for admission, all applicants should have a grade point average of at least 3.0/4.0 for all previous undergraduate work and 3.3/4.0 for all previous graduate work. In some cases, additional prerequisite courses related to the program of study may be required (see Provisional Admission). Course credits for meeting undergraduate prerequisites are not applied toward the graduate degree.

The GRE exam is required of all students, and international students are expected to complete the TOEFL exam. The minimum scores for the GRE are set by the Department of Bioengineering; the minimum scores for the TOEFL exam are set by the College of Graduate Studies. The minimum scores considered are:

- GRE - 300 combined for the verbal and quantitative sections
- TOEFL - 550 (PBT); 213 (CBT); 80 (IBT)

ADMISSION TO CANDIDACY

To be admitted to doctoral candidacy, all doctoral students must meet the following requirements:

- Pass the bioengineering qualifying examination.
- Select a faculty adviser and dissertation committee.
- Pass the bioengineering dissertation research proposal examination.
- Earn at least a 3.0/4.0 GPA for all graduate level course work.

PROGRAM REQUIREMENTS

The doctor of philosophy degree in engineering requires a minimum of 90 semester hours of approved graduate course work beyond the B.S. degree or 60 semester hours beyond the M.S. degree. For students directly admitted into the Ph.D. program with a B.S. degree, the M.S. course work and the Ph.D. course work requirements must be satisfied. All course work must be approved by the student's advisor. Each student must meet the following minimum general course work requirements beyond the M.S. degree requirements:

- Register and attend the weekly bioengineering department seminar. Registration and attendance are mandatory every semester.
- Complete BIOE 6100 if not previously taken.
- Complete 9-12 hours of elective course work as approved by the advisor to support the research area.
- Complete MIME 8100 to satisfy the mathematics requirement.
- Complete at least 45 semester hours of dissertation research.

In addition to course work requirements, continuation within the Ph.D. program requires that the student pass two major examinations:

1. the qualifying exam and
2. defense of the dissertation research proposal.

Completion of the Ph.D. degree requires the writing and defense of the dissertation, and presentation and publication of the research findings.

Qualifying Exam

For students accepted into the Ph.D. program, the Ph.D. Qualifying Exam will occur after the completion of the required first year coursework comprising the core courses in physiology, mathematics and the bioengineering core courses (see MS course requirements). The students rotate through 3 different examination topics which are mediated by 2-3 faculty members. Each testing topic lasts no more than 25 minutes; each student is asked questions of increasing difficulty until the perimeter of the student's knowledge is determined. All students are tested on the common areas of mathematics and physiology. Each student selects the third test segment from the three broad specialization

areas of biomechanics, bioprocessing/molecular & cellular biology, and bioelectrical systems.

Following the finalization of the examination outcomes, the Graduate Program Director will immediately notify the students tested in writing of the testing outcome. If retesting is required, the student is also informed of the date of testing and the topic(s) to be retested. Students who do not receive an outright pass on the first examination have one opportunity to retest with a passing score or are dismissed from the program.

Ph.D. in Biomedical Engineering OVERVIEW

Patricia Relue, Program Co-Director from the College of Engineering
Kandace Williams, Program Co-Director from the College of Medicine and Life Sciences

The Doctor of Philosophy in Biomedical Engineering at the University of Toledo is a joint program between the College of Engineering and the College of Medicine and Life Sciences. The program is open to qualified students with B.S. degrees in engineering or in science fields such as biology, chemistry, physics, mathematics, or computer science. Since prospective students have a variety of backgrounds, the requirements for admission vary.

The degree is conferred based on high scholarly attainment in the field of biomedical engineering. This program incorporates a formal entrepreneurship component in collaboration with the College of Business and Innovation (COBI) to encourage Ph.D. students to commercialize the biomedical technology they may develop as part of their dissertation research. The curriculum also provides a Ph.D. program for M.D. students from undergraduate engineering backgrounds that are interested in pursuing a dual degree and careers as physician scientists.

ADMISSIONS REQUIREMENTS

The entrance requirement for the PhD program in Biomedical Engineering is the B.S. degree in engineering or in science fields such as biology, chemistry, physics, mathematics, or computer science. Students with non-engineering undergraduate degrees desiring entry into this PhD program must have completed 1 year of engineering physics; 1 year of biology; 1 year of general chemistry; 2 years of calculus through differential equations; and at least 12 semester credit hours of undergraduate engineering/science course work (appropriate to the area of research interest of the candidate) to be considered for admission. Credit received for undergraduate coursework required for admission will not be applied toward the graduate degree.

To be competitive for admission, all applicants should have a grade point average of at least 3.0/4.0 for all previous undergraduate work and 3.3/4.0 for all previous graduate work. In some cases, additional prerequisite courses related to the program of study may be required (see Provisional Admission). Course credits for meeting undergraduate prerequisites are not applied toward the graduate degree.

The GRE exam is required of all students, and international students are expected to complete the TOEFL exam. The minimum scores for the GRE are set by the Department of Bioengineering; the minimum scores for the

TOEFL exam are set by the College of Graduate Studies. The minimum scores considered are:

- GRE - 300 combined for the verbal and quantitative sections
- TOEFL - 550 (PBT); 213 (CBT); 80 (IBT)

In addition to coursework requirements, continuation within the Ph.D. program requires that the student pass two major examinations:

1. Ph.D. Qualifying Exam and
2. Dissertation Research Proposal defense.

Completion of the Ph.D. degree requires the writing and defense of the Dissertation and the writing of a business commercialization plan and/or publication of the research findings.

CURRICULUM

A minimum of 90 semester credit hours of approved graduate coursework are required beyond the B.S. degree. For students directly admitted into the Ph.D. program with a B.S. degree, the minimum coursework requirements specified below must be satisfied.

- Register and attend a weekly seminar series in the College of Engineering or the College of Medicine and Life Sciences. Registration and attendance is mandatory every semester.
- Complete 13 hours of core coursework.
- Complete 12 hours of engineering/life sciences elective coursework.
- Complete 3-6 hours of entrepreneurship elective coursework.
- Complete 15 hours of other engineering/science elective coursework.
- Complete at least 45 semester hours of dissertation research. A student can register for dissertation research only after passing the *Qualifying Exam*.

In order to be awarded the PhD in Biomedical Engineering degree, the student must have at least a B average (a minimum GPA of 3.0/4.0) for all graduate course credits in the program of study as well as for the entire graduate transcript. Only credit hours obtained with a letter grade of "C" or higher, or an "S" grade for the limited number of classes offered on a satisfactory or unsatisfactory basis, will fulfill degree requirements.

Program Requirements

The core courses include the following:

Code	Title	Hours
Computational Physiology		
A math course at the 7000 or 8000 level as a prerequisite for the mathematics core course		
MIME 8100	Advanced Engineering Mathematics II	
	or MATH 8510 Partial Differential Equations	
INDI 8020	On Being a Scientist	
Select at least three credit hours from the following:		
BMSP 8330	Curr Prob Res App Protein Str	
BMSP 8340	Curr Prob Res App Genes/Genome	
BMSP 8350	Cell Biology & Signaling	

BMSP 8360 Curr Prob Cell Membranes

MPHY 8040 Diag Radiological Physics (or equivalent)

Students emphasizing the biological sciences must complete at least 5 credit hours of biomedical sciences program (BMSP) courses.

The Ph.D. in Biomedical Engineering includes an entrepreneurial component which is nurtured through close interaction with the COBI. Each student in this degree program completes the course EFSB 6590 New Venture Creation as part of the approved elective coursework. Students may also elect to complete the additional graduate level COBI course EFSB 6690 Technology Commercialization.

Qualifying Examination

The Qualifying Examination is an oral exam used to assess a student's critical thinking skills and understanding of the foundational material essential for success in the doctoral program. For students accepted into the Ph.D. program, the Ph.D. Qualifying Exam will occur after the completion of the required first year coursework comprising the core courses in physiology, mathematics and the courses from the College of Medicine and Life Sciences. The students rotate through 3 different examination topics which are mediated by 2-3 faculty members. Each testing topic lasts no more than 25 minutes; each student is asked questions of increasing difficulty until the perimeter of the student's knowledge is determined. All students are tested on the common areas of mathematics and physiology. Each student selects the third test segment from the three broad specialization areas of biomechanics, bioprocessing/molecular & cellular biology, and bioelectrical systems.

Following the finalization of the examination outcomes, the Program Co-Director immediately notify the students tested in writing of the testing outcome. If retesting is required, the student is also informed of the date of testing and the topic(s) to be retested. Students who do not receive an outright pass on the first examination have one opportunity to retest with a passing score or are dismissed from the program.

Ph.D. Dissertation Committee

Following the successful completion of the Qualifying Examination, students are expected to form their dissertation committees with the advice and consent of their research advisors. Each committee must consist of at least five UT Graduate Faculty. Affiliated Faculty must constitute the majority on each committee. Each committee must include at least one Affiliated Faculty member from the College of Engineering, one from the College of Medicine and Life Sciences, and one external faculty member usually from the College of Business and Innovation.

Doctoral Candidacy

All doctoral students must meet the following requirements before being admitted to doctoral candidacy:

- Pass the Biomedical Engineering Qualifying Examination
- Select a dissertation committee
- Obtain at least a 3.0/4.0 for all graduate level coursework

Prior to initiating dissertation research, each student must complete and file a Graduate Research Advisory Committee Approval and Assurances Form (GRAD) with the College of Graduate Studies. Students must complete this form and receive the required approvals prior to beginning

any research for a thesis involving humans, animals, radiation, or bio hazardous substances.

Dissertation Research Proposal Examination

The dissertation research proposal is a document written by the student describing the research to be undertaken for the dissertation. The oral examination consists of the presentation of the written proposal by the student to the dissertation committee in a closed forum. The dissertation research proposal must be written and presented within one calendar year of passing the Qualifying Examination. A student may request an extension of up to one additional calendar year with the approval of the faculty advisor.

The dissertation research proposal should describe the background, goals, hypotheses, and general methods of the proposed research. The proposal should be structured in a manner similar to an NIH grant application. Copies of the proposal must be given to all members of the dissertation committee at least two weeks before the oral presentation. The dissertation proposal must then be formally presented to the dissertation committee and defended to their satisfaction.

Entrepreneurship Component

Each student will integrate his/her COBI coursework with his/her research discoveries and submit a formal business plan to commercialize the dissertation research. This plan must be presented and approved by the dissertation committee prior to the final approval of the dissertation. The committee, which includes one faculty member from the COBI, may seek the advice of others in evaluating the submitted plan.

In recognition of the fact that some students will focus on more fundamental scientific research which may have limited commercial value, a student may request from the dissertation committee a substitution of the business plan by a research equivalent of this requirement. An example of such an equivalent requirement would be evidence of submission and/or publication of two peer-reviewed journal articles.

Ph.D. Dissertation and Defense

When the dissertation research is completed to the satisfaction of the faculty advisor, the student prepares a complete draft of the Ph.D. dissertation. The student must submit the final draft of the dissertation to each committee member for his or her critical evaluation and review at least two (2) weeks prior to the defense. The dissertation defense consists of a 45 minute formal oral presentation by the student, followed by open and closed question sessions. The dissertation committee then votes, and a majority of the committee must concur on the final decision. If the student does not pass the dissertation defense, then the dissertation committee, in consultation with the Program Director, will decide a course of future action.

Time Limit

Doctoral candidacy automatically terminates five (5) years after admission to candidacy. All requirements for the doctoral degree must be completed within seven (7) years of admission to the Ph.D. program (registration for first doctoral level class). To continue beyond the time limit, a written request for extension to the research advisor and the

two Co-Directors of the Biomedical Engineering Committee must be submitted and approved. Upon approval through the required channels of The College of Engineering, the extension request must be forwarded to The College of Graduate Studies for final review and approval.

- (1) Solve problems using advanced mathematics, engineering and biomedical sciences
- (2) Communicate research rationale and results in scientific presentations, grant proposals, patents and refereed publications
- (3) Identify research questions and commercialization opportunities in biomedical research
- (4) Independently design, conduct and direct laboratory research
- (5) Lead research or project teams without additional supervision
- (6) Review scientific literature to identify and obtain rationale for new research areas
- (7) Teach undergraduate engineering courses

M.S. in Chemical Engineering OVERVIEW

Our chemical engineering M.S. students grow their knowledge through rigorous coursework and perform cutting-edge research that aims to tackle the world's greatest energy, environmental and medical challenges. Current projects range from the production of renewable biofuels and polymers, to water purification, to development of nanomaterials for CO₂ capture, advanced catalysis, and sensing, to hydrogels for regenerative medicine. Through their coursework and research, our M.S. students receive training in state-of-the-art experimental and modeling tools to prepare them for leadership roles in industry and government, or further academic study. Most graduates elect to pursue careers in industry, joining diverse companies throughout the United States. Others go on to rewarding careers at nonprofit and government institutions, or continue their studies toward Ph.D. degrees.

ADMISSIONS REQUIREMENTS

Admission for graduate studies at The University of Toledo requires a four-year bachelor's degree from an accredited college or university. For all applicants from an accredited U.S. or Canadian university with an undergraduate GPA below 2.7 and for all international applicants from non-English speaking countries, GRE scores must be submitted with a quantitative GRE score of at least 155. For all international applicants from non-English speaking countries, a minimum TOEFL speaking score of 22 (or a minimum IETLS speaking score of 6.5). International students must also demonstrate adequate financial resources for their graduate education before admission.

Admission of Chemistry Majors

A special program is in place for students who are Chemistry Majors, and it requires them to take required pre-requisite courses. The plan assumes that two years of undergraduate calculus and one semester of physical chemistry have been completed. The student should contact the Graduate Director.

PROGRAM REQUIREMENTS

Students may select one of three Master of Science in Chemical Engineering (M.S. Ch.E.) degree programs: (1) thesis, (2) non-thesis coursework, or (3) non-thesis project options. A Professional Science Master's Track in Green Chemistry and Engineering also is offered.

The thesis Master of Science in Chemical Engineering (M.S. Ch.E.) degree program requires completion of 30 hours of course credit, successful defense of a thesis and typically takes two years to complete. Minimum requirements are:

Code	Title	Hours
GNEN 5000	Graduate Launch	0
CHEE 6500	Advanced Chemical Reaction Engineering	3
CHEE 6510	Advanced Chemical Engineering Thermodynamics	3
CHEE 6550	Transport Phenomena I	3
CHEE 6560	Transport Phenomena II	3
Graduate course work		9
Continuous registration and attendance for the Graduate Seminar for full time students		
Thesis work completed to the satisfaction of the thesis committee and successful oral defense of the thesis before the committee in a public forum.		9
Total Hours		30

The non-thesis Master of Science options are: course work and project. For the coursework option, students are required to complete 30 credit hours of approved graduate study including:

Code	Title	Hours
CHEE 6500	Advanced Chemical Reaction Engineering	3
CHEE 6510	Advanced Chemical Engineering Thermodynamics	3
CHEE 6550	Transport Phenomena I	3
CHEE 6560	Transport Phenomena II	3
Graduate course work		18
Total Hours		30

For the project option, students are required to complete 30 credit hours of approved graduate study, including six hours of a Master of Science project as specified. Students are required to submit a written project report to the department after approval by the chemical engineering faculty project supervisor. Specific requirements are:

Code	Title	Hours
CHEE 6500	Advanced Chemical Reaction Engineering	3
CHEE 6510	Advanced Chemical Engineering Thermodynamics	3
CHEE 6550	Transport Phenomena I	3
CHEE 6560	Transport Phenomena II	3
Graduate course work		12
CHEE 6920	Chemical Engineering Project (completed to the satisfaction of the faculty project supervisor)	6

Continuous registration and attendance for the Graduate Seminar for full time students

Total Hours	30
--------------------	-----------

Only credit hours obtained with a letter grade of "C" or higher, or an "S" grade for the limited number of classes offered on a satisfactory or unsatisfactory basis, will fulfill degree requirements. Students must maintain a grade point average (GPA) of 3.0 or above. Additionally, the graduate course work must satisfy the following restrictions:

- No more than six (6) hours of Graduate Seminar (CHEE 5930), independent study, special problems, or special topics
- No more than seven (7) hours in dual level courses; courses with a minority enrollment of selected undergraduates are not restricted
- All courses must be taken at the 5000 level or higher in the College of Engineering, the College of Pharmacy and Pharmaceutical Sciences, the College of Medicine and Life Sciences, or the College of Natural Sciences and Mathematics.

Students should carefully select their courses to enhance their educational background and complement their research activities. Additionally, all students must register for one hour of Seminars in Chemical Engineering, CHEE 5930, each semester during the academic year. This course is graded on a satisfactory/unsatisfactory basis. To receive a grade of "S," students must attend all seminars or provide a written explanation for their absence.

The Professional Science Masters option requires completion of 30 hours of coursework, 6 hours of industrial internship, and typically takes one year to complete. Minimum requirements are:

Code	Title	Hours
CHEM 6200	Green Chemistry	3
CHEM 6210	Environmental Chemistry	3
CHEE 6010	Green Engineering Principles	3
CHEE 6110	Green Engineering Applications	3
BUAD 6600	Supply Chain Management	3
EFSB 6690	Strategic Management of Innovation	3
or EFSB 6590	New Venture Creation	
Elective graduate course work		12
CHEE 6970	Graduate Engineering Internship	6
Total Hours		36

Students possessing a Bachelor's degree in Chemical Engineering are required to take three additional hours of elective graduate course work in lieu of CHEE 6010.

The elective graduate course work may come from traditional areas of chemistry and chemical engineering at the 6000 level. Up to four hours of 6000 level course work in a related discipline (e.g., environmental sciences or physics) and up to two hours of independent research project (CHEE 6980) may be applied to the elective graduate course work requirement subject to the approval of the PSM program director. Research seminar (CHEE 5930) cannot be applied towards the elective graduate course work.

Six (6) hours of Graduate Engineering Internship (CHEE 6970) also are required. The Graduate Industrial Internship must be completed at an

industry, governmental organization, or non-governmental organization in an area relevant to green chemistry and engineering. The PSM program director will assist in identifying Internship opportunities and must approve all placements. Students who are working or have worked part or full-time in a relevant job may request Internship credit for this work experience. The Director will evaluate all such requests and give credit if appropriate.

Admission of Chemistry Majors

A special program is in place for students who are Chemistry Majors, and it requires them to take required prerequisite courses. The plan assumes that two years of undergraduate calculus and one semester of physical chemistry have been completed. The student should contact the Graduate Director.

Our student learning outcomes (SLOs) are to graduate students who will have:

1. an ability to conduct research or complete engineering projects
2. an ability to communicate technical issues to others
3. an ability to apply knowledge of mathematics, science, and engineering to problem solving
4. an ability to identify, formulate and solve engineering problems
5. an understanding of ethical conduct in engineering research and/or practice.

Ph.D. in Engineering (Chemical Engineering)

OVERVIEW

Our chemical engineering Ph.D. students perform cutting-edge research that aims to tackle the world's greatest energy, environmental and medical challenges. Current projects range from the production of renewable biofuels and polymers, to water purification, to development of nanomaterials for CO₂ capture, advanced catalysis, and sensing, to hydrogels for regenerative medicine. Our graduate students receive training in state-of-the-art experimental and modeling tools to prepare them for scientific leadership roles in industry, government and academia. Most graduates elect to pursue careers in industry, joining diverse companies throughout the United States. Others go on to prestigious faculty positions at research and teaching universities, or pursue rewarding careers at other nonprofit and government institutions.

ADMISSIONS REQUIREMENTS

Admission for graduate studies at The University of Toledo requires a four-year bachelor's degree from an accredited college or university. For all applicants from an accredited U.S. or Canadian university with an undergraduate GPA below 2.7 and for all international applicants from non-English speaking countries, GRE scores must be submitted with a quantitative GRE score of at least 155. For all international applicants from non-English speaking countries, a minimum TOEFL speaking score of 22 (or a minimum IELTS speaking score of 6.5). International students must also demonstrate adequate financial resources for their graduate education before admission.

PROGRAM REQUIREMENTS

The doctoral degree requires a total of 90 credit hours split equally between course work and dissertation research. However, to be formally admitted to candidacy for the degree, doctoral students must first pass the preliminary and qualifying examinations. After admission to candidacy, the completion of 45 credit hours of course work and 45 credit hours of dissertation research, doctoral candidates must prepare a written dissertation documenting their research efforts. Final approval for graduation is contingent upon a successful oral defense of the dissertation before the dissertation committee in a public forum.

The minimum requirements for the Doctor of Philosophy (Ph.D.) in Engineering are:

Code	Title	Hours
GNEN 5000	Graduate Launch	0
CHEE 8500	Advanced Chemical Reaction Engineering	3
CHEE 8510	Advanced Chemical Engineering Thermodynamics	3
CHEE 8550	Transport Phenomena I	3
CHEE 8560	Transport Phenomena II	3
Additional graduate course work, including:		33
CHEE 5930	Seminars in Chemical Engineering ¹	
Passage of the preliminary exam		
Passage of the qualifying exam		
Dissertation research (Completed to the satisfaction of the dissertation committee)		45
Total Hours		90

¹ All full-time students must register for one hour of CHEE 5930 each semester during the academic year. This course is graded on a satisfactory/unsatisfactory basis. To receive a grade of S, students must attend all seminars or provide a written explanation for their absence

Only credit hours obtained with a letter grade of C or higher, or an S grade for the limited number of classes offered on a satisfactory or unsatisfactory basis will fulfill degree requirements. Students must maintain a grade point average (GPA) of 3.0 or above.

For students admitted with a Bachelor's degree, the graduate course work must satisfy the following restrictions:

- No more than thirty (30) hours of Graduate Seminar (CHEE 5930), independent study, special problems or special topics
- No more than eleven (11) hours in 5000 level courses
- All courses must be taken at the 5000, 7000 or 8000 level in the College of Engineering, the College of Pharmacy, the College of Medicine and Life Sciences, or the Biology, Chemistry, Mathematics, Environmental Sciences, and Physics Departments of the College of Natural Sciences and Mathematics

The faculty may award students admitted with a Master in Chemical Engineering up to 30 hours of credit toward the Ph.D. This may include credit for core classes if the faculty deem classes taken as a Master student are comparable to the core classes. The student must satisfy all

other requirements as listed above. Additional course work must satisfy the following restrictions:

- No more than fifteen (15) hours of Graduate Seminar (CHEE 5930), independent study, special problems or special topics.
- No more than four (4) hours in 5000 level courses
- All courses must be taken at the 5000 level or higher in the College of Engineering, the College of Pharmacy, or the Biology, Chemistry, Mathematics, Environmental Sciences, and Physics Departments of the College of Natural Sciences and Mathematics

Preliminary Examinations

The purpose of the preliminary exam is to evaluate whether a student possesses the background necessary to complete doctoral degree requirements. The oral exam is given at the end of the first year for all new doctoral students.

The exam will require the students to formulate and defend a research plan, wherein they will: (1) propose a study (on a topic selected by the student and approved by the advisor) that can result in a peer-reviewed journal publication; (2) submit a 6 – 10 page double-spaced proposal; and (3) deliver a 15 – 20 minute presentation followed by questions. The advisor's role in the proposal and presentation preparation will be limited to approving the proposal topic (i.e., the advisor will not edit or provide feedback on the proposal before its submission/presentation to the faculty). To pass this exam, the candidate must demonstrate the ability to plan a study using appropriate research tools, be able to use chemical engineering principles to defend their research proposal, and exhibit effective written and oral communication skills.

Students either pass or fail the exam. The faculty as a whole will evaluate the results and will consider input from the student's advisor, TA assignment supervisors and classroom instructors to determine the final grade. Students who fail the exam may petition the Department to consider offering a retake of the exam. If permission is not granted, then the exam failure will be final.

Students that enter with a B.S. and ultimately fail the exam are required to complete a Master's degree or leave the program. Students that enter with a M.S. are required to leave the program or pursue another M.S. degree.

Qualifying Exam

The qualifying exam consists of an oral defense of the proposed doctoral research project. The exam must be taken within one calendar year of passage of the preliminary exam. However, a student may petition the Department for extension of this time limit.

The student must submit a written proposal to their dissertation committee at least two weeks prior to the proposed exam date. The proposal should contain the following sections:

1. Project Summary
2. Research Objectives
3. Research Significance
4. Literature Review
5. Research Plan

6. Bibliography

7. Budget

The entire proposal should be prepared using a 12 point font and one inch margins around the page. The project summary should be double spaced and extend not more than one page. Sections 2-5 should also be double spaced and not exceed 20 pages in length. The budget should indicate both monetary and time requirements.

There are no restrictions on the student concerning preparation of the proposal. Students may consult with both faculty and other students, if agreeable.

The oral defense consists of a brief presentation of the proposal, typically 30-45 minutes, followed by a question and answer session. During the exam, the committee will assess the appropriateness of the proposed project for a doctoral dissertation and the student's ability to successfully complete it; passage indicates that the committee believes the project is suitable and the student can complete it.

If a student fails the exam, they may petition the Department to retake the exam the following term. If permission is not granted, then the exam failure will be final.

Students that enter with a B.S. and ultimately fail the exam are required to complete a Master's degree or leave the program. Students that enter with a M.S. are required to leave the program or pursue another M.S. degree.

Dissertation Defense

After completing all other degree requirements and preparing a final draft of the dissertation, the student may schedule a final defense date with the dissertation committee. The Graduate School provides guidelines for dissertation preparation.

The defense is open to all faculty members of the University. Consequently, the student must submit the defense date to the Graduate School two weeks in advance to permit University-wide notification. At the same time, each committee member should receive a copy of the dissertation draft.

The defense consists of a short oral presentation, 30-45 minutes in length, followed by a question and answer session. During the defense, the committee will evaluate if the student has satisfactorily completed the proposed dissertation research and possesses a Doctoral level understanding of general Chemical Engineering and the particular research area.

If more than one member of the Advisory Committee votes against accepting the dissertation, the student fails the defense. The student may revise the thesis to address the concerns of the committee and request reconsideration. If the student fails upon revision of the dissertation, the student will be dismissed from the program without award of the degree.

M.S. in Civil Engineering OVERVIEW

M.S. students in our department gain advanced knowledge in civil engineering and can specialize in environmental, geotechnical, structural,

and transportation fields. Most students doing research are involved in computational work. Some students, mainly in environmental area are involved laboratory and field research. The department faculty conduct both applied and fundamental research and tailor the research project to students' interests and skill sets. Most of our students present their work in local and national conferences. Students work closely with their research advisor to make timely progress towards completing their degree. Our department has an excellent track record with our MS students finding an industry or consulting job prior to or shortly after they graduate. MS students interested in an academic career often publish their research before continuing on to obtain a PhD degree either in our department or at another institution.

ADMISSIONS REQUIREMENTS

Most students admitted have a strong GPA from a civil, environmental, or chemical engineering department. Students with non-engineering backgrounds can be admitted provisionally until they demonstrate proficiency in key engineering skills. See College of Engineering admissions information for details.

PROGRAM REQUIREMENTS

For the master of science in civil engineering (M.S.C.E.) degree, a minimum of 30 credit hours is required – 21 cr hr of graduate course work and 9 cr hr of thesis research (CIVE 6960) performed under the supervision of a full-time faculty member approved by the department of civil engineering. The department also offers a M.S.C.E. degree with a project or course work option with the written approval of the department chair or graduate program director. In the project option, a minimum of 30 cr hr is required – 24 cr hr of graduate course work and 6 cr hr for the project report (CIVE 6920). In the course work-only option, a minimum of 30 cr hr in graduate course work is required. Courses taken on an audit basis do not count toward the degree. Additional requirements include:

- A maximum of 6 cr hr of CIVE 6990 Independent Study is allowed toward the degree.
- Students must prepare a plan of study in conjunction with the adviser (graduate program director for the first semester) with a concentration of required and elective courses in one of the department's research focus areas of graduate study and receive approval from the graduate program director. Required core courses in each area are determined by the faculty comprising that research area in conjunction with the graduate program director.
- No more than 9 cr hr toward the M.S.C.E. may be earned at another university, and in no case may the thesis or project be satisfied by work completed at another institution.

Students graduating with the MS in civil engineering are expected to attain the following outcomes:

1. Solve engineering problems in one of the two specialty areas (Infrastructure and Environmental).
2. Solve engineering problems using mathematics in one of the two specialty areas indicated in SLO (1).
3. Successfully present the results of engineering research in oral and written forms.
4. Synthesize the completed research for publication in a journal, book, or conference for thesis students.

5. Practice responsible citizenship in local and global communities by using skills including but not limited to professional ethics, diversity and inclusion, and social equity.

Ph.D. in Engineering (Civil Engineering)

OVERVIEW

Our PhD program is geared towards students interested in an academic path or an advanced research based career. Most of our PhD students joining the program hold an MS degree and they are able to finish their program within three to four years. Many of our PhD students have published their research in peer reviewed journals and some have also obtained teaching skills to prepare them better for an academic position.

ADMISSIONS REQUIREMENTS

An MS degree in an engineering related field is desirable. GRE and TOEFL scores are also required. See College of Engineering admissions information for details.

PROGRESS TOWARD DEGREE

To be formally admitted to candidacy for the doctoral degree, students must first pass the qualifying examination. The purpose of the qualifying exam is to determine whether a student possesses the necessary potential to complete doctoral degree requirements. The exam consists of two parts – a written examination and an oral proposal defense. The written exam is given in the middle of the fall or spring semester. It is intended to test the breadth and depth of the student's understanding of fundamentals and the most important and basic elements of the broad area of graduate studies in which the student is specializing.

The oral defense of the proposed dissertation research is held before an advisory committee of at least five faculty members. Prior to the defense, students submit a written proposal to the committee. The defense consists of a brief presentation of the written proposal followed by a question and answer session. During the exam, the committee will assess the appropriateness of the proposed research for a doctoral dissertation and the student's ability to successfully complete it. Students must defend their proposal in the fall or spring semester following passage of the written exam. Upon passing both parts of the qualifying exam, students may apply for admission to candidacy.

After completion of a minimum of 45 credit hours of course work beyond the bachelor's degree and 45 credit hours of dissertation research, doctoral candidates must prepare a written dissertation documenting their research results. Final approval for graduation is contingent upon a successful oral defense of the dissertation before the advisory committee in a public forum.

Students applying for admission are expected to have completed a B.S. in civil engineering. Those with degrees in other areas of engineering or science will have to take certain undergraduate courses to prepare for graduate courses. These courses will be identified prior to admission and will appear on the student's plan of study.

PROGRAM REQUIREMENTS

The doctoral degree requires a minimum of 90 credit hours, of which 45 credit hours are for course work and 45 credit hours are for dissertation research. To be formally admitted to candidacy for the degree, however, doctoral students must first pass a qualifying examination. All Ph.D. students should note that admission to the doctoral program does not constitute admission to candidacy. The doctoral program is normally a full-time program throughout all of the course work and the dissertation. The department of civil engineering does not encourage part-time studies in the Ph.D. program.

For the Ph.D. degree, a minimum of 60 graduate credit hours beyond the M.S.C.E. degree (90 credit hours beyond the B.S. degree) are required, of which at least 12 credit hours are for graduate course work (largely departmental), an additional three credit hours for graduate level mathematics course work, and 45 credit hours for dissertation research under the supervision of a full-time faculty member of the department of civil engineering. A minimum of 45 credit hours beyond the M.S. must be completed at The University of Toledo.

To be awarded the Ph.D. degree, the student must have at least a B average (minimum GPA of 3.0) for all credits in the program of study. Only credit hours obtained with a letter grade of "C" or higher, or an "S" grade for the limited number of classes offered on a satisfactory or unsatisfactory basis, will fulfill degree requirements. In addition, the student must be admitted to doctoral candidacy and pursue an original research problem. The research must be completed and the dissertation written and successfully defended in public before the Ph.D. degree is conferred.

Master of Cyber Security OVERVIEW

Weiqing Sun, program director

Our master's degree programs in cyber security provide an experiential learning-rich curriculum tailored to your interests and industry's needs. The programs offer personalized capstone options and a large number of elective courses. Flexible course scheduling within our programs enables you to start taking classes during either fall or spring semester. We offer a research-based Master of Science in Cyber Security and a coursework-based Master in Cyber Security. You can pick the degree that best fits with your professional goals and interests.

Our Master of Cyber Security program will train you with the latest technology trends in cyber security through a combination of core and elective courses. The capstone course, Experiential Learning in Cyber Security, provides you with the foundation and opportunities to learn about real-world cyber-attacks and design defense strategies through The University of Toledo's Cyber Range. Guided by UToledo IT security professionals, the capstone course will help you develop the competencies you need to work as a cyber security professional in a rapidly evolving IT world. You will be required to take 30 credit hours to graduate.

For more information, please check the program website (<https://www.utoledo.edu/engineering/graduate-studies/cyber.html>) and contact the Program Director (Dr. Weiqing Sun, weiqing.sun@utoledo.edu).

ADMISSIONS REQUIREMENTS

Prospective students must have a bachelor's degree with a minimum 3.0/4.0 GPA or equivalent in a computer science or related field. For other STEM graduates, prerequisite undergraduate-level foundation courses in computer programming, computer networks, data structures, and operating systems are required. University of Toledo equivalent courses are shown below.

Code	Title	Hours
<i>Programming - one course or equivalent</i>		
CSET 1200	Object Oriented Programming and Data Structures	
EECS 1510	Introduction To Object Oriented Programming	
<i>Computer Networks - one course or equivalent</i>		
CSET 4750	Computer Networks And Data Communication	
EECS 3150	Data Communications	
<i>Data Structures and Algorithms - one course or equivalent</i>		
CSET 3150	Introduction to Algorithms	
EECS 2510	Non-Linear Data Structures	
<i>Operating Systems - one course or equivalent</i>		
CSET 4350	Operating Systems	
EECS 3540	Systems And Systems Programming	

The application requires transcripts from all universities attended (except UToledo); 3 letters of recommendation, with at least one from an employer or a professor; a personal statement written in response to a cyber security prompt; current GRE score; and TOEFL score for students with a BS degree from a non-US institution.

PROGRAM REQUIREMENTS

Code	Title	Hours

Total Hours	30

- Understand the cyber security challenges in contemporary networks and software systems.
- Demonstrate the proficiency in various tools and utilities used in cyber security.
- Evaluate security mechanisms in terms of their effectiveness and appropriateness for computer and network systems.
- Understand the ethical issues related to securing information systems and critical infrastructure.
- Communicate effectively, both orally and in writing, with other security professionals.
- Apply appropriate security methods and mechanisms to protect enterprise network systems.

M.S. in Cyber Security OVERVIEW

Weiqing Sun, program director

Our master's degree programs in cyber security provide an experiential learning-rich curriculum tailored to your interests and industry's needs. The programs offer personalized capstone options and a large number of elective courses, prepares you for research and development jobs in cyber security areas, and provides a foundation for carrying out cyber security research and development. Flexible course scheduling within our programs enables you to start taking classes during either fall or spring semester. We offer a research-based Master of Science in Cyber Security and a coursework-based Master in Cyber Security. You can pick the degree that best fits with your professional goals and interests.

Master of Science in Cyber Security is our research-intensive degree program, and it offers two capstone options (thesis or project) for you to work on cyber security research projects under the guidance of a faculty research mentor. This program helps you develop skills to investigate cyber security issues, discover new cyber security knowledge and present your research to professionals in the industry or academia. After completing this program, you will be prepared to continue your research and development in cyber security areas or work in industry, practicing learned professional skills. You will be required to take 30 credit hours to graduate.

For more information, please check the program website (<https://www.utoledo.edu/engineering/graduate-studies/cyber.html>) and contact the Program Director (Dr. Weiqing Sun, weiqing.sun@utoledo.edu).

- Apply appropriate security methods and mechanisms to protect enterprise network systems.
- Research cyber security issues, discovery new knowledge, and present the research results to professionals in industry or academia.

M.S. in Electrical Engineering

OVERVIEW

The Master of Science in Electrical Engineering (MSEE) program is open to qualified applicants with a BS degree in Electrical Engineering or a closely related field.

Graduate courses and research include topics in communications; controls, signal processing; machine vision and imaging; power systems; power electronics; electronic materials and devices; photovoltaic devices; device modeling, laser-based advanced processing; renewable energy and smart grid; electro-optics and photonics; microelectronics; fault tolerance and reliability; electromagnetics; computer aided design and simulation; microwave electronics, antennas, plasma physics, hardware-oriented security and trust.

The program is offered in a thesis-option version or in two non-thesis option versions:

1. **Thesis Option:** A minimum of 30 credit hours of approved graduate study including 9 credit hours of Master of Science Thesis under the supervision of an EECS faculty member is required. Students are required to successfully complete the oral defense of the thesis work, submit typed copies of their thesis to the Graduate School and the department.
2. **Master of Science Degree with Non-Thesis Options:** The degree requirements for Master of Science with Non-Thesis option are available with the approval of the Department Chair or the Department Graduate Program Director:
 - a. **Master of Science Degree with Project Option:** Students are required to complete 30 credit hours of an approved graduate study including 6 hours of Master of Science Project as specified by individual department guidelines and requirements. Students are required to submit a typed Project Report to the department-approved committee, consisting of the student's advisor and another faculty member.
 - b. **Master of Science Degree with Coursework-only Option:** Students are required to complete a minimum of 30 credit hours of approved graduate-level course work.

The program prepares students with advanced and up-to-date knowledge and skills to pursue careers in the various fields of Electrical Engineering.

It provides the foundation needed to become a productive researcher or a developer of innovative solutions to technological problems in these fields.

ADMISSIONS REQUIREMENTS

Admission to the MSEE program requires:

- a BS degree in Electrical Engineering or a closely related field from a 4-year college or university;
- a minimum GPA of 2.8/4.0 for applicants with relevant degrees from accredited US universities or a GPA of 3.0/4.0 for international applicants with relevant degrees;
- GRE scores (applicants with relevant degrees from accredited US universities are exempt);

- TOEFL or IELTS scores that satisfy the minimum University of Toledo requirements (only for international applicants who are non-native English speakers);
- a minimum of two letters of recommendation;
- statement of purpose.

Admission decisions are made on an individual basis and take into account the applicant's test results and previous academic record, the intended area of study, and the capacity of the EECS department.

PROGRAM REQUIREMENTS

MS EE program students can select one of the options below.

1. Master of Science degree with Thesis option: A minimum of 30 credit hours of approved graduate study, including nine credit hours of Master of Science thesis under the supervision of a faculty member, is required. Students are required to submit a written thesis and successfully complete the oral defense of the thesis work.
2. Master of Science degree with Non-Thesis option: The degree requirements for the Master of Science with non-thesis option are:
 - a. Master of Science degree with Project option: Students are required to complete 30 credit hours of approved graduate-level work, including six hours of Master of Science project as specified by the individual department guidelines and requirements. Students are required to submit a written project report to the department.
 - b. Master of Science degree with Course Work-only option: Students are required to complete 30 credit hours of approved graduate-level course work

Requirements and rules:

1. Students must submit a Plan of Study by the end of the 1st semester, which must be approved by a faculty advisor and the graduate program director.
2. Students must take one credit hour (included in the required 30 hours for the program) of the EECS graduate seminar course EECS 5930 with a maximum of two excused absences in the semester.
3. Students admitted to the MSEE must also be admitted into one of the associated "specialization" areas based on their undergraduate degree and background.
 - a. This is accomplished during orientation week before the first semester or during the first week of the semester. The graduate Program Director (GPD) will advise students that they must select an available "specialization area" within the degree program into which they are admitted before they are permitted to register. Not all listed specialization areas may be available during any given academic year.
 - b. Once the student chooses a "specialization area", then the student must consult with the GPD to secure his/her signature for permission to register for the courses in that specific area, which must be completed before the first semester starts or in the first week of the semester.
 - c. Students must register for all core courses offered from the specialization area during that term, and if not all core courses are available during that term, then additional courses must be included from the "recommended electives" list as required by the

registration status of the student. However, student must take the remaining core courses for the chosen specialization area during their next immediate term of offering.

4. Student admitted into a specialization area associated with the the MSEE program must take all required core courses as designated for that specialization area.
 - Core courses may be substituted by recommended electives under unique circumstances and on an exceptional and case-by-case basis. This is so if a core course cannot be offered by the department for foreseeable future due to reasons outside the control of department, which may include but not limited to, such as faculty unavailability or student having taken those courses as part of BS/MS program at UT or a transfer student into our MS programs etc.
 - The procedure to follow to substitute a required core is as follows: faculty adviser, but not the student, must in writing request substitution of a core course with a recommended elective or another course which may be from a different specialization area within the degree program with a detailed rationale from the EECS Graduate Committee whose written and documented approval of such requests is required for them to take effect.
5. Students must take at least 15 credit hours of graduate level EECS courses, specifically 3 core courses of a specialization area excluding independent study, independent research, masters' project or masters' thesis hours.
6. Students must take at least 6 credit hours of 6000-level courses excluding masters' thesis, independent study, masters' project or independent research.
7. Non-compliance with the requirements may result in a "HOLD" being put on student account preventing any further registration actions.

A table with required and recommended courses for each specialization area is included in the attached Program Restructuring document below.

Students are encouraged to include higher-level math courses in their program, subject to approval of their advisers.

Courses taken on an audit basis do not count toward the degree. Courses outside of the College of Engineering require prior approval.

In order to be awarded the Master of Science degree, the student must have at least a B average (a minimum GPA of 3.0/4.0) for all graduate course credits in the program of study as well as for the entire graduate transcript. Only credit hours obtained with a letter grade of "C" or higher, or an "S" grade for the limited number of classes offered on a satisfactory or unsatisfactory basis, will fulfill the degree requirements.

MSEE with thesis option:

Code	Title	Hours
Core courses		9
Recommended courses		9
EECS 6990	Independent Study	2
EECS 5930	Electrical Engineering & Computer Science Seminar	1

EECS 6960 Master's Graduate Research And Thesis 9

Total Hours 30

MSEE with project option:

Code	Title	Hours
Core courses		9
Recommended courses		12
EECS 6990	Independent Study	2
EECS 5930	Electrical Engineering & Computer Science Seminar	1
EECS 5920	Projects	6
Total Hours		30

MSEE with courses-only option:

Code	Title	Hours
Core courses		9
Recommended courses		18
EECS 6990	Independent Study	2
EECS 5930	Electrical Engineering & Computer Science Seminar	1
Total Hours		30

1. Apply specialized knowledge and skills gained through the MSEE program to solve complex electrical engineering problems.
2. Demonstrate competency commensurate with the master's education for one or more of the following engineering activities: design, develop, integrate, simulate, prototype, test, verify or validate a component, subsystem, system in hardware or software.
3. Demonstrate effective communication skills.
4. Demonstrate professionalism appropriate to the discipline.

Ph.D. in Engineering (Electrical Engineering)

OVERVIEW

The Ph.D. degree in Engineering (with concentration in Electrical Engineering) is conferred on the basis of extended study and high scholarly attainment in the field of electrical engineering. The students are expected to apply advanced and specialized knowledge and skills, gained through the program, to solve novel and complex problems in the domain of electrical engineering, and develop appropriate professional skills. In the course of the program, the students will demonstrate effective communication skills and competency commensurate with the doctoral education by making an original and substantial contribution to the body of knowledge in electrical engineering.

Graduate courses and research include topics in communications; controls, signal processing; machine vision and imaging; power systems; power electronics; electronic materials and devices; photovoltaic devices; device modeling, laser-based advanced processing; renewable energy and smart grid; electro-optics and photonics; microelectronics; fault tolerance and reliability; electromagnetics; computer aided design and simulation; microwave electronics; antennas; plasma physics; and hardware-oriented security and trust.

The program prepares students with advanced and up-to-date knowledge and skills to pursue careers as scientists/researchers/educators in the various fields of Electrical Engineering. It provides the foundation needed to become leaders as well as productive scholars or developers of innovative solutions to technological problems in these fields.

ADMISSIONS REQUIREMENTS

Admission to the Ph.D. in Engineering (concentration in Electrical Engineering) program requires:

- a BS or an MS degree in Electrical Engineering or a closely related field with a minimum GPA of 3.0/4.0;
- GRE scores (applicants with relevant degrees from accredited US universities are exempt);
- TOEFL or IELTS scores that satisfy the minimum University of Toledo requirements (only for international applicants who are non-native English speakers);
- a minimum of two letters of recommendation;
- statement of purpose.

Admission decisions are made on an individual basis and take into account the applicant's test results and previous academic and research record, the intended area of study, and the capacity of the EECS department to advise and support Ph.D. students and Ph.D. level research projects.

PROGRAM REQUIREMENTS

Ph.D. students must complete a total of at least 90 hours of graduate credit (including 45 credit hours of dissertation) beyond the bachelor's degree, or 60 credit hours beyond the M.S. degree. Doctoral candidacy requires selection of an academic advisor, formation of a dissertation committee, and satisfactory performance on the doctoral qualifying examination. Candidates are awarded the Ph.D. degree following:

1. Satisfactory completion of the requisite credit hours beyond the M.S. / B.S. degree (the M.S. or B.S. degree must be in a closely related field); and
2. Successful defense of a dissertation that constitutes a fundamental advancement of knowledge in the field.

The Ph.D. typically takes a minimum of three full years of graduate work beyond the M.S. degree.

The general requirements for the Ph.D. degree are:

- A minimum of 60 credit hours beyond the M.S. degree or a minimum of 90 credit hours beyond the B.S. degree. Out of these credit hours, a minimum of 45 credit hours should be devoted to research toward the student's dissertation.
- No more than three credit hours of independent study for students with an M.S. degree and no more than 9 credit hours of independent study for students with a B.S. degree may be counted toward the Ph.D. course requirement.
- The student must pursue, complete and publish a research manuscript that is demonstrated to be an original contribution to the field of study.

- The dissertation must be written and successfully defended publicly before the Ph.D. degree is conferred.
- Students must submit a minimum of two journal papers based on the dissertation research. Copies of the accepted/published papers, or official letters of acknowledgments for the submitted papers must be given to the graduate director at least one week prior to dissertation defense date.
- The student is required to take the 1cr.h. EECS seminar course and pass with an S grade.

Ph.D. Qualifying Examination

The intent of the Ph.D. Qualifying Examination is to assess the student's potential for successfully completing doctoral level studies and research in the department. The students are tested in four areas: two based on the required core courses of the specialization area; and two based on the recommended courses list in the student's specialization areas, chosen in consultation with the student's advisor. The examination is given in two written parts.

Further details pertaining to the qualifying examination, as well as course registration requirements, Plan of Study requirements, and PhD proposal defense requirements can be found in the EECS Graduate Handbook.

A document containing tables with the PhD EE program courses and specialization areas is attached below.

It is the responsibility of the student and the faculty advisor to formulate a program of study that satisfies the requirements for the Ph.D. degree. The student's program of study should promote depth of knowledge by covering one of the specialization areas associated with Electrical Engineering. The program of study must be approved by the faculty advisor, the Advisory Committee, the Graduate Program Director, the Associate Dean of Graduate Studies of the College of Engineering, and the College of Graduate Studies.

M.S. in Engineering (Computer Science & Engineering)

OVERVIEW

The Master of Science in Engineering with concentration in Computer Science and Engineering (MSE CSE) program is open to qualified applicants with a BS degree in Computer Science, Computer Engineering or a closely related field.

Graduate courses and research topics include computer systems design and applications (hardware and software); artificial intelligence; machine vision and imaging; computer networks; computer graphics and visualization; cyber security; hardware oriented security and trust; social networking; and high performance computing.

The program is offered in a thesis-option version or in two non-thesis option versions:

1. Thesis Option: A minimum of 30 credit hours of approved graduate study including 9 credit hours of Master of Science Thesis under the supervision of an EECS faculty member is required. Students are required to successfully complete the oral defense of the thesis work,

submit typed copies of their thesis to the Graduate School and the department.

2. Master of Science Degree with Non-Thesis Options: The degree requirements for Master of Science with Non-Thesis option are available with the approval of the Department Chair or the Department Graduate Program Director:
 - a. Master of Science Degree with Project Option: Students are required to complete 30 credit hours of an approved graduate study including 6 hours of Master of Science Project as specified by individual department guidelines and requirements. Students are required to submit a typed Project Report to the department-approved committee, consisting of the student's advisor and another faculty member.
 - b. Master of Science Degree with Coursework-only Option: Students are required to complete a minimum of 30 credit hours of approved graduate-level course work.

ADMISSIONS REQUIREMENTS

Admission to the MSE CSE program requires:

- a BS degree in Computer Science, Computer Engineering or a closely related field from a 4-year college or university;
- a minimum GPA of 2.8/4.0 for applicants with relevant degrees from accredited US universities or a GPA of 3.0/4.0 for international applicants with relevant degrees;
- GRE scores (applicants with relevant degrees from accredited US universities are exempt);
- TOEFL or IELTS scores that satisfy the minimum University of Toledo requirements (only for international applicants who are non-native English speakers);
- a minimum of two letters of recommendation;
- statement of purpose.

Admission decisions are made on an individual basis and take into account the applicant's test results and previous academic record, the intended area of study, and the capacity of the EECS department.

PROGRAM REQUIREMENTS

MS in Engineering (concentration in Computer Science and Engineering) program (MSECSE) students can select one of the options below.

1. Master of Science degree with Thesis option: A minimum of 30 credit hours of approved graduate study, including nine credit hours of Master of Science thesis under the supervision of a faculty member, is required. Students are required to submit a written thesis and successfully complete the oral defense of the thesis work.
2. Master of Science degree with Non-Thesis option: The degree requirements for the Master of Science with non-thesis option are:
 - a. Master of Science degree with Project option: Students are required to complete 30 credit hours of approved graduate-level work, including six hours of Master of Science project as specified by the individual department guidelines and requirements. Students are required to submit a written project report to the department.

- b. Master of Science degree with Course Work-only option: Students are required to complete 30 credit hours of approved graduate-level course work

Requirements and rules:

1. Students must submit a Plan of Study by the end of the 1st semester, which must be approved by a faculty adviser and the graduate program director.
2. Students must take one credit hour (included in the required 30 hours for the program) of the EECS graduate seminar course EECS 5930 with a maximum of two excused absences in the semester.
3. Students admitted to the MSECSE must also be admitted into one of the "specialization" areas associated with the MSECSE program and based on their undergraduate degree and background.
 - a. This is accomplished during orientation week before the first semester or during the first week of the semester. The graduate Program Director (GPD) will advise students that they must select an available "specialization area" within the degree program into which they are admitted before they are permitted to register. Not all listed specialization areas may be available during any given academic year.
 - b. Once the student chooses a "specialization area", then the student must consult with the GPD to secure his/her signature for permission to register for the courses in that specific area, which must be completed before the first semester starts or in the first week of the semester.
 - c. Students must register for all core courses offered from the specialization area during that term, and if not all core courses are available during that term, then additional courses must be included from the "recommended electives" list as required by the registration status of the student. However, student must take the remaining core courses for the chosen specialization area during their next immediate term of offering.
4. Student admitted into a specialization area associated with the MSECSE program must take all required core courses as designated for that specialization area.
 - Core courses may be substituted by recommended electives under unique circumstances and on an exceptional and case-by-case basis. This is so if a core course cannot be offered by the department for foreseeable future due to reasons outside the control of department, which may include but not limited to, such as faculty unavailability or student having taken those courses as part of BS/MS program at UT or a transfer student into our MS programs etc.
 - The procedure to follow to substitute a required core is as follows: faculty advisor, but not the student, must in writing request substitution of a core course with a recommended elective or another course which may be from a different specialization area within the degree program with a detailed rationale from the EECS Graduate Committee whose written and documented approval of such requests is required for them to take effect.
5. Students must take at least 15 credit hours of graduate level EECS courses, specifically 3 core courses of a specialization area excluding independent study, independent research, masters' project or masters' thesis hours.

6. Students must take at least 6 credit hours of 6000-level courses excluding masters' thesis, independent study, masters' project or independent research.
7. Non-compliance with the requirements may result in a "HOLD" being put on student account preventing any further registration actions.

Students are encouraged to include higher-level math courses in their program, subject to approval of their advisers.

Courses taken on an audit basis do not count toward the degree. Courses outside of the College of Engineering require prior approval.

In order to be awarded the MS degree, the student must have at least a B average (a minimum GPA of 3.0/4.0) for all graduate course credits in the program of study as well as for the entire graduate transcript. Only credit hours obtained with a letter grade of "C" or higher, or an "S" grade for the limited number of classes offered on a satisfactory or unsatisfactory basis, will fulfill the degree requirements.

MSECSE with thesis option:

Code	Title	Hours
Core Courses		9
Recommended Courses		9
EECS 6990	Independent Study	2
EECS 5930	Electrical Engineering & Computer Science Seminar	1
EECS 6960	Master's Graduate Research And Thesis	9
Total Hours		30

MSECSE with project option:

Code	Title	Hours
Core Courses		9
Recommended Courses		12
EECS 6990	Independent Study	2
EECS 5930	Electrical Engineering & Computer Science Seminar	1
EECS 5920	Projects	6
Total Hours		30

MSECSE with courses-only option:

Code	Title	Hours
Core Courses		9
Recommended Courses		18
EECS 6990	Independent Study	2
EECS 5930	Electrical Engineering & Computer Science Seminar	1
Total Hours		30

1. Apply specialized knowledge and skills gained through the MSECSE program to solve complex computer engineering or computer science problems.
2. Demonstrate competency commensurate with the master's education for one or more of the following computer engineering or computer science activities: design, develop, integrate, simulate, prototype, test,

verify or validate a component, subsystem, system in hardware or software.

3. Demonstrate effective communication skills.

4. Demonstrate professionalism appropriate to the discipline.

Ph.D. in Engineering (Computer Science & Engineering)

OVERVIEW

The Ph.D. degree in Engineering (with Computer Science and Engineering concentration) is conferred on the basis of extended study and high scholarly attainment in the field of computer science and engineering.

The students are expected to apply advanced and specialized knowledge and skills, gained through the program, to solve novel and complex problems in the domains of computer science or computer engineering, and develop appropriate professional skills. In the course of the program, the students will demonstrate effective communication skills and competency commensurate with the doctoral education by making an original and substantial contribution to the field of computer science or computer engineering.

Graduate courses and research include topics in computer systems design and applications (hardware and software); artificial intelligence; machine vision and imaging; computer networks; computer graphics and visualization; cyber security; hardware-oriented security and trust; social networking; and high performance computing.

The program prepares students with advanced and up-to-date knowledge and skills to pursue careers as scientists/researchers/educators in the various fields of Computer Science and Computer Engineering. It provides the foundation needed to become leaders as well as productive scholars or developers of innovative solutions to technological problems in these fields.

ADMISSIONS REQUIREMENTS

Admission to the Ph.D. in Engineering (concentration in Computer Science and Engineering) program requires:

- a BS or an MS degree in Computer Science, Computer Engineering or a closely related field with a minimum GPA of 3.0/4.0;
- GRE scores (applicants with relevant degrees from accredited US universities are exempt);
- TOEFL or IELTS scores that satisfy the minimum University of Toledo requirements (only for international applicants who are non-native English speakers);
- a minimum of two letters of recommendation;
- statement of purpose.

Admission decisions are made on an individual basis and take into account the applicant's test results and previous academic and research record, the intended area of study, and the capacity of the EECS department to advise and support Ph.D. students and Ph.D. level research projects.

PROGRAM REQUIREMENTS

Ph.D. students must complete a total of at least 90 hours of graduate credit (including 45 credit hours of dissertation) beyond the bachelor's

degree, or 60 credit hours beyond the M.S. degree. Doctoral candidacy requires selection of an academic advisor, formation of a dissertation committee, and satisfactory performance on the doctoral qualifying examination. Candidates are awarded the Ph.D. degree following:

1. Satisfactory completion of the requisite credit hours beyond the M.S. / B.S. degree (the M.S. or B.S. degree must be in a closely related field); and
2. Successful defense of a dissertation that constitutes a fundamental advancement of knowledge in the field.

The Ph.D. typically takes a minimum of three full years of graduate work beyond the M.S. degree.

The general requirements for the Ph.D. degree are:

- A minimum of 60 credit hours beyond the M.S. degree or a minimum of 90 credit hours beyond the B.S. degree. Out of these credit hours, a minimum of 45 credit hours should be devoted to research toward the student's dissertation.
- No more than three credit hours of independent study for students with an M.S. degree and no more than 9 credit hours of independent study for students with a B.S. degree may be counted toward the Ph.D. course requirement.
- The student must pursue, complete and publish a research manuscript that is demonstrated to be an original contribution to the field of study.
- The dissertation must be written and successfully defended publicly before the Ph.D. degree is conferred.
- Students must submit a minimum of two journal papers based on the dissertation research. Copies of the accepted/published papers, or official letters of acknowledgments for the submitted papers must be given to the graduate director at least one week prior to the dissertation defense date.
- The student is required to take the 1 cr.h. EECS seminar course and pass with an S grade.

Ph.D. Qualifying Examination

The intent of the Ph.D. Qualifying Examination is to assess the student's potential for successfully completing doctoral level studies and research in the department. The students are tested in four areas: two based on the required core courses of the specialization area; and two based on the recommended courses list in the student's specialization areas, chosen in consultation with the student's advisor. The examination is given in two written parts.

Further details pertaining to the qualifying examination, as well as course registration requirements, Plan of Study requirements, and PhD proposal defense requirements can be found in the EECS Graduate Handbook.

A document containing the courses and the specialization areas of the PhD CSE program is attached below.

It is the responsibility of the student and the faculty advisor to formulate a program of study that satisfies the requirements for the Ph.D. degree. The student's program of study should promote depth of knowledge through one of the specialization areas associated with Computer Science and Engineering. The program of study must be approved by the faculty advisor, the Advisory Committee, the Graduate Program Director,

the Associate Dean of Graduate Studies of the College of Engineering, and the College of Graduate Studies.

M.S. in Industrial Engineering

OVERVIEW

The occupation of industrial engineering involves the optimization of complex systems, processes or organizations. Industrial engineers develop integrated systems by using mathematical and social sciences, and engineering analysis. Their work may be in areas of operations research, production and supply chain engineering, management engineering, ergonomics and human factors engineering, safety engineering, or financial engineering.

ADMISSIONS REQUIREMENTS

Applicants must hold a bachelor of science in mechanical or industrial engineering, or a closely related field, from an accredited engineering program. If the baccalaureate is in a non-engineering or science area, students may be required to complete prerequisite courses without graduate degree credit. For transfer credit, students should refer to the general policies of the College of Graduate Studies. GRE is not required. Refer to the College Policies (Graduate Handbook) entry for additional admissions requirements.

PROGRAM REQUIREMENTS

The Master of Science degree program may be pursued with thesis, project and non-thesis options. Degree requirements for thesis, project, and coursework-only capstone options are provided in the table below. The department may specify additional credit or non-credit requirements for satisfactory completion as well as enhancement of degree objectives. The plan of study for the Master of Science degree must be filed before 16 hour of academic coursework has been completed. For full-time students, this normally will required that the plan of study be filed before registration for the second term.

A minimum of 12 cr hr of required or elective coursework must be at the 6000-level. A student may be required to complete more than the required minimum hours to satisfy prerequisite deficiencies specified as provisional admission conditions and/or to fulfill educational requirements for the program as specified by the advisor or department.

Code	Title	Hours

Elective coursework		21
MIME 6930	Graduate Seminar (every semester)	0

- 1) Demonstrate technical proficiency in their focus area topics
- 2) Apply advanced engineering mathematics and/or statistical principles to solve engineering problems in one of the IE specialty areas
- 3) Demonstrate ability to conduct a literature review
- 4) Explain course projects in one of the IE specialty areas clearly and concisely in written and oral formats
- 5) Thesis or project option: explain their research clearly and concisely in written and oral formats
- 6) Thesis or project option: generate high quality engineering research

Ph.D in Engineering (Industrial Engineering)

OVERVIEW

The Ph.D. program in Engineering with a concentration in Industrial Engineering is interdisciplinary and provides its students with an opportunity to study in a broad range of areas within mechanical engineering, industrial engineering, and other engineering areas within the College of Engineering and College of Medicine and Life Sciences. Ph.D. students could work at the intersection of materials engineering, medicine, and advanced manufacturing on a wide range of projects from innovative biomedical devices and technologies to advanced bearing, ice detection and prevention, human movements, robotics, recycling,

fatigue, and innovative coatings. These projects include experimental characterization as well as multi-scale modeling and data analysis.

ADMISSIONS REQUIREMENTS

Admission for the Ph.D. program in Engineering with a concentration in Industrial Engineering requires the M.S. in Industrial Engineering or another engineering field provided the student shows evidence of an appropriate engineering background at the undergraduate level, including a minimum of two years of calculus through differential equations and one year of physics. Highly qualified B.S. engineering graduates can be admitted directly into the Ph.D. program.

PROGRAM REQUIREMENTS

A satisfactory doctoral degree plan is developed jointly by the student and the dissertation adviser, subject to the approval of the department chair or graduate program director.

A minimum of 15 credit hours of regular 8000-level graduate courses taken for a letter grade beyond the M.S. degree is required for the doctoral degree program. Twelve of these 15 credit hours must be departmental graduate courses. Students entering the direct doctoral program with a bachelor's degree must complete 45 credit hours of graduate course work, of which 36 are regular departmental graduate courses beyond their bachelor's degree, and at least 27 credit hours must be at the 6000/8000 level. Other courses taken may include courses not listed as departmental courses, independent study courses, and courses taken S/U.

In addition to the above course requirements, all supported students are required to enroll and participate in a graduate seminar (MIME 8930 or equivalent) each semester. The department may specify additional credit or non-credit requirements, for satisfactory completion as well as enhancement of degree objectives.

For transfer credit, students should refer to the general policies of the College of Graduate Studies.

Industrial Engineering Concentration - Manufacturing

Students pursuing a Ph.D with a concentration in Industrial Engineering need to take the qualifying examination in the following three areas:

- Mathematics. General and specific topics are typically covered in MIME 8000: Advanced Engineering Math I and MIME 8100: Advanced Engineering Math II
- Design of Experiments. Topics are typically covered in courses such as MIME 8720: Design of Experiments
- Manufacturing Engineering. Topics tested in this area are typically covered in courses such as MIME 5060: Manufacturing Engineering

Doctoral Degree Candidacy

Doctoral candidacy requires satisfactory performance in the doctoral qualifying examination, filing of an approved doctoral program plan, selection of an academic adviser, formation of a doctoral dissertation committee and maintaining good academic performance as specified in the MIME Department Graduate Student Handbook.

When the above requirements have been met, the student may file his/her application for doctoral candidacy. The department requires that the application be filed within one year of the time the doctoral qualifying

examination is passed. Doctoral students must have established candidacy for the doctoral degree before presenting and defending dissertation research.

Doctoral Dissertation

After the student and the adviser have agreed on a dissertation topic, the student must write a dissertation proposal. The student will present the proposal to the doctoral dissertation committee and successfully defend his/her dissertation proposal.

The doctoral dissertation committee must consist of at least five members. The chair of the committee will be the candidate's principal adviser. The other members usually will be the co-adviser (if any), faculty members or experts in a related field, with at least one committee member outside the department. The signatures of the committee on the candidate's dissertation indicate approval of the dissertation research and represent the final certification of its adequacy.

- 1) Demonstrate technical proficiency in their focus area topics.
- 2) Explain doctoral level course projects clearly and concisely in written and oral formats.
- 3) Explain their doctoral research clearly and concisely in written and oral formats.
- 4) Generate high quality engineering research that is original, significant and consequential, and is publishable in high quality journals, book chapters, and conference proceedings.
- 5) Participate in research proposal writing to fund their research.
- 6) Teach undergraduate engineering courses.

M.S. in Mechanical Engineering

OVERVIEW

The field of mechanical engineering is very diverse, offering opportunities in research, design, product development and manufacturing. Major areas of mechanical engineering include aerodynamics, fluid dynamics, solid mechanics, bioengineering, material sciences, nanotechnology, dynamics, automotive engineering, production and process, machine design, vibrations and control systems, and reliability-based design and optimization. The department features state-of-the-art studies using modern equipment and techniques.

ADMISSIONS REQUIREMENTS

Applicants must hold a bachelor of science in mechanical or industrial engineering, or a closely related field, from an accredited engineering program. If the baccalaureate is in a non-engineering or science area, students may be required to complete prerequisite courses without graduate degree credit. For transfer credit, students should refer to the general policies of the College of Graduate Studies.

PROGRAM REQUIREMENTS

The Master of Science degree program may be pursued with thesis, project and non-thesis options.

The MS in Mechanical Engineering degree can be completed in one of two research focus areas. Degree requirements for thesis, project, and coursework-only capstone options are provided in the tables below. The department may specify additional credit or non-credit requirements for satisfactory completion as well as enhancement of degree objectives.

The plan of study for the Master of Science degree must be filed before 16 hour of academic coursework has been completed. For full-time students, this normally will require that the plan of study be filed before registration for the second term.

A minimum of 12 cr hr of required or elective coursework must be 6000-level. A student may be required to complete more than the required minimum cr hr to satisfy prerequisite deficiencies specified as provisional admission conditions and/or to fulfill educational requirements for the program as specified by the advisor or department.

Ph.D. in Engineering (Mechanical Engineering)

OVERVIEW

The Ph.D. program in Engineering with a concentration in Mechanical Engineering is interdisciplinary and provides its students with an opportunity to study in a broad range of areas within mechanical engineering, industrial engineering, and other engineering areas within the College of Engineering and College of Medicine and Life Sciences. Ph.D. students could work at the intersection of materials engineering, medicine, and advanced manufacturing on a wide range of projects from innovative biomedical devices and technologies to advanced bearing, ice detection and prevention, human movements, robotics, recycling, fatigue, and innovative coatings. These projects include experimental characterization as well as multi-scale modeling and data analysis.

ADMISSIONS REQUIREMENTS

Admission for the Ph.D. program in Engineering with a concentration in Mechanical Engineering requires the M.S. in Mechanical Engineering or another engineering field provided the student shows evidence of an appropriate engineering background at the undergraduate level, including a minimum of two years of calculus through differential equations and one year of physics. Highly qualified B.S. engineering graduates can be admitted directly into the Ph.D. program.

PROGRAM REQUIREMENTS

A satisfactory doctoral degree plan is developed jointly by the student and the dissertation adviser, subject to the approval of the department chair or graduate program director.

A minimum of 15 credit hours of regular 8000-level graduate courses taken for a letter grade beyond the M.S. degree is required for the doctoral degree program. Twelve of these 15 credit hours must be departmental graduate courses. Students entering the direct doctoral program with a bachelor's degree must complete 45 credit hours of graduate course work, of which 36 are regular departmental graduate courses beyond their bachelor's degree, and at least 27 credit hours must

be at the 6000/8000 level. Other courses taken may include courses not listed as departmental courses, independent study courses, and courses taken S/U.

In addition to the above course requirements, all supported students are required to enroll and participate in a graduate seminar (MIME 8930 or equivalent) each semester. The department may specify additional credit or non-credit requirements, for satisfactory completion as well as enhancement of degree objectives.

For transfer credit, students should refer to the general policies of the College of Graduate Studies.

Doctoral Qualifying Examination

Students can complete the PhD degree with a concentration in Mechanical Engineering or Industrial Engineering. The PhD with a concentration in Mechanical Engineering can be completed in one of two research focus areas: Materials, Design and Manufacturing focus area and Computational & Experimental Thermal Sciences focus area.

Mechanical Engineering concentration - Materials, Design, and Manufacturing

Students pursuing a Ph.D. in the Mechanical Engineering concentration in the Materials, Design and Manufacturing focus area need to take the qualifying examination in three areas:

- Mathematics. General and specific topics are typically covered in MIME 8000: Advanced Engineering Math I and MIME 8100: Advanced Engineering Math II

Two of the following four areas:

- Dynamics and Vibrations. The concepts to be tested in this area are typically presented in courses such as MIME 2300: Engineering Dynamics, MIME 3370 Mechanical Vibrations, and MIME 8200 Advanced Dynamics
- Deformable Body Mechanics. The concepts to be tested in this area are typically presented in courses such as: CIVE 1150: Statics, CIVE 1160: Mechanics of Materials, and MIME 5300: Advanced Mechanics of Materials
- Design of Experiments. Topics are typically covered in courses such as MIME 8720: Design of Experiments
- Manufacturing Engineering. Topics tested in this area are typically covered in courses such as MIME 5060: Manufacturing Engineering

MECHANICAL ENGINEERING CONCENTRATION - Computational & Experimental Thermal Sciences

Students pursuing a PhD in the Mechanical Engineering concentration in the Computational & Experimental Thermal Sciences focus area need to take the qualifying exam in three areas:

- Mathematics. General and specific topics are typically covered in MIME 8000: Advanced Engineering Math I and MIME 8100: Advanced Engineering Math II

Two of the following three areas:

- Fluid Mechanics
- Heat Transfer
- Thermodynamics

Doctoral Degree Candidacy

Doctoral candidacy requires satisfactory performance in the doctoral qualifying examination, filing of an approved doctoral program plan, selection of an academic adviser, formation of a doctoral dissertation committee and maintaining good academic performance as specified in the MIME Department Graduate Student Handbook.

When the above requirements have been met, the student may file his/her application for doctoral candidacy. The department requires that the application be filed within one year of the time the doctoral qualifying examination is passed. Doctoral students must have established candidacy for the doctoral degree before presenting and defending dissertation research.

Doctoral Dissertation

After the student and the adviser have agreed on a dissertation topic, the student must write a dissertation proposal. The student will present the proposal to the doctoral dissertation committee and successfully defend his/her dissertation proposal.

The doctoral dissertation committee must consist of at least five members. The chair of the committee will be the candidate's principal adviser. The other members usually will be the co-adviser (if any), faculty members or experts in a related field, with at least one committee member outside the department. The signatures of the committee on the candidate's dissertation indicate approval of the dissertation research and represent the final certification of its adequacy.

- 1) Demonstrate technical proficiency in topics aligned with their focus area.
- 2) Deliver clear and concise written and oral presentations for doctoral level course projects.
- 3) Deliver clear and concise written and oral presentations of their doctoral research.
- 4) Generate high quality engineering research that is original, significant and consequential, and is publishable in high quality journals, book chapters, and conference proceedings.
- 5) Contribute to research proposals in collaboration and / or under the guidance of the faculty advisor.
- 6) Teach undergraduate engineering courses.

M.S. in Engineering (Energy Engineering - online)

OVERVIEW

Raghav Khanna, program director

The College of Engineering at the University of Toledo offers a Master of Science degree in engineering with a concentration in Energy Engineering. The energy field, subject to ever-increasing challenges, is vital to all aspects of society and necessary for assuring a sustainable quality of life across the globe. Graduates of the University of Toledo's Master of Science in Engineering with a Concentration in Energy Engineering degree develop expertise in many complementary areas, such as public policy, energy management, energy economics and

finance, and energy consulting. This highly customizable program is not just for engineering graduates with technical portfolios. With flexibility and options for coursework in law, business and finance, the concentration in energy engineering is ideal for professionals at companies that generate and distribute energy, as well as anyone seeking to manage energy portfolios in a variety of businesses and industries. This program can also be completed part-time.

ADMISSIONS REQUIREMENTS

To be admitted to the Master of Science in Engineering with a concentration in Energy Engineering program, applicants must have a bachelor's degree in engineering, engineering technology or in a closely related field (e.g., one of the mathematical, physical or biological sciences). Admissions are made on an individual basis and take into account the applicant's previous academic record, the intended area of study, and the capacity of the College of Engineering.

Applicants should have a minimum grade point average (GPA) of 2.7 in previous undergraduate work from appropriately accredited academic institutions or from an academic institution with high academic standards deemed appropriate and acceptable by the College of Engineering and the College of Graduate Studies. Applicants having a GPA less than 2.7 who otherwise demonstrate potential for graduate study may be admitted to the master's program on a provisional basis at the discretion of the College. Students with an undergraduate GPA below 2.7 must provide GRE scores. Information on the GRE is available on the GRE Web site: <http://www.gre.org>.

Students who graduated with a bachelor's degree from the University of Toledo do not need to submit official transcript. Students who did not graduate from the University of Toledo need to contact the office of the registrar at their undergraduate institution to arrange for transmission of their undergraduate transcripts. All students from non-English speaking countries must submit scores for the test of English as a Foreign Language (TOEFL). The minimum acceptable score for the TOEFL is 213 (for computer-based test) or 80 (for internet-based test).

Students entering the program will be required to have at least:

- calculus, through ordinary differential equations (3 semesters),
- physics (2 semesters) and
- chemistry and/or engineering materials (1 semester) and
- any three out of the following six courses:
 - statics,
 - dynamics,
 - electronics,
 - electric circuits,
 - fluid mechanics and
 - thermodynamics.

Students lacking one or more of the above courses must take the necessary courses before entering the program.

Students can apply for special student status and take up to nine credit hours of graduate classes, which may be applied to their graduate degree program. Students with special status can be admitted as regular graduate students at a later date.

For additional information regarding this program, please consult the College of Engineering's Web site at <http://www.utoledo.edu/engineering/graduate-studies/energyengineering.html> or contact EnergyEngineering@eng.utoledo.edu.

DEGREE REQUIREMENTS

The Master of Science in engineering program with a concentration in energy engineering is comprised of 30 credit hours. The project option requires the completion of a minimum of 24 credit hours of approved graduate-level course work (nominally 8 courses) and a six-hour practice-oriented project in consultation with their advisor, for a total of 30 credit hours. The coursework option requires the completion of at least 30 credit hours of approved graduate-level course work (nominally 10 courses).

Additionally, the Master of Science in engineering program with a concentration in energy engineering at the University of Toledo has three options for specialization:

1. Power generation and distribution (option 1), or
2. Energy utilization and management (option 2), or
3. Advanced energy systems (option 3).

All students are expected to complete the following requirements:

The Master of Science in engineering program with a concentration in energy engineering is comprised of 30 credit hours. The project option requires the completion of a minimum of 24 credit hours of approved graduate-level course work (nominally 8 courses) and a six-hour practice-oriented project in consultation with their advisor, for a total of 30 credit hours. The coursework option requires the completion of at least 30 credit hours of approved graduate-level course work (nominally 10 courses).

Additionally, all students are expected to complete the following requirements to obtain the Master of Science in Energy Engineering degree program at the University of Toledo:

Code	Title	Hours
Energy Engineering Core Courses		
<i>Minimum of four courses</i>		12
GNEN 6200	Environmental Efficiency for Buildings	
EECS 5240	Power Systems Operation	
EECS 5460	Power Systems Management	
EECS 5480	Power Electronics 1	
MIME 5410	Alternative Energy	
MIME 5820	Sustainability Analysis and Design	
MIME 5980	Special Topics	
Business Core Courses		
<i>Minimum of one course</i>		3
ACCT 5000	Financial And Managerial Accounting	
ACCT 5100	Financial Accounting and Analysis	
BLAW 6100	Business, Government And Society	
BUAD 6600	Supply Chain Management	
EFSB 6590	New Venture Creation	
FINA 5210	Economics For Business Decisions	

OSCM 5520	Analysis of Manufacturing and Service Systems	
Engineering Electives		
<i>Minimum of two courses</i>		6
CIVE 5690	Sustainability Engineering	
GNEN 5500	Applications of Engineering Analysis	
GNEN 5700	Applied Probability and Statistics	
GNEN 6700	Management of Projects and Technological Innovation	
EECS 5260	Control Systems Design	
MIME 5080	Operations Research I	
MIME 6980	Special Topics	
Capstone Option - Work Related Project or Coursework		
<i>Work Related Project Option</i>		9
GNEN 6920	Special Projects in Engineering (6 cr hr)	
Any course from those listed above (3 cr hr)		
<i>Coursework Only Option</i>		9
Any three courses from those listed above (9 cr hr)		

Students may meet their coursework requirements by completing the requirements above, as well as any of the approved elective courses in consultation with their academic advisor. Elective courses may be taken on campus or via distance learning. Several graduate offerings from the College of Engineering, the College of Business and Innovation and the College of Law are available for selection.

Students following the coursework only option may take up to 6 hours of approved independent study toward the 30 credit hours requirement. Students will find it possible to complete the degree requirements in five semesters or less, depending on academic backgrounds and course loads. If students choose the project option, they may complete the course requirements in four semesters by taking two recommended courses per semester and completing the project in one or two semesters. The six-credit (6 hrs.) project for fulfillment of the project option may be accomplished in coordination with the student's employer utilizing skills learned in this program. Students should consult their advisor regarding this option.

For transfer credit, students should refer to the general policies of the College of Graduate Studies. Students may use no more than nine credit hours earned at another university with a grade of B or better toward the Master of Science in engineering, and in no case may the project be satisfied by work already completed at another institution or on the job.

In order to be awarded the Master of Science in engineering degree, the student must have at least a B average (minimum GPA of 3.0/4.0) for all graduate course credits in the program as well as for their entire graduate transcript. Only credit hours obtained with a letter grade of "C" or higher, or an "S" grade for the limited number of classes offered on a satisfactory or unsatisfactory basis, will fulfill degree requirements.

First Year		Hours
Fall semester		
EECS 5480	Power Electronics 1	3
MIME 5410	Alternative Energy	3
Spring Semester		
EECS 5240	Power Systems Operation	3

GNEN 6200	Environmental Efficiency for Buildings	3
Hours		12
Second Year		
Fall semester		
ACCT 5000	Financial And Managerial Accounting	3
CIVE 5690	Sustainability Engineering	3
Spring semester		
GNEN 5500	Applications of Engineering Analysis	3
GNEN 5700	Applied Probability and Statistics	3
Hours		12
Third Year		
Fall semester		
EECS 5460	Power Systems Management	3
GNEN 6700	Management of Projects and Technological Innovation	3
Hours		6
Total Hours		30

Students will obtain a comprehensive understanding of critical engineering concepts.

Students will obtain proficiency in advanced topics of mathematics and statistics

Students will obtain proficiency in topics in business including accounting, business law, and operations management

Students will be able to apply technical solutions to global and societal issues

M.S. in Engineering (General Engineering-online)

OVERVIEW

Dr. Carmen Cioc, Program Director

The College of Engineering at the University of Toledo offers a Master of Science degree in Engineering with a concentration in General Engineering that can be completed part-time, online. This engineering master's degree program is intended for students who are full-time employees seeking a master's degree to facilitate career advancement or achievement of personal educational goals. It is designed for current and future managers and engineers. This cross-disciplinary program combines a study in business management and engineering and presents an alternative to a traditional business management or technical Master of Science degree. To accommodate students who are full-time employees, course work for this degree program may be taken completely online via distance learning.

ADMISSION REQUIREMENTS

To be admitted to the Masters of Science in Engineering program, applicants must have a bachelor's degree in engineering, engineering technology or a closely related field (e.g., one of the mathematical, physical or biological sciences). Applicants must be employed in an engineering-related industry. Admissions are made on an individual basis

and take into account the applicant's previous record, the intended area of study, and the needs and capacity of the College of Engineering.

Applicants should have a minimum grade point average (GPA) of 2.7 in previous undergraduate work from appropriately accredited academic institutions or from an academic institution with high academic standards deemed appropriate and acceptable by the College of Engineering and the College of Graduate Studies. Applicants having a GPA less than 2.7 who demonstrate potential for graduate study may be admitted to the master's program on a provisional or other basis, at the option of the college. Students with an undergraduate GPA below 2.7 must register and take the GRE. Information on the GRE is available on the GRE Web site: <http://www.gre.org>. Students who graduated with a bachelor's degree from The University of Toledo do not need to submit official transcripts. Students who did not graduate from The University of Toledo need to contact the office of the registrar at their undergraduate institution to arrange for transmission of the undergraduate transcripts.

Students entering the program without a B.S. in engineering will be required to have at least: calculus, through ordinary differential equations (2 semesters); physics (2 semesters); chemistry and/or engineering materials (1 semester); and any three out of the following six: statics, dynamics, electronics, electric circuits, fluid mechanics and thermodynamics. Students lacking one or more of the above courses must take the necessary courses before entering the program.

Students can apply for non-degree student status and take up to nine credit hours of graduate-level classes that may be applied to their graduate degree program. Students with non-degree status can be admitted to the program as regular graduate students at a later date.

For additional information regarding this program, please consult the College of Engineering's website at <http://www.utoledo.edu/engineering/graduate-studies/> for specific program guidelines developed in cooperation with the College of Business and Innovation.

DEGREE REQUIREMENTS

The Part-Time Master of Science in Engineering with a concentration in General Engineering program requires 30 credit hours of graduate level course work. The project option requires the completion of a minimum of 24 credit hours of approved graduate course work and 6 credit hours of a work-related project. Specific curriculum requirements are provided below.

Code	Title	Hours
Engineering Core Courses: Minimum of 2 courses		6
GNEN 5500	Applications of Engineering Analysis	3
GNEN 5700	Applied Probability and Statistics	3
GNEN 6700	Management of Projects and Technological Innovation	3
Business Core Courses: Minimum of 1 course		3
ACCT 5000	Financial And Managerial Accounting	3
ACCT 5100	Financial Accounting and Analysis	3
BLAW 6100	Business, Government And Society	3
BUAD 6400	Results-Based Management	3
BUAD 6600	Supply Chain Management	3
EFSB 6590	New Venture Creation	3

FINA 5210	Economics For Business Decisions	3
OSCM 5520	Analysis of Manufacturing and Service Systems	3
Engineering Electives: Minimum of 4 courses		12
CIVE 5690	Sustainability Engineering	3
EECS 5240	Power Systems Operation	3
EECS 5260	Control Systems Design	3
EECS 5460	Power Systems Management	3
EECS 5480	Power Electronics 1	3
GNEN 6200	Environmental Efficiency for Buildings	3
MIME 5080	Operations Research I	3
MIME 5410	Alternative Energy	3
MIME 5820	Sustainability Analysis and Design	3
MIME 5830	Additive Manufacturing	3
Project or Coursework option		9
<i>Work-Related Project Option:</i>		
GNEN 6920	Special Projects in Engineering	6
Any additional course from categories above		3
<i>Coursework option</i>		
Any additional 3 courses from categories above		9

- The engineering core courses establish a common foundation in engineering mathematics and project management. The engineering core courses are designed to update computer analysis skills, provide a background in applied statistics and to furnish tools for the management of projects and technological innovation.
- The business core courses cover a broad range of topics that are important for engineers that are taking on responsibilities outside of a traditional engineering technical track. The business core is intended to provide engineers, scientists and technologists with financial and managerial skills that can help the engineer succeed in today's marketplace.
- The engineering elective courses support a technical focus area. In addition to those listed in the table above, any graduate level course in bioengineering, chemical engineering, civil and environmental engineering, electrical engineering and computer science, general engineering, or mechanical, industrial and manufacturing engineering departments can be selected as an elective.

All students must complete 21 cr hr based on the engineering core, business core, and engineering electives as described above. Students completing a course work only degree will take an additional 9 cr hr of courses from the three categories.

Students electing the project option will take one additional course and will complete 6 cr hr of a work-related project (GNEN 6920). The topic and other specifics of the project require prior approval of the program director and should include approval and cooperation of the employer. The project may be completed over one or more semesters. Students may complete their course requirements in four semesters by taking the recommended two courses (6 cr hr) per semester.

For transfer credit, students should refer to the general policies of the College of Graduate Studies. No more than 9 cr hr toward the Master of

Science in engineering may be earned at another university with a grade of B or better, and in no case may the project be satisfied by work already completed at another institution or on the job.

In order to be awarded the Master of Science in Engineering degree, the student must have at least a B average (minimum GPA of 3.0/4.0) for all graduate course credits in the program as well as for the entire graduate transcript. Only credit hours obtained with a letter grade of "C" or higher, or an "S" grade for the limited number of classes offered on a satisfactory or unsatisfactory basis, will fulfill degree requirements.

Course work only degree option:

First Year		
First Term		Hours
GNEN 5500	Applications of Engineering Analysis	3
GNEN 6700	Management of Projects and Technological Innovation	3

Total Hours		30

1. Students will obtain proficiency in solving complex engineering problems by applying advanced principles of engineering, science, and mathematics.
2. Students will obtain proficiency in applying engineering design, operations management, and business knowledge, to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. Students will be able to recognize ethical and professional responsibilities in engineering situations and to make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
4. Students will obtain proficiency in analyzing and interpreting data and using engineering judgment to draw conclusions.
5. Students will be able to acquire and apply new knowledge as needed using appropriate learning strategies, and engaging in lifelong learning.
6. Students will be able to acquire key management skills including creating a collaborative and inclusive environment, establishing goals, planning tasks, and meeting objectives.

J.D./M.S. Dual Degree Program

Overview

The J.D./M.S. dual degree program offers a student who has been admitted to The University of Toledo College of Law and one of The University of Toledo College of Engineering master of science programs the opportunity to complete requirements for both the J.D. and the M.S. degrees in an accelerated period of study. The program is designed for full-time students who have an undergraduate degree in engineering or its equivalent. Students with a non-engineering undergraduate degree will be required to complete all prerequisite courses required by the College of Engineering, depending on the nature of the undergraduate degree.

Advising

The College of Law and the College of Engineering will advise with regard to that school's curriculum, requirements and guidelines. Within the College of Engineering, advising is handled within the individual department of enrollment and coordinated through the associate dean of graduate studies.

Awarding of Degrees and Credit

A student enrolled in the dual degree program will not receive either the J.D. or M.S. degree until all the work required for both degrees has been completed. A student who withdraws from the dual degree program and remains in either the College of Law or College of Engineering shall receive only as much credit for work in the other college as the dean may authorize under the rules of that college.

No credit for work in the other college shall be awarded unless the student achieves an acceptable grade in the college offering the course. In addition, degrees must be awarded within time limits established by the College of Graduate Studies, the College of Law and the College of Engineering.

ADMISSION Requirements

Students should apply for the dual degree program using both the College of Law standard application form and the College of Graduate Studies application form. A joint admissions committee consisting of admission committee members from both colleges will review those College of Law applications that request dual admission. Although admission to both colleges is required before the student can begin the joint degree program, a student can begin a program in one college and later add the dual-degree program. In this case, courses completed prior to admission to the dual-degree program will be evaluated for program credit according to College of Graduate Studies transfer credit guidelines.

PROGRAM REQUIREMENTS

The integrated program and curriculum leads to the awarding of two degrees. The Juris doctor degree will be awarded by The University of Toledo College of Law, and the Master of Science degree will be awarded by The University of Toledo College of Engineering.

Master of Science in Engineering Degree: To fulfill requirements for the M.S. degree, 30 credit hours at graduate level are required. Students in the joint program may apply up to 12 credit hours of non-first year course work at the College of Law toward meeting the M.S. degree requirements.

The College of Law course work eligible for credit toward the M.S. degree will be determined in consultation with the associate dean of graduate studies in the College of Engineering. With the M.S. thesis/project option, students must complete at least 18 credit hours at the graduate level from the College of Engineering, including nine hours of M.S. thesis or six hours of M.S. project. With the M.S. course work-only option, students must complete at least 18 credit hours at the graduate level from the College of Engineering.

Juris Doctor Degree: The College of Law requires the successful completion of 89 credit hours. The dual degree program would permit up to 12 credit hours of core courses done in the College of Engineering to be applied toward the satisfaction of the 89-hour requirement.

Engineering course work credited toward the J.D. degree will be determined in consultation with the associate dean for academic affairs in the College of Law.

Graduate Certificate in Cyber Security

Overview

The Cyber Security Certificate Program is designed for graduate students who are (i) admitted to the Master of Science in Electrical Engineering or Computer Science Engineering, or (ii) eligible to take graduate level engineering courses within the Electrical Engineering and Computer Science Department at The University of Toledo. The program requires completion of four cyber security-related graduate courses (12 cr hr). This Certificate Program provides foundation of the software and hardware cyber security expertise needed to secure employment in the general domain of cyber security.

A minimum GPA of 3.0 and no grade below C are required for certificate completion.

ADMISSIONS REQUIREMENTS

Candidates who are not current students can apply online to the UToledo College of Graduate Studies. Applicants to the cyber security certificate are expected to meet the admission requirements for the MS in electrical engineering or computer science & engineering degree program.

PROGRAM REQUIREMENTS

The certificate consists of any 4 courses from the list below:

Code	Title	Hours
EECS 5720	Essentials of Cyber Security	3
EECS 5640	Inside Cryptography	3
EECS 5760	Computer Security	3
EECS 5790	Network Security	4
EECS 6650	Hardware Oriented Security and Trust	3

Graduate Certificate in Manufacturing

OVERVIEW

Hongyan Zhang, Program Director

Manufacturing is undergoing systemic changes as a result of technological advances and reshoring of manufacturing to the U.S. Adoption and integration of additive manufacturing technologies is changing the way products are made and opening product opportunities that were previously unfeasible. New manufacturing technologies, coupled with internet of things (IOT) and Green initiatives that reduce raw material costs and promote a circular economy, are shaping the manufacturing landscape of today. The graduate certificate in manufacturing will equip graduates with the knowledge and skills they need in this rapidly changing environment and enable employers to quickly identify graduates with the manufacturing expertise that they need.

Benefits

Many industries are seeking to upgrade the skills of their workforce as methods of manufacturing expand to include additive manufacturing and advanced automation and automated assembly. Replacing legacy processes with new manufacturing methods also requires re-imagining engineering design for production with these new technologies. Want to be a leader in the manufacturing revolution? Let the Graduate Certificate in Manufacturing take your career to the next level. Want to keep going? Consider stacking with another certificate for additional credentials or to complete a MS degree.

ADMISSIONS REQUIREMENTS

Applicants for the program are evaluated based on the admission requirements of the M.S. of the Mechanical Engineering program.

PROGRAM REQUIREMENTS

Code	Title	Hours
<i>Required courses (select 3)</i>		<i>9</i>
MIME 5060	Manufacturing Engineering	
MIME 5830	Additive Manufacturing	
MIME 6720	Design of Experiments	
MIME 6810	Assembly And Joining Processes	
<i>Elective courses (select 2)</i>		<i>6</i>
MIME 5080	Operations Research I	
MIME 5100	Manufacturing Systems Simulation	
MIME 5690	Reliability	
MIME 5800	Design For Manufacturability	
MIME 5820	Sustainability Analysis and Design	
MIME 6800	Advanced Manufacturing Systems Engineering	
Total Hours		15

The educational outcome of the Manufacturing Graduate Certificate will result in graduates that will

- Be hired as practicing engineers in industries and government laboratories that are involved in the design, simulation, implementation, testing, analysis, and control of manufacturing processes and systems.
- Be prepared to continue their education with an advanced degree in mechanical engineering, industrial engineering, or other related field of engineering.
- Be prepared to continue their studies in other graduate programs to pursue careers in business or law.

Graduate Certificate in Materials Science & Engineering

Applicants for the program are evaluated based on the admission requirements of the M.S. of Mechanical Engineering program.

To complete this 12 cr hr certificate, the students have to complete 4 courses from the following list of courses.

Code	Title	Hours
MIME 5350	Advanced Ceramics	3
MIME 5370	Advanced Materials for Automotive Structures	3
MIME 5380	Engineering Polymers and Rubbers	3

MIME 5390	Failure Analysis of Materials	3
EECS 5600	Solid State Devices	3

This certificate will offer students to learn advanced materials science and engineering in related fields such as metals, ceramics, electronic materials, and polymers. All of these materials are very important and essential components in mechanical and manufacturing engineering fields. Students will have the option to select any 4 courses (12 Cr Hrs) from the list of approved courses that cover the above topics.

Upon the successful completion of the Materials Science and Engineering Certificate, the students will be able to achieve the following outcomes:

1. Identify, formulate, and solve complex engineering problems by applying the properties of materials.
2. Design and produce different devices that meet specified needs based on different materials.
3. Recognize ethical and professional responsibilities in materials science and engineering related to engineering manufacturing.
4. Develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions related to materials science and engineering.
5. Acquire and apply new knowledge as needed, using appropriate learning strategies.
6. Communicate verbally or in writing through research papers, presentations, and inventions.
7. Manage a technical project related to materials science & engineering related technical fields, research projects, or industries.

Graduate Certificate in Mechatronics

OVERVIEW

Adam Schroeder, Program Director

The Mechatronics Certificate Program is designed for mechanical engineers already in the workforce to introduce mechatronics and the relevant sub-topics including programming, electrical hardware, dynamics and controls. The certificate requires completion of five mechatronics-related courses (15 cr hr), taken one course per semester, starting in the fall. The courses have thus far been taught in classrooms at The University of Toledo and students have also taken these courses remotely. This certificate will build the requisite skills that engineers need to conceptualize, design, build and test mechatronic devices, which have largely replaced traditional mechanical-only devices.

ADMISSION REQUIREMENTS

Applicants for the program are evaluated based on the admission requirements of the M.S. of Mechanical Engineering program.

PROGRAM REQUIREMENTS

Mechatronics certificate (15 cr hr) - Courses taken in the following categories:

Code	Title	Hours
1. Control Area		3
MIME 5420	Modeling and Control of Engineering Systems	
MIME 5430	Advanced Automotive Control Systems	

2. Programming Area **3**

MIME 5460 Advanced MATLAB for Engineers

3. Hardware Area **3**

EECS 5480 Power Electronics 1

Other graduate level courses as approved by the program director

4. Project **3**

MIME 5440 Advanced Mechatronics

5. Elective **3**

MIME 5450 Advanced Automation Design

MIME 5420 Modeling and Control of Engineering Systems

MIME 5430 Advanced Automotive Control Systems

Other graduate level course as approved by the program director

Total Hours 15

- 1) Demonstrate technical proficiency in mechatronics topics.
- 2) Solve problems using mathematics and engineering knowledge in mechatronics
- 3) Explain course projects in mechatronics clearly and concisely in written and oral formats

College Policies (Graduate Handbook)

The College of Engineering offers graduate programs in bioengineering, cyber security, chemical, civil and environmental, computer science and engineering, electrical, general, and industrial and mechanical engineering. In addition, and jointly with the College of Medicine and Life Sciences, the College of Engineering also offers a graduate program in biomedical engineering. Requirements for the engineering graduate programs are identified below. In addition, students should be familiar with the general College of Graduate Studies requirements.

Entrance Requirements

The graduate programs are open to all qualified individuals with a bachelor of science (B.S.)/master of science (M.S.) in engineering. Applicants should have a grade point average (GPA) of at least 3.0 in previous undergraduate work and at least 3.3 in previous graduate work. Students with a degree in another field may be eligible for admission, provided they meet the minimum background requirement, which includes two years of calculus through differential equations and one year of engineering physics. In some cases, other prerequisite courses may be required. Course credits for meeting undergraduate prerequisites are not applied toward the graduate degree. Check individual programs for specific admissions requirements.

A complete application for admission includes the following items:

1. application for admission to the College of Graduate Studies;
2. statement of purpose in the application that indicates the areas of engineering in which the applicant is interested;
3. payment of the application fee;
4. application for graduate assistantship to the College of Graduate Studies; (optional)
5. two or three letters of recommendation, depending on program;
6. official transcripts of all previous college-level work;

7. scores of the Graduate Record Exam (GRE), if required;
8. financial statement (for international students);
9. English language proficiency scores for students from non-English speaking countries. UToledo accepts scores from the TOEFL IBT (80 or above); TOEFL PBT (550 or above); IELTS (6.5 or above); PTE (58 or above); and Duolingo (105 or above);
10. professional resume (online programs only).

The above documentation should be submitted to the College of Graduate Studies. Admission to any graduate program is contingent on the availability of openings for incoming students. To receive full consideration for financial support starting from the fall semester, the application should be received in advance of department deadlines (<https://www.utoledo.edu/graduate/prospectivestudents/admission/departmentsdeadlines.html>). Applications are considered as they are received. Because of the sequential nature of courses, most full-time students are admitted for the fall semester of the academic year; see department deadlines for more information. Please be advised that only complete application files will be reviewed for admissions.

COLLEGE OF GRADUATE STUDIES: GRADUATE STUDENT HANDBOOK (<http://www.utoledo.edu/graduate/currentstudents/pdfs/Graduate%20Student%20Handbook%202018-2019.pdf>)

- College of Graduate Studies Policies and Procedures (p. 571)
- Academic Regulations (p. 572)
- Other Policies and Information (p. 577)

Admission

Application for admission and all accompanying materials should be submitted directly to the College of Graduate Studies. Applications to the biomedical engineering program should be made to this specific program. All other applications for admission should be made to one of the engineering departments for study in specific focus areas.

To be admitted to a graduate program in the College of Engineering, the applicant must have a bachelor's degree in engineering or a closely related field. Admission is made on an individual basis, taking into account the applicant's previous academic record, the intended area of study and professional experience. Individual departments may have additional requirements, which are listed in their departmental descriptions. Generally, a GPA of at least 3.0 is required for admission. Applicants having a GPA of less than 3.0 who demonstrate potential for graduate study may be admitted to the master's program on a provisional or other basis at the discretion of the department. All students from non-English speaking countries must submit scores for the TOEFL; some departments require completion of the GRE. Specific requirements for admission to programs are described under degree programs in this catalog.

The program admission committee will make the admission decision, subject to departmental policies and review by the College of Graduate Studies. The applicant should clearly indicate an area of intended concentration and/or the department and program of intended study. The criteria for admission include the baccalaureate and previous graduate record (grades and curricular content); the student's potential for success as indicated by professional references and relevant post-baccalaureate experience; and the scores on required standardized tests.

Most successful applicants for the Ph.D. program will have completed a master's degree in the intended area of study or a closely related field. For an applicant who has an outstanding undergraduate record and no master's degree, direct admission to the doctoral program is available. Applicants seeking direct admission must satisfy all prerequisites for graduate study in the intended field of study and must have achieved an undergraduate GPA of at least 3.0.

Early Admission to an engineering M.S. program

The College of Engineering encourages current UToledo students who wish to continue their education and earn graduate degrees in engineering to apply for early admission to one of the College of Engineering's M.S. programs. By entering the M.S. program prior to completing the B.S. degree requirements, talented students may begin working on their graduate coursework and research while completing B.S. degree requirements. Students may apply up to 9 cr hr of graduate coursework toward B.S. and M.S. coursework requirements, subject to program approvals.

The B.S./M.S. program is open to all students in the College of Engineering that have completed at least 2 of the 3 mandatory co-op rotations (engineering science programs only) and have a higher education GPA of 3.3 or higher. Applicants should refer to program application deadlines, and should apply for M.S. admission for the term they plan to register for their first graduate level course. Students are expected to consult with the B.S. and M.S. program directors prior to applying.

An expedited M.S. application package includes:

1. a completed application for graduate admission to the M.S. program of interest;
2. two or three letters of recommendation, depending on program;
3. a letter of interest (one page); and
4. a current resume (for online, part-time M.S. in general or energy engineering only)

Programs that require the GRE exam may make early admission decisions in advance of receiving the test score.

Students accepted through the early admission process will be granted provisional admission to enroll in graduate level courses. Students will be admitted to the M.S. program in the College of Engineering upon completion of the B.S. degrees.

A student must file an M.S. plan of study immediately after being granted early admission to the M.S. program. The plan must specify up to nine credit hours of graduate course work that will be applied toward specific B.S. degree requirements. The student must meet all the requirements of the M.S. program as specified by the College of Graduate Studies, the College of Engineering, and the degree program.

Master of Science Programs

The master's degree programs are intended to provide advanced study in an area of engineering. The programs provide sufficient flexibility to allow students to develop an area of specialization, broaden their educational experience into additional areas of engineering, or synthesize

an integrated program of interdisciplinary studies through a thesis or project.

Plan of Study

Master's degrees in the College of Engineering are offered with thesis and non-thesis options, depending on the degree program. Consult graduate program requirements to determine program completion options. Each option is described in more detail below.

1. **Thesis option:** A minimum of 30 credit hours of approved graduate study, including nine credit hours of thesis research under the supervision of a faculty member, is required. Students are required to submit a written thesis and successfully complete the oral defense of the thesis work. Additional guidelines and requirements may exist for individual departments.
2. **Non-thesis option:** The master of science with non-thesis option is available with the approval of the department chair or the department graduate program director and/or faculty advisor.
 - a. **Master of science degree with project option:** Students are required to complete a minimum of 30 credit hours of approved graduate study, including six hours of master of science project under the supervision of a faculty advisor as specified by individual department guidelines and requirements. Students are required to submit a written project report to the department.
 - b. **Master of science degree with course work-only option:** Students are required to complete a minimum of 30 credit hours of approved graduate-level course work. Additional hours of course work to replace thesis or project are selected from departmental electives approved by the department chair or the graduate program director.

A plan of study that specifies the entire master's program, including include thesis or project requirements and graduate course work, as well as any specified preparatory undergraduate course work, is to be developed by the student working with his/her advisor. The plan of study should be submitted for review and approval before 12 credit hours are completed in the program of study. Graduate course work may be selected from engineering, math, science, business and related fields, subject to course category restrictions specified by the individual programs. Students should consult the departmental program descriptions for additional requirements.

To be awarded the Master of Science degree, a student must have at least a B average (minimum GPA of 3.0/4.0) for all graduate course credits in the program as well as for their entire graduate transcript. Only credit hours obtained with a letter grade of "C" or higher, or an "S" grade for the limited number of classes offered on a satisfactory or unsatisfactory basis, will fulfill degree requirements.

Doctoral Degree Program

The Doctor of Philosophy programs in the College of Engineering are intended for academically outstanding students with appropriate bachelor's degrees. The programs require the completion and defense of a significant, original research dissertation. Potential fields of study are biomedical engineering and other designated areas of research focus within individual departments. Potential concentrations are bioengineering, chemical engineering, civil engineering, computer science

and engineering, electrical engineering, industrial engineering, and mechanical engineering.

Advisory Committee

Doctoral students, in consultation with the graduate program director and departmental chair, should select an advisor during their first term of study. Since the advisor is expected to become the student's dissertation supervisor, selection should be based on mutual agreement and common interests, with the expectation that the student and advisor can work effectively together. Notification of the advisor's appointment should be forwarded to the department's graduate program director, the college's associate dean of graduate studies, and the College of Graduate Studies.

The student and advisor should agree on a general area for the dissertation within the first year of study, an advisory committee should be appointed subject to the approval of the graduate program director and departmental chair. This committee, in general, is composed of a minimum of five graduate faculty members, with at least one of whom from outside the focus area and one from outside the department of the advisor. The duties of the advisory committee include developing a plan of study that will prepare the student in the chosen field and facilitate successful completion of the dissertation; reviewing and approving the dissertation proposal; advising and assisting in the completion of the dissertation research and preparation of the dissertation document; and conducting the dissertation defense. Students are referred to additional details and requirements provided in the Graduate Student Handbook of individual departments.

Plan of Study

The advisory committee's first responsibility is to work with the student to develop and submit for approval a doctoral program plan of study that meets all University, college and departmental requirements. This document must be filed with the College of Graduate Studies prior to completion of 12 credit hours. The plan of study specifies the course work and other requirements for the Ph.D., including qualifying examinations or publications.

The plan of study requires a minimum of 45 credit hours each of dissertation research and course work. Students admitted to the Ph.D. program with an M.S. degree may be granted credit for up to 30 credit hours of course work from their M.S. degree. Course work must satisfy core course and other requirements specified for the student's focus area by the department.

In order to be awarded the Ph.D. degree, a student must have at least a B average (minimum GPA of 3.0/4.0) for all graduate course work satisfying the degree program as well as for their entire graduate transcript. Only credit hours obtained with a letter grade of "C" or higher, or an "S" grade for the limited number of classes offered on a satisfactory or unsatisfactory basis, will fulfill degree requirements.

Residency Requirement

The College of Graduate Studies has established an academic residency requirement in order to provide doctoral students with the opportunity to engage in intensive, concentrated study over an extended period of time in association with faculty members and other students in an atmosphere conducive to a high level of intellectual and scholarly activity.

More information can be found under the College of Graduate Studies academic regulations section of the catalog.

Examinations

At the discretion of the student's program, either a qualifying examination, a comprehensive examination, or both will be required prior to admission to doctoral candidacy. Please refer to departmental handbooks for details of the qualifying or comprehensive examination timing, process, and procedures.

Admission to Candidacy

Students typically apply for admission to candidacy following the completion of coursework requirements and completion of any required qualifying examinations. At the time a student applies for admission to candidacy, the student must have a minimum 3.0/4.0 cumulative GPA and have satisfactorily completed the department examination requirements.

Dissertation Proposal

The student, working with the advisor, should develop a detailed written dissertation proposal for presentation to the advisory committee. The proposal should state the objectives, provide appropriate background, and describe the general approach to accomplish the research clearly and completely. Specific procedures and details for the timing, preparation, distribution and defense of this proposal are noted in departmental requirements. An approved copy of the accepted proposal, signed by each member of the advisory committee, will be kept in the student's file.

Dissertation Defense

After the advisor and committee have approved the dissertation proposal, the student should carry out the dissertation plan. When the advisor and student believe the work is complete and ready for defense, a dissertation document should be prepared with the advisor providing suggestions for improvement until both the advisor and the student believe the document is ready for publication. The advisor-approved dissertation document should be distributed to the committee in advance of the public dissertation defense.

Notice of the scheduled dissertation defense exam should be sent to the department graduate director, associate dean of graduate studies of the College of Engineering, and the College of Graduate Studies, and should be posted on College of Engineering notification sites.

Following the oral examination, the advisory committee will vote on whether to approve the dissertation and its defense. The committee will advise the student on what additions or corrections are necessary for the written dissertation document to be considered approved. When all corrections have been approved by the advisor and/or committee, the dissertation is uploaded to OhioLINK for archiving.

Department of Bioengineering

Brent D. Cameron, chair

Halim Ayan, graduate program director

Bioengineering is a relatively new discipline with rapidly growing job opportunities. Bioengineers apply engineering and life science principles to study, understand, modify and control biological systems. The goal of bioengineering is to develop new technologies and techniques that can be applied to a variety of problems in medicine and in the manufacturing of bio-related products.

Achievement of these goals requires engineering graduates who are trained in both engineering and the life sciences. The programs in bioengineering are multidisciplinary in nature as they draw on faculty resources, collaborative research programs, and course offerings throughout the College of Engineering, the College of Natural Sciences and Mathematics, the College of Pharmacy and Pharmaceutical Sciences, and departments on the UToledo Health Science Campus. The current areas of faculty research in the department include artificial intelligence, biofuels, biomaterials, biomedical optics, biomimetic assay development, biosensing, cellular and orthopedic biomechanics, computational biology, drug discovery and delivery platforms, medical imaging, microfluidics, plasma medicine, and tissue engineering.

The graduate programs in the Department of Bioengineering are open to all qualified individuals with a Bachelor of Science (B.S.) or Master of Science (M.S.) in Engineering. Students with a B.S./B.A. or M.S./M.A. degree in a related field are also eligible but students may be required to complete prerequisite courses without graduate credit. The Department of Bioengineering requires the GRE of all students for admission decisions to graduate programs.

Degrees Offered

MS in Bioengineering (p. 81)

PhD in Engineering (Bioengineering) (p. 82)

COURSES

BIOE 5200 Physiology And Anatomy For Bioengineers

[3 credit hours]

Review and study of general physiological principles and bioengineering perspectives of the human circulatory, respiratory, digestive, immune, nervous, muscular and excretory systems.

Term Offered: Fall

BIOE 5260 Medical Imaging Systems I

[3 credit hours]

An introduction to the physical principles, design and function of x-ray based diagnostic imaging systems, including radiographic, fluoroscopic and computer tomography (CT) systems.

Prerequisites: MIME 6000 with a minimum grade of C or MIME 8000 with a minimum grade of C

Term Offered: Spring

BIOE 5620 Cellular Electrophysiology

[3 credit hours]

The generation of electrical impulses by ion channels in excitable tissues. Models of ion channel gating include the Hodgkin-Huxley equations and Markov models. Principles of electrodiffusion applied to ionic flow through open channels.

Term Offered: Spring

BIOE 5640 Applications of Biotransport

[3 credit hours]

The application of engineering principles to the design and analysis of artificial organs and their clinical application.

Term Offered: Spring

BIOE 5650 Bioseparations

[3 credit hours]

Introduction to, analysis and industrial design of processes required to separate and purify proteins and other biological compounds for the downstream processing of bioreactor products. The separations techniques will include filtration, chromatography and crystallization.

Prerequisites: BIOE 3400 with a minimum grade of D- or CHEE 3120 with a minimum grade of D-

Term Offered: Fall

BIOE 5670 Ultrasound Principles And Medical Applications

[3 credit hours]

The basic principles and physics of ultrasound will be covered, Students will learn various medical applications of ultrasound and will be exposed to the latest developments in ultrasound technology.

Prerequisites: (MATH 2860 with a minimum grade of D- and MATH 3820 with a minimum grade of D-) or (PHYS 2140 with a minimum grade of D- and MATH 3860 with a minimum grade of D-)

BIOE 5710 Biomechanics of Soft and Hard Materials

[3 credit hours]

Composite and hierarchical models of bone remodeling models presented. Soft tissue models include linear and nonlinear viscoelasticity, Fung's quasilinear viscoelastic theory. Biphasic and triphasic models and mechano-ionic interactions.

Term Offered: Fall

BIOE 5730 Computational Bioengineering

[3 credit hours]

Introduction to and utilization of computational packages for bioengineering applications. Introduction to finite element analysis and applications in biomechanics, biofluidics, bioheat transfer, optimization.

Term Offered: Spring

BIOE 5740 Tissue Engineering

[3 credit hours]

Application of principles from engineering and the life sciences toward the development of biological substitutes that restore, maintain, or improve tissue function.

Term Offered: Spring, Fall

BIOE 5750 Experimental Methods In Orthopedic Biomechanics

[3 credit hours]

The theory and implementation of techniques used for the measurement of forces and motion within the musculoskeletal system at the system, organ and tissue levels.

Prerequisites: BIOE 3110 with a minimum grade of D- or CIVE 1160 with a minimum grade of D-

Term Offered: Spring, Fall

BIOE 5780 Advanced Biomechanics

[3 credit hours]

Three-dimensional analysis and measurement of human body motions. Applications to gait analysis, physical therapies, and impact analysis. Includes total hip and knee replacement: elbow, shoulder, wrist and finger arthroplasty: bone plates, hip fracture fixation devices, and external fixators.

Term Offered: Spring, Fall

BIOE 5830 Additive Manufacturing

[3 credit hours]

Additive manufacturing (AM) is a method of manufacturing that has been growing rapidly. In this course the students will learn about various AM technologies. They will also work with the required design software packages to create 3D models and 3D-print objects from the designed models.

Prerequisites: MIME 2650 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Fall

BIOE 5930 Bioengineering Seminar

[0 credit hours]

Presentations of ongoing research in the field of bioengineering. Includes presentations by guest speakers, faculty and graduate students.

Term Offered: Spring, Fall

BIOE 5980 Special Topics In Bioengineering

[1-5 credit hours]

Selected subjects in the field of bioengineering with intensive investigation of the recent literature in a few areas of special interest to the class and the professor.

Term Offered: Spring, Summer, Fall

BIOE 5990 Independent Study In Bioengineering

[1-6 credit hours]

The student, under the guidance of their research adviser, explores in-depth specific areas or topics related to their thesis or dissertation research.

Term Offered: Spring, Summer, Fall

BIOE 6100 Computational Physiology

[3 credit hours]

Application of mathematical and computational techniques to physiological systems. Models include conductive cables and compartmental models of nerve fibers, nonlinear differential equation models of electrophysiology, and stochastic models of biomolecular interactions.

Prerequisites: MIME 6000 with a minimum grade of D- and BIOE 4100 with a minimum grade of D-

Term Offered: Spring

BIOE 6210 Optical Instrumentation For Bioengineering

[3 credit hours]

Introduction to the theory and design of topical instruments for bioengineers. Instruments using geometrical, physical and quantum optical principles will be discussed.

BIOE 6310 Cell and Tissue Engineering Laboratory

[3 credit hours]

The application of engineering principles to the design and analysis of biological processes that employ living organisms or biochemicals.

Term Offered: Spring

BIOE 6520 Orthopaedic Biomechanics

[3 credit hours]

The course of orthopaedic biomechanics has been designed to fuse the biological and physiological problems with the science and technology of engineering. It focuses on a brief review of the physiology and biology of the human body, introduces the physics of manual industrial activities.

Prerequisites: BIOE 4110 with a minimum grade of D- and BIOE 5780 with a minimum grade of D-

Term Offered: Spring

BIOE 6730 Biological Transport Phenomena

[3 credit hours]

Application of transport phenomena and reaction engineering in the understanding of signaling, growth processes and the flow of biological fluids in mammalian vessels in living systems.

BIOE 6920 Bioengineering Project

[1-6 credit hours]

The student performs a special project of an advanced nature in bioengineering. The course is primarily intended for students pursuing a Masters degree with the project option in Bioengineering.

Term Offered: Spring, Summer, Fall

BIOE 6960 Bioengineering Research And Thesis - Master's

[1-9 credit hours]

Graduate thesis research. The student completes and defends a written thesis under the direction and guidance of their faculty research adviser.

Term Offered: Spring, Summer, Fall

BIOE 6970 Graduate Engineering Internship

[1 credit hour]

Faculty advisor approved industry, government, or agency internship to provide an experiential learning component to the master's/doctoral degree program.

Prerequisites: GNEN 5000 with a minimum grade of S

Term Offered: Spring, Summer, Fall

BIOE 7260 Medical Imaging Systems I

[3 credit hours]

An introduction to the physical principles, design and function of x-ray based diagnostic imaging systems, including radiographic, fluoroscopic and computer tomography (CT) systems.

Prerequisites: MIME 6000 with a minimum grade of C or MIME 8000 with a minimum grade of C

Term Offered: Spring

BIOE 7930 Bioengineering Seminar

[0 credit hours]

Presentations of ongoing research in the field of bioengineering. Includes presentations by guest speakers, faculty and graduate students.

Term Offered: Spring, Fall

BIOE 7980 Special Topics In Bioengineering

[1-5 credit hours]

Selected subjects in the field of bioengineering with intensive investigation of the recent literature in a few areas of special interest to the class and the professor.

Term Offered: Summer

BIOE 7990 Independent Study In Bioengineering

[1-6 credit hours]

The student, under the guidance of their research adviser, explores in-depth specific areas or topics related to their thesis or dissertation research.

Term Offered: Spring, Summer, Fall

BIOE 8100 Computational Physiology

[3 credit hours]

Application of mathematical and computational techniques to physiological systems. Models include conductive cables and compartmental models of nerve fibers, nonlinear differential equation models of electrophysiology, and stochastic models of biomolecular interactions.

Prerequisites: MIME 6000 with a minimum grade of D- and BIOE 4100 with a minimum grade of D-

Term Offered: Spring

BIOE 8210 Optical Instrumentation For Bioengineering

[3 credit hours]

Introduction to the theory and design of topical instruments for bioengineers. Instruments using geometrical, physical and quantum optical principles will be discussed.

BIOE 8310 Cell and Tissue Engineering Laboratory

[3 credit hours]

The application of engineering principles to the design and analysis of biological processes that employ living organisms or biochemicals.

Term Offered: Spring

BIOE 8520 Orthopaedic Biomechanics

[3 credit hours]

The course of orthopaedic biomechanics has been designed to fuse the biological and physiological problems with the science and technology of engineering. It focuses on a brief review of the physiology and biology of the human body, introduces the physics of manual industrial activities.

Prerequisites: BIOE 4110 with a minimum grade of D- and BIOE 5780 with a minimum grade of D-

Term Offered: Spring

BIOE 8730 Biological Transport Phenomena

[3 credit hours]

Application of transport phenomena and reaction engineering in the understanding of signaling, growth processes and the flow of biological fluids in mammalian vessels in living systems.

BIOE 8960 Bioengineering Dissertation

[1-9 credit hours]

Original investigations of significant bioengineering problems at the graduate level under the guidance of a member of the faculty.

Term Offered: Spring, Summer, Fall

BIOE 8970 Graduate Engineering Internship

[1 credit hour]

Faculty advisor approved industry, government, or agency internship to provide an experiential learning component to the master's/doctoral degree program.

Prerequisites: GNEN 5000 with a minimum grade of S

Term Offered: Spring, Summer, Fall

Department of Chemical Engineering

Maria Coleman, chair

Yakov Lapitsky, graduate program director

The Department of Chemical Engineering offers graduate courses and conducts research in the areas of advanced materials, alternative energy, biomass conversion to chemicals and materials, polymer science and engineering, and membrane science and engineering. Students may select from a variety of courses and research topics in each area. The department offers two graduate degrees, a Master of Science in Chemical Engineering (M.S.Ch.E.) and a Doctor of Philosophy in Engineering (Ph.D.).

Alternative energy research focuses on the production of fuels from lignocellulosic biomass and algae. Faculty also are developing processes for the conversion of biomass to chemicals and materials, including polymers and fuels. Advanced materials and complex fluid formulations are being developed for application in catalysis, drug delivery, energy, home/personal care products, nanosensors, and nanocomposites. Packaging is the focus of work in polymer science and engineering, especially the development of sustainable packaging materials with enhanced barrier properties for product preservation and improved recyclability. This work is conducted largely through the University's Polymer Institute. Finally, membrane materials and processes are being developed for desalination, wastewater treatment, carbon dioxide capture, and energy production.

Degrees Offered

No results found.

COURSES

CHEE 5410 Bioseparations

[3 credit hours]

Introduction to, analysis and industrial design of processes required to separate and purify proteins and other biological compounds for the downstream processing of bioreactor products. The separations techniques will include filtration, chromatography and crystallization.

Prerequisites: BIOE 3400 with a minimum grade of D- or CHEE 3120 with a minimum grade of D-

Term Offered: Fall

CHEE 5800 Polymer Science And Engineering

[3 credit hours]

Polymerization processes, characterization, structure and properties of polymers, processing and engineering applications of the major polymer types.

Term Offered: Fall

CHEE 5930 Seminars in Chemical Engineering

[0-1 credit hours]

Research topics of current interest to chemical engineers will be presented by internal and external speakers in a research seminar format.

Term Offered: Spring, Fall

CHEE 6010 Green Engineering Principles

[3 credit hours]

The principles of chemical process analysis and design are introduced for the development of green engineering processes. Common components of chemical processes are reviewed and quantitative analyses of process performance and economics developed. The impact of design variables on materials and energy usage is demonstrated.

Term Offered: Fall

CHEE 6110 Green Engineering Applications

[3 credit hours]

Applications of green engineering principles in the chemical industry are discussed. Metrics for comparing process options are introduced along with common techniques for improving process performance.

Prerequisites: CHEE 6010 with a minimum grade of C

Term Offered: Spring

CHEE 6120 Biofuels

[3 credit hours]

The technical, economic, social, and political issues associated with energy consumption are discussed. The potential for biofuels to replace current energy sources is examined based on the historical evolution of the industry and current research activity.

Term Offered: Spring

CHEE 6500 Advanced Chemical Reaction Engineering

[3 credit hours]

Analysis of kinetic, diffusive and flow factors on chemical reactor performance. Topics include batch, plug flow and CSTR reactors, empirical rate expressions, residence time distributions, catalytic reactors, stability and optimization.

Term Offered: Spring

CHEE 6510 Advanced Chemical Engineering Thermodynamics

[3 credit hours]

Advanced treatment of fundamental principles of thermodynamics, especially as related to calculation of phase equilibria. Topics include intermolecular potentials, excess functions, theories of solutions, high-pressure equilibria and introductory statistical mechanics.

Term Offered: Spring, Fall

CHEE 6550 Transport Phenomena I

[3 credit hours]

Students learn how to formulate and solve engineering problems involving momentum transfer from the microscopic view. Topics include vector/tensor analysis, approximation methods, computational solutions and non-Newtonian fluid phenomena.

Term Offered: Fall

CHEE 6560 Transport Phenomena II

[3 credit hours]

Students learn how to formulate and solve engineering problems involving simultaneous momentum, heat and mass transfer from the microscopic view. Topics include conduction, radiation, diffusion, forced convection and free convection.

Prerequisites: CHEE 6550 with a minimum grade of D-

Term Offered: Spring

CHEE 6860 Polymer Laboratory Methods

[3 credit hours]

Characterization of polymers by physical testing (tensile, creep and rheological), physicochemical methods (viscosity, gel permeation chromatography), thermal analysis, spectroscopy, light microscopy, permeation, density, light scattering and processing.

Term Offered: Spring, Fall

CHEE 6920 Chemical Engineering Project

[1-6 credit hours]

Students will perform a special project of an advanced nature in Chemical Engineering under the supervision of a faculty advisor. The project will culminate in submission of a written report. The course is intended primarily for Masters students pursuing a project Masters in Chemical Engineering.

Term Offered: Spring, Summer, Fall**CHEE 6960 Master's Graduate Research And Thesis**

[1-9 credit hours]

Graduate research towards the completion of a Master's Degree.

Term Offered: Spring, Summer, Fall**CHEE 6970 Graduate Engineering Internship**

[1-6 credit hours]

Academic advisor approved industrial or non-profit internship to provide an experiential learning component to the Master's/ doctoral degree program.

Prerequisites: GNEN 5000 (may be taken concurrently) with a minimum grade of S

Term Offered: Spring, Summer, Fall**CHEE 6980 Special Topics In Chemical Engineering**

[1-6 credit hours]

Selected topics from current chemical engineering research with intensive investigation into the recent literature in an area of mutual interest to the student and the instructor.

Term Offered: Spring, Summer, Fall**CHEE 6990 Independent Study In Chemical Engineering**

[1-6 credit hours]

The student, under the guidance of their research advisor, explores in-depth specific areas or topics related to their project, thesis, or dissertation research, or other academic interests.

Term Offered: Spring, Summer, Fall**CHEE 7930 Seminars in Chemical Engineering**

[0-1 credit hours]

Research topics of current interest to chemical engineers will be presented by internal and external speakers in a research seminar format.

Term Offered: Spring, Fall**CHEE 8010 Green Engineering Principles**

[3 credit hours]

The principles of chemical process analysis and design are introduced for the development of green engineering processes. Common components of chemical processes are reviewed and quantitative analyses of process performance and economics developed. The impact of design variables on materials and energy usage is demonstrated.

Term Offered: Fall**CHEE 8110 Green Engineering Applications**

[3 credit hours]

Applications of green engineering principles in the chemical industry are discussed. Metrics for comparing process options are introduced along with common techniques for improving process performance.

Prerequisites: CHEE 8010 with a minimum grade of C

Term Offered: Spring**CHEE 8120 Biofuels**

[3 credit hours]

The technical, economic, social, and political issues associated with energy consumption are discussed. The potential for biofuels to replace current energy sources is examined based on the historical evolution of the industry and current research activity.

Term Offered: Spring**CHEE 8500 Advanced Chemical Reaction Engineering**

[3 credit hours]

Analysis of kinetic, diffusive and flow factors on chemical reactor performance. Topics include batch, plug flow and CSTR reactors, empirical rate expressions, residence time distributions, catalytic reactors, stability and optimization.

Term Offered: Spring**CHEE 8510 Advanced Chemical Engineering Thermodynamics**

[3 credit hours]

Advanced treatment of fundamental principles of thermodynamics, especially as related to calculation of phase equilibria. Topics include intermolecular potentials, excess functions, theories of solutions, high-pressure equilibria and introductory statistical mechanics.

Term Offered: Spring, Fall**CHEE 8550 Transport Phenomena I**

[3 credit hours]

Students learn how to formulate and solve engineering problems involving momentum transfer from the microscopic view. Topics include vector/tensor analysis, approximation methods, computational solutions and non-Newtonian fluid phenomena.

Term Offered: Fall**CHEE 8560 Transport Phenomena II**

[3 credit hours]

Students learn how to formulate and solve engineering problems involving simultaneous momentum, heat and mass transfer from the microscopic view. Topics include conduction, radiation, diffusion, forced convection and free convection.

Prerequisites: CHEE 8550 with a minimum grade of D-

Term Offered: Spring**CHEE 8860 Polymer Laboratory Methods**

[3 credit hours]

Characterization of polymers by physical testing (tensile, creep and rheological), physicochemical methods (viscosity, gel permeation chromatography), thermal analysis, spectroscopy, light microscopy, permeation, density, light scattering and processing.

Term Offered: Spring, Fall**CHEE 8960 Doctoral Graduate Research And Dissertation**

[1-9 credit hours]

Graduate research towards the completion of a Doctoral Degree.

Term Offered: Spring, Summer, Fall**CHEE 8970 Graduate Engineering Internship**

[1-6 credit hours]

Academic advisor approved industrial or non-profit internship to provide an experiential learning component to the Master's/ doctoral degree program.

Prerequisites: GNEN 5000 (may be taken concurrently) with a minimum grade of S

Term Offered: Spring, Summer, Fall

CHEE 8980 Special Topics In Chemical Engineering

[1-6 credit hours]

Selected topics from current chemical engineering research with intensive investigation into the recent literature in an area of mutual interest to the student and the instructor.

Term Offered: Spring, Summer, Fall

CHEE 8990 Independent Study In Chemical Engineering

[1-6 credit hours]

The student, under the guidance of their research advisor, explores in-depth specific areas or topics related to their project, thesis, or dissertation research, or other academic interests.

Term Offered: Spring, Summer, Fall

Department of Civil and Environmental Engineering

OVERVIEW

Defne Apul, chair

Azadeh Parvin, graduate program director

The department of civil and environmental engineering offers graduate degree programs and conducts research in two focus areas – environmental and infrastructure engineering. Environmental engineering includes advanced study in areas such as:

- sustainable buildings;
- water infrastructure sustainability,
- contaminated sediments;
- microbial degradation of organic compounds;
- microbial sensors;
- computer modeling of contaminant release and dispersion in soils and in air;
- environmental decision making;
- risk assessment; and
- wastewater treatment processes.

Infrastructure engineering includes:

- structural and earthquake engineering,
- transportation engineering and
- geotechnical engineering.
 - geotechnical engineering includes advanced study in areas such as:
 - shallow and deep foundations,
 - groundwater and seepage, and
 - experimental and theoretical soil mechanics.
 - structural engineering includes advanced study in areas such as:
 - earthquake engineering;
 - structural repair and rehabilitation;
 - structural health monitoring;
 - numerical and experimental analysis; and
 - design.
 - transportation engineering includes advanced study in areas such as:

- traffic and facility design;
- urban transportation planning;
- pavement materials' properties and design;
- pavement management;
- intelligent transportation systems; and
- transportation system management and economics.

Degrees Offered

MS in Civil Engineering (p. 88)

PhD in Engineering (Civil Engineering) (p. 89)

COURSES

CIVE 5210 Advanced Soil Mechanics

[3 credit hours]

A study of soil behavior including stress distributions, deformation, consolidation and shear strength. The course focuses upon the development and use of well accepted solutions and practical applications.

CIVE 5240 Design With Geosynthetics

[3 credit hours]

Use of geosynthetic materials in engineering design for reinforcement, barrier, separation and/or drainage functions. Design applications for geotechnical, transportation and environmental uses.

CIVE 5300 Advanced Mechanics Of Materials

[3 credit hours]

Introduction to theory of elasticity, plane-stress and plane-strain problems, yield criteria and failure theories, bending of beams, energy methods, curved flexural members, unsymmetrical bending, torsion, shear center and axisymmetrically loaded members.

Term Offered: Fall

CIVE 5320 Computer-Aided Analysis of Structures

[3 credit hours]

Matrix analysis of continuous beams, trusses and frames by force method and displacement method. Methods of consistent deformation and slope deflection will be discussed to complement the matrix analysis. Computer applications.

Prerequisites: CIVE 3310 with a minimum grade of D-

CIVE 5340 Experimental Mechanics

[3 credit hours]

Application of experimental techniques to stress analysis. Comparison of experimental and analytical methods. Theory of electrical resistance strain gages. Methods of photoelasticity including photostress. Data acquisition systems and their use.

Term Offered: Spring

CIVE 5430 Structural Steel Design II

[3 credit hours]

Study of local failure in beams, biaxial bending, plate girders, composite beams, semi-rigid composite connections and beam columns.

Term Offered: Spring

CIVE 5440 Reinforced Concrete Design II

[3 credit hours]

Analysis and design of columns under axial compression and biaxial bending. Consideration of bar cutoff, development lengths. Design of two-way slabs and building frames in reinforced concrete. Deflection of beams. Shear design provisions for deep beams.

CIVE 5450 Bridge Design I

[3 credit hours]

Design of the three most common types of short span bridges: concrete slabs, steel stringers and prestressed concrete. Additional topics are bearings, rehabilitation and retrofit and design to minimize maintenance.

Term Offered: Spring, Summer, Fall**CIVE 5480 Reinforced Masonry Design**

[3 credit hours]

Study of the design of reinforced and unreinforced masonry design, beams and walls and columns. Working stress design, strength design and empirical design are studied.

Term Offered: Spring, Fall**CIVE 5550 Traffic Control**

[3 credit hours]

To provide a detailed understanding of the basic concepts of traffic engineering together with driver-roadway-vehicle system characteristics. Capacity analysis of freeways, rural highways, multilane and two lane highways. Traffic control devices and traffic signal design and capacity. Traffic studies and data collections; volume, speed and travel time, accident and parking studies. Introduction to other tools to mitigate traffic congestion.

Term Offered: Fall**CIVE 5610 Water Resources And Hydrology**

[3 credit hours]

Aspects of Hydrology. Stream gauging. Common and rare event analysis. Hydraulic and hydrologic routing. Irrigation, navigation, flood control and urban drainage. Resource demand conflicts and multiple use planning.

Term Offered: Spring, Fall**CIVE 5630 Indoor Air Quality**

[3 credit hours]

Characterization of the indoor air pollutants, predictions of indoor air quality levels and indoor air quality control. Four to five design problems involving indoor air quality will be discussed/solved in the class. Special emphasis on indoor radon and asbestos problems in the United States. Use of USEPA program.

Term Offered: Fall**CIVE 5650 Industrial Ventilation**

[3 credit hours]

Industrial ventilation as related to need of industrial hygiene engineer, including principles of air flow, natural and power ventilation, supply and exhaust, characteristics and design of systems, fans, collectors, testing instruments. Construction guidelines for local exhaust systems.

CIVE 5670 Solid Waste Management And Disposal

[3 credit hours]

A basic study of solid waste management concepts including origin, quantities, qualities, collection and disposal of solid waste materials. The course focuses upon municipal wastes and introduces the student to hazardous waste technologies. The primary course objective is to develop environmentally sound landfill design technologies and other ultimate disposal techniques.

CIVE 5680 Environmental Law

[3 credit hours]

An overview of the major federal environmental statutes: Clean Air Act, Clean Water Act, RCRA, CERCLA, etc. and legal perspective of why they were developed. Exposure to some basic legal principles which will be integrated into the overall study of environmental law. Provides a practical perspective on how the law can be applied to situations encountered by environmental engineers and scientists in the real world.

Term Offered: Fall**CIVE 5690 Sustainability Engineering**

[3 credit hours]

Course develops students' abilities to apply the principles of sustainability to engineered systems. Course topics include sustainability definition and data, life cycle assessment based design, planetary boundaries, greenhouse gas emissions, green construction.

Term Offered: Spring, Fall**CIVE 5710 Advanced Engineering Systems Modeling**

[3 credit hours]

A systematic approach to the analysis of complicated engineering system involving uncertain and probabilistic phenomena. Decision-making with multiple objectives, monte carlo simulation, reliability based design, and Markov process are studied.

Term Offered: Fall**CIVE 5930 Graduate Seminar In Civil Engineering**

[1-3 credit hours]

An opportunity for qualified graduate students to pursue a relevant area of Civil Engineering of particular personal interest under the supervision of a faculty member.

Term Offered: Spring, Fall**CIVE 6280 Environmental and Energy Geotechnology**

[3 credit hours]

This course is designed for engineering and geoscience students who want to explore a broad range of engineering challenges that emerge at the interface of materials, environment and energy. This course is aimed to provide advanced students with fundamental knowledge for understanding and modelling many complex phenomena involved in a variety of engineering applications. These include technologies of nuclear and hazardous waste disposal, unconventional petroleum and gas extraction, CO2 sequestration and geothermal energy.

Term Offered: Spring**CIVE 6310 Finite Element Methods**

[3 credit hours]

Study of direct stiffness method, introduction to the minimum potential energy method and the Galerkin method, formulation of truss, beam, triangular and rectangular elements, applications to the analyses of space trusses, building frames, folded plates, fluid flow and seepage problems. Applications of modern computer software.

Term Offered: Spring, Fall**CIVE 6340 Mechanics Of Stability**

[3 credit hours]

Differential equations. Buckling of centrally and eccentrically loaded compression members; variational methods of determining critical loads; lateral and torsional buckling of beams; introduction to dynamic stability; parametric excitations; nonconservative stability problems; buckling of plates.

CIVE 6360 Dynamics Of Structures

[3 credit hours]

Evaluation of dynamic response of structures to arbitrary time-varying loadings; single degree-of-freedom, multi-degree-of-freedom and distributed-parameter systems; partial differential equation formulations of simple systems; mode superposition and wave propagation solutions; time history analysis and estimation of maximum response by spectral analysis; effects of nonlinearities on the structural response.

Term Offered: Spring, Fall

CIVE 6460 Advanced Composite Materials In Infrastructure

[3 credit hours]

Introduction to fiber composites and their applications in repair and retrofit of infrastructure. Strengthening of bridges, buildings, pavements. Understanding of basic concepts involved in design of concrete members reinforced with fiber reinforced polymer.

Term Offered: Spring

CIVE 6480 Prestressed Concrete Structures

[3 credit hours]

Structural behavior and failure modes of prestressed concrete structures; design in prestressed concrete, including long-span structures, bridges and precast systems.

Prerequisites: CIVE 5440 with a minimum grade of D-

Term Offered: Spring, Fall

CIVE 6490 Nonlinear Modeling of Reinforced Concrete

[3 credit hours]

Theories of elasticity and plasticity as applied to reinforced concrete, mechanical properties of concrete and reinforcing bars, linear and nonlinear elastic models, shear response, compression field and smeared crack models, their implementation and application into nonlinear finite element analysis, and performance assessment of plane frame structures.

Prerequisites: CIVE 3420 with a minimum grade of C and CIVE 6310 with a minimum grade of C or CIVE 8310 with a minimum grade of C or MIME 4280 with a minimum grade of C or MIME 5280 with a minimum grade of C

CIVE 6630 Dispersion And Risk Modeling

[3 credit hours]

Treatment of atmospheric dispersion problems, development of air quality models, components of a physical model, selection and evaluation of air pollution software, evaluation of models, risk modeling, EPA models and recent topics.

CIVE 6670 Physicochemical Processes for Water Quality Control

[3 credit hours]

The course will discuss theories and designs for water treatment processes.

Term Offered: Fall

CIVE 6690 Dispersion Modeling Laboratory

[1 credit hour]

Use of USEPA network, use of ten computer programs from the USEPA network, use of Internet and environmental BBS, search for environmental data bases using search engines.

Prerequisites: CIVE 6630 with a minimum grade of D-

Term Offered: Spring, Summer

CIVE 6900 Civil Engineering Problems

[3 credit hours]

Special assignment of civil engineering problems of various types at the graduate level.

Term Offered: Spring, Summer, Fall

CIVE 6920 Civil Engineering Project

[1-6 credit hours]

The student performs a special project of an advanced nature in civil engineering. The course is primarily intended for students pursuing a Masters degree with the project option in Civil Engineering.

Term Offered: Spring, Summer, Fall

CIVE 6960 Graduate Research And Thesis - Masters

[1-9 credit hours]

MS student should register their adviser's section number.

Term Offered: Spring, Summer, Fall

CIVE 6970 Graduate Engineering Internship

[1 credit hour]

Faculty advisor approved industry, government, or agency internship to provide an experiential learning component to the Master's/doctoral degree program.

Term Offered: Spring, Summer, Fall

CIVE 6980 Special Topics in Civil and Environmental Engineering

[1-6 credit hours]

This course is offered on selected subjects in a field in civil or environmental engineering with intensive investigation of the recent literature in an area of special interest to the class and the instructor.

Term Offered: Spring, Summer, Fall

CIVE 6990 Independent Study in Civil and Environmental Engineering

[1-6 credit hours]

The student, under the guidance of their research advisor, explores in-depth specific areas or topics related to their project, thesis, or dissertation research, or other academic interests.

Term Offered: Spring, Summer, Fall

CIVE 7340 Experimental Mechanics

[3 credit hours]

CIVE 7430 Structural Steel Design II

[3 credit hours]

CIVE 7450 Bridge Design I

[3 credit hours]

Design of the three most common types of short span bridges: concrete slabs, steel stringers and prestressed concrete. Additional topics are bearings, rehabilitation and retrofit and design to minimize maintenance.

Term Offered: Spring, Fall

CIVE 7900 Independent Problems

[1-6 credit hours]

CIVE 8280 Environmental and Energy Geotechnology

[3 credit hours]

This course is designed for engineering and geoscience students who want to explore a broad range of engineering challenges that emerge at the interface of materials, environment and energy. This course is aimed to provide advanced students with fundamental knowledge for understanding and modelling many complex phenomena involved in a variety of engineering applications. These include technologies of nuclear and hazardous waste disposal, unconventional petroleum and gas extraction, CO₂ sequestration and geothermal energy.

Term Offered: Spring**CIVE 8310 Finite Element Methods**

[3 credit hours]

Study of direct stiffness method, introduction to the minimum potential energy method and the Galerkin method, formulation of truss, beam, triangular and rectangular elements, applications to the analyses of space trusses, building frames, folded plates, fluid flow and seepage problems. Applications of modern computer software.

Term Offered: Spring, Fall**CIVE 8340 Mechanics Of Stability**

[3 credit hours]

Differential equations. Buckling of centrally and eccentrically loaded compression members; variational methods of determining critical loads; lateral and torsional buckling of beams; introduction to dynamic stability; parametric excitations; nonconservative stability problems; buckling of plates.

CIVE 8360 Dynamics Of Structures

[3 credit hours]

Evaluation of dynamic response of structures to arbitrary time-varying loadings; single degree-of-freedom, multi-degree-of-freedom and distributed-parameter systems; partial differential equation formulations of simple systems; mode superposition and wave propagation solutions; time history analysis and estimation of maximum response by spectral analysis; effects of nonlinearities on the structural response.

Term Offered: Spring, Fall**CIVE 8460 Advanced Composite Materials In Infrastructure**

[3 credit hours]

Introduction to fiber composites and their applications in repair and retrofit of infrastructure. Strengthening of bridges, buildings, pavements. Understanding of basic concepts involved in design of concrete members reinforced with fiber reinforced polymer.

Term Offered: Spring**CIVE 8480 Prestressed Concrete Structures**

[3 credit hours]

Structural behavior and failure modes of prestressed concrete structures; design in prestressed concrete, including long-span structures, bridges and precast systems.

Prerequisites: CIVE 7440 with a minimum grade of D-**Term Offered:** Spring, Fall**CIVE 8490 Nonlinear Modeling of Reinforced Concrete**

[3 credit hours]

Theories of elasticity and plasticity as applied to reinforced concrete, mechanical properties of concrete and reinforcing bars, linear and nonlinear elastic models, shear response, compression field and smeared crack models, their implementation and application into nonlinear finite element analysis, and performance assessment of plane frame structures.

Prerequisites: CIVE 3420 with a minimum grade of C and CIVE 6310 with a minimum grade of C or CIVE 8310 with a minimum grade of C or MIME 4280 with a minimum grade of C or MIME 5280 with a minimum grade of C

CIVE 8630 Dispersion And Risk Modeling

[3 credit hours]

Treatment of atmospheric dispersion problems, development of air quality models, components of a physical model, selection and evaluation of air pollution software, evaluation of models, risk modeling, EPA models and recent topics.

CIVE 8670 Physicochemical Processes for Water Quality Control

[3 credit hours]

The course will discuss theories and designs for water treatment processes.

Term Offered: Fall**CIVE 8690 Dispersion Modeling Laboratory**

[1 credit hour]

Use of USEPA network, use of ten computer programs from the USEPA network, use of Internet and environmental BBS, search for environmental data bases using search engines.

Prerequisites: CIVE 8630 with a minimum grade of D-**Term Offered:** Spring, Summer, Fall**CIVE 8900 Independent Problems**

[1-6 credit hours]

Ph.D. student should register their adviser's section number.

Term Offered: Spring, Summer, Fall**CIVE 8960 Doctoral Graduate Research & Dissertation**

[1-16 credit hours]

Graduate research towards the completion of a Doctoral degree.

Term Offered: Spring, Summer, Fall**CIVE 8970 Graduate Engineering Internship**

[1 credit hour]

Faculty advisor approved industry, government, or agency internship to provide an experiential learning component to the Master's/doctoral degree program.

Term Offered: Spring, Summer, Fall**CIVE 8980 Special Topics in Civil and Environmental Engineering**

[1-6 credit hours]

This course is offered on selected subjects in a field in civil or environmental engineering with intensive investigation of the recent literature in an area of special interest to the class and the instructor.

Term Offered: Spring, Summer, Fall

CIVE 8990 Independent Study in Civil and Environmental Engineering [1-6 credit hours]

The student, under the guidance of their research advisor, explores in-depth specific areas or topics related to their project, thesis, or dissertation research, or other academic interests.

Term Offered: Spring, Summer, Fall

Department of Electrical Engineering and Computer Science

Gursel Serpen, interim chair

Daniel Georgiev, graduate program director

The mission of the Electrical Engineering and Computer Science (EECS) department is to educate future engineers and scientists in the fields of electrical engineering and computer science; to contribute to the body of knowledge in the fields of electrical engineering and computer science; and to conduct research and contribute to the development of innovative solutions to address diverse technological and societal needs.

The EECS department offers advanced studies leading to the M.S. or the Ph.D. degrees as well as a Graduate Certificate in Cybersecurity. EECS Graduate courses and research entail diverse topics across the spectrum of Electrical Engineering (EE), Computer Engineering (CE), and Computer Science (CS). Current topics for EE include communications, control and signal processing, machine vision and imaging, power systems, power electronics, nano-electronic materials and devices, photovoltaic devices, laser-based advanced processing, electromagnetics and plasma science, renewable energy and smart grid, and microelectronics. Current topics in Computer Science and Engineering include artificial intelligence, computer systems design and applications (hardware and software), computer graphics and visualization, computer aided design and simulation, cyber and computer security, hardware oriented security and trust, social networking, and high performance computing.

EECS department faculty members participate in four research tracks, with each track consisting of multiple specialization areas. The research activities of some faculty fall in more than one these tracks and areas. Each specialization area has sets of required and recommended courses for all graduate students pursuing the specialization. The recommended courses needed to complete the degree requirements are selected by the student in consultation with an advisor. The four research tracks include the following:

- **Electrical Engineering Physical Sciences (PS).** Research in the PS track includes the following specialization areas:
 - Materials, Devices, Electromagnetics and Plasma Virtual
 - Power
- **Electrical Engineering System Sciences (SS).** Research in the SS track includes the following specialization areas:
 - Communications
 - Signals, Image Processing and Computer Vision
 - Controls
- **Computer Science (CS).** Research in the CS track includes the following specialization areas:
 - Artificial Intelligence
 - Cybersecurity

- **Computer Engineering (CE).** Research in the CE track includes the following specialization area:

- Advanced Computing Systems

Degrees Offered

MS in Computer Science & Engineering (p. 96)

MS in Electrical Engineering (p. 93)

PhD in Engineering (Electrical Engineering) (p. 95)

PhD in Engineering (Computer Science & Engineering) (p. 98)

Graduate Certificate in Cyber Security (p. 108)

COURSES

EECS 5120 Introduction to Fuzzy Systems and Applications

[3 credit hours]

Introduction to Fuzzy Rule Based Intelligent Systems. Basic concepts of Fuzzy logic, Fuzzy Sets, Fuzzy Arithmetic, Fuzzy Relations, Fuzzy Graphs, Approximate Reasoning and Fuzzy Implication. Applications in Real World Domains.

Term Offered: Spring, Fall

EECS 5130 Digital Design

[4 credit hours]

The design of digital systems, design methodologies, hardware description language such as VHDL, behavioral-, dataflow- and structural-level description of digital systems. Implementation technologies including PLDs and FPGAs.

Term Offered: Spring

EECS 5200 Feedback Control Systems

[3 credit hours]

Feedback methods for the control of dynamic systems. Topics include characteristics and performance of feedback systems, state variable analysis stability, root locus and frequency response methods and computer simulations.

Term Offered: Spring

EECS 5220 Programmable Logic Controllers

[3 credit hours]

Programmable Logic Controllers (PLCs), programming, sensors, process control algorithms, interfacing of sensors and other I/O devices, simulation and networking.

Term Offered: Spring, Fall

EECS 5240 Power Systems Operation

[3 credit hours]

Single Line Diagrams & Per Unit calculations, Network Matrices & Ybus for systems with uncoupled lines, Load Flow Techniques, Large system Loss Formula using Zbus, Real and Reactive Power Dispatch programming, Power systems relays & protection schemes.

Term Offered: Spring, Fall

EECS 5260 Control Systems Design

[3 credit hours]

A general study of computer-aided design of control systems. Topics include: stability, compensation, pole placement, nonlinear systems and digital systems.

Term Offered: Fall

EECS 5330 Image Analysis And Computer Vision

[3 credit hours]

Imaging geometry, image filtering, segmentation techniques, image representation and description, stereovision and depth measurements, texture analysis, dynamic vision and motion analysis, matching and recognition.

Term Offered: Fall**EECS 5360 Communication Systems**

[3 credit hours]

Fourier transform applications in signal analysis and communication. Signals spectra, filtering, AM and FM modulation, noise and optimum receiver, sampling theorem, multiplexing, PCM, introduction to digital modulators and demodulators.

Prerequisites: EECS 3300 with a minimum grade of D-**Term Offered:** Spring**EECS 5370 Information Theory And Coding**

[3 credit hours]

Coding concepts, Huffman code, Entropy analysis, Channel and mutual information, Channel capacity and Shannon's theorems, Algebraic coding theory and application to block code and cyclic code, Introduction to convolutional code.

Term Offered: Spring, Fall**EECS 5380 Digital Signal Processing**

[3 credit hours]

Discrete Fourier Transform (DFT), Discrete convolution and correlation, Fast Fourier Transform (FFT) and its applications. Design of IIR and FIR digital filters, Multi-rate/channel digital systems, Decimation and Interpolation.

Term Offered: Spring**EECS 5390 Wireless And Mobile Networks**

[3 credit hours]

Mobile radio propagation; traffic engineering; cellular concept; multiple radio access; multiple division techniques; channel allocation; mobile communication systems; existing wireless systems; network protocols; Ad Hoc and sensor networks; wireless LANS and PANS; recent advances.

Term Offered: Spring, Fall**EECS 5410 Electro-Optics**

[3 credit hours]

Laser physics, optics, optical waveguides, optical communication systems and electro-optics. Design of light processing and communication systems will be considered with emphasis on optics and optical communication.

Term Offered: Spring, Fall**EECS 5460 Power Systems Management**

[3 credit hours]

An advanced study of the management and operation of today's power system. Included are historical developments, utility and operational costs and economics, power generation alternatives, fuel alternatives, renewable applications, transmission and distribution practices, and a discussion of current power system issues, both in the U.S. and abroad.

Prerequisites: EECS 3220 with a minimum grade of D-**Term Offered:** Spring**EECS 5470 Electronic Design**

[3 credit hours]

Principles and techniques of analog active circuit design. Selected design problems are given; working circuits using standard parts are designed and laboratory tested. A design notebook is kept.

Term Offered: Spring**EECS 5480 Power Electronics 1**

[3 credit hours]

Basic electronic power switching circuits. Half-wave and full-wave rectification. Characteristics of power semiconductors. Phase-controlled rectifiers and inverters. Isolated and non-isolated dc-dc converters.

Term Offered: Fall**EECS 5500 Programming for the World Wide Web**

[3 credit hours]

Fundamental concepts and programming languages for constructing contemporary websites. Differences and similarities between procedural, object-oriented, and scripting languages. Topics include HTML, Javascript, CSS, XML, Ajax, PHP, ASPnet, Three.js, and related technologies, as well as their impact on the programming process.

Term Offered: Spring**EECS 5520 Advanced Systems Programming**

[4 credit hours]

This course examines pertinent concepts of systems programming. Topics covered include: synchronization, distributed programming models, kernel design, peripheral handling, file systems and security history and methods.

Term Offered: Spring**EECS 5530 Computer Graphics I**

[4 credit hours]

An introduction to typical computer graphics systems and their operation. Interactive techniques will be introduced as well as representations and projections of three-dimensional images. Exercises using graphics equipment are assigned.

Term Offered: Fall**EECS 5540 Computer Graphics II**

[4 credit hours]

Examines current topics related to realistic and representative 3D computer graphics. Topics include curve and surface geometry, solid modeling, raytracing, radiosity and real-time computer graphics.

EECS 5560 Database Systems I

[3 credit hours]

The following topics are covered: relational database modeling, query languages, design issues and implementation issues of databases. An appropriate database language is introduced and used to demonstrate principles.

Term Offered: Spring, Fall**EECS 5590 Human Computer Interface Design**

[3 credit hours]

This course presents the fundamental theory and practice of design, implementation and evaluation of human-computer interfaces.

Term Offered: Spring

EECS 5600 Solid State Devices

[3 credit hours]

Theory and operation of physical electronic devices. Electrical transport in metals, semiconductors and models of BJT's and FET's. Optoelectronic devices and integrated circuits. Laboratory includes hands-on experimentation with basic semiconductor fabrication processes.

Term Offered: Spring

EECS 5610 Digital Vlsi Design I: Basic Subsystems

[4 credit hours]

CMOS process technologies. CMOS logic families. Custom and semicustom design. Subsystem design; adders, counters, multipliers. System design methods. VLSI design tools.

Prerequisites: EECS 3400 with a minimum grade of D-

EECS 5640 Inside Cryptography

[3 credit hours]

Examines the inner workings of several cryptographic algorithms, including the discrete math behind them. Introduces operations in a Galois Field, and covers some Prime Number Theory. Symmetric algorithms include Feistel (DES) and non-Feistel (AES) designs; Asymmetric algorithms include Merkle-Hellman and RSA. Block and stream modes are explored, as are cryptographic hash functions, and ECB and Chained modes of encryption.

Prerequisites: EECS 2520 with a minimum grade of D- and EECS 3100 with a minimum grade of D-

Term Offered: Spring

EECS 5720 Fundamentals of Cyber Security

[3 credit hours]

Introduces to cyber security, its interdisciplinarity, relation to nation, businesses, society, and people. Discusses cyber security terminologies, technologies, protocols, threat analysis, security principles, security mechanisms, policies, forensics, incidence response and methods/practices to secure systems. Additional real-world security problems are discussed using hands-on experiments.

Prerequisites: EECS 2110 with a minimum grade of D-

Term Offered: Fall

EECS 5740 Artificial Intelligence

[3 credit hours]

This course explores the topic of intelligent software agents with a emphasis on hands-on design of adaptive problem-solving agents for environments of increasing complexity ranging from single-agent computer games to complex real-world multi-agent environments.

Term Offered: Spring

EECS 5750 Machine Learning

[3 credit hours]

This course emphasizes learning algorithms and theory including concept, decision tree, neural network, computational, Bayesian, evolutionary, and reinforcement learning.

Prerequisites: (MIME 4000 with a minimum grade of D- and MATH 2890 with a minimum grade of D- and EECS 2110 with a minimum grade of D-)

Term Offered: Spring, Fall

EECS 5760 Computer Security

[3 credit hours]

Survey of computer security concepts: ethics and responsibility, OS vulnerabilities and intrusion detection, viruses and worms, defensive strategies including secret/public key cryptosystems, firewalls and decoys.

Prerequisites: EECS 2110 with a minimum grade of C- and EECS 3540 with a minimum grade of C-

Term Offered: Fall

EECS 5770 Computer Hacking and Forensic Analysis

[3 credit hours]

This course is an introduction to discovering vulnerabilities, attacking/defending systems, responding to attacks, and identifying/designing controls for attack prevention. Topics include the evolution of hacking, penetration testing; cryptology; footprinting; vulnerability scanning and exploit; wireless, web, and database attacks; traffic analysis; incident response; and defensive technologies and controls.

Prerequisites: (EECS 2110 with a minimum grade of C- and EECS 4720 with a minimum grade of C-) or (EECS 5720 with a minimum grade of C)

Term Offered: Spring

EECS 5790 Network Security

[4 credit hours]

Theory and practice of network security. Topics include firewalls, Windows, UNIX and TCP/IP network security. Security auditing, attacks, viruses, intrusion detection and threat analysis will also be covered.

Prerequisites: EECS 4720 with a minimum grade of D- or EECS 5720 with a minimum grade of C

Term Offered: Spring

EECS 5920 Projects

[1-6 credit hours]

Independent research project with intensive investigation into an area of practical interest to the student and the instructor. Students will make progress in a project of an advanced nature in Electrical Engineering/Computer Science and Engineering. The project will culminate in a submission of a written report. Course may be repeated.

Term Offered: Spring, Summer, Fall

EECS 5930 Electrical Engineering & Computer Science Seminar

[1 credit hour]

Seminar talk series by invited speakers from academia, industry, research corporations, private or federal research labs, and funding agencies. 1 cr. hr. seminar.

Term Offered: Spring, Fall

EECS 5980 Special Topics in EECS

[1-4 credit hours]

Pilot offerings of new courses involving emerging topics of interest are introduced using this number. One credit per lecture hour or 2.5 lab hours per week.

Term Offered: Spring, Fall

EECS 6110 Advanced Computer Architecture

[3 credit hours]

Architectural development in computer systems and scalability. Processors and arithmetic algorithms. Memory hierarchy, shared memory and cache architecture. Pipeline, superscaler and vector organization.

Term Offered: Fall

EECS 6120 Computer Systems Performance And Reliability

[4 credit hours]

Relative importance of performance and reliability. Fault-tolerance in computer systems. Techniques for reliability modeling and analysis. Markov and semi-Markov models. Queuing network models of computer systems. Performability modeling and analysis.

Prerequisites: (EECS 2100 with a minimum grade of D- and MIME 4000 with a minimum grade of D-)

EECS 6180 Biologically Inspired Computing

[3 credit hours]

Introduction to Computational Techniques inspired from Biology for Self Learning Adaptive Systems. Evolutionary Computations, Binary and Real coded Genetic Algorithms. Neural Networks, Swarm Intelligence, DNA Computing and Artificial Immune Systems. Hybrid systems such as Evolutionary Fuzzy Systems and Evolutionary Neural Systems, Swarm Neural Systems. Emerging Topics in Computing inspired by nature.

Term Offered: Spring, Fall

EECS 6190 Renewable Energy and Smart Grid

[3 credit hours]

Electric power systems nowadays are undergoing significant changes worldwide in order to become cleaner, smarter, and more reliable. This course examines a broad spectrum of topics relevant to these changes.

Term Offered: Fall

EECS 6220 Nonlinear Control Systems

[3 credit hours]

The multiple input describing function. Random signals in nonlinear systems. The phase plane, equilibrium points, limit cycles and linearization methods. Lyapunov stability theorems. Optimum switching systems. Selected applications.

Term Offered: Spring

EECS 6230 Optimal Control Theory

[3 credit hours]

Optimization of dynamic systems by the calculus of variations and Pontryagin's Maximum Principle. Solution of optimal control problems using direct and indirect computational methods. Applications include constrained state and/or control parameters.

Prerequisites: EECS 4200 with a minimum grade of D-

EECS 6250 Advanced Digital Signal Processing

[3 credit hours]

Documentation/interpolation filter design, wavelet transforms, spectral estimation, multirate, adaptive, radar and array signal processing techniques, beamforming, simulation of signal processing algorithms via MATLAB or equivalent.

Term Offered: Spring

EECS 6300 Random Signals And Optimal Filters

[3 credit hours]

Description and properties of random signals and their processing by optimal filters. Correlation and power spectra. GRP. Narrowband noise. Signal detection (matched filter) and estimation (Wiener and Kalman filters).

Term Offered: Fall

EECS 6320 Data Compression For Multimedia Communication

[3 credit hours]

Multimedia information representation, Huffman, run length and arithmetic coding, predictive, transform, pyramid coding; vector quantization and subband coding; wavelet-based coding, data packetization, error resilience coding, multimedia compression standards, JPEG, MPEG coding.

Term Offered: Spring

EECS 6340 Modern Communications Engineering I

[3 credit hours]

Introduction to detection and estimation and applications to the bandpass signals, Binary and M-ary digital modulation techniques, Error-control convolutional coding, Trellis Coded Modulation (TCM), Spread Spectrum (SS) communication techniques.

Term Offered: Fall

EECS 6350 Modern Communications Engineering II

[3 credit hours]

Digital transmission over Gaussian/non-Gaussian channels, Satellite systems (GEO and LEO) and multiple accesses, Cellular and satellite communication network, Mobile/wireless Personal communication services (PCS) and its networking.

Term Offered: Spring, Fall

EECS 6390 Modeling And Performance Evaluation Of Communication Networks

[3 credit hours]

Communication network model-based performance evaluation methodology. Principles of stochastic processes in communication networks. Modeling and analysis of LANs, MANs, and WANs. Single class networks and Jackson networks. Multimedia network analysis.

Term Offered: Spring, Fall

EECS 6410 Advanced Electromagnetic Components

[3 credit hours]

Maxwell's equations, transmission line theory, technology CAD, circuit modeling of magnetics, antenna design, electromagnetic interference (EMI), signal integrity.

Term Offered: Fall

EECS 6420 Computer-Aided Modeling and Design of Circuits

[3 credit hours]

Introduction to computer aided design, classification of CAD operations, modified nodal admittance matrix, frequency-domain analysis, time-domain analysis of nonlinear circuits, sensitivity analysis, high-frequency modeling and design.

Term Offered: Fall

EECS 6450 Advanced Power Electronics

[3 credit hours]

Dynamic analysis of DC-DC power conversion circuits. State space and converter transfer functions. Analytical semiconductor device modeling techniques. Sinusoidal pulse width modulation in inverter circuits. Isolated DC-DC converters.

Prerequisites: EECS 5480 with a minimum grade of D-

EECS 6550 Software Specification And Design

[3 credit hours]

This course covers the software development steps of specification, requirements analysis and design in depth. Computer-human interfaces are also discussed.

Term Offered: Spring, Fall

EECS 6570 Intelligent Systems

[3 credit hours]

Heuristic search, game playing, constraint satisfaction, knowledge representation and reasoning with first order logic, planning, probabilistic modeling and reasoning, and learning.

Term Offered: Fall

EECS 6580 Wireless Sensor Networks

[3 credit hours]

Single node and network architecture, design principles, medium access control, naming and addressing, synchronization, localization and positioning, topology control, routing protocols, data-centric networking, and information and data aggregation.

Term Offered: Spring

EECS 6610 Principles of CMOS Devices

[3 credit hours]

MOSFET Device Physics, CMOS Fabrication, Scaling Trends, Characterization, Technology CAD, Digital Analog and RF Applications, Advanced Device Concepts, Nanoelectronics.

Term Offered: Spring

EECS 6630 Digital and VLSI System Testing

[3 credit hours]

In depth study of testing techniques for digital and VLSI circuit including memory and logic, field programmable gate arrays, system on chips, and quantum dot cellular automata circuits.

Term Offered: Spring

EECS 6650 Hardware Oriented Security and Trust

[3 credit hours]

The course covers the following topics: Hardware Security Basics, Physical Unclonable Function (PUF), Metrics for Evaluating PUFs, Split Manufacturing, Hardware Trojans, Detection of Hardware Trojans, Built-In Self-Repair Hardware Circuits, Security of FPGAs, Machine Learning Attack Models, Testing of Digital/VLSI Circuits.

Term Offered: Spring

EECS 6660 Field Programmable Gate Arrays

[3 credit hours]

Introduction to FPGA's. Programming technology. Logic block architectures. Routing architectures. FPGA based VLSI design. Design tools.

Term Offered: Spring, Fall

EECS 6830 Power Semiconductor Device Engineering

[3 credit hours]

Semiconductor material physics, electrical transport physics, power switching, power amplification characteristics, power diodes, power MOSFETs, power MOS-bipolar devices, thyristors, and emerging devices.

Term Offered: Fall

EECS 6840 Compound Semiconductors and Devices

[3 credit hours]

This course will cover the fundamentals of various compound-semiconductor materials and devices, including materials and device physics, diodes, GaAs MESFETS, optoelectronic and photovoltaic devices and structures.

Term Offered: Fall

EECS 6860 RF Integrated Circuits

[3 credit hours]

Wireless principles, Passive RLC networks, Passive IC component characteristics, MOS Device Physics, Distributed Systems, Smith Chart and s-parameters, Bandwidth estimation, high frequency amplifier design, voltage references, noise, LNA design, mixers, feedback systems, RF power amplifiers, PLLs, Oscillators and Synthesizers, Phase Noise, Transceiver architectures.

Term Offered: Spring

EECS 6870 Advanced Analog Integrated Circuits

[3 credit hours]

Integrated Circuit Technology, Device Modeling, MOS Switches, Current Sinks and Sources, Bandgap References, Amplifiers, Operational Amplifiers, Comparators, Switched-Capacitor Circuits, Data Converters

Term Offered: Fall

EECS 6900 Independent Research

[1-6 credit hours]

Selected topics from current EE and CSE research with intensive investigation into recent literature in an area of mutual interest to the student and the instructor.

Term Offered: Spring, Summer, Fall

EECS 6910 EECS Graduate Seminar

[1 credit hour]

Students will attend seminars and prepare a report reflecting their learning, questions and the impact of the seminar series. Students will also present their thesis or project plan and initial research results.

Term Offered: Spring, Fall

EECS 6960 Master's Graduate Research And Thesis

[1-9 credit hours]

Graduate research towards the completion of a Master's degree. Students will make progress in a project of an advanced nature in Electrical Engineering/Computer Science and Engineering. The project will culminate in submission and a public defense a master's thesis. Course may be repeated.

Term Offered: Spring, Summer, Fall

EECS 6970 Graduate Engineering Internship

[1 credit hour]

Faculty advisor approved industry, government, or agency full-time internship to provide an experiential learning component to the Master's/ Doctoral degree program.

Prerequisites: GNEN 5000 with a minimum grade of S

Term Offered: Spring, Summer, Fall

EECS 6980 Special Topics In Electrical Engineering & Computer Science

[1-5 credit hours]

Selected topics in the field of Electrical Engineering and Computer Science in areas of special interest to the class and the professor.

Term Offered: Spring, Summer, Fall

EECS 6990 Independent Study

[1-3 credit hours]

In depth study of a selected topic of mutual interest to the student and the instructor.

Term Offered: Spring, Summer, Fall

EECS 7520 Advanced Systems Programming

[4 credit hours]

EECS 8110 Advanced Computer Architecture

[3 credit hours]

Architectural development in computer systems and scalability. Processors and arithmetic algorithms. Memory hierarchy, shared memory and cache architecture. Pipeline, superscaler and vector organization.

Term Offered: Fall**EECS 8120 Computer Systems Performance And Reliability**

[4 credit hours]

Relative importance of performance and reliability. Fault-tolerance in computer systems. Techniques for reliability modeling and analysis. Markov and semi-Markov models. Queuing network models of computer systems. Performance modeling and analysis.

Prerequisites: (EECS 2100 with a minimum grade of D- and MIME 4000 with a minimum grade of D-)

EECS 8180 Biologically Inspired Computing

[3 credit hours]

Introduction to Computational Techniques inspired from Biology for Self Learning Adaptive Systems. Evolutionary Computations, Binary and Real coded Genetic Algorithms. Neural Networks, Swarm Intelligence, DNA Computing and Artificial Immune Systems. Hybrid systems such as Evolutionary Fuzzy Systems and Evolutionary Neural Systems, Swarm Neural Systems. Emerging Topics in Computing inspired by nature.

Term Offered: Spring, Fall**EECS 8190 Renewable Energy and Smart Grid**

[3 credit hours]

Electric power systems nowadays are undergoing significant changes worldwide in order to become cleaner, smarter, and more reliable. This course examines a broad spectrum of topics relevant to these changes.

Term Offered: Fall**EECS 8220 Nonlinear Control Systems**

[3 credit hours]

The multiple input describing function. Random signals in nonlinear systems. The phase plane, equilibrium points, limit cycles and linearization methods. Lyapunov stability theorems. Optimum switching systems. Selected applications.

Term Offered: Spring**EECS 8230 Optimal Control Theory**

[3 credit hours]

Optimization of dynamic systems by the calculus of variations and Pontryagin's Maximum Principle. Solution of optimal control problems using direct and indirect computational methods. Applications include constrained state and/or control parameters.

Prerequisites: EECS 4200 with a minimum grade of D-

EECS 8250 Advanced Digital Signal Processing

[3 credit hours]

Documentation/interpolation filter design, wavelet transforms, spectral estimation, multirate, adaptive, radar and array signal processing techniques, beamforming, simulation of signal processing algorithms via MATLAB or equivalent.

Term Offered: Spring**EECS 8300 Random Signals And Optimal Filters**

[3 credit hours]

Description and properties of random signals and their processing by optimal filters. Correlation and power spectra. GRP Narrowband noise. Signal detection (matched filter) and estimation (Wiener and Kalman filters).

Term Offered: Fall**EECS 8320 Data Compression For Multimedia Communication**

[3 credit hours]

Multimedia information representation, Huffman, run length and arithmetic coding, predictive, transform, pyramid coding; vector quantization and subband coding; wavelet-based coding, data packetization, error resilience coding, multimedia compression standards, JPEG, MPEG coding.

Term Offered: Spring**EECS 8340 Modern Communications Engineering I**

[3 credit hours]

Introduction to detection and estimation and applications to the bandpass signals, Binary and M-ary digital modulation techniques, Error-control convolutional coding, Trellis Coded Modulation (TCM), Spread Spectrum (SS) communication techniques.

Term Offered: Fall**EECS 8350 Modern Communications Engineering II**

[3 credit hours]

Digital transmission over Gaussian/non-Gaussian channels, Satellite systems (GEO and LEO) and multiple accesses, Cellular and satellite communication network, Mobile/wireless Personal communication services (PCS) and its networking.

Term Offered: Spring, Fall**EECS 8390 Modeling And Performance Evaluation Of Communication Networks**

[3 credit hours]

Communication network model-based performance evaluation methodology. Principles of stochastic processes in communication networks. Modeling and analysis of LANs, MANs, and WANs. Single class networks and Jackson networks. Multimedia network analysis.

Term Offered: Spring, Fall**EECS 8410 Advanced Electromagnetic Components**

[3 credit hours]

Maxwell's equations, transmission line theory, technology CAD, circuit modeling of magnetics, antenna design, electromagnetic interference (EMI), signal integrity.

Term Offered: Fall**EECS 8420 Computer-Aided Modeling and Design of Circuits**

[3 credit hours]

Introduction to computer aided design, classification of CAD operations, modified nodal admittance matrix, frequency-domain analysis, time-domain analysis of nonlinear circuits, sensitivity analysis, high-frequency modeling and design.

Term Offered: Fall

EECS 8450 Advanced Power Electronics

[3 credit hours]

Dynamic analysis of DC-DC power conversion circuits. State space and converter transfer functions. Analytical semiconductor device modeling techniques. Sinusoidal pulse width modulation in inverter circuits. Isolated DC-DC converters.

Prerequisites: EECS 5480 with a minimum grade of D-

EECS 8550 Software Specification And Design

[3 credit hours]

This course covers the software development steps of specification, requirements analysis and design in depth. Computer-human interfaces are also discussed.

Term Offered: Spring, Fall

EECS 8570 Intelligent Systems

[3 credit hours]

Heuristic search, game playing, constraint satisfaction, knowledge representation and reasoning with first order logic, planning, probabilistic modeling and reasoning, and learning.

Term Offered: Fall

EECS 8580 Wireless Sensor Networks

[3 credit hours]

Single node and network architecture, design principles, medium access control, naming and addressing, synchronization, localization and positioning, topology control, routing protocols, data-centric networking, and information and data aggregation.

Term Offered: Spring

EECS 8610 Principles of CMOS Devices

[3 credit hours]

MOSFET Device Physics, CMOS Fabrication, Scaling Trends, Characterization, Technology CAD, Digital Analog and RF Applications, Advanced Device Concepts, Nanoelectronics.

Term Offered: Spring

EECS 8630 Digital and VLSI System Testing

[3 credit hours]

In depth study of testing techniques for digital and VLSI circuit including memory and logic, field programmable gate arrays, system on chips, and quantum dot cellular automata circuits

Term Offered: Spring

EECS 8660 Field Programmable Gate Arrays

[3 credit hours]

Introduction to FPGA's. Programming technology. Logic block architectures. Routing architectures. FPGA based VLSI design. Design tools.

Term Offered: Spring, Fall

EECS 8670 Hardware Oriented Security and Trust

[3 credit hours]

The course covers the following topics: Hardware Security Basics, Physical Unclonable Function (PUF), Metrics for Evaluating PUFs, Split Manufacturing, Hardware Trojans, Detection of Hardware Trojans, Built-In Self-Repair Hardware Circuits, Security of FPGAs, Machine Learning Attack Models, and Testing of Digital/VLSI Circuits.

Term Offered: Spring

EECS 8830 Power Semiconductor Device Engineering

[3 credit hours]

Semiconductor material physics, electrical transport physics, power switching, power amplification characteristics, power diodes, power MOSFETs, power MOS-bipolar devices, thyristors, and emerging devices.

Term Offered: Fall

EECS 8840 Compound Semiconductors and Devices

[3 credit hours]

This course will cover the fundamentals of various compound-semiconductor materials and devices, including materials and device physics, diodes, GaAs MESFETS, optoelectronic and photovoltaic devices and structures.

Term Offered: Spring, Fall

EECS 8860 RF Integrated Circuits

[3 credit hours]

Wireless principles, Passive RLC networks, Passive IC component characteristics, MOS Device Physics, Distributed Systems, Smith Chart and s-parameters, Bandwidth estimation, high frequency amplifier design, voltage references, noise, LNA design, mixers, feedback systems, RF power amplifiers, PLLs, Oscillators and Synthesizers, Phase Noise, Transceiver architectures.

Term Offered: Fall

EECS 8870 Advanced Analog Integrated Circuits

[3 credit hours]

Integrated Circuit Technology, Device Modeling, MOS Switches, Current Sinks and Sources, Bandgap References, Amplifiers, Operational Amplifiers, Comparators, Switched-Capacitor Circuits, Data Converters

Term Offered: Fall

EECS 8900 Independent Research

[1-6 credit hours]

Selected topics from current EE and CSE research with intensive investigation into recent literature in an area of mutual interest to the student and the instructor.

Term Offered: Spring, Summer, Fall

EECS 8910 EECS Graduate Seminar

[1 credit hour]

Students will attend seminars and prepare a report reflecting their learning, questions and the impact of the seminar series. Students will also present their thesis or project plan and initial research results.

Term Offered: Spring, Fall

EECS 8960 Dissertation

[1-9 credit hours]

Graduate research towards the completion of a Doctoral Degree. Course may be repeated.

Term Offered: Spring, Summer, Fall

EECS 8970 Graduate Engineering Internship

[1 credit hour]

Faculty advisor approved industry, government, or agency full-time internship to provide an experiential learning component to the Master's/ Doctoral degree program.

Prerequisites: GNEN 5000 with a minimum grade of U

Term Offered: Spring, Summer, Fall

EECS 8980 Current Topics In Electrical Engineering & Computer Science
[1-5 credit hours]

Current topics in the field of Electrical Engineering and Computer Science in areas of special interest to the class and the professor. Students will be expected to complete a written project based on a review of the research literature of the area covered in this course.

Term Offered: Spring, Summer, Fall

EECS 8990 Independent Study

[1-3 credit hours]

In depth study of a selected topic of mutual interest to the student and the instructor.

Term Offered: Spring, Summer, Fall

Department of Mechanical, Industrial, and Manufacturing Engineering

Mohammad Elahinia, chair

Mohamed Samir Hefzy, graduate programs director

Graduate students enrolled in the Department of Mechanical, Industrial and Manufacturing Engineering (M.I.M.E.) may pursue the following degree programs:

- Master of Science in Industrial Engineering
- Master of Science in Mechanical Engineering
- Doctor of Philosophy in Engineering

The fields of Mechanical Engineering are very diverse, offering opportunities in research, design, product development and manufacturing. Major areas of Mechanical Engineering include aerodynamics, fluid dynamics, solid mechanics, bio-engineering, material sciences, nanotechnology, dynamics, automotive engineering, production and process, machine design, vibrations and control systems, and reliability-based design and optimization. The department features state of the art studies using modern equipment and techniques.

Research Focus Areas

The current research of the department focuses on the following areas:

- **Numerical and Experimental Thermal Fluid Sciences:** The computational and experimental thermal fluid science research focus group encompasses broad research activities. These include research in such areas as alternative energy, computational fluid dynamics and heat transfer, tribology, flow stability and transition, vortex dynamics, drag reduction, small and medium engine turbines, microgravity flows, thermal systems simulation, biofluid flow dynamics, turbulent boundary layer characterization, experimental methods using hot wire/film anemometry, laser Doppler velocimetry, particle image velocimetry, and flow visualization techniques. **D.R. Hixon** (coordinator), A. Afjeh, O. Amili, G. Choueiri, S. Cioc, S. Huebner, C. Sheng, H. Sojoudi.
- **Mechanics, Materials, and Manufacturing:** The objectives of the mechanics, materials, and manufacturing focus group are to conduct research that will advance the engineering knowledge base and lead to new processes and products in the broad areas of materials, manufacturing, mechanical systems, dynamic systems and control, mechanical behavior of materials and mechanical

design. Specifically, the research thrust of this group includes but is not limited to the dynamic behavior and control of mechanisms, machines, mechanical systems, processes, structures and smart material systems, including MEMS, biomechanics, design methodology, fatigue and fracture mechanics, machine dynamics, noise and vibration analysis and control, solid modeling and vehicle dynamics. An essential aspect of this group is the blend of practical plant expertise with the benefits of computational technologies, including computer-aided design and manufacturing. Processes are understood from a "hands-on" perspective and expanded through defining theoretical models. Engineering materials are studied throughout their life cycle, from raw material acquisition, product creation and usage, remanufacturing, recycling and final material disposal. Key expertise within this group includes internationally recognized faculty in rapid prototyping, process engineering, grinding and abrasives engineering, facilities planning and modeling, and environmentally conscious manufacturing. **A. Qattawi** (coordinator), H. Ayan, L. Berhan, S. Bhaduri, M. Elahinia, N. Ene, M. Franchetti, A. Gupta, M. Haghsheenas, M.S. Hefzy, A.H. Jayatissa, A. Schroeder, B. Trease, H. Zhang.

Degrees Offered

MS in Industrial Engineering (p. 99)

MS in Mechanical Engineering (p. 100)

PhD in Engineering (Industrial Engineering) (p. 102)

PhD in Engineering (Mechanical Engineering) (p. 102)

Graduate Certificate in Manufacturing (p. 108)

Graduate Certificate in Mechatronics (p. 109)

COURSES

MIME 5060 Manufacturing Engineering

[3 credit hours]

The course provides an overview of advanced manufacturing processes, manufacturing management, nano- and bio-manufacturing processes and their applications.

Term Offered: Spring, Fall

MIME 5070 Computer-Aided Manufacturing

[3 credit hours]

The study of machining processes using numerical control machine tools and controllers. Development of programs to machine parts on mills and lathes. Conversion of CAD models to programs through software interfaces.

Term Offered: Fall

MIME 5080 Operations Research I

[3 credit hours]

This course focuses on the mathematical methods of Operations Research and their applications in engineering. Topics include the optimal solution of deterministic and stochastic mathematical models, modeling process, linear programming, the simplex method, duality theory and sensitivity analysis.

Term Offered: Spring, Fall

MIME 5100 Manufacturing Systems Simulation

[3 credit hours]

Discrete and continuous simulation models are used to study queuing networks, manufacturing and related engineering systems. Simulation languages and animation are covered. Statistical inference is used to draw conclusions and to identify the best system.

Term Offered: Spring, Fall

MIME 5230 Dynamics Of Human Movement

[3 credit hours]

The goal of this course is for students to be able to describe motions of the human body. Three-dimensional analysis and measurements of human body movements including kinematics, kinetics and energetics of human gait, anthropometry and application to bioengineering and orthopedics will be presented. Euler angles and the screw axis method will be used to describe three-dimensional motions.

Term Offered: Spring, Fall

MIME 5240 Experimental Methods in Orthopaedic Biomechanics

[3 credit hours]

Experimental techniques used in orthopedics and in the study of the musculoskeletal system including mechanical testing, experimental and analytical methods for stress analysis, strain gages, methods used in human motion analysis to include motion capture, force plates and EMG's. Course prerequisites: For undergraduate students: (BIOE 2200 or MIME 1650) and (BIOE 3110 or CIVE 1160) For graduate students: None
Prerequisites: (BIOE 2200 with a minimum grade of D- or MIME 1650 with a minimum grade of D-) and (BIOE 3110 with a minimum grade of D- or CIVE 1160 with a minimum grade of D-)

Term Offered: Spring, Fall

MIME 5280 Cad - Finite Element Methods

[3 credit hours]

Numerical solutions of boundary value problems, variational calculus and the principle of minimum potential energy, finite element formulation of two dimensional field and elasticity problems, axisymmetric elements, finite element programming.

Term Offered: Summer, Fall

MIME 5300 Advanced Mechanics Of Materials

[3 credit hours]

Theory of elasticity, plane stress and plane strain problems, yield criteria and failure theories, bending of beams, energy methods, curved flexural members, unsymmetric bending, torsion, shear center and axisymmetrically loaded members.

Term Offered: Fall

MIME 5310 Mechanics Of Composite Materials

[3 credit hours]

Review of elasticity of anisotropic solids, determination of mechanical properties of fiber-reinforced lamina, analysis and performance of laminated composites.

Term Offered: Spring

MIME 5320 Fatigue Of Materials & Structures

[3 credit hours]

Fatigue design methods; fatigue mechanisms; cyclic deformation behavior and material cyclic properties; stress-based and fracture mechanics-based methodologies to fatigue life prediction of smooth and notched members subjected to constant or variable amplitude loadings.

Term Offered: Spring

MIME 5350 Advanced Ceramics

[3 credit hours]

This course provides greater knowledge on the atomic bonding, crystal structure, crystal imperfections, phases and interfaces, microstructures, phase diagrams, phase transformation, transport and diffusion, metal deformation, fracture of materials, deterioration of materials, electronic and physical properties of ceramics.

Prerequisites: MIME 1650 with a minimum grade of C- and PHYS 2130 with a minimum grade of C-

Term Offered: Spring, Fall

MIME 5370 Advanced Materials for Automotive Structures

[3 credit hours]

An in#depth study of the broad range of engineering materials used in the construction of motor vehicles. Inter#relations between materials microstructure, components manufacturing process and components service behavior.

Prerequisites: (MIME 1650 with a minimum grade of C- and PHYS 2130 with a minimum grade of C-)

Term Offered: Spring, Fall

MIME 5380 Engineering Polymers and Rubbers

[3 credit hours]

Polymers and rubber are introduced through lecture and lab components at three levels- 1) synthesis and characterization, 2) thermal, molecular and mechanical properties, and 3) design considerations for engineering applications.

Prerequisites: (MIME 1650 with a minimum grade of C- and PHYS 2130 with a minimum grade of C-)

Term Offered: Spring, Fall

MIME 5390 Failure Analysis of Materials

[3 credit hours]

The failure analysis is a procedure to determine the physical cause of the failure of an element, component or industrial equipment. The course will be focused on material related and will present an introduction to the principles of failure analysis and the fundamental aspects to conduct a failure analysis investigation. A key component of the course is the discussion of real cases of failures (case studies), i.e. failures in mining machinery, chemical processing equipment, energy production, systems, aircraft and petrochemical industry components. This course provides the connection between mechanisms that are responsible for material failures and will address the characterization techniques used in failure analysis. Fundamental failure mechanisms in various materials applications including fracture of metals and alloys, failure in electronic devices, and environmental factor induced failures will be covered. Each categorized phenomenon will be approached by historical events to reveal the application and connection between the mechanism and the incidents.

Prerequisites: (MIME 1650 with a minimum grade of C- and PHYS 2130 with a minimum grade of C-)

Term Offered: Spring, Fall

MIME 5410 Alternative Energy

[3 credit hours]

This course focuses on the technical aspects of sustainable energy technologies, such as wind, solar, biomass, ocean, eaves/tides, geothermal, and hydropower; it also covers issues and applications related to storage, transportation, distribution, industrial usage, and buildings. The course investigates the progress, challenges, and opportunities of each technology to be both technically feasible and economically viable.

Term Offered: Spring, Fall**MIME 5420 Modeling and Control of Engineering Systems**

[3 credit hours]

In this course students study physical modeling and feedback principles for control of mechanical and electrical systems. Transient response, root locus and frequency response principles are applied to the control of basic mechanical and electrical systems. PID control laws are emphasized.

Term Offered: Spring, Fall**MIME 5430 Advanced Automotive Control Systems**

[3 credit hours]

This course covers the major aspects of automotive control, including engine, driveline, and complete vehicle control. This includes applications such as fuel and ignition control, ABS systems, gear-shifting, and vehicle velocity estimation.

Term Offered: Spring, Summer, Fall**MIME 5440 Advanced Mechatronics**

[3 credit hours]

This course will give students hands-on experience with mechatronic systems and components. The mechatronics lab (NE-1063) will be used to demonstrate several mechatronics systems including inverted pendulums, suites of sensors and motors, and other more complex systems. A major part of the course will be a semester-long project where the students conceive, design, and build a mechatronic device. The components for this device, namely a Raspberry Pi and a variety of sensors and actuators, will be directly funded by the course fee.

Term Offered: Spring, Fall**MIME 5450 Advanced Automation Design**

[3 credit hours]

This course will introduce the range of common components used in automation, including actuators, sensors, motors, linear guides, energy chain, industrial robots and light curtains. Students will practice (with feedback) walking through the design process in specifying, sizing, laying out and integrating these components. The course will use some elements of CAD, where CAD experience would be helpful, but this would also be a good opportunity to quickly build competence with CAD.

Term Offered: Spring, Fall**MIME 5460 Advanced MATLAB for Engineers**

[3 credit hours]

MATLAB is a useful 'tool' for each engineer to have in their 'toolkit'. This course will review the basics of using MATLAB, identify best-practices (applicable to other programming languages as well), and then move on to examples of more-advanced functionality, e.g. image processing, Simulink control of mechatronic systems, numerically solving differential equations, GPU computation, and optimization. Programming experience would be helpful, but this would also be a good opportunity to rapidly grow programming skills with an easy-to-learn language. A major component of the course is a semester-long project where the student can choose a topic that is most relevant to their research or professional interests, or simply a new area that they're curious about, e.g. mechatronics and programming embedded systems.

Term Offered: Spring, Summer, Fall**MIME 5510 Turbomachinery**

[3 credit hours]

Theory of energy transfer between fluid and rotor in turbomachines. Design of turbomachine components, axial flow compressors and fans, centrifugal compressors and pumps, axial flow turbines. Design theory and principles, performance analysis, and computational methods

Term Offered: Spring, Summer, Fall**MIME 5520 Heating, Ventilating & Air Conditioning**

[3 credit hours]

Control of the thermal environment within enclosed spaces including psychrometric properties of air heating and cooling, loads and factors affecting human comfort. Analysis of basic heating and refrigeration systems, heat pumps, heaters, utilization of solar energy, humidifiers, energy conservation and controls for systems.

Term Offered: Fall**MIME 5530 Internal Combustion Engines**

[3 credit hours]

Study of Otto, Diesel, and Miller Cycles, performance characteristics, and construction details of internal combustion engines. Analysis of problems associated with air flow, fuel injection, combustion, cooling, supercharging, friction, lubrication, emissions, testing, and control.

Term Offered: Spring**MIME 5540 Jet Propulsion**

[3 credit hours]

Aerothermodynamic analysis of jet propulsion systems and components: diffuser, compressor, combustor, turbine and nozzle. Investigation of characteristics of ramjets, turbojets, turbofans and turboprops. Design theory and principles, performance analysis, and computational methods

Term Offered: Summer, Fall**MIME 5550 Aerodynamics**

[3 credit hours]

Fundamentals of aerodynamics, potential flow theory, aerodynamic forces and moments, introduction to numerical analysis, application to external and internal flows, theory of lift for infinite and finite wings, induced drag.

Term Offered: Spring, Fall

MIME 5560 Gas Dynamics

[3 credit hours]

Analysis of compressible flow phenomena including shock and detonation waves. Topics include wave propagation, isentropic flow, normal shock waves, oblique shock waves, Prandtl-Meyer flow, and analysis and application to supersonic airfoil theory, inlet, and nozzle.

Term Offered: Spring

MIME 5690 Reliability

[3 credit hours]

Reliability of components and multicomponent systems. Static and dynamic reliability models for both independent and dependent failures. Effects of redundancy. Reliability testing consideration.

Term Offered: Spring, Fall

MIME 5800 Design For Manufacturability

[3 credit hours]

The course is an introduction to modern manufacturing methodologies used in the fabrication and analysis of new and existing product designs with three areas of emphasis: manufacturing processes, materials, and product development. The course exposes the students to the product development methods and the relationship of design to production processes, product material, material handling, quality costs, and CAD/CAM are presented. Emphasis is primarily on assembled products. Cost estimation software and other design analysis tools are employed. Lean manufacturing and Six Sigma concepts in the design context are also introduced.

Prerequisites: MIME 2650 with a minimum grade of D-

Term Offered: Spring, Fall

MIME 5820 Sustainability Analysis and Design

[3 credit hours]

The course is intended to introduce students to sustainability analysis and design in manufacturing and service settings as related to mechanical and industrial engineering. It will cover solid waste minimization for manufacturers, life cycle analysis, and environmentally conscious design.

Term Offered: Spring, Fall

MIME 5830 Additive Manufacturing

[3 credit hours]

Additive manufacturing (AM) is a method of manufacturing that has been growing rapidly. In this course the students will learn about various AM technologies. They will also work with the required design software packages to create 3D models and 3D-print objects from the designed models.

Prerequisites: MIME 2650 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Fall

MIME 5980 Special Topics

[1-6 credit hours]

A special topic at the graduate level in Mechanical, Industrial or Manufacturing Engineering to be offered as a course during a term by a faculty member.

Term Offered: Spring, Summer, Fall

MIME 6000 Advanced Engineering Mathematics I

[3 credit hours]

An advanced course in mathematical analysis for engineers. Topics include matrix methods, eigenvalues and eigenvectors, systems of equations, series representations including FFT, ordinary differential equations and Bessel functions. This course will make use of computer-aided-mathematics techniques and include engineering applications.

Term Offered: Fall

MIME 6100 Advanced Engineering Mathematics II

[3 credit hours]

Partial differential equations for engineering applications including elliptic, parabolic, hyperbolic differential and non-linear systems of equations. Solution procedures include separation of variables, Laplace transform methods, solutions using complex analysis including conformal mapping and numerical methods.

Prerequisites: MIME 6000 with a minimum grade of D-

Term Offered: Spring

MIME 6200 Advanced Dynamics

[3 credit hours]

Study of dynamics of a system of particles and rigid bodies using Newtonian and Lagrangian Mechanics including multi-body systems. Principles of nonlinear system dynamics and stability.

Term Offered: Spring

MIME 6210 Advanced Mechanical Vibrations

[3 credit hours]

Advanced concepts in normal mode theory for discrete systems and vibration of continuous systems such as bars, beams and plates.

Term Offered: Spring

MIME 6300 Continuum Mechanics

[3 credit hours]

A unified approach to the study of the mechanics of continuous media; analysis of tensors; kinematics of material media; analysis of deformation and stress; the mathematical statement of the laws of conservation of mass, momentum and energy; formulation of the mechanical constitutive equations for various classes of solids and fluids.

Term Offered: Spring, Fall

MIME 6350 Elasticity

[3 credit hours]

Review of tensor analysis, analysis of stress and strain, three dimensional equations of elasticity, plane problems in rectangular Cartesian and polar coordinates.

Term Offered: Fall

MIME 6360 Plasticity

[3 credit hours]

Review of elastic stress-strain relations, analysis of strain rate and concept of stress rate, criteria of yielding and rules of plastic flow, elastoplastic bending and torsion, theory of slip line fields, mechanics of metal forming processes.

Term Offered: Spring

MIME 6380 Fracture Mechanics

[3 credit hours]

Principles of fracture mechanics and its applications to the prevention of fractures in components and structures, linear elastic and elastic-plastic fracture mechanics, fracture mechanisms, fracture toughness, applications to fatigue crack propagation.

Term Offered: Fall**MIME 6440 Computational Fluid Dynamics I**

[3 credit hours]

Properties of various partial differential equations. Basics of finite difference methods. Governing equations of fluid mechanics and heat transfer. Numerical solution of inviscid flow equations. Methods for solving Euler equations. Treatment of shock waves. Applications to simple compressible flows. Numerical methods for boundary-layer type equations.

Term Offered: Fall**MIME 6450 Experimental Fluid Mechanics**

[3 credit hours]

Digital data acquisition and analysis; limitations and interpretation of physical measurements; sources of errors and difficulties in experimental technique; advanced experimental methods for static and dynamic measurements in thermal systems and fluid flow.

Term Offered: Spring**MIME 6460 Intermediate Fluid Mechanics and Heat Transfer**

[3 credit hours]

Development of the Navier-Stokes and the convective equations. Analysis of boundary-layer flows including similarity solutions, potential flows as well as convective heat transfer topics. This course is intended to provide a solid theoretical foundation in fluid mechanics and convective heat transfer for graduate students, preparing them for more specialized courses in Heat Transfer and Fluid Mechanics.

Term Offered: Fall**MIME 6470 Advanced Computational Fluid Dynamics**

[3 credit hours]

This course presents numerical methods to solve hyperbolic equations for compressible fluids. The eigensystem and characteristics of the system of equations representing one-dimensional Euler flows are detailed in terms of conservative and primitive variables. The focus of this course is to introduce concepts of finite-volume upwinding schemes and numerical flux formulations. Numerical solution methods using both explicit and implicit schemes will be introduced in the class and be selectively exercised in the CFD coding project.

Prerequisites: MIME 3430 with a minimum grade of D- and MIME 3400 with a minimum grade of D-

Term Offered: Spring, Fall**MIME 6540 Computational Fluid Dynamics II**

[3 credit hours]

Finite difference procedures applied to the solution of reduced forms of the Navier-Stokes equations. Numerical solution of compressible and incompressible forms of the Navier-Stokes equations for laminar and turbulent flows. Fundamental turbulence models. Solution enhancement methods including multi-grid schemes and the use of preconditioning. Grid generation procedures using algebraic and differential equation methods. Structured versus unstructured grid methods. Grid adaptation procedures. Computer program applications.

Prerequisites: MIME 6440 with a minimum grade of D-

Term Offered: Spring**MIME 6570 Advanced Fluid Mechanics**

[3 credit hours]

Review of general governing equations, stability of laminar flows, transition to turbulence, incompressible turbulent flows, compressible boundary layer flow, and a selected topic chosen with the class.

Prerequisites: MIME 6460 with a minimum grade of D-

Term Offered: Spring**MIME 6580 Advanced Heat Transfer**

[3 credit hours]

Analytical and numerical methods for steady and transient heat conduction, convective heat transfer in boundary layers, models for external and internal forced flows, free flows, influence of turbulence, and phase change.

Prerequisites: MIME 6460 with a minimum grade of D-

Term Offered: Spring**MIME 6590 Advanced Gas Dynamics**

[3 credit hours]

One-dimensional steady flows of perfect gases: fundamental laws and basic equations for subsonic, transonic, and supersonic processes. Multidimensional flows: exact solutions; linearized flows; characteristics; supersonic nozzle design. Unsteady one-dimensional flows with discontinuities. Measurements in compressible flows. A selected topics in viscous, heat conducting compressible flows and boundary layers.

Prerequisites: MIME 4560 with a minimum grade of D-

Term Offered: Spring**MIME 6650 Advanced Material Science and Engineering**

[3 credit hours]

The course provides an overview of structure, properties, design considerations, processing and engineering application of engineering materials. Hard and Soft materials are introduced through lecture and demonstrations at three levels- 1) synthesis and characterization, 2) thermal, molecular and mechanical properties, and 3) design considerations for engineering applications.

Term Offered: Fall**MIME 6720 Design of Experiments**

[3 credit hours]

Design and analysis of experiments including analysis of variance and regression analysis. Factorial, blocked and nested models are considered together with appropriate estimation and post ANOVA tests.

Term Offered: Fall

MIME 6800 Advanced Manufacturing Systems Engineering

[3 credit hours]

The course is an advanced-level course focusing on advanced studies of traditional manufacturing processes and advanced manufacturing systems with emphasis on manufacturing engineering processes and equipment, machine tools, process planning, design and operation of manufacturing systems.

Term Offered: Spring, Fall

MIME 6810 Assembly And Joining Processes

[3 credit hours]

This course is comprised of two parts: joining processes and assembly systems. Commonly used joining methods, such as welding, mechanical fastening and adhesion are discussed. General principles of assembly are presented with extensive use of automobile assembly as an example.

Term Offered: Spring

MIME 6900 Independent Research

[1-16 credit hours]

Research credit hours toward the Master of Science degree in Mechanical, Industrial and Manufacturing Engineering Department. Students are to use the section number of their thesis/dissertation adviser.

Term Offered: Spring, Summer, Fall

MIME 6910 Engineering Analysis of Smart Material Systems

[3 credit hours]

In this course the students will study the fundamental concepts behind different types of active materials. The course emphasizes current research topics and engineering applications of active materials.

MIME 6920 Special Projects

[1-6 credit hours]

A special project by the student to investigate or solve an acceptable problem in industrial or mechanical engineering. This course is primarily intended for graduate students interested in mechanical, industrial or manufacturing engineering.

Term Offered: Spring, Summer, Fall

MIME 6930 Graduate Seminar

[0 credit hours]

This is a seminar for graduate students in Mechanical, Industrial and Manufacturing Engineering. Topics include orientation to the graduate program and special topics by speakers from industry and other universities. Credit does not apply toward a graduate degree.

Term Offered: Spring, Fall

MIME 6960 Graduate Research and Thesis

[1-9 credit hours]

Masters thesis research.

Term Offered: Spring, Summer, Fall

MIME 6970 Graduate Engineering Internship

[1 credit hour]

Faculty advisor approved industry, government, or agency internship to provide an experiential learning component to the Master's/Doctoral degree program.

Prerequisites: GNEN 5000 with a minimum grade of S

Term Offered: Spring, Summer, Fall

MIME 6980 Special Topics

[1-6 credit hours]

A special topic at the graduate level in Mechanical, Industrial or Manufacturing Engineering to be offered as a course during a term by a faculty member.

Term Offered: Spring, Summer, Fall

MIME 6990 Independent Study

[1-6 credit hours]

An independent study by the student to investigate or solve an acceptable problem in industrial or mechanical engineering. This course is primarily intended for graduate students in mechanical, industrial or manufacturing engineering.

Term Offered: Fall

MIME 7550 Aerodynamics

[3 credit hours]

MIME 7690 Reliability

[3 credit hours]

MIME 8000 Advanced Engineering Mathematics I

[3 credit hours]

An advanced course in mathematical analysis for engineers. Topics include matrix methods, eigenvalues and eigenvectors, systems of equations, series representations including FFT, ordinary differential equations and Bessel functions. This course will make use of computer-aided-mathematics techniques and include engineering applications.

Term Offered: Fall

MIME 8100 Advanced Engineering Mathematics II

[3 credit hours]

Partial differential equations for engineering applications including elliptic, parabolic, hyperbolic differential and non-linear systems of equations. Solution procedures include separation of variables, Laplace transform methods, solutions using complex analysis including conformal mapping and numerical methods.

Prerequisites: MIME 8000 with a minimum grade of D-

Term Offered: Spring

MIME 8120 Advanced Measurement Systems

[3 credit hours]

Sensor selection, data acquisition system selection, evaluation of system response, digital sampling theory, statistical data analysis, space-time correlations, spectral analysis, analog and digital signal conditioning, and static and dynamic measurements.

Term Offered: Fall

MIME 8200 Advanced Dynamics

[3 credit hours]

Study of dynamics of a system of particles and rigid bodies using Newtonian and Lagrangian Mechanics including multi-body systems. Principles of nonlinear system dynamics and stability.

Term Offered: Spring

MIME 8210 Advanced Mechanical Vibrations

[3 credit hours]

Advanced concepts in normal mode theory for discrete systems and vibration of continuous systems such as bars, beams and plates.

Term Offered: Spring

MIME 8300 Continuum Mechanics

[3 credit hours]

A unified approach to the study of the mechanics of continuous media; analysis of tensors; kinematics of material media; analysis of deformation and stress; the mathematical statement of the laws of conservation of mass, momentum and energy; formulation of the mechanical constitutive equations for various classes of solids and fluids.

Term Offered: Spring, Fall**MIME 8350 Elasticity**

[3 credit hours]

Review of tensor analysis, analysis of stress and strain, three dimensional equations of elasticity, plane problems in rectangular Cartesian and polar coordinates.

Term Offered: Fall**MIME 8360 Plasticity**

[3 credit hours]

Review of elastic stress-strain relations, analysis of strain rate and concept of stress rate, criteria of yielding and rules of plastic flow, elastoplastic bending and torsion, theory of slip line fields, mechanics of metal forming processes.

Term Offered: Spring**MIME 8380 Fracture Mechanics**

[3 credit hours]

Principles of fracture mechanics and its applications to the prevention of fractures in components and structures, linear elastic and elastic-plastic fracture mechanics, fracture mechanisms, fracture toughness, applications to fatigue crack propagation.

Term Offered: Fall**MIME 8440 Computational Fluid Dynamics I**

[3 credit hours]

Properties of various partial differential equations. Basics of finite difference methods. Governing equations of fluid mechanics and heat transfer. Numerical solution of inviscid flow equations. Methods for solving Euler equations. Treatment of shock waves. Applications to simple compressible flows. Numerical methods for boundary-layer type equations.

Term Offered: Fall**MIME 8450 Experimental Fluid Mechanics**

[3 credit hours]

Digital data acquisition and analysis; limitations and interpretation of physical measurements; sources of errors and difficulties in experimental technique; advanced experimental methods for static and dynamic measurements in thermal systems and fluid flow.

Term Offered: Spring**MIME 8460 Intermediate Fluid Mechanics and Heat Transfer**

[3 credit hours]

Development of the Navier-Stokes and the convective equations. Analysis of boundary-layer flows including similarity solutions, potential flows as well as convective heat transfer topics. This course is intended to provide a solid theoretical foundation in fluid mechanics and convective heat transfer for graduate students, preparing them for more specialized courses in Heat Transfer and Fluid Mechanics.

Term Offered: Fall**MIME 8470 Advanced Computational Fluid Dynamics**

[3 credit hours]

This course presents numerical methods to solve hyperbolic equations for compressible fluids. The eigensystem and characteristics of the system of equations representing one-dimensional Euler flows are detailed in terms of conservative and primitive variables. The focus of this course is to introduce concepts of finite-volume upwinding schemes and numerical flux formulations. Numerical solution methods using both explicit and implicit schemes will be introduced in the class and be selectively exercised in the CFD coding project.

Prerequisites: MIME 3430 with a minimum grade of D- and MIME 3400 with a minimum grade of D-

Term Offered: Spring, Fall**MIME 8540 Computational Fluid Dynamics II**

[3 credit hours]

Finite difference procedures applied to the solution of reduced forms of the Navier-Stokes equations. Numerical solution of compressible and incompressible forms of the Navier-Stokes equations for laminar and turbulent flows. Fundamental turbulence models. Solution enhancement methods including multi-grid schemes and the use of preconditioning. Grid generation procedures using algebraic and differential equation methods. Structured versus unstructured grid methods. Grid adaptation procedures. Computer program applications.

Prerequisites: MIME 8440 with a minimum grade of D-

Term Offered: Spring**MIME 8570 Advanced Fluid Mechanics**

[3 credit hours]

Review of general governing equations, stability of laminar flows, transition to turbulence, incompressible turbulent flows, compressible boundary layer flow, and a selected topic chosen with the class.

Prerequisites: MIME 8460 with a minimum grade of D-

Term Offered: Spring**MIME 8580 Advanced Heat Transfer**

[3 credit hours]

Analytical and numerical methods for steady and transient heat conduction, convective heat transfer in boundary layers, models for external and internal forced flows, free flows, influence of turbulence, and phase change.

Prerequisites: MIME 8460 with a minimum grade of D-

Term Offered: Spring**MIME 8590 Advanced Gas Dynamics**

[3 credit hours]

One-dimensional steady flows of perfect gases: fundamental laws and basic equations for subsonic, transonic, and supersonic processes. Multidimensional flows: exact solutions; linearized flows; characteristics; supersonic nozzle design. Unsteady one-dimensional flows with discontinuities. Measurements in compressible flows. A selected topics in viscous, heat conducting compressible flows and boundary layers.

Prerequisites: MIME 4560 with a minimum grade of D-

Term Offered: Spring

MIME 8650 Advanced Material Science and Engineering

[3 credit hours]

The course provides an overview of structure, properties, design considerations, processing and engineering application of engineering materials. Hard and Soft materials are introduced through lecture and demonstrations at three levels- 1) synthesis and characterization, 2) thermal, molecular and mechanical properties, and 3) design considerations for engineering applications.

Term Offered: Fall

MIME 8720 Design of Experiments

[3 credit hours]

Design and analysis of experiments including analysis of variance and regression analysis. Factorial, blocked and nested models are considered together with appropriate estimation and post ANOVA tests.

Term Offered: Fall

MIME 8800 Advanced Manufacturing Systems Engineering

[3 credit hours]

Advanced studies of traditional manufacturing processes and advanced manufacturing systems with emphasis on manufacturing engineering processes and equipment, machine tools, process planning, design and operation of manufacturing systems.

MIME 8810 Assembly And Joining Processes

[3 credit hours]

This course is comprised of two parts: joining processes and assembly systems. Commonly used joining methods, such as welding, mechanical fastening and adhesion are discussed. General principles of assembly are presented with extensive use of automobile assembly as an example.

Term Offered: Spring

MIME 8900 Independent Research

[1-16 credit hours]

Research credit hours toward the doctoral degree for students in the Mechanical, Industrial and Manufacturing Engineering Department. Students are to use the section number of their dissertation adviser.

Term Offered: Spring, Summer, Fall

MIME 8910 Engineering Analysis of Smart Material Systems

[3 credit hours]

In this course the students will study the fundamental concepts behind different types of active materials. The course emphasizes current research topics and engineering applications of active materials.

MIME 8920 Special Projects

[1-6 credit hours]

A special project by the student to investigate or solve an acceptable problem in industrial or mechanical engineering. This course is primarily intended for graduate students interested in mechanical, industrial or manufacturing engineering.

Term Offered: Spring, Summer, Fall

MIME 8930 Graduate Seminar

[0 credit hours]

This is a seminar for graduate students in Mechanical, Industrial and Manufacturing Engineering. Topics include orientation to the graduate program and special topics by speakers from industry and other universities. Credit does not apply toward a graduate degree.

Term Offered: Spring, Fall

MIME 8960 Dissertation

[1-9 credit hours]

Doctoral dissertation research credit hours for students in the Mechanical, Industrial and Manufacturing Engineering Department. Students are to use the section number of their dissertation adviser.

Term Offered: Spring, Summer, Fall

MIME 8970 Graduate Engineering Internship

[1 credit hour]

Faculty advisor approved industry, government, or agency internship to provide an experiential learning component to the Master's/Doctoral degree program.

Prerequisites: GNEN 5000 with a minimum grade of S

Term Offered: Spring, Summer, Fall

MIME 8980 Special Topics

[1-6 credit hours]

A special topic at the graduate level in Mechanical, Industrial or Manufacturing Engineering to be offered as a course during a term by a faculty member.

Term Offered: Spring, Summer, Fall

MIME 8990 Independent Study

[1-6 credit hours]

An independent study by the student to investigate or solve an acceptable problem in industrial or mechanical engineering. This course is primarily intended for graduate students in mechanical, industrial or manufacturing engineering.

Term Offered: Summer, Fall

College of Health and Human Services

2021-2022 Graduate Catalog

The UT College of Health and Human Services, an innovative college housed within a national public research university, prepares engaged professionals who improve the human condition in the region and the world. We deliver nationally recognized academic programs committed to discovery, teaching, professional practice and service that directly improve human lives.

Our programs enhance the human condition through the delivery of relevant learning, influential research, practical applications and meaningful community engagement. We are an educational resource to our community in population health, social justice, exercise & rehabilitation sciences and intervention and wellness. Our interprofessional collaborations, effective integration of theory and practice, and commitment to relevant societal issues and opportunities will provide you with a well-rounded education; one that is comprised of didactic and clinical experiences that are dedicated to helping and improving the quality of life of those we serve. Whether you are starting college for the first time, returning to complete a degree, transferring from another college or just checking us out, we want to serve you. Our goal is your success.

MISSION:

The UT College of Health and Human Services, an innovative college housed within a national public research university, prepares engaged professionals who improve the human condition in the region and the world.

Graduate Degrees/Certificates Offered

A list of degree programs offered in the College of Health and Human Services is provided below. Above each degree is the School that offers that degree program. Program descriptions are provided in the information under each school.

School of Population Health (p. 220)

Masters Degree Programs

Master of Public Health

- Environmental and Occupational Health (p. 137)
- Generalist (p. 139)
- Health Promotion and Education (p. 141)
- Public Health Epidemiology (p. 144)

Master of Science in Occupational Health (p. 146)

- Industrial Hygiene (p. 146)

Doctoral Degree Programs

- Doctor of Philosophy in Health Education (p. 148)

Dual Degree Program

- Doctor of Medicine and Master of Public Health¹

(Offered through the College of Health and Human Services and the College of Medicine and Life Sciences)

- Occupational Therapy Doctorate/PhD in Health Education (p. 149)

¹ Student must be accepted into the MD program first to be eligible for the dual degree.

Graduate Certificate Programs

- Certificate in Biostatistics and Epidemiology (p. 173)
- Certificate in Contemporary Gerontological Practice (p. 174)
- Certificate in Disaster Preparedness and Response (p. 175)
- Certificate in Epidemiology (p. 175)
- Certificate in Occupational Health (p. 175)
- Certificate in Public Health and Emergency Response (p. 176)

School of Exercise and Rehabilitation Sciences (p. 177)

Masters Degree Programs

Master of Science in Exercise Science (p. 193)

- Applied Biomechanics (p. 193)
- Exercise Physiology (p. 193)
- Athletic Training (Post-professional Program) (p. 193)

Master of ATHLETIC TRAINING (p. 191)

- Athletic Training (Pre-professional Program) (p. 191)

Master of Arts in Recreation and Leisure Studies (p. 150)

- Recreation Administration (p. 150)

Doctoral Degree Programs

- Doctor of Philosophy in Exercise Science (p. 152)
- Doctor of Physical Therapy (p. 153)
- Doctor of Physical Therapy/PhD Exercise Science (<http://utoledo-public.courseleaf.com/graduate/health-human-services/graduate-programs-schools/exercise-rehabilitation-sciences/doctor-physical-therapy-phd-exercise-science/#text>)

- Occupational Therapy Doctorate (p. 155)
- Occupational Therapy Doctorate/PhD Exercise Science (<http://utoledo-public.courseleaf.com/graduate/health-human-services/graduate-programs-schools/exercise-rehabilitation-sciences/occupational-therapy-doctorate-phd-exercise-science/>)

School of Intervention and Wellness (p. 195)

Masters Degree Programs

Master of Arts in Speech-Language Pathology (p. 158)

Master of Arts in Counselor Education (p. 160)

- School Counseling Program (p. 160)
- Clinical Mental Health Counseling (p. 160)

Master of Arts in School Psychology (p. 214)

Doctoral Degree Program

- Doctor of Philosophy in Counselor Education (p. 167)

Educational Specialist Degree Program

- Education Specialist in School Psychology (p. 169)

Graduate Certificate Programs

- Certificate in Advanced Intervention for Listening and Spoken Language (p. 173)

School of Social Justice (p. 241)

Masters Degree Programs

Master of Arts in Criminal Justice (p. 171)

Master of Arts in Criminal Justice and Juris Doctor (p. 171)

(Offered through the College of Health and Human Services and the College of Law)

Masters in Social Work (p. 172)

Master of Public Health: Environmental and Occupational Health

The school of population health offers a variety of degree options and graduate courses. In health, a master of public health is offered with five majors.

MPH Program

The MPH degree program is fully accredited by the Council on Education for Public Health (CEPH) and requires four semesters to complete as a full time student. Part time students take approximately eight semesters to complete the program.

The core competencies for the Master of Public Health are:

Evidence-based Approaches to Public Health

1. Apply epidemiological methods to the breadth of settings and situations in public health practice

2. Select quantitative and qualitative data collection methods appropriate for a given public health context
3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate
4. Interpret results of data analysis for public health research, policy or practice

Public Health & Health Care Systems

1. Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings
2. Discuss the means by which structural bias, social inequities and racism undermine health care and create challenges to achieving health equity at organizational, community, and societal level

Planning & Management to Promote Health

1. Assess population needs, assets and capacities that affect communities' health
2. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs
3. Design a population-based policy, program, project, or intervention
4. Explain basic principles and tools of budget and resource management
5. Select methods to evaluate public health programs

Policy in Public Health

1. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence
2. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes
3. Advocate for political, social or economic policies and programs that will improve health in diverse populations
4. Evaluate policies for their impact on public health and health equity

Leadership

1. Apply principles of leadership, governance and management, which include creating a vision, empowering others, fostering collaboration and guiding decision making
2. Apply negotiation and mediation skills to address organizational or community challenges

Communication

1. Select communication strategies for different audiences and sectors
2. Communicate audience-appropriate public health content, both in writing and through oral presentation
3. Describe the importance of cultural competence in communicating public health content

Interprofessional Practice

1. Perform effectively on interprofessional teams

Systems Thinking

1. Apply systems thinking tools to a public health issue

Environmental and Occupational Health (ENVH): Specialists in this field focus on a combination of scientific, technical, and regulatory aspects of public health related to the assessment and control of hazardous physical, chemical, and biological agents in non-occupational and occupational environments as well as in emergencies. The major focus is recognition, evaluation, and control of human exposures to contaminated air, water, soil, and food. Emergency and disaster planning, preparation, and recognition are also emphasized.

Environmental and Occupational Health (ENVH) major competencies:

1. Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems
2. Objectively and subjectively assess chemical, biological, and physical agents classified as hazardous to human health
3. Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents
4. Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation
5. Collect and evaluate applicable information to perform a risk assessment
6. Make administrative decisions based on recommended measures to reduce or eliminate environmental and occupational health hazards
7. Develop and present administrative, scientific, technical, and/or regulatory reports

Applicants are required to complete an online application, as well as submit official transcripts from all institutions where they have taken courses (transcripts from institutions outside the US must be translated, evaluated, and reported on the 4.00 scale), 3 letters of recommendation (2 of which must be from persons with a graduate degree), a resume, and a letter of statement of purpose.

The GRE is not required for graduates from an accredited US institution with a GPA ≥ 3.00 . The GRE may be required by the MPH Admissions Committee for applicants with a GPA < 3.00 . The GRE is required for all students graduating from institutions outside the US and any student with a GPA < 2.7 .

Regular admission to the MPH program requires:

- An earned bachelor's degree from an accredited college or university
- GPA ≥ 3.00 (on a 4.00 scale)
- All students must have foundation courses in college-level mathematics, and social sciences
 - Environmental and Occupational Health and Safety majors must also complete college-level courses in organic/inorganic chemistry, organic chemistry and biological science (biology, biochemistry, anatomy, physiology, etc.)
 - Public Health Epidemiology majors also must complete college level courses in biological sciences (e.g., biology, biochemistry, anatomy, physiology, etc.)
- TOEFL ≥ 550 (paper-based), ≥ 213 (computer-based), or >79 (IBT) for applicants who graduated from institutions outside the US.

Provisional admission to the MPH program may be offered with one or more of the following deficiencies:

- Missing foundation course(s)
- GPA < 3.00 , but ≥ 2.7

Provisional students take 4 courses (12 credit hours) in the MPH program. Preferably, all 4 courses will be core courses, but 1 major specific course is also allowed. No electives may be taken. Students must attain a B or better in each of these courses to be admitted as a regular status student. Any student not attaining a B or better in these 4 courses could be dismissed from the program.

All MPH students are required to take the following 8 (24 credit hours) core courses.

Code	Title	Hours
PUBH 5160	Environmental Health	3
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010	Public Health Epidemiology	3
PUBH 6020	Management and Leadership in Public Health	3
PUBH 6080	Social Determinants of Health	3
PUBH 6090	Issues in Public Health	3
PUBH 6950	Integrative Learning Experience	2
One of the Following Must Be Completed:		4
PUBH 6960	Internship in Public Health	
PUBH 6970	Project in Public Health	
Total Hours		24

All ENVH majors are required to take the following 5 (15 credit hours) major specific courses. In addition, all ENVH majors are required to take 2 (6 credit hours) advised electives.

Code	Title	Hours
PUBH 5020	Occupational Health	3
PUBH 5060	Occupational Safety	3
PUBH 5310	Chemical Agents	3
PUBH 5520	Biological Agents	3
PUBH 5620	Physical Agents	3
Total Hours		15

FOUNDATIONAL COMPETENCIES: 1. Apply epidemiological methods to the breadth of settings and situations in public health practice; 2. Select quantitative and qualitative data collection methods appropriate for a given public health context; 3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate; 4. Interpret results of data analysis for public health research, policy or practice; 5. Compare the organization, structure, and function of health care, public health, and regulatory systems across national and international settings; 6. Discuss the means by which structural bias, social inequities, and racism undermine health and create challenges to achieving health equity at organizational, community, and societal levels; 7. Assess population needs, assets, and capacities that affect communities' health; 8. Apply awareness of cultural values and practices to the design or implementation of public health policies

or programs; 9. Design a population-based policy, program, project, or intervention; 10. Explain basic principles and tools of budget and resource management; 11. Select methods to evaluate public health programs; 12. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 14. Advocate for political, social, or economic policies and programs that will improve health in diverse populations; 15. Evaluate policies for their impact on public health and health equity; 16. Apply principles of leadership, governance, and management, which includes creating a vision, empowering others, fostering collaboration, and guiding decision making; 17. Apply negotiation and mediation skills to address organizational or community challenges; 18. Select communication strategies for different audiences and sectors; 19. Communicate audience-appropriate public health content, both in writing and through oral presentation; 20. Describe the importance of cultural competence in communicating public health content; 21. Perform effectively on interprofessional teams; 22. Apply systems thinking to a public health issue.

ENVIRONMENTAL AND OCCUPATIONAL HEALTH COMPETENCIES: 1. Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems; 2. Objectively and subjectively assess chemical, biological, and physical agents classified as hazardous to human health; 3. Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents; 4. Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation; 5. Collect and evaluate applicable information to perform a risk assessment; 6. Make administrative decisions based on recommended measures to reduce or eliminate environmental and occupational health hazards; 7. Develop and present administrative, scientific, technical, and/or regulatory reports.

HEALTH PROMOTION AND EDUCATION COMPETENCIES: 1. Develop an intervention and survey based on a health theory; 2. Demonstrate skills to plan and implement appropriate health programs; 3. Explain the contribution of logic models in program development, implementation, and evaluation; 4. Identify evidence-based practices to address a variety of public health problems; 5. Demonstrate skills to present effective health programs using a variety of techniques and appropriate teaching strategies; 6. Develop strategies to organize community members to advocate for change that impacts public health; 7. Differentiate the purposes of formative, process, and outcome evaluation; 8. Apply program evaluation knowledge and skill using established models.

PUBLIC HEALTH EPIDEMIOLOGY COMPETENCIES: 1. Differentiate the major epidemiologic research study designs based on their strengths and limitations; 2. Distinguish between the major sources of bias in epidemiologic research (confounding, selection bias, and measurement error) and select the appropriate method to evaluate and reduce bias; 3. Apply criteria to support whether or not an association is causal; 4. Formulate appropriate public health recommendations using evidence-based practice based on a synthesis of findings across studies found in the scientific literature; 5. Design an epidemiologic study to address a question of interest; 6. Identify and apply molecular/genetic principles and technologies in public health practice; 7. Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic

investigation; 8. Identify, analyze, and interpret data arising from local, national, and international research and surveillance databases.

PUBLIC HEALTH POLICY AND LAW COMPETENCIES: 1. Demonstrate how legal rules from cases, statutes, and regulations apply to specific factual situations; 2. Interpret when legal authority can intervene in public health based on powers and limitations; 3. Select appropriate kinds of legal interventions to address specific public health issues and evaluate the merits of the interventions; 4. Evaluate and weigh the relative merits of various local, state, and federal legal interventions for public health; 5. Interpret key policy concerns and ethical considerations shaping public health law and distinguish the roles of public health professionals and lawyers in exercising these responsibilities; 6. Influence health policy and program decision-making using scientific knowledge, analysis, communication, and consensus building; 7. Develop policies and plans that support individual and community health efforts.

GENERALIST COMPETENCIES: 1. Assess risk factors and evidence for establishing morbidity and mortality problems; 2. Develop a health promotion program; 3. Apply advanced statistical techniques for continuous data; 4. Select the appropriate methods to communicate and disseminate evaluation findings; 5. Apply the appropriate health and safety programs that are available or commonly used in the workplace.

Master of Public Health: Generalist

The school of population health offers a variety of degree options and graduate courses. In health, a master of public health is offered with five majors.

MPH Program

The MPH degree program is fully accredited by the Council on Education for Public Health (CEPH) and requires four semesters to complete as a full time student. Part time students take approximately eight semesters to complete the program.

The core competencies for the Master of Public Health are:

Evidence-based Approaches to Public Health

1. Apply epidemiological methods to the breadth of settings and situations in public health practice
2. Select quantitative and qualitative data collection methods appropriate for a given public health context
3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate
4. Interpret results of data analysis for public health research, policy or practice

Public Health & Health Care Systems

1. Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings
2. Discuss the means by which structural bias, social inequities and racism undermine health care and create challenges to achieving health equity at organizational, community, and societal level

Planning & Management to Promote Health

1. Assess population needs, assets and capacities that affect communities' health
2. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs
3. Design a population-based policy, program, project, or intervention
4. Explain basic principles and tools of budget and resource management
5. Select methods to evaluate public health programs

Policy in Public Health

1. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence
2. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes
3. Advocate for political, social or economic policies and programs that will improve health in diverse populations
4. Evaluate policies for their impact on public health and health equity

Leadership

1. Apply principles of leadership, governance and management, which include creating a vision, empowering others, fostering collaboration and guiding decision making
2. Apply negotiation and mediation skills to address organizational or community challenges

Communication

1. Select communication strategies for different audiences and sectors
2. Communicate audience-appropriate public health content, both in writing and through oral presentation
3. Describe the importance of cultural competence in communicating public health content

Interprofessional Practice

1. Perform effectively on interprofessional teams

Systems Thinking

1. Apply systems thinking tools to a public health issue

The generalist major offers a general overview of public health and factors affecting communication, data, policy, and general health and safety of populations.

Generalist (GENL) major competencies:

1. Assess risk factors and evidence for establishing morbidity and mortality problems
2. Develop a health promotion program
3. Apply advanced statistical techniques for continuous data
4. Select the appropriate methods to communicate and disseminate evaluation findings
5. Apply the appropriate health and safety programs that are available or commonly used in the workplace

Applicants are required to complete an online application, as well as submit official transcripts from all institutions where they have taken

courses (transcripts from institutions outside the US must be translated, evaluated, and reported on the 4.00 scale), 3 letters of recommendation (2 of which must be from persons with a graduate degree), a resume, and a letter of statement of purpose.

The GRE is not required for graduates from an accredited US institution with a GPA ≥ 3.00 . The GRE may be required by the MPH Admissions Committee for applicants with a GPA < 3.00 . The GRE is required for all students graduating from institutions outside the US and any student with a GPA < 2.7 .

Regular admission to the MPH program requires:

- An earned bachelor's degree from an accredited college or university
- GPA ≥ 3.00 (on a 4.00 scale)
- All students must have foundation courses in college-level mathematics, and social sciences
 - Environmental and Occupational Health and Safety majors must also complete college-level courses in organic/inorganic chemistry, organic chemistry and biological science (biology, biochemistry, anatomy, physiology, etc.)
 - Public Health Epidemiology majors also must complete college level courses in biological sciences (e.g., biology, biochemistry, anatomy, physiology, etc.)
- TOEFL ≥ 550 (paper-based), ≥ 213 (computer-based), or >79 (IBT) for applicants who graduated from institutions outside the US.

Provisional admission to the MPH program may be offered with one or more of the following deficiencies:

- Missing foundation course(s)
- GPA < 3.00 , but ≥ 2.7

Provisional students take 4 courses (12 credit hours) in the MPH program. Preferably, all 4 courses will be core courses, but 1 major specific course is also allowed. No electives may be taken. Students must attain a B or better in each of these courses to be admitted as a regular status student. Any student not attaining a B or better in these 4 courses could be dismissed from the program.

All MPH students are required to take the following 8 (24 credit hours) core courses.

Code	Title	Hours
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010	Public Health Epidemiology	3
PUBH 6020	Management and Leadership in Public Health	3
PUBH 6050	Concepts and Issues in Environmental Health (Concepts and Issues in Environmental Health)	3
PUBH 6080	Social Determinants of Health	3
PUBH 6090	Issues in Public Health	3
PUBH 6950	Integrative Learning Experience	2
One of the Following is Required:		4
PUBH 6960	Internship in Public Health	
PUBH 6970	Project in Public Health	
Total Hours		24

All GENL majors are required to take the following 5 (15 credit hours) major specific courses. In addition, all GENL majors are required to take 2 (6 total credit hours) advised electives.

Code	Title	Hours
PUBH 5020	Occupational Health	3
PUBH 6030	Advanced Epidemiology	3
PUBH 6060	Advanced Biostatistics	3
PUBH 6460	Health Promotion Programs	3
PUBH 6800	Evaluation of Health Programs	3
Total Hours		15

FOUNDATIONAL COMPETENCIES: 1. Apply epidemiological methods to the breadth of settings and situations in public health practice; 2. Select quantitative and qualitative data collection methods appropriate for a given public health context; 3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate; 4. ENVIRONMENTAL AND OCCUPATIONAL HEALTH COMPETENCIES: 1. Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems; 2. Objectively and subjectively assess chemical, biological, and physical agents classified as hazardous to human health; 3. Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents; 4. Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation; 5. Collect and evaluate applicable information to perform a risk assessment; 6. Make

administrative decisions based on recommended measures to reduce or eliminate environmental and occupational health hazards; 7. Develop and present administrative, scientific, technical, and/or regulatory reports.

HEALTH PROMOTION AND EDUCATION COMPETENCIES: 1. Develop an intervention and survey based on a health theory; 2. Demonstrate skills to plan and implement appropriate health programs; 3. Explain the contribution of logic models in program development, implementation, and evaluation; 4. Identify evidence-based practices to address a variety of public health problems; 5. Demonstrate skills to present effective health programs using a variety of techniques and appropriate teaching strategies; 6. Develop strategies to organize community members to advocate for change that impacts public health; 7. Differentiate the purposes of formative, process, and outcome evaluation; 8. Apply program evaluation knowledge and skill using established models.

PUBLIC HEALTH EPIDEMIOLOGY COMPETENCIES: 1. Differentiate the major epidemiologic research study designs based on their strengths and limitations; 2. Distinguish between the major sources of bias in epidemiologic research (confounding, selection bias, and measurement error) and select the appropriate method to evaluate and reduce bias; 3. Apply criteria to support whether or not an association is causal; 4. Formulate appropriate public health recommendations using evidence-based practice based on a synthesis of findings across studies found in the scientific literature; 5. Design an epidemiologic study to address a question of interest; 6. Identify and apply molecular/genetic principles and technologies in public health practice; 7. Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic investigation; 8. Identify, analyze, and interpret data arising from local, national, and international research and surveillance databases.

PUBLIC HEALTH POLICY AND LAW COMPETENCIES: 1. Demonstrate how legal rules from cases, statutes, and regulations apply to specific factual situations; 2. Interpret when legal authority can intervene in public health based on powers and limitations; 3. Select appropriate kinds of legal interventions to address specific public health issues and evaluate the merits of the interventions; 4. Evaluate and weigh the relative merits of various local, state, and federal legal interventions for public health; 5. Interpret key policy concerns and ethical considerations shaping public health law and distinguish the roles of public health professionals and lawyers in exercising these responsibilities; 6. Influence health policy and program decision-making using scientific knowledge, analysis, communication, and consensus building; 7. Develop policies and plans that support individual and community health efforts.

GENERALIST COMPETENCIES: 1. Assess risk factors and evidence for establishing morbidity and mortality problems; 2. Develop a health promotion program; 3. Apply advanced statistical techniques for continuous data; 4. Select the appropriate methods to communicate and disseminate evaluation findings; 5. Apply the appropriate health and safety programs that are available or commonly used in the workplace.

Master of Public Health: Health Promotion and Education

The school of population health offers a variety of degree options and graduate courses. In health, a master of public health is offered with five majors.

MPH Program

The MPH degree program is fully accredited by the Council on Education for Public Health (CEPH) and requires four semesters to complete as a

full time student. Part time students take approximately eight semesters to complete the program.

The core competencies for the Master of Public Health are:

Evidence-based Approaches to Public Health

1. Apply epidemiological methods to the breadth of settings and situations in public health practice
2. Select quantitative and qualitative data collection methods appropriate for a given public health context
3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate
4. Interpret results of data analysis for public health research, policy or practice

Public Health & Health Care Systems

1. Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings
2. Discuss the means by which structural bias, social inequities and racism undermine health care and create challenges to achieving health equity at organizational, community, and societal level

Planning & Management to Promote Health

1. Assess population needs, assets and capacities that affect communities' health
2. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs
3. Design a population-based policy, program, project, or intervention
4. Explain basic principles and tools of budget and resource management
5. Select methods to evaluate public health programs

Policy in Public Health

1. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence
2. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes
3. Advocate for political, social or economic policies and programs that will improve health in diverse populations
4. Evaluate policies for their impact on public health and health equity

Leadership

1. Apply principles of leadership, governance and management, which include creating a vision, empowering others, fostering collaboration and guiding decision making
2. Apply negotiation and mediation skills to address organizational or community challenges

Communication

1. Select communication strategies for different audiences and sectors
2. Communicate audience-appropriate public health content, both in writing and through oral presentation
3. Describe the importance of cultural competence in communicating public health content

Interprofessional Practice

1. Perform effectively on interprofessional teams

Systems Thinking

1. Apply systems thinking tools to a public health issue

The Health Promotion and Education (HPRO) major focuses on methods for planning, implementing and evaluating educational and behavioral changes as well as programs that enhance health. Graduates are prepared for positions that emphasize program planning, health promotion, health education, disease prevention and social action. Graduates work in business, voluntary, non-profit and governmental agencies at the local, county, state and federal levels.

Health Promotion and Education (HPRO) major competencies:

1. Develop an intervention and survey based on a health theory
2. Demonstrate skills to plan and implement appropriate health programs
3. Explain the contribution of logic models in program development, implementation, and evaluation
4. Identify evidence-based practices to address a variety of public health problems
5. Demonstrate skills to present effective health programs using a variety of techniques and appropriate teaching strategies
6. Develop strategies to organize community members to advocate for change that impacts public health
7. Differentiate the purpose of formative, process, and outcome evaluation
8. Apply program evaluation knowledge and skill using established models

Applicants are required to complete an online application, as well as submit official transcripts from all institutions where they have taken courses (transcripts from institutions outside the US must be translated, evaluated, and reported on the 4.00 scale), 3 letters of recommendation (2 of which must be from persons with a graduate degree), a resume, and a letter of statement of purpose.

The GRE is not required for graduates from an accredited US institution with a GPA ≥ 3.00 . The GRE may be required by the MPH Admissions Committee for applicants with a GPA < 3.00 . The GRE is required for all students graduating from institutions outside the US and any student with a GPA < 2.7 .

Regular admission to the MPH program requires:

- An earned bachelor's degree from an accredited college or university
- GPA ≥ 3.00 (on a 4.00 scale)
- All students must have foundation courses in college-level mathematics, and social sciences

- Environmental and Occupational Health and Safety majors must also complete college-level courses in organic/inorganic chemistry, organic chemistry and biological science (biology, biochemistry, anatomy, physiology, etc.)
- Public Health Epidemiology majors also must complete college level courses in biological sciences (e.g., biology, biochemistry, anatomy, physiology, etc.)
- TOEFL ≥ 550 (paper-based), ≥ 213 (computer-based), or >79 (IBT) for applicants who graduated from institutions outside the US.

Provisional admission to the MPH program may be offered with one or more of the following deficiencies:

- Missing foundation course(s)
- GPA < 3.00 , but ≥ 2.7

Provisional students take 4 courses (12 credit hours) in the MPH program. Preferably, all 4 courses will be core courses, but 1 major specific course is also allowed. No electives may be taken. Students must attain a B or better in each of these courses to be admitted as a regular status student. Any student not attaining a B or better in these 4 courses could be dismissed from the program.

All MPH students are required to take the following 8 (24 credit hours) core courses.

Code	Title	Hours
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010	Public Health Epidemiology	3
PUBH 6020	Management and Leadership in Public Health	3
PUBH 6050	Concepts and Issues in Environmental Health	3
PUBH 6080	Social Determinants of Health	3
PUBH 6090	Issues in Public Health	3
PUBH 6950	Integrative Learning Experience	2
One of the Following Must Be Completed:		4
PUBH 6960	Internship in Public Health	
PUBH 6970	Project in Public Health	
Total Hours		24

All HPRO majors are required to take the following 5 (15 credit hours) major specific courses. In addition, all HPRO majors are required to take 2 (6 total credit hours) advised electives.

Code	Title	Hours
PUBH 6310	Public Health Assessment and Planning	3
PUBH 6320	Implementation of Public Health Programs	3
PUBH 6600	Health Behavior	3
PUBH 6630	Public Health Advocacy	3
PUBH 6800	Evaluation of Health Programs	3
Total Hours		15

FOUNDATIONAL COMPETENCIES: 1. Apply epidemiological methods to the breadth of settings and situations in public health practice; 2. Select quantitative and qualitative data collection methods appropriate for a given public health context; 3. Analyze quantitative and qualitative

data using biostatistics, informatics, computer-based programming and software, as appropriate; 4. Interpret results of data analysis for public health research, policy or practice; 5. Compare the organization, structure, and function of health care, public health, and regulatory systems across national and international settings; 6. Discuss the means by which structural bias, social inequities, and racism undermine health and create challenges to achieving health equity at organizational, community, and societal levels; 7. Assess population needs, assets, and capacities that affect communities' health; 8. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs; 9. Design a population-based policy, program, project, or intervention; 10. Explain basic principles and tools of budget and resource management; 11. Select methods to evaluate public health programs; 12. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 14. Advocate for political, social, or economic policies and programs that will improve health in diverse populations; 15. Evaluate policies for their impact on public health and health equity; 16. Apply principles of leadership, governance, and management, which includes creating a vision, empowering others, fostering collaboration, and guiding decision making; 17. Apply negotiation and mediation skills to address organizational or community challenges; 18. Select communication strategies for different audiences and sectors; 19. Communicate audience-appropriate public health content, both in writing and through oral presentation; 20. Describe the importance of cultural competence in communicating public health content; 21. Perform effectively on interprofessional teams; 22. Apply systems thinking to a public health issue.

ENVIRONMENTAL AND OCCUPATIONAL HEALTH COMPETENCIES: 1. Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems; 2. Objectively and subjectively assess chemical, biological, and physical agents classified as hazardous to human health; 3. Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents; 4. Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation; 5. Collect and evaluate applicable information to perform a risk assessment; 6. Make administrative decisions based on recommended measures to reduce or eliminate environmental and occupational health hazards; 7. Develop and present administrative, scientific, technical, and/or regulatory reports.

HEALTH PROMOTION AND EDUCATION COMPETENCIES: 1. Develop an intervention and survey based on a health theory; 2. Demonstrate skills to plan and implement appropriate health programs; 3. Explain the contribution of logic models in program development, implementation, and evaluation; 4. Identify evidence-based practices to address a variety of public health problems; 5. Demonstrate skills to present effective health programs using a variety of techniques and appropriate teaching strategies; 6. Develop strategies to organize community members to advocate for change that impacts public health; 7. Differentiate the purposes of formative, process, and outcome evaluation; 8. Apply program evaluation knowledge and skill using established models.

PUBLIC HEALTH EPIDEMIOLOGY COMPETENCIES: 1. Differentiate the major epidemiologic research study designs based on their strengths

and limitations; 2. Distinguish between the major sources of bias in epidemiologic research (confounding, selection bias, and measurement error) and select the appropriate method to evaluate and reduce bias; 3. Apply criteria to support whether or not an association is causal; 4. Formulate appropriate public health recommendations using evidence-based practice based on a synthesis of findings across studies found in the scientific literature; 5. Design an epidemiologic study to address a question of interest; 6. Identify and apply molecular/genetic principles and technologies in public health practice; 7. Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic investigation; 8. Identify, analyze, and interpret data arising from local, national, and international research and surveillance databases.

PUBLIC HEALTH POLICY AND LAW COMPETENCIES: 1. Demonstrate how legal rules from cases, statutes, and regulations apply to specific factual situations; 2. Interpret when legal authority can intervene in public health based on powers and limitations; 3. Select appropriate kinds of legal interventions to address specific public health issues and evaluate the merits of the interventions; 4. Evaluate and weigh the relative merits of various local, state, and federal legal interventions for public health; 5. Interpret key policy concerns and ethical considerations shaping public health law and distinguish the roles of public health professionals and lawyers in exercising these responsibilities; 6. Influence health policy and program decision-making using scientific knowledge, analysis, communication, and consensus building; 7. Develop policies and plans that support individual and community health efforts.

GENERALIST COMPETENCIES: 1. Assess risk factors and evidence for establishing morbidity and mortality problems; 2. Develop a health promotion program; 3. Apply advanced statistical techniques for continuous data; 4. Select the appropriate methods to communicate and disseminate evaluation findings; 5. Apply the appropriate health and safety programs that are available or commonly used in the workplace.

Master of Public Health: Public Health Epidemiology

The school of population health offers a variety of degree options and graduate courses. In health, a master of public health is offered with five majors.

MPH Program

The MPH degree program is fully accredited by the Council on Education for Public Health (CEPH) and requires four semesters to complete as a full time student. Part time students take approximately eight semesters to complete the program.

The core competencies for the Master of Public Health are:

Evidence-based Approaches to Public Health

1. Apply epidemiological methods to the breadth of settings and situations in public health practice
2. Select quantitative and qualitative data collection methods appropriate for a given public health context
3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate
4. Interpret results of data analysis for public health research, policy or practice

Public Health & Health Care Systems

1. Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings
2. Discuss the means by which structural bias, social inequities and racism undermine health care and create challenges to achieving health equity at organizational, community, and societal level

Planning & Management to Promote Health

1. Assess population needs, assets and capacities that affect communities' health
2. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs
3. Design a population-based policy, program, project, or intervention
4. Explain basic principles and tools of budget and resource management
5. Select methods to evaluate public health programs

Policy in Public Health

1. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence
2. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes
3. Advocate for political, social or economic policies and programs that will improve health in diverse populations
4. Evaluate policies for their impact on public health and health equity

Leadership

1. Apply principles of leadership, governance and management, which include creating a vision, empowering others, fostering collaboration and guiding decision making
2. Apply negotiation and mediation skills to address organizational or community challenges

Communication

1. Select communication strategies for different audiences and sectors
2. Communicate audience-appropriate public health content, both in writing and through oral presentation
3. Describe the importance of cultural competence in communicating public health content

Interprofessional Practice

1. Perform effectively on interprofessional teams

Systems Thinking

1. Apply systems thinking tools to a public health issue

Epidemiology involves factors affecting disease and disability in populations. As a fundamental science of public health and preventive medicine, epidemiology traditionally has focused on causation through population studies for both infectious and chronic diseases. Epidemiologists quantify the distribution of diseases and establish determinants of health problems by describing and analyzing the

biological, environmental, and behavioral factors affecting health, illness, and premature death. Epidemiologists use descriptive and analytic techniques to gather information on disease occurrence, extend basic knowledge about the physical, mental, and social processes affecting health, and develop effective disease control measures.

Public Health Epidemiology (PHEP) major competencies:

1. Differentiate the major epidemiologic research study designs based on their strengths and limitations
2. Distinguish between the major sources of bias in epidemiologic research (confounding, selection bias, and measurement error) and select the appropriate method to evaluate and reduce bias
3. Apply criteria to support whether or not an association is causal
4. Formulate appropriate public health recommendations using evidence-based practice based on a synthesis of findings across studies found in the scientific literature
5. Design an epidemiologic study to address a question of interest
6. Identify and apply molecular/genetic principles and technologies in public health practice
7. Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic investigation
8. Identify, analyze, and interpret data arising from local, national, or international research and surveillance databases

Applicants are required to complete an online application, as well as submit official transcripts from all institutions where they have taken courses (transcripts from institutions outside the US must be translated, evaluated, and reported on the 4.00 scale), 3 letters of recommendation (2 of which must be from persons with a graduate degree), a resume, and a letter of statement of purpose.

The GRE is not required for graduates from an accredited US institution with a GPA ≥ 3.00 . The GRE may be required by the MPH Admissions Committee for applicants with a GPA < 3.00 . The GRE is required for all students graduating from institutions outside the US and any student with a GPA < 2.7 .

Regular admission to the MPH program requires:

- An earned bachelor's degree from an accredited college or university
- GPA ≥ 3.00 (on a 4.00 scale)
- All students must have foundation courses in college-level mathematics, and social sciences
 - Environmental and Occupational Health and Safety majors must also complete college-level courses in organic/inorganic chemistry, organic chemistry and biological science (biology, biochemistry, anatomy, physiology, etc.)
 - Public Health Epidemiology majors also must complete college level courses in biological sciences (e.g., biology, biochemistry, anatomy, physiology, etc.)
- TOEFL ≥ 550 (paper-based), ≥ 213 (computer-based), or >79 (IBT) for applicants who graduated from institutions outside the US.

Provisional admission to the MPH program may be offered with one or more of the following deficiencies:

- Missing foundation course(s)
- GPA < 3.00 , but ≥ 2.7

Provisional students take 4 courses (12 credit hours) in the MPH program. Preferably, all 4 courses will be core courses, but 1 major specific course is also allowed. No electives may be taken. Students must attain a B or better in each of these courses to be admitted as a regular status student. Any student not attaining a B or better in these 4 courses could be dismissed from the program.

All MPH students are required to take the following 8 (24 credit hours) core courses.

Code	Title	Hours
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010	Public Health Epidemiology	3
PUBH 6020	Management and Leadership in Public Health	3
PUBH 6050	Concepts and Issues in Environmental Health (Concepts and Issues in Environmental Health)	3
PUBH 6080	Social Determinants of Health	3
PUBH 6090	Issues in Public Health	3
PUBH 6950	Integrative Learning Experience	2
One of the Following Must Be Completed:		4
PUBH 6960	Internship in Public Health	
PUBH 6970	Project in Public Health	
Total Hours		24

All PHEP majors are required to take the following 5 (15 credit hours) major specific courses. In addition, all PHEP majors are required to take 2 (total of 6 credit hours) advised electives.

Code	Title	Hours
PUBH 6030	Advanced Epidemiology	3
PUBH 6060	Advanced Biostatistics	3
PUBH 6120	Epidemiology Infectious Diseases	3
PUBH 6550	Chronic Disease Epidemiology	3
PUBH 6070 or PUBH 6130	Genetic Epidemiology Molecular Epidemiology	3
Total Hours		15

FOUNDATIONAL COMPETENCIES: 1. Apply epidemiological methods to the breadth of settings and situations in public health practice; 2. Select quantitative and qualitative data collection methods appropriate for a given public health context; 3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate; 4. Interpret results of data analysis for public health research, policy or practice; 5. Compare the organization, structure, and function of health care, public health, and regulatory systems across national and international settings; 6. Discuss the means by which structural bias, social inequities, and racism undermine health and create challenges to achieving health equity at organizational, community, and societal levels; 7. Assess population needs, assets, and capacities that affect communities' health; 8. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs; 9. Design a population-based policy, program, project,

or intervention; 10. Explain basic principles and tools of budget and resource management; 11. Select methods to evaluate public health programs; 12. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 14. Advocate for political, social, or economic policies and programs that will improve health in diverse populations; 15. Evaluate policies for their impact on public health and health equity; 16. Apply principles of leadership, governance, and management, which includes creating a vision, empowering others, fostering collaboration, and guiding decision making; 17. Apply negotiation and mediation skills to address organizational or community challenges; 18. Select communication strategies for different audiences and sectors; 19. Communicate audience-appropriate public health content, both in writing and through oral presentation; 20. Describe the importance of cultural competence in communicating public health content; 21. Perform effectively on interprofessional teams; 22. Apply systems thinking to a public health issue.

ENVIRONMENTAL AND OCCUPATIONAL HEALTH COMPETENCIES: 1. Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems; 2. Objectively and subjectively assess chemical, biological, and physical agents classified as hazardous to human health; 3. Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents; 4. Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation; 5. Collect and evaluate applicable information to perform a risk assessment; 6. Make administrative decisions based on recommended measures to reduce or eliminate environmental and occupational health hazards; 7. Develop and present administrative, scientific, technical, and/or regulatory reports.

HEALTH PROMOTION AND EDUCATION COMPETENCIES: 1. Develop an intervention and survey based on a health theory; 2. Demonstrate skills to plan and implement appropriate health programs; 3. Explain the contribution of logic models in program development, implementation, and evaluation; 4. Identify evidence-based practices to address a variety of public health problems; 5. Demonstrate skills to present effective health programs using a variety of techniques and appropriate teaching strategies; 6. Develop strategies to organize community members to advocate for change that impacts public health; 7. Differentiate the purposes of formative, process, and outcome evaluation; 8. Apply program evaluation knowledge and skill using established models.

PUBLIC HEALTH EPIDEMIOLOGY COMPETENCIES: 1. Differentiate the major epidemiologic research study designs based on their strengths and limitations; 2. Distinguish between the major sources of bias in epidemiologic research (confounding, selection bias, and measurement error) and select the appropriate method to evaluate and reduce bias; 3. Apply criteria to support whether or not an association is causal; 4. Formulate appropriate public health recommendations using evidence-based practice based on a synthesis of findings across studies found in the scientific literature; 5. Design an epidemiologic study to address a question of interest; 6. Identify and apply molecular/genetic principles and technologies in public health practice; 7. Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic

investigation; 8. Identify, analyze, and interpret data arising from local, national, and international research and surveillance databases.

PUBLIC HEALTH POLICY AND LAW COMPETENCIES: 1. Demonstrate how legal rules from cases, statutes, and regulations apply to specific factual situations; 2. Interpret when legal authority can intervene in public health based on powers and limitations; 3. Select appropriate kinds of legal interventions to address specific public health issues and evaluate the merits of the interventions; 4. Evaluate and weigh the relative merits of various local, state, and federal legal interventions for public health; 5. Interpret key policy concerns and ethical considerations shaping public health law and distinguish the roles of public health professionals and lawyers in exercising these responsibilities; 6. Influence health policy and program decision-making using scientific knowledge, analysis, communication, and consensus building; 7. Develop policies and plans that support individual and community health efforts.

GENERALIST COMPETENCIES: 1. Assess risk factors and evidence for establishing morbidity and mortality problems; 2. Develop a health promotion program; 3. Apply advanced statistical techniques for continuous data; 4. Select the appropriate methods to communicate and disseminate evaluation findings; 5. Apply the appropriate health and safety programs that are available or commonly used in the workplace.

MS in Occupational Health

Program of Study for the Master of Science in Occupational Health: Industrial Hygiene Program

The Master of Science in Occupational Health (MSOH) degree program is available in Industrial Hygiene. Industrial hygiene professionals are involved in understanding and implementing scientific, technical, and regulatory aspects that focus on preventing and controlling workers' exposures to factors and agents that can cause them harm. The profession focuses on prevention of exposure or occurrence and mitigation of factors and agents that contribute to worker harm, as work-related illnesses and injuries.

The comprehensive and flexible curriculum of the Master of Science in Occupational Health (MSOH) degree – Industrial Hygiene (IH) program provides a solid foundation of information for students with limited or no background in industrial hygiene, while simultaneously offering students with professional experience the opportunity to expand the scope of their knowledge and skills. The program offers classes during evenings and weekends to facilitate graduate study for those engaged in full-time daily employment. The schedule also permits students without applicable practical experience to complete an internship.

The MSOH degree is fully accredited by the Accreditation Board for Engineering and Technology - Applied Science Accreditation Commission (ABET-ASAC) and requires four semesters to complete as a full-time student. Part time students take approximately eight semesters to complete the program.

Student Learning Objectives

The MSOH degree-IH program student outcomes state that upon completion of the program, graduates should be able to:

- Identify agents, factors, and stressors generated by and/or associated with defined sources, unit operations, and/or processes

- Describe qualitative and quantitative aspects of generation of agents, factors, and stressors
- Understand physiological and/or toxicological interactions of physical, chemical, biological, and ergonomic agents, factors, and/or stressors with the human body
- Assess qualitative and quantitative aspects of exposure assessment, dose-response, and risk characterization based on applicable pathways and modes of entry
- Calculate, interpret, and apply statistical and epidemiological data
- Recommend and evaluate engineering, administrative, and personal protective equipment controls and/or other interventions to reduce or eliminate hazards
- Demonstrate the importance of appropriate ethical performance and practice
- Demonstrate an understanding of applicable business and managerial practices
- Interpret and apply applicable occupational and environmental regulations
- Participate in the development and implementation of applicable industrial-hygiene-related programs
- Generate, review, and interpret data, whether from original research or other published sources
- Prepare scientific and technical summaries and reports
- Understand fundamental aspects of safety and environmental health
- Understand the necessity of teamwork among management, industrial hygienists, safety specialists, environmental specialists, engineers, and clinicians (i.e. occupational health physicians and nurses)
- Attain recognized professional certification

Applicants are required to complete an online application, as well as submit official transcripts from all institutions where they have taken courses (transcripts from institutions from outside the US must be translated, evaluated, and reported on the 4.00 scale), 3 letters of recommendation (2 of which must be from persons with a graduate degree), a resume, and a letter of interest (statement of purpose).

The GRE is not required for graduates from an accredited US institution with a GPA ≥ 3.00 . The GRE may be required by the MPH Admissions Committee for applicants with a GPA < 3.00 . The GRE is required for all students graduating from institutions outside the US and for any student with a GPA ≤ 2.7 .

Regular admission to the MSOH program requires:

- An earned bachelor's degree from an accredited college or university
- GPA ≥ 3.00 (on a 4.00 scale)
- Foundation courses in college-level mathematics (preferably calculus), inorganic chemistry, organic chemistry, physics, biology, and English/writing
 - Work experience based on applicability and duration and applicable certifications such as CIH or CSP will also be considered
- TOEFL ≥ 550 (paper-based), ≥ 213 (computer-based), or >79 (iBT) for applicants who graduated from institutions outside the US and whose primary language is not English.

Provisional admission to the MSOH program may be offered with one or more of the following deficiencies:

- Missing foundation course(s)
- GPA < 3.00 , but ≥ 2.7

Provisional students take 4 courses (12 credits hours) in the MSOH program. No electives may be taken. Students must attain a B or better in each of these courses to be admitted as a regular status student. Any student not attaining a B or better in these 4 courses could be dismissed from the program.

The MSOH degree has a minimum of 40 credit hours for degree requirements. The curriculum incorporates the general areas of science, technology, management, and communication within the context of the core courses and thesis requirements for the MSOH degree.

All MSOH students take the following courses. For those students not requiring an internship, 1 advised elective is added.

Code	Title	Hours
PUBH 5020	Occupational Health	3
PUBH 5060	Occupational Safety	3
PUBH 5160	Environmental Health	3
PUBH 5260	Haz Mat and Emerg Response	3
PUBH 5310	Chemical Agents	3
PUBH 5410	Hazard Control	3
PUBH 5520	Biological Agents	3
PUBH 5620	Physical Agents	3
PUBH 5700	Risk Assessment	3
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010	Public Health Epidemiology	3
PUBH 6960	Internship in Public Health (3 credits required if <1 year experience, otherwise 3 credits advised electives)	3
PUBH 6970	Project in Public Health	4
or PUBH 6990	Thesis Research	
Total Hours		40

1. Identify agents, factors, and stressors generated by and/or associated with defined sources, unit operations, and/or processes
2. Describe qualitative and quantitative aspects of generation of agents, factors, and stressors
3. Understand physiological and/or toxicological interactions of physical, chemical, biological, and ergonomic agents, factors, and/or stressors with the human body.
4. Assess qualitative and quantitative aspects of exposure assessment, dose-response, and risk characterization based on applicable pathways and modes of entry
5. Calculate, interpret, and apply statistical and epidemiological data.
6. Recommend and evaluate engineering, administrative, and personal protective equipment controls and/or other interventions to reduce or eliminate hazards.
7. Demonstrate the importance of appropriate ethical performance and practice.

8. Demonstrate an understanding of applicable business and managerial practices.
9. Interpret and apply applicable occupational and environmental regulations
10. Participate in the development and implementation of applicable industrial hygiene-related programs.
11. Generate, review, and interpret data, whether from original research or other published sources.
12. Prepare scientific and technical summaries and reports.
13. Understand fundamental aspects of safety and environmental health.
14. Understand the necessity of teamwork among management, industrial hygienists, safety specialists, environmental specialists, engineers, and clinicians (i.e., occupational health physicians and nurses).
15. Attain recognized professional certification.

PhD in Health Education

The doctoral degree program in health focuses on advanced study and research in community/health education. The program prepares advanced students to contribute to the field of health through research. Although research and health courses are required, the program is individualized through selection of a cognate and elective courses to develop each student for leadership roles in universities, public service or the private health sector.

An opportunity exists for graduate students interested in pursuing a joint OTD/PhD degree in Occupational Therapy and Health Education. This joint degree program provides occupational therapy students with the clinical practice, advocacy, leadership, research, and scholarship skills needed to pursue careers in higher education. The occupational therapy program provides detailed description of the application process and curriculum. Opportunities also exist for students to take related graduate level courses across campus that lead to certification (e.g., biostatistics and epidemiology, gerontological practice, occupational health, public health and emergency response).

Admission to the program includes completion of a master's degree from an accredited institution. In addition to the College of Graduate Studies requirements, evaluation of applicants is based on the following criteria:

- completion of the GRE;
- a clearly defined statement of purpose that specifies the area of specialization within the degree program;
- a minimum of three letters of reference from faculty members with specific expertise in health who have worked with the applicant in an academic setting;
- evidence of research and/or writing ability through a master's thesis, project, paper, report, publication or paper presented to a professional society will be considered;
- international applicants must submit a TOEFL score of 550 or higher

Prospective students should contact the department for further information.

The program requires 12 credits of research core courses, 27 hours of specified health education courses, 12 hours from a related field to fulfill the cognate, 9 credits of approved electives based on the student's needs

and interests, a portfolio, and a dissertation that contributes to the field of health education.

Occupational Therapy Doctorate/PhD in Exercise Science

The dual degree of occupational therapy doctorate (OTD) and doctor of philosophy (Ph.D.) in exercise science is designed to meet the growing need for occupational therapy faculty members who are prepared to conduct and mentor research. The graduates of the dual degree program will not only have the credentials but also the skills needed for successful careers in academia.

Admission to the OTD/Ph.D. is a two-step process. The first step is admission to the OTD program. See the occupational therapy doctorate section for admission requirements. In the second semester of the OTD program, the student applies for admission to the Ph.D. in exercise science. If selected for admission, the student will be officially admitted to the Ph.D. program in exercise science at the beginning of the second year in the OTD program. Please contact the occupational therapy program at occtherapydoctorate@utoledo.edu or the program director for graduate exercise science program for more information on the dual degree.

Students may apply up to 18 credits of their OTD program for credit in the Ph.D. program. Please contact the occupational therapy program at occtherapydoctorate@utoledo.edu or the program director for graduate exercise science program for more information on the dual degree.

Occupational Therapy Doctorate/PhD in Health Education

The dual degree of occupational therapy doctorate (OTD) and doctor of philosophy (Ph.D.) in health education is designed to meet the growing need for occupational therapy faculty members who are prepared to conduct and mentor research. The graduates of the dual degree program will not only have the credentials but also the skills needed for successful careers in academia.

Admission to the OTD/Ph.D. is a two-step process. The first step is to be admitted to the OTD program. See the occupational therapy doctorate section for admission requirements. During the OTD program, the student completes the second step by applying for admission to the Ph.D. in health education. Please contact the occupational therapy program at occtherapydoctorate@utoledo.edu or the school of population health for more information on the dual degree.

Students may apply up to 18 credits of their OTD program for credit in the Ph.D. program. Please contact the occupational therapy program at occtherapydoctorate@utoledo.edu or the school of population health for more information on the dual degree.

PRACTICE: 1. Compare, contrast and evaluate models of practice and integrate them with the Occupational Therapy Practice Framework. 2. Examine the interactions between occupations, client factors, performance skills, performance patterns, and contexts and environments. 3/ Describe the relationship between human development and occupation from a life span perspective. 4. Distinguish the relationships between wellness and occupation, identify at risk populations and implement occupation-based interventions to enhance wellness and prevent disease. 5. Investigate and grade the demands of

an occupation, reflecting the specific body structures, body functions, performance skills, and performance patterns that are required to successfully engage in occupation. 6. Interpret screening, assessment, and occupational profile data to evaluate clients occupational performance. 7. Interpret evaluation results to diagnose problems related to occupational performance and participation. 8. Illustrate collaboration with clients to develop individualized goals for occupational performance and implement interventions to achieve them. 9. Practice occupational therapy services consistent with clients needs and context, including reassessment and discharge. 10. Show how to effectively communicate and educate via written, oral, and nonverbal means, with clients, family members, significant others, team members, and the community at large. 11. Demonstrate therapeutic use of self, including personality, insights, perceptions, and judgments, as part of the therapeutic process. 12. Show how to effectively and professionally document all aspects of the occupational therapy process. 13. Recognize and apply codes, guidelines, policies, and standards of practice put forth by AOTA and regulatory bodies. 14. Apply accepted Practice Standards regarding supervision of and collaboration with occupational therapy assistants.

ADVOCACY: 15. Evaluate and judge the relevance of current socio-political, legal, economic, international, geographic, demographic, and health disparity issues and trends, including as they affect occupational therapy practice. 16. Justify, design, and engage in initiatives that meet society s occupational needs within existing organizations and through new, entrepreneurial services and programs (e.g., private practice) to move the profession of occupational therapy forward as an integral discipline in health care, human services, and education. 17. Apply principles of management, administration, and supervision (e.g., COTAs, students, other rehabilitation personnel, volunteers) into a personal framework for directing and developing occupational therapy services, personnel, and programs. 18. Choose, design, and implement teaching/learning experiences for a variety of audiences. 19. Practice in collaborative interprofessional practice to improve service delivery in complex systems and organizations. 20. Demonstrate advocacy efforts for clients and the profession to influence practice, legislation, policies, and reimbursement funding.

RESEARCH: 21. Use principles of research design to describe, analyze, critique, and interpret research protocols and articles relevant to the field of occupational therapy. 22. Interpret research findings to enhance their practice and promote research in the profession at multiple levels including collaboration with independent researchers. 23. Produce and disseminate guided, individualized, scholarly projects. 24. Identify specific ways that occupational therapists can contribute to occupational therapy research, including initiation of research, collaboration in research, participation in advanced studies, application for grants, and support of research as a member of the profession of occupational therapy. 25. Explain, apply, and demonstrate professional ethics as they are pertinent to laws and institutional policies that govern client confidentiality and rights of research participants.

AUTONOMOUS DECISION MAKING: 26. Recognize and accept personal responsibility for life-long learning, professional behavior, and demeanor through reflective practice. 27. Develop skill in seeking out information (e.g., library resources, electronic media, internet searches) to compile evidence in support of practice, advocacy, and research. 28. Show leadership skills and guide the profession by disseminating research, conducting presentations, and assuming leadership and mentorship roles, including fieldwork education.

MA in Recreation and Leisure Studies Recreation Administration

The recreation and leisure studies (RLS) program offers advanced study beyond the baccalaureate level in recreation and leisure studies with emphasis in recreation administration or recreational therapy. The graduate degree offers students the ability to focus on areas of interest while obtaining skills beyond the entry level. Advanced coursework challenges the student to investigate personal philosophies as they relate to the delivery of recreation, sport and leisure services.

Students enrolling in the master of arts in recreation and leisure must meet the following minimum admission requirements:

- A bachelor's or professional degree earned from a department of approved standing and granted by an accredited college or university.
- A 2.70 or equivalent Grade Point Average (GPA) for all previous undergraduate academic work.
- Prerequisite academic work that indicates the applicant should be able to pursue effectively the master of arts in recreation and leisure studies.
- Proof of health and accident insurance.
- Satisfactory scores on the Test of English as a Foreign Language (TOEFL) if from a country where English is not the primary language.
- Provisional acceptance to the program may be considered for applicants not meeting the requirements for regular student status admission.

For the degree in recreation administration, immunizations, background checks, and a "fit for duty" test may be required by host agencies for internships. Students must provide their own transportation to internship sites.

Students in the recreation therapy program must provide verification of immunizations:

- Mantoux,
- Rubella Titer/Roseolla (MMR),
- Hepatitis B status, as well as
- current CPR certification.

Additional immunizations may be required by host agencies for clinicals or internships. Host agencies may also require background checks and/or "fit for duty" tests. Students must provide their own transportation to volunteer, clinical or internship sites. More information can be found at: <http://www.utoledo.edu/hhs/rec-admin/>

Summary of Recreation and Leisure Studies Technical Standards

Students completing the master's degree in recreation and leisure studies must possess/demonstrate the competencies needed for the provision of recreation and/or recreation therapy services at the administrative level. Students must understand the context of recreation services in contemporary society, be able to identify and adapt to the issues and trends effecting the recreation profession and the communities in which services are provided, demonstrate the ability to be effective

administrative leaders and effective fiscal resource managers, as well as demonstrate the ability to competently engage in the evaluation of programs and services. Students must also demonstrate the capacity to engage in critical thinking and effective problem solving and decision making. In addition, students must demonstrate the ability to apply the aforementioned knowledge and skills from a multicultural, inclusive, and nondiscriminatory perspective.

The program leading to the master's degree allows students to choose service learning projects, internships, or research activities that will prepare them for successful careers in the field. The program includes a research core, recreation core, and specific courses and electives in the student's area of concentration. A minimum of 30 credits is required for the degree with a plan of study submitted and approved during the first semester of matriculation. For further information, please contact eric.longsdorf@utoledo.edu.

Depending on student's goals, emphasis and scheduling preference, the master's degree with an emphasis in recreation administration can be completed online.

Program Concentration

Select one (1) of the following Options: A or B

A. Recreation Administration (9 Credit Hours)

Select three (3) courses from the following:		9
RCRT 5100	Community Event Planning ¹	
RCRT 5200	Planning and Promotion of Sport ¹	
RCRT 5300	Inclusion and Recreational Therapy Services ¹	
RCRT 5340	Leisure, Recreation, And Aging in Recreational Therapy Practice ¹	
RCRT 5410	Facility Planning and Design ¹	
RCRT 5610	Adventure Programming in Recreation and Recreation Therapy	
RCRT 6990	Independent Study In Recreation And Leisure (Advisor Approval Required)	

5000/6000 Level University Elective (Advisor Approval Required)

B. Recreational Therapy (26 Credit Hours)

NCTRC Certification Prerequisites (May be completed concurrently with graduate course study)

Medical Terminology
Lifespan Development Psychology
Abnormal Psychology
Anatomy and Physiology
Human Service Elective
Human Service Elective

RCRT 5300	Inclusion and Recreational Therapy Services ¹
RCRT 5640	Rt Intervention: Therapeutic Groups
RCRT 5720	Introduction To Therapeutic Recreation
RCRT 5730	Medical & Clinical Aspects Of Therapeutic Recreation
RCRT 5760	APIE in Recreation Therapy
RCRT 5790	Medical & Clinical Aspects Of Therapeutic Recreation II
RCRT 5810	Clinical: Psychiatric Rehabilitation
RCRT 5830	Clinical: Geriatric
RCRT 5870	Program Planning In Recreational Therapy
Select four (4) courses from the following:	
RCRT 5620	Animal Assisted Therapy
RCRT 5630	Therapeutic Activities
RCRT 5660	Relaxation And Stress Management
RCRT 5670	Rt Intervention: Leisure Education
RCRT 5680	Rt Intervention: Assistive Technology & Techniques
RCRT 5690	Rt Intervention: Aquatic Therapy
RCRT 5860	Therapeutic Fitness
RCRT 5900	Rt Intervention: Craft Therapy
RCRT 5910	Rt Intervention: Horticulture Therapy
Select one(1) course from the following:	
RCRT 5800	Clinical: Physical Rehabilitation
RCRT 5820	RT Clinical: Intellectual Deficits / Developmental Disability
Capstone Option (6 Credit Hours)	
Select one (1) of the following Options: A, B, or C	
Option A	
RCRT 5940	Internship In Recreation And Leisure or RCRT 694 Internship
Option B	
RCRT 6920	Master's Project In Recreation And Leisure
Select one (1) research/statistics course from the following:	
RESM 5110	Quantitative Methods I or SOC 5290 Social Research Statistics
SOC 5290	Social Research Statistics
Option C	
RCRT 6960	Master's Thesis In Recreation And Leisure
Select one (1) research/statistics course from the following:	
RESM 5110	Quantitative Methods I or SOC 5290 Social Research Statistics
SOC 5290	Social Research Statistics
Total Hours	30

¹ Denotes online course availability.

8. Ability to demonstrate a breadth and depth of understanding of applied and evaluative research in recreation and recreation therapy in relation to:
Methodologies
Human subject protection

Ethics
Research process
Study Planning
Validity/reliability
Data collection
Data analysis
Manuscript and report development
Application: Evidence-based practice
7. Ability to demonstrate a breadth and depth of understanding of the design and management of physical resources in recreation and recreation therapy in relation to:
Site Analysis
Functional Analysis
Land & Facility Use
Legal Requirements
Principles of design
Programming Relationships
Development of Master plans
Construction/green construction
Sustainable maintenance
Circulation, safety, control and security
Visitor Management
Auxiliary Facilities: (e.g. Playgrounds, aquatics, sports courts, strength areas)
Current and future perspectives, issues, and trends
6. Ability to demonstrate a breadth and depth of understanding of legal aspects, liability, and risk management in recreation and recreation therapy in relation to:
The judicial system
The legal process
Legal Issues
Authority and jurisdiction
Criminal liability
Civil liability: Contract law
Civil liability: Negligence law
Civil liability: Strict liability law
Civil liability: Nuisance law
Civil liability: Constitutional/equal rights
Risk Management: Assessment & planning
Writing risk management plans
Current and future perspectives, issues, and trends
2. Ability to demonstrate a breadth and depth of understanding of administrative leadership in recreation and recreation therapy in relation to:
Philosophies, theories, models, and constructs
Strategic planning
Organizational structure and design
Creating vision
Decision making
Establishing constructive climates and environments
Inclusivity and diversity
Effective communication
Fostering creativity and innovation
Managing conflict and negotiation
Developing leadership skills
Collaborative leadership
Current and future perspectives, issues, and trends

5. Ability to demonstrate a breadth and depth of understanding of the management of financial resources and fiscal operations in recreation and recreation therapy in relation to:

Foundations of fiscal management and the cash flow cycle
 Models and constructs of fiscal management and planning
 Fiscal resource acquisition and financing
 Fiscal resource allocation
 Methods for measuring financial performance
 Managing inventory, accounts receivable, and accounts payable
 Reading and understanding annual reports
 Budgeting
 Balance sheets
 Assets, liabilities, and equity
 Revenues, costs, expenses, and profits
 Cash flow statements
 Managing day-to-day cash flow
 Current and future perspectives, issues, and trends

4. Ability to demonstrate a breadth and depth of understanding of the management of facility operations in recreation and recreation therapy in relation to:

Management methods & models
 Strategic operational planning
 Service outsourcing
 Emergency management
 Developing operational systems and controls
 Energy management and renewable energy
 Managing equipment and subsystems
 Coordinating and scheduling
 Information technology
 Service delivery
 Quality assurance
 Current and future perspectives, issues, and trends

3. Ability to demonstrate a breadth and depth of understanding of the management of human resources in recreation and recreation therapy in relation to:

Dynamic environment of human resource management
 Fundamentals of strategic of resource management
 Theories, models, and constructs of human resource management
 Equal opportunity employment
 Employment rights and discipline
 Human resource planning
 Employment searches
 Candidate recruitment
 Candidate interviews & selection
 Contract negotiations
 Orientation, mentorship & training
 Developing performance management systems
 Labor relations & collective bargaining
 Current and future perspectives, issues, and trends

1. Ability to demonstrate a breadth and depth of understanding that encompasses the conceptual foundations of the recreation and recreation therapy professions in relation to:

Historical development including both profession and infrastructure advancement
 Key developmental pioneers
 Philosophies, theories, models, and constructs that govern and or direct the provision of services in contemporary society

Cultural, social, and economic roles and impacts of recreation in contemporary society

Defining leisure and recreation behavior

Social and behavior science underpinnings

Breadth and depth of the various types of service provisions in contemporary society

Current and future perspectives, issues, and trends

PhD in Exercise Science

The school of exercise and rehabilitation sciences provides qualified students with the opportunity to pursue coursework and research leading to the doctor of philosophy in exercise science. Students work closely with a faculty mentor to design a program that is consistent with the mentor's research focus and that meets the unique needs of the student. This includes courses, seminars, independent study and research, and may reflect a secondary area of specialization (cognate) that some students choose to pursue. Areas of research include:

- muscle physiology,
- cardiovascular physiology,
- biomechanics of human movement,
- sports injury and rehabilitation.

Typically, graduates of this program go on to pursue careers in higher education teaching and research or post-doctoral research in areas related to their area of specialization.

A unique feature of the program is the possibility for students in the university's doctorate in physical therapy and the occupational therapy doctorate programs to combine either of these programs with work leading to the completion of the doctor of philosophy in exercise science degree. This option is ideal for students who wish to pursue a career in academics and research relating to physical or occupational therapy.

Prospective students are considered for admission to the doctoral program on the basis of the following:

- the individual's previous academic training: admitted students will typically have a master's degree in exercise science or a closely related area.
- the individual's academic record: the applicant's undergraduate and graduate academic record should demonstrate the ability for high-level scholarship.
- the applicant's scores on the Graduate Record Exam (GRE): applicants should have a combined (quantitative and verbal) GRE score above the 50 percentile and outstanding writing.
- the applicant's letters of recommendation: three letters are required from individuals qualified to assess the applicant's potential for success in doctoral education.
- the applicant's intended area of study: applicants must identify their intended area of study within the Ph.D. program and be selected as an advisee by faculty member working in that area.

Students enrolled in the first year of study in the doctor of physical therapy or the occupational therapy doctorate should apply for the doctor of philosophy in exercise science. In addition to the admission criteria above, a faculty member from the student's clinical doctoral program

should provide a letter of recommendation and be willing to serve as mentor to the student.

The doctor of philosophy in exercise science requires a minimum of 72 post-master's credits for completion; all students complete a dissertation as part of the degree process. Of the 72 credits, a minimum of 36 credits will be composed of coursework and an additional minimum of 36 credits will comprise dissertation. All prospective applicants should contact a faculty member in the department of kinesiology to discuss their interests and plans.

Students work closely with a faculty mentor to design a program that meets the unique needs of the individual. The program of study typically requires four years of full-time study. The dual degree program with the clinical doctoral degrees in occupational therapy and physical therapy provide a limited number of courses and competencies that meet the requirements of both degrees.

Doctor of Physical Therapy Program

The doctor in physical therapy (DPT) program at The University of Toledo is fully accredited by the Commission on Accreditation in Physical Therapy Education (CAPTE). The degree consists of 94 credit hours spanning 36 months beyond the bachelor's degree. Upon successful completion of the doctor of physical therapy program, graduates are eligible to take the national licensure examination.

The deadline for applications for the DPT program at UT is October 1st prior to the year of anticipated matriculation into the program (the program begins with summer enrollment).

Seven out of the ten prerequisite courses **MUST** be completed at the time of application (see list below). Since the deadline to apply to UT's DPT Program is October 1, the 7 out of 10 prerequisite courses must be completed **BEFORE** fall semester.

The University of Toledo participates in the Physical Therapist Centralized Application System (PTCAS). Please use their website to apply to our program (www.ptcas.org (<http://www.ptcas.org>)).

- Bachelor's degree from an accredited institution
- Minimum cumulative GPA of 3.3
- Minimum prerequisite GPA of 3.0
- Prerequisites include:
 - One course in **each** of the following:
 - Human Anatomy with lab¹
 - Human Physiology with lab¹
 - General Psychology
 - Statistics
 - Two (2) courses on a semester-based system in **each** of the following:
 - Biology for science majors with lab
 - Chemistry for science majors with lab
 - Physics (algebra-based)
- The following courses are highly recommended: Exercise Physiology with lab, Technical Writing

- Three letters of recommendation; one must be from a physical therapist and one from a professor (or employer if you are not currently a student)
- Interview
- Knowledge of the field of physical therapy
- Shadowing a physical therapist is highly recommended to obtain knowledge of the field; however, there is not a minimum number of hours of observation or shadowing required

¹ Or two course sequence in Human Anatomy and Physiology.

Criminal Background Check Policy

All incoming physical therapy students are required to complete both an Ohio BCI&I check and a FBI criminal background check. In the event that the background check report identifies a history of criminal activity, the student may be at risk for not being able to successfully complete the required clinical education requirements of the DPT program. Successful completion of all designated clinical practicums and clinical internships is a graduation requirement for a DPT degree. Further, students with a criminal background may be "at risk" for not meeting Physical Therapy licensure eligibility requirements in some states due to a felony conviction.

Each student, while enrolled in the didactic and clinical portions of the physical therapy curriculum, is required to complete various immunizations, titers, tests, and a physical examination each year as specified in the Student Health Form Packet in the DPT Program Student Handbook. Students are prohibited to engage in laboratory activities or to attend clinical facilities if this information is not on file for the current year.

It should also be noted that some clinical education sites have additional health requirements (flu shots, drug screens, etc.). When these are known in advance, the program will inform the student of any additional health requirements. However, during preparations for upcoming clinicals, the student is responsible for checking with the Clinical Coordinator for Clinical Education to determine if there are any additional health requirements. It is recommended that this process be initiated approximately 4-6 weeks prior to the start of the clinical to allow adequate time for completion of any additional health requirements. If the student does not complete the additional requirements of the clinical site, the student is prohibited from attending that facility for their clinical education experience.

All expenses incurred in obtaining a physical, necessary laboratory tests, immunizations and additional health requirements are the responsibility of the student.

Essential Functions

The University of Toledo admits and matriculates qualified physical therapy students in accordance with the UT Policy of Nondiscrimination on the Basis of a Disability – The Americans with Disabilities Act, Section 504 of the Rehabilitation Act of 1973, The State of Ohio Revised Code, and other applicable statutes and regulations relating to equality of opportunity. UT prohibits discrimination against anyone on the basis of disability and is committed to equal access for all qualified applicants and students.

A physical therapist must have the knowledge and skills to function in a broad variety of clinical settings and to render care to a wide spectrum of patients/clients. Performing successfully as a student physical therapist involves completing significant intellectual, social and physical tasks throughout the curriculum. Students must master a broad array of basic knowledge, skills, and behaviors, including abilities in the areas of judgment, integrity, character, professional attitude and demeanor. To master these skills and behaviors, candidates/students must possess, at a minimum, abilities and skills in observation, communication, motor function, intellectual-conceptualization, behavioral and social skills. These abilities and skills comprise the categories of UT physical therapy program's 'Essential Functions of a Physical Therapy Student for Matriculation, and Graduation' which are further described and defined in the Student Handbook located on the DPT program website.

The essential functions provide information to allow a candidate to make an informed decision for application and are a guide to accommodation of students with disabilities. Academic adjustments can be made for disabilities in some instances, but a student must be able to perform the essential functions of the physical therapy program independently either with or without reasonable accommodation.

In adopting these standards, the UT physical therapy program believes it must keep in mind the ultimate safety of both students and patients who may be involved in the course of a student's education. The essential functions reflect what the physical therapy program believes are reasonable expectations for physical therapy students learning and performing patient care.

Hours		6

Total Hours 95

1. Select the most accurate response to questioning that is supported by contemporary concepts and evidence-based practice.
2. Defend critical thinking used to justify competent decisions in patient management.
3. Develop safe and effective plans for management of physical therapy diagnosis and movement dysfunction in patients across the lifespan.
4. Weigh individualized psychosocial factors, diversity, and cultural competence to provide sensitive and effective patient management across the lifespan.
5. Select the best tests and measures to examine movement dysfunction and inform the patient management across the lifespan.
6. Design and implement safe and effective individualized plans for the management of physical therapy diagnoses and movement dysfunction in patients across the lifespan.
7. Practice and delegate responsibilities in a safe, ethical, and legal manner.

8. Formulate a question relevant to patient management to facilitate a search of the current body of literature.
9. Critique the body of knowledge guiding physical therapy practice.
10. Appraise the results in the literature to inform clinical reasoning for individualized, patient care decisions.
11. Facilitate effective, respectful discussions among patients, families, and team members.
12. Engage in effective collaboration for shared decision making.
13. Collaborate with the patient, family, or other health professionals to gather relevant clinical information to formulate a plan of care in a variety of practice settings.
14. Participate in activism that advances the profession of physical therapy.
15. Defend the need for physical therapy services in patients across the lifespan.
16. Generate a plan for community engagement in service beyond job responsibilities.
17. Deliver competent and compassionate services designed to meet the physical therapy needs of individuals and the community.
18. Support events to promote health and wellness in one's community.
19. Self-assess to identify needs for continued personal and professional development throughout one's career.
20. Plan for participation in continuing education to maintain life-long learning and continuing competence.

Occupational Therapy Doctorate

The occupational therapy program provides a sequence of coursework, field placements, and capstone experiences that culminate in the occupational therapy doctorate (OTD). The University of Toledo offered the first OTD in Ohio and the first OTD program in the nation at a public institution. The OTD program is accredited by the:

Accreditation Council for Occupational Therapy Education of the American Occupational Therapy Association
6116 Executive Boulevard, Suite 200
North Bethesda, MD
20852-4929
www.acoteonline.org (<http://www.acoteonline.org>)

Graduates of the program will be eligible to sit for the national certification examination for the occupational therapist, administered by the National Board for Certification in Occupational Therapy (NBCOT). After successful completion of this exam, the graduate will be an occupational therapist, registered (OTR). In addition, most states require licensure to practice; however state licenses are usually based on the results of the NBCOT certification examination. A felony conviction may affect a graduate's ability to sit for the NBCOT certification examination or attain state licensure.

Due to the sequential nature of the curriculum, matriculation to the OTD program occurs fall semester only. **Applications may be submitted after July 15th for admission the following academic year.** If you have questions, please contact us at occtherapydoctorate@utoledo.edu or 419.530.6670.

The following criteria are used for admission:

- Bachelor degree in any field of study with a minimum cumulative GPA of 3.0 at graduation. The Bachelor degree must be completed prior to starting the program, NOT prior to application.
- GRE with minimum mean percentile rank of 33% across all three sections.
- Completion of the OT Centralized Application System (OTCAS) and payment of fee.
- Completion of The University of Toledo's OTD supplemental application and payment of fee (including the Prerequisite Completion Plan form and Writing Sample).
- Prerequisites: Applicants must receive a B- or better in all prerequisite courses. Prerequisite courses must be completed prior to starting the program, NOT prior to application:
 - Introductory Biology (3 semester or 4 quarter credits), Lab required
 - Human Anatomy and Physiology (6 semester or 8 quarter credits). Lab required, however, if Anatomy and Physiology are taken as separate courses, we require a lab for Anatomy but not Physiology
 - Introduction to Psychology (3 semester or 4 quarter credits)
 - Abnormal Psychology (3 semester or 4 quarter credits)
 - Introduction to Sociology or Anthropology (3 semester or 4 quarter credits)
 - Medical Terminology (course or proficiency test)
 - Statistics (3 semester or 4 quarter credits)
 - Lifespan Human Development: You may meet this requirement by EITHER:
 - i. obtaining a B- or better in a Lifespan Human Development course (3 semester or 4 quarter credits) that covers human development from birth to death OR
 - ii. obtaining a B- or better in both a Child Development (3 semester or 4 quarter credits) course AND a Gerontology/ Psychology of Aging course (3 semester or 4 quarter credits)
 - UT Writing Sample (found within The University of Toledo's OTD supplemental). This is not the *same* as the Personal Statement that is part of the OTCAS application.
- Three letters of recommendation (submitted through the OTCAS application only).
- Communicate orally and in writing to complete individual and group assignments at the graduate level including papers, exams, presentations, projects, and demonstrations;
- Maintain interpersonal relationships with instructors, faculty, advisors, mentors, fieldwork educators, classmates, peers, and clients;
- Commit time and effort to complete independent and group work according to timelines and due dates;
- Manage and prioritize multiple concurrent demands;
- Maintain access to and use current technologies to engage with learning materials, submit work, and engage in clinical practices;
- Be punctual and attend class, practicum experiences, and fieldwork at both on- and off-campus locations, including necessary transportation and on-site mobility;
- Demonstrate a realistic understanding of the field of occupational therapy including the scope and diversity of the profession and the requirements of therapists in their day to day work;
- Demonstrate the willingness and ability to assume responsibilities for the full spectrum of occupational therapy services;
- Meet health requirements including specific vaccinations and screenings. (A detailed list of these requirements can be obtained from the program. It is the applicant's responsibility to inquire as to inquire as to the implications of any individual health related circumstances.);
- Respond adequately to the health and safety needs of clients/ patients, including
 - Complete training in cardiopulmonary resuscitation,
 - Have knowledge of Center for Disease Control standards for infectious control, and
 - Respond appropriately to emergency situations in classrooms, practicum sites, and fieldwork placements.
- Submit to criminal background checks. Results may be required for fieldwork placement. Applicants/students with a criminal history may want to consult with respective licensing boards regarding their ability to obtain professional licensure.
- Maintain personal/professional records.

NOTE: You must apply via <http://portal.otcas.org> to access the OTCAS application. The University of Toledo's OTD supplemental application is available at apply.utoledo.edu (<http://apply.utoledo.edu>). The OTCAS portal and UT Supplemental application opens in mid-July for each admission cycle. Refer to the UT Occupational Therapy webpage for detailed admission requirements.

The Program Technical Standards for the Occupational Therapy Doctoral Program can be found published on the program's website at utoledo.edu/hhs/ot/program/standards.html (<https://www.utoledo.edu/hhs/ot/program/standards.html>). Students interested in pursuing admission to the program are highly encouraged to refer to these standards in their entirety. However, a brief synopsis of the technical standards are as follows:

In order to successfully complete the Program, students are required to:

We urge applicants to ask questions about the program's technical standards for clarification and to determine whether they can meet the requirements with or without reasonable accommodations. Such questions may be directed to the program director or the Academic Enrichment Center on campus. Revealing a disability is voluntary; however, such disclosure is necessary before any accommodations may be made in the learning environment or in the program's procedures. We handle disability-related information in a confidential manner. We expect that any student who requires accommodation to attain course objectives will notify the course instructor at the first opportunity. Reasonable accommodations will comply with the Americans with Disabilities Act and require program and institutional approvals.

Unique features of the program include fieldwork or experiential opportunities in every semester, and the opportunity to complete an

individualized capstone to develop specialized skills in a practice area of choice, and an individual research project.

OCCT 8900	Mentored Capstone Dissemination	3

OCCT 8910	Mentored Studies:Capstone Area (or Elective in Capstone Area)	3
Hours		15
Total Hours		95

Note. Student must complete all Level II fieldwork within 24 months following didactic portion of the program. The capstone experience must be completed with 12 months following completion of Level II fieldwork.

PRACTICE: 1. Compare, contrast and evaluate models of practice and integrate them with the Occupational Therapy Practice Framework. 2. Examine the interactions between occupations, client factors, performance skills, performance patterns, and contexts and environments. 3/ Describe the relationship between human development and occupation from a life span perspective. 4. Distinguish the relationships between wellness and occupation, identify at risk populations and implement occupation-based interventions to enhance wellness and prevent disease. 5. Investigate and grade the demands of an occupation, reflecting the specific body structures, body functions, performance skills, and performance patterns that are required to successfully engage in occupation. 6. Interpret screening, assessment, and occupational profile data to evaluate clients occupational performance. 7. Interpret evaluation results to diagnose problems related to occupational performance and participation. 8. Illustrate collaboration with clients to develop individualized goals for occupational performance and implement interventions to achieve them. 9. Practice occupational therapy services consistent with clients needs and context, including reassessment and discharge. 10. Show how to effectively communicate and educate via written, oral, and nonverbal means, with clients, family members, significant others, team members, and the community at large. 11. Demonstrate therapeutic use of self, including personality, insights, perceptions, and judgments, as part of the therapeutic process. 12. Show how to effectively and professionally document all aspects of the occupational therapy process. 13. Recognize and apply codes, guidelines, policies, and standards of practice put forth by AOTA and regulatory bodies. 14. Apply accepted Practice Standards regarding supervision of and collaboration with occupational therapy assistants. **ADVOCACY:** 15. Evaluate and judge the relevance of current socio-political, legal, economic, international, geographic, demographic, and health disparity issues and trends, including as they affect occupational therapy practice. 16. Justify, design, and engage in initiatives that meet society s occupational needs within existing organizations and through new, entrepreneurial services and programs (e.g., private practice) to move the profession of occupational therapy forward as an integral discipline in health care, human services, and education. 17. Apply principles of management, administration, and supervision (e.g., COTAs, students, other rehabilitation personnel, volunteers) into a personal framework for directing and developing occupational therapy services, personnel, and programs. 18. Choose, design, and implement teaching/learning experiences for a variety of audiences. 19. Practice in collaborative interprofessional practice to improve service delivery in complex systems and organizations. 20. Demonstrate advocacy efforts for clients and the profession to influence practice, legislation, policies, and reimbursement funding. **RESEARCH:** 21. Use principles of research design to describe, analyze, critique, and interpret research protocols and articles relevant to the field of occupational therapy. 22. Interpret research findings to enhance their practice and promote research in the profession at multiple levels

including collaboration with independent researchers. 23. Produce and disseminate guided, individualized, scholarly projects. 24. Identify specific ways that occupational therapists can contribute to occupational therapy research, including initiation of research, collaboration in research, participation in advanced studies, application for grants, and support of research as a member of the profession of occupational therapy. 25. Explain, apply, and demonstrate professional ethics as they are pertinent to laws and institutional policies that govern client confidentiality and rights of research participants.

AUTONOMOUS DECISION MAKING: 26. Recognize and accept personal responsibility for life-long learning, professional behavior, and demeanor through reflective practice. 27. Develop skill in seeking out information (e.g., library resources, electronic media, internet searches) to compile evidence in support of practice, advocacy, and research. 28. Show leadership skills and guide the profession by disseminating research, conducting presentations, and assuming leadership and mentorship roles, including fieldwork education.

MA in Speech Language Pathology

The graduate program provides students with the necessary coursework and clinical practicum experience to attain a master of arts in speech-language pathology that is applicable toward the Certification of Clinical Competence (CCC-SLP) by the American Speech-Language-Hearing Association (ASHA) and state licensure in the area of speech-language pathology. In addition to successful completion of the master's degree requirements, the certification and licensure processes include successful completion of the national specialty examination in speech-language pathology and a clinical fellowship (professional experience year).

The graduate program in speech-language pathology is accredited by the Council of Academic Accreditation in Audiology and Speech-Language Pathology (CAA). The speech-language pathology program is dedicated to the development of competent and caring entry-level speech-language pathologists. The program is committed to providing a broad foundation of normal bases of speech, language, and hearing and specialized coursework in the assessment and remediation of speech and language disorders. The program provides coursework and practicum experiences with a diverse population to ensure that students demonstrate knowledge and skill competencies to provide services to children and adults with communication disorders.

Undergraduate students with a degree in speech-language pathology will be considered for entry into the graduate program. Students without adequate undergraduate preparation in speech-language pathology will need to complete a series of leveling courses in the major as an undergraduate with degree (UWD). The UWD program is available at the University of Toledo.

The deadline for completed applications for enrollment in the graduate Speech-Language Pathology program is December 15 of every academic year. Applications received after December 15 may not receive full consideration.

Applications should be made directly to the Communication Sciences and Disorders Centralized Application System (<http://www.capsd.org/csdcas-student-page/>); additionally, a supplemental application should be completed through The University of Toledo College of Graduate Studies.

NOTE: It is the responsibility of the student to monitor his or her application status to insure that all required materials are posted by CSDCAS before the deadline date of December 15. Students may work with the Communication Sciences and Disorders Centralized Application System to insure that all materials are posted before the deadline, or notify the speech-language pathology program in the event that materials are lost. Similarly, students must monitor the supplemental application status to insure that all materials are posted before the deadline date of December 15. Failure to do so may result in an incomplete application that is not reviewed.

Acceptance into the ASHA accredited speech-language pathology graduate program is highly competitive. Consequently, many factors are taken into consideration when selecting an applicant for acceptance into the program. These factors include, but are not limited to:

- undergraduate preparation in the field;
- cumulative grade point average (highest consideration for ≥ 3.5);
- grade point in the major (highest consideration for ≥ 3.5);
- potential to successfully complete the graduate program;
- quality of references (require 3);
- personal essay (statement of purpose);
- oral and written language skills;
- interview (by invitation); and
- Graduate Record Examination (GRE)

Highest consideration will be given to those with a score above the 40th percentile on the Verbal and the Quantitative sections and a GRE writing score > 4.0 . A writing score below 3.5 is not acceptable, and applications with a GRE writing score of 3.0 or below will not be given regular admission. Students are encouraged to retake the GRE to improve their scores if they fall below the required scores.

Each student, while enrolled in the didactic and clinical portions of the speech-language pathology curriculum, is required to complete various immunizations, titers, tests, and a physical examination each year as specified in the Student Health Form Packet in the Speech-Language Pathology Program Student Handbook. Required immunizations include Positive MMR titers, Positive Varicella titer, Positive Hep B titer, Hep B Vaccination Series, Current Tdap, 2-step Initial TB test, and 1-step Annual TB test. All speech-language students are required to complete both an Ohio BCI check and an FBI criminal background check prior to participating in any clinical experiences. Students are prohibited from engaging in laboratory activities or attending clinical facilities if this information is not on file for the current year. For details, see: <http://www.utoledo.edu/hhs/speech/formsandhandbook.html>

It should also be noted that some clinical education sites have additional health requirements (flu shots, drug screens, etc.). All expenses incurred in obtaining a physical, necessary laboratory tests, immunizations and additional health requirements are the responsibility of the student.

Essential Functions

The University of Toledo admits and matriculates qualified speech-language pathology students in accordance with the UT Policy of Nondiscrimination on the Basis of a Disability – The Americans with Disabilities Act, Section 504 of the Rehabilitation Act of 1973, The State

of Ohio Revised Code, and other applicable statutes and regulations relating to equality of opportunity.

The Essential Functions provide information to allow a candidate to make an informed decision for application and are a guide to accommodation of students with disabilities. Academic adjustments can be made for disabilities in some instances, but a student must be able to perform the essential functions of a speech-language pathologist independently either with or without reasonable accommodation.

Many physical, behavioral and social, and cognitive and intellectual abilities are necessary for satisfactory mastery of the academic and clinical curriculum and professional responsibilities in the field of speech-language pathology. Essential physical abilities include, but are not limited to, the ability to visually and auditorily monitor patient responses and materials and to make judgments about patient health based on these perceptions. Examples of behavioral and social attributes include maintaining emotional and mental health necessary to use one's intellectual abilities, to promptly complete responsibilities, and to develop appropriate relationships with faculty, supervisors, staff, peers, clients, parents or caregivers, and other professionals. Essential cognitive and intellectual abilities include, among others, demonstrating the mental capacity to learn and assimilate professional information, including the ability to comprehend oral and written professional literature and reports; ability to write discipline-specific papers and clinical reports in Standard American English; ability to speak Standard American English intelligibly and to discriminate correct production of and model Standard American English phonemes, vocabulary, grammatical forms, and prosodic patterns.

We urge applicants to ask questions about the program's technical standards for clarification and to determine whether they can meet the requirements with or without reasonable accommodations. Such questions may be directed to the Program Director or the Academic Enrichment Center on campus.

First Year		Hours
SLP 6000	Advanced Practicum In Communication Disorders	2
SLP 6001	Advanced Practicum in Communication Disorders II	2
SLP 6002	Advanced Practicum III	2
SLP 6010	Diagnostic Practicum In Communication Disorders	2

SLP 6940	Adult Internship In Speech-Language Pathology	6
SLP 6941	Pediatric Internship in Speech-Language Pathology	6
Hours		18
Total Hours		62

Students are divided into two cohort groups/tracks (Gold and Blue). While all students will graduate having the same didactic and clinical requirements, the two cohorts will go through a different sequence of courses. In addition to the academic requirements of the degree, students must enroll in graduate credits to complete multiple clinical experiences including on-campus clinical practica as well as a minimum of internships to meet clinical requirements for certification. Students may choose between a thesis and a comprehensive examination.

The following programs of study assume no deficiencies in normal bases of speech/language/audiology requirements exist.

Plan of Study

Knowledge outcomes

IV A: The applicant must have demonstrated knowledge of the biological sciences, physical sciences, statistics, and the social/behavioral sciences.

IV B: The applicant must have demonstrated knowledge of basic human communication and swallowing processes, including the appropriate biological, neurological, acoustic, psychological, developmental, and linguistic and cultural bases. The applicant must have demonstrated the ability to integrate information pertaining to normal and abnormal human development across the life span.

IV C: The applicant must have demonstrated knowledge of communication and swallowing disorders and differences, including the appropriate etiologies, characteristics, anatomical/physiological, acoustic, psychological, developmental, and linguistic and cultural correlates in the following areas:

Skills Outcome

V A: The applicant must have demonstrated skills in oral and written or other forms of communication sufficient for entry into professional practice.

V B: The applicant for certification must have completed a program of study that included experiences sufficient in breadth and depth to achieve the following skills outcomes:

Evaluation, Intervention, Interaction and Personal Qualities

V C: The applicant for certification in speech-language pathology must complete a minimum of 400 clock hours of supervised clinical experience in the practice of speech-language pathology. Twenty-five hours must be spent in clinical observation, and 375 hours must be spent in direct client/patient contact.

V D: At least 325 of the 400 clock hours must be completed while the applicant is engaged in graduate study in a program accredited in speech-language pathology by the Council on Academic Accreditation in Audiology and Speech-Language Pathology.

V E: Supervision must be provided by individuals who hold the Certificate of Clinical Competence in the appropriate profession. The amount of direct supervision must be commensurate with the student's knowledge, skills, and experience, must not be less than 25% of the student's total contact with each client/patient, and must take place periodically throughout the practicum. Supervision must be sufficient to ensure the welfare of the client/patient.

V F: Supervised practicum must include experience with client/patient populations across the life span and from culturally/linguistically diverse backgrounds. Practicum must include experience with client/patient populations with various types and severities of communication and/or related disorders, differences, and disabilities.

Assessment

The applicant must have passed the national examination adopted by ASHA for purposes of certification in speech-language pathology.

MA in Counselor Education

The counselor education program offers a master of arts in counselor education with specializations in school counseling or clinical mental health counseling, and a doctoral degree in counselor education. All counselor education programs are nationally accredited by the Council for Accreditation of Counseling and Related Educational Programs (CACREP).

The clinical mental health counseling program prepares graduates for licensure in Ohio as professional counselors or professional clinical counselors and is approved by the Ohio Counselor, Social Worker, and Marriage & Family Therapist Board. Graduates work as counselors in community mental health agencies, hospitals, college counseling centers, or in private practice. The school counseling specialization prepares graduates to work in K-12 schools. It is accredited by the Council for Accreditation of Counseling and Related Educational Programs and is approved by the Ohio Department of Education. The master's degree in school counseling meets the academic requirements for K-12 school counselor licensure in Ohio and other states. Neither Ohio nor Michigan requires applicants to have teacher certification to be licensed as a school counselor. Applicants expecting to practice outside of Ohio or Michigan should consult that state's department of education to determine current certification or licensure requirements. The doctor of philosophy in counselor education prepares graduates as counselor educators in colleges and universities, and as counselors, supervisors or directors in agencies, or as private practitioners. The counselor education programs meet educational requirements for licensure or certification in Ohio, Michigan and most other states.

School Counseling Licensure Endorsement Program

Any licensed or license-eligible professional counselor or professional clinical counselor or any student in the clinical mental health counseling program who wants school counselor licensure, but is not seeking admission to the master's degree in school counseling, must apply for admission to the school counseling licensure endorsement program. The application consists of an application form, official transcripts of graduate work in counseling, three letters of recommendation, and a personal statement clarifying the reasons the applicant wishes to become a licensed school counselor. The applicant may be required to appear for an interview. Students must be admitted to the endorsement program before they will be permitted to enroll in the required 600 clock-hour internship.

Master of Arts in Counselor Education: Clinical Mental Health Counseling

The master's degree in the area of clinical mental health counseling is a prerequisite for licensure as a professional counselor or professional clinical counselor in Ohio and other states. It is accredited by the Council for Accreditation of Counseling and Related Educational Programs and is approved by the Ohio Counselor, Social Worker, Marriage and Family Therapist Board. This degree prepares students to work in mental health agencies, substance abuse agencies, private practice, and a wide variety of settings including hospitals, colleges, and the criminal justice system. Applicants expecting to practice outside Ohio or Michigan should consult that state's counseling board to determine current certification or licensure requirements.

Master of Arts in Counselor Education: School Counseling Program

Admission

The application deadlines are September 15, January 15, or May 15.

To apply to the program, applicants must meet all requirements of the College of Graduate Studies and submit the following materials to the College of Graduate Studies:

- College of Graduate Studies application for the master's degree in school counseling
- Transcripts of an undergraduate degree with a 3.0 or equivalent cumulative grade point average on a 4-point scale for all undergraduate study at all institutions attended.
- An official Graduate Record Examination (GRE) score taken within the last five years is required for persons whose undergraduate GPA is below 2.7.
 - Applicants holding a doctoral degree from an accredited college or university are automatically excluded from the requirement to submit an official Graduate Record Examination score.
 - Applicants holding a master's degree from an accredited college or university and whose cumulative graduate course work meets or exceeds 3.5 on a 4.0 scale are automatically excluded from the requirement to submit an official Graduate Record Examination score.
- A typed, written personal statement (suggested length 2-3 pages) detailing significant personal and professional experiences that relate to the applicant's decision to pursue a career in counseling (e.g., rationale for seeking degree, commitment to counseling as a profession). The personal statement should also address such topics as the applicant's skills or knowledge, preparation through education and/or experience, strengths and weaknesses, rationale for academic deficiencies, etc.
- A professional résumé
- Three letters of recommendation, at least one of which must address the applicant's academic potential (i.e. from a university faculty member)

To be consistent with national training standards and to ensure sufficient faculty members to advise and mentor students, a limited number of applicants will be admitted into the program each year. As a result, admission is competitive. Applicants who pass the initial screening

are required to interview with an admissions committee. For more information or to ask questions, contact:

Master of Arts in Counselor Education: Clinical Mental Health Counseling

The curriculum leading to the master of arts degree in counselor education with a specialization in clinical mental health counseling consists of a minimum of 60 semester hours. Applicants seeking licensure as professional counselors or professional clinical counselors in Ohio need to insure that at least 20 of their 60 semester hours of study meet the five areas of clinical practice required by the Ohio Counselor, Social Worker, and Marriage and Family Therapist Board.

PROFESSIONAL ORIENTATION AND ETHICAL PRACTICE

Studies that provide an understanding of all of the following aspects of professional functioning:

- 1.a. history and philosophy of the counseling profession;
- 1.b. professional roles, functions, and relationships with other human service providers, including strategies for interagency/interorganization collaboration and communications;
- 1.c. counselors roles and responsibilities as members of an interdisciplinary emergency management response team during a local, regional, or national crisis, disaster or other trauma-causing event;
- 1.d. self-care strategies appropriate to the counselor role;
- 1.e. counseling supervision models, practices, and processes;
- 1.f. professional organizations, including membership benefits, activities, services to members, and current issues;
- 1.g. professional credentialing, including certification, licensure, and accreditation practices and standards, and the effects of public policy on these issues;
- 1.h. the role and process of the professional counselor advocating on behalf of the profession;
- 1.i. advocacy processes needed to address institutional and social barriers that impede access, equity, and success for clients; and
- 1.j. ethical standards of professional organizations and credentialing bodies, and applications of ethical and legal considerations in professional counseling.

SOCIAL AND CULTURAL DIVERSITY

Studies that provide an understanding of the cultural context of relationships, issues, and trends in a multicultural society, including all of the following:

- 2.a. multicultural and pluralistic trends, including characteristics and concerns within and among diverse groups nationally and internationally;
- 2.b. attitudes, beliefs, understandings, and acculturative experiences, including specific experiential learning activities designed to foster students understanding of self and culturally diverse clients;
- 2.c. theories of multicultural counseling, identity development, and social justice;
- 2.d. individual, couple, family, group, and community strategies for working with and advocating for diverse populations, including multicultural competencies;
- 2.e. counselors roles in developing cultural self-awareness, promoting cultural social justice, advocacy and conflict resolution, and other culturally supported behaviors that promote optimal wellness and growth of the human spirit, mind, or body;
- 2.f. counselors roles in eliminating biases, prejudices, and processes of intentional and unintentional oppression and discrimination.

HUMAN GROWTH AND DEVELOPMENT

Studies that provide an understanding of the nature and needs of persons at all developmental levels and in multicultural contexts, including all of the following:

- 3.a. theories of individual and family development and transitions across the life span;
- 3.b. theories of learning and personality development, including current understandings about neurobiological behavior;
- 3.c. effects of crises, disasters, and other trauma-causing events on persons of all ages;
- 3.d. theories and models of individual, cultural, couple, family, and community resilience;
- 3.e. a general framework for understanding exceptional abilities and strategies for differentiated interventions;
- 3.f. human behavior, including an understanding of developmental crises, disability, psychopathology, and situational and environmental factors that affect both normal and abnormal behavior;
- 3.g. theories and etiology of addictions and addictive behaviors, including strategies for prevention, intervention, and treatment;
- 3.h. theories for facilitating optimal development and wellness over the life span.

CAREER DEVELOPMENT

Studies that provide an understanding of career development and related life factors, including all of the following:

- 4.a. career development theories and decision-making models;
- 4.b. career, avocational, educational, occupational and labor market information resources, and career information systems;
- 4.c. career development program planning, organization, implementation, administration, and evaluation;
- 4.d. interrelationships among and between work, family, and other life roles and factors, including the role of multicultural issues in career development;
- 4.e. career and educational planning, placement, follow-up, and evaluation;
- 4.f. assessment instruments and techniques relevant to career planning and decision making;
- 4.g. career counseling processes, techniques, and resources, including those applicable to specific populations in a global economy.

HELPING RELATIONSHIPS

Studies that provide an understanding of the counseling process in a multicultural society, including all of the following:

- 5.a. an orientation to wellness and prevention as desired counseling goals;
- 5.b. counselor characteristics and behaviors that influence helping processes;
- 5.c. essential interviewing and counseling skills;
- 5.d. counseling theories that provide the student with models to conceptualize client presentation and that help the student select appropriate counseling interventions. Students will be exposed to models of counseling that are consistent with current professional research and practice in the field so they begin to develop a personal model of counseling;
- 5.e. a systems perspective that provides an understanding of family and other systems theories and major models of family and related interventions;
- 5.f. a general framework for understanding and practicing consultation;
- 5.g. crisis intervention and suicide prevention models, including the use of psychological first aid strategies.

GROUP WORK

Studies that provide both theoretical and experiential understandings of group purpose, development, dynamics, theories, methods, skills, and other group approaches in a multicultural society, including all of the following:

- 6.a. principles of group dynamics, including group process components, developmental stage theories, group members roles and behaviors, and therapeutic factors of group work;
- 6.b. group leadership or facilitation styles and approaches, including characteristics of various types of group leaders and leadership styles;
- 6.c. theories of group counseling, including commonalities, distinguishing characteristics, and pertinent research and literature;
- 6.d. group counseling methods, including group counselor orientations and behaviors, appropriate selection criteria and methods, and methods of evaluation of effectiveness;
- 6.e. direct experiences in which students participate as group members in a small group activity, approved by the program, for a minimum of 10 clock hours over the course of one academic term.

ASSESSMENT

Studies that provide an understanding of individual and group approaches to assessment and evaluation in a multicultural society, including all of the following:

- 7. a. historical perspectives concerning the nature and meaning of assessment;
- 7. b. basic concepts of standardized and nonstandardized testing and other assessment techniques, including norm-referenced and criterion-referenced assessment, environmental assessment, performance assessment, individual and group test and inventory methods, psychological testing, and behavioral observations;
- 7. c. statistical concepts, including scales of measurement, measures of central tendency, indices of variability, shapes and types of distributions, and correlations;
- 7. d. reliability (i.e., theory of measurement error, models of reliability, and the use of reliability information);
- 7. e. validity (i.e., evidence of validity, types of validity, and the relationship between reliability and validity);
- 7. f. social and cultural factors related to the assessment and evaluation of individuals, groups, and specific populations;

7. g. ethical strategies for selecting, administering, and interpreting assessment and evaluation instruments and techniques in counseling.

RESEARCH AND PROGRAM EVALUATION

Studies that provide an understanding of research methods, statistical analysis, needs assessment, and program evaluation, including all of the following:

- 8.a. the importance of research in advancing the counseling profession;
- 8.b. research methods such as qualitative, quantitative, single-case designs, action research, and outcome-based research;
- 8.c. statistical methods used in conducting research and program evaluation;
- 8.d. principles, models, and applications of needs assessment, program evaluation, and the use of findings to effect program modifications;
- 8.e. the use of research to inform evidence-based practice; and
- 8.f. ethical and culturally relevant strategies for interpreting and reporting the results of research and/or program evaluation studies.

FOUNDATIONS

A. Knowledge

- A.1. Knows history, philosophy, and trends in school counseling and educational systems.
- A.2 Understands ethical and legal considerations specifically related to the practice of school counseling.
- A.3 Knows roles, functions, settings, and professional identity of the school counselor in relation to the roles of other professional and support personnel in the school.
- A.4 Knows professional organizations, preparation standards, and credentials that are relevant to the practice of school counseling.
- A.5 Understands current models of school counseling programs (e.g., American School Counselor Association [ASCA] National Model) and their integral relationship to the total educational program.
- A.6 Understands the effects of (a) atypical growth and development, (b) health and wellness, (c) language, (d) ability level, (e) multicultural issues, and (f) factors of resiliency on student learning and development.
- A.7 Understands the operation of the school emergency management plan and the roles and responsibilities of the school counselor during crises, disasters, and other trauma-causing events.

B. Skills and Practices

- B.1 Demonstrates the ability to apply and adhere to ethical and legal standards in school counseling.
- B.2 Demonstrates the ability to articulate, model, and advocate for an appropriate school counselor identity and program.

COUNSELING, PREVENTION, AND INTERVENTION

C. Knowledge

- C.1 Knows the theories and processes of effective counseling and wellness programs for individual students and groups of students.
- C.2 Knows how to design, implement, manage, and evaluate programs to enhance the academic, career, and personal/social development of students.
- C.3 Knows strategies for helping students identify strengths and cope with environmental and developmental problems.
- C.4 Knows how to design, implement, manage, and evaluate transition programs, including school-to-work, postsecondary planning, and college admissions counseling.
- C.5 Understands group dynamics including counseling, psycho-educational, task, and peer helping groups and the facilitation of teams to enable students to overcome barriers and impediments to learning.

C.6 Understands the potential impact of crises, emergencies, and disasters on students, educators, and schools, and knows the skills needed for crisis intervention.

D. Skills and Practices

D.1. Demonstrates self-awareness, sensitivity to others, and the skills needed to relate to diverse individuals, groups, and classrooms.

D.2. Provides individual and group counseling and classroom guidance to promote the academic, career, and personal/social development of students.

D.3. Designs and implements prevention and intervention plans related to the effects of (a) atypical growth and development, (b) health and wellness, (c) language, (d) ability level, (e) multicultural issues, and (f) factors of resiliency on student learning and development.

D.4. Demonstrates the ability to use procedures for assessing and managing suicide risk.

D.5. Demonstrates the ability to recognize his or her limitations as a school counselor and to seek supervision or refer clients when appropriate.

DIVERSITY AND ADVOCACY

E. Knowledge

E.1 Understands the cultural, ethical, economic, legal, and political issues surrounding diversity, equity, and excellence in terms of student learning.

E.2 Identifies community, environmental, and institutional opportunities that enhance as well as barriers that impede the academic, career, and personal/social development of students.

E.3 Understands the ways in which educational policies, programs, and practices can be developed, adapted, and modified to be culturally congruent with the needs of students and their families.

E.4 Understands multicultural counseling issues, as well as the impact of ability levels, stereotyping, family, socioeconomic status, gender, and sexual identity, and their effects on student achievement.

F. Skills and Practices

F.1 Demonstrates multicultural competencies in relation to diversity, equity, and opportunity in student learning and development.

F.2 Advocates for the learning and academic experiences necessary to promote the academic, career, and personal/social development of students.

F.3 Advocates for school policies, programs, and services that enhance a positive school climate and are equitable and responsive to multicultural student populations.

F.4 Engages parents, guardians, and families to promote the academic, career, and personal/social development of students.

ASSESSMENT

G. Knowledge

G.1 Understands the influence of multiple factors (e.g., abuse, violence, eating disorders, attention deficit hyperactivity disorder, childhood depression) that may affect the personal, social, and academic functioning of students.

G.2 Knows the signs and symptoms of substance abuse in children and adolescents, as well as the signs and symptoms of living in a home where substance abuse occurs.

G.3 Identifies various forms of needs assessments for academic, career, and personal/social development.

H. Skills and Practices

H.1 Assesses and interprets students strengths and needs, recognizing uniqueness in cultures, languages, values, backgrounds, and abilities.

H.2 Selects appropriate assessment strategies that can be used to evaluate a student's academic, career, and personal/social development.

H.3 Analyzes assessment information in a manner that produces valid inferences when evaluating the needs of individual students and assessing the effectiveness of educational programs.

H.4 Makes appropriate referrals to school and/or community resources.

H.5 Assesses barriers that impede students' academic, career, and personal/social development.

RESEARCH AND EVALUATION

I. Knowledge

I.1 Understands how to critically evaluate research relevant to the practice of school counseling.

I.2 Knows models of program evaluation for school counseling programs.

I.3 Knows basic strategies for evaluating counseling outcomes in school counseling (e.g., behavioral observation, program evaluation).

I.4 Knows current methods of using data to inform decision making and accountability (e.g., school improvement plan, school report card).

I.5 Understands the outcome research data and best practices identified in the school counseling research literature.

J. Skills and Practices

J.1 Applies relevant research findings to inform the practice of school counseling.

J.2 Develops measurable outcomes for school counseling programs, activities, interventions, and experiences.

J.3 Analyzes and uses data to enhance school counseling programs.

ACADEMIC DEVELOPMENT

K. Knowledge

K.1 Understands the relationship of the school counseling program to the academic mission of the school.

K.2 Understands the concepts, principles, strategies, programs, and practices designed to close the achievement gap, promote student academic success, and prevent students from dropping out of school.

K.3 Understands curriculum design, lesson plan development, classroom management strategies, and differentiated instructional strategies for teaching counseling- and guidance-related material.

L. Skills and Practices

L.1 Conducts programs designed to enhance student academic development.

L.2 Implements strategies and activities to prepare students for a full range of postsecondary options and opportunities.

L.3 Implements differentiated instructional strategies that draw on subject matter and pedagogical content knowledge and skills to promote student achievement.

COLLABORATION AND CONSULTATION

M. Knowledge

M.1 Understands the ways in which student development, well-being, and learning are enhanced by family-school-community collaboration.

M.2 Knows strategies to promote, develop, and enhance effective teamwork within the school and the larger community.

M.3 Knows how to build effective working teams of school staff, parents, and community members to promote the academic, career, and personal/social development of students.

M.4 Understands systems theories, models, and processes of consultation in school system settings.

M.5 Knows strategies and methods for working with parents, guardians, families, and communities to empower them to act on behalf of their children.

M.6 Understands the various peer programming interventions (e.g., peer meditation, peer mentoring, peer tutoring) and how to coordinate them.

M.7 Knows school and community collaboration models for crisis/disaster preparedness and response.

N. Skills and Practices

- N.1 Works with parents, guardians, and families to act on behalf of their children to address problems that affect student success in school.
- N.2 Locates resources in the community that can be used in the school to improve student achievement and success.
- N.3 Consults with teachers, staff, and community-based organizations to promote student academic, career, and personal/social development.
- N.4 Uses peer helping strategies in the school counseling program.
- N.5 Uses referral procedures with helping agents in the community (e.g., mental health centers, businesses, service groups) to secure assistance for students and their families.

LEADERSHIP

O. Knowledge

- O.1 Knows the qualities, principles, skills, and styles of effective leadership.
- O.2 Knows strategies of leadership designed to enhance the learning environment of schools.
- O.3 Knows how to design, implement, manage, and evaluate a comprehensive school counseling program.
- O.4 Understands the important role of the school counselor as a system change agent.
- O.5 Understands the school counselor's role in student assistance programs, school leadership, curriculum, and advisory meetings.

P. Skills and Practices

- P.1 Participates in the design, implementation, management, and evaluation of a comprehensive developmental school counseling program.
- P.2 Plans and presents school-counseling-related educational programs for use with parents and teachers (e.g., parent education programs, materials used in classroom guidance and advisor/advisee programs for teachers).

FOUNDATIONS

A. Knowledge

- A.1 Understands the history, philosophy, and trends in clinical mental health counseling.
- A.2 Understands ethical and legal considerations specifically related to the practice of clinical mental health counseling.
- A.3 Understands the roles and functions of clinical mental health counselors in various practice settings and the importance of relationships between counselors and other professionals, including interdisciplinary treatment teams.
- A.4 Knows the professional organizations, preparation standards, and credentials relevant to the practice of clinical mental health counseling.
- A.5 Understands a variety of models and theories related to clinical mental health counseling, including the methods, models, and principles of clinical supervision.
- A.6 Recognizes the potential for substance use disorders to mimic and coexist with a variety of medical and psychological disorders.
- A.7 Is aware of professional issues that affect clinical mental health counselors (e.g., core provider status, expert witness status, access to and practice privileges within managed care systems).
- A.8 Understands the management of mental health services and programs, including areas such as administration, finance, and accountability.
- A.9 Understands the impact of crises, disasters, and other trauma-causing events on people.

A.10 Understands the operation of an emergency management system within clinical mental health agencies and in the community.

B. Skills and Practices

- B.1 Demonstrates the ability to apply and adhere to ethical and legal standards in clinical mental health counseling.
- B.2 Applies knowledge of public mental health policy, financing, and regulatory processes to improve service delivery opportunities in clinical mental health counseling.

COUNSELING, PREVENTION, AND INTERVENTION

C. Knowledge

- C.1 Describes the principles of mental health, including prevention, intervention, consultation, education, and advocacy, as well as the operation of programs and networks that promote mental health in a multicultural society.
- C.2 Knows the etiology, the diagnostic process and nomenclature, treatment, referral, and prevention of mental and emotional disorders.
- C.3 Knows the models, methods, and principles of program development and service delivery (e.g., support groups, peer facilitation training, parent education, self-help).
- C.4 Knows the disease concept and etiology of addiction and co-occurring disorders.
- C.5 Understands the range of mental health service delivery such as inpatient, outpatient, partial treatment and aftercare and the clinical mental health counseling services network.
- C.6 Understands the principles of crisis intervention for people during crises, disasters, and other trauma-causing events.
- C.7 Knows the principles, models, and documentation formats of biopsychosocial case conceptualization and treatment planning.
- C.8 Recognizes the importance of family, social networks, and community systems in the treatment of mental and emotional disorders.
- C.9 Understands professional issues relevant to the practice of clinical mental health counseling.

D. Skills and Practices

- D.1 Uses the principles and practices of diagnosis, treatment, referral, and prevention of mental and emotional disorders to initiate, maintain, and terminate counseling.
- D.2 Applies multicultural competencies to clinical mental health counseling involving case conceptualization, diagnosis, treatment, referral, and prevention of mental and emotional disorders.
- D.3 Promotes optimal human development, wellness, and mental health through prevention, education, and advocacy activities.
- D.4 Applies effective strategies to promote client understanding of and access to a variety of community resources.
- D.5 Demonstrates appropriate use of culturally responsive individual, couple, family, group, and systems modalities for initiating, maintaining, and terminating counseling.
- D.6 Demonstrates the ability to use procedures for assessing and managing suicide risk.
- D.7 Applies current record-keeping standards related to clinical mental health counseling.
- D.8 Provides appropriate counseling strategies when working with clients with addiction and co-occurring disorders.
- D.9 Demonstrates the ability to recognize his or her own limitations as a clinical mental health counselor and to seek supervision or refer clients when appropriate.

DIVERSITY AND ADVOCACY

E. Knowledge

E.1 Understands how living in a multicultural society affects clients who are seeking clinical mental health counseling services.

E.2 Understands the effects of racism, discrimination, sexism, power, privilege, and oppression on one's own life and career and those of the client.

E.3 Understands current literature that outlines theories, approaches, strategies, and techniques shown to be effective when working with specific populations of clients with mental and emotional disorders.

E.4 Understands effective strategies to support client advocacy and influence public policy and government relations on local, state, and national levels to enhance equity, increase funding, and promote programs that affect the practice of clinical mental health counseling.

E.5 Understands the implications of concepts such as internalized oppression and institutional racism, as well as the historical and current political climate regarding immigration, poverty, and welfare.

E.6 Knows public policies on the local, state, and national levels that affect the quality and accessibility of mental health services.

F. Skills and Practices

F.1 Maintains information regarding community resources to make appropriate referrals.

F.2 Advocates for policies, programs, and services that are equitable and responsive to the unique needs of clients.

F.3 Demonstrates the ability to modify counseling systems, theories, techniques, and interventions to make them culturally appropriate for diverse populations.

ASSESSMENT

G. Knowledge

G.1 Knows the principles and models of assessment, case conceptualization, theories of human development, and concepts of normalcy and psychopathology leading to diagnoses and appropriate counseling treatment plans.

G.2 Understands various models and approaches to clinical evaluation and their appropriate uses, including diagnostic interviews, mental status examinations, symptom inventories, and psychoeducational and personality assessments.

G.3 Understands basic classifications, indications, and contraindications of commonly prescribed psychopharmacological medications so that appropriate referrals can be made for medication evaluations and so that the side effects of such medications can be identified.

G.4 Identifies standard screening and assessment instruments for substance use disorders and process addictions.

H. Skills and Practices

H.1 Selects appropriate comprehensive assessment interventions to assist in diagnosis and treatment planning, with an awareness of cultural bias in the implementation and interpretation of assessment protocols.

H.2 Demonstrates skill in conducting an intake interview, a mental status evaluation, a biopsychosocial history, a mental health history, and a psychological assessment for treatment planning and caseload management.

H.3 Screens for addiction, aggression, and danger to self and/or others, as well as co-occurring mental disorders.

H.4 Applies the assessment of a client's stage of dependence, change, or recovery to determine the appropriate treatment modality and placement criteria within the continuum of care.

RESEARCH AND EVALUATION

I. Knowledge

I.1 Understands how to critically evaluate research relevant to the practice of clinical mental health counseling.

I.2 Knows models of program evaluation for clinical mental health programs.

I.3 Knows evidence-based treatments and basic strategies for evaluating counseling outcomes in clinical mental health counseling.

J. Skills and Practices

J.1 Applies relevant research findings to inform the practice of clinical mental health counseling.

J.2 Develops measurable outcomes for clinical mental health counseling programs, interventions, and treatments.

J.3 Analyzes and uses data to increase the effectiveness of clinical mental health counseling interventions and programs.

DIAGNOSIS

K. Knowledge

K.1 Knows the principles of the diagnostic process, including differential diagnosis, and the use of current diagnostic tools, such as the current edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM).

K.2 Understands the established diagnostic criteria for mental and emotional disorders, and describes treatment modalities and placement criteria within the continuum of care.

K.3 Knows the impact of co-occurring substance use disorders on medical and psychological disorders.

K.4 Understands the relevance and potential biases of commonly used diagnostic tools with multicultural populations.

K.5 Understands appropriate use of diagnosis during a crisis, disaster, or other trauma-causing event.

L. Skills and Practices

L.1 Demonstrates appropriate use of diagnostic tools, including the current edition of the DSM, to describe the symptoms and clinical presentation of clients with mental and emotional impairments.

L.2 Is able to conceptualize an accurate multi-axial diagnosis of disorders presented by a client and discuss the differential diagnosis with collaborating professionals.

L.3 Differentiates between diagnosis and developmentally appropriate reactions during crises, disasters, and other trauma-causing events.

PhD in Counselor Education

The doctor of philosophy degree (Ph.D.) in counselor education prepares students for careers in counselor education, counseling supervision, counseling leadership, and community and school counseling management through research, teaching, supervision, clinical, and leadership course work and experiences. Opportunities exist within this program to create areas of specialization that are relevant to the academic, professional, or research interests of the student. The program objectives and curricular experiences of the doctoral program reflect a deepening of master's-level curriculum and an expansion into the five core areas of doctoral-level practice: teaching, supervision, research, clinical practice, and leadership and advocacy.

Persons applying for admission to doctoral study must meet the admission requirements of the College of Graduate Studies, the College of Health and Human Services, and the counselor education program. These requirements include an application for graduate admission, one set of official transcripts from each institution attended showing any and all undergraduate/graduate credits and degrees attained, three letters of recommendation, and a non-refundable application fee that must be submitted to the College of Graduate Studies to begin the admission process.

In addition, counselor education program requirements for admission to the doctoral program are:

- A minimum GPA of 3.5 on a 4.0-point scale for all graduate-level academic work
- A master's degree in counseling from a program that is approved by the Council for Accreditation of Counseling and Related Educational Programs (CACREP). Applicants with degrees from non-accredited programs must demonstrate their equivalency to approved programs or make up any deficiencies that may be present in their training.
- GRE scores are not required for admission but may be submitted as supplemental materials.
- A résumé and statement of purpose three-to-five pages in length.
- One writing sample. This is typically fulfilled by submitting a copy of your best academic work completed in previous graduate courses.
- A personal interview with program faculty to determine the personal and professional suitability and leadership potential of the applicant. Applicants will be notified if they are selected for an interview.
- Three letters of recommendation, at least one of which must address the applicant's academic potential (i.e. from a university faculty member).

Applicants are interviewed and admitted to doctoral study during the fall or spring semesters of each academic year.

1. COUNSELING

- a. scholarly examination of theories relevant to counseling
- b. integration of theories relevant to counseling
- c. conceptualization of clients from multiple theoretical perspectives
- d. evidence-based counseling practices
- e. methods for evaluating counseling effectiveness
- f. ethical and culturally relevant counseling in multiple settings

2. SUPERVISION

- a. purposes of clinical supervision
- b. theoretical frameworks and models of clinical supervision
- c. roles and relationships related to clinical supervision
- d. skills of clinical supervision
- e. opportunities for developing a personal style of clinical supervision
- f. assessment of supervisees developmental level and other relevant characteristics

- g. modalities of clinical supervision and the use of technology
- h. administrative procedures and responsibilities related to clinical supervision
- i. evaluation, remediation, and gatekeeping in clinical supervision
- j. legal and ethical issues and responsibilities in clinical supervision
- k. culturally relevant strategies for conducting clinical supervision
- 3. TEACHING
 - a. roles and responsibilities related to educating counselors
 - b. pedagogy and teaching methods relevant to counselor education
 - c. models of adult development and learning
 - d. instructional and curriculum design, delivery, and evaluation methods relevant to counselor education
 - e. effective approaches for online instruction
 - f. screening, remediation, and gatekeeping functions relevant to teaching
 - g. assessment of learning
 - h. ethical and culturally relevant strategies used in counselor preparation
 - i. the role of mentoring in counselor education
- 4. RESEARCH AND SCHOLARSHIP
 - a. research designs appropriate to quantitative and qualitative research questions
 - b. univariate and multivariate research designs and data analysis methods
 - c. qualitative designs and approaches to qualitative data analysis
 - d. emergent research practices and processes
 - e. models and methods of instrument design
 - f. models and methods of program evaluation
 - g. research questions appropriate for professional research and publication
 - h. professional writing for journal and newsletter publication
 - i. professional conference proposal preparation
 - j. design and evaluation of research proposals for a human subjects/institutional review board review
 - k. grant proposals and other sources of funding
 - l. ethical and culturally relevant strategies for conducting research
- 5. LEADERSHIP AND ADVOCACY
 - a. theories and skills of leadership
 - b. leadership and leadership development in professional organizations
 - c. leadership in counselor education programs
 - d. knowledge of accreditation standards and processes
 - e. leadership, management, and administration in counseling organizations and other institutions
 - f. leadership roles and strategies for responding to crises and disasters
 - g. strategies of leadership in consultation
 - h. current topical and political issues in counseling and how those issues affect the daily work of counselors and the counseling profession
 - i. role of counselors and counselor educators advocating on behalf of the profession and professional identity
 - j. models and competencies for advocating for clients at the individual, system, and policy levels
 - k. strategies of leadership in relation to current multicultural and social justice issues
 - l. ethical and culturally relevant leadership and advocacy practices

EdS in School Psychology

The graduate program in school psychology meets the education requirements for licensure in Ohio and many other states. The program is approved by the National Association of School Psychologists and accredited by the Council for the Accreditation of Educator

Preparation. Both the master of arts and the education specialist degree requirements must be completed by the student to be licensed as a school psychologist in Ohio and to be a nationally certified school psychologist.

The Ed.S. program is designed for three years of full-time study.

Application deadline for the school psychology program is February 15.

To apply to the program, applicants must meet the minimum academic prerequisite and submit the following materials:

- For students who completed their MA in school psychology at the University of Toledo and are applying to continue in the Ed.S. degree program, they only need to submit the College of Graduate Studies application for the Ed.S. degree in school psychology.

For students who have completed their MA degree at another institution, if approved by the program director, they may apply for admission to the Ed.S. degree program. Students will be required to submit the following:

- Three letters of recommendation, at least one of which must address the applicant's academic potential (i.e., from a university faculty member).
- Statement of purpose, between two to three pages, that details the reasons the applicant would like to pursue a career in school psychology and includes personal experiences. The statement of purpose should be typed and submitted to the College of Graduate Studies as a separate Word document.
- Official undergraduate transcripts and graduate transcripts, if applicable.
- Professional résumé.

To be consistent with national training standards and to ensure sufficient faculty members to advise and mentor students, a limited number of applicants will be admitted into the program each year. As a result, admission is competitive. For more information or to ask questions, contact:

Jennifer Reynolds
Program Director
jennifer.reynolds21@utoledo.edu (wendy.cochrane@utoledo.edu)

SPSY 7260	Developmental Child Psychopathology	4
COUN 7140	Counseling Theories and Application	4
SPSY 7940	Internship In School Psychology	16

The complete program, including the MA and EdS, includes approximately 77 credit hours, a two-semester pre-practica experience during the first

year, a two-semester practica experience during the second year, and a 9-month, full-time internship (minimum of 1200 clock hours) in a school setting completed during the third year. Students earn a master of arts (MA) after completing a minimum of 30 hours of coursework and 100 pre-practica experience hours. The education specialist (EdS) degree is earned after completion of the remaining coursework, practica experience and internship.

PLO 1.5 Demonstrates evidence-based methods for integrating family, school and community resources to improve educational outcomes for children (2.7)

PLO 2.1 Demonstrates knowledge and skill in selecting and administering various methods of cognitive assessment, and interpreting and sharing results (2.2, 2.3)

PLO 1.3 Demonstrates knowledge and respect for diversity factors related to culture, family systems, and an understanding that advocacy for social justice is a foundation of service delivery (2.7, 2.8)

PLO 1.4 Demonstrates active, attentive listening and communicates and collaborates effectively with others in activities such as meetings, supervision sessions, parent interviews, and consultations (2.2)

PLO 1.2 Demonstrates strategies for addressing diversity factors when selecting, administering, and interpreting assessments; and designing, implementing and evaluating interventions for academic and/or behavior concerns (2.8)

PLO 3.4 Demonstrates understanding of biological, developmental, and social influences on behavior and mental health and implications for classroom management and instruction (2.2, 2.4)

PLO 3.5 Demonstrates knowledge of concepts from applied behavior analysis and skill in conducting functional assessment and analysis to develop behavior intervention plans (2.4)

PLO 4.1 Demonstrates knowledge of system change research and process, team processes and dynamics, strategic planning, and program evaluation in order to identify needs and plan for school improvement (2.5, 2.9)

PLO 4.2 Demonstrates knowledge and skill in assessing existing school policies and practices in areas such as MTSS, staff training, and home-school-community partnerships, and skill in designing, implementing, and evaluating universal interventions to create and maintain effective and supportive learning environments (2.5, 2.9)

PLO 4.3 Demonstrates knowledge of the crisis research and skill in crisis prevention, intervention, response, and recovery (2.6)

PLO 4.4 Demonstrates understanding of principles and research related to resilience and risk factors in learning and mental health and skills in developing, implementing, and evaluating universal interventions that foster resilience and minimize factors that lead to academic and behavior difficulties (2.6, 2.9)

PLO 2.2 Demonstrates knowledge and skill in selecting and administering various methods of academic assessment, and interpreting and sharing results (2.1, 2.3)

PLO 2.3 Demonstrates knowledge and skill at making data-based decisions by linking academic and cognitive assessment information to instructional interventions in general education setting, and when appropriate, in special education settings (2.1, 2.3)

PLO 2.4 Demonstrates skill in using a systematic problem solving process guided by data-based decision making to develop, implement, monitor, and evaluate academic interventions by (2.1, 2.3)

PLO 2.5 Demonstrates knowledge of ecological influences of the classroom and home on student academic skills, learning, and cognition and applies to assessment and intervention (2.2, 2.3)

PLO 3.1 Demonstrates knowledge and skill in selecting and administering various methods for affective, behavior, and adaptive behavior assessment and interpreting and sharing results (2.2, 2.4)

PLO 3.2 Demonstrates knowledge and skill in linking affective, behavior and adaptive behavior assessment information to interventions in general and special education settings (2.1, 2.4)

PLO 3.3 Demonstrates skill in using a systematic problem solving process guided by data-based decision making to develop, implement, monitor, and evaluate affective, behavior and adaptive behavior interventions (2.1, 2.4)

PLO 4.5 Demonstrates knowledge of school system organizational structure, general education, special education, and state and federal laws and policy for school accountability for academics and behavior (2.5)

PLO 5.1 Demonstrates knowledge of ethical and legal policies and procedures and satisfactory professional judgment and decision making (2.10)

PLO 5.2 Demonstrates use of technology in assessment, intervention, and presentation of information (2.9, 2.10)

PLO 5.3 Demonstrates ability to function as scientist-practitioner by designing and conducting single case and small group research and to analyze outcomes to inform practices and services (2.9)

PL0 5.4 Understands one s identify as a school psychologist by engaging in activities that foster this professional identify through membership involvement in and attendance at regional, state and national conferences (2.10)

PL0 5.5 Demonstrates satisfactory professional dispositions needed for effective practice including social justice, communication and interpersonal skills with peers, trainers, and supervisors, and satisfactory initiative, dependability, time management and organizational skills (2.8, 2.10)

PL0 1.1 Demonstrates understanding of and sensitivity to individual differences, abilities, disabilities, and other diverse characteristics as evidenced in communication and interpersonal relationships (2.2, 2.8)

MA in Criminal Justice

The Master of Arts in Criminal Justice is designed to provide students with a broad understanding of the criminal justice system, social control and the nature of crime, in addition to developing and improving skills necessary to critically assess criminal justice problems and develop meaningful responses to these problems. The program also provides students with the skills to conduct applied research and evaluation, as well as the ability to understand empirical scholarly publications. The program prepares students for leadership roles in the field of criminal justice and the pursuit of criminal justice doctoral studies. The program allows a person to be either a full-time or part-time student. The program is available as a blend of land-based and online courses. **A full-time student can complete the program in one year. A student can complete the program entirely online in two years. A student can also complete the program entirely land based in two years.**

In addition to the College of Graduate Studies and College of Health and Human Services requirements, evaluation of applicants for the criminal justice graduate program is based on the following criteria:

- application
- three letters of recommendation
- personal statement
- official transcripts
- undergraduate GPA of 3.0 or above on a 4.0 point scale is preferred; GPA of at least 2.7 on a 4.0 point scale will be considered on a case-by-case basis
- applicants with a GPA less than 2.7 must take the Graduate Record Exam (GRE)

Meeting the minimum admission requirements does not guarantee entrance into the program. Admission is competitive and is dependent on the availability of space within the program. Under special circumstances, the graduate admissions committee may choose to admit a promising applicant as a provisional student in the program.

The Master of Arts in Criminal Justice requires a minimum of 30 semester hours including core and elective course work. Students should meet with the director of the graduate program in criminal justice to develop a plan of study which must be submitted by the end of the first semester or 12 credits hours. Any electives taken outside of criminal justice must be pre-approved by the director of the graduate program in criminal justice. A student must successfully complete one of the following capstone experiences to earn a degree; a thesis, a comprehensive exam, a three hour internship, or Policy Projects in

Criminal Justice (CRIM 6950). Within the first semester of graduate study, a student may elect to complete a thesis in lieu of 3 credit hours of elective course work.

First Term		Hours
CRIM 6590	Administration Of Criminal Justice	3
CRIM 6200	Data Analysis In Criminal Justice	3
CRIM 6400	Graduate Criminal Justice Research Methodology	3
Elective in CRIM		3
Hours		12
Second Term		
CRIM 6000	Advanced Theories: Criminal Justice	3
Elective in CRIM ¹		3
Elective in CRIM ¹		3
Elective ¹		3
Hours		12
Third Term		
Elective in CRIM		3
Elective		3
Hours		6
Total Hours		30

¹ A maximum of 18 hours of elective work must be done in graduate level courses. A maximum of 6 hours may be done in graduate level course work outside of CJ with pre-approval of the CJ graduate advisor.

MACJ students will be able to identify and apply criminal justice theories. MACJ students will understand how to apply social scientific research methods and statistics to the study of crime and criminal justice policy. MACJ students will be able to integrate criminal justice theory and research findings with criminal justice practice. MACJ students will demonstrate their ability to apply criminal justice concepts, theories, and policy in their capstone experience.

Joint M.A. in Criminal Justice/Juris Doctor

This program is administered jointly by the College of Law and the criminal justice program. The program is designed for students who wish to have theoretical and practical knowledge in the law and in the field of criminal justice.

- First be accepted by the University of Toledo College of Law
- Successfully complete of the first year of law school
- Be a student in good standing at the University of Toledo College of Law
- Complete an application for the master of arts in criminal justice

To complete the master of arts in criminal justice, the student must meet the degree requirements. Six to nine hours of law courses may be applied as electives in the master of arts in criminal justice, subject to the approval of the CJ graduate advisor.

To qualify for the juris doctor degree, a student must comply with all the academic and non-academic rules of the College of Law. The student must be at least a second year law student before applying for the joint degree. Under the joint program, up to 12 semester hours taken for the Master of Arts in criminal justice may be applied toward the completion of credit hours for juris doctor degree. The student must earn a grade of B or better in those courses to be credited toward the juris doctor.

MSW in Social Work

The master of social work program has a strong emphasis on social and economic justice. As such, the degree has an advanced generalist concentration, preparing students to create change at all system levels, from individuals to communities. Students may select a specialization in either mental health or in child and family practice.

A 33 hour advanced standing program exists for students who meet specific criteria including a baccalaureate social work degree from an undergraduate social work program accredited by the Counsel of Social Work Education (CSWE). Students with related degrees will not be admitted under advanced standing status, but may be admitted to the 60 hour foundation program.

In addition to the admission criteria established by the College of Graduate Studies at The University of Toledo, the applicant to the MSW program must submit,

- three letters of recommendation from both academic and professional settings
- the MSW program application

Additional requirements for admission to the MSW Program include,

- a baccalaureate degree in social work from a CSWE-accredited social work program; required for admission into the advanced program
- minimum undergraduate GPA of 2.7
- minimum GPA of 3.0 in social work courses

The personal statement and references from both employers and prior faculty members will be evaluated for a “fit” with the social work profession and our program's focus on social and economic justice. Applicants must convey their valuing of and adherence to the values and ethics of the profession. Applicants with no evidence of the above will not be admitted to the program.

The Council on Social Work Education does not permit programs to provide course credit for work experience. It is our hope that the student body of our program will include a mixture of students who have experience as well as those without extensive professional experience. We encourage diversity among the students accepted to the program. This includes diversity of gender, age, race/ethnicity, sexual orientation, ability and experience in the profession, etc. Prospective applicants are urged to review information on the program website.

The MSW Program requires 60 semester hours for graduation, which is consistent with MSW programs across the country. Foundation (5000 level) course work is offered in the first year of the program and advanced (6000 level) course work in the second year.

Students must enroll in 16 credit hours of field education to obtain the minimum required by CSWE. Six (6) of these credit hours are taken during the foundation year and ten (10) credit hours during the advanced year. While every effort is made to accommodate students with full-time jobs, applicants to the program must be aware that field placements primarily take place during business hours and on week days. We are unable to guarantee a night or weekend field placement.

Students who are awarded admission with advanced standing must complete 33 credit hours to obtain the MSW degree. The advanced standing program focuses on advanced generalist and specialty courses and field placements. Only courses at the 6000 level are required for the advanced standing program.

Foundation students are required to complete 60 credit hours (First year, 27 credit hours are listed below, in the second year students are required to take the 33 credit hours listed below the advanced standing section).

Code	Title	Hours
SOCW 5010	Social Work Research Methods And Analysis	3
SOCW 5110	Social Work Practice I	3
SOCW 5120	Social Work Practice II	3
SOCW 5130	Social Work Practice III	3

 SOCW 5330 Policy Issues and Analysis in Social Work - 3 credits
 SOCW 5900 Foundation Field Experience & Integrated Seminar I - 3 credits
 SOCW 5910 Foundation Field Experience & Integrated Seminar II - 3 credits

Advanced standing students are required to complete 33 credit hours.

SOCW 6030 Research Methods for Macro Social Work Practice **OR**
 SOCW 6040 Research Methods for Micro Social Work Practice - 3 credits
 SOCW 6110 Advanced Generalist Practice I - 3 credits
 SOCW 6120 Advanced Generalist Practice II - 3 credits
 SOCW 6130 Advanced Generalist Practice III - 3 credits
 SOCW 6140 Advanced Social Work Assessment - 3 credits
 SOCW 6200 Disparities, Diversity and Social Justice - 2 credits
 SOCW 6410 Social Work Practice with Children & Families – Micro **OR**
 SOCW 6510 Social Work Practice in Mental Health – Micro - 3 credits
 SOCW 6430 Social Work Practice with Children & Families – Macro **OR**
 SOCW 6530 Social Work Practice in Mental Health – Macro - 3 credits
 SOCW 6900 Advanced Social Work Field Experience and Integrated Seminar I - 5 credits
 SOCW 6910 Advanced Social Work Field Experience and Integrated Seminar II - 5 credits

Competency 1: Demonstrate Ethical and Professional Behavior
 Competency 2: Engage Diversity and Difference in Practice
 Advance Human Rights and Social, Economic, and Environmental Justice
 Competency 4: Engage In Practice-informed Research and Research-informed Practice
 Competency 5: Engage in Policy Practice
 Competency 6: Engage with Individuals, Families, Groups, Organizations, and Communities
 Competency 7: Assess Individuals, Families, Groups, Organizations, and Communities
 Competency 8: Intervene with Individuals, Families, Groups, Organizations, and Communities
 Competency 9: Evaluate Practice with Individuals, Families, Groups, Organizations, and Communities

Certificate in Advanced Intervention for Listening and Spoken Language

The certificate in advanced intervention for listening and spoken language (HE-LICH-CRG) is designed to provide The University of Toledo speech-language pathology graduate students and working

professionals, who are certified and licensed speech-language pathologists, with the knowledge and tools necessary to support listening and spoken language development of children who use advanced hearing technologies.

Graduate students, accepted into The University of Toledo speech-language pathology graduate program, may enroll in the online certificate program concurrently. Graduate students take four additional online courses to earn the HE-LICH-CRG certificate along with the necessary coursework and clinical experience (including working with clients with hearing loss).

Certified and licensed speech-language pathologists, working with children who use advanced hearing technologies to develop listening and spoken language, may also enroll in the four online courses. Individuals applying for the certificate must provide verification of the Certificate of Clinical Competence awarded by the American Speech-Language-Hearing Association and appropriate state licensure, write a letter of intent, provide a letter of recommendation and support from a supervisor, and participate in an interview.

Students enrolled in the HE-LICH-CRG program will be better prepared to work with children with hearing loss and also position themselves for certification as a Listening and Spoken Language Specialist by the Alexander Graham Bell Association for the Deaf (a multi-year process).

First Term		Hours
SLP 6810	Facilitating Auditory Learning and Spoken Language for Children with Hearing Loss	3
Hours		3
Second Term		
SLP 6820	Hearing Technology	3
SLP 6830	Lang Lit Ac of Child Hear Loss	3
SLP 6840	Team Models and Ed Leadership	3
Hours		9
Total Hours		12

Clinical experience: The HE-LICH-CRG certificate also requires clinical experience providing listening and spoken language interventions for children who use advanced hearing technologies. This may be obtained through The University of Toledo graduate program clinical practicum and internship rotation, which includes supervision. Working professionals must arrange a mentorship to support their clinical skill development as part of the certificate program.

To learn more about the certificate in advanced intervention for listening and spoken language, interested persons should contact: Dr. Lori Pakulski at Lori.Pakulski@utoledo.edu.

Certificate in Biostatistics and Epidemiology

The 15 credit hours graduate Certificate in Biostatistics and Epidemiology focuses on the development of the qualitative and quantitative knowledge and skills to collect, organize, analyze, and interpret data associated with epidemiologic investigations, health surveys, injury and illness recognition, and human exposure assessment. The Certificate in Biostatistics and Epidemiology provides learners with an expanded

scope and depth of quantitative knowledge and skills, as compared to the Certificate in Epidemiology. NOCPH MPH students may not take this certificate concurrently while earning the MPH.

Student Learning Objectives

Student Learning Objectives for the Certificate in Biostatistics and Epidemiology:

- Select and apply appropriate biostatistical and epidemiological methods and interpret basic and applied research data
- Define and calculate measures of disease frequency and measures of association between risk factors and disease
- Describe the major epidemiologic research study designs and their advantages and limitations
- Define the basic terms and apply methods used in outbreak investigation, infectious disease epidemiology, chronic disease epidemiology, disease prevention trials, and evaluation of screening tests
- Review the scientific literature with competence, synthesize findings across studies, and make appropriate public health recommendations based on current knowledge
- Design an epidemiologic study to address a question of interest
- Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic investigation
- Apply epidemiologic skills in a clinical or public health setting, specifically in the formulation or application of health-related programs or policies

Certificate in Biostatistics and Epidemiology students take the following courses.

Code	Title	Hours
PUBH 6000/8000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010/8010	Public Health Epidemiology	3
PUBH 6030/8030	Advanced Epidemiology	3
PUBH 6060/8060	Advanced Biostatistics	3
PUBH 6110/8110	Categorical Data Analysis	3
Total Hours		15

1. Define and calculate measures of disease frequency and measures of association between risk factors and disease.
2. Describe the major epidemiologic research study designs and their advantages and limitations.
3. Describe the major sources of bias in epidemiologic research (confounding, selection bias, and measurement error) and the ways to evaluate and reduce bias.
4. Apply criteria to support whether an association is causal.
5. Interpret the results of an epidemiologic study, including the relation to findings from other epidemiologic studies, potential biologic and/or social mechanisms, the limitations of the study, and any public health implications.
6. Describe basic biostatistical methods and perform basic statistical analyses.

Certificate in Contemporary Gerontological Practice

Barbara Kopp Miller, Ph.D., administrative director, Center for Successful Aging

The Graduate Certificate in Contemporary Gerontological Practice at the University of Toledo is offered through the Center for Successful Aging and is designed to provide knowledge about contemporary issues in gerontology and geriatrics and prepare individuals for working with older adults and their families in the current interprofessional health care system.

A unique feature of the Certificate Program is the delivery system. Recognizing that individuals continually balance personal and professional responsibilities, the courses are accessible "24/7" through distance education methods. The five course curriculum is focused on meeting the educational needs of health care professionals and students through effective and innovative educational methods. Minimum credits required for the Certificate in Contemporary Gerontological Practice is 15 credits.

Students are admitted for fall or spring semesters. The application deadline is July 1 for fall admission and November 1 for spring admission. To be considered for admittance into the program, a candidate must:

- Hold a bachelor's degree from an accredited college or university with a minimum 3.0 undergraduate grade point average. Degrees in progress will be considered. Official transcripts are required;
- Submit two online letters of recommendation;
- Submit a completed online application and the accompanying application fee.

Only online applications through the College of Graduate Studies are accepted.

Students who are currently enrolled in a program at the University of Toledo may apply to the Graduate Certificate Program by submitting an online Request to Add a Graduate Certificate Form. Students will also need to complete a Plan of Study form. The student must be in good standing in her or her current degree. (The accompanying fee is waived.)

First Term		Hours
GERO 5400	Health and Aging	3
GERO 5410	Issues Contemp Gerontol Pract	3
Hours		6
Second Term		
GERO 5420	Grief and Bereavement Issues	3
GERO 5430	Funding Adult Programming	3
Hours		6
Third Term		
GERO 5440	Independent Study Gerontology (Offered Fall, Spring and Summer)	3
Hours		3
Total Hours		15

Certificate in Disaster Preparedness and Response

Students will receive training and education related to preparing communities for and responding to any disaster. Apart from synchronous and asynchronous didactic education, the learner will participate in tabletop scenarios, functional exercises, and skill labs, taking full advantage of the University of Toledo's Jacobs Inter-professional Immersive Simulation Center. This will include weekly exercises, a live, simulated response to a tornado and triaging of victims, and hospital evacuation exercises. Students will receive online and in-person training with the Incident Command System (ICS). Additional skills will be interwoven throughout this program including patient assessment, splinting, suturing, tourniquet application, START and SALT triage, personal protective equipment (PPE) application, decontamination, and more.

The certificate's strength is its commitment to interdisciplinary education where students from the various health disciplines (e.g. medicine, physician assistant, pharmacy, nursing, EMS, PT, OT, RT, etc.) can work with public health students and where everyone can obtain a better perspective of what each discipline does and how they can form comprehensive health care teams when a disaster occurs. Minimum required credit hours for completion is 12.

Code	Title	Hours
PUBH 5260	Haz Mat and Emerg Response (Offered Summer)	3
PUBH 6090/8090	Issues in Public Health	3
PUBH 6500/8500	Disaster Preparedness/Response (Offered Fall)	3
PUBH 6560/8560	Interdisciplinary Crisis Management for Medical and Public Health Professionals (Offered Spring)	3
Total Hours		12

Apply principles of crisis leadership, governance, and management throughout simple, complex, and catastrophic mass casualty situations. Explain and exercise the basic principles associated with the management of HAZMAT and infectious disease crises from the perspective of both victim and responder. Identify real-world national and global public health challenges and demonstrate how these issues could blossom into true disasters with ineffectual leadership and mismanagement.

Certificate in Epidemiology

The 12 credit hours graduate Certificate in Epidemiology focuses on the development of the qualitative and quantitative knowledge and skills to collect, organize, analyze, and interpret data associated with epidemiologic investigations, health surveys, injury and illness recognition, and human exposure assessment. NOCPH MPH students may not take this certificate concurrently while earning the MPH.

Student Learning Objectives

Student learning objectives for the Certificate in Epidemiology:

- Select and apply appropriate biostatistical and epidemiological methods and interpret basic and applied research data

- Define and calculate measures of disease frequency and measures of association between risk factors and disease
- Describe the major epidemiologic research study designs and their advantages and limitations
- Define the basic terms and apply methods used in outbreak investigation, infectious disease epidemiology, chronic disease epidemiology, disease prevention trials, and evaluation of screening tests
- Review the scientific literature with competence, synthesize findings across studies, and make appropriate public health recommendations based on current knowledge
- Design an epidemiologic study to address a question of interest
- Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic investigation
- Apply epidemiologic skills in a clinical or public health setting, specifically in the formulation or application of health-related programs or policies

Certificate in Epidemiology students take the following courses.

Code	Title	Hours
PUBH 6000/8000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010/8010	Public Health Epidemiology	3
PUBH 6120/8120	Epidemiology Infectious Diseases	3
PUBH 6550/8550	Chronic Disease Epidemiology	3
Total Hours		12

1. Define and calculate measures of disease frequency and measures of association between risk factors and disease.
2. Describe the major epidemiologic research study designs and their advantages and limitations.
3. Describe the major sources of bias in epidemiologic research (confounding, selection bias, and measurement error) and the ways to evaluate and reduce bias.
4. Apply criteria to support whether an association is causal.
5. Describe the basic terms and methods used in outbreak investigation, infectious disease epidemiology, chronic disease epidemiology, disease prevention trials, and evaluation of screening tests.
6. Interpret the results of an epidemiologic study, including the relation to findings from other epidemiologic studies, potential biologic and/or social mechanisms, the limitations of the study, and any public health implications.

Certificate in Occupational Health

The 15 credit hours graduate Certificate in Occupational Health provides education and training focused on scientific, technical, regulatory, and administrative principles and practices for preventing and controlling worker and community exposures to physical (e.g., noise, radiation), chemical (e.g., toxic), and biological (e.g., infectious, allergenic, intoxicating) agents and ergonomic factors that can cause human illness. The profession focuses on prevention of exposure or occurrence and mitigation of factors and agents that contribute to illness and injury to workers and other members of the community. Occupational health professionals also have the education and training applicable to preparedness for, and response to natural disaster and intentional

terrorist events. NOCPH MPH students may take this certificate concurrently while earning their MPH, except for ENVH majors.

Student Learning Objectives

Student learning objectives for the Certificate in Occupational Health:

- Identify agents, factors, and stressors generated by and/or associated with defined sources, unit operations, and/or processes
- Describe qualitative and quantitative aspects of generation of agents, factors, and stressors
- Describe physiological and/or toxicological interactions of physical, chemical, biological, and ergonomic agents, factors, and/or stressors with the human body
- Recommend and evaluate engineering, administrative, and personal protective equipment controls and/or other interventions to reduce and eliminate hazards
- Demonstrate an understanding of applicable business and managerial practices
- Interpret and apply applicable occupational and environmental regulations

Certificate in Occupational Health students take the following courses.

Code	Title	Hours
PUBH 5020	Occupational Health	3
PUBH 5310	Chemical Agents	3
PUBH 5410	Hazard Control	3
PUBH 5620	Physical Agents	3
Select one of the following:		3
PUBH 5060	Occupational Safety	
PUBH 5160	Environmental Health	
PUBH 5260	Haz Mat and Emerg Response	
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	
PUBH 6010	Public Health Epidemiology	
Total Hours		15

1. Identify agents, factors, and stressors generated by and/or associated with defined sources, unit operations, and/or processes.
2. Describe qualitative and quantitative aspects of generation of agents, factors, and stressors.
3. Describe physiological and/or toxicological interactions of physical, chemical, biological, and ergonomic agents, factors, and/or stressors with the human body.
4. Recommend and evaluate engineering, administrative, and personal protective equipment controls and/or other interventions to reduce or eliminate hazards.
5. Demonstrate an understanding of applicable business and managerial practices.
6. Interpret and apply applicable occupational and environmental regulations.

Certificate in Public Health and Emergency Response

The 12 credit hours graduate Certificate in Public Health and Emergency Response focuses on the characteristics and human health impacts of biological, chemical, and radiological agents; personal protective equipment and decontamination; site monitoring instrumentation and methods; epidemiological investigation and surveillance; and, applicable regulatory standards and recommended professional guidelines for incident recognition, response, and control. NOCPH MPH students may not take this certificate concurrently while earning the MPH.

Student Learning Objectives

Student learning objectives for the Certificate in Public Health and Emergency Response:

- Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems
- Objectively and subjectively assess chemical, biological, and physical agents classified as hazardous to humans health (including terrorism agents)
- Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents
- Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation
- Collect and evaluate applicable information to conduct disaster preparation/planning

Certificate in Public Health and Emergency Response students take the following courses.

Code	Title	Hours
PUBH 5260	Haz Mat and Emerg Response	3
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010	Public Health Epidemiology	3
Select one of the following:		3
PUBH 5310	Chemical Agents	
PUBH 5520	Biological Agents	
PUBH 5700	Risk Assessment	
PUBH 6030	Advanced Epidemiology	
PUBH 6120	Epidemiology Infectious Diseases	
Total Hours		12

1. Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems.
2. Objectively and subjectively assess chemical, biological, and physical agents classified as hazardous to human health.
3. Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents.

4. Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation.
5. Collect and evaluate applicable information to conduct disaster preparation/planning.

College Policies (Graduate Handbook)

COLLEGE OF GRADUATE STUDIES: GRADUATE STUDENT HANDBOOK (<https://www.utoledo.edu/graduate/files/GraduateStudentHandbook20-21.pdf>)

- College Policies and Procedures (p. 571)
- Academic Regulations (p. 572)
- Other Policies and Information (p. 577)

Schools

- School of Exercise and Rehabilitation Sciences (p. 177)
- School of Intervention and Wellness (p. 195)
- School of Population Health (p. 220)
- School of Social Justice (p. 241)

School of Exercise and Rehabilitation Sciences

ERIC LONGSDORF, chair

The school of exercise and rehabilitation sciences offers graduate programs leading to the master of science in exercise science (MSES), master of athletic training (MAT), and the doctor of philosophy in exercise science (Ph.D.) degrees. These programs involve a combination of courses, seminars, clinical experiences and research that is intended to prepare individuals for a wide range of careers that relate to exercise science. Involvement in research is emphasized throughout the program.

In the recreation professions, the master of arts in recreation and leisure studies with specializations in recreation administration or recreational therapy is available.

A dual doctoral degree program leading to the doctor of philosophy in exercise science is available for students admitted to the occupational therapy doctorate or the doctorate of physical therapy. Please see those programs, which are located in school of exercise and rehabilitation sciences.

Degrees Offered

- Masters of Science in Exercise Science (MSES) (p. 193)
- Masters in Athletic Training (MAT) (p. 191)
- Masters of Arts in Recreation and Leisure Studies (MA) (p. 150)
- Doctor of Philosophy in Exercise Science (PhD) (p. 152)
- Doctor of Physical Therapy (DPT) (p. 153)
- Doctor of Physical Therapy (DPT)/PhD in Exercise Science (p. 191)
- Doctor of Occupational Therapy (OTD) (p. 155)

- Doctor of Occupational Therapy (OTD)/ PhD in Exercise Science (p. 149)

ATTR 6010 Clinical Applications I

[1 credit hour]

Clinical skill experience is provided to develop autonomous athletic trainer and provide exposure to implementing evidence based practice in clinical practice.

ATTR 6020 Clinical Applications II

[1 credit hour]

Continue to develop autonomous athletic training skills built upon in Clinical Applications I and continue to advance diagnosis, treatment and intervention skills.

Prerequisites: KINE 6010 with a minimum grade of D- or ATTR 6010 with a minimum grade of D-

ATTR 6030 Clinical Applications III

[2 credit hours]

Advanced integration of clinical skills with the introduction of mentoring athletic training students in a clinical setting.

Prerequisites: KINE 6020 with a minimum grade of D- or EXSC 6020 with a minimum grade of D-

ATTR 6040 Clinical Applications IV

[2 credit hours]

Preparation of autonomous athletic training care for the transition into an occupation in sports medicine.

Prerequisites: KINE 6030 with a minimum grade of D- or EXSC 6030 with a minimum grade of D-

ATTR 6120 Evaluation and Management of Peripheral Joint Injuries

[4 credit hours]

The study of the pathology, etiology and presentation of peripheral joint injuries. Subjective and objective components as well as orthopedic special testing will be introduced and serve as the foundation for the formulation of a systematic evaluation method. In addition, acute management techniques include first aid as well as immobilization methods will be introduced. Laboratory concepts include selection and implementation of appropriate evaluation and acute management techniques.

Prerequisites: ATTR 6140 with a minimum grade of C+ and ATTR 6150 with a minimum grade of C+

Term Offered: Fall

ATTR 6140 Functional Musculoskeletal Anatomy

[3 credit hours]

A cadaver anatomy course focusing on foundation concepts of structural kinesiology and anatomy. In addition, the structure of various musculoskeletal tissues and functional joint complexes will be examined.

ATTR 6150 Foundations of Athletic Training Practice

[3 credit hours]

Introduction to the profession of athletic training including history, regulation of practice, and the role of the profession in the sports medicine health care team. Course topics include fundamental aspects of clinical practice such as health care core competencies, systematic evaluation, first aid, and communication in the health care team. Laboratory concepts include selection and application of appropriate prophylactic taping, wrapping and bracing techniques as well as selection and application of appropriate first aid techniques.

Term Offered: Summer

ATTR 6220 Evaluation and Management of Head and Spine Injuries

[4 credit hours]

The study of the pathology, etiology and presentation of head and spine injuries common in active populations. Subjective and objective components as well as orthopedic special testing will be introduced and serve as the foundation for the formulation of a systematic evaluation method. In addition, acute management techniques include first aid as well as immobilization methods will be introduced. Laboratory concepts include selection and implementation of appropriate evaluation and acute management techniques.

Prerequisites: ATTR 6140 with a minimum grade of C+ and ATTR 6150 with a minimum grade of C+

Term Offered: Spring

ATTR 6310 Therapeutic Interventions I

[3 credit hours]

The study of the physiological, mechanical and bio-electrical principles related to the application of thermal, electrical and mechanical modalities in the treatment of musculoskeletal injury. Laboratory concepts include selection and application of appropriate modality use specific to patient values and situation.

Prerequisites: KINE 6140 with a minimum grade of C+ and KINE 6150 with a minimum grade of C+ or ATTR 6140 with a minimum grade of C+ and ATTR 6150 with a minimum grade of C+

ATTR 6410 Clinical Biomechanics

[2 credit hours]

The study of common kinematic and kinetic alterations that can occur following acute and chronic musculoskeletal injuries and the deleterious effects these changes can cause. In addition, students will be introduced to both laboratory and clinical techniques to assess and alter the kinematic and kinetic deficits associated with injury.

Prerequisites: KINE 6120 with a minimum grade of C+ and KINE 6610 with a minimum grade of B- or ATTR 6120 with a minimum grade of C+ and ATTR 6610 with a minimum grade of B-

Term Offered: Spring, Summer

ATTR 6500 Biomechanics Of Posture And Balance

[3 credit hours]

Focus on the mechanical and sensory-motor factors involved in the control of balance and posture. Emphasis on the theories, the influence of pathology and techniques for the assessment of balance.

Prerequisites: KINE 6130 with a minimum grade of D- or ATTR 6130 with a minimum grade of D-

ATTR 6510 Evaluation and Management of General Medical Conditions

[3 credit hours]

The study of the pathology, etiology and presentation of common general medical conditions in active populations. Systems will include cardiovascular, respiratory, gastrointestinal, genitourinary, reproductive, dermatologic and neurologic systems and infectious diseases. For each system, subjective and objective components as well as common special tests will be introduced. In addition, concepts of pharmacology including pharmacokinetics, basic drug classifications and legal aspects of use will be covered. Specific focus will be placed on common therapeutic drugs used in sports medicine.

Prerequisites: KINE 6620 with a minimum grade of B- or ATTR 6620 with a minimum grade of B-

ATTR 6520 Management of Emergencies in Athletic Training

[3 credit hours]

A laboratory and simulation-based course that focuses on the recognition and management of emergency situations common in athletic training clinical practice.

Prerequisites: ATTR 6620 with a minimum grade of B-

Term Offered: Summer

ATTR 6600 Issues And Management In Athletic Training

[3 credit hours]

This course addresses current issues that affect the profession of Athletic Training. Topics cover issues that influence clinical practice as well as political issues related to the profession.

Term Offered: Spring, Fall

ATTR 6610 Clinical Skills I

[2 credit hours]

The first of sequential courses that focuses on development of professional behaviors and review of concepts and skills from previous coursework. In addition, clinical education rotations provided will allow students to implement course material into a clinical setting and gain practical hands-on experience working under the supervision of a certified athletic trainer.

Prerequisites: KINE 6150 with a minimum grade of C+ and KINE 6140 with a minimum grade of C+ or ATTR 6150 with a minimum grade of C+ and ATTR 6140 with a minimum grade of C+

ATTR 6620 Clinical Skills II

[2 credit hours]

The second of sequential courses that focuses on development of professional behaviors and review of concepts and skills from previous coursework. In addition, clinical education rotations provided will allow students to implement course material into a clinical setting and gain practical hands-on experience working under the supervision of a Clinical Preceptor.

Prerequisites: ATTR 6610 with a minimum grade of B-

Term Offered: Spring

ATTR 6630 Clinical Skills III

[3 credit hours]

The third of sequential courses that focuses on development of professional behaviors and review of concepts and skills from previous coursework. In addition, clinical education rotations provided will allow students to implement course material into a clinical setting and gain practical hands-on experience working under the supervision of a Clinical Preceptor.

Prerequisites: ATTR 6620 with a minimum grade of B-

Term Offered: Fall

ATTR 6640 Clinical Skills IV

[3 credit hours]

The final of sequential courses that focuses on development of professional behaviors and review of concepts and skills from previous coursework. In addition, clinical education rotations provided will allow students to implement course material into a clinical setting and gain practical hands-on experience working under the supervision of a Clinical Preceptor.

Prerequisites: ATTR 6630 with a minimum grade of B-

Term Offered: Spring

ATTR 6660 Evidence-Based Practice in Sports Medicine

[2 credit hours]

This course will introduce the student to clinical epidemiology and the evaluation of the efficacy of prevention, diagnosis, and treatment strategies in athletic training and sports medicine.

Term Offered: Fall

ATTR 6670 Pathology of Orthopedic Injury

[3 credit hours]

An in-depth investigation into the basic structure and mechanisms of injury of various musculoskeletal tissue applied to the recognition and prevention of specific orthopedic injuries and conditions.

Term Offered: Spring, Fall

ATTR 6680 Advanced Interventions I

[2 credit hours]

Students will be introduced to advanced techniques that impact clinical practice in Athletic Training, including manual therapy, advanced orthopedic evaluation s, and advanced management and planning related to emergency medicine.

Term Offered: Spring

ATTR 6690 Advanced Interventions II

[3 credit hours]

Students will be introduced to advanced evaluation and assessment techniques that impact clinical practice, including general medical conditions, psychosocial, professionalism, and profession advocacy.

Prerequisites: KINE 6680 with a minimum grade of D- or ATTR 6680 with a minimum grade of D-

ATTR 6700 Therapeutic Interventions II

[3 credit hours]

The study of the advanced techniques related to rehabilitation of musculoskeletal injuries. Concepts include development of an exercise program, exercise program progression, indication and contraindications for specific techniques as well as reconditioning, return to play and preventative programs. Laboratory concepts include selection and implementation of appropriate rehabilitation techniques specific to patient values and situation.

Prerequisites: ATTR 6610 with a minimum grade of B- and ATTR 6310 with a minimum grade of B-

Term Offered: Spring, Fall

ATTR 6710 Organization And Administration Of Athletic Training Programs

[3 credit hours]

Administration of athletic training programs including legal issues, athletic training room management, budgeting, staffing, insurance, medical records, emergency care planning, preparticipation physical examinations, athletic training room design and public relations.

Prerequisites: ATTR 6620 with a minimum grade of B-

Term Offered: Fall

ATTR 6730 Optimization of Performance and Wellness

[3 credit hours]

An investigation into the nutritional and psychological components of optimal performance and wellness in active populations as well as recognition and appropriate referral of patients with suspected substance abuse and mental health disorders. In addition, concepts related to wellness and fitness assessment and weight management in a healthy population including prescription of strengthening and conditioning exercises will be discussed.

Prerequisites: ATTR 6620 with a minimum grade of B-

Term Offered: Fall

ATTR 6800 Foundations of Scholarly Practice

[3 credit hours]

An introduction to the consumption and appraisal of research in the field of athletic training with a specific focus on supporting evidence-based clinical practice. Overview of the stages of research project development as well as introduction to various research methods and designs. Students will be introduced to strategies to effectively search, read and appraise scientific literature as well as strategies to help translate evidence from scientific literature into clinical practice.

Prerequisites: ATTR 6140 with a minimum grade of C+ and ATTR 6150 with a minimum grade of C+

Term Offered: Fall

ATTR 6810 Scholarly Practice I

[1 credit hour]

The first of sequential courses designed to provide students opportunity to refine skills in consuming, applying and disseminating contemporary sports medicine research.

Prerequisites: ATTR 6800 with a minimum grade of C+ and ATTR 6610 with a minimum grade of B-

Term Offered: Spring

ATTR 6820 Scholarly Practice II

[1 credit hour]

The second of sequential courses designed to provide students opportunity to refine skills in consuming, applying and disseminating contemporary sports medicine research.

Prerequisites: ATTR 6810 with a minimum grade of C+ and ATTR 6620 with a minimum grade of B-

Term Offered: Fall

ATTR 6830 Scholarly Practice III

[1 credit hour]

The third of sequential courses designed to provide students opportunity to refine skills in consuming, applying and disseminating contemporary sports medicine research. Assignments in this course serve to fulfill graduate research requirements.

Prerequisites: ATTR 6820 with a minimum grade of C+ and ATTR 6630 with a minimum grade of B-

Term Offered: Spring

ATTR 6910 Introduction to Sports Medicine Research I

[1 credit hour]

Students will be introduced to sports medicine research with a focus on evaluating the literature, asking a clinically relevant research question, and developing experimental hypotheses.

ATTR 6920 Introduction to Sports Medicine Research II

[1 credit hour]

Students will continue to develop the ability to critique research and will be introduced to developing research methods to address a clinically question related to sports medicine.

Prerequisites: KINE 6910 with a minimum grade of D- or ATTR 6910 with a minimum grade of D-

ATTR 8600 Issues And Management In Athletic Training

[3 credit hours]

This course addresses current issues that affect the profession of Athletic Training. Topics cover issues that influence clinical practice as well as political issues related to the profession.

Term Offered: Fall

ATTR 8660 Evidence-Based Practice in Sports Medicine

[3 credit hours]

An investigation into the science and theories of therapeutic rehabilitation and its impact on clinical practice using current literature and databases from the areas of evidence based medicine.

Term Offered: Fall

ATTR 8670 Pathology of Orthopedic Injury

[3 credit hours]

An in-depth investigation into the basic structure and mechanisms of injury of various musculoskeletal tissue applied to the recognition and prevention of specific orthopedic injuries and conditions.

Term Offered: Spring, Fall

EXSC 5110 Measurement And Statistical Inference In Human Performance

[3 credit hours]

Application of measurement and statistical inference to human performance testing and research. Includes descriptive and inferential statistics, principles of test construction and introduction to authentic assessment in public schools.

Term Offered: Spring

EXSC 5250 Readings In Exercise Biology

[3 credit hours]

Faculty and student directed readings of original research in Exercise Biology. Readings will focus on how changes in physical activity influence the biology of skeletal muscle.

Term Offered: Spring, Fall

EXSC 6100 Physiology of Exercise

[3 credit hours]

This course is designed to provide an understanding of the mechanisms of the physiological responses to exercise. Emphasis will be placed on adaptations to exercise training and the role of exercise in health and disease.

Term Offered: Fall

EXSC 6130 Biomechanics Of Human Motion

[3 credit hours]

This course provides a basic overview of the principles of biomechanics as they apply to human movement. In-depth discussion and lab activities focus on the application of these principles to such topics as muscle function, locomotion, balance, mechanisms of injury and ergonomics.

Term Offered: Spring, Fall

EXSC 6200 Biomechanical Instrumentation

[3 credit hours]

Provides students with experience in the research and clinical use of videography, force and pressure plates, electromyography and other systems in applied biomechanics. Emphasis on hands-on lab experience and topics related to data collection and signal processing.

Prerequisites: KINE 6130 with a minimum grade of D- or EXSC 6130 with a minimum grade of D-

Term Offered: Spring

EXSC 6230 Scientific Writing And Research Methods

[3 credit hours]

Principles and issues involved in the design and conduct of research in exercise science: critical evaluation, research design, development of a research proposal, grant acquisition, and compliance with institutional and federal guidelines on the use of humans and animals.

Term Offered: Fall

EXSC 6420 Cardiopulmonary Exercise Physiology

[3 credit hours]

The responses and adaptations of the cardiovascular and pulmonary systems to exercise in healthy individuals.

Prerequisites: KINE 6100 with a minimum grade of D- or EXSC 6100 with a minimum grade of D-

Term Offered: Spring, Fall

EXSC 6430 Environmental Physiology

[3 credit hours]

Physiological responses and adaptations to extreme environments.

Term Offered: Fall

EXSC 6460 Readings in Cardiovascular Physiology

[3 credit hours]

This is a faculty directed examination of current research in Cardiovascular Physiology. Emphasis is placed on the role of physical activity on the prevention and/or treatment of cardiovascular treatment.

Term Offered: Spring, Fall

EXSC 6540 Laboratory Techniques In Exercise Physiology

[3 credit hours]

This course covers theoretical and practical knowledge for the assessment of exercise metabolism, cardiorespiratory function, body composition, thermoregulation and skeletal muscle function. Hands-on data collection will be emphasized.

Term Offered: Fall

EXSC 6550 Lab Techniques In Exercise Biology

[3 credit hours]

The course provides students with theoretical and practical knowledge for assessing cellular and molecular responses to exercise and inactivity. Emphasis will be placed on laboratory safety, reagent preparation, cell culture techniques, and tissue analysis.

Prerequisites: (KINE 6100 with a minimum grade of D- and KINE 6540 with a minimum grade of D-) or (EXSC 6100 with a minimum grade of D- and EXSC 6540 with a minimum grade of D-)

EXSC 6720 Advanced Clinical Anatomy

[2 credit hours]

A cadaver anatomy course focusing on the extremities. Emphasis will be placed on the link between anatomical structure, orthopedic injuries, and clinical practice.

Term Offered: Fall

EXSC 6960 Masters Thesis In Exercises Science

[1-4 credit hours]

Independence research in Exercise Science completed as part of the requirements for the Master of Science in Exercise Science degree.

Term Offered: Spring, Summer, Fall

EXSC 6990 Independent Study In Exercise Science Independent Study In Exercise Science

[1-4 credit hours]

Faculty supervised independent reading, laboratory research, field experience and other activities not suited for class instruction.

Term Offered: Spring, Summer, Fall

EXSC 7110 Measurement And Statistical Inference In Human Performance

[3 credit hours]

Application of measurement and statistical inference to human performance testing and research. Includes descriptive and inferential statistics, principles of test construction and introduction to authentic assessment in public schools.

Term Offered: Spring

EXSC 7250 Readings In Exercise Biology

[3 credit hours]

EXSC 8100 Physiology of Exercise

[3 credit hours]

This course is designed to provide an understanding mechanisms of the physiological responses to exercise. Emphasis will be placed on adaptations to exercise training and the role of exercise in health and disease.

Term Offered: Fall

EXSC 8130 Biomechanics of Human Motion

[3 credit hours]

This course provides a basic overview of the principles of biomechanics as they apply to human movement. In-depth discussion and lab activities focus on the application of these principles to such topics as muscle function, locomotion, balance, mechanisms of injury and ergonomics.

Term Offered: Spring, Fall

EXSC 8200 Biomechanical Instrumentation

[3 credit hours]

Provides students with experience in the research and clinical use of videography, force and pressure plates, electromyography and other systems in applied biomechanics. Emphasis on hands-on lab experience and topics related to data collection and signal processing.

Prerequisites: (KINE 6130 with a minimum grade of D- and KINE 8130 with a minimum grade of D-) or (EXSC 6130 with a minimum grade of D- and EXSC 8130 with a minimum grade of D-)

Term Offered: Spring

EXSC 8230 Scientific Writing And Research Methods

[3 credit hours]

Principles and issues involved in the design and conduct of research in exercise science: critical evaluation, research design, development of a research proposal, grant acquisition, and compliance with institutional and federal guidelines on the use of humans and animals.

Term Offered: Fall

EXSC 8420 Cardiopulmonary Exercise Physiology

[3 credit hours]

The responses and adaptations of the cardiovascular and pulmonary systems to exercise in healthy individuals.

Prerequisites: KINE 8100 with a minimum grade of D- or EXSC 8100 with a minimum grade of D-

Term Offered: Spring, Fall

EXSC 8430 Environmental Physiology

[3 credit hours]

Physiological responses and adaptations to extreme environments.

Term Offered: Fall

EXSC 8460 Readings in Cardiovascular Physiology Readings in Cardiovascular Physiology

[3 credit hours]

This is a faculty directed examination of current research in Cardiovascular Physiology. Emphasis is placed on the role of physical activity on the prevention and/or treatment of cardiovascular diseases.

Prerequisites: KINE 8100 with a minimum grade of D- or EXSC 8100 with a minimum grade of D-

Term Offered: Spring, Fall

EXSC 8540 Laboratory Techniques In Exercise Physiology

[3 credit hours]

This course covers theoretical and practical knowledge for the assessment of exercise metabolism, cardiorespiratory function, body composition, thermoregulation and skeletal muscle function. Hands-on data collection will be emphasized.

Term Offered: Spring, Fall

EXSC 8550 Lab Techniques In Exercise Biology

[3 credit hours]

The course provides students with theoretical and practical knowledge for assessing cellular and molecular responses to exercise and inactivity. Emphasis will be placed on laboratory safety, reagent preparation, cell culture techniques, and tissue analysis.

Prerequisites: (KINE 8100 with a minimum grade of D- and KINE 8540 with a minimum grade of D-) or (EXSC 8100 with a minimum grade of D- and EXSC 8540 with a minimum grade of D-)

EXSC 8720 Anatomical Concepts for Clinical Practice

[3 credit hours]

A cadaver anatomy course focusing on the extremities. Emphasis will be placed on the link between anatomical structure, orthopedic injuries, and clinical practice.

Term Offered: Fall

EXSC 8960 Doctoral Dissertation In Exercise Science

[1-12 credit hours]

Directed research towards completion of the doctoral degree. Students may register for credit in more than one semester. Total dissertation credit toward the degree may not exceed 16 hours.

Term Offered: Spring, Summer, Fall

EXSC 8990 Independent Study In Exercise Science

[1-4 credit hours]

Faculty supervised independent reading, laboratory research, field experience and other activities not suited for class instruction.

Term Offered: Spring, Summer, Fall

OCCT 7000 Foundations of Occupational Therapy

[3 credit hours]

This course introduces students to the history, philosophy, core concepts, ethics, and the domain and process of occupational therapy. Students also explore the basic tenets of therapeutic occupation and investigate the role that chosen occupations play within an individual's daily life. Professional skills in occupational analysis and professional communication are introduced and applied. Students also complete concurrent lab experiences with students from other health care professions as part of the university-wide Interprofessional Education Program. Prerequisite: Admission to OTD Program

Term Offered: Fall**OCCT 7010 OT Models of Practice I**

[5 credit hours]

Examines the biomechanical model of practice including its musculoskeletal and kinesiological foundations. Includes assessments and interventions for prevention, adaptation, and compensation.

Prerequisite: Admission to OTD Program

Term Offered: Fall**OCCT 7020 OT Models of Practice II**

[5 credit hours]

An introduction to the nervous system, with emphasis on the neurological basis of human occupation and the effects of neurological conditions (disease, injury, and mental illness) on occupational performance.

Explores neuroplasticity and neuro rehabilitation. Labs include neuroanatomy and clinical assessment. Prerequisite: Occupational Therapy Models of Practice I Co-requisite: Occupational Therapy Models of Practice III

Term Offered: Spring**OCCT 7030 OT Models of Practice III**

[4 credit hours]

Explores historical and alternative conceptual frameworks of occupation and therapeutic occupation. Examines cognitively based and general models of practice. Presents related assessments and interventions for prevention, adaptation, and compensation. Prerequisite: Occupational Therapy Models of Practice I Co-requisite: Occupational Therapy Models of Practice II

Term Offered: Spring**OCCT 7040 OT Models of Practice IV**

[5 credit hours]

Focuses on the occupational therapy process and models of practice for intervention with children and individuals with neurological impairments, including assessment and intervention. Prerequisite: Occupational Therapy Models of Practice II

Term Offered: Summer**OCCT 7110 Research in OT I**

[4 credit hours]

Examines quantitative and qualitative research methodologies. Includes critical analysis of occupational therapy research. Explores areas of possible research interest with guidance from potential major advisors.

Fall Prerequisite: Admission to the OTD Program

Term Offered: Fall**OCCT 7210 OT Advocacy I**

[2 credit hours]

Explores the role of occupational therapist as educator. Examines educational theory, instructional methods and technology, and evaluation of teaching effectiveness with patients, families, peers, supervisees, and community groups. Fall Prerequisite: Admission to OTD Program

Term Offered: Fall**OCCT 7220 OT Advocacy II**

[2 credit hours]

Applies teaching principles as students assume the role of educators to the community. Explores the role of the therapist in design, development, implementation, and evaluation of occupational therapy curricula. Integrates presentation of self and professionalism. Summer

Prerequisite: Occupational Therapy Advocacy I

Term Offered: Summer**OCCT 7310 FW and Professional Dev I**

[1 credit hour]

Introduces Level I and Level II Fieldwork, and the Capstone Experience, including policy, procedures, and documentation and the portfolio assignment. Defines professional behavior and health care communication. Encourages discussion of Level I fieldwork experiences. Includes Level I fieldwork experience. Prerequisite: Admission to the OTD Program

Term Offered: Fall**OCCT 7320 FW and Professional Dev II**

[1 credit hour]

Emphasizes interviewing clients for an occupational profile. Encourages discussion of Level I fieldwork experiences. Introduces the course sequence of the Capstone Experience. Includes Level I fieldwork experience. Prerequisite: Fieldwork and Professional Development Seminar I

Term Offered: Spring**OCCT 7330 FW and Professional Dev III**

[1 credit hour]

Introduces Capstone Seminar opportunities in teaching, research, program development, or clinical practice. Introduces Capstone Manual and structure for planning the individualized Capstone Experience.

Provides a forum for discussion fieldwork experiences. Summer

Prerequisite: Fieldwork and Professional Development Seminar II

Term Offered: Summer**OCCT 7400 Conditions in OT**

[2 credit hours]

Reviews the physical and mental health conditions that challenge successful and satisfying occupational performance, with an emphasis on the aspects of medical management and rehabilitation relevant to the role of the occupational therapist. Spring Prerequisite: Occupational Therapy Advocacy I

Term Offered: Spring**OCCT 7610 Orientation to Interprofessional Teaming**

[1 credit hour]

Orientation to the Graduate Certificate in Teaming in Early Childhood. Focus on individual competencies needed to work collaboratively to meet the needs of young children with disabilities and their families.

Prerequisites: SPED 5270 with a minimum grade of D-

Term Offered: Summer

OCCT 7620 Leadership and Advocacy in Interprofessional Teaming

[1 credit hour]

This second seminar in the Graduate Certificate in Teaming in Early Childhood focuses on skills and policies that promote best practices in teaming to support young children with disabilities.

Prerequisites: SPED 5270 with a minimum grade of D- and OCCT 7610 with a minimum grade of D-

Term Offered: Summer, Fall

OCCT 7630 Evidence-Based Practice and Innovation in Interprofessional Teaming

[1 credit hour]

This third seminar in the Graduate Certificate in Teaming in Early Childhood provides students the opportunity to reflect on their practicum experiences in teaming to support young children with disabilities.

Prerequisites: OCCT 7620 with a minimum grade of D-

Corequisites: OCCT 7640

Term Offered: Spring, Summer

OCCT 7640 Practicum in Interprofessional Teaming

[2 credit hours]

The practicum is provides an opportunity to engage in interprofessional teaming in order to provide integrated services to young children with special needs in an inclusive setting.

Prerequisites: OCCT 7620 with a minimum grade of D-

Corequisites: OCCT 7630

Term Offered: Spring, Summer

OCCT 8050 OT Models of Practice V

[5 credit hours]

Advances clinical reasoning for occupational therapy practice to support occupational performance throughout the lifespan, including prevention of occupational impairment. Prerequisite: Occupational Therapy Models of Practice IV Co-requisite: Occupational Therapy Models of Practice VI

Term Offered: Spring, Fall

OCCT 8060 OT Models of Practice VI

[4 credit hours]

Examines compensation-oriented models of practice including assistive technology, positioning, patient handling, and mobility. Presents occupational and non-occupational assessments and interventions for prevention, adaptation, and compensation. Prerequisite: Occupational Therapy Models IV Co-requisite: Occupational Therapy Models V

Term Offered: Fall

OCCT 8070 OT Models of Practice VII

[4 credit hours]

Examines contemporary and possible models of practice emphasizing wellness, health promotion, community care, population-based intervention and other emerging trends. Provides students with leadership experiences in program development. Prerequisite: Occupational Therapy Models of Practice VI Corequisite: Occupational Therapy Models of Practice VIII

Term Offered: Spring

OCCT 8080 OT Models of Practice VIII

[3 credit hours]

Models of practice emphasizing group occupational forms, group process, and therapeutic use of self in groups. Involves practice in assessment and intervention with persons experiencing both physical and mental health conditions. Prerequisite: Occupational Therapy Models of Practice VI Co-requisite: Occupational Therapy Models of Practice VII

Term Offered: Spring, Fall

OCCT 8120 Research in OT II

[3 credit hours]

Provides structure for student, guided by faculty mentor, to define a research question, investigate the literature, explore the site(s) for data collection, and prepare preliminary research proposal. Involves individual faculty contact. Spring Prerequisite: Research in Occupational Therapy I

Term Offered: Spring

OCCT 8130 Research in Occ Therapy III

[3 credit hours]

Provides structure for student to begin data collection after obtaining official approval of project by major advisor and institutional review board. Involves individual faculty contact. Fall, Spring, Summer

Prerequisite: Research in Occupational Therapy II

Term Offered: Spring, Fall

OCCT 8140 Research in OT IV

[3 credit hours]

Includes completion of data collection, analysis of results, submission of approved final project in journal article format, and formal presentation of the research project. Involves individual faculty contact. Fall, Spring, Summer Prerequisite: Research in Occupational Therapy III

Term Offered: Spring, Summer, Fall

OCCT 8230 OT Advocacy III

[2 credit hours]

Identifies advocacy issues relevant to occupational therapy and introduces community resources that can enhance successful and satisfying reintegration back into home, school, work, and/or community. Explores legislation and ethical issues that influence health care provision. Fall Prerequisite: Occupational Therapy Advocacy II

Term Offered: Fall

OCCT 8240 OT Advocacy IV

[3 credit hours]

Examines leadership, management, and supervision of occupational therapy services in a dynamic health care system. Addresses legislative, regulatory, and payment issues affecting program development. Encourages leadership development. Spring Prerequisite: Occupational Therapy Advocacy III

Term Offered: Spring

OCCT 8340 FW and Professional Dev IV

[1 credit hour]

Addresses communication with children, family members, and health care professionals; ethics and safety; and cultural diversity. Students identify Capstone Practicum sites, site mentor(s), and the faculty mentor. A forum for discussion of Level I fieldwork experiences is provided. Level I fieldwork experience is included. Prerequisite: Fieldwork and Professional Development Seminar II

Term Offered: Fall

OCCT 8350 FW and Professional Dev V

[3 credit hours]

Addresses issues of clinical supervision; Level II fieldwork policy, procedures, and documentation; and professional development. A forum for discussion of Level I fieldwork experiences is provided. Students develop a comprehensive Capstone Proposal. Includes Level I fieldwork experience. Prerequisite: Fieldwork and Professional Development Seminar IV

Term Offered: Spring**OCCT 8360 Fieldwork Level II**

[3 credit hours]

Provides a 12 - week, full-time, supervised fieldwork experience where students refine entry-level abilities to integrate occupational therapy theory, research, and practice under supervision and with collaboration of the academic institution. An on-line forum for discussion of Level II fieldwork experiences is provided. Prerequisite: Completion of academic content except research, which may be taken concurrently

Term Offered: Spring, Summer, Fall**OCCT 8370 Fieldwork Level II**

[6 credit hours]

Provides a 12 - week, full-time, supervised fieldwork experience where students refine entry-level abilities to integrate occupational therapy theory, research, and practice under supervision and with collaboration of the academic institution. An on-line forum for discussion of Level II fieldwork experiences is provided. Prerequisite: OCCT 8360 and completion of academic content except research, which may be taken concurrently

Prerequisites: OCCT 8360 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall**OCCT 8380 Capstone Practicum**

[6 credit hours]

Students develop skills in teaching, research, program development, advocacy or clinical practice with mentorship by faculty and on-site practitioners. This course, in combination with OCCT 8900 and OCCT 8910 requires documentation of 560 hours. Prerequisite: Level II FW, competency exam, all courses except research

Corequisites: OCCT 8900, OCCT 8910**Term Offered:** Spring, Summer, Fall**OCCT 8400 Phys Agent Mod and Non Occ Met**

[2 credit hours]

Addresses non-occupational methods including physical agent modalities and technology used with medically complex patients. Covers scientific underpinnings and regulatory guidelines for appropriate use of physical agent modalities in occupational therapy. Summer Prerequisite: Occupational Models of Practice VI

Term Offered: Summer**OCCT 8800 Independent Study OT**

[0-12 credit hours]

Intensive study in a field of interest, including theoretical and experimental work. May be repeated for credit. Prerequisite: Admission to OTD program or consent of instructor Fall, Spring, Summer

Term Offered: Summer, Fall**OCCT 8900 Mentored Capstone Dissemination**

[3 credit hours]

Focuses on individualized issues arising in the Capstone Practicum. Involves mentorship by site and faculty practitioners and culminates in a paper and a presentation dealing with a specific area within occupational therapy. Spring Prerequisite: Level II fieldwork and completion of academic content except research, which may be taken concurrently Co-requisites: Mentored Studies in Capstone Area or approved elective and Capstone Practicum

Term Offered: Spring, Summer, Fall**OCCT 8910 Mentored Studies:Capstone Area**

[3 credit hours]

Focuses on mastery of literature and in-depth knowledge of an area within occupational therapy through exploration of library, electronic, and clinical resources. Lends theoretical and research support to the Capstone Practicum. Spring Prerequisite: Level II fieldwork and completion of academic content except research, which may be taken concurrently Co-requisites: Mentored Capstone Dissemination and Capstone Fieldwork Practicum

Term Offered: Spring, Summer, Fall**PHYT 5000 Gross Anatomy**

[5 credit hours]

Students will study the structure of the human body using the structure-function relationship as the course paradigm. Musculoskeletal, vascular, and peripheral nervous system anatomy will be emphasized, as will the coordinated role of these structures, both locally and regionally, in producing movement of the axial skeleton and extremities. Competencies serve as a foundation for clinical science coursework, particularly in the musculoskeletal and neuromuscular areas of practice.

Term Offered: Summer**PHYT 5020 Lifespan I**

[2 credit hours]

The first of two, this course examines typical lifespan development from birth to adolescence. Emphasis is on theoretical constructs, gross motor development, physical therapy examination, diagnosis, prognosis and evaluation of findings. Also includes an overview of fine motor development, cognitive development, reflex development, interaction with families, public laws and child abuse.

Term Offered: Summer**PHYT 5050 Analysis of Movement I**

[2 credit hours]

This is the first of two courses that will integrate anatomy and biomechanics in order to gain an understanding of normal and abnormal human movement. In this course, foundational concepts will be introduced including biomechanical principles and tissue and muscle mechanics and applied to understanding movement of the upper extremity joints.

Term Offered: Summer

PHYT 5060 Analysis of Movement II

[3 credit hours]

This is the second of two courses that will integrate anatomy and biomechanics in order to gain an understanding of normal and abnormal human movement. In this course biomechanical principles of human movement will be reviewed and applied to understanding movement of the spine, pelvis, and lower extremity joints. Concepts of human movement analysis will be introduced and applied to common functional movements such as standing, transferring, walking, stair negotiation, and running.

Prerequisites: PHYT 5000 with a minimum grade of C and PHYT 5050 with a minimum grade of C and PHYT 5350 with a minimum grade of C

Term Offered: Fall

PHYT 5090 Neuroscience

[5 credit hours]

An introduction to the nervous system, including fundamental concepts in neuroanatomy and neurophysiology as they relate to human movement and basic bodily function mediated by the central and peripheral nervous systems. Emphasis is placed on the effects of neurological conditions (disease, injury, mental illness) relevant to physical therapy and functional performance. Basic clinical assessment skills of neurological impairments will integrate neuroscience information with clinical practice.

Term Offered: Spring

PHYT 5110 Clinical Pathophysiology I

[3 credit hours]

Integrated study of physiological and pathophysiological processes that influence the human body at the cellular, organ and systemic levels. Emphasis on mechanisms of and clinical manifestations of common diseases with discussion of potential impact on the delivery of PT services. Content to serve as the basis for discussion of pharmacology in subsequent courses.

Term Offered: Fall

PHYT 5120 Clinical Pathophysiology II

[1 credit hour]

Second of 2 courses that address the integrated study of normal physiological and pathophysiological processes in human body at cellular, organ, and systemic levels - emphasizes on clinical manifestations and impact on PT plan of care.

Term Offered: Summer

PHYT 5130 Evidence Based Practice

[4 credit hours]

Introduction to the principles of measurement and research design, with an emphasis on critically evaluating the design of research studies relevant to clinical practice.

Term Offered: Fall

PHYT 5170 Evidence Based Practice I

[2 credit hours]

Introduction to the principles of measurement and research design, with an emphasis on critically evaluating the design of research studies relevant to clinical practice.

Term Offered: Spring

PHYT 5180 Evidence Based Practice II

[2 credit hours]

The second of a two course series on the principles of measurement and research design, with an emphasis on the statistical analysis procedures commonly used in clinical research. The critical evaluation and analysis of research studies relevant to clinical practice will also be emphasized.

Term Offered: Summer

PHYT 5270 Applied Exercise Physiology

[3 credit hours]

Exploration of exercise physiology principles as related to promotion of PT patients/clients' health and wellness. Emphasizes physiological and biochemical changes with exercise/training and exercise testing and prescription for PT patients/clients.

Term Offered: Spring

PHYT 5280 Therapeutic Interventions I

[2 credit hours]

The theory and practice of physical therapy in the acute care setting as it relates to improvement of functional mobility, prevention of complications, and preparation for next level of care.

Term Offered: Spring

PHYT 5290 Therapeutic Interventions II

[2 credit hours]

Study of the theoretical basis for, and the application of thermal, mechanical, and electrical modalities used for the PT management of clients. Emphasis is on evidence-based practice, critical thinking, and clinical decision-making using a case-based format, and review of the scientific literature will be used in determining the most appropriate use of modalities within a comprehensive PT plan of care.

Term Offered: Summer

PHYT 5300 Principles of Therapeutic Exercise

[2 credit hours]

Application of scientific principles in anatomy, applied biomechanics, and exercise physiology to develop sound therapeutic exercise procedures. Emphasis on development of skills associated with therapeutic exercise for patients with musculoskeletal and/or general movement dysfunction. Students will learn how to use and apply a variety of common fitness and rehabilitation exercise apparatus and develop appropriate PT treatment plans that include exercise for a given patient problem.

Term Offered: Spring

PHYT 5350 Intro to Examination

[2 credit hours]

Introduction to the physical examination process, including history-taking, systems review and screening. Emphasis on basic PT examination skills of the cardiovascular, musculoskeletal, and integumentary systems. Skills include: assessment of tolerance to functional activity (vital signs), posture, pain, peripheral pulses and edema; goniometry; and strength testing.

Term Offered: Summer, Fall

PHYT 5450 Foundations of PT

[2 credit hours]

Addresses the professional socialization process. Professional codes and guides of behavior will be discussed in relation to delivery of competent, ethical, legal and compassionate PT services. Topics include: therapeutic communication, cultural competency, stress management and conflict resolution. Introduction to basic principles of teaching and learning for the role of educator is included.

Term Offered: Fall**PHYT 5610 Orientation to Interprofessional Teaming**

[1 credit hour]

Orientation to the Graduate Certificate in Teaming in Early Childhood. Focus on individual competencies needed to work collaboratively to meet the needs of young children with disabilities and their families.

Prerequisites: SPED 5270 with a minimum grade of D-**Term Offered:** Summer**PHYT 5620 Leadership and Advocacy in Interprofessional Teaming**

[1 credit hour]

This second seminar in the Graduate Certificate in Teaming in Early Childhood focuses on skills and policies that promote best practices in teaming to support young children with disabilities.

Prerequisites: SPED 5270 with a minimum grade of D- and PHYT 5610 with a minimum grade of D-**Term Offered:** Summer, Fall**PHYT 5630 Evidence-Based Practice and Innovation in Interprofessional Teaming**

[1 credit hour]

This third seminar in the Graduate Certificate in Teaming in Early Childhood provides students the opportunity to reflect on their practicum experiences in teaming to support young children with disabilities.

Prerequisites: SPED 5270 with a minimum grade of D- and PHYT 5610 with a minimum grade of D- and PHYT 5620 with a minimum grade of D-**Corequisites:** PHYT 5640**Term Offered:** Spring, Summer, Fall**PHYT 5640 Practicum in Interprofessional Teaming**

[2 credit hours]

The practicum is provides an opportunity to engage in interprofessional teaming in order to provide integrated services to young children with special needs in an inclusive setting.

Prerequisites: PHYT 5620 with a minimum grade of D-**Corequisites:** PHYT 5630**Term Offered:** Spring, Summer, Fall**PHYT 5650 Pharmacology of PT**

[1 credit hour]

Integrated study of pharmacology that presents the pharmacodynamics and pharmacotherapeutics of common classes of drugs. Drugs covered include: anti-inflammatory, analgesic, muscle relaxant, psychotropic, anti-microbial, and diabetic medications. Emphasis on indications, contraindications, adverse drug reactions, and the implications for physical therapy care.

Term Offered: Summer**PHYT 5750 Clinical Reasoning**

[1 credit hour]

Introduction to theoretical models that guide clinical decision making, including patient management, clinical reasoning, disablement, and evidence-based practice models. Documentation will be discussed as a tool to aid clinical reasoning.

Term Offered: Spring, Fall**PHYT 5850 Clinical Education Experience I**

[3 credit hours]

The first in a series four full-time, supervised clinical education experiences. Students are engaged in supervised practice in a 6-week integrated clinical education experience that emphasizes the early phases of development toward entry-level PT competencies in professional practice and patient management in either an inpatient or outpatient practice setting.

Term Offered: Summer**PHYT 5860 Clinical Practicum II**

[1 credit hour]

Clinical observation and supervised application of advancing physical therapy skills at the same clinical facility as Clinical Practicum I. An emphasis will be on continued progression in the generic abilities and a more focused approach toward the development of specific technical, cognitive or affective areas in need of improvement as identified during Clinical Practicum I.

Term Offered: Summer**PHYT 5900 Medical Imaging**

[2 credit hours]

This course provides the student with the tools needed to interpret information obtained from the radiology report and apply it to management of the physical therapy patient. Musculoskeletal imaging is emphasized, but imaging for other body systems is also addressed. This course strengthens the student's competency to perform a comprehensive patient evaluation, establish a diagnosis and prognosis, develop a physical therapy plan of care, and to communicate and collaborate with other health care providers.

Term Offered: Spring, Summer**PHYT 6020 Lifespan II**

[2 credit hours]

The principles of normal aging including the physiological, functional, and psychosocial changes associated with aging, and a review of diseases and disorders common to the aging population.

Term Offered: Spring, Summer**PHYT 6050 Hlth Care Policy and Delivery**

[1 credit hour]

Overview of the origins and components of the American health care system and major policy initiatives that influence it. Access, cost, and quality factors in health care delivery will be explored. Serves as a starting point for the student's study of the continuously expanding sector of the American economy in which they will practice.

Term Offered: Spring, Fall

PHYT 6100 Health Promotion

[2 credit hours]

Discussion and application of the elements of health and wellness as described by Healthy People 2010. Emphasis on health assessment, obesity, physical activity, nutrition, complementary/alternative management, and behavior modification strategies.

Term Offered: Fall

PHYT 6170 Scholarly Project I

[2 credit hours]

The first in a series that will culminate in the oral and written presentation of a scholarly project. This will include the development and presentation of a project proposal.

Term Offered: Summer, Fall

PHYT 6180 Scholarly Project II

[2 credit hours]

The second in a series that will culminate in the oral and written presentation of a scholarly project. This is a continuation of the project initiated in PHYT 6170.

Term Offered: Spring

PHYT 6190 Scholarly Project III

[1 credit hour]

Includes the final preparation of a scholarly paper which must meet the guidelines established by the College of Graduate Studies, and the oral defense/presentation of the scholarly project as required by the College of Graduate Studies.

Term Offered: Summer, Fall

PHYT 6260 Cardiovascular-Pulmonary PT

[3 credit hours]

Integrative study of the role of PT in interdisciplinary management of patients with cardiovascular and/or pulmonary dysfunction. Application of skills associated with PT examination, evaluation, diagnosis, prognosis and interventions for patients with CV-P dysfunction.

Term Offered: Fall

PHYT 6460 Teaching and Learning

[2 credit hours]

Study of a physical therapist's role as educator of peers, patients and families, community members, and students in the clinical setting. Emphasis on instructional design, instructional strategies, teaching methods, and evaluation of learning.

Term Offered: Fall

PHYT 6500 Musculoskeletal Rehab I

[3 credit hours]

First of two courses, focused on the synthesis of principles of pathophysiology and screening and examination of musculoskeletal system. Emphasis on pertinent special examination techniques, principles of evaluation, PT diagnosis and prognosis, and intervention for the upper and lower extremities. Case-based discussion of role of common M-S pharmacological management, radiographic procedures and findings, and interpretation of special tests for diagnostic purposes.

Term Offered: Fall

PHYT 6510 Musculoskeletal Rehab II

[3 credit hours]

Second of two courses, continued discussion of the principles of pathophysiology and musculoskeletal examination, evaluation, PT diagnosis and prognosis, and intervention. Emphasis on spine and lower quarter biomechanical examination and evaluation as it relates to lumbopelvic dysfunction. Includes discussion of: pharmacological management of inflammation and pain, and synthesis of radiological findings (radiographs, MRI, CT scans), as they relate to rendering PT diagnosis and prognosis.

Term Offered: Spring

PHYT 6600 Neuromuscular Rehab I

[3 credit hours]

Theories and principles of client examination, evaluation, PT diagnosis, prognosis, and therapeutic intervention for clients with stroke and spinal cord injury. Historic and modern evidence-based treatment approaches for the neurologic patient, in general, will be discussed with emphasis on the approach's influence in the design of a PT plan of care.

Term Offered: Fall

PHYT 6610 Neuromuscular Rehab II

[3 credit hours]

Second course in the series on rehabilitation of patients with neuromuscular diagnoses, including amputations, and neurodegenerative diseases. Emphasis on theories, philosophies, and the PT plan of care including examination, evaluation, and intervention strategies. Prostheses and orthoses prescription, application and training included.

Term Offered: Spring

PHYT 6620 Pediatric Rehabilitation

[2 credit hours]

Principles of rehabilitation for pediatric clients with neuromuscular impairments and developmental disabilities. Preparation for physical therapy practice in pediatric settings using interdisciplinary family-centered practice; normal and abnormal development, standardized assessment, service-delivery settings, interventions, management strategies specific to pediatrics. Emphasis on essential pediatric core competencies and the PT Management including examination, evaluation, diagnosis/prognosis, and intervention strategies.

Term Offered: Spring

PHYT 6700 Professional Issues

[1 credit hour]

Prerequisite: PHYT685 Discussion of current events and issues faced by the profession of physical therapy as identified by the APTA and other pertinent sources, and as encountered during clinical education experiences.

Term Offered: Fall

PHYT 6720 Special Topics in PT

[1 credit hour]

Intensive exploration of a topic related to the profession of physical therapy and designed to meet the student's special interest and professional goals. Subject matter will vary depending upon student interest.

Term Offered: Spring, Fall

PHYT 6740 Clinical Seminar I

[2 credit hours]

The first of a series of two courses, this course emphasizes the application of clinical psychomotor skills, problem-solving and critical thinking for a variety of diagnoses and practice settings using patient scenarios including patients with movement dysfunction involving multiple body systems. An emphasis is placed on evidence-based decision-making, comprehensive evaluation, progressive intervention planning, and evaluation of one's own clinical reasoning processes and skills.

Term Offered: Fall**PHYT 6750 Clinical Seminar II**

[2 credit hours]

The second of a series of two courses, this course emphasizes the application of clinical psychomotor skills, problem-solving and critical thinking for a variety of diagnoses and practice settings using patient scenarios including patients with movement dysfunction involving multiple body systems. An emphasis is placed on evidence-based decision-making, comprehensive evaluation, progressive intervention planning, and evaluation of one's own clinical reasoning processes and skills.

Term Offered: Spring**PHYT 6850 Clinical Education Experience II**

[5 credit hours]

The second in a series of four full-time, supervised clinical education experiences. Students are engaged in supervised practice in a 10 week clinical education experience that emphasizes development toward entry-level PT competencies in professional practice and patient management in an inpatient or outpatient practice setting.

Term Offered: Summer**PHYT 6990 Independent Study in PT**

[0-4 credit hours]

In-depth exploration and study of clinically related problems or topic of interest. May be repeated for credit.

Term Offered: Spring, Summer, Fall**PHYT 7050 Practice Management**

[2 credit hours]

Examination of management and supervisory issues encountered in contemporary physical therapy practice. Discussion will include identification, analysis, and resolution of issues that compromise the delivery of effective and efficient PT services in a variety of practice settings. Topics include: organizational structure and behavior, human resources, finance and operations management, and marketing.

Term Offered: Spring, Fall**PHYT 7100 Integrated Patient Management**

[3 credit hours]

This integrative course emphasizes comprehensive patient management using the International Classification of Function model. This course focuses on the PT examination, evaluation, diagnosis, prognosis, and plan of care for patients with complex movement dysfunctions involving multiple body systems, managing clinical ambiguity, and determining need for referral.

Prerequisites: PHYT 685 with a minimum grade of D- or PHYT 6850 with a minimum grade of D-

Term Offered: Summer, Fall**PHYT 7200 Scholarly Project IV**

[1 credit hour]

The course includes the final preparation of a scholarly paper including the oral defense/presentation and submission of the final paper to the Department of Physical Therapy.

Prerequisites: PHYT 617 with a minimum grade of D- or PHYT 6170 with a minimum grade of D-

Term Offered: Spring, Summer, Fall**PHYT 7320 Medical Screening**

[1 credit hour]

Preparation to work within a collaborative medical model and application of threshold detection to recognize to identify impairments or "red flags" in medical screening that warrant contact with a physician or other health care provider. Patient cases illustrate important medical screening principles. Emphasis on an examination scheme to promote efficient, effective patient data collection and professional communication with patients, physicians and other health providers.

Term Offered: Spring, Fall**PHYT 7890 Clinical Education Experience III**

[4 credit hours]

The third in a series of four full-time, supervised clinical education experiences. Students are engaged in supervised practice in a 8-week terminal clinical education experience that emphasizes development toward entry-level PT competencies in professional practice and patient management in an inpatient or outpatient practice setting.

Term Offered: Summer, Fall**PHYT 7900 Internship II**

[6 credit hours]

The final full-time, supervised internship completed following the culmination of the didactic portion of the DPT program. Students are engaged in supervised practice in a 12 week internship that emphasizes development of entry-level PT competencies in all the components of professional practice and patient management in various clinical practice and specialty settings.

Term Offered: Spring**PHYT 7990 Specialty Internship**

[4 credit hours]

Extended period of supervised, advanced clinical practice and/or formal experience in administrative or professional organizational environments, which is designed to meet the student's special interests and professional goals.

Term Offered: Spring, Fall**RCRT 5100 Community Event Planning**

[3 credit hours]

This course provides the graduate student with an advanced understanding of the event planning process including: risk and risk management, ethics, inclusivity, planning, budgeting, organizing, location selection, travel logistics, venue and guest requirements, marketing, and food and beverage considerations.

Term Offered: Summer, Fall

RCRT 5200 Planning and Promotion of Sport

[3 credit hours]

This course provides the graduate student with an advanced understanding of the principles of marketing and delivery of services associated with intercollegiate athletics, professional, and multi-sport club operations, facilities and management of resources. This course also examines motivation and behavior of sports tourists.

Term Offered: Fall

RCRT 5310 Leisure And Popular Culture

[3 credit hours]

This course provides the graduate student with an advanced understanding of leisure theory, philosophy, and behavior and its application to the delivery of leisure services within contemporary culture.

Term Offered: Fall

RCRT 5320 Administration In Recreation And Recreational Therapy

[3 credit hours]

This course provides the graduate student with an advanced understanding of the administrative functions of delivering recreation and therapeutic recreation services. Students will master and apply the aspects of management principles including ethics, legislation, technology, quality management, risk management, financial and human resources, marketing, and accreditation..

Term Offered: Spring, Summer

RCRT 5340 Leisure, Recreation And Aging

[3 credit hours]

This course provides the graduate student with an advanced understanding of the impacts of aging on leisure and recreation behavior and activity during middle and later adulthood by investigating the aging process, leisure across the lifespan, and the impact of leisure and recreation on quality of life and wellness.

Term Offered: Spring, Fall

RCRT 5410 Facility Planning and Design

[3 credit hours]

This course provides the graduate student with an advanced understanding of, and ability to apply, the principles of design and the site design process to the development of recreation-based facilities. Specific areas of the design process presented include: tools of the trade, functional and aesthetic considerations, research, regional and site analysis, programming, final design development, construction, management, and evaluation.

Term Offered: Spring

RCRT 5420 Leisure Program Research Techniques

[3 credit hours]

This course provides the graduate student with an advanced understanding of, and ability to apply, the basic components of research in the academic and professional practice setting including: ethics, human subject protection, research concepts, topic identification, theoretical roots, literature review development, sample selection, methodologies, instrument testing, data collection and analysis procedures, and research reporting.

Term Offered: Spring, Fall

RCRT 5610 Adventure Programming in Recreation and Recreation Therapy

[3 credit hours]

This course provides the graduate student with an advanced understanding of, and ability to apply, theories and techniques of adventure programming as a treatment protocol and/or leisure education tool. Outdoor trips required.

Term Offered: Spring, Fall

RCRT 5620 Animal Assisted Therapy

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using a variety of animal-assisted modalities.

Term Offered: Spring, Fall

RCRT 5630 Therapeutic Activities

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using a variety of games, humor and play modalities.

Term Offered: Spring, Fall

RCRT 5640 Rt Intervention: Therapeutic Groups

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using therapeutic group techniques and processes as a modality.

Term Offered: Spring, Fall

RCRT 5660 Relaxation And Stress Management

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using relaxation and stress management techniques as a modality.

Prerequisites: (RCRT 1310 with a minimum grade of D- and RCRT 4720 with a minimum grade of D-)

Term Offered: Spring, Fall

RCRT 5670 Rt Intervention: Leisure Education

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using leisure education activities, including: social skills, values clarification, leisure awareness, resources and knowledge. Minimum

Term Offered: Spring, Fall

RCRT 5680 Rt Intervention: Assistive Technology & Techniques

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes utilizing assistive technology, techniques, and resources in therapeutic settings.

Term Offered: Spring, Fall

RCRT 5690 Rt Intervention: Aquatic Therapy

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes utilizing swimming, evidence-based aquatic programming methods, and resources.

Term Offered: Spring, Summer, Fall

RCRT 5720 Introduction To Therapeutic Recreation

[3 credit hours]

This course is designed to introduce graduate students who do not have a background in therapeutic recreation to the theories, models, principles, and history of therapeutic recreation service. Through lectures, discussions and self-directed learning activities, the student will examine the structure and function of therapeutic recreation processes in a variety of treatment settings.

Term Offered: Spring, Fall**RCRT 5730 Medical & Clinical Aspects Of Therapeutic Recreation**

[3 credit hours]

This course provides the graduate student with an advanced understanding of health-related conditions or disabilities related to physical, neurological, sensory and metabolic impairments across the lifespan. Uses of pharmacological interventions, family involvement, programming, and other implications impacting Therapeutic Recreation practice are examined.

Term Offered: Fall**RCRT 5750 Group Dynamics In Recreational Therapy**

[3 credit hours]

This course provides the graduate student with an advanced understanding, and ability to apply, concepts and theories of the therapeutic group process as applicable to professional practice. Students will be introduced to and practice: facilitation skills, behavior modification techniques, and effective communication and leadership skills.

Term Offered: Spring, Fall**RCRT 5760 APIE in Recreation Therapy**

[3 credit hours]

This course addresses the procedures and processes of assessment, planning, implementation and evaluation of recreation therapy services.

RCRT 5790 Medical & Clinical Aspects Of Therapeutic Recreation II

[3 credit hours]

This course provides the graduate student with an advanced understanding of health-related conditions or disabilities related to intellectual and developmental disabilities and psychological impairments across the lifespan. Uses of pharmacological interventions, family involvement, programming, and other implications impacting Therapeutic Recreation practice will be examined.

Term Offered: Spring**RCRT 5800 Clinical: Physical Rehabilitation**

[1 credit hour]

This course requires a 50-hour practicum experience in a community agency. The practicum experience provides the student a structured environment to apply the APIE(D) process with a physical rehabilitation population.

Term Offered: Spring, Summer, Fall**RCRT 5810 Clinical: Psychiatric Rehabilitation**

[1 credit hour]

This course requires a 50-hour practicum experience in a community agency. The practicum experience provides the student a structured environment to apply the APIE(D) process with a psychiatric rehabilitation population.

Term Offered: Spring, Fall**RCRT 5820 Clinical: Mental Retardation/Developmental Disability**

[1 credit hour]

This course requires a 50-hour practicum experience in a community agency. The practicum experience provides the student a structured environment to apply the APIE(D) process with an ID/DD rehabilitation population.

Term Offered: Spring, Fall**RCRT 5830 Clinical: Geriatric**

[1 credit hour]

This course requires a 50-hour practicum experience in a community agency. The practicum experience provides the student a structured environment to apply the APIE(D) process with a geriatric population.

Term Offered: Spring, Fall**RCRT 5860 Therapeutic Fitness**

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using therapeutic fitness modalities.

Term Offered: Spring, Fall**RCRT 5870 Program Planning In Recreational Therapy**

[3 credit hours]

This course requires the graduate student to apply cumulative knowledge of the APIE(D) process through designing evidence-based: treatment programs, program evaluations, protocols and treatment plans in recreation therapy practice.

Term Offered: Spring**RCRT 5900 Rt Intervention: Craft Therapy**

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using craft therapy modalities.

Term Offered: Spring, Fall**RCRT 5910 Rt Intervention: Horticulture Therapy**

[1 credit hour]

This course provides the graduate student with advanced skill development needed to implement therapeutic outcomes using horticulture therapy modalities.

Term Offered: Spring, Fall**RCRT 5940 Internship In Recreation And Leisure**

[1-6 credit hours]

This course provides the graduate student with the opportunity to complete an internship under the supervision of a recreation professional in partial fulfillment for the MA degree in recreation and leisure studies.

Term Offered: Spring, Summer, Fall**RCRT 6000 Issues And Trends In Recreation/Recreational Therapy**

[3 credit hours]

This course provides the graduate student with an advanced understanding of the issues and trends impacting the delivery of recreation and recreation therapy services in diverse professional settings.

Term Offered: Spring

RCRT 6020 Financial Resources Of Recreation And Recreational Therapy
[3 credit hours]

This course provides the graduate student with an advanced understanding of the financial management concepts and resources supporting the delivery of recreation and recreation therapy services.

Term Offered: Summer

RCRT 6920 Master's Project In Recreation And Leisure

[1-4 credit hours]

This course provides the graduate student with the opportunity to complete a Master's project under the supervision of a project committee in partial fulfillment for the MA degree in recreation and leisure studies.

Term Offered: Spring, Summer, Fall

RCRT 6940 Internship

[1-4 credit hours]

This course provides the graduate student with the opportunity to complete an advanced internship under the supervision of a recreation professional in partial fulfillment for the MA degree in recreation and leisure studies.

Term Offered: Spring, Fall

RCRT 6960 Master's Thesis In Recreation And Leisure

[1-4 credit hours]

This course provides the graduate student with the opportunity to complete a Master's Thesis under the supervision of a thesis committee in partial fulfillment for the MA degree in recreation and leisure studies.

Term Offered: Spring, Summer, Fall

RCRT 6990 Independent Study In Recreation And Leisure

[1-3 credit hours]

This course provides the graduate student with the opportunity to develop an advanced independent learning experience in support of academic and/or professional interests.

Term Offered: Spring, Summer, Fall

Doctor in Physical Therapy/PhD in Exercise Science

There is a significant demand for physical therapists who have attained the additional doctor of philosophy degree to serve as core faculty in academic positions to educate DPT students and to serve as physical therapists with clinical expertise and research experience to expand the knowledge base of the profession.

Admission to the DPT/PhD program is a two-step process. The first step is to be admitted to the DPT program. Students interested in being considered for the PhD in exercise science degree program in the school of exercise and rehabilitation sciences will then apply to that program prior to completion of the DPT program. This process will follow the established procedures for application to the school of exercise and rehabilitation sciences' doctoral program.

Students may apply up to 18 credits of their DPT program for credit in the Ph.D. program. Please contact the physical therapy program or the program director for the graduate program in exercise science for more information on the dual degree.

Masters of Athletic Training

The Masters of Athletic Training (MAT) Program serves as the route to certification for future athletic trainers. Students will be prepared to enter an evolving profession and dynamic healthcare environment. The MAT prepares students to be scholarly clinicians that have the knowledge and skills to provide excellent healthcare today and in the future.

Through the use of high-impact teaching practices, MAT students will gain the professional knowledge and skills necessary to work in collaboration with physicians and other healthcare professions to provide preventative and acute care, and evaluate and treat injuries and illnesses in a physically active population.

Upon successful completion of the MAT Program, students will be eligible to sit for the National Athletic Training Association Board of Certification Examination. After successful completion of this exam, students will be a Certified Athletic Trainer (ATC). In addition to BOC Certification, students may need state licensure/registration/certification in order to legally practice.

Students enrolling in the Master of Athletic Training program must meet the following minimum admission requirements:

Prerequisite Requirements:

- 4 year Bachelor's degree from a regionally accredited college or university (degree must be completed by the time of enrollment however degree may be in progress at the time of application)
- 3.000 cumulative GPA for all academic work
- 3.000 GPA in prerequisite coursework (see below for details)
- GRE score of 300 (150 verbal, 150 quantitative)
- Required prerequisite courses include: biology, chemistry, physics, human anatomy and physiology, exercise physiology, biomechanics, general psychology, statistics, nutrition and first aid.
- Recommended prerequisite courses include: pharmacology, medical terminology, cadaver anatomy, medical ethics, scientific writing, research methods, personal health/wellness, pathophysiology, growth and motor development.

Application Components/Process:

- Completed Athletic Training Centralized Application Service (ATCAS) Application (<https://atcas.liaisoncas.com/applicant-ux/#/login>)
- Completed University of Toledo College of Graduate Studies Application (https://apply.utoledo.edu/prod/bwskalog.p_disloginnew/) (application materials may be duplicated from ATCAS)
- 3 letters of recommendation- 1 letter must be from a Certified Athletic Trainer, 1 letter must be from a Professor/Instructor (if a student at the time of applying) or employer (if not a student at the time of applying), remaining letter must be from a non-relative
- Personal Statement (prompt provided within ATCAS)
- Official transcripts
- Proof of current Emergency Cardiac Care certification

To ensure sufficient student progress and maintain the standards of quality, only a certain number of students will be admitted each year. As a result, admission is competitive. Following the submission of ATCAS

and COGS applications, qualified applicants will be contacted about an on-campus interview.

For more information, please visit our website (<http://www.utoledo.edu/hhs/athletictraining/>) or contact MAT Program Director- Sarah Long, MS, AT, ATC (Sarah.long@utoledo.edu).

For the degree in athletic training, immunizations and compliance with technical standards are required. In addition, some clinical sites may require a background check. Students must provide their own transportation to clinical sites. Typically clinical sites are within 20 miles of the UT campus however certain immersive rotations may be located outside of the greater-Toledo area and it will be the responsibility of the student to secure housing.

Students in the MAT must provide verification (official documentation or proof of positive titer) of the following immunizations:

- Hepatitis B- 3 dose series
- Rubella, Rubeola, Mumps (MMR/MRR)
- Tetanus/Diphtheria (TDap/DTap)- updated in the last 10 years
- Varicella
- Tb/PPD- Initial 2 step test and/or Annual TB Skin Test
- Annual Flu Vaccination

Summary of Technical Standards:

Candidates for selection to the Athletic Training Program must demonstrate:

1. the capacity to assimilate, analyze, synthesize, integrate concepts and problem solve to formulate assessment and therapeutic judgments and to be able to distinguish deviations from the norm.
2. the ability to perform appropriate physical examinations using accepted techniques; and accurately, safely and efficiently use equipment and materials during the assessment and treatment of patients.
3. the ability to communicate effectively and sensitively with patients and colleagues, including individuals from different cultural and social backgrounds; this includes, but is not limited to, the ability to establish rapport with patients and communicate judgments and treatment information effectively.
4. the ability to record the physical examination results and a treatment plan clearly and accurately.
5. the capacity to maintain composure and continue to function well during periods of high stress.
6. the perseverance, diligence and commitment to complete the athletic training program as outlined and sequenced.
7. flexibility and the ability to adjust to changing situations and uncertainty in clinical situations.
8. affective skills and appropriate demeanor and rapport that relate to professional education and quality patient care.

For the full Technical Standards document, please visit the MAT website.

The program consists of 3 components: classroom/didactic, clinical education and scholarly project. The program consists of 55 credits spread over 6 semesters. The program is cohort-based, thus students

may only start the program sequence once per year (May/June) and must complete the program in the following order:

First Term		Hours
SUMMER 1		
ATTR 6140	Functional Musculoskeletal Anatomy	3
ATTR 6150	Foundations of Athletic Training Practice	3
Hours		6
Second Term		
FALL 1		
ATTR 6120	Evaluation and Management of Peripheral Joint Injuries	4
ATTR 6310	Therapeutic Interventions I	3
ATTR 6610	Clinical Skills I	2
ATTR 6800	Foundations of Scholarly Practice	3
Hours		12
Third Term		
SPRING 1		
ATTR 6220	Evaluation and Management of Head and Spine Injuries	4
ATTR 6620	Clinical Skills II	2
ATTR 6700	Therapeutic Interventions II	3
ATTR 6810	Scholarly Practice I	1
Hours		10
Fourth Term		
SUMMER 11		
ATTR 6410	Clinical Biomechanics	2
ATTR 6510	Evaluation and Management of General Medical Conditions	3
ATTR 6520	Management of Emergencies in Athletic Training	3
Hours		8
Fifth Term		
FALL II		
ATTR 6630	Clinical Skills III	3
ATTR 6660	Evidence-Based Practice in Sports Medicine	2
ATTR 6710	Organization And Administration Of Athletic Training Programs	3
ATTR 6730	Optimization of Performance and Wellness	3
ATTR 6820	Scholarly Practice II	1
Hours		12
Sixth Term		
SPRING II		
ATTR 6600	Issues And Management In Athletic Training	3
ATTR 6640	Clinical Skills IV	3
ATTR 6830	Scholarly Practice III	1
Hours		7
Total Hours		55

Goal #1: To prepare students for entry-level practice in the field of athletic training

Objective 1: Provide students with the knowledge, skills and abilities to demonstrate competency in each of the five practice domains as defined by the 6th Role Delineation Study/Practice Analysis (Board of Certification 2012)

Domain 1: Injury/Illness Prevention and Wellness Protection

Domain 2: Clinical Evaluation and Diagnosis

Domain 3: Immediate and Emergency Care

Domain 4: Treatment and Rehabilitation

Domain 5: Organizational and Professional Health and Well-Being

Objective 2: Provide students with the knowledge, skills and abilities necessary to successfully challenge the NATA Board of Certification Examination

Objective 3: Provide students with the opportunity to translate knowledge from theoretical to hands-on through a series of progressive courses and clinical education rotations

Goal #2: To instill in students the mindset of a scholarly clinician

Objective 1: Provide students with information, techniques and methods best aligned with the evidence-based practice mode

Objective 2: Provide students with the knowledge, skills and abilities to evaluate, consume and apply research evidence

Objective 3: Provide students with the opportunity to translate research evidence to clinical practice through a series of progressive courses and clinical education rotations

Goal #3: To provide students with the skills necessary to operate successfully as a member of a healthcare team

Objective 1: Provide students with the knowledge, skills and abilities to communicate in an effective and professional manner

Objective 2: Provide students with hands-on opportunity to observe and engage as a member of a sports medicine healthcare team in a variety of settings

Objective 3: Provide students with opportunities for inter-professional education with other healthcare profession programs

MS in Exercise Science

The school of exercise and rehabilitation sciences offers programming at the graduate level leading to the master of science in exercise science (MSES) degree. Students may choose to specialize in athletic training, exercise physiology or exercise biology. These specializations involve a combination of courses, seminars, clinical experiences, and research that is intended to prepare individuals for a wide range of careers and advanced study in exercise science and related fields.

Students applying for the MS in Exercise Science (see below for Athletic Training Concentration) need to provide:

- previous academic training: admitted students will typically have an undergraduate degree in exercise science or a closely related area with recommended coursework in human anatomy, physiology, exercise physiology and biomechanics
- academic record: applicants with an undergraduate GPA above 2.75 will be considered for admission; 3.0 in the last 60 hours of the undergraduate program is recommended
- scores on the Graduate Record Exam (GRE)
- letters of recommendation: three letters are required from individuals qualified to assess the individual's potential for success in graduate

education, faculty members with specific expertise in exercise science or a closely related area are recommended

- area of study: all applicants must identify their intended area of study within the MSES program.

Admission is competitive. A selected number of students are admitted to each specialization program area depending on space.

Goals and mission statements for the students can be found at: <http://www.utoledo.edu/hhs/exercise-science/>.

Requirements for Post-professional Athletic Training Program

Program information for the Post Professional Athletic Training Education Program can be found on our website: <http://www.utoledo.edu/hhs/athletictraining/graduate/>. Admission requirements for the academic program are as follows:

1. Graduation from a CAATE accredited professional Athletic Training Program;
2. Certification or eligibility for certification by the Board of Certification for Athletic Trainers (BOC);
3. Licensure or eligibility for Ohio Occupational Therapy, Physical Therapy and Athletic Training Board
4. Attainment of a 3.0 cumulative GPA, and a GRE score of 303 (153 verbal and 150) are preferred

Students must have verification of Hepatitis B (3 dose series), MMR, TDap/DTap, Varicella, 2 step PPD. In addition, students will need to receive a yearly influenza vaccine as well as an annual intradermal TB test. Students are required to submit to a background check on an annual basis as required by their clinical assistantship. Students are responsible for their own transportation to their clinical sites.

Admission to the Post Professional Program is secondary to admission to the College of Graduate Studies. A clinical assistantship is provided to those students who are admitted to the program.

Program of Study for the Master of Science in Exercise Science

The mission of the Post-Professional Athletic Training Program is to expand the depth and breadth of athletic training knowledge and skills beyond that of entry-level. The program seeks to develop clinicians that practice with a patient-centered approach in an effort to optimize the health and well-being of their patients. In addition, the program seeks to develop scholarly clinicians that are capable of providing the high-quality care necessary to contribute to the advancement of the athletic training field. In this cohort program, students are provided the opportunity to foster these skills in the classroom (36 credits) and research laboratories (thesis required), as well as during autonomous clinical education assignments. Full-time students will complete the program in two years.

Cohort program course of study required for all students (36 credit minimum)

Program of Study for the Master of Science in Exercise Science: Concentration in athletic training

School of Intervention and Wellness

MADELINE CLARK, counselor education program director

CAROLINE MENEZES, speech language pathology program director

JENNIFER REYNOLDS, school psychology program director

The school of intervention and wellness offers a master's degree and education specialist degree in school psychology, a master's degree in counselor education with concentrations in school counseling and clinical mental health counseling, and a doctorate in counselor education. The school also offers a master's degree in speech-language pathology.

Degrees Offered

- Certificate in Advanced Intervention for Listening and Spoken Language (p. 173)
- EdS in School Psychology (p. 169)
- MA in Counselor Education (p. 160)
- MA in School Psychology (p. 214)
- MA in Speech Language Pathology (p. 158)
- PhD in Counselor Education (p. 167)

COUN 5010 Professional Orientation To School Counseling

[4 credit hours]

This course is an introduction to the profession of school counseling including the historical foundations, roles and responsibilities, legal and ethical issues, implications of sociocultural diversity, organization and administration, and future trends within the context of the school community.

Term Offered: Spring, Summer, Fall

COUN 5020 Professional Orientation to Clinical Mental Health Counseling

[4 credit hours]

An orientation to the counseling profession; ethical and legal issues, counseling process, skills and theories; counselor roles, functions and work settings; and historical foundations of counseling.

Term Offered: Spring, Fall

COUN 5110 Career Counseling And Development

[3 credit hours]

Theories, resources and practices of career counseling and development are presented. Knowledge and skills for promoting career growth among a broad range of individuals across the life span is emphasized.

Term Offered: Spring, Summer, Fall

COUN 5120 Individual And Group Assessment

[3 credit hours]

This course provides an in-depth understanding of psychological testing through (1) an overview of basic testing concepts, (2) an understanding of test construction, (3) familiarity with instruments and (4) an overview of using test results. History and rationale of testing are included.

Term Offered: Summer, Fall

COUN 5130 Group Counseling

[4 credit hours]

This course provides training and experience in group development, dynamics, theories, methods and skills of group counseling, group leadership, research and evaluation, ethical issues, and other group work approaches. Multicultural issues, advocacy, and wellness will be explored throughout the course.

Term Offered: Spring, Summer, Fall

COUN 5140 Counseling Theories and Application

[4 credit hours]

Includes a study of counseling and consultation theories and application of theory in therapeutic/helping relationships from individual, group, and systemic perspectives.

Term Offered: Spring, Summer, Fall

COUN 5150 Counseling Across The Life Span

[3 credit hours]

This course provides training in the theoretical understanding and processes of human development (e.g., social, affective, familial, cognitive, physical) from prenatal stages through older adulthood. Counseling approaches relevant to theoretical principles will be presented. Multicultural issues, advocacy, wellness, and ethical issues will be explored throughout the course. Theories of individual and family development across the lifespan are examined. Developmental processes of individuals and families and implications for counseling are presented from a multi-generational family perspective.

Term Offered: Spring, Summer, Fall

COUN 5160 Cultural Diversity For Counselors And School Psychologists

[3 credit hours]

This course addresses sociocultural diversity, multicultural, and social justice concepts related to self and others. Throughout the course the tripartite model of multicultural attitudes, knowledge, and skills will be explored using an inclusive definition of multiculturalism. We will examine multiculturalism and social justice on individual, community, and systemic levels. Wellness, prevention, and advocacy will also be infused throughout the course. Addresses the cross cultural theories, knowledge, beliefs and techniques required for providing effective services to culturally diverse populations. Examines assumptions about cultural differences, which underlie counseling theories and therapies.

Term Offered: Spring, Summer, Fall

COUN 5180 Counseling Skills

[4 credit hours]

This course is an introduction to the basic helping/microskills used in individual, group, and systemic therapeutic settings. These are the foundational counseling skills necessary in the preparation of school and clinical mental health counselors. Supervised training prepares students for their entry-level clinical practicum experience.

Term Offered: Spring, Fall

COUN 5190 Counseling Practicum

[4 credit hours]

Students receive supervised, practical experiences in providing counseling services to clients. Performance of counseling skills; relationship skills; intervention techniques; documentation skills; and professional, ethical and legal conduct is expected.

Term Offered: Spring, Summer, Fall

COUN 5250 Creating Therapeutic Environments For The Aged

[3 credit hours]

Explores the various aspects necessary for creating therapeutic physical and social psychological settings for older institutionalized adults. Models of care giving and programmatic skills are examined.

COUN 5980 Special Topics In Counseling, Mental Health, And School Psychology

[1-8 credit hours]

This course is open to a graduate student pursuing a master's, specialist or doctoral degree program and may be a requirement of that program.

Term Offered: Spring, Summer, Fall**COUN 6000 Counseling Research and Program Evaluation**

[3 credit hours]

This course focuses on the research and program evaluation in professional counseling, covering basic statistics and related research design with specific applications counseling. Students will be expected to critique existing counseling research. Material covered in this course should provide the student with the skills necessary to be a competent consumer as well as producer of research. Students will gain skills in the preparation of research problems, design and implementation of quantitative and qualitative research and methodology in the field of counseling.

Term Offered: Summer, Fall**COUN 6100 Comprehensive School Counseling Programs**

[3 credit hours]

Emphasis in this course is placed on the skills necessary to assess K-12 students' needs, design a program of comprehensive services, and coordinate, implement, and evaluate the program's activities. This includes counseling strategies for the school counselor that promote academic and personal/social development in children and youth. Finally, a thorough study of consulting models and techniques to help school counselors develop consultation skills, which may be applied when working with school personnel, administrators, parents, and mental health clinicians in community agencies, or other settings.

Prerequisites: COUN 5010 with a minimum grade of B-**Term Offered:** Spring**COUN 6210 Psychopathology**

[4 credit hours]

The study of various paradigms for conceptualizing psychopathology related to children, adolescents and adults. Includes study of specific personality theories and their application to clinical counseling.

Term Offered: Spring**COUN 6220 Child, Adolescent, Family Therapy**

[3 credit hours]

Specialized study of therapeutic techniques commonly emphasized in working with children, adolescents and their families. Approaches to family therapy in a multicultural context, family assessment and ethical issues will be emphasized.

Prerequisites: COUN 5140 with a minimum grade of D-**Term Offered:** Summer, Fall**COUN 6230 Crisis Intervention Counseling**

[3 credit hours]

Instruction in the theories, skills and techniques necessary to intervene into a variety of crisis situations such as suicide, violence, domestic violence, drug and alcohol abuse and family dysfunction.

Prerequisites: COUN 5140 with a minimum grade of D-**Term Offered:** Summer, Fall**COUN 6240 Diagnosis And Mental Health**

[4 credit hours]

Study of the signs, symptoms, etiology and psychodynamics of various mental and emotional disorders based on the most current edition of the Diagnostic and Statistical Manual for Mental Disorders (DSM).

Term Offered: Summer, Fall**COUN 6470 Drugs And Mental Health Counseling**

[4 credit hours]

This course includes instruction on the neuroanatomy of the nervous system, the physiology of the neuron, and the processes involved in synaptic transmission. The psychobiological and psychophysiological effects of various psychotropic medications typically used in the treatment of mental disorder will be investigated. Integration of pharmacotherapy and psychotherapy in the treatment of mental, emotional, and substance use disorders will also be considered.

Term Offered: Spring, Summer, Fall**COUN 6500 Advanced Theory And Practice Of Career Counseling**

[3 credit hours]

Advanced study in theories pertaining to the principles and practice of career counseling. Special emphasis on research, legal and ethical issues, and the role of culture in career choice and development.

COUN 6720 Advocacy for the Survivor of Child Neglect and Abuse

[3 credit hours]

This course prepares students to recognize the long term cognitive, social, and emotional effects of child maltreatment. Evidenced-based approaches for effective advocacy and for treatment of the survivor are examined.

Prerequisites: SOCW 6700 with a minimum grade of D- and CRIM 6710 with a minimum grade of D-**Term Offered:** Spring**COUN 6920 Master's Research Project**

[1-3 credit hours]

In this capstone experience, master's students review the literature, report implications and produce a project which can be applied in counseling-related settings. This can substitute for CMHS 6930.

COUN 6930 Master's Research Seminar

[2-3 credit hours]

In this capstone experience, master's students review and critique the literature and report implications for research, theory and practice on counseling-related topic of interest, approved by the instructor.

COUN 6940 Counseling Internship

[1-8 credit hours]

The course is intended to provide counseling students with practical experience in settings where counseling services are offered. It allows students to relate academic and theoretical learning to settings outside the classroom. Field placement also allows student to receive evaluative feedback on their knowledge, attitudes, and skills with clients in the school setting. Since students already have received advanced training in counseling, the staff and the clientele at the placement site should benefit from the services that are provided by students during the placement. Students are expected to assume a broad spectrum of counseling roles and functions. Students are asked to experience as many responsibilities as feasible in the school setting that are similar to the responsibilities of a professional counselor.

Prerequisites: COUN 5190 with a minimum grade of B or CMHS 5190 with a minimum grade of B

Term Offered: Spring, Summer, Fall

COUN 6950 Workshop In Counseling, Mental Health, And School Psychology

[1-6 credit hours]

Workshops developed around topics of interest and concern to counselors, school psychologists or other mental health care professionals. Practical application of topics will be stressed.

COUN 6960 Master's Research Thesis

[1-3 credit hours]

In this capstone experience, master's students complete an original piece of research, including literature review, methods, analysis and discussion. This can substitute for CMHS 6930.

COUN 6990 Master's Independent Study

[1-4 credit hours]

Provides students the opportunity to work independently on professional problems under the direction of a faculty member in the Department of Counseling and Mental Health Services.

Term Offered: Spring, Summer, Fall

COUN 7010 Professional Orientation To School Counseling

[4 credit hours]

This course is an introduction to the profession of school counseling including the historical foundations, roles and responsibilities, legal and ethical issues, implications of sociocultural diversity, organization and administration, and future trends within the context of the school community.

COUN 7130 Group Counseling

[4 credit hours]

This course provides training and experience in group development, dynamics, theories, methods and skills of group counseling, group leadership, research and evaluation, ethical issues, and other group work approaches. Multicultural issues, advocacy, and wellness will be explored throughout the course.

Term Offered: Spring, Summer, Fall

COUN 7140 Counseling Theories and Application

[4 credit hours]

Includes a study of counseling and consultation theories and application of theory in therapeutic/helping relationships from individual, group, and systemic perspectives.

Term Offered: Spring, Summer, Fall

COUN 7150 Counseling Across The Life Span

[3 credit hours]

This course provides training in the theoretical understanding and processes of human development (e.g., social, affective, familial, cognitive, physical) from prenatal stages through older adulthood. Counseling approaches relevant to theoretical principles will be presented. Multicultural issues, advocacy, wellness, and ethical issues will be explored throughout the course. Theories of individual and family development across the lifespan are examined. Developmental processes of individuals and families and implications for counseling are presented from a multi-generational family perspective.

Term Offered: Spring, Summer, Fall

COUN 7160 Cultural Diversity For Counselors And School Psychologists

[3 credit hours]

This course addresses sociocultural diversity, multicultural, and social justice concepts related to self and others. Throughout the course the tripartite model of multicultural attitudes, knowledge, and skills will be explored using an inclusive definition of multiculturalism. We will examine multiculturalism and social justice on individual, community, and systemic levels. Wellness, prevention, and advocacy will also be infused throughout the course. Addresses the cross cultural theories, knowledge, beliefs and techniques required for providing effective services to culturally diverse populations. Examines assumptions about cultural differences, which underlie counseling theories and therapies.

Term Offered: Spring, Summer

COUN 7180 Counseling Skills

[4 credit hours]

This course is an introduction to the basic helping/microskills used in individual, group, and systemic therapeutic settings. These are the foundational counseling skills necessary in the preparation of school and clinical mental health counselors. Supervised training prepares students for their entry-level clinical practicum experience.

Term Offered: Spring, Fall

COUN 7210 Psychopathology

[4 credit hours]

This course is designed as an exploration into various conceptualizations of psychopathology and their implications for assessment, diagnosis, and treatment planning in counseling. The study of various paradigms for conceptualizing psychopathology related to children, adolescents and adults. Includes study of specific personality theories and their application to clinical counseling

Term Offered: Spring

COUN 7220 Child, Adolescent, Family Therapy

[3 credit hours]

Specialized study of therapeutic techniques commonly emphasized in working with children, adolescents and their families. Approaches to family therapy in a multicultural context, family assessment and ethical issues will be emphasized.

Prerequisites: COUN 5140 with a minimum grade of D-

Term Offered: Summer, Fall

COUN 7230 Crisis Intervention Counseling

[3 credit hours]

The Crisis Intervention Counseling course (COUN 7230) is designed to develop knowledge and skills in crisis intervention counseling associated with a variety of crisis situations. The course contributes to meeting the Council on Accreditation of Counseling and Related Educational Programs (CACREP) accreditation general

Prerequisites: COUN 5140 with a minimum grade of D-

Term Offered: Fall

COUN 7240 Diagnosis And Mental Health

[4 credit hours]

Study of the signs, symptoms, etiology and psychodynamics of various mental and emotional disorders based on the most current edition of the Diagnostic and Statistical Manual for Mental Disorders (DSM).

Term Offered: Summer, Fall

COUN 7510 Supervision In Counseling And School Psychology

[4 credit hours]

Training in supervision models, methods, roles, ethical issues, research and evaluation. Advanced training in consultation.

Term Offered: Spring, Fall

COUN 7520 Education And Leadership In Mental Health Professions

[4 credit hours]

Orient students to the roles and tasks of educators and leaders in mental health professions, curricular issues of programs, professional and ethical issues and current status and future trends in higher education among mental health professions.

Term Offered: Spring

COUN 7530 Advanced Theories Of Counseling And Consultation

[4 credit hours]

This course is designed to provide advanced preparation in theory pertaining to the principles and practice of individual counseling, group work and consultation.

Term Offered: Fall

COUN 7540 Advanced Personality Assessment

[4 credit hours]

This course will focus on the administration, scoring, and interpretation of selected advanced personality assessment instruments. Special emphasis will be given to the MMPI-2, NEO-PI-3, MCMI-III, SASSI-3, and report writing.

Prerequisites: COUN 5120 with a minimum grade of D-

Term Offered: Fall

COUN 7930 Doctoral Research Seminar

[4 credit hours]

Advanced preparation in research problems, design and implementation of quantitative and qualitative research and methodology in the fields of counseling and supervision.

Term Offered: Spring

COUN 8180 Advanced Multicultural Issues in Counselor Education and Supervision

[4 credit hours]

This advanced course is designed to prepare counseling students for leadership and advocacy in the areas of diversity, inclusion, and equity in counselor education and supervision.

Prerequisites: COUN 5160 with a minimum grade of D-

Term Offered: Spring

COUN 8410 Advanced Practicum In Individual And Group Therapy

[4 credit hours]

Students receive supervised, practical experiences in providing counseling in individual and group modes of services. Advanced therapy skills will be emphasized.

Term Offered: Spring

COUN 8420 Advanced Practicum In Family Therapy

[4 credit hours]

This course is designed to provide specialized opportunity under live supervision to develop specialized skills in family therapy. The student will work in co-therapy with a family experiencing difficulties.

COUN 8440 Advanced Theory And Practice Of Group Counseling

[3 credit hours]

Advanced training and experience in development, dynamics, theories, methods and skills of group counseling and therapy, leadership, research and evaluation and ethical issues as applicable to normal and abnormal populations.

COUN 8450 Couples And Family Therapy

[3 credit hours]

Theories and practice of couples and family counseling are explored. Foundations of systems theories and their application to couples and family therapy are presented.

Prerequisites: (COUN 5140 with a minimum grade of D- and COUN 5150 with a minimum grade of D-)

Term Offered: Spring

COUN 8460 Substance Abuse Counseling

[4 credit hours]

Review of treatment approaches, techniques and programs for counseling individuals and families experiencing substance-related problems.

Term Offered: Spring, Fall

COUN 8470 Drugs And Mental Health Counseling

[4 credit hours]

This course includes instruction on the neuroanatomy of the nervous system, the physiology of the neuron, and the processes involved in synaptic transmission. The psychobiological and psychophysiological effects of various psychotropic medications typically used in the treatment of mental disorder will be investigated. Integration of pharmacotherapy and psychotherapy in the treatment of mental, emotional, and substance use disorders will also be considered.

Term Offered: Spring, Summer, Fall

COUN 8480 Advanced Training In Professional, Legal, And Ethical Issues

[4 credit hours]

The content of this course will consider advanced training in contemporary professional, legal, and ethical issues that influence, regulate, or affect the work of counselors, psychologists, and other mental health professionals.

Term Offered: Spring

COUN 8490 Gender Issues In Counseling And Mental Health Services

[3 credit hours]

Examines the effect of gender role and related dynamics upon the psychological functioning of men and women and considers how these issues can be explored in counseling based upon an interactive model of gender roles emphasizing the learned nature of these characteristics.

COUN 8500 Advanced Theory And Practice Of Career Counseling

[3 credit hours]

Advanced study in theories pertaining to the principles and practice of career counseling. Special emphasis on research, legal and ethical issues, and the role of culture in career choice and development.

COUN 8930 Advanced Doctoral Seminar

[3 credit hours]

This seminar will consider problems and provide advanced study. Open only to advanced graduate students.

COUN 8940 Counseling Internship

[1-8 credit hours]

The course is intended to provide counselor education doctoral students with student-directed, practical experiences in which they can develop advanced skills in various facets of counselor education (e.g., clinical counseling, advocacy, instruction, research, leadership, clinical supervision). Multicultural issues, ethics, professional issues, and wellness will be explored throughout the course. Supervised practical experiences in various settings while assuming a spectrum of counseling roles and functions. Emphasis is placed upon integrating ethical practice, theory, and research in work settings.

Prerequisites: COUN 5190 with a minimum grade of B or CMHS 5190 with a minimum grade of B

Term Offered: Spring, Summer, Fall

COUN 8950 Workshop In Counseling, Mental Health, And School Psychology

[1-6 credit hours]

Workshops developed around topics of interest and concern to counselors, school psychologists, or other mental health care professionals. Practical application of topics will be stressed.

COUN 8960 Doctoral Research Dissertation

[1-12 credit hours]

Dissertation credit may not total less than 10 semester hours and no greater than 32 hours. A doctoral student may register for such credit in more than one semester.

Term Offered: Spring, Summer, Fall

COUN 8980 Special Topics In Counseling, Mental Health, And School Psychology

[1-3 credit hours]

This course is open to a graduate student pursuing a master's, specialist or doctoral degree program and may be a requirement of that program.

Term Offered: Spring, Summer, Fall

COUN 8990 Doctoral Independent Study

[1-4 credit hours]

Provides students the opportunity to work independently on professional problems under the direction of a faculty member in the Department of Counseling and Mental Health Services.

Term Offered: Spring, Summer, Fall

SLP 5440 Augmentative Communication Systems

[3 credit hours]

SLP 6000 Advanced Practicum In Communication Disorders

[2 credit hours]

Provides students with supervised therapeutic experiences with specific speech and language disorders. Students should have completed or be currently enrolled in graduate level communication disorders course addressing the specific practicum disorder selected.

Term Offered: Spring, Summer, Fall

SLP 6001 Advanced Practicum in Communication Disorders II

[2 credit hours]

Provides students with supervised therapeutic experiences with specific speech and language disorders. Students should have completed or be currently enrolled in graduate level communication disorders course addressing the specific practicum disorder selected. SLP 6000 is a pre-requisite for this course.

Prerequisites: SLP 6000 with a minimum grade of D-

Term Offered: Spring, Summer

SLP 6002 Advanced Practicum III

[2 credit hours]

Provides students with supervised therapeutic experiences with specific speech and language disorders. Students should have completed or be currently enrolled in graduate level communication disorders course addressing the specific practicum disorder selected. SLP 6000 and 6001 are a pre-requisite for this course.

Prerequisites: SLP 6000 with a minimum grade of D- and SLP 6001 with a minimum grade of D-

SLP 6010 Diagnostic Practicum In Communication Disorders

[2 credit hours]

Provides a minimum of 30 hours supervised diagnostic practicum with a variety of communicatively disordered cases.

Corequisites: SLP 6100

Term Offered: Spring, Summer, Fall

SLP 6011 Diagnostic Practicum in Communication Disorders II

[2 credit hours]

Provides students with supervised therapeutic experiences with specific speech and language disorders. Students should have completed or be currently enrolled in graduate level communication disorders course addressing the specific practicum disorder selected.

Prerequisites: SLP 6010 with a minimum grade of D-

Term Offered: Summer

SLP 6020 Audiological Practicum In Communication Disorders

[2 credit hours]

Provides the advanced student with supervised practicum hours in the screening, impedance and pure tone threshold testing for audiological diagnosis.

Term Offered: Spring, Summer, Fall

SLP 6030 Research in Speech-Language Pathology

[3 credit hours]

Early graduate course in research methods with emphasis on analysis of current research, application of single-subject research in clinic practicum, and development of research project.

Prerequisites: SLP 6010 (may be taken concurrently) with a minimum grade of D- or SLP 6020 (may be taken concurrently) with a minimum grade of D-

Term Offered: Spring, Summer, Fall

SLP 6040 Exploring Research in Speech Language Pathology

[2 credit hours]

This course will guide graduate students in an exploration of the methods and process of research in Speech and Language Pathology. In addition, the students will be guided in the process of critically reviewing research pertinent to the field. The course will culminate in the development of an independent research project or paper, that will lead to their comprehensive exam/project required for graduation.

Term Offered: Spring, Fall**SLP 6100 Diagnosis Of Speech And Language Disorders**

[3 credit hours]

Detailed analysis of formal and informal instruments and procedures designed to evaluate speech and language disorders.

Term Offered: Spring, Summer, Fall**SLP 6210 Language Development and Disorders:Early Childhood through Adolescence**

[6 credit hours]

This course provides the conceptual framework for understanding language disorders in preschool through school-age children. Special emphasis is placed on application and theory of assessment as well as intervention strategies in private and school settings.

Term Offered: Spring, Fall**SLP 6300 Phonological And Articulatory Disorders**

[3 credit hours]

Advanced study of phonological and articulatory disorders including developmental apraxia. Focus on phonological differences in multi-cultural society with emphasis on assessment of disorders and current advances in remediation.

Term Offered: Spring, Summer, Fall**SLP 6400 Adult Language and Cognitive Communication Disorders**

[5 credit hours]

Advanced course exploring normal and disordered neural anatomy and physiology for communication and cognition. Student will demonstrate knowledge of assessment and treatment of cognitive and linguistics deficits due to trauma and disease to central nervous systems.

Term Offered: Spring, Fall**SLP 6500 Motor Speech Disorders**

[3 credit hours]

Adult apraxia and dysarthrias are discussed in relation to neurological organization, disorders and speech characteristics.

Term Offered: Spring, Fall**SLP 6550 Trends in Technology for Communication Disorders**

[3 credit hours]

Introduction to the study and application of assistive technology, including augmentative and alternative communication devices, to aid communication for persons incapable of producing functional oral communication. The course includes device characteristics, program features, and intervention strategies as well as current trends in technological advances that includes but are not limited to devices such as iPads, smartphone applications, and software.

Term Offered: Spring, Summer, Fall**SLP 6600 Voice and Resonance Disorders**

[3 credit hours]

An advanced course in the nature, evaluation and treatment of voice and resonance disorders. Major voice and resonance disorders in adults and children are emphasized.

Term Offered: Summer**SLP 6650 Feeding and Swallowing Disorders**

[3 credit hours]

This course introduces the student to the nature, evaluation, and management of feeding and swallowing disorders from infancy through adulthood.

Term Offered: Spring, Summer, Fall**SLP 6670 Voice Disorders**

[3 credit hours]

SLP 6700 Assessment And Remediation Of Fluency Disorders

[3 credit hours]

An advanced course to develop skills in the assessment and remediation of fluency disorders with special emphasis on current trends in stuttering therapy.

Term Offered: Spring, Summer, Fall**SLP 6710 Counseling Skills for Speech-Language Pathologists**

[3 credit hours]

Provides an overview of the skills necessary to counsel people with communication disorders and their families. Topics include patient-centered practice, interviewing, information-giving, psychological sequelae of communication disorders, and family systems.

SLP 6720 Advanced Readings in Fluency Disorders

[3 credit hours]

Reviews seminal and current research studies in fluency disorders. Topics include physiology, psychosocial effects of stuttering, evidence base for stuttering therapy, school-based stuttering therapy, and others based on student interests.

SLP 6730 Innovative Service Delivery in Stuttering

[3 credit hours]

Explores innovative service delivery models in stuttering including intensive programs, telepractice, and group therapy. Students will deliver therapy to at least one client who stutters as part of the course.

SLP 6750 Professional Issues in Speech Language Pathology

[2 credit hours]

This course will provide students with the opportunity to learn about specific issues related to working in a variety of professional settings.

Term Offered: Spring, Fall**SLP 6800 Aural Rehabilitation**

[3 credit hours]

Aural (Re)Habilitation examines communication assessment and intervention approaches over the lifespan for individuals with both peripheral and central auditory perceptual issues. Emphasis is placed upon early identification and education to minimize and alleviate communication and related problems commonly associated with hearing impairment and auditory perceptual disorders.

Term Offered: Spring, Summer, Fall

SLP 6810 Facilitating Auditory Learning and Spoken Language for Children with Hearing Loss

[3 credit hours]

The impact of universal newborn hearing screening, early fitting of hearing technology (digital hearing aids and/or cochlear implants), and enrollment in comprehensive early intervention programs has created new opportunities for infants and toddlers with hearing loss to learn to listen and talk. In this course, students will learn the developmental processes that are the underpinning for audition and spoken language acquisition. Specific techniques, strategies, and teaching behaviors to develop listening and spoken language in young children who are deaf or hard of hearing will be demonstrated and explored.

Term Offered: Spring

SLP 6820 Hearing Technology

[3 credit hours]

This course will orient speech-language pathology students to hearing technologies that assist persons with hearing impairment (hearing aids, assistive listening and alerting devices, and implantable technologies). The focus will be on providing auditory access to children for the purpose of developing listening and spoken language. Equipment will be demonstrated, current issues will be discussed, and students will be given opportunities to check and troubleshoot equipment.

Term Offered: Fall

SLP 6830 Lang Lit Ac of Child Hear Loss

[3 credit hours]

This course examines the relevant research, best practices, and intervention strategies for infants and children with hearing loss.

Term Offered: Spring

SLP 6840 Team Models and Ed Leadership

[3 credit hours]

SLPs who work with children who are hearing impaired (HI) must work in collaboration educational professionals, parents, audiologists, and other medical professionals within a team-based model. This course will focus on the skills, knowledge and ethical practices essential to the provision of effective service coordination and teaming for SLPs who work in educational settings with children who are HI. Students will examine various models of teaming and consultation approaches and address issues related to supporting students' educational achievement in educational settings.

Term Offered: Summer

SLP 6900 Independent Research In Speech-Language Pathology

[1-5 credit hours]

Independent research provides opportunities to work on individual research under the direction of faculty. The student meets with the instructor at intervals and conducts research without formal class meeting.

Term Offered: Summer, Fall

SLP 6920 Master's Research Project In Speech-Language Pathology

[1-5 credit hours]

The Master's project is an individually designed product.

Prerequisites: SLP 6930 with a minimum grade of D-

SLP 6930 Seminars In Speech-Language Pathology

[1-5 credit hours]

Seminars will consider problems and provide advanced study in the field of Speech-Language Pathology. A student may register for more than one seminar during a graduate program.

Term Offered: Spring, Fall

SLP 6940 Adult Internship In Speech-Language Pathology

[6 credit hours]

Provides the advanced graduate student with supervised practicum experiences with the adult population at an off-campus site; including hospitals, agencies, rehabilitation clinics, work training sites and other community sites where persons with disabilities are served.

Term Offered: Spring, Summer, Fall

SLP 6941 Pediatric Internship in Speech-Language Pathology

[6 credit hours]

Provides the advanced graduate student with supervised practicum experiences with the pediatric population at an off-campus site; including schools, hospitals, agencies, rehabilitation clinics, and other community sites where persons with disabilities are served.

Term Offered: Spring, Summer, Fall

SLP 6942 Internship in Speech-Language Pathology III

[6 credit hours]

Provides the graduate student with supervised practicum experiences at an off-campus sites. This is the third internship in a sequence.

Prerequisites: SLP 6940 with a minimum grade of D- and SLP 6941 with a minimum grade of D-

SLP 6960 Master Research Thesis In Speech-Language Pathology

[1-5 credit hours]

The master's thesis is an individually designed investigation approved by the thesis committee and designed to contribute to the knowledge base of the speech-language pathology. Meets the final activity requirement for completion of the master's degree.

Prerequisites: SLP 6930 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

SLP 6990 Independent Study In Speech-Language Pathology

[1-5 credit hours]

Individual study provides advanced graduate students opportunities to work individually on professional problems with faculty of the Speech-Language Pathology program. Individual meetings with sponsoring faculty are held.

Term Offered: Spring, Summer, Fall

SLP 7610 Orientation to Interprofessional Teaming

[1 credit hour]

Orientation to the Graduate Certificate in Teaming in Early Childhood.

Focus on individual competencies needed to work collaboratively to meet the needs of young children with disabilities and their families.

Prerequisites: SPED 5270 with a minimum grade of D-

Term Offered: Summer

SLP 7620 Working Effectively With Team Members

[1 credit hour]

This second seminar in the Graduate Certificate in Teaming in Early Childhood focuses on skills and policies that promote best practices in teaming to support young children with disabilities.

Prerequisites: SLP 7610 with a minimum grade of D-

Term Offered: Fall

SLP 7630 Evidence-Based Practice and Innovation in Interprofessional Teaming

[1 credit hour]

This third seminar in the Graduate Certificate in Teaming in Early Childhood provides students the opportunity to reflect on their practicum experiences in teaming to support young children with disabilities.

Prerequisites: SLP 7620 with a minimum grade of D-

Corequisites: SLP 7640

Term Offered: Spring

SLP 7640 Practicum in Interprofessional Teaming

[2 credit hours]

The practicum is provides an opportunity to engage in interprofessional teaming in order to provide integrated services to young children with special needs in an inclusive setting.

Prerequisites: SLP 5620 with a minimum grade of D-

Corequisites: SLP 5630

Term Offered: Spring

SLP 8000 Advanced Practicum In Communication Disorders

[2 credit hours]

Provides students with supervised therapeutic experiences with specific speech and language disorders. Students should have completed or be currently enrolled in graduate level communication disorders course addressing the specific practicum disorder selected.

Term Offered: Summer

SLP 8010 Diagnostic Practicum In Communication Disorders

[2 credit hours]

Provides a minimum of 30 hours supervised diagnostic practicum with a variety of communicatively disordered cases.

Corequisites: SLP 8100

Term Offered: Summer

SLP 8020 Audiological Practicum In Communication Disorders

[2 credit hours]

Provides the advanced student with supervised practicum hours in the screening, impedance and pure tone threshold testing for audiological diagnosis.

SLP 8100 Diagnosis Of Speech And Language Disorders

[3 credit hours]

Detailed analysis of formal and informal instruments and procedures designed to evaluate speech and language disorders.

SLP 8210 Preschool Language Disorders

[3 credit hours]

The conceptual framework for understanding language disorders in young children. Application and theory of assessment and intervention strategies will be described and discussed.

SLP 8220 Language Disorders In School-Age Children

[2 credit hours]

The conceptual framework for understanding language disorders in school-age children with special emphasis on language assessment and language interventions in school settings.

SLP 8300 Phonological And Articulatory Disorders

[3 credit hours]

Advanced study of phonological and articulatory disorders including developmental apraxia. Focus on phonological differences in multi-cultural society with emphasis on assessment of disorders and current advances in remediation.

SLP 8400 Neurological Disorders: Aphasia

[3 credit hours]

Advanced course in deficits due to neurological alterations resulting in aphasia. Formal and informal assessment procedures for the diagnosis of aphasia as well as techniques and functional strategies for communicative compensation provide the focus of the course.

SLP 8450 Neurological Disorders: Brain Injury And Dementia

[2 credit hours]

Course in cognitive and linguistics deficits due to trauma and disease to central nervous system. Course focuses on identification and intervention in communication disorders as the result of acquired brain injury/ disease. Traumatic brain injury, right hemisphere damage and dementia are addressed.

SLP 8500 Motor Speech Disorders

[3 credit hours]

Adult apraxia and dysarthrias are discussed in relation to neurological organization, disorders and speech characteristics.

SLP 8550 Augmentative And Alternative Communication

[2 credit hours]

The study and application of assistive communication technology for persons who are nonspeaking. The course includes characteristics of ACC consumers, design features of augmentative communication devices, assessment strategies to choose a system and intervention strategies to facilitate use of the ACC system.

SLP 8600 Voice Disorders: Diagnosis And Treatment

[3 credit hours]

Advanced course in the evaluation and treatment of voice disorders. Major voice disorders in children and adults are emphasized.

SLP 8650 Dysphagia And Oropharyngeal Disorders

[2 credit hours]

Evaluation and intervention procedures for individuals with communication problems related to structural impairments of the oral cavity and pharynx.

SLP 8670 Voice Disorders

[3 credit hours]

SLP 8700 Assessment And Remediation Of Fluency Disorders

[3 credit hours]

An advanced course to develop skills in the assessment and remediation of fluency disorders with special emphasis on current trends in stuttering therapy.

SLP 8800 Aural Rehabilitation

[3 credit hours]

Advanced care and training in the use of individual and group assistive listening devices, auditory trainers and other aids to augment hearing. Methods for using residual hearing and contextual factors to augment technology is addressed.

Prerequisites: SLP 3400 with a minimum grade of D-

SLP 8900 Independent Research In Speech-Language Pathology

[1-5 credit hours]

Independent Research provides opportunities to work on individual research under the direction of faculty. The student meets with the instructor at intervals and conducts research without formal class meeting.

SLP 8930 Seminars In Speech-Language Pathology

[1-5 credit hours]

Seminars will consider problems and provide advanced study in the field of Speech-Language Pathology. A student may register for more than one seminar during a graduate program.

SLP 8940 Internship In Speech-Language Pathology

[1-8 credit hours]

Provides the advanced graduate student with supervised practicum experiences at an off-campus site; including schools, hospitals, agencies, rehabilitation clinics, work training sites and other community sites where persons with disabilities are served.

SLP 8960 Master Research Thesis In Speech-Language Pathology

[1-5 credit hours]

The master's thesis is an individually designed investigation approved by the thesis committee and designed to contribute to the knowledge base of the speech-language pathology.

Prerequisites: SLP 6930 with a minimum grade of D-

SLP 8990 Independent Study In Speech-Language Pathology

[1-5 credit hours]

Individual study provides advanced graduate students opportunities to work individually on professional problems with faculty of the Speech-Language Pathology program. Individual meetings with sponsoring faculty are held.

Term Offered: Summer

SPSY 5030 Role And Function Of The School Psychologist

[3 credit hours]

Designed for school psychology students to develop an understanding of the school psychologist as a member of the school staff. It also serves as an introduction to each of the important concepts in current practice, as well as the values of our specific program. Current legal & ethical responsibilities, the history of the profession, as well as current theories of service delivery will be explored.

Term Offered: Fall

SPSY 5040 Legal And Ethical Issues For School Psychologists And Counselors

[4 credit hours]

Covers the ethical standards and legal regulation in school psychology and school counseling. Ethical standards, litigation and legal regulation are examined in regard to professional practice.

Term Offered: Summer, Fall

SPSY 5060 Prepractica in School Psychology

[2 credit hours]

A two semester pre-internship experience designed for first year school psychology graduate students to acquire knowledge of schools as systems and to gain familiarity with the role and function of the school psychologist and other related services staff. This course includes activities designed to build students' skills in delivering culturally responsive practices.

Term Offered: Spring, Fall

SPSY 5170 Consultation I: Theories And Techniques

[3 credit hours]

Designed to provide an overview of the major consultation theories and techniques and to help students develop consultation skills, which may be applied in the schools, community agencies, or other settings. Includes introduction to and practice in applying the problem solving process to school-based academic and behavior problems.

Term Offered: Spring, Summer, Fall

SPSY 5300 Psychoeducational Assessment And Interventions I

[4 credit hours]

Provides training in standardized and curriculum based academic assessment methods and linking assessment to intervention. Includes instruction in evidence-based interventions, administering, scoring, interpreting, and communicating assessment results in written reports.

Prerequisites: SPSY 5030 with a minimum grade of D-

Term Offered: Spring, Fall

SPSY 5310 Psychoeducational Assessment And Interventions II

[4 credit hours]

Provides training in standardized assessment methods for preschool and low-incidence populations. Includes instruction in evidence-based interventions, linking assessment to tiered interventions, and functional behavior assessment.

Prerequisites: SPSY 5300 (may be taken concurrently) with a minimum grade of B

Term Offered: Spring, Summer

SPSY 5610 Seminar I: Orientation to Interprofessional Teaming

[1 credit hour]

Orientation to the Graduate Certificate in Teaming in Early Childhood. Focus on individual competencies needed to work collaboratively to meet the needs of young children with disabilities and their families.

Prerequisites: SPED 5270 with a minimum grade of D-

Term Offered: Summer

SPSY 5620 Seminar II: Leadership and Advocacy Interprofessional Teaming

[1 credit hour]

This second seminar in the Graduate Certificate in Teaming in Early Childhood focusses on skills and policies that promote best practices in teaming to support young children with disabilities.

Prerequisites: SPED 5270 with a minimum grade of D- and SPSY 5610 with a minimum grade of D-

Term Offered: Summer, Fall

SPSY 5630 Seminar III: Evidence-Based Practice and Innovation in Interprofessional Teaming

[1 credit hour]

This third seminar in the Graduate Certificate in Teaming in Early Childhood provides students the opportunity to reflect on their practicum experiences in teaming to support young children with disabilities.

Prerequisites: SPED 5270 with a minimum grade of D- and SPSY 5610 with a minimum grade of D- and SPSY 5620 with a minimum grade of D-

Corequisites: SPSY 5640

Term Offered: Spring, Summer

SPSY 5640 Practicum in Interprofessional Teaming

[2 credit hours]

The practicum provides an opportunity to engage in interprofessional teaming in order to provide integrated services to young children with special needs in an inclusive setting.

Prerequisites: SPED 5270 with a minimum grade of D- and SPSY 5610 with a minimum grade of D- and SPSY 5620 with a minimum grade of D-

Corequisites: SPSY 5630

Term Offered: Spring, Summer

SPSY 5980 Special Topics In Counseling, Mental Health, And School Psychology

[1-3 credit hours]

This course is open to a graduate student pursuing a master's, specialist or doctoral degree program and may be a requirement of that program.

Term Offered: Spring, Summer

SPSY 6260 Developmental Child Psychopathology

[4 credit hours]

This course covers the influence of nature (e.g., prenatal, biological, genetic) and nurture (family, culture, and community) on typical and atypical child development. It emphasizes the development of disorders of infancy through adolescents from an ecological perspective, focusing on understanding characteristics and causes, diagnosis both medical and educational, and identifications of interventions for school and home.

Term Offered: Spring, Summer, Fall

SPSY 6990 Master's Independent Study

[1-4 credit hours]

Provides students the opportunity to work independently on professional problems under the direction of a faculty member in the Department of Counseling and Mental Health Services.

Term Offered: Spring, Summer

SPSY 7170 Consultation I: Theories And Techniques

[3 credit hours]

Designed to provide an overview of the major consultation theories and techniques and to help students develop consultation skills, which may be applied in the schools, community agencies, or other settings. Includes introduction to and practice in applying the problem solving process to school-based academic and behavior problems.

Term Offered: Spring, Summer

SPSY 7180 Consultation II: School and Home Collaboration

[3 credit hours]

Provides training in universal/system-level academic interventions with an emphasis on consultation practices used to develop and sustain home and school collaboration. Includes study and review of prevention programs for student academic success and system-level academic assessment methods.

Term Offered: Summer, Fall

SPSY 7190 Consultation III: School and Community

[4 credit hours]

Provides training in universal/system-level behavior interventions with an emphasis on practices used to develop and sustain school and community collaboration. Includes instruction in system change theory, prevention programs for promoting mental health, and crisis prevention and intervention.

Term Offered: Spring, Summer

SPSY 7260 Developmental Child Psychopathology

[4 credit hours]

This course covers the influence of nature (e.g., prenatal, biological, genetic) and nurture (family, culture, and community) on typical and atypical child development. It emphasizes the development of disorders of infancy through adolescents from an ecological perspective, focusing on understanding characteristics and causes, diagnosis both medical and educational, and identifications of interventions for school and home.

Term Offered: Spring, Summer, Fall

SPSY 7310 Psychoeducational Assessment And Interventions II

[4 credit hours]

Provides training in standardized assessment methods for preschool and low-incidence populations. Includes instruction in evidence-based interventions, linking assessment to tiered interventions, and functional behavior assessment.

Prerequisites: SPSY 5300 (may be taken concurrently) with a minimum grade of B

Term Offered: Summer, Fall

SPSY 7320 Psychoeducational Assessment And Interventions III

[4 credit hours]

Provides training and practice in assessment of cognitive and adaptive functioning for school-age children. Includes instruction in administering, scoring, interpreting, and communicating assessment results, and in writing comprehensive written reports.

Prerequisites: SPSY 7310 with a minimum grade of B or SPSY 5310 with a minimum grade of B

Term Offered: Spring, Fall

SPSY 7330 Practica in School Psychology

[1-4 credit hours]

A two semester pre-internship experience designed for second year school psychology students. Provides experience in tiered intervention design, implementation, and evaluation for behavior and academic problems. Includes practice in individual assessment for special education eligibility.

Term Offered: Spring, Summer, Fall

SPSY 7340 School Psychology Practicum II

[4 credit hours]

Practice in individual evaluation, assessment and intervention design, with preschool and other special populations. Includes practice in functional behavioral assessment.

Prerequisites: SPSY 7330 with a minimum grade of B

SPSY 7510 Supervision In Counseling And School Psychology

[3 credit hours]

Training in supervision models, methods, roles, ethical issues, research and evaluation. Advanced training in consultation.

SPSY 7530 Advanced Theories Of Counseling And Consultation

[4 credit hours]

Advanced preparation in theory pertaining to the principles and practice of individual counseling, group work and consultation.

SPSY 7920 Specialist Research Project

[1-3 credit hours]

In this capstone experience, specialist students review the literature, report implications and produce a project which can be applied in school psychology and counseling-related settings.

SPSY 7930 Doctoral Research Seminar

[3 credit hours]

Advanced preparation in research problems, design and implementation of quantitative and qualitative research and methodology in the fields of counseling and supervision.

SPSY 7940 Internship In School Psychology

[1-8 credit hours]

Academic year on-the-job internship experience for third year school psychology students. Conducted in a school and supervised by a school psychologist and coordinated by a university supervisor. Prepares students for the broad range of services to include tiered mental health and instructional interventions, assessment linked to intervention, consultation, special education assessment, home-school-community collaboration, and counseling.

Prerequisites: SPSY 7330 with a minimum grade of S

Term Offered: Spring, Summer, Fall

SPSY 8480 Advanced Training In Professional, Legal, And Ethical Issues

[3 credit hours]

Advanced training in contemporary professional, legal and ethical issues that regulate or affect the work of counselors, psychologists and other mental health professionals.

SPSY 8930 Advanced Doctoral Seminar

[3 credit hours]

This seminar will consider problems and provide advanced study. Open only to advanced graduate students.

SPSY 8950 Workshop In Counseling, Mental Health, And School Psychology

[1-6 credit hours]

Workshops developed around topics of interest and concern to counselors, school psychologists, or other mental health care professionals. Practical application of topics will be stressed.

SPSY 8960 Doctoral Research Dissertation

[1-12 credit hours]

Dissertation credit may not total less than 10 semester hours and no greater than 32 hours. A doctoral student may register for such credit in more than one semester.

SPSY 8980 Special Topics In Counseling, Mental Health, And School Psychology

[1-3 credit hours]

This course is open to a graduate student pursuing a master's, specialist or doctoral degree program and may be a requirement of that program.

Term Offered: Spring

SPSY 8990 Doctoral Independent Study

[1-4 credit hours]

Provides students the opportunity to work independently on professional problems under the direction of a faculty member in the Department of Counseling and Mental Health Services.

Certificate in Advanced Intervention for Listening and Spoken Language

The certificate in advanced intervention for listening and spoken language (HE-LICH-CRG) is designed to provide The University of Toledo speech-language pathology graduate students and working professionals, who are certified and licensed speech-language

pathologists, with the knowledge and tools necessary to support listening and spoken language development of children who use advanced hearing technologies.

Graduate students, accepted into The University of Toledo speech-language pathology graduate program, may enroll in the online certificate program concurrently. Graduate students take four additional online courses to earn the HE-LICH-CRG certificate along with the necessary coursework and clinical experience (including working with clients with hearing loss).

Certified and licensed speech-language pathologists, working with children who use advanced hearing technologies to develop listening and spoken language, may also enroll in the four online courses. Individuals applying for the certificate must provide verification of the Certificate of Clinical Competence awarded by the American Speech-Language-Hearing Association and appropriate state licensure, write a letter of intent, provide a letter of recommendation and support from a supervisor, and participate in an interview.

Students enrolled in the HE-LICH-CRG program will be better prepared to work with children with hearing loss and also position themselves for certification as a Listening and Spoken Language Specialist by the Alexander Graham Bell Association for the Deaf (a multi-year process).

First Term		Hours
SLP 6810	Facilitating Auditory Learning and Spoken Language for Children with Hearing Loss	3
Hours		3
Second Term		
SLP 6820	Hearing Technology	3
SLP 6830	Lang Lit Ac of Child Hear Loss	3
SLP 6840	Team Models and Ed Leadership	3
Hours		9
Total Hours		12

Clinical experience: The HE-LICH-CRG certificate also requires clinical experience providing listening and spoken language interventions for children who use advanced hearing technologies. This may be obtained through The University of Toledo graduate program clinical practicum and internship rotation, which includes supervision. Working professionals must arrange a mentorship to support their clinical skill development as part of the certificate program.

To learn more about the certificate in advanced intervention for listening and spoken language, interested persons should contact: Dr. Lori Pakulski at Lori.Pakulski@utoledo.edu.

EdS in School Psychology

The graduate program in school psychology meets the education requirements for licensure in Ohio and many other states. The program is approved by the National Association of School Psychologists and accredited by the Council for the Accreditation of Educator Preparation. Both the master of arts and the education specialist degree requirements must be completed by the student to be licensed as a school psychologist in Ohio and to be a nationally certified school psychologist.

The Ed.S. program is designed for three years of full-time study.

Application deadline for the school psychology program is February 15.

To apply to the program, applicants must meet the minimum academic prerequisite and submit the following materials:

- For students who completed their MA in school psychology at the University of Toledo and are applying to continue in the Ed.S. degree program, they only need to submit the College of Graduate Studies application for the Ed.S. degree in school psychology.

For students who have completed their MA degree at another institution, if approved by the program director, they may apply for admission to the Ed.S. degree program. Students will be required to submit the following:

- Three letters of recommendation, at least one of which must address the applicant's academic potential (i.e., from a university faculty member).
- Statement of purpose, between two to three pages, that details the reasons the applicant would like to pursue a career in school psychology and includes personal experiences. The statement of purpose should be typed and submitted to the College of Graduate Studies as a separate Word document.
- Official undergraduate transcripts and graduate transcripts, if applicable.
- Professional résumé.

To be consistent with national training standards and to ensure sufficient faculty members to advise and mentor students, a limited number of applicants will be admitted into the program each year. As a result, admission is competitive. For more information or to ask questions, contact:

Total Hours **47**

PLO 1.5 Demonstrates evidence-based methods for integrating family, school and community resources to improve educational outcomes for children (2.7)
 PLO 2.1 Demonstrates knowledge and skill in selecting and administering various methods of cognitive assessment, and interpreting and sharing results (2.2, 2.3)
 PLO 1.3 Demonstrates knowledge and respect for diversity factors related to culture, family systems, and an understanding that advocacy for social justice is a foundation of service delivery (2.7, 2.8)
 PLO 1.4 Demonstrates active, attentive listening and communicates and collaborates effectively with others in activities such as meetings, supervision sessions, parent interviews, and consultations (2.2)
 PLO 1.2 Demonstrates strategies for addressing diversity factors when selecting, administering, and interpreting assessments; and designing, implementing and evaluating interventions for academic and/or behavior concerns (2.8)
 PLO 3.4 Demonstrates understanding of biological, developmental, and social influences on behavior and mental health and implications for classroom management and instruction (2.2, 2.4)

PLO 3.5 Demonstrates knowledge of concepts from applied behavior analysis and skill in conducting functional assessment and analysis to develop behavior intervention plans (2.4)

PLO 4.1 Demonstrates knowledge of system change research and process, team processes and dynamics, strategic planning, and program evaluation in order to identify needs and plan for school improvement (2.5, 2.9)

PLO 4.2 Demonstrates knowledge and skill in assessing existing school policies and practices in areas such as MTSS, staff training, and home-school-community partnerships, and skill in designing, implementing, and evaluating universal interventions to create and maintain effective and supportive learning environments (2.5, 2.9)

PLO 4.3 Demonstrates knowledge of the crisis research and skill in crisis prevention, intervention, response, and recovery (2.6)

PLO 4.4 Demonstrates understanding of principles and research related to resilience and risk factors in learning and mental health and skills in developing, implementing, and evaluating universal interventions that foster resilience and minimize factors that lead to academic and behavior difficulties (2.6, 2.9)

PLO 2.2 Demonstrates knowledge and skill in selecting and administering various methods of academic assessment, and interpreting and sharing results (2.1, 2.3)

PLO 2.3 Demonstrates knowledge and skill at making data-based decisions by linking academic and cognitive assessment information to instructional interventions in general education setting, and when appropriate, in special education settings (2.1, 2.3)

PLO 2.4 Demonstrates skill in using a systematic problem solving process guided by data-based decision making to develop, implement, monitor, and evaluate academic interventions by (2.1, 2.3)

PLO 2.5 Demonstrates knowledge of ecological influences of the classroom and home on student academic skills, learning, and cognition and applies to assessment and intervention (2.2, 2.3)

PLO 3.1 Demonstrates knowledge and skill in selecting and administering various methods for affective, behavior, and adaptive behavior assessment and interpreting and sharing results (2.2, 2.4)

PLO 3.2 Demonstrates knowledge and skill in linking affective, behavior and adaptive behavior assessment information to interventions in general and special education settings (2.1, 2.4)

PLO 3.3 Demonstrates skill in using a systematic problem solving process guided by data-based decision making to develop, implement, monitor, and evaluate affective, behavior and adaptive behavior interventions (2.1, 2.4)

PLO 4.5 Demonstrates knowledge of school system organizational structure, general education, special education, and state and federal laws and policy for school accountability for academics and behavior (2.5)

PLO 5.1 Demonstrates knowledge of ethical and legal policies and procedures and satisfactory professional judgment and decision making (2.10)

PLO 5.2 Demonstrates use of technology in assessment, intervention, and presentation of information (2.9, 2.10)

PLO 5.3 Demonstrates ability to function as scientist-practitioner by designing and conducting single case and small group research and to analyze outcomes to inform practices and services (2.9)

PLO 5.4 Understands one's identity as a school psychologist by engaging in activities that foster this professional identity through membership involvement in and attendance at regional, state and national conferences (2.10)

PLO 5.5 Demonstrates satisfactory professional dispositions needed for effective practice including social justice, communication and interpersonal skills with peers, trainers, and supervisors, and satisfactory initiative, dependability, time management and organizational skills (2.8, 2.10)

PLO 1.1 Demonstrates understanding of and sensitivity to individual differences, abilities, disabilities, and other diverse characteristics as evidenced in communication and interpersonal relationships (2.2, 2.8)

MA in Counselor Education

The counselor education program offers a master of arts in counselor education with specializations in school counseling or clinical mental health counseling, and a doctoral degree in counselor education. All counselor education programs are nationally accredited by the Council for Accreditation of Counseling and Related Educational Programs (CACREP).

The clinical mental health counseling program prepares graduates for licensure in Ohio as professional counselors or professional clinical counselors and is approved by the Ohio Counselor, Social Worker, and Marriage & Family Therapist Board. Graduates work as counselors in community mental health agencies, hospitals, college counseling centers, or in private practice. The school counseling specialization prepares graduates to work in K-12 schools. It is accredited by the Council for Accreditation of Counseling and Related Educational Programs and is approved by the Ohio Department of Education. The master's degree in school counseling meets the academic requirements for K-12 school counselor licensure in Ohio and other states. Neither Ohio nor Michigan requires applicants to have teacher certification to be licensed as a school counselor. Applicants expecting to practice outside of Ohio or Michigan should consult that state's department of education to determine current certification or licensure requirements. The doctor of philosophy in counselor education prepares graduates as counselor educators in colleges and universities, and as counselors, supervisors or directors in agencies, or as private practitioners. The counselor education programs meet educational requirements for licensure or certification in Ohio, Michigan and most other states.

School Counseling Licensure Endorsement Program

Any licensed or license-eligible professional counselor or professional clinical counselor or any student in the clinical mental health counseling program who wants school counselor licensure, but is not seeking admission to the master's degree in school counseling, must apply for admission to the school counseling licensure endorsement program. The application consists of an application form, official transcripts of graduate work in counseling, three letters of recommendation, and a personal statement clarifying the reasons the applicant wishes to become a licensed school counselor. The applicant may be required to appear for an interview. Students must be admitted to the endorsement program before they will be permitted to enroll in the required 600 clock-hour internship.

Master of Arts in Counselor Education: Clinical Mental Health Counseling

The master's degree in the area of clinical mental health counseling is a prerequisite for licensure as a professional counselor or professional clinical counselor in Ohio and other states. It is accredited by the Council for Accreditation of Counseling and Related Educational Programs and is approved by the Ohio Counselor, Social Worker, Marriage and Family Therapist Board. This degree prepares students to work in mental health agencies, substance abuse agencies, private practice, and a wide variety of settings including hospitals, colleges, and the criminal justice system. Applicants expecting to practice outside Ohio or Michigan should consult that state's counseling board to determine current certification or licensure requirements.

Master of Arts in Counselor Education: School Counseling Program

Admission

The application deadlines are September 15, January 15, or May 15.

To apply to the program, applicants must meet all requirements of the College of Graduate Studies and submit the following materials to the College of Graduate Studies:

- College of Graduate Studies application for the master's degree in school counseling
- Transcripts of an undergraduate degree with a 3.0 or equivalent cumulative grade point average on a 4-point scale for all undergraduate study at all institutions attended.
- An official Graduate Record Examination (GRE) score taken within the last five years is required for persons whose undergraduate GPA is below 2.7.
 - Applicants holding a doctoral degree from an accredited college or university are automatically excluded from the requirement to submit an official Graduate Record Examination score.
 - Applicants holding a master's degree from an accredited college or university and whose cumulative graduate course work meets or exceeds 3.5 on a 4.0 scale are automatically excluded from the requirement to submit an official Graduate Record Examination score.
- A typed, written personal statement (suggested length 2-3 pages) detailing significant personal and professional experiences that relate to the applicant's decision to pursue a career in counseling (e.g., rationale for seeking degree, commitment to counseling as a profession). The personal statement should also address such topics as the applicant's skills or knowledge, preparation through education and/or experience, strengths and weaknesses, rationale for academic deficiencies, etc.
- A professional résumé
- Three letters of recommendation, at least one of which must address the applicant's academic potential (i.e. from a university faculty member)

To be consistent with national training standards and to ensure sufficient faculty members to advise and mentor students, a limited number of applicants will be admitted into the program each year. As a result, admission is competitive. Applicants who pass the initial screening

are required to interview with an admissions committee. For more information or to ask questions, contact:

PROFESSIONAL ORIENTATION AND ETHICAL PRACTICE

Studies that provide an understanding of all of the following aspects of professional functioning:

- 1.a. history and philosophy of the counseling profession;
- 1.b. professional roles, functions, and relationships with other human service providers, including strategies for interagency/interorganization collaboration and communications;
- 1.c. counselors roles and responsibilities as members of an interdisciplinary emergency management response team during a local, regional, or national crisis, disaster or other trauma-causing event;
- 1.d. self-care strategies appropriate to the counselor role;
- 1.e. counseling supervision models, practices, and processes;
- 1.f. professional organizations, including membership benefits, activities, services to members, and current issues;
- 1.g. professional credentialing, including certification, licensure, and accreditation practices and standards, and the effects of public policy on these issues;
- 1.h. the role and process of the professional counselor advocating on behalf of the profession;
- 1.i. advocacy processes needed to address institutional and social barriers that impede access, equity, and success for clients; and
- 1.j. ethical standards of professional organizations and credentialing bodies, and applications of ethical and legal considerations in professional counseling.

SOCIAL AND CULTURAL DIVERSITY

Studies that provide an understanding of the cultural context of relationships, issues, and trends in a multicultural society, including all of the following:

- 2.a. multicultural and pluralistic trends, including characteristics and concerns within and among diverse groups nationally and internationally;
- 2.b. attitudes, beliefs, understandings, and acculturative experiences, including specific experiential learning activities designed to foster students understanding of self and culturally diverse clients;
- 2.c. theories of multicultural counseling, identity development, and social justice;
- 2.d. individual, couple, family, group, and community strategies for working with and advocating for diverse populations, including multicultural competencies;
- 2.e. counselors roles in developing cultural self-awareness, promoting cultural social justice, advocacy and conflict resolution, and other culturally supported behaviors that promote optimal wellness and growth of the human spirit, mind, or body;
- 2.f. counselors roles in eliminating biases, prejudices, and processes of intentional and unintentional oppression and discrimination.

HUMAN GROWTH AND DEVELOPMENT

Studies that provide an understanding of the nature and needs of persons at all developmental levels and in multicultural contexts, including all of the following:

- 3.a. theories of individual and family development and transitions across the life span;
- 3.b. theories of learning and personality development, including current understandings about neurobiological behavior;
- 3.c. effects of crises, disasters, and other trauma-causing events on persons of all ages;
- 3.d. theories and models of individual, cultural, couple, family, and community resilience;
- 3.e. a general framework for understanding exceptional abilities and strategies for differentiated interventions;
- 3.f. human behavior, including an understanding of developmental crises, disability, psychopathology, and situational and environmental factors that affect both normal and abnormal behavior;
- 3.g. theories and etiology of addictions and addictive behaviors, including strategies for prevention, intervention, and treatment;
- 3.h. theories for facilitating optimal development and wellness over the life span.

CAREER DEVELOPMENT

Studies that provide an understanding of career development and related life factors, including all of the following:

- 4.a. career development theories and decision-making models;
- 4.b. career, avocational, educational, occupational and labor market information resources, and career information systems;
- 4.c. career development program planning, organization, implementation, administration, and evaluation;
- 4.d. interrelationships among and between work, family, and other life roles and factors, including the role of multicultural issues in career development;
- 4.e. career and educational planning, placement, follow-up, and evaluation;
- 4.f. assessment instruments and techniques relevant to career planning and decision making;
- 4.g. career counseling processes, techniques, and resources, including those applicable to specific populations in a global economy.

HELPING RELATIONSHIPS

Studies that provide an understanding of the counseling process in a multicultural society, including all of the following:

- 5.a. an orientation to wellness and prevention as desired counseling goals;
- 5.b. counselor characteristics and behaviors that influence helping processes;
- 5.c. essential interviewing and counseling skills;
- 5.d. counseling theories that provide the student with models to conceptualize client presentation and that help the student select appropriate counseling interventions. Students will be exposed to models of counseling that are consistent with current professional research and practice in the field so they begin to develop a personal model of counseling;
- 5.e. a systems perspective that provides an understanding of family and other systems theories and major models of family and related interventions;
- 5.f. a general framework for understanding and practicing consultation;
- 5.g. crisis intervention and suicide prevention models, including the use of psychological first aid strategies.

GROUP WORK

Studies that provide both theoretical and experiential understandings of group purpose, development, dynamics, theories, methods, skills, and other group approaches in a multicultural society, including all of the following:

- 6.a. principles of group dynamics, including group process components, developmental stage theories, group members roles and behaviors, and therapeutic factors of group work;
- 6.b. group leadership or facilitation styles and approaches, including characteristics of various types of group leaders and leadership styles;
- 6.c. theories of group counseling, including commonalities, distinguishing characteristics, and pertinent research and literature;
- 6.d. group counseling methods, including group counselor orientations and behaviors, appropriate selection criteria and methods, and methods of evaluation of effectiveness;
- 6.e. direct experiences in which students participate as group members in a small group activity, approved by the program, for a minimum of 10 clock hours over the course of one academic term.

ASSESSMENT

Studies that provide an understanding of individual and group approaches to assessment and evaluation in a multicultural society, including all of the following:

- 7. a. historical perspectives concerning the nature and meaning of assessment;
- 7. b. basic concepts of standardized and nonstandardized testing and other assessment techniques, including norm-referenced and criterion-referenced assessment, environmental assessment, performance assessment, individual and group test and inventory methods, psychological testing, and behavioral observations;
- 7. c. statistical concepts, including scales of measurement, measures of central tendency, indices of variability, shapes and types of distributions, and correlations;
- 7. d. reliability (i.e., theory of measurement error, models of reliability, and the use of reliability information);
- 7. e. validity (i.e., evidence of validity, types of validity, and the relationship between reliability and validity);
- 7. f. social and cultural factors related to the assessment and evaluation of individuals, groups, and specific populations;

7. g. ethical strategies for selecting, administering, and interpreting assessment and evaluation instruments and techniques in counseling.

RESEARCH AND PROGRAM EVALUATION

Studies that provide an understanding of research methods, statistical analysis, needs assessment, and program evaluation, including all of the following:

- 8.a. the importance of research in advancing the counseling profession;
- 8.b. research methods such as qualitative, quantitative, single-case designs, action research, and outcome-based research;
- 8.c. statistical methods used in conducting research and program evaluation;
- 8.d. principles, models, and applications of needs assessment, program evaluation, and the use of findings to effect program modifications;
- 8.e. the use of research to inform evidence-based practice; and
- 8.f. ethical and culturally relevant strategies for interpreting and reporting the results of research and/or program evaluation studies.

FOUNDATIONS

A. Knowledge

- A.1. Knows history, philosophy, and trends in school counseling and educational systems.
- A.2 Understands ethical and legal considerations specifically related to the practice of school counseling.
- A.3 Knows roles, functions, settings, and professional identity of the school counselor in relation to the roles of other professional and support personnel in the school.
- A.4 Knows professional organizations, preparation standards, and credentials that are relevant to the practice of school counseling.
- A.5 Understands current models of school counseling programs (e.g., American School Counselor Association [ASCA] National Model) and their integral relationship to the total educational program.
- A.6 Understands the effects of (a) atypical growth and development, (b) health and wellness, (c) language, (d) ability level, (e) multicultural issues, and (f) factors of resiliency on student learning and development.
- A.7 Understands the operation of the school emergency management plan and the roles and responsibilities of the school counselor during crises, disasters, and other trauma-causing events.

B. Skills and Practices

- B.1 Demonstrates the ability to apply and adhere to ethical and legal standards in school counseling.
- B.2 Demonstrates the ability to articulate, model, and advocate for an appropriate school counselor identity and program.

COUNSELING, PREVENTION, AND INTERVENTION

C. Knowledge

- C.1 Knows the theories and processes of effective counseling and wellness programs for individual students and groups of students.
- C.2 Knows how to design, implement, manage, and evaluate programs to enhance the academic, career, and personal/social development of students.
- C.3 Knows strategies for helping students identify strengths and cope with environmental and developmental problems.
- C.4 Knows how to design, implement, manage, and evaluate transition programs, including school-to-work, postsecondary planning, and college admissions counseling.
- C.5 Understands group dynamics including counseling, psycho-educational, task, and peer helping groups and the facilitation of teams to enable students to overcome barriers and impediments to learning.

C.6 Understands the potential impact of crises, emergencies, and disasters on students, educators, and schools, and knows the skills needed for crisis intervention.

D. Skills and Practices

D.1. Demonstrates self-awareness, sensitivity to others, and the skills needed to relate to diverse individuals, groups, and classrooms.

D.2. Provides individual and group counseling and classroom guidance to promote the academic, career, and personal/social development of students.

D.3. Designs and implements prevention and intervention plans related to the effects of (a) atypical growth and development, (b) health and wellness, (c) language, (d) ability level, (e) multicultural issues, and (f) factors of resiliency on student learning and development.

D.4. Demonstrates the ability to use procedures for assessing and managing suicide risk.

D.5. Demonstrates the ability to recognize his or her limitations as a school counselor and to seek supervision or refer clients when appropriate.

DIVERSITY AND ADVOCACY

E. Knowledge

E.1 Understands the cultural, ethical, economic, legal, and political issues surrounding diversity, equity, and excellence in terms of student learning.

E.2 Identifies community, environmental, and institutional opportunities that enhance as well as barriers that impede the academic, career, and personal/social development of students.

E.3 Understands the ways in which educational policies, programs, and practices can be developed, adapted, and modified to be culturally congruent with the needs of students and their families.

E.4 Understands multicultural counseling issues, as well as the impact of ability levels, stereotyping, family, socioeconomic status, gender, and sexual identity, and their effects on student achievement.

F. Skills and Practices

F.1 Demonstrates multicultural competencies in relation to diversity, equity, and opportunity in student learning and development.

F.2 Advocates for the learning and academic experiences necessary to promote the academic, career, and personal/social development of students.

F.3 Advocates for school policies, programs, and services that enhance a positive school climate and are equitable and responsive to multicultural student populations.

F.4 Engages parents, guardians, and families to promote the academic, career, and personal/social development of students.

ASSESSMENT

G. Knowledge

G.1 Understands the influence of multiple factors (e.g., abuse, violence, eating disorders, attention deficit hyperactivity disorder, childhood depression) that may affect the personal, social, and academic functioning of students.

G.2 Knows the signs and symptoms of substance abuse in children and adolescents, as well as the signs and symptoms of living in a home where substance abuse occurs.

G.3 Identifies various forms of needs assessments for academic, career, and personal/social development.

H. Skills and Practices

H.1 Assesses and interprets students strengths and needs, recognizing uniqueness in cultures, languages, values, backgrounds, and abilities.

H.2 Selects appropriate assessment strategies that can be used to evaluate a student's academic, career, and personal/social development.

H.3 Analyzes assessment information in a manner that produces valid inferences when evaluating the needs of individual students and assessing the effectiveness of educational programs.

H.4 Makes appropriate referrals to school and/or community resources.

H.5 Assesses barriers that impede students academic, career, and personal/social development.

RESEARCH AND EVALUATION

I. Knowledge

I.1 Understands how to critically evaluate research relevant to the practice of school counseling.

I.2 Knows models of program evaluation for school counseling programs.

I.3 Knows basic strategies for evaluating counseling outcomes in school counseling (e.g., behavioral observation, program evaluation).

I.4 Knows current methods of using data to inform decision making and accountability (e.g., school improvement plan, school report card).

I.5 Understands the outcome research data and best practices identified in the school counseling research literature.

J. Skills and Practices

J.1 Applies relevant research findings to inform the practice of school counseling.

J.2 Develops measurable outcomes for school counseling programs, activities, interventions, and experiences.

J.3 Analyzes and uses data to enhance school counseling programs.

ACADEMIC DEVELOPMENT

K. Knowledge

K.1 Understands the relationship of the school counseling program to the academic mission of the school.

K.2 Understands the concepts, principles, strategies, programs, and practices designed to close the achievement gap, promote student academic success, and prevent students from dropping out of school.

K.3 Understands curriculum design, lesson plan development, classroom management strategies, and differentiated instructional strategies for teaching counseling- and guidance-related material.

L. Skills and Practices

L.1 Conducts programs designed to enhance student academic development.

L.2 Implements strategies and activities to prepare students for a full range of postsecondary options and opportunities.

L.3 Implements differentiated instructional strategies that draw on subject matter and pedagogical content knowledge and skills to promote student achievement.

COLLABORATION AND CONSULTATION

M. Knowledge

M.1 Understands the ways in which student development, well-being, and learning are enhanced by family-school-community collaboration.

M.2 Knows strategies to promote, develop, and enhance effective teamwork within the school and the larger community.

M.3 Knows how to build effective working teams of school staff, parents, and community members to promote the academic, career, and personal/social development of students.

M.4 Understands systems theories, models, and processes of consultation in school system settings.

M.5 Knows strategies and methods for working with parents, guardians, families, and communities to empower them to act on behalf of their children.

M.6 Understands the various peer programming interventions (e.g., peer meditation, peer mentoring, peer tutoring) and how to coordinate them.

M.7 Knows school and community collaboration models for crisis/disaster preparedness and response.

N. Skills and Practices

- N.1 Works with parents, guardians, and families to act on behalf of their children to address problems that affect student success in school.
- N.2 Locates resources in the community that can be used in the school to improve student achievement and success.
- N.3 Consults with teachers, staff, and community-based organizations to promote student academic, career, and personal/social development.
- N.4 Uses peer helping strategies in the school counseling program.
- N.5 Uses referral procedures with helping agents in the community (e.g., mental health centers, businesses, service groups) to secure assistance for students and their families.

LEADERSHIP

O. Knowledge

- O.1 Knows the qualities, principles, skills, and styles of effective leadership.
- O.2 Knows strategies of leadership designed to enhance the learning environment of schools.
- O.3 Knows how to design, implement, manage, and evaluate a comprehensive school counseling program.
- O.4 Understands the important role of the school counselor as a system change agent.
- O.5 Understands the school counselor's role in student assistance programs, school leadership, curriculum, and advisory meetings.

P. Skills and Practices

- P.1 Participates in the design, implementation, management, and evaluation of a comprehensive developmental school counseling program.
- P.2 Plans and presents school-counseling-related educational programs for use with parents and teachers (e.g., parent education programs, materials used in classroom guidance and advisor/advisee programs for teachers).

FOUNDATIONS

A. Knowledge

- A.1 Understands the history, philosophy, and trends in clinical mental health counseling.
- A.2 Understands ethical and legal considerations specifically related to the practice of clinical mental health counseling.
- A.3 Understands the roles and functions of clinical mental health counselors in various practice settings and the importance of relationships between counselors and other professionals, including interdisciplinary treatment teams.
- A.4 Knows the professional organizations, preparation standards, and credentials relevant to the practice of clinical mental health counseling.
- A.5 Understands a variety of models and theories related to clinical mental health counseling, including the methods, models, and principles of clinical supervision.
- A.6 Recognizes the potential for substance use disorders to mimic and coexist with a variety of medical and psychological disorders.
- A.7 Is aware of professional issues that affect clinical mental health counselors (e.g., core provider status, expert witness status, access to and practice privileges within managed care systems).
- A.8 Understands the management of mental health services and programs, including areas such as administration, finance, and accountability.
- A.9 Understands the impact of crises, disasters, and other trauma-causing events on people.

A.10 Understands the operation of an emergency management system within clinical mental health agencies and in the community.

B. Skills and Practices

- B.1 Demonstrates the ability to apply and adhere to ethical and legal standards in clinical mental health counseling.
- B.2 Applies knowledge of public mental health policy, financing, and regulatory processes to improve service delivery opportunities in clinical mental health counseling.

COUNSELING, PREVENTION, AND INTERVENTION

C. Knowledge

- C.1 Describes the principles of mental health, including prevention, intervention, consultation, education, and advocacy, as well as the operation of programs and networks that promote mental health in a multicultural society.
- C.2 Knows the etiology, the diagnostic process and nomenclature, treatment, referral, and prevention of mental and emotional disorders.
- C.3 Knows the models, methods, and principles of program development and service delivery (e.g., support groups, peer facilitation training, parent education, self-help).
- C.4 Knows the disease concept and etiology of addiction and co-occurring disorders.
- C.5 Understands the range of mental health service delivery such as inpatient, outpatient, partial treatment and aftercare and the clinical mental health counseling services network.
- C.6 Understands the principles of crisis intervention for people during crises, disasters, and other trauma-causing events.
- C.7 Knows the principles, models, and documentation formats of biopsychosocial case conceptualization and treatment planning.
- C.8 Recognizes the importance of family, social networks, and community systems in the treatment of mental and emotional disorders.
- C.9 Understands professional issues relevant to the practice of clinical mental health counseling.

D. Skills and Practices

- D.1 Uses the principles and practices of diagnosis, treatment, referral, and prevention of mental and emotional disorders to initiate, maintain, and terminate counseling.
- D.2 Applies multicultural competencies to clinical mental health counseling involving case conceptualization, diagnosis, treatment, referral, and prevention of mental and emotional disorders.
- D.3 Promotes optimal human development, wellness, and mental health through prevention, education, and advocacy activities.
- D.4 Applies effective strategies to promote client understanding of and access to a variety of community resources.
- D.5 Demonstrates appropriate use of culturally responsive individual, couple, family, group, and systems modalities for initiating, maintaining, and terminating counseling.
- D.6 Demonstrates the ability to use procedures for assessing and managing suicide risk.
- D.7 Applies current record-keeping standards related to clinical mental health counseling.
- D.8 Provides appropriate counseling strategies when working with clients with addiction and co-occurring disorders.
- D.9 Demonstrates the ability to recognize his or her own limitations as a clinical mental health counselor and to seek supervision or refer clients when appropriate.

DIVERSITY AND ADVOCACY

E. Knowledge

E.1 Understands how living in a multicultural society affects clients who are seeking clinical mental health counseling services.

E.2 Understands the effects of racism, discrimination, sexism, power, privilege, and oppression on one's own life and career and those of the client.

E.3 Understands current literature that outlines theories, approaches, strategies, and techniques shown to be effective when working with specific populations of clients with mental and emotional disorders.

E.4 Understands effective strategies to support client advocacy and influence public policy and government relations on local, state, and national levels to enhance equity, increase funding, and promote programs that affect the practice of clinical mental health counseling.

E.5 Understands the implications of concepts such as internalized oppression and institutional racism, as well as the historical and current political climate regarding immigration, poverty, and welfare.

E.6 Knows public policies on the local, state, and national levels that affect the quality and accessibility of mental health services.

F. Skills and Practices

F.1 Maintains information regarding community resources to make appropriate referrals.

F.2 Advocates for policies, programs, and services that are equitable and responsive to the unique needs of clients.

F.3 Demonstrates the ability to modify counseling systems, theories, techniques, and interventions to make them culturally appropriate for diverse populations.

ASSESSMENT

G. Knowledge

G.1 Knows the principles and models of assessment, case conceptualization, theories of human development, and concepts of normalcy and psychopathology leading to diagnoses and appropriate counseling treatment plans.

G.2 Understands various models and approaches to clinical evaluation and their appropriate uses, including diagnostic interviews, mental status examinations, symptom inventories, and psychoeducational and personality assessments.

G.3 Understands basic classifications, indications, and contraindications of commonly prescribed psychopharmacological medications so that appropriate referrals can be made for medication evaluations and so that the side effects of such medications can be identified.

G.4 Identifies standard screening and assessment instruments for substance use disorders and process addictions.

H. Skills and Practices

H.1 Selects appropriate comprehensive assessment interventions to assist in diagnosis and treatment planning, with an awareness of cultural bias in the implementation and interpretation of assessment protocols.

H.2 Demonstrates skill in conducting an intake interview, a mental status evaluation, a biopsychosocial history, a mental health history, and a psychological assessment for treatment planning and caseload management.

H.3 Screens for addiction, aggression, and danger to self and/or others, as well as co-occurring mental disorders.

H.4 Applies the assessment of a client's stage of dependence, change, or recovery to determine the appropriate treatment modality and placement criteria within the continuum of care.

RESEARCH AND EVALUATION

I. Knowledge

I.1 Understands how to critically evaluate research relevant to the practice of clinical mental health counseling.

I.2 Knows models of program evaluation for clinical mental health programs.

I.3 Knows evidence-based treatments and basic strategies for evaluating counseling outcomes in clinical mental health counseling.

J. Skills and Practices

J.1 Applies relevant research findings to inform the practice of clinical mental health counseling.

J.2 Develops measurable outcomes for clinical mental health counseling programs, interventions, and treatments.

J.3 Analyzes and uses data to increase the effectiveness of clinical mental health counseling interventions and programs.

DIAGNOSIS

K. Knowledge

K.1 Knows the principles of the diagnostic process, including differential diagnosis, and the use of current diagnostic tools, such as the current edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM).

K.2 Understands the established diagnostic criteria for mental and emotional disorders, and describes treatment modalities and placement criteria within the continuum of care.

K.3 Knows the impact of co-occurring substance use disorders on medical and psychological disorders.

K.4 Understands the relevance and potential biases of commonly used diagnostic tools with multicultural populations.

K.5 Understands appropriate use of diagnosis during a crisis, disaster, or other trauma-causing event.

L. Skills and Practices

L.1 Demonstrates appropriate use of diagnostic tools, including the current edition of the DSM, to describe the symptoms and clinical presentation of clients with mental and emotional impairments.

L.2 Is able to conceptualize an accurate multi-axial diagnosis of disorders presented by a client and discuss the differential diagnosis with collaborating professionals.

L.3 Differentiates between diagnosis and developmentally appropriate reactions during crises, disasters, and other trauma-causing events.

MA in School Psychology

The program is approved by the National Association of School Psychologists and accredited by the Council for the Accreditation of Educator Preparation. Both the masters of arts and the education specialist degree requirements must be completed by the student to be licensed as a school psychologist in Ohio and to be a nationally certified school psychologist.

The M.A. program is designed for one year of full-time study.

Application deadlines for the school psychology M.A. program are December 15 and February 15.

To apply to the program, applicants must meet the minimum academic prerequisites and submit the following materials:

- Minimum academic prerequisite: Undergraduate GPA of 2.7 (for admission to the College of Graduate Studies) and for the school psychology program, a preferred undergraduate GPA of 3.0.
- GRE scores (taken within the last five years).
- College of Graduate Studies application for the master's degree in school psychology.

- Three letters of recommendation, at least one of which must address the applicant's academic potential (i.e. from a university faculty member).
- Statement of purpose, between two to three pages, that details the reasons the applicant would like to pursue a career in school psychology and includes personal experiences. The statement of purpose should be typed and submitted to the College of Graduate Studies as a separate word document.
- Official undergraduate transcripts (and graduate transcripts, if applicable).
- Professional résumé.

To be consistent with national training standards and to ensure sufficient faculty members to advise and mentor students, a limited number of applicants will be admitted into the program each year. As a result, admission is competitive. Applicants are required to interview with an admissions committee. Prior to participating in the campus interview, applicants must interview a school psychologist. The list of questions to ask during the school psychologist interview as well as other information about the program can be found on the program website. For more information or to ask questions, contact:

Jennifer Reynolds
Program Director
jennifer.reynolds21@utoledo.edu

Code	Title	Hours
SPSY 5030	Role And Function Of The School Psychologist	3
SPSY 5060	Prepractica in School Psychology ^{Course is taken in fall (2 credits) and spring (2 credits).}	2
SPSY 5170	Consultation I: Theories And Techniques	3
SPSY 5300	Psychoeducational Assessment And Interventions I	4
SPSY 5310	Psychoeducational Assessment And Interventions II	4
COUN 5160	Cultural Diversity For Counselors And School Psychologists	3
SPSY 5980	Special Topics In Counseling, Mental Health, And School Psychology ^{Will be replaced with new course SPSY 6300 spring 2023.}	3
HSBS 6000	Statistics and Research for Health Science and Human Service Professions	3
SPSY 5040	Legal And Ethical Issues For School Psychologists And Counselors	4

The complete program, including the MA and EdS, includes approximately 76 credit hours, a two-semester pre-practica experience during the first year, a two-semester practica experience during the second year, and a 9-month, full-time internship (minimum of 1200 clock hours) in a school setting completed during the third year. Students earn a master of arts (M.A.) after completing a minimum of 30 hours of coursework and 100 pre-practica experience hours. The education specialist (Ed.S.) degree is earned after completion of the remaining coursework, practica experience and internship.

First Year

First Term		Hours

Total Hours		31

PLO 1.1 Demonstrates understanding of and sensitivity to individual differences, abilities, disabilities, and other diverse characteristics as evidenced in communication and interpersonal relationships (2.2, 2.8)

PLO 1.2 Demonstrates strategies for addressing diversity factors when selecting, administering, and interpreting assessments; and designing, implementing and evaluating interventions for academic and/or behavior concerns (2.8)

PLO 1.3 Demonstrates knowledge and respect for diversity factors related to culture, family systems, and an understanding that advocacy for social justice is a foundation of service delivery (2.7, 2.8)

PLO 1.4 Demonstrates active, attentive listening and communicates and collaborates effectively with others in activities such as meetings, supervision sessions, parent interviews, and consultations (2.2)

PLO 2.2 Demonstrates knowledge and skill in selecting and administering various methods of academic assessment, and interpreting and sharing results (2.1, 2.3)

PLO 2.3 Demonstrates knowledge and skill at making data-based decisions by linking academic and cognitive assessment information to instructional interventions in general education setting, and when appropriate, in special education settings (2.1, 2.3)

PLO 2.4 Demonstrates skill in using a systematic problem solving process guided by data-based decision making to develop, implement, monitor, and evaluate academic interventions by (2.1, 2.3)

PLO 2.5 Demonstrates knowledge of ecological influences of the classroom and home on student academic skills, learning, and cognition and applies to assessment and intervention (2.2, 2.3)

PLO 3.3 Demonstrates skill in using a systematic problem solving process guided by data-based decision making to develop, implement,

monitor, and evaluate affective, behavior and adaptive behavior interventions (2.1, 2.4)

PLO 3.4 Demonstrates understanding of biological, developmental, and social influences on behavior and mental health and implications for classroom management and instruction (2.2, 2.4)

PLO 3.5 Demonstrates knowledge of concepts from applied behavior analysis and skill in conducting functional assessment and analysis to develop behavior intervention plans (2.4)

PLO 4.4 Demonstrates understanding of principles and research related to resilience and risk factors in learning and mental health and skills in developing, implementing, and evaluating universal interventions that foster resilience and minimize factors that lead to academic and behavior difficulties (2.6, 2.9)

PLO 4.5 Demonstrates knowledge of school system organizational structure, general education, special education, and state and federal laws and policy for school accountability for academics and behavior (2.5)

PLO 5.2 Demonstrates use of technology in assessment, intervention, and presentation of information (2.9, 2.10)

PLO 5.3 Demonstrates ability to function as scientist-practitioner by designing and conducting single case and small group research and to analyze outcomes to inform practices and services (2.9)

PLO 5.4 Understands one's identity as a school psychologist by engaging in activities that foster this professional identity through membership involvement in and attendance at regional, state and national conferences (2.10)

PLO 5.5 Demonstrates satisfactory professional dispositions needed for effective practice including social justice, communication and interpersonal skills with peers, trainers, and supervisors, and satisfactory initiative, dependability, time management and organizational skills (2.8, 2.10)

MA in Speech Language Pathology

The graduate program provides students with the necessary coursework and clinical practicum experience to attain a master of arts in speech-language pathology that is applicable toward the Certification of Clinical Competence (CCC-SLP) by the American Speech-Language-Hearing Association (ASHA) and state licensure in the area of speech-language pathology. In addition to successful completion of the master's degree requirements, the certification and licensure processes include successful completion of the national specialty examination in speech-language pathology and a clinical fellowship (professional experience year).

The graduate program in speech-language pathology is accredited by the Council of Academic Accreditation in Audiology and Speech-Language Pathology (CAA). The speech-language pathology program is dedicated to the development of competent and caring entry-level speech-language pathologists. The program is committed to providing a broad foundation of normal bases of speech, language, and hearing and specialized coursework in the assessment and remediation of speech and language disorders. The program provides coursework and practicum experiences with a diverse population to ensure that students demonstrate knowledge and skill competencies to provide services to children and adults with communication disorders.

Undergraduate students with a degree in speech-language pathology will be considered for entry into the graduate program. Students without adequate undergraduate preparation in speech-language pathology

will need to complete a series of leveling courses in the major as an undergraduate with degree (UWD). The UWD program is available at the University of Toledo.

The deadline for completed applications for enrollment in the graduate Speech-Language Pathology program is December 15 of every academic year. Applications received after December 15 may not receive full consideration.

Applications should be made directly to the Communication Sciences and Disorders Centralized Application System (<http://www.capsd.org/csdcas-student-page/>); additionally, a supplemental application should be completed through The University of Toledo College of Graduate Studies.

NOTE: It is the responsibility of the student to monitor his or her application status to insure that all required materials are posted by CSDCAS before the deadline date of December 15. Students may work with the Communication Sciences and Disorders Centralized Application System to insure that all materials are posted before the deadline, or notify the speech-language pathology program in the event that materials are lost. Similarly, students must monitor the supplemental application status to insure that all materials are posted before the deadline date of December 15. Failure to do so may result in an incomplete application that is not reviewed.

Acceptance into the ASHA accredited speech-language pathology graduate program is highly competitive. Consequently, many factors are taken into consideration when selecting an applicant for acceptance into the program. These factors include, but are not limited to:

- undergraduate preparation in the field;
- cumulative grade point average (highest consideration for ≥ 3.5);
- grade point in the major (highest consideration for ≥ 3.5);
- potential to successfully complete the graduate program;
- quality of references (require 3);
- personal essay (statement of purpose);
- oral and written language skills;
- interview (by invitation); and
- Graduate Record Examination (GRE)

Highest consideration will be given to those with a score above the 40th percentile on the Verbal and the Quantitative sections and a GRE writing score > 4.0 . A writing score below 3.5 is not acceptable, and applications with a GRE writing score of 3.0 or below will not be given regular admission. Students are encouraged to retake the GRE to improve their scores if they fall below the required scores.

Each student, while enrolled in the didactic and clinical portions of the speech-language pathology curriculum, is required to complete various immunizations, titers, tests, and a physical examination each year as specified in the Student Health Form Packet in the Speech-Language Pathology Program Student Handbook. Required immunizations include Positive MMR titers, Positive Varicella titer, Positive Hep B titer, Hep B Vaccination Series, Current Tdap, 2-step Initial TB test, and 1-step Annual TB test. All speech-language students are required to complete both an Ohio BCI check and an FBI criminal background check prior to participating in any clinical experiences. Students are prohibited from engaging in laboratory activities or attending clinical facilities if this

information is not on file for the current year. For details, see: <http://www.utoledo.edu/hhs/speech/formsandhandbook.html>

It should also be noted that some clinical education sites have additional health requirements (flu shots, drug screens, etc.). All expenses incurred in obtaining a physical, necessary laboratory tests, immunizations and additional health requirements are the responsibility of the student.

Essential Functions

The University of Toledo admits and matriculates qualified speech-language pathology students in accordance with the UT Policy of Nondiscrimination on the Basis of a Disability – The Americans with Disabilities Act, Section 504 of the Rehabilitation Act of 1973, The State of Ohio Revised Code, and other applicable statutes and regulations relating to equality of opportunity.

The Essential Functions provide information to allow a candidate to make an informed decision for application and are a guide to accommodation of students with disabilities. Academic adjustments can be made for disabilities in some instances, but a student must be able to perform the essential functions of a speech-language pathologist independently either with or without reasonable accommodation.

Many physical, behavioral and social, and cognitive and intellectual abilities are necessary for satisfactory mastery of the academic and clinical curriculum and professional responsibilities in the field of speech-language pathology. Essential physical abilities include, but are not limited to, the ability to visually and auditorily monitor patient responses and materials and to make judgments about patient health based on these perceptions. Examples of behavioral and social attributes include maintaining emotional and mental health necessary to use one's intellectual abilities, to promptly complete responsibilities, and to develop appropriate relationships with faculty, supervisors, staff, peers, clients, parents or caregivers, and other professionals. Essential cognitive and intellectual abilities include, among others, demonstrating the mental capacity to learn and assimilate professional information, including the ability to comprehend oral and written professional literature and reports; ability to write discipline-specific papers and clinical reports in Standard American English; ability to speak Standard American English intelligibly and to discriminate correct production of and model Standard American English phonemes, vocabulary, grammatical forms, and prosodic patterns.

We urge applicants to ask questions about the program's technical standards for clarification and to determine whether they can meet the requirements with or without reasonable accommodations. Such questions may be directed to the Program Director or the Academic Enrichment Center on campus.

First Year		Hours
SLP 6000	Advanced Practicum In Communication Disorders	2
SLP 6001	Advanced Practicum in Communication Disorders II	2
SLP 6002	Advanced Practicum III	2
SLP 6010	Diagnostic Practicum In Communication Disorders	2

SLP 6011	Diagnostic Practicum in Communication Disorders II	2

Second Year		
SLP 6750	Professional Issues in Speech Language Pathology	2
SLP 6800	Aural Rehabilitation	3
SLP 6920	SLP Concomitant Project	1
SLP 6940	Adult Internship In Speech-Language Pathology	6
SLP 6941	Pediatric Internship in Speech-Language Pathology	6
Hours		18
Total Hours		62

Students are divided into two cohort groups/tracks (Gold and Blue). While all students will graduate having the same didactic and clinical requirements, the two cohorts will go through a different sequence of courses. In addition to the academic requirements of the degree, students must enroll in graduate credits to complete multiple clinical experiences including on-campus clinical practica as well as a minimum of internships to meet clinical requirements for certification. Students may choose between a thesis and a comprehensive examination.

The following programs of study assume no deficiencies in normal bases of speech/language/audiology requirements exist.

Plan of Study

First Year		Hours
SLP 6000	Advanced Practicum In Communication Disorders	2

Knowledge outcomes

IV A: The applicant must have demonstrated knowledge of the biological sciences, physical sciences, statistics, and the social/behavioral sciences.

IV B: The applicant must have demonstrated knowledge of basic human communication and swallowing processes, including the appropriate biological, neurological, acoustic, psychological, developmental, and linguistic and cultural bases. The applicant must have demonstrated the ability to integrate information pertaining to normal and abnormal human development across the life span.

IV C: The applicant must have demonstrated knowledge of communication and swallowing disorders and differences, including the appropriate etiologies, characteristics, anatomical/physiological, acoustic, psychological, developmental, and linguistic and cultural correlates in the following areas:

Skills Outcome

V A: The applicant must have demonstrated skills in oral and written or other forms of communication sufficient for entry into professional practice.

V B: The applicant for certification must have completed a program of study that included experiences sufficient in breadth and depth to achieve the following skills outcomes:

Evaluation, Intervention, Interaction and Personal Qualities

V C: The applicant for certification in speech-language pathology must complete a minimum of 400 clock hours of supervised clinical experience in the practice of speech-language pathology. Twenty-five hours must

be spent in clinical observation, and 375 hours must be spent in direct client/patient contact.

V D: At least 325 of the 400 clock hours must be completed while the applicant is engaged in graduate study in a program accredited in speech-language pathology by the Council on Academic Accreditation in Audiology and Speech-Language Pathology.

V E: Supervision must be provided by individuals who hold the Certificate of Clinical Competence in the appropriate profession. The amount of direct supervision must be commensurate with the student's knowledge, skills, and experience, must not be less than 25% of the student's total contact with each client/patient, and must take place periodically throughout the practicum. Supervision must be sufficient to ensure the welfare of the client/patient.

V F: Supervised practicum must include experience with client/patient populations across the life span and from culturally/linguistically diverse backgrounds. Practicum must include experience with client/patient populations with various types and severities of communication and/or related disorders, differences, and disabilities.

Assessment

The applicant must have passed the national examination adopted by ASHA for purposes of certification in speech-language pathology.

PhD in Counselor Education

The doctor of philosophy degree (Ph.D.) in counselor education prepares students for careers in counselor education, counseling supervision, counseling leadership, and community and school counseling management through research, teaching, supervision, clinical, and leadership course work and experiences. Opportunities exist within this program to create areas of specialization that are relevant to the academic, professional, or research interests of the student. The program objectives and curricular experiences of the doctoral program reflect a deepening of master's-level curriculum and an expansion into the five core areas of doctoral-level practice: teaching, supervision, research, clinical practice, and leadership and advocacy.

Persons applying for admission to doctoral study must meet the admission requirements of the College of Graduate Studies, the College of Health and Human Services, and the counselor education program. These requirements include an application for graduate admission, one set of official transcripts from each institution attended showing any and all undergraduate/graduate credits and degrees attained, three letters of recommendation, and a non-refundable application fee that must be submitted to the College of Graduate Studies to begin the admission process.

In addition, counselor education program requirements for admission to the doctoral program are:

- A minimum GPA of 3.5 on a 4.0-point scale for all graduate-level academic work
- A master's degree in counseling from a program that is approved by the Council for Accreditation of Counseling and Related Educational Programs (CACREP). Applicants with degrees from non-accredited programs must demonstrate their equivalency to approved programs or make up any deficiencies that may be present in their training.
- GRE scores are not required for admission but may be submitted as supplemental materials.
- A résumé and statement of purpose three-to-five pages in length.

- One writing sample. This is typically fulfilled by submitting a copy of your best academic work completed in previous graduate courses.
- A personal interview with program faculty to determine the personal and professional suitability and leadership potential of the applicant. Applicants will be notified if they are selected for an interview.
- Three letters of recommendation, at least one of which must address the applicant's academic potential (i.e. from a university faculty member).

Applicants are interviewed and admitted to doctoral study during the fall or spring semesters of each academic year.

Hours 5

Total Hours 60

1. COUNSELING

- a. scholarly examination of theories relevant to counseling
- b. integration of theories relevant to counseling
- c. conceptualization of clients from multiple theoretical perspectives
- d. evidence-based counseling practices
- e. methods for evaluating counseling effectiveness
- f. ethical and culturally relevant counseling in multiple settings

2. SUPERVISION

- a. purposes of clinical supervision
- b. theoretical frameworks and models of clinical supervision
- c. roles and relationships related to clinical supervision
- d. skills of clinical supervision
- e. opportunities for developing a personal style of clinical supervision
- f. assessment of supervisees developmental level and other relevant characteristics
- g. modalities of clinical supervision and the use of technology
- h. administrative procedures and responsibilities related to clinical supervision
- i. evaluation, remediation, and gatekeeping in clinical supervision
- j. legal and ethical issues and responsibilities in clinical supervision
- k. culturally relevant strategies for conducting clinical supervision

3. TEACHING

- a. roles and responsibilities related to educating counselors
- b. pedagogy and teaching methods relevant to counselor education
- c. models of adult development and learning
- d. instructional and curriculum design, delivery, and evaluation methods relevant to counselor education
- e. effective approaches for online instruction

- f. screening, remediation, and gatekeeping functions relevant to teaching
- g. assessment of learning
- h. ethical and culturally relevant strategies used in counselor preparation
- i. the role of mentoring in counselor education
- 4. RESEARCH AND SCHOLARSHIP
 - a. research designs appropriate to quantitative and qualitative research questions
 - b. univariate and multivariate research designs and data analysis methods
 - c. qualitative designs and approaches to qualitative data analysis
 - d. emergent research practices and processes
 - e. models and methods of instrument design
 - f. models and methods of program evaluation
 - g. research questions appropriate for professional research and publication
 - h. professional writing for journal and newsletter publication
 - i. professional conference proposal preparation
 - j. design and evaluation of research proposals for a human subjects/institutional review board review
 - k. grant proposals and other sources of funding
 - l. ethical and culturally relevant strategies for conducting research
- 5. LEADERSHIP AND ADVOCACY
 - a. theories and skills of leadership
 - b. leadership and leadership development in professional organizations
 - c. leadership in counselor education programs
 - d. knowledge of accreditation standards and processes
 - e. leadership, management, and administration in counseling organizations and other institutions
 - f. leadership roles and strategies for responding to crises and disasters
 - g. strategies of leadership in consultation
 - h. current topical and political issues in counseling and how those issues affect the daily work of counselors and the counseling profession
 - i. role of counselors and counselor educators advocating on behalf of the profession and professional identity
 - j. models and competencies for advocating for clients at the individual, system, and policy levels
 - k. strategies of leadership in relation to current multicultural and social justice issues
 - l. ethical and culturally relevant leadership and advocacy practices

School of Population Health

JOSEPH DAKE, chair

The School of Population Health offers a variety of degree options and graduate courses. In health, a master of public health with a specialization in health promotion and education is available as well as the doctor of philosophy degree in health education.

Degrees Offered

- Certificate in Biostatistics and Epidemiology (p. 173)
- Certificate in Contemporary Gerontological Practice (p. 174)
- Certificate in Disaster Preparedness and Response (p. 175)
- Certificate in Epidemiology (p. 175)
- Certificate in Occupational Health (p. 175)
- Certificate in Public Health and Emergency Response (p. 176)
- Master of Public Health: Environmental and Occupational Health (p. 137)

- Master of Public Health: Generalist (p. 139)
- Master of Public Health: Health Promotion and Education (p. 141)
- Master of Public Health: Public Health Epidemiology (p. 144)
- MS in Occupational Health (p. 146)
- PhD in Health Education (p. 148)
- Occupational Therapy Doctorate/PhD in Health Education (p. 149)

PUBH 5020 Occupational Health

[3 credit hours]

Hazardous materials, mathematics, anatomy, and physiology; hazard recognition for harmful agents; methods, standards, recommendations, and instruments used to evaluate hazards; techniques for hazard control; occupational health programs and regulations; communication and ethics.

Term Offered: Fall

PUBH 5060 Occupational Safety

[3 credit hours]

Scientific, regulatory and management principles applicable to safety and health programs, administration, and controlling unsafe conditions/acts. Includes a field component.

Term Offered: Fall

PUBH 5160 Environmental Health

[3 credit hours]

Scientific, regulatory and management principles applicable to human disease associated with food, water, air and soil contamination. Focuses on biology and chemistry of contamination, exposure monitoring and contaminant control. Includes a field component.

Term Offered: Spring, Fall

PUBH 5260 Haz Mat and Emerg Response

[3 credit hours]

Scientific, regulatory and management principles applicable to characteristics, control, storage, transport and disposal of chemical, biological and radiological agents; disaster preparedness and emergency response; personal protective equipment and site assessment/monitoring. Includes a field component.

Term Offered: Spring, Summer, Fall

PUBH 5310 Chemical Agents

[3 credit hours]

Scientific and management principles applicable to the qualitative and quantitative evaluation of chemical agents associated with human diseases resulting from various occupational and environmental exposures. Introduction to the exposure assessment process including basic characterization, establishing exposure groups, and judging exposure profiles. Includes laboratory and field components.

Term Offered: Spring, Fall

PUBH 5410 Hazard Control

[3 credit hours]

Scientific and management principles of air contaminant modeling; control of indoor and outdoor (ambient) air pollution; operation of dilution and location exhaust ventilation systems; design of ventilation systems; respiratory and other personal protective equipment and programs commonly used in the workplace. Includes a laboratory component.

Term Offered: Spring

PUBH 5520 Biological Agents

[3 credit hours]

Scientific principles and practices applicable to the pathogenicity, evaluation and control of microbiological agents, parasitic agents, and some biological vectors associated with human diseases resulting from various environmental exposures. Content includes normal/abnormal human physiology relative to exposure, exposure assessment, and exposure control.

Term Offered: Spring, Summer, Fall

PUBH 5620 Physical Agents

[3 credit hours]

Scientific, regulatory, and management principles applicable to the assessment and control of exposure to physical agents (noise, thermal stress, ionizing and non-ionizing radiation). Includes laboratory and field components.

Term Offered: Spring

PUBH 5700 Risk Assessment

[3 credit hours]

Scientific and management principles of human health risk assessment including hazard identification, toxicity assessment, exposure assessment, risk characterization and communication relative to public, environmental, and occupational health.

Term Offered: Summer, Fall

PUBH 5720 Exposure Assessment Strategies

[3 credit hours]

Exposure assessment is an integral part of occupational and environmental health. This course will focus on the statistics and methods needed to assess exposures in the workplace.

Prerequisites: PUBH 6000 with a minimum grade of D- or PUBH 600 with a minimum grade of D-

Term Offered: Spring

PUBH 6000 Quantitative and Qualitative Data Analysis in Public Health

[3 credit hours]

This course includes introductory content on both quantitative and qualitative methods and relevant data analyses. Quantitative: Statistical methods and principles necessary for understanding and interpreting data used in public health. Topics include descriptive statistics, statistical comparison groups, correlation, and regression. Includes a lab component using SPSS statistical package. Qualitative: Methods for gathering qualitative data and thematic analysis of data in health service research. Activities include analyzing data for emergent themes as well as interpreting and presenting findings.

Term Offered: Spring, Fall

PUBH 6001 Biostatistics for Medical Sciences

[3 credit hours]

An introduction to descriptive statistics including measurement of central tendency, dispersion, correlation and regression, hypothesis testing, and select nonparametric methods, including the use of statistical package(s).

Term Offered: Fall

PUBH 6010 Public Health Epidemiology

[3 credit hours]

The course will present principles of the epidemiology method including problem solving. Various study designs will be discussed, including prospective and retrospective studies, analytic, and experimental methods.

Term Offered: Spring, Fall

PUBH 6020 Management and Leadership in Public Health

[3 credit hours]

An introduction to the leadership and management principles necessary for the delivery of public health programs, intervention, and outreach, including fostering collaboration, effective communication, consensus building, negotiation, cultural awareness, budget and resource management, evaluation, coalition building, vision creation, mediation, empowering others, and guiding decision making.

Term Offered: Spring, Summer, Fall

PUBH 6030 Advanced Epidemiology

[3 credit hours]

This course covers principles and methods of epidemiology in depth. The topics include causal inference, risk and effect, confounding, interaction, randomization, and matching. Special emphasis is given to design and interpretation of epidemiological studies.

Term Offered: Summer

PUBH 6050 Concepts and Issues in Environmental Health

[3 credit hours]

The course will review environmental concepts, focusing on water, soil, food, and diseases as they pertain to public health. Emergency preparedness for environmental events will be discussed. The impact of environmental events on public health, preparations, and appropriate responses will be included. The relationship between environmental health and public health will be emphasized.

Term Offered: Spring, Summer, Fall

PUBH 6060 Advanced Biostatistics

[3 credit hours]

Advanced statistical techniques with particular emphasis on problems in public health. Multiple regression, methods of analysis of variance, categorical data analysis including logistic regression, non parametric and survival analysis. Problems whose solution involves using a statistical program (e.g., SPSS).

Term Offered: Spring, Fall

PUBH 6070 Genetic Epidemiology

[3 credit hours]

Introduces genetic epidemiology methods, principles of population genetics including linkage and association studies used in assessing familial aggregation, and transmission patterns for identifying the genetic basis of common diseases.

Prerequisites: (PUBH 6000 with a minimum grade of C or PUBH 8000 with a minimum grade of C) and (PUBH 6010 with a minimum grade of C or PUBH 8010 with a minimum grade of C) or (PUBH 600 with a minimum grade of C or PUBH 800 with a minimum grade of C) and (PUBH 601 with a minimum grade of C or PUBH 801 with a minimum grade of C)

Term Offered: Summer

PUBH 6080 Social Determinants of Health

[3 credit hours]

Social determinants of health are social conditions, factors, and systems that place people from different socio-demographic and socioeconomic group (social class, gender, race/ethnicity, and place of birth) at differential risk of poor health and premature mortality. Mechanisms through which these factors are hypothesized to influence health, such as stress and access to health resources and constraints, will be discussed, as well as the ways in which these mechanisms can operate across the life course.

Term Offered: Spring, Fall**PUBH 6090 Issues in Public Health**

[3 credit hours]

Examination of various contemporary issues in public health. Includes social, economic, political, and community problems in the provision of health services, health manpower, and payment for health care.

PUBH 6100 Environ/Occup Epidemiology

[3 credit hours]

The course focuses on the application of epidemiological techniques to the study of effects of occupational and environmental exposures.

Prerequisite: PUBH600 and 601.**PUBH 6110 Categorical Data Analysis**

[3 credit hours]

This course introduces the theory and application of methods for categorical data, with emphasis on biomedical and public health applications. Topics include contingency tables, log-linear, logistic regression and Raush models, multivariate methods for matched pairs and longitudinal data. The methods are illustrated with SAS and/or SPSS, R.

Term Offered: Spring, Summer**PUBH 6120 Epidemiology Infectious Diseases**

[3 credit hours]

Provides an overview of major infectious diseases affecting public health in the U.S. and worldwide; introducing the basic epidemiologic methods for surveillance and investigation of infectious disease outbreaks.

Term Offered: Spring, Fall**PUBH 6130 Molecular Epidemiology**

[3 credit hours]

The course focuses on the application of epidemiological techniques to the study of effects of occupational and environmental exposures.

Term Offered: Fall**PUBH 6150 Clinical Epidemiology**

[3 credit hours]

This course focuses on epidemiologic concepts and methods in clinical medicine. Topics include clinical measurements and outcomes, risk, prognostic factors, clinical diagnosis, study design, decision analysis, clinical research and meta-analysis.

Term Offered: Spring**PUBH 6160 Reproductive Epidemiology**

[3 credit hours]

Reproductive health issues from the pre-conception, prenatal delivery, and postnatal periods and emphasizes health issues affecting women, men, and infants. A focus on current research, controversial issues and methodological issues.

Prerequisites: PUBH 6010 with a minimum grade of D- or PUBH 601 with a minimum grade of D-**Term Offered:** Spring**PUBH 6170 Molec and Genomic Epidemiology**

[3 credit hours]

Presents concepts and methods of molecular and genetic epidemiology relevant to the study of prevalent diseases in the population. Topics include biomarkers, polymorphism and gene-environment interaction. The evolution and function of the genomics and a synopsis of epidemiological design and analysis are included.

PUBH 6180 Cancer Epidemiology

[3 credit hours]

Focuses on a number of cancers, including the most incident cancers in the United States. Provides a broad overview of cancer epidemiology and basic substantive knowledge regarding many cancers and their risk factors, prevention, and biology and pathogenesis.

Term Offered: Spring, Summer, Fall**PUBH 6190 Statistical Packages for Public Health**

[3 credit hours]

The purpose of this 3 credit course is to develop analysis skills using the SAS statistical package, SPSS, and R for students that already have a basic knowledge of biostatistics.

Prerequisites: PUBH 6000 with a minimum grade of D- or PUBH 8000 with a minimum grade of D-**Term Offered:** Fall**PUBH 6200 Methods, Materials for PUBH**

[3 credit hours]

Introduces students to resource materials and methods appropriate for public health education. Students will use various mediums of instruction in direct application to public health programs.

Term Offered: Spring, Fall**PUBH 6250 Nutritional Epidemiology**

[3 credit hours]

PUBH 6300 Community Health Organization

[3 credit hours]

Focuses on techniques to bring about change in a community's health status through assessment, public advocacy, coalition building, decision-making, planning, policy development, and political influence. Applications will be emphasized.

Term Offered: Spring**PUBH 6310 Public Health Assessment and Planning**

[3 credit hours]

This course introduces the principles of health promotion program assessment and planning. Students learn the process of community health assessment, precursors to program planning, as well as the purposes, procedures, terminology, and specific techniques in the planning process.

Term Offered: Fall

PUBH 6320 Implementation of Public Health Programs

[3 credit hours]

This course is designed to prepare students to implement health education programs in the community. Emphasis will be placed on a variety of health education methods and strategies to plan, promote, present and evaluate health promotion activities.

Prerequisites: PUBH 6310 with a minimum grade of D-

Term Offered: Spring

PUBH 6330 Public Health and Aging

[3 credit hours]

Examines public health and aging issues in contemporary society. Introduces physical, cognitive and affective function from a public health perspective. Prevention and health promotion models are included.

Term Offered: Summer

PUBH 6410 Global Perspectives on Public Health and Disaster Preparedness

[3 credit hours]

This course introduces the introductory healthcare learner (including but not limited to MD, MPH, PA, MSN, MSBS, OT, PT) to specific principles of global perspectives on disaster management and response. Covers epidemiology of various diseases and population health issues from a global and domestic perspective. Employs an all-hazards framework, providing essential skills to function in the event of a catastrophe.

Guest speakers from healthcare disciplines who work internationally will present first-hand experiences in managing disasters.

Term Offered: Spring

PUBH 6420 Social Marketing in Health

[3 credit hours]

The Centers for Disease Control and Prevention (CDC) identify social marketing as a practice allied with Health Education and Health Promotion. The CDC encourages programs to apply the principles of social marketing to health behavior change efforts in order to increase the effectiveness of interventions. Social marketing uses audience research to determine target audience segmentation into groups with common risk behaviors, motivations, and information channel preferences. Key audience segments are then reached with the mix of intervention strategies formed by the "4 P's" of social marketing, namely product, price, place, and promotion. The final product is designed based on the needs and desires of the consumer and persuasive messages promoting behavior change are promoted to the target audience. Continuous evaluation and message revision allows for ongoing refinement on the basis of consumer feedback.

Term Offered: Spring

PUBH 6430 Community Mental Health

[3 credit hours]

In this course, mental health is examined from a public health perspective with a focus on epidemiological, behavioral, sociological and cultural issues. Particular emphasis is placed on the prevention of mental illness, social responses to illness, as well as the social determinants of mental health. Mental health, mental health promotion and community mental health issues are analyzed at individual and population level.

Term Offered: Spring, Summer

PUBH 6460 Health Promotion Programs

[3 credit hours]

PUBH 6500 Disaster Preparedness/Response

[3 credit hours]

PUBH 6510 Issues in Pandemic Preparedness and Response

[3 credit hours]

By means of synchronous, asynchronous, audiovisual, and simulation platforms, the learner will develop an in-depth knowledge concerning how the healthcare infrastructure of a community must plan for, respond to, and recover from a pandemic. The course is divided into four topic areas: 1) introduction; 2) preparedness; 3) response; and 4) recovery.

Term Offered: Spring, Fall

PUBH 6520 Public Health Nutrition

[3 credit hours]

PUBH 6550 Chronic Disease Epidemiology

[3 credit hours]

Epidemiology of selected chronic diseases and non-infectious conditions: cancer, cardiovascular diseases, musculoskeletal diseases and other chronic diseases. Emphasis on classification, rates, associations, etiology, prevention and control.

Prerequisites: PUBH 6010 with a minimum grade of C or PUBH 601 with a minimum grade of C

Term Offered: Spring, Summer, Fall

PUBH 6560 Interdisciplinary Crisis Management for Medical and Public Health Professionals

[3 credit hours]

The purpose of this semester course is to introduce the interdisciplinary healthcare learner (including but not limited to MD, PA, MPH, MSN, OT and PT students) to specific principles of epidemiology and disaster medicine employing an all-hazards framework and to provide essential skills enabling proper functioning in the event a catastrophe arises in the near future. The course will include lectures, simulation exercises and independent web-assisted content.

Term Offered: Spring, Fall

PUBH 6600 Health Behavior

[3 credit hours]

Examines the role of behaviors on health status and how to influence and understand behavior through use of cognitive models and change theory.

Term Offered: Spring, Summer, Fall

PUBH 6620 Introduction to Health Policy and Health Systems

[3 credit hours]

This course examines public health and healthcare policy from a public health perspective. It emphasizes the interrelatedness of law, the policymaking process, and governmental public health; addresses essential issues in health policy and law (e.g., health insurance, health economics, government health insurances, the uninsured); and introduces health policy analysis.

Term Offered: Fall

PUBH 6630 Public Health Advocacy

[3 credit hours]

An examination of the importance of advocacy for the individual, community, and public health professionals. Special emphasis will be place on developing advocacy-based skills to effectively advocate at the micro and macro level. In addition, students will participate in advocacy efforts external to the university to gain experience that enriches the student's training.

Term Offered: Spring

PUBH 6690 Public Health Research Design

[3 credit hours]

This course will cover the components of public health research methods. After completing the course, students will be able to write a research proposal to answer a question of interest. Additionally, students will be able to analyze evidence in order to engage in evidence-based public health practice. The course will be offered at the masters and doctoral levels with a focus on research methods utilized in public health and health education. The course is relevant for students in all majors within the M.P.H. program, and is required for students in the Health Education Ph.D. program.

Term Offered: Spring, Fall**PUBH 6730 Research Environmental Health**

[3 credit hours]

Students will participate in selected ongoing research programs of members of the faculty. May be repeated for credit.

Term Offered: Spring, Summer, Fall**PUBH 6790 Indep Study in Biostatistics**

[0-3 credit hours]

This courses addresses areas of biostatistics not covered by a regular course offering. It is intended to provide students the knowledge and experience needed in that area. This course is designed for public health students and could be beneficial to Ph.D. students, specifically those who need advanced statistical techniques for their dissertation. Topics include survival analysis, statistical models in carcinogenesis, statistical genetics, nonparametric statistics and multivariate techniques. May be repeated for credit.

Term Offered: Spring, Summer, Fall**PUBH 6800 Evaluation of Health Programs**

[3 credit hours]

An exploration of types of program evaluation, evaluation models, data collection, types of data, data quality, evaluation reports, standard data collection instruments and ethical issues in health program evaluation (UT-Main). Prerequisites: HEAL 6460/HEAL 8460; co-requisite: HEAL 6750.

Term Offered: Spring, Fall**PUBH 6890 Indep Study in Public Health**

[1-3 credit hours]

The student and instructor will agree on a program of study that will enable the student to achieve specific learning objectives in environmental health. May be repeated for credit.

Term Offered: Spring, Summer, Fall**PUBH 6900 Interprofessional Education for Public Health**

[1 credit hour]

This 1-Credit hour course for Public Health students has been designed to provide a variety of interprofessional learning activities and educational experiences that include learning modules related to current health topics and issues in our communities such as social determinants of health, human trafficking, poverty, and resilience. Students are required to complete selected educational experiences that provides opportunities to collaborate with students from other health care professions (Athletic Training, Medicine, Nursing, Occupational Therapy, Pharmacy, Physical Therapy, Physician Assistant, Public Health, Respiratory Therapy, Social Work, and Speech Language Pathology) using an experiential learning approach.

Term Offered: Spring**PUBH 6940 Internship in Occupational Health**

[1-3 credit hours]

Comprehensive or focused practical training in industrial hygiene/occupational health at a designated agency, organization, or company.

Term Offered: Spring, Summer, Fall**PUBH 6950 Integrative Learning Experience**

[2 credit hours]

Seminar course which serves as the culminating experience of the MPH program. Students are required to produce a high-quality written product that is appropriate to the student's educational and professional objectives and that must demonstrate both Foundational and Major Competencies.

Term Offered: Spring, Summer, Fall**PUBH 6960 Internship in Public Health**

[1-4 credit hours]

Comprehensive or focused practical training in environmental and occupational health at a designated agency, organization, or company.

Term Offered: Spring, Summer, Fall**PUBH 6970 Project in Public Health**

[1-4 credit hours]

Independent development by a student with approval and guidance by a Major Advisor, of a paper, manual, software, etc. applicable to a specific area of environmental and occupational health.

Term Offered: Spring, Summer, Fall**PUBH 6980 Seminar in Public Health**

[1-3 credit hours]

A systematic study of selected topics in public health. Course meets for three consecutive semesters. Students may begin any semester, but must complete in sequence. Students register for one credit each term for a cumulative total of three consecutive semesters. May be repeated for credit.

PUBH 6990 Thesis Research

[1-4 credit hours]

PUBH 8000 Quantitative and Qualitative Data Analysis in Public Health

[3 credit hours]

This course includes introductory content on both quantitative and qualitative methods and relevant data analyses. Quantitative: Statistical methods and principles necessary for understanding and interpreting data used in public health. Topics include descriptive statistics, statistical comparison groups, correlation, and regression. Includes a lab component using SPSS statistical package. Qualitative: Methods for gathering qualitative data and thematic analysis of data in health service research. Activities include analyzing data for emergent themes as well as interpreting and presenting findings.

Term Offered: Spring, Fall**PUBH 8010 Public Health Epidemiology**

[3 credit hours]

This course will present principles of the epidemiology method including problem solving. Various study designs will be discussed, including prospective and retrospective studies, analytical, and experimental methods.

Term Offered: Spring, Fall

PUBH 8020 Management and Leadership in Public Health

[3 credit hours]

An introduction to the leadership and management principles necessary for the delivery of public health programs, intervention, and outreach, including fostering collaboration, effective communication, consensus building, negotiation, cultural awareness, budget and resource management, evaluation, coalition building, vision creation, mediation, empowering others, and guiding decision making.

Term Offered: Spring, Summer, Fall

PUBH 8030 Advanced Epidemiology

[3 credit hours]

The course covers principles and methods of epidemiology in depth. The topics include causal inference, risk and effect, confounding, interaction, randomization, and matching. Special emphasis is given to design and interpretation of epidemiological studies.

Term Offered: Summer

PUBH 8060 Advanced Biostatistics

[3 credit hours]

PUBH 8090 Issues in Public Health

[3 credit hours]

Examination of various contemporary issues in public health. Included are social, economic, political and community problems in the provision of health services, health manpower and payment for health care.

PUBH 8110 Categorical Data Analysis

[3 credit hours]

PUBH 8120 Epidemiology Infectious Disease

[3 credit hours]

Provides an overview of major infectious diseases affecting public health in the U.S. and worldwide; introducing the basic epidemiologic methods for surveillance and investigation of infectious disease outbreaks.

Term Offered: Fall

PUBH 8130 Molecular Epidemiology

[3 credit hours]

This course covers both the major theoretical and practical issues of conducting an epidemiology study involving molecular and genomic techniques. The course will emphasize from infectious disease, chronic disease, and cancer research literature.

Term Offered: Fall

PUBH 8150 Clinical Epidemiology

[3 credit hours]

This course focuses on epidemiologic concepts and methods in clinical medicine. Topics include clinical measurements and outcomes, risk, prognostic factors, clinical diagnosis, study design, decision analysis, clinical research and meta-analysis.

Term Offered: Spring

PUBH 8160 Reproductive Epidemiology

[3 credit hours]

Additional assignments are here for students who will take this course as PUBH 8160. Covers broad reproductive health issues from the pre-conception, pre-natal, delivery, and post-natal periods and emphasizes how these issues affect women, men, babies, and infants. Relevant methodological and programmatic issues will be presented with practical illustrations from domestic and international settings. Guest speakers, including health care providers, will give real world experience and insight to these topics of study.

Prerequisites: PUBH 6010 with a minimum grade of D- and PUBH 8010 with a minimum grade of D-

Term Offered: Spring

PUBH 8170 Molecular and Genomic Epi

[3 credit hours]

PUBH 8180 Cancer Epidemiology

[3 credit hours]

Focuses on a number of cancers, including the most incident cancers in the United States. Provides a broad overview of cancer epidemiology and basic substantive knowledge regarding many cancers and their risk factors, prevention, and biology and pathogenesis.

Term Offered: Summer, Fall

PUBH 8330 Public Health and Aging

[3 credit hours]

Examines public health and aging issues in contemporary society. Introduces physical, cognitive, and affective function from a public health perspective. Prevention and health promotion are included.

Term Offered: Summer

PUBH 8410 Global Perspectives on Public Health and Disaster

Preparedness

[3 credit hours]

This course introduces the introductory healthcare learner (including but not limited to MD, MPH, PA, MSN, MSBS, OT, PT) to specific principles of global perspectives on disaster management and response. Covers epidemiology of various diseases and population health issues from a global and domestic perspective. Employs an all-hazards framework, providing essential skills to function in the event of a catastrophe.

Guest speakers from healthcare disciplines who work internationally will present first-hand experiences in managing disasters.

Term Offered: Spring

PUBH 8420 Social Marketing in Health

[3 credit hours]

The Centers for Disease Control and Prevention (CDC) identify social marketing as a practice allied with Health Education and Health Promotion. The CDC encourages programs to apply the principles of social marketing to health behavior change efforts in order to increase the effectiveness of interventions. Social marketing uses audience research to determine target audience segmentation into groups with common risk behaviors, motivations, and information channel preferences. Key audience segments are then reached with the mix of intervention strategies formed by the “4 P’s” of social marketing, namely product, price, place, and promotion. The final product is designed based on the needs and desires of the consumer and persuasive messages promoting behavior change are promoted to the target audience. Continuous evaluation and message revision allows for ongoing refinement on the basis of consumer feedback.

Term Offered: Spring**PUBH 8430 Community Mental Health**

[3 credit hours]

In this course, mental health is examined from a public health perspective with a focus on epidemiological, behavioral, sociological and cultural issues. Particular emphasis is placed on the prevention of mental illness, social responses to illness, as well as the social determinants of mental health. Mental health, mental health promotion and community mental health issues are analyzed at individual and population level.

Term Offered: Spring, Summer**PUBH 8500 Disaster Preparedness/Response**

[3 credit hours]

PUBH 8510 Issues in Pandemic Preparedness and Response

[3 credit hours]

By means of synchronous, asynchronous, audiovisual, and simulation platforms, the learner will develop an in-depth knowledge concerning how the healthcare infrastructure of a community must plan for, respond to, and recover from a pandemic. The course is divided into four topic areas: 1) introduction; 2) preparedness; 3) response; and 4) recovery.

Term Offered: Spring, Fall**PUBH 8550 Chronic Disease Epidemiology**

[3 credit hours]

Epidemiology of selected chronic diseases and non-infectious conditions: cancer, cardiovascular diseases, musculoskeletal diseases and other chronic diseases. Emphasis on classification, rates, associations, etiology, prevention and control.

Prerequisites: PUBH 6010 with a minimum grade of C or PUBH 601 with a minimum grade of C

Term Offered: Summer**PUBH 8560 Interdisciplinary Crisis Management for Medical and Public Health Professionals**

[3 credit hours]

The purpose of this semester course is to introduce the interdisciplinary healthcare learner (including but not limited to MD, PA, MPH, MSN, OT and PT students) to specific principles of epidemiology and disaster medicine employing an all-hazards framework and to provide essential skills enabling proper functioning in the event a catastrophe arises in the near future. The course will include lectures, simulation exercises and independent web-assisted content.

Term Offered: Spring, Fall**PUBH 8620 Introduction to Health Policy and Health Systems**

[3 credit hours]

In this course, mental health is examined from a public health perspective with a focus on epidemiological, behavioral, sociological and cultural issues. Particular emphasis is placed on the prevention of mental illness, social responses to illness, as well as the social determinants of mental health. Mental health, mental health promotion and community mental health issues are analyzed at individual and population level.

Term Offered: Fall**PUBH 8630 Public Health Advocacy**

[3 credit hours]

An examination of the importance of advocacy for the individual, community, and public health professionals. Special emphasis will be place on developing advocacy-based skills to effectively advocate at the micro and macro level. In addition, students will participate in advocacy efforts external to the university to gain experience that enriches the student's training.

Term Offered: Spring**PUBH 8900 Interprofessional Education for Public Health**

[1 credit hour]

This 1-Credit hour course for Public Health students has been designed to provide a variety of interprofessional learning activities and educational experiences that include learning modules related to current health topics and issues in our communities such as social determinants of health, human trafficking, poverty, and resilience. Students are required to complete selected educational experiences that provides opportunities to collaborate with students from other health care professions (Athletic Training, Medicine, Nursing, Occupational Therapy, Pharmacy, Physical Therapy, Physician Assistant, Public Health, Respiratory Therapy, Social Work, and Speech Language Pathology) using an experiential learning approach.

Term Offered: Spring

Certificate in Biostatistics and Epidemiology

The 15 credit hours graduate Certificate in Biostatistics and Epidemiology focuses on the development of the qualitative and quantitative knowledge and skills to collect, organize, analyze, and interpret data associated with epidemiologic investigations, health surveys, injury and illness recognition, and human exposure assessment. The Certificate in Biostatistics and Epidemiology provides learners with an expanded scope and depth of quantitative knowledge and skills, as compared to the Certificate in Epidemiology. NOCPH MPH students may not take this certificate concurrently while earning the MPH.

Student Learning Objectives

Student Learning Objectives for the Certificate in Biostatistics and Epidemiology:

- Select and apply appropriate biostatistical and epidemiological methods and interpret basic and applied research data
- Define and calculate measures of disease frequency and measures of association between risk factors and disease
- Describe the major epidemiologic research study designs and their advantages and limitations

- Define the basic terms and apply methods used in outbreak investigation, infectious disease epidemiology, chronic disease epidemiology, disease prevention trials, and evaluation of screening tests
- Review the scientific literature with competence, synthesize findings across studies, and make appropriate public health recommendations based on current knowledge
- Design an epidemiologic study to address a question of interest
- Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic investigation
- Apply epidemiologic skills in a clinical or public health setting, specifically in the formulation or application of health-related programs or policies

Certificate in Biostatistics and Epidemiology students take the following courses.

Code	Title	Hours
PUBH 6000/8000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010/8010	Public Health Epidemiology	3
PUBH 6030/8030	Advanced Epidemiology	3
PUBH 6060/8060	Advanced Biostatistics	3
PUBH 6110/8110	Categorical Data Analysis	3
Total Hours		15

1. Define and calculate measures of disease frequency and measures of association between risk factors and disease.
2. Describe the major epidemiologic research study designs and their advantages and limitations.
3. Describe the major sources of bias in epidemiologic research (confounding, selection bias, and measurement error) and the ways to evaluate and reduce bias.
4. Apply criteria to support whether an association is causal.
5. Interpret the results of an epidemiologic study, including the relation to findings from other epidemiologic studies, potential biologic and/or social mechanisms, the limitations of the study, and any public health implications.
6. Describe basic biostatistical methods and perform basic statistical analyses.

Certificate in Contemporary Gerontological Practice

Barbara Kopp Miller, Ph.D., administrative director, Center for Successful Aging

The Graduate Certificate in Contemporary Gerontological Practice at the University of Toledo is offered through the Center for Successful Aging and is designed to provide knowledge about contemporary issues in gerontology and geriatrics and prepare individuals for working with older adults and their families in the current interprofessional health care system.

A unique feature of the Certificate Program is the delivery system. Recognizing that individuals continually balance personal and professional responsibilities, the courses are accessible "24/7" through distance education methods. The five course curriculum is focused on

meeting the educational needs of health care professionals and students through effective and innovative educational methods. Minimum credits required for the Certificate in Contemporary Gerontological Practice is 15 credits.

Students are admitted for fall or spring semesters. The application deadline is July 1 for fall admission and November 1 for spring admission. To be considered for admittance into the program, a candidate must:

- Hold a bachelor's degree from an accredited college or university with a minimum 3.0 undergraduate grade point average. Degrees in progress will be considered. Official transcripts are required;
- Submit two online letters of recommendation;
- Submit a completed online application and the accompanying application fee.

Only online applications through the College of Graduate Studies are accepted.

Students who are currently enrolled in a program at the University of Toledo may apply to the Graduate Certificate Program by submitting an online Request to Add a Graduate Certificate Form. Students will also need to complete a Plan of Study form. The student must be in good standing in her or her current degree. (The accompanying fee is waived.)

First Term		Hours
GERO 5400	Health and Aging	3
GERO 5410	Issues Contemp Gerontol Pract	3
Hours		6
Second Term		
GERO 5420	Grief and Bereavement Issues	3
GERO 5430	Funding Adult Programming	3
Hours		6
Third Term		
GERO 5440	Independent Study Gerontology (Offered Fall, Spring and Summer)	3
Hours		3
Total Hours		15

Certificate in Disaster Preparedness and Response

Students will receive training and education related to preparing communities for and responding to any disaster. Apart from synchronous and asynchronous didactic education, the learner will participate in tabletop scenarios, functional exercises, and skill labs, taking full advantage of the University of Toledo's Jacobs Inter-professional Immersive Simulation Center. This will include weekly exercises, a live, simulated response to a tornado and triaging of victims, and hospital evacuation exercises. Students will receive online and in-person training with the Incident Command System (ICS). Additional skills will be interwoven throughout this program including patient assessment, splinting, suturing, tourniquet application, START and SALT triage, personal protective equipment (PPE) application, decontamination, and more.

The certificate's strength is its commitment to interdisciplinary education where students from the various health disciplines (e.g. medicine, physician assistant, pharmacy, nursing, EMS, PT, OT, RT, etc.) can work with public health students and where everyone can obtain a better perspective of what each discipline does and how they can form comprehensive health care teams when a disaster occurs. Minimum required credit hours for completion is 12.

Code	Title	Hours
PUBH 5260	Haz Mat and Emerg Response (Offered Summer)	3
PUBH 6090/8090	Issues in Public Health	3
PUBH 6500/8500	Disaster Preparedness/Response (Offered Fall)	3
PUBH 6560/8560	Interdisciplinary Crisis Management for Medical and Public Health Professionals (Offered Spring)	3
Total Hours		12

Apply principles of crisis leadership, governance, and management throughout simple, complex, and catastrophic mass casualty situations. Explain and exercise the basic principles associated with the management of HAZMAT and infectious disease crises from the perspective of both victim and responder. Identify real-world national and global public health challenges and demonstrate who these issues could blossom into true disasters with ineffectual leadership and mismanagement.

Certificate in Epidemiology

The 12 credit hours graduate Certificate in Epidemiology focuses on the development of the qualitative and quantitative knowledge and skills to collect, organize, analyze, and interpret data associated with epidemiologic investigations, health surveys, injury and illness recognition, and human exposure assessment. NOCPH MPH students may not take this certificate concurrently while earning the MPH.

Student Learning Objectives

Student learning objectives for the Certificate in Epidemiology:

- Select and apply appropriate biostatistical and epidemiological methods and interpret basic and applied research data
- Define and calculate measures of disease frequency and measures of association between risk factors and disease
- Describe the major epidemiologic research study designs and their advantages and limitations
- Define the basic terms and apply methods used in outbreak investigation, infectious disease epidemiology, chronic disease epidemiology, disease prevention trials, and evaluation of screening tests
- Review the scientific literature with competence, synthesize findings across studies, and make appropriate public health recommendations based on current knowledge
- Design an epidemiologic study to address a question of interest
- Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic investigation
- Apply epidemiologic skills in a clinical or public health setting, specifically in the formulation or application of health-related programs or policies

Certificate in Epidemiology students take the following courses.

Code	Title	Hours
PUBH 6000/8000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010/8010	Public Health Epidemiology	3
PUBH 6120/8120	Epidemiology Infectious Diseases	3
PUBH 6550/8550	Chronic Disease Epidemiology	3
Total Hours		12

1. Define and calculate measures of disease frequency and measures of association between risk factors and disease.
2. Describe the major epidemiologic research study designs and their advantages and limitations.
3. Describe the major sources of bias in epidemiologic research (confounding, selection bias, and measurement error) and the ways to evaluate and reduce bias.
4. Apply criteria to support whether an association is causal.
5. Describe the basic terms and methods used in outbreak investigation, infectious disease epidemiology, chronic disease epidemiology, disease prevention trials, and evaluation of screening tests.
6. Interpret the results of an epidemiologic study, including the relation to findings from other epidemiologic studies, potential biologic and/or social mechanisms, the limitations of the study, and any public health implications.

Certificate in Occupational Health

The 15 credit hours graduate Certificate in Occupational Health provides education and training focused on scientific, technical, regulatory, and administrative principles and practices for preventing and controlling worker and community exposures to physical (e.g., noise, radiation), chemical (e.g., toxic), and biological (e.g., infectious, allergenic, intoxicating) agents and ergonomic factors that can cause human illness. The profession focuses on prevention of exposure or occurrence and mitigation of factors and agents that contribute to illness and injury to workers and other members of the community. Occupational health professionals also have the education and training applicable to preparedness for, and response to natural disaster and intentional terrorist events. NOCPH MPH students may take this certificate concurrently while earning their MPH, except for ENVH majors.

Student Learning Objectives

Student learning objectives for the Certificate in Occupational Health:

- Identify agents, factors, and stressors generated by and/or associated with defined sources, unit operations, and/or processes
- Describe qualitative and quantitative aspects of generation of agents, factors, and stressors
- Describe physiological and/or toxicological interactions of physical, chemical, biological, and ergonomic agents, factors, and/or stressors with the human body
- Recommend and evaluate engineering, administrative, and personal protective equipment controls and/or other interventions to reduce and eliminate hazards
- Demonstrate an understanding of applicable business and managerial practices

- Interpret and apply applicable occupational and environmental regulations

Certificate in Occupational Health students take the following courses.

Code	Title	Hours
PUBH 5020	Occupational Health	3
PUBH 5310	Chemical Agents	3
PUBH 5410	Hazard Control	3
PUBH 5620	Physical Agents	3
Select one of the following:		3
PUBH 5060	Occupational Safety	
PUBH 5160	Environmental Health	
PUBH 5260	Haz Mat and Emerg Response	
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	
PUBH 6010	Public Health Epidemiology	
Total Hours		15

1. Identify agents, factors, and stressors generated by and/or associated with defined sources, unit operations, and/or processes.
2. Describe qualitative and quantitative aspects of generation of agents, factors, and stressors.
3. Describe physiological and/or toxicological interactions of physical, chemical, biological, and ergonomic agents, factors, and/or stressors with the human body.
4. Recommend and evaluate engineering, administrative, and personal protective equipment controls and/or other interventions to reduce or eliminate hazards.
5. Demonstrate an understanding of applicable business and managerial practices.
6. Interpret and apply applicable occupational and environmental regulations.

Certificate in Public Health and Emergency Response

The 12 credit hours graduate Certificate in Public Health and Emergency Response focuses on the characteristics and human health impacts of biological, chemical, and radiological agents; personal protective equipment and decontamination; site monitoring instrumentation and methods; epidemiological investigation and surveillance; and, applicable regulatory standards and recommended professional guidelines for incident recognition, response, and control. NOCPH MPH students may not take this certificate concurrently while earning the MPH.

Student Learning Objectives

Student learning objectives for the Certificate in Public Health and Emergency Response:

- Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems
- Objectively and subjectively assess chemical, biological, and physical agents classified as hazardous to humans health (including terrorism agents)

- Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents
- Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation
- Collect and evaluate applicable information to conduct disaster preparation/planning

Certificate in Public Health and Emergency Response students take the following courses.

Code	Title	Hours
PUBH 5260	Haz Mat and Emerg Response	3
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010	Public Health Epidemiology	3
Select one of the following:		3
PUBH 5310	Chemical Agents	
PUBH 5520	Biological Agents	
PUBH 5700	Risk Assessment	
PUBH 6030	Advanced Epidemiology	
PUBH 6120	Epidemiology Infectious Diseases	
Total Hours		12

1. Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems.
2. Objectively and subjectively assess chemical, biological, and physical agents classified as hazardous to human health.
3. Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents.
4. Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation.
5. Collect and evaluate applicable information to conduct disaster preparation/planning.

Master of Public Health: Environmental and Occupational Health

The school of population health offers a variety of degree options and graduate courses. In health, a master of public health is offered with five majors.

MPH Program

The MPH degree program is fully accredited by the Council on Education for Public Health (CEPH) and requires four semesters to complete as a full time student. Part time students take approximately eight semesters to complete the program.

The core competencies for the Master of Public Health are:

Evidence-based Approaches to Public Health

1. Apply epidemiological methods to the breadth of settings and situations in public health practice
2. Select quantitative and qualitative data collection methods appropriate for a given public health context
3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate
4. Interpret results of data analysis for public health research, policy or practice

Public Health & Health Care Systems

1. Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings
2. Discuss the means by which structural bias, social inequities and racism undermine health care and create challenges to achieving health equity at organizational, community, and societal level

Planning & Management to Promote Health

1. Assess population needs, assets and capacities that affect communities' health
2. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs
3. Design a population-based policy, program, project, or intervention
4. Explain basic principles and tools of budget and resource management
5. Select methods to evaluate public health programs

Policy in Public Health

1. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence
2. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes
3. Advocate for political, social or economic policies and programs that will improve health in diverse populations
4. Evaluate policies for their impact on public health and health equity

Leadership

1. Apply principles of leadership, governance and management, which include creating a vision, empowering others, fostering collaboration and guiding decision making
2. Apply negotiation and mediation skills to address organizational or community challenges

Communication

1. Select communication strategies for different audiences and sectors
2. Communicate audience-appropriate public health content, both in writing and through oral presentation
3. Describe the importance of cultural competence in communicating public health content

Interprofessional Practice

1. Perform effectively on interprofessional teams

Systems Thinking

1. Apply systems thinking tools to a public health issue

Environmental and Occupational Health (ENVH): Specialists in this field focus on a combination of scientific, technical, and regulatory aspects of public health related to the assessment and control of hazardous physical, chemical, and biological agents in non-occupational and occupational environments as well as in emergencies. The major focus is recognition, evaluation, and control of human exposures to contaminated air, water, soil, and food. Emergency and disaster planning, preparation, and recognition are also emphasized.

Environmental and Occupational Health (ENVH) major competencies:

1. Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems
2. Objectively and subjectively assess chemical, biological, and physical agents classified as hazardous to human health
3. Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents
4. Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation
5. Collect and evaluate applicable information to perform a risk assessment
6. Make administrative decisions based on recommended measures to reduce or eliminate environmental and occupational health hazards
7. Develop and present administrative, scientific, technical, and/or regulatory reports

Applicants are required to complete an online application, as well as submit official transcripts from all institutions where they have taken courses (transcripts from institutions outside the US must be translated, evaluated, and reported on the 4.00 scale), 3 letters of recommendation (2 of which must be from persons with a graduate degree), a resume, and a letter of statement of purpose.

The GRE is not required for graduates from an accredited US institution with a GPA ≥ 3.00 . The GRE may be required by the MPH Admissions Committee for applicants with a GPA < 3.00 . The GRE is required for all students graduating from institutions outside the US and any student with a GPA < 2.7 .

Regular admission to the MPH program requires:

- An earned bachelor's degree from an accredited college or university
- GPA ≥ 3.00 (on a 4.00 scale)
- All students must have foundation courses in college-level mathematics, and social sciences
 - Environmental and Occupational Health and Safety majors must also complete college-level courses in organic/inorganic chemistry, organic chemistry and biological science (biology, biochemistry, anatomy, physiology, etc.)

- Public Health Epidemiology majors also must complete college level courses in biological sciences (e.g., biology, biochemistry, anatomy, physiology, etc.)
- TOEFL ≥ 550 (paper-based), ≥ 213 (computer-based), or >79 (IBT) for applicants who graduated from institutions outside the US.

Provisional admission to the MPH program may be offered with one or more of the following deficiencies:

- Missing foundation course(s)
- GPA < 3.00 , but ≥ 2.7

Provisional students take 4 courses (12 credit hours) in the MPH program. Preferably, all 4 courses will be core courses, but 1 major specific course is also allowed. No electives may be taken. Students must attain a B or better in each of these courses to be admitted as a regular status student. Any student not attaining a B or better in these 4 courses could be dismissed from the program.

All MPH students are required to take the following 8 (24 credit hours) core courses.

Code	Title	Hours
PUBH 5160	Environmental Health	3
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010	Public Health Epidemiology	3
PUBH 6020	Management and Leadership in Public Health	3
PUBH 6080	Social Determinants of Health	3
PUBH 6090	Issues in Public Health	3
PUBH 6950	Integrative Learning Experience	2
One of the Following Must Be Completed:		4
PUBH 6960	Internship in Public Health	
PUBH 6970	Project in Public Health	
Total Hours		24

All ENVH majors are required to take the following 5 (15 credit hours) major specific courses. In addition, all ENVH majors are required to take 2 (6 credit hours) advised electives.

Code	Title	Hours
PUBH 5020	Occupational Health	3
PUBH 5060	Occupational Safety	3
PUBH 5310	Chemical Agents	3
PUBH 5520	Biological Agents	3
PUBH 5620	Physical Agents	3
Total Hours		15

FOUNDATIONAL COMPETENCIES: 1. Apply epidemiological methods to the breadth of settings and situations in public health practice; 2. Select quantitative and qualitative data collection methods appropriate for a given public health context; 3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate; 4. Interpret results of data analysis for public health research, policy or practice; 5. Compare the organization, structure, and function of health care, public health, and regulatory systems across national and international settings; 6. Discuss the means by which

structural bias, social inequities, and racism undermine health and create challenges to achieving health equity at organizational, community, and societal levels; 7. Assess population needs, assets, and capacities that affect communities' health; 8. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs; 9. Design a population-based policy, program, project, or intervention; 10. Explain basic principles and tools of budget and resource management; 11. Select methods to evaluate public health programs; 12. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 14. Advocate for political, social, or economic policies and programs that will improve health in diverse populations; 15. Evaluate policies for their impact on public health and health equity; 16. Apply principles of leadership, governance, and management, which includes creating a vision, empowering others, fostering collaboration, and guiding decision making; 17. Apply negotiation and mediation skills to address organizational or community challenges; 18. Select communication strategies for different audiences and sectors; 19. Communicate audience-appropriate public health content, both in writing and through oral presentation; 20. Describe the importance of cultural competence in communicating public health content; 21. Perform effectively on interprofessional teams; 22. Apply systems thinking to a public health issue.

ENVIRONMENTAL AND OCCUPATIONAL HEALTH COMPETENCIES: 1.

Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems; 2. Objectively and subjectively assess chemical, biological, and physical agents classified as hazardous to human health; 3. Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents; 4. Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation; 5. Collect and evaluate applicable information to perform a risk assessment; 6. Make administrative decisions based on recommended measures to reduce or eliminate environmental and occupational health hazards; 7. Develop and present administrative, scientific, technical, and/or regulatory reports.

HEALTH PROMOTION AND EDUCATION COMPETENCIES: 1. Develop an intervention and survey based on a health theory; 2. Demonstrate skills to plan and implement appropriate health programs; 3. Explain the contribution of logic models in program development, implementation, and evaluation; 4. Identify evidence-based practices to address a variety of public health problems; 5. Demonstrate skills to present effective health programs using a variety of techniques and appropriate teaching strategies; 6. Develop strategies to organize community members to advocate for change that impacts public health; 7. Differentiate the purposes of formative, process, and outcome evaluation; 8. Apply program evaluation knowledge and skill using established models.

PUBLIC HEALTH EPIDEMIOLOGY COMPETENCIES: 1. Differentiate the major epidemiologic research study designs based on their strengths and limitations; 2. Distinguish between the major sources of bias in epidemiologic research (confounding, selection bias, and measurement error) and select the appropriate method to evaluate and reduce bias; 3. Apply criteria to support whether or not an association is causal; 4. Formulate appropriate public health recommendations using evidence-

based practice based on a synthesis of findings across studies found in the scientific literature; 5. Design an epidemiologic study to address a question of interest; 6. Identify and apply molecular/genetic principles and technologies in public health practice; 7. Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic investigation; 8. Identify, analyze, and interpret data arising from local, national, and international research and surveillance databases.

PUBLIC HEALTH POLICY AND LAW COMPETENCIES: 1. Demonstrate how legal rules from cases, statutes, and regulations apply to specific factual situations; 2. Interpret when legal authority can intervene in public health based on powers and limitations; 3. Select appropriate kinds of legal interventions to address specific public health issues and evaluate the merits of the interventions; 4. Evaluate and weigh the relative merits of various local, state, and federal legal interventions for public health; 5. Interpret key policy concerns and ethical considerations shaping public health law and distinguish the roles of public health professionals and lawyers in exercising these responsibilities; 6. Influence health policy and program decision-making using scientific knowledge, analysis, communication, and consensus building; 7. Develop policies and plans that support individual and community health efforts.

GENERALIST COMPETENCIES: 1. Assess risk factors and evidence for establishing morbidity and mortality problems; 2. Develop a health promotion program; 3. Apply advanced statistical techniques for continuous data; 4. Select the appropriate methods to communicate and disseminate evaluation findings; 5. Apply the appropriate health and safety programs that are available or commonly used in the workplace.

Master of Public Health: Generalist

The school of population health offers a variety of degree options and graduate courses. In health, a master of public health is offered with five majors.

MPH Program

The MPH degree program is fully accredited by the Council on Education for Public Health (CEPH) and requires four semesters to complete as a full time student. Part time students take approximately eight semesters to complete the program.

The core competencies for the Master of Public Health are:

Evidence-based Approaches to Public Health

1. Apply epidemiological methods to the breadth of settings and situations in public health practice
2. Select quantitative and qualitative data collection methods appropriate for a given public health context
3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate
4. Interpret results of data analysis for public health research, policy or practice

Public Health & Health Care Systems

1. Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings

2. Discuss the means by which structural bias, social inequities and racism undermine health care and create challenges to achieving health equity at organizational, community, and societal level

Planning & Management to Promote Health

1. Assess population needs, assets and capacities that affect communities' health
2. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs
3. Design a population-based policy, program, project, or intervention
4. Explain basic principles and tools of budget and resource management
5. Select methods to evaluate public health programs

Policy in Public Health

1. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence
2. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes
3. Advocate for political, social or economic policies and programs that will improve health in diverse populations
4. Evaluate policies for their impact on public health and health equity

Leadership

1. Apply principles of leadership, governance and management, which include creating a vision, empowering others, fostering collaboration and guiding decision making
2. Apply negotiation and mediation skills to address organizational or community challenges

Communication

1. Select communication strategies for different audiences and sectors
2. Communicate audience-appropriate public health content, both in writing and through oral presentation
3. Describe the importance of cultural competence in communicating public health content

Interprofessional Practice

1. Perform effectively on interprofessional teams

Systems Thinking

1. Apply systems thinking tools to a public health issue

The generalist major offers a general overview of public health and factors affecting communication, data, policy, and general health and safety of populations.

Generalist (GENL) major competencies:

1. Assess risk factors and evidence for establishing morbidity and mortality problems
2. Develop a health promotion program
3. Apply advanced statistical techniques for continuous data

4. Select the appropriate methods to communicate and disseminate evaluation findings
5. Apply the appropriate health and safety programs that are available or commonly used in the workplace

Applicants are required to complete an online application, as well as submit official transcripts from all institutions where they have taken courses (transcripts from institutions outside the US must be translated, evaluated, and reported on the 4.00 scale), 3 letters of recommendation (2 of which must be from persons with a graduate degree), a resume, and a letter of statement of purpose.

The GRE is not required for graduates from an accredited US institution with a GPA ≥ 3.00 . The GRE may be required by the MPH Admissions Committee for applicants with a GPA < 3.00 . The GRE is required for all students graduating from institutions outside the US and any student with a GPA < 2.7 .

Regular admission to the MPH program requires:

- An earned bachelor's degree from an accredited college or university
- GPA ≥ 3.00 (on a 4.00 scale)
- All students must have foundation courses in college-level mathematics, and social sciences
 - Environmental and Occupational Health and Safety majors must also complete college-level courses in organic/inorganic chemistry, organic chemistry and biological science (biology, biochemistry, anatomy, physiology, etc.)
 - Public Health Epidemiology majors also must complete college level courses in biological sciences (e.g., biology, biochemistry, anatomy, physiology, etc.)
- TOEFL ≥ 550 (paper-based), ≥ 213 (computer-based), or >79 (IBT) for applicants who graduated from institutions outside the US.

Provisional admission to the MPH program may be offered with one or more of the following deficiencies:

- Missing foundation course(s)
- GPA < 3.00 , but ≥ 2.7

Provisional students take 4 courses (12 credit hours) in the MPH program. Preferably, all 4 courses will be core courses, but 1 major specific course is also allowed. No electives may be taken. Students must attain a B or better in each of these courses to be admitted as a regular status student. Any student not attaining a B or better in these 4 courses could be dismissed from the program.

All MPH students are required to take the following 8 (24 credit hours) core courses.

Code	Title	Hours
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010	Public Health Epidemiology	3
PUBH 6020	Management and Leadership in Public Health	3
PUBH 6050	Concepts and Issues in Environmental Health (Concepts and Issues in Environmental Health)	3
PUBH 6080	Social Determinants of Health	3
PUBH 6090	Issues in Public Health	3

PUBH 6950	Integrative Learning Experience	2
One of the Following is Required:		4
PUBH 6960	Internship in Public Health	
PUBH 6970	Project in Public Health	
Total Hours		24

All GENL majors are required to take the following 5 (15 credit hours) major specific courses. In addition, all GENL majors are required to take 2 (6 total credit hours) advised electives.

Code	Title	Hours
PUBH 5020	Occupational Health	3
PUBH 6030	Advanced Epidemiology	3
PUBH 6060	Advanced Biostatistics	3
PUBH 6460	Health Promotion Programs	3
PUBH 6800	Evaluation of Health Programs	3
Total Hours		15

FOUNDATIONAL COMPETENCIES: 1. Apply epidemiological methods to the breadth of settings and situations in public health practice; 2. Select quantitative and qualitative data collection methods appropriate for a given public health context; 3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate; 4. Interpret results of data analysis for public health research, policy or practice; 5. Compare the organization, structure, and function of health care, public health, and regulatory systems across national and international settings; 6. Discuss the means by which structural bias, social inequities, and racism undermine health and create challenges to achieving health equity at organizational, community, and societal levels; 7. Assess population needs, assets, and capacities that affect communities' health; 8. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs; 9. Design a population-based policy, program, project, or intervention; 10. Explain basic principles and tools of budget and resource management; 11. Select methods to evaluate public health programs; 12. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 14. Advocate for political, social, or economic policies and programs that will improve health in diverse populations; 15. Evaluate policies for their impact on public health and health equity; 16. Apply principles of leadership, governance, and management, which includes creating a vision, empowering others, fostering collaboration, and guiding decision making; 17. Apply negotiation and mediation skills to address organizational or community challenges; 18. Select communication strategies for different audiences and sectors; 19. Communicate audience-appropriate public health content, both in writing and through oral presentation; 20. Describe the importance of cultural competence in communicating public health content; 21. Perform effectively on interprofessional teams; 22. Apply systems thinking to a public health issue.

ENVIRONMENTAL AND OCCUPATIONAL HEALTH COMPETENCIES: 1. Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems; 2. Objectively and subjectively

assess chemical, biological, and physical agents classified as hazardous to human health; 3. Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents; 4. Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation; 5. Collect and evaluate applicable information to perform a risk assessment; 6. Make administrative decisions based on recommended measures to reduce or eliminate environmental and occupational health hazards; 7. Develop and present administrative, scientific, technical, and/or regulatory reports.

HEALTH PROMOTION AND EDUCATION COMPETENCIES: 1. Develop an intervention and survey based on a health theory; 2. Demonstrate skills to plan and implement appropriate health programs; 3. Explain the contribution of logic models in program development, implementation, and evaluation; 4. Identify evidence-based practices to address a variety of public health problems; 5. Demonstrate skills to present effective health programs using a variety of techniques and appropriate teaching strategies; 6. Develop strategies to organize community members to advocate for change that impacts public health; 7. Differentiate the purposes of formative, process, and outcome evaluation; 8. Apply program evaluation knowledge and skill using established models.

PUBLIC HEALTH EPIDEMIOLOGY COMPETENCIES: 1. Differentiate the major epidemiologic research study designs based on their strengths and limitations; 2. Distinguish between the major sources of bias in epidemiologic research (confounding, selection bias, and measurement error) and select the appropriate method to evaluate and reduce bias; 3. Apply criteria to support whether or not an association is causal; 4. Formulate appropriate public health recommendations using evidence-based practice based on a synthesis of findings across studies found in the scientific literature; 5. Design an epidemiologic study to address a question of interest; 6. Identify and apply molecular/genetic principles and technologies in public health practice; 7. Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic investigation; 8. Identify, analyze, and interpret data arising from local, national, and international research and surveillance databases.

PUBLIC HEALTH POLICY AND LAW COMPETENCIES: 1. Demonstrate how legal rules from cases, statutes, and regulations apply to specific factual situations; 2. Interpret when legal authority can intervene in public health based on powers and limitations; 3. Select appropriate kinds of legal interventions to address specific public health issues and evaluate the merits of the interventions; 4. Evaluate and weigh the relative merits of various local, state, and federal legal interventions for public health; 5. Interpret key policy concerns and ethical considerations shaping public health law and distinguish the roles of public health professionals and lawyers in exercising these responsibilities; 6. Influence health policy and program decision-making using scientific knowledge, analysis, communication, and consensus building; 7. Develop policies and plans that support individual and community health efforts.

GENERALIST COMPETENCIES: 1. Assess risk factors and evidence for establishing morbidity and mortality problems; 2. Develop a health promotion program; 3. Apply advanced statistical techniques for continuous data; 4. Select the appropriate methods to communicate and disseminate evaluation findings; 5. Apply the appropriate health and safety programs that are available or commonly used in the workplace.

Master of Public Health: Health Promotion and Education

The school of population health offers a variety of degree options and graduate courses. In health, a master of public health is offered with five majors.

MPH Program

The MPH degree program is fully accredited by the Council on Education for Public Health (CEPH) and requires four semesters to complete as a full time student. Part time students take approximately eight semesters to complete the program.

The core competencies for the Master of Public Health are:

Evidence-based Approaches to Public Health

1. Apply epidemiological methods to the breadth of settings and situations in public health practice
2. Select quantitative and qualitative data collection methods appropriate for a given public health context
3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate
4. Interpret results of data analysis for public health research, policy or practice

Public Health & Health Care Systems

1. Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings
2. Discuss the means by which structural bias, social inequities and racism undermine health care and create challenges to achieving health equity at organizational, community, and societal level

Planning & Management to Promote Health

1. Assess population needs, assets and capacities that affect communities' health
2. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs
3. Design a population-based policy, program, project, or intervention
4. Explain basic principles and tools of budget and resource management
5. Select methods to evaluate public health programs

Policy in Public Health

1. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence
2. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes
3. Advocate for political, social or economic policies and programs that will improve health in diverse populations
4. Evaluate policies for their impact on public health and health equity

Leadership

1. Apply principles of leadership, governance and management, which include creating a vision, empowering others, fostering collaboration and guiding decision making
2. Apply negotiation and mediation skills to address organizational or community challenges

Communication

1. Select communication strategies for different audiences and sectors
2. Communicate audience-appropriate public health content, both in writing and through oral presentation
3. Describe the importance of cultural competence in communicating public health content

Interprofessional Practice

1. Perform effectively on interprofessional teams

Systems Thinking

1. Apply systems thinking tools to a public health issue

The Health Promotion and Education (HPRO) major focuses on methods for planning, implementing and evaluating educational and behavioral changes as well as programs that enhance health. Graduates are prepared for positions that emphasize program planning, health promotion, health education, disease prevention and social action. Graduates work in business, voluntary, non-profit and governmental agencies at the local, county, state and federal levels.

Health Promotion and Education (HPRO) major competencies:

1. Develop an intervention and survey based on a health theory
2. Demonstrate skills to plan and implement appropriate health programs
3. Explain the contribution of logic models in program development, implementation, and evaluation
4. Identify evidence-based practices to address a variety of public health problems
5. Demonstrate skills to present effective health programs using a variety of techniques and appropriate teaching strategies
6. Develop strategies to organize community members to advocate for change that impacts public health
7. Differentiate the purpose of formative, process, and outcome evaluation
8. Apply program evaluation knowledge and skill using established models

Applicants are required to complete an online application, as well as submit official transcripts from all institutions where they have taken courses (transcripts from institutions outside the US must be translated, evaluated, and reported on the 4.00 scale), 3 letters of recommendation (2 of which must be from persons with a graduate degree), a resume, and a letter of statement of purpose.

The GRE is not required for graduates from an accredited US institution with a GPA ≥ 3.00 . The GRE may be required by the MPH Admissions Committee for applicants with a GPA < 3.00 . The GRE is required for all

students graduating from institutions outside the US and any student with a GPA < 2.7 .

Regular admission to the MPH program requires:

- An earned bachelor's degree from an accredited college or university
- GPA ≥ 3.00 (on a 4.00 scale)
- All students must have foundation courses in college-level mathematics, and social sciences
 - Environmental and Occupational Health and Safety majors must also complete college-level courses in organic/inorganic chemistry, organic chemistry and biological science (biology, biochemistry, anatomy, physiology, etc.)
 - Public Health Epidemiology majors also must complete college level courses in biological sciences (e.g., biology, biochemistry, anatomy, physiology, etc.)
- TOEFL ≥ 550 (paper-based), ≥ 213 (computer-based), or >79 (IBT) for applicants who graduated from institutions outside the US.

Provisional admission to the MPH program may be offered with one or more of the following deficiencies:

- Missing foundation course(s)
- GPA < 3.00 , but ≥ 2.7

Provisional students take 4 courses (12 credit hours) in the MPH program. Preferably, all 4 courses will be core courses, but 1 major specific course is also allowed. No electives may be taken. Students must attain a B or better in each of these courses to be admitted as a regular status student. Any student not attaining a B or better in these 4 courses could be dismissed from the program.

All MPH students are required to take the following 8 (24 credit hours) core courses.

Code	Title	Hours
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010	Public Health Epidemiology	3
PUBH 6020	Management and Leadership in Public Health	3
PUBH 6050	Concepts and Issues in Environmental Health	3
PUBH 6080	Social Determinants of Health	3
PUBH 6090	Issues in Public Health	3
PUBH 6950	Integrative Learning Experience	2
One of the Following Must Be Completed:		4
PUBH 6960	Internship in Public Health	
PUBH 6970	Project in Public Health	
Total Hours		24

All HPRO majors are required to take the following 5 (15 credit hours) major specific courses. In addition, all HPRO majors are required to take 2 (6 total credit hours) advised electives.

Code	Title	Hours
PUBH 6310	Public Health Assessment and Planning	3
PUBH 6320	Implementation of Public Health Programs	3
PUBH 6600	Health Behavior	3

PUBH 6630	Public Health Advocacy	3
PUBH 6800	Evaluation of Health Programs	3
Total Hours		15

FOUNDATIONAL COMPETENCIES: 1. Apply epidemiological methods to the breadth of settings and situations in public health practice; 2. Select quantitative and qualitative data collection methods appropriate for a given public health context; 3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate; 4. Interpret results of data analysis for public health research, policy or practice; 5. Compare the organization, structure, and function of health care, public health, and regulatory systems across national and international settings; 6. Discuss the means by which structural bias, social inequities, and racism undermine health and create challenges to achieving health equity at organizational, community, and societal levels; 7. Assess population needs, assets, and capacities that affect communities' health; 8. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs; 9. Design a population-based policy, program, project, or intervention; 10. Explain basic principles and tools of budget and resource management; 11. Select methods to evaluate public health programs; 12. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 14. Advocate for political, social, or economic policies and programs that will improve health in diverse populations; 15. Evaluate policies for their impact on public health and health equity; 16. Apply principles of leadership, governance, and management, which includes creating a vision, empowering others, fostering collaboration, and guiding decision making; 17. Apply negotiation and mediation skills to address organizational or community challenges; 18. Select communication strategies for different audiences and sectors; 19. Communicate audience-appropriate public health content, both in writing and through oral presentation; 20. Describe the importance of cultural competence in communicating public health content; 21. Perform effectively on interprofessional teams; 22. Apply systems thinking to a public health issue.

ENVIRONMENTAL AND OCCUPATIONAL HEALTH COMPETENCIES: 1. Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems; 2. Objectively and subjectively assess chemical, biological, and physical agents classified as hazardous to human health; 3. Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents; 4. Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation; 5. Collect and evaluate applicable information to perform a risk assessment; 6. Make administrative decisions based on recommended measures to reduce or eliminate environmental and occupational health hazards; 7. Develop and present administrative, scientific, technical, and/or regulatory reports.

HEALTH PROMOTION AND EDUCATION COMPETENCIES: 1. Develop an intervention and survey based on a health theory; 2. Demonstrate skills to plan and implement appropriate health programs; 3. Explain the contribution of logic models in program development, implementation, and evaluation; 4. Identify evidence-based practices to address a variety

of public health problems; 5. Demonstrate skills to present effective health programs using a variety of techniques and appropriate teaching strategies; 6. Develop strategies to organize community members to advocate for change that impacts public health; 7. Differentiate the purposes of formative, process, and outcome evaluation; 8. Apply program evaluation knowledge and skill using established models.

PUBLIC HEALTH EPIDEMIOLOGY COMPETENCIES: 1. Differentiate the major epidemiologic research study designs based on their strengths and limitations; 2. Distinguish between the major sources of bias in epidemiologic research (confounding, selection bias, and measurement error) and select the appropriate method to evaluate and reduce bias; 3. Apply criteria to support whether or not an association is causal; 4. Formulate appropriate public health recommendations using evidence-based practice based on a synthesis of findings across studies found in the scientific literature; 5. Design an epidemiologic study to address a question of interest; 6. Identify and apply molecular/genetic principles and technologies in public health practice; 7. Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic investigation; 8. Identify, analyze, and interpret data arising from local, national, and international research and surveillance databases.

PUBLIC HEALTH POLICY AND LAW COMPETENCIES: 1. Demonstrate how legal rules from cases, statutes, and regulations apply to specific factual situations; 2. Interpret when legal authority can intervene in public health based on powers and limitations; 3. Select appropriate kinds of legal interventions to address specific public health issues and evaluate the merits of the interventions; 4. Evaluate and weigh the relative merits of various local, state, and federal legal interventions for public health; 5. Interpret key policy concerns and ethical considerations shaping public health law and distinguish the roles of public health professionals and lawyers in exercising these responsibilities; 6. Influence health policy and program decision-making using scientific knowledge, analysis, communication, and consensus building; 7. Develop policies and plans that support individual and community health efforts.

GENERALIST COMPETENCIES: 1. Assess risk factors and evidence for establishing morbidity and mortality problems; 2. Develop a health promotion program; 3. Apply advanced statistical techniques for continuous data; 4. Select the appropriate methods to communicate and disseminate evaluation findings; 5. Apply the appropriate health and safety programs that are available or commonly used in the workplace.

Master of Public Health: Public Health Epidemiology

The school of population health offers a variety of degree options and graduate courses. In health, a master of public health is offered with five majors.

MPH Program

The MPH degree program is fully accredited by the Council on Education for Public Health (CEPH) and requires four semesters to complete as a full time student. Part time students take approximately eight semesters to complete the program.

The core competencies for the Master of Public Health are:

Evidence-based Approaches to Public Health

1. Apply epidemiological methods to the breadth of settings and situations in public health practice

2. Select quantitative and qualitative data collection methods appropriate for a given public health context
3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate
4. Interpret results of data analysis for public health research, policy or practice

Public Health & Health Care Systems

1. Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings
2. Discuss the means by which structural bias, social inequities and racism undermine health care and create challenges to achieving health equity at organizational, community, and societal level

Planning & Management to Promote Health

1. Assess population needs, assets and capacities that affect communities' health
2. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs
3. Design a population-based policy, program, project, or intervention
4. Explain basic principles and tools of budget and resource management
5. Select methods to evaluate public health programs

Policy in Public Health

1. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence
2. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes
3. Advocate for political, social or economic policies and programs that will improve health in diverse populations
4. Evaluate policies for their impact on public health and health equity

Leadership

1. Apply principles of leadership, governance and management, which include creating a vision, empowering others, fostering collaboration and guiding decision making
2. Apply negotiation and mediation skills to address organizational or community challenges

Communication

1. Select communication strategies for different audiences and sectors
2. Communicate audience-appropriate public health content, both in writing and through oral presentation
3. Describe the importance of cultural competence in communicating public health content

Interprofessional Practice

1. Perform effectively on interprofessional teams

Systems Thinking

1. Apply systems thinking tools to a public health issue

Epidemiology involves factors affecting disease and disability in populations. As a fundamental science of public health and preventive medicine, epidemiology traditionally has focused on causation through population studies for both infectious and chronic diseases. Epidemiologists quantify the distribution of diseases and establish determinants of health problems by describing and analyzing the biological, environmental, and behavioral factors affecting health, illness, and premature death. Epidemiologists use descriptive and analytic techniques to gather information on disease occurrence, extend basic knowledge about the physical, mental, and social processes affecting health, and develop effective disease control measures.

Public Health Epidemiology (PHEP) major competencies:

1. Differentiate the major epidemiologic research study designs based on their strengths and limitations
2. Distinguish between the major sources of bias in epidemiologic research (confounding, selection bias, and measurement error) and select the appropriate method to evaluate and reduce bias
3. Apply criteria to support whether or not an association is causal
4. Formulate appropriate public health recommendations using evidence-based practice based on a synthesis of findings across studies found in the scientific literature
5. Design an epidemiologic study to address a question of interest
6. Identify and apply molecular/genetic principles and technologies in public health practice
7. Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic investigation
8. Identify, analyze, and interpret data arising from local, national, or international research and surveillance databases

Applicants are required to complete an online application, as well as submit official transcripts from all institutions where they have taken courses (transcripts from institutions outside the US must be translated, evaluated, and reported on the 4.00 scale), 3 letters of recommendation (2 of which must be from persons with a graduate degree), a resume, and a letter of statement of purpose.

The GRE is not required for graduates from an accredited US institution with a GPA ≥ 3.00 . The GRE may be required by the MPH Admissions Committee for applicants with a GPA < 3.00 . The GRE is required for all students graduating from institutions outside the US and any student with a GPA < 2.7 .

Regular admission to the MPH program requires:

- An earned bachelor's degree from an accredited college or university
- GPA ≥ 3.00 (on a 4.00 scale)
- All students must have foundation courses in college-level mathematics, and social sciences
 - Environmental and Occupational Health and Safety majors must also complete college-level courses in organic/inorganic chemistry, organic chemistry and biological science (biology, biochemistry, anatomy, physiology, etc.)

- Public Health Epidemiology majors also must complete college level courses in biological sciences (e.g., biology, biochemistry, anatomy, physiology, etc.)
- TOEFL ≥ 550 (paper-based), ≥ 213 (computer-based), or >79 (IBT) for applicants who graduated from institutions outside the US.

Provisional admission to the MPH program may be offered with one or more of the following deficiencies:

- Missing foundation course(s)
- GPA < 3.00 , but ≥ 2.7

Provisional students take 4 courses (12 credit hours) in the MPH program. Preferably, all 4 courses will be core courses, but 1 major specific course is also allowed. No electives may be taken. Students must attain a B or better in each of these courses to be admitted as a regular status student. Any student not attaining a B or better in these 4 courses could be dismissed from the program.

All MPH students are required to take the following 8 (24 credit hours) core courses.

Code	Title	Hours
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010	Public Health Epidemiology	3
PUBH 6020	Management and Leadership in Public Health	3
PUBH 6050	Concepts and Issues in Environmental Health (Concepts and Issues in Environmental Health)	3
PUBH 6080	Social Determinants of Health	3
PUBH 6090	Issues in Public Health	3
PUBH 6950	Integrative Learning Experience	2
One of the Following Must Be Completed:		4
PUBH 6960	Internship in Public Health	
PUBH 6970	Project in Public Health	
Total Hours		24

All PHEP majors are required to take the following 5 (15 credit hours) major specific courses. In addition, all PHEP majors are required to take 2 (total of 6 credit hours) advised electives.

Code	Title	Hours
PUBH 6030	Advanced Epidemiology	3
PUBH 6060	Advanced Biostatistics	3
PUBH 6120	Epidemiology Infectious Diseases	3
PUBH 6550	Chronic Disease Epidemiology	3
PUBH 6070	Genetic Epidemiology	3
or PUBH 6130	Molecular Epidemiology	
Total Hours		15

FOUNDATIONAL COMPETENCIES: 1. Apply epidemiological methods to the breadth of settings and situations in public health practice; 2. Select quantitative and qualitative data collection methods appropriate for a given public health context; 3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate; 4. Interpret results of data analysis for public

health research, policy or practice; 5. Compare the organization, structure, and function of health care, public health, and regulatory systems across national and international settings; 6. Discuss the means by which structural bias, social inequities, and racism undermine health and create challenges to achieving health equity at organizational, community, and societal levels; 7. Assess population needs, assets, and capacities that affect communities' health; 8. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs; 9. Design a population-based policy, program, project, or intervention; 10. Explain basic principles and tools of budget and resource management; 11. Select methods to evaluate public health programs; 12. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes; 14. Advocate for political, social, or economic policies and programs that will improve health in diverse populations; 15. Evaluate policies for their impact on public health and health equity; 16. Apply principles of leadership, governance, and management, which includes creating a vision, empowering others, fostering collaboration, and guiding decision making; 17. Apply negotiation and mediation skills to address organizational or community challenges; 18. Select communication strategies for different audiences and sectors; 19. Communicate audience-appropriate public health content, both in writing and through oral presentation; 20. Describe the importance of cultural competence in communicating public health content; 21. Perform effectively on interprofessional teams; 22. Apply systems thinking to a public health issue.

ENVIRONMENTAL AND OCCUPATIONAL HEALTH COMPETENCIES: 1. Apply fundamental and advanced principles of statistics, epidemiology, environmental health science, and occupational health science to real-world public health issues and problems; 2. Objectively and subjectively assess chemical, biological, and physical agents classified as hazardous to human health; 3. Conduct fundamental sample collection of media contaminated with hazardous chemical, biological, and physical agents; 4. Critically analyze and interpret statistical, epidemiological, toxicological, and communicable disease information for prevention and remediation program development and implementation; 5. Collect and evaluate applicable information to perform a risk assessment; 6. Make administrative decisions based on recommended measures to reduce or eliminate environmental and occupational health hazards; 7. Develop and present administrative, scientific, technical, and/or regulatory reports. HEALTH PROMOTION AND EDUCATION COMPETENCIES: 1. Develop an intervention and survey based on a health theory; 2. Demonstrate skills to plan and implement appropriate health programs; 3. Explain the contribution of logic models in program development, implementation, and evaluation; 4. Identify evidence-based practices to address a variety of public health problems; 5. Demonstrate skills to present effective health programs using a variety of techniques and appropriate teaching strategies; 6. Develop strategies to organize community members to advocate for change that impacts public health; 7. Differentiate the purposes of formative, process, and outcome evaluation; 8. Apply program evaluation knowledge and skill using established models. PUBLIC HEALTH EPIDEMIOLOGY COMPETENCIES: 1. Differentiate the major epidemiologic research study designs based on their strengths and limitations; 2. Distinguish between the major sources of bias in epidemiologic research (confounding, selection bias, and measurement

error) and select the appropriate method to evaluate and reduce bias; 3. Apply criteria to support whether or not an association is causal; 4. Formulate appropriate public health recommendations using evidence-based practice based on a synthesis of findings across studies found in the scientific literature; 5. Design an epidemiologic study to address a question of interest; 6. Identify and apply molecular/genetic principles and technologies in public health practice; 7. Write a clear description of the rationale, methods, results, and interpretation of an epidemiologic investigation; 8. Identify, analyze, and interpret data arising from local, national, and international research and surveillance databases.

PUBLIC HEALTH POLICY AND LAW COMPETENCIES: 1. Demonstrate how legal rules from cases, statutes, and regulations apply to specific factual situations; 2. Interpret when legal authority can intervene in public health based on powers and limitations; 3. Select appropriate kinds of legal interventions to address specific public health issues and evaluate the merits of the interventions; 4. Evaluate and weigh the relative merits of various local, state, and federal legal interventions for public health; 5. Interpret key policy concerns and ethical considerations shaping public health law and distinguish the roles of public health professionals and lawyers in exercising these responsibilities; 6. Influence health policy and program decision-making using scientific knowledge, analysis, communication, and consensus building; 7. Develop policies and plans that support individual and community health efforts.

GENERALIST COMPETENCIES: 1. Assess risk factors and evidence for establishing morbidity and mortality problems; 2. Develop a health promotion program; 3. Apply advanced statistical techniques for continuous data; 4. Select the appropriate methods to communicate and disseminate evaluation findings; 5. Apply the appropriate health and safety programs that are available or commonly used in the workplace.

MS in Occupational Health

Program of Study for the Master of Science in Occupational Health: Industrial Hygiene Program

The Master of Science in Occupational Health (MSOH) degree program is available in Industrial Hygiene. Industrial hygiene professionals are involved in understanding and implementing scientific, technical, and regulatory aspects that focus on preventing and controlling workers' exposures to factors and agents that can cause them harm. The profession focuses on prevention of exposure or occurrence and mitigation of factors and agents that contribute to worker harm, as work-related illnesses and injuries.

The comprehensive and flexible curriculum of the Master of Science in Occupational Health (MSOH) degree – Industrial Hygiene (IH) program provides a solid foundation of information for students with limited or no background in industrial hygiene, while simultaneously offering students with professional experience the opportunity to expand the scope of their knowledge and skills. The program offers classes during evenings and weekends to facilitate graduate study for those engaged in full-time daily employment. The schedule also permits students without applicable practical experience to complete an internship.

The MSOH degree is fully accredited by the Accreditation Board for Engineering and Technology - Applied Science Accreditation Commission (ABET-ASAC) and requires four semesters to complete as a full-time

student. Part time students take approximately eight semesters to complete the program.

Student Learning Objectives

The MSOH degree-IH program student outcomes state that upon completion of the program, graduates should be able to:

- Identify agents, factors, and stressors generated by and/or associated with defined sources, unit operations, and/or processes
- Describe qualitative and quantitative aspects of generation of agents, factors, and stressors
- Understand physiological and/or toxicological interactions of physical, chemical, biological, and ergonomic agents, factors, and/or stressors with the human body
- Assess qualitative and quantitative aspects of exposure assessment, dose-response, and risk characterization based on applicable pathways and modes of entry
- Calculate, interpret, and apply statistical and epidemiological data
- Recommend and evaluate engineering, administrative, and personal protective equipment controls and/or other interventions to reduce or eliminate hazards
- Demonstrate the importance of appropriate ethical performance and practice
- Demonstrate an understanding of applicable business and managerial practices
- Interpret and apply applicable occupational and environmental regulations
- Participate in the development and implementation of applicable industrial-hygiene-related programs
- Generate, review, and interpret data, whether from original research or other published sources
- Prepare scientific and technical summaries and reports
- Understand fundamental aspects of safety and environmental health
- Understand the necessity of teamwork among management, industrial hygienists, safety specialists, environmental specialists, engineers, and clinicians (i.e. occupational health physicians and nurses)
- Attain recognized professional certification

Applicants are required to complete an online application, as well as submit official transcripts from all institutions where they have taken courses (transcripts from institutions from outside the US must be translated, evaluated, and reported on the 4.00 scale), 3 letters of recommendation (2 of which must be from persons with a graduate degree), a resume, and a letter of interest (statement of purpose).

The GRE is not required for graduates from an accredited US institution with a GPA ≥ 3.00 . The GRE may be required by the MPH Admissions Committee for applicants with a GPA < 3.00 . The GRE is required for all students graduating from institutions outside the US and for any student with a GPA ≤ 2.7 .

Regular admission to the MSOH program requires:

- An earned bachelor's degree from an accredited college or university
- GPA ≥ 3.00 (on a 4.00 scale)

- Foundation courses in college-level mathematics (preferably calculus), inorganic chemistry, organic chemistry, physics, biology, and English/writing
 - Work experience based on applicability and duration and applicable certifications such as CIH or CSP will also be considered
- TOEFL ≥ 550 (paper-based), ≥ 213 (computer-based), or >79 (iBT) for applicants who graduated from institutions outside the US and whose primary language is not English.

Provisional admission to the MSOH program may be offered with one or more of the following deficiencies:

- Missing foundation course(s)
- GPA < 3.00 , but ≥ 2.7

Provisional students take 4 courses (12 credits hours) in the MSOH program. No electives may be taken. Students must attain a B or better in each of these courses to be admitted as a regular status student. Any student not attaining a B or better in these 4 courses could be dismissed from the program.

The MSOH degree has a minimum of 40 credit hours for degree requirements. The curriculum incorporates the general areas of science, technology, management, and communication within the context of the core courses and thesis requirements for the MSOH degree.

All MSOH students take the following courses. For those students not requiring an internship, 1 advised elective is added.

Code	Title	Hours
PUBH 5020	Occupational Health	3
PUBH 5060	Occupational Safety	3
PUBH 5160	Environmental Health	3
PUBH 5260	Haz Mat and Emerg Response	3
PUBH 5310	Chemical Agents	3
PUBH 5410	Hazard Control	3
PUBH 5520	Biological Agents	3
PUBH 5620	Physical Agents	3
PUBH 5700	Risk Assessment	3
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010	Public Health Epidemiology	3
PUBH 6960	Internship in Public Health (3 credits required if <1 year experience, otherwise 3 credits advised electives)	3
PUBH 6970	Project in Public Health	4
or PUBH 6990	Thesis Research	
Total Hours		40

1. Identify agents, factors, and stressors generated by and/or associated with defined sources, unit operations, and/or processes
2. Describe qualitative and quantitative aspects of generation of agents, factors, and stressors
3. Understand physiological and/or toxicological interactions of physical, chemical, biological, and ergonomic agents, factors, and/or stressors with the human body.

4. Assess qualitative and quantitative aspects of exposure assessment, dose-response, and risk characterization based on applicable pathways and modes of entry
5. Calculate, interpret, and apply statistical and epidemiological data.
6. Recommend and evaluate engineering, administrative, and personal protective equipment controls and/or other interventions to reduce or eliminate hazards.
7. Demonstrate the importance of appropriate ethical performance and practice.
8. Demonstrate an understanding of applicable business and managerial practices.
9. Interpret and apply applicable occupational and environmental regulations
10. Participate in the development and implementation of applicable industrial hygiene-related programs.
11. Generate, review, and interpret data, whether from original research or other published sources.
12. Prepare scientific and technical summaries and reports.
13. Understand fundamental aspects of safety and environmental health.
14. Understand the necessity of teamwork among management, industrial hygienists, safety specialists, environmental specialists, engineers, and clinicians (i.e., occupational health physicians and nurses).
15. Attain recognized professional certification.

PhD in Health Education

The doctoral degree program in health focuses on advanced study and research in community/health education. The program prepares advanced students to contribute to the field of health through research. Although research and health courses are required, the program is individualized through selection of a cognate and elective courses to develop each student for leadership roles in universities, public service or the private health sector.

An opportunity exists for graduate students interested in pursuing a joint OTD/PhD degree in Occupational Therapy and Health Education. This joint degree program provides occupational therapy students with the clinical practice, advocacy, leadership, research, and scholarship skills needed to pursue careers in higher education. The occupational therapy program provides detailed description of the application process and curriculum. Opportunities also exist for students to take related graduate level courses across campus that lead to certification (e.g., biostatistics and epidemiology, gerontological practice, occupational health, public health and emergency response).

Admission to the program includes completion of a master's degree from an accredited institution. In addition to the College of Graduate Studies requirements, evaluation of applicants is based on the following criteria:

- completion of the GRE;
- a clearly defined statement of purpose that specifies the area of specialization within the degree program;
- a minimum of three letters of reference from faculty members with specific expertise in health who have worked with the applicant in an academic setting;

- evidence of research and/or writing ability through a master's thesis, project, paper, report, publication or paper presented to a professional society will be considered;
- international applicants must submit a TOEFL score of 550 or higher

Prospective students should contact the department for further information.

The program requires 12 credits of research core courses, 27 hours of specified health education courses, 12 hours from a related field to fulfill the cognate, 9 credits of approved electives based on the student's needs and interests, a portfolio, and a dissertation that contributes to the field of health education.

Code	Title	Hours
General Core Requirements		
HEAL 8880	Scientific Writing In Health	3
RESM 8120	Quantitative Methods II	3
RESM 8320	Research Design	3
Select one of the following:		3
RESM 7330	Qualitative Research I: Introduction And Basic Methods	
RESM 8130	Multivariate Statistics	
RESM 8160	Nonparametric Statistics

School of Social Justice

MEGAN STEWART, criminal justice program director

MEGAN PETRA, social work program director

The criminal justice and social work programs in the school of social justice offer master's degrees in each of their professions.

Criminal Justice Program

The criminal justice program offers graduate level courses leading to a master of arts in criminal justice as well as an optional certificate in juvenile justice. In addition, the criminal justice and legal specialties programs along with the College of Law offers a joint degree program leading to the master of arts in criminal justice and the juris doctor.

Social Work Program

The graduate program in social work offers the professional master of social work degree (MSW). The graduate program in social work is fully accredited by the Council on Social Work Education (CSWE).

Degrees Offered

- Master of Arts in Criminal Justice (p. 171)
- Masters of Social Work (p. 172)
- Joint Master of Arts in Criminal Justice/Juris Doctor (p. 171)

CRIM 6000 Advanced Theories: Criminal Justice

[3 credit hours]

This course critically examines contributions made by a variety of theorists to an understanding of crime/deviance and reactions to it.

Term Offered: Spring

CRIM 6200 Data Analysis In Criminal Justice

[3 credit hours]

This course provides students with a basic understanding of fundamental data analysis techniques utilized in criminal justice research.

Term Offered: Spring, Fall

CRIM 6300 Advanced Studies In Ethics And Criminal Justice

[3 credit hours]

This course is designed to provide students with the opportunity to integrate ethics in an understanding of criminal justice.

Term Offered: Spring, Summer, Fall

CRIM 6310 Juvenile Justice In The Metropolitan Community

[3 credit hours]

Criminal justice theories of delinquency are studied and compared with a paradigmatic foundation of current criminal justice processes.

Term Offered: Fall

CRIM 6320 Women, Crime And Criminal Justice

[3 credit hours]

This course explores women as offenders, victims and professionals in criminal justice.

Term Offered: Summer

CRIM 6400 Graduate Criminal Justice Research Methodology

[3 credit hours]

This course is designed to provide students with an understanding of criminal justice research.

Term Offered: Fall

CRIM 6590 Administration Of Criminal Justice

[3 credit hours]

A research-oriented course into the relationship of the major structures of criminal justice-police, prosecutor, courts and corrections with emphasis on the development of performance evaluation criteria.

Term Offered: Fall

CRIM 6620 Police And Society

[3 credit hours]

An examination of the role of the police in contemporary America, emphasizing the ambivalence of the self-image of the police and the social and political forces that compete to redefine the police function.

Term Offered: Spring, Summer, Fall

CRIM 6940 Criminal Justice Graduate Internship

[1-3 credit hours]

Field placement experience in an approved criminal justice agency to enhance the knowledge of the student.

Term Offered: Spring, Summer, Fall

CRIM 6950 Policy Projects In Criminal Justice

[3 credit hours]

Students will demonstrate their knowledge and skills gained in the program via the development of a comprehensive policy project. This analysis will focus on a contemporary issue in criminology or criminal justice, selected by the student and approved by professor. Students will be expected to develop a plan to assess the theoretical background and empirical research relevant to the issue, then research the problem and develop informed policy.

Prerequisites: CRIM 6000 with a minimum grade of D- and CRIM 6200 with a minimum grade of D- and CRIM 6400 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

CRIM 6960 Thesis

[1-6 credit hours]

This course involves research leading to a written thesis. Both the topic of the research and the final thesis must be defended and approved by the student's thesis committee.

CRIM 6980 Special Topics In Criminal Justice

[3 credit hours]

Content will vary as instructors present a single concentration on developments, problems and controversies in criminal justice.

Term Offered: Spring, Summer, Fall

CRIM 6990 Independent Study In Criminal Justice

[1-3 credit hours]

Directed study in criminal justice under the supervision of a criminal justice faculty member.

Term Offered: Spring, Summer, Fall

SOCW 5010 Social Work Research Methods And Analysis

[3 credit hours]

Course introduces students to qualitative and quantitative research methodologies, supporting statistical methods as utilized within the social work profession, data analysis technology and evidenced based social work practice concepts.

Term Offered: Summer, Fall

SOCW 5110 Social Work Practice I

[3 credit hours]

Provides an overview of social work practice theory and paradigms to base practice with individuals, families and groups emphasizing strengths and empowerment, values and ethics, and understanding self.

Term Offered: Spring, Fall

SOCW 5120 Social Work Practice II

[3 credit hours]

Provides an overview of social work theories guiding social work practice with groups and organizations, including group development, leadership, and models of organizations within a social and economic justice framework.

Prerequisites: SOCW 5110 with a minimum grade of C and SOCW 5210 with a minimum grade of C

Term Offered: Spring, Fall

SOCW 5130 Social Work Practice III

[3 credit hours]

Provides historical and contemporary look at the social work profession, its roots in community organizing, theories underpinning group work and community organizing. Strengths and empowerment models and social justice emphasized.

Prerequisites: SOCW 5110 with a minimum grade of C

Term Offered: Spring

SOCW 5210 Micro Social Work Perspectives In Human Behavior And The Social Environment

[3 credit hours]

Course is organized on a developmental model including social work perspectives and theory on: biopsychosocial aspects of human growth and development. Critical analysis encouraged through social justice conceptualizations.

Prerequisites: SOCW 5010 (may be taken concurrently) with a minimum grade of C and SOCW 5110 (may be taken concurrently) with a minimum grade of C

Term Offered: Fall

SOCW 5220 Macro Social Work Perspectives In Human Behavior And The Social Environment

[3 credit hours]

Course views the behavior of groups, organizations, and communities and their environmental contexts through a social work perspective. Attention focuses on issues of diversity, oppression, and social and economic justice.

Prerequisites: SOCW 5210 with a minimum grade of C

Term Offered: Spring

SOCW 5330 Policy Issues And Analysis In Social Work

[3 credit hours]

Course covers the history of social work profession and major institutions. Through current policy issues, methods of policy analysis are provided. Students are introduced to various methods of policy practice.

Prerequisites: SOCW 5010 (may be taken concurrently) with a minimum grade of C and SOCW 5110 (may be taken concurrently) with a minimum grade of C and SOCW 5210 (may be taken concurrently) with a minimum grade of C

Term Offered: Fall

SOCW 5900 FOUNDATION FIELD EXPERIENCE AND INTEGRATIVE SEMINAR I

[3 credit hours]

Students participate in a weekly seminar to integrate classroom learning to the field experience; and during the 3rd week begin a 208 hour field experience in an assigned agency. The course must be taken in consecutive semesters with SOCW 5910.

Corequisites: SOCW 5010, SOCW 5110, SOCW 5210, SOCW 5330

Term Offered: Fall

SOCW 5910 FOUNDATION FIELD EXPERIENCE AND INTEGRATIVE SEMINAR II

[3 credit hours]

Students continue in the field agency assigned in SOCW 5900; complete 240 field hours; and participate in the same weekly integrative field seminar section. SOCW 5900 and 5910 must be taken in consecutive semesters.

Prerequisites: SOCW 5900 with a minimum grade of B or SOCW 5120 with a minimum grade of B or SOCW 5220 with a minimum grade of B

Corequisites: SOCW 5130

Term Offered: Spring, Summer

SOCW 6030 Research Methods For Macro Social Work Practice

[3 credit hours]

Covers research methods specific to macro social work practice especially needs assessment and program evaluation. Content on research ethics, data management, and evidence based practice are addressed. **Prerequisites:** All 5000 level courses, advanced standing status or permission of instructor.

Term Offered: Fall

SOCW 6040 Research Methods For Micro Social Work Practice

[3 credit hours]

Course covers evaluation of client accomplishments through subject design methods. Content on research Ethics, data management, and evidence based practice are addressed. **Prerequisites:** all 5000-level courses, advanced standing status or by permission of instructor.

Term Offered: Fall

SOCW 6110 Advanced Generalist Practice I

[3 credit hours]

Advanced study of generalist social work practice and theory when working with individuals, families, and groups with an intergenerational focus on social and economic justice. All SOCW 5000-level courses, Advanced Standing Status, or Permission.

Term Offered: Summer, Fall

SOCW 6120 Advanced Generalist Practice II

[3 credit hours]

Course provides advanced content on social work practice in organizations including financial management, supervision and planning. Incorporates current theoretical perspectives and research on effective practice. **Prerequisite:** SOCW 6110 with a B or better, or permission of instructor.

Prerequisites: SOCW 6110 with a minimum grade of C

Term Offered: Spring

SOCW 6130 Advanced Generalist Practice III

[3 credit hours]

Course provides advanced content on social work practice within the community and with groups. Particular attention is paid to community change processes and social and economic justice. **Prerequisite:** SOCW 6110 and 6140 with a B or better.

Prerequisites: SOCW 6110 with a minimum grade of C

Term Offered: Spring

SOCW 6140 Advanced Social Work Assessment

[3 credit hours]

Course provides an overview of theories and methods of social work assessment with an emphasis on psychosocial assessment, macro assessments and various tools used by social workers for assessment purposes. **Prerequisites** all 5000 level courses, advanced standing status. or by permission.

Term Offered: Spring, Summer, Fall

SOCW 6200 Disparities, Diversity and Social Justice

[2 credit hours]

This graduate social work course provides students with an understanding of the impact of social inequalities when working within diverse systems. Using self-reflection and critical analysis, students will build cultural and linguistic competence. This course examines the mechanisms of privilege and oppression that impact the experiences of diverse populations, using theories of critical multiculturalism and intersectionality. This course will enhance students' knowledge, values, and attitudes about social work practice at micro, mezzo, and macro levels.

Term Offered: Spring, Summer, Fall

SOCW 6410 Social Work Micro Practice with Children and Families

[3 credit hours]

Course provides students with specialized knowledge about clinical practice with children and families. Included are major theoretical perspectives and practices currently accepted in the field, with an emphasis on strengths and empowerment.

Term Offered: Fall

SOCW 6430 Social Work Macro Practice involving Children and Families

[3 credit hours]

This is the second of two Child and Family specialization courses. It provides knowledge about current social work issues and practices in the mezzo and macro practice arenas, including social work practice related to laws, regulations, and policies concerning services for children and families.

Prerequisites: SOCW 6410 with a minimum grade of C

Term Offered: Spring

SOCW 6460 Social Work Journal Review Seminar I: Child And Family Services

[1 credit hour]

This course enables students to gain a critical understanding and appreciation of the social work literature and research underpinning social work practice in child and family services. Prerequisite: All 5000-level classes and SOCW 6140. Corequisites: SOCW 6110, 6410, or permission of instructor

Term Offered: Fall**SOCW 6470 Social Work Journal Review Seminar II - Child And Family Services**

[1 credit hour]

Course provides a more in depth examination and appreciation of social work literature and research underpinning social work practice with children and family services. Prerequisite: SOCW 6110, 6140, 6410 with a B or better. Corequisite: 6430.

Prerequisites: SOCW 6460 with a minimum grade of B**Term Offered:** Spring**SOCW 6510 Social Work Micro Practice in Mental Health**

[3 credit hours]

This course Provides MSW students with specialized knowledge about clinical practice in mental-behavioral health settings. The focus includes social works history of involvement with the primary prevention, diagnosis and treatment of mental and emotional disorders. Major emphasis is placed on social work practice at these levels with emphasis on social and economic justice.

Prerequisites: SOCW 6140 with a minimum grade of C**Term Offered:** Fall**SOCW 6530 Social Work Macro Practice in Mental Health**

[3 credit hours]

This is the second of two mental health specialization courses. It provides knowledge about current social work issues in the mezzo-macro practice arena, including social work practice related to laws regulations and policies concerning mental health services. Major emphasis is placed on social work practice at these levels with emphasis on social and economic justice.

Prerequisites: SOCW 6510 with a minimum grade of C**Term Offered:** Spring**SOCW 6560 Social Work Journal Review Seminar I - Mental Health Practice**

[1 credit hour]

Course enables students to gain a critical understanding and appreciation of the social work literature and research underpinning social work practice in mental health settings. Prerequisites: All 5000-level classes, advanced standing status, and SOCW 6140. Corequisites: SOCW 6110, 6510, or permission of instructor.

Term Offered: Fall**SOCW 6570 Social Work Journal Review Seminar II - Mental Health Practice**

[1 credit hour]

Course provides a more in depth examination and appreciation of social work literature and research underpinning social work practice in mental health settings. Prerequisites: SOCW 6110, 6140, 6510 with a B or better.

Prerequisites: SOCW 6560 with a minimum grade of B**Term Offered:** Spring**SOCW 6610 Social Work Practice In The Aging Community**

[3 credit hours]

Course provides an understanding of social worker's role in aging practice settings. Included are major theoretical perspectives currently accepted in the field with emphasis on strengths and empowerment.

SOCW 6630 Social Work Policy Issues In Aging

[3 credit hours]

Course provides knowledge about the current policy issues concerning social work services for the elderly. Major emphasis is placed on social and economic justice in the resolution of policy conflicts.

SOCW 6660 Social Work Journal Review Seminar I - Aging Services

[1 credit hour]

Course provides an understanding and appreciation of the social work literature and research underpinning social work practice with older adults.

SOCW 6670 Social Work Journal Review Summer II - Aging Services

[1 credit hour]

Course provides a more in depth examination and appreciation of the social work literature and research underpinning social work practice with older adults.

Prerequisites: SOCW 6660 with a minimum grade of D-**SOCW 6700 Perspectives on Child Maltreatment and Child Advocacy**

[3 credit hours]

This course provides a foundation of in-depth information on the child protection system in the U.S., child neglect, child physical abuse, child sexual abuse the investigation, and substantiation of maltreatment, and the role of advocacy in the process.

Term Offered: Fall**SOCW 6900 ADVANCED FIELD EXPERIENCE AND INTEGRATIVE SEMINAR I**

[5 credit hours]

Students are assigned to a field agency; complete 360 field hours; and attend a weekly seminar to integrate classroom learning to the field experience. SOCW 6900 and SOCW 6910 must be taken in consecutive semesters.

Prerequisites: SOCW 6460 with a minimum grade of B and SOCW 6410 (may be taken concurrently) with a minimum grade of B or SOCW 6510 (may be taken concurrently) with a minimum grade of B and SOCW 6560 with a minimum grade of B

Term Offered: Fall**SOCW 6910 ADVANCED FIELD EXPERIENCE AND INTEGRATIVE SEMINAR II**

[5 credit hours]

Students continue placement in the field agency assigned in SOCW 6900; complete 360 field hours and participate in same weekly integrative field seminar section. SOCW 6900 and 6910 must be taken in consecutive semesters.

Prerequisites: SOCW 6900 with a minimum grade of B and SOCW 6430 (may be taken concurrently) with a minimum grade of B or SOCW 6530 (may be taken concurrently) with a minimum grade of B

Term Offered: Spring

SOCW 6960 Thesis

[1-6 credit hours]

This course involves research leading to a written thesis. Thesis topic, defense, and final thesis must be approved by the student's thesis committee.

Term Offered: Fall

SOCW 6980 Special Topics In Social Work

[1-3 credit hours]

Content will vary as instructors present a single concentration on developments, problems, and controversies in social work.

Term Offered: Spring, Summer, Fall

SOCW 6990 Independent Study In Social Work

[1-3 credit hours]

Directed study in social work under the supervision of a social work faculty member.

Term Offered: Spring, Summer, Fall

SOCW 7610 Orientation to Interprofessional Teaming

[1 credit hour]

Students will become familiar with and develop a plan of study which will lead to successful completion of the requirements for the Graduate Certificate in Teaming in Early Childhood. Students will demonstrate an understanding of conflict resolution and working with others whose values and beliefs differ significantly from their own.

Prerequisites: SPED 7270 with a minimum grade of D-

SOCW 7620 Leadership and Advocacy in Interprofessional Teaming

[1 credit hour]

This seminar focuses on developing the skills to promote best practice in teaming. Students will explore the factors that support and threaten interprofessional collaboration. They will become aware of policies affecting teaming. Finally, students will engage in advocacy for teaming that will benefit individuals with disabilities.

Prerequisites: SOCW 7610 with a minimum grade of D-

Term Offered: Summer

SOCW 7630 Evidence-Based Practice and Innovation in Interprofessional Teaming

[1 credit hour]

The purpose of this seminar is to provide an opportunity for students to reflect on their practicum experiences as well as examine issues related to principles of ethical practice, professional identity and advocacy to promote the well-being of young children with special needs and their families. Students will also explore ways in which technology can promote effective teaming practices with other professionals as well as with family members.

Corequisites: SOCW 7640

Term Offered: Spring, Summer

SOCW 7640 Practicum in Interprofessional Teaming

[2 credit hours]

The purpose of this practicum is to provide students enrolled in the Graduate Certificate in Teaming and Early Childhood program with an opportunity to engage in interprofessional teaming in order to provide integrated services to young children with special needs and their families in an inclusive setting. During this practicum, students will complete a minimum of 60 clock hours directly working with team members, young children with special needs, and their families.

Prerequisites: SOCW 7620 with a minimum grade of B

Corequisites: SOCW 7630

Term Offered: Summer

Graduate Degrees/Certificates Offered

- Master of Studies in Law (MLW) (p. 247)

Sample Master's Areas of Concentration

Because of the diverse and rich curriculum and the varied scholarly and teaching backgrounds of the instructional staff at the College of Law, master of studies in law students may design specific areas of concentration to fit their particular interests and needs.

Sample areas of concentration include the following:

- business law,
- criminal justice law,
- education law,
- employment and labor law,
- environmental law,
- health law,
- intellectual property law,
- international law,

- real estate law,
- and trusts and estates.

Courses are offered during the day, in the evening, during summer sessions, and in a distance learning format, enabling part-time students to take full advantage of course offerings.

College Policies (Graduate Handbook)

3364-80-01 Law Student Handbook (http://www.utoledo.edu/law/studentlife/resources/handbook_policies/conduct.html)

3364-80-02 College of Law Academic Rules (<http://www.utoledo.edu/law/studentlife/resources/pdf/academic-rules.pdf>)

COLLEGE OF GRADUATE STUDIES: GRADUATE STUDENT HANDBOOK (<https://www.utoledo.edu/graduate/files/GraduateStudentHandbook20-21.pdf>)

- College Policies and Procedures (p. 571)
- Academic Regulations (p. 572)
- Other Policies and Information (p. 577)

Application

The applications for the master of studies in law are available at apply.utoledo.edu (<http://apply.utoledo.edu>).

Master of studies in law applicants need to:

- complete an application for graduate study;
- submit transcripts from all baccalaureate and post-baccalaureate programs attended; and
- submit a personal statement and resume.
- submit two letters of recommendation.
- Submission of LSAT, GRE, GMAT or MCAT scores is optional.
- Students educated outside the U.S. must also submit a TOEFL score.

Admission to the master of studies in law does not require undergraduate or graduate academic preparation in law. To qualify for admission, all applicants must meet the admission criteria set by the College of Graduate Studies at The University of Toledo.

The College of Law will make final recommendations for admission.

For more information, contact the the College of Law at law.admissions@utoledo.edu

Grading

Master of studies in law students take some classes side-by-side with J.D. students. However, non-J.D. graduate student grades are determined using the standards associated with other graduate programs at The University of Toledo.

The College of Law permits master of studies in law students to earn up to six credit hours of graduate-level courses in another College at the University of Toledo. To transfer the credits toward the master of studies in law degree, the student must earn a minimum grade of B (or

Satisfactory, if graded on a satisfactory/no credit basis) in the non-law graduate course.

Programs Offered

The College of Law offers a master of studies in law degree. The master of studies in law (MLW) is an entry-level graduate degree designed for those who seek a better understanding of the law, legal institutions and legal methods. The master of studies in law program can benefit those who work with lawyers, those whose work is governed by law and regulations, and those in professions where knowledge of the law is valuable. Although designed for professionals to enhance their careers, the master of studies in law program can help re-direct and launch career paths, too. The degree does not qualify the holder to sit for a bar examination or to practice law, nor will it be considered as a qualifier for entry into the J.D. program. Classes taken toward the master of studies in law degree will not be later applied toward a J.D. degree.

Requirements

The Master of Studies in Law program requires students to successfully complete 30 credit hours.

The program is offered on both a full-time and part-time schedule.

The Master of Studies in Law requires students to complete 4 required courses. The required courses are:

- Law and the Legal System (Fall Semester, 2-3 credit hours),
- Lawyering Skills I (Fall Semester, 2 credit hours),
- One additional first-year course (typically Fall Semester, 3-4 credit hours), and
- A seminar or independent research project (2-3 credit hours).

For full-time M.L.W. students, Law and the Legal System, Lawyering Skills I, and the additional first-year course must be taken in the fall semester of the first year.

For the additional first-year course, students can choose from courses such as Property, Torts, Civil Procedure, or Contracts.

College of Medicine & Life Sciences

2020-2021 Graduate Catalog

The University of Toledo College of Medicine and Life Sciences is dedicated to improving health in the communities and region we serve. We do this by educating excellent clinicians and scientists, by providing patient centered and high-quality care and by producing nationally recognized research in focused area.

The College of Medicine offers a world-class education with medical degrees, dual degree programs, graduate degrees and graduate certificates.

Our state-of-the-art Interprofessional Immersive Simulation Center (<http://www.utoledo.edu/centers/iisc/>) reflects today's reality of medicine. Students in differing specialties are learning the importance of interdisciplinary teamwork and collaboration. The three-story, 65,000-square-foot facility is the first in the nation to incorporate three integrated simulation centers: a progressive anatomy and surgical skills center, an advanced clinical simulation center, and a virtual immersive reality center.

Mission

The mission of The University of Toledo College of Medicine and Life Sciences is to improve health in the communities and region we serve. We do this by educating excellent clinicians and scientists, by providing patient centered and high-quality care and by producing nationally recognized research in focused area.

Vision

The University of Toledo College of Medicine and Life Sciences, with its partner ProMedica, is nationally recognized for education and focused research, and regionally distinguished for comprehensive clinical care.

- Oral Biology (p. 271)
- Orthopedic Sciences (p. 271)
- Physician Assistant Studies (p. 272)

Dual Degrees

- Doctor of Medicine and Doctor of Philosophy in Biomedical Sciences¹
Please go to this link for more information: <http://www.utoledo.edu/med/mdphd/pdf/2016%20UT%20MDPhD%20Handbook.pdf>
- Doctor of Medicine and Master of Science in Biomedical Sciences¹
- Doctor of Medicine and Master of Public Health¹

¹ Students must be accepted into the MD program first to be eligible for the dual degree (contact the College of Health Sciences for additional information about Master of Public Health requirements).

Additional Dual Degrees available in MD/JD (contact Medical School Admissions) and MD/MBA (p. 395) (Refer to the College of Business and Innovation (p. 391) catalog for additional information).

Graduate Certificates

- Certificate in Bioinformatics Proteomics/Genomics (p. 279)
- Certificate in Pathology for Post Second Year Medical Students (p. 280)

Accreditation

Graduate programs are accredited either by discipline-specific accrediting agencies or by the Higher Learning Commission of the North Central Association.

General Admission Standards

To be admitted to the Ph.D. or Master of Science in Biomedical Sciences (MSBS) Program, applicants must hold an earned baccalaureate (or equivalent) from an accredited college or university, and have a minimum overall GPA of 3.0 on a 4.0 scale. Typically, applicants will have an undergraduate major in Biology or a related discipline. In addition, Graduate Record Examination (GRE) scores are required in most programs of study (see individual degree programs for specific requirements). Minimum scores of the 50th percentile or above for both Verbal and Quantitative scores and 4.0 (Analytical Writing Test) are recommended to be competitive for most degree programs. For international applicants, an appropriate test of English language

proficiency is required. Scores from The Test of English as a Foreign Language (TOEFL) are accepted and a minimum iBT score of 80, or pBT score of 550 is required. Scores from The International English Language Testing Service (IELTS) are also accepted and a minimum score of 6.5 is required. A prior Masters degree is not required to enter the PhD program. At this time, all students accepted without provisions into the PhD in Biomedical Sciences program, and maintaining good academic standing, will receive a full tuition scholarship and a research stipend funded in whole or in part by the College of Graduate Studies and funding from a student's advisor through a grant(s). There are a limited number of tuition scholarships and stipends available for students in the Masters in Biomedical Sciences programs.

Ph.D in Biomedical Science - Cancer Biology

JianTing Zhang, Ph.D., chair

Kandace Williams, Ph.D., co-track director

Xiaohong Li, Ph.D., co-track director

The Cancer Biology track within the Biomedical Science Program at the University of Toledo fosters young scientists to become cutting-edge researchers who understand the molecular and genetic basis of cancer and the knowledge to develop improved therapies for human cancer. Students in the Cancer Biology track develop scientific thinking and laboratory skills to approach cancer research questions in ways that will best lead to success. Graduates of the Cancer Biology program move on to become successful scientists and leaders in academic, government, and industrial settings. CAB students may pursue the Doctor of Philosophy (PhD) degree or, after acceptance into the medical school, a combined MD/PhD degree. The Masters' degree in Cancer Biology is not currently offered.

The CAB program faculty research interests and areas of expertise are: 1) Control of tumor cell growth and death, 2) Signal transduction, 3) Mechanisms of cancer cell motility and chemotaxis, 4) Invasion and metastasis, 5) Molecular genetics of cancer risk, 6) Influence of tumor microenvironment on cancer progression and metastasis, 7) Protein trafficking, 8) Epigenetic regulation of oncogenes and tumor suppressor genes, 9) Chromatin remodeling and mechanisms of DNA repair, 10) Nitric oxide signaling alterations in cancer cells and 11) Adipogenesis and pre-adipocyte/adipocyte functions; Role of adipokines in cancer.

Cancer Biology PhD students enroll in a first-year core curriculum that is designed to provide a foundation of knowledge for cutting edge research. The first-year curriculum provides students with a comprehensive overview of molecular and cellular biology, systems pathophysiology, modern research methodology, and statistical analysis. In addition, students complete laboratory rotations during the first two semesters to identify a Cancer Biology major advisor and laboratory for their dissertation research project. PhD students complete three rotations and then may join a Cancer Biology laboratory in the spring semester of their first year. Doctoral students in good academic standing may be supported financially by a tuition scholarship and stipend during their academic training. This financial assistance does not require the student to be a Teaching Assistant for undergraduates, thus enabling the student to more fully concentrate on his/her graduate program.

Cancer Biology Track

All CAB students are expected to give a CAB student seminar every year, except when the student's graduate advisory committee approves that s/he may begin writing their dissertation, that student may be exempt from giving a seminar but is still required to attend all CAB seminars during this time. CAB students are also required to present posters in the annual COMLS Graduate Student Research Forums and oral presentations in the annual Larry Gentry Research Symposia beginning in their second year.

The PhD Qualifying Exam is taken in the Fall semester of the second year. Prior to completing the exam, students should carry out their dissertation research under the course Research in (CABP 6730) or in some cases, Independent Study in (CABP 6890). After passing the Qualifying Exam, students conduct their research under the course Dissertation Research (CABP 9990).

The minimum number of credits required for PhD is 90, with a minimum of 24 credits of didactic coursework (letter grade), and a minimum of 30 credits of dissertation research. The remaining credits are approved electives and research in the Cancer Biology track.

First-Year Core Curriculum SLOs

Upon completion of the first-year Core Curriculum, a BMSP Ph.D. student will be able to:

FY1. Identify and summarize the structure and function of cells, tissues, and organs

FY2. Describe the molecular, biochemical, and cellular mechanisms that maintain the normal function, development, and plasticity of cells, tissues, and organs

FY3. Summarize basic disease causes and processes that affect the structure and function of cells, tissues, and organs

FY4. Assess and critically analyze relevant basic science and clinical literature.

FY5. Design and conduct applicable biomedical sciences experiments.

FY6. Organize, interpret and summarize results of applicable biomedical sciences experiments.

FY7. Demonstrate ethical and responsible conduct in research and all other scholarly activities consistent with the University of Toledo, College of Medicine and Life Sciences.

K1 Knowledge of the normal structure and function of the body and its organ systems.

K2 Knowledge of molecular, biochemical, and cellular mechanisms important in maintaining the body's homeostasis.

K3 Knowledge of the molecular mechanisms of oncogenic transformation from initiation of cells through tumor metastasis.

K4 Knowledge of the pathophysiology of prominent types of cancer.

K5 Knowledge of basic bioinformatic and statistical methods used in the design and interpretation of research projects.

K6 Knowledge of the principles and legal responsibilities that govern responsible conduct of research, the ethical care and use of animals in research, and the accurate reporting of research results.

S1 The ability to perform laboratory procedures necessary for the completion of the student's dissertation (Ph.D.) or thesis (M.S.) research project(s).

S2 The ability to design and complete an independent research project.

S3 The ability to perform research productively as an individual or member of a research team.

S4 The ability to communicate research findings effectively, both orally and in writing.

S5 The ability to retrieve (from electronic databases and other sources), manage, and utilize biomedical information for solving problems that are relevant to the appropriate completion of a research project, and accurate reporting of the results.

P1 Ethical, responsible, and reliable behavior in all aspects of their professional lives.

P2 Honesty and integrity in all interactions with colleagues, research subjects, and others with whom students may interact in their professional lives.

P3 Professionalism in dress and grooming in compliance with health and safety rules applicable to research laboratories and to other institutional and public sites.

P4 Respect and adherence to all laws and regulations governing the biomedical research use of animals and patient materials, and for all patient privacy issues.

EDUCATIONAL PROGRAM OBJECTIVES FOR THE CANCER BIOLOGY TRACK

Ph.D in Biomedical Science - Molecular Medicine

The Molecular Medicine (MOME) track (formerly Cardiovascular and Metabolic Diseases) track in the Biomedical Sciences Graduate program at The University of Toledo College of Medicine & Life Sciences on the Health Science Campus nurtures students and provides them with the necessary tools to pursue an independent career in biomedical sciences. The program encompasses a unique interdisciplinary approach to train students to conduct research in the underlying molecular mechanisms of diseases that have profound impact on human health.

The program draws on faculty research strengths in signal transduction, genetics, molecular and cellular biology, gene microarrays, genomics, proteomics, gene knockout and transgenics, tissue culture, and protein and carbohydrate biochemistry. The MOME faculty members are not only drawn from its associated department, the Department of Physiology and Pharmacology, and from the Center for Diabetes and Endocrine Research (CeDER), but also from other departments including the Departments of Medicine and Orthopedic Surgery. Modern, well-equipped research facilities are available through the participating departments. The MOME program offers degrees of Doctor of Philosophy (PhD) and Masters in biomedical sciences (MSBS). The program also offers these graduate degrees in combination with the Medical Degree (MD) that is offered by the medical school. Students from the four programs, PhD, MSBS, MD/PhD and MD/MSBS, follow a well-defined program that includes core courses, journal clubs, seminars, laboratory rotations, independent research, and electives in the area of interest. Students select faculty advisors and begin their independent dissertation research following the laboratory rotations in the biomedical science core curriculum. The curriculum is designed to enable students, guided by their advisors, to develop the expertise that prepares them for a successful career in research and education.

To be admitted to the Ph.D. or Master of Science in Biomedical Sciences (MSBS) Program, applicants must hold an earned baccalaureate (or equivalent) from an accredited college or university and have a minimum overall GPA of 3.0 on a 4.0 scale. Typically, applicants will have an undergraduate major in Biology or a related discipline. In addition, Graduate Record Examination (GRE) scores are required in most programs of study (see individual degree programs for specific requirements). Minimum scores at the 50th percentile or above for both Verbal and Quantitative scores and 4.0 (Analytical Writing Test) are recommended to be competitive for most degree programs. For international applicants, an appropriate test of English language proficiency is required. Scores from The Test of English as a Foreign Language (TOEFL) are accepted and a minimum iBT score of 80, or pBT score of 550 is required. Scores from The International English Language Testing Service (IELTS) are also accepted and a minimum score of 6.5 is required. A prior Masters degree is not required to enter the PhD program. At this time, all students accepted without provisions into the PhD in Biomedical Science Program, and maintaining good academic standing, will receive a full tuition scholarship and a research stipend funded in whole or in part by the College of Graduate Studies and funding from a student's advisor through a grant(s). There are also a limited number of tuition scholarships and stipends available for students in the Masters in Biomedical Sciences programs.

³ Required in fall and spring of 2nd and 3rd years

⁴ Required in spring of 2nd year

Curriculum to include advanced electives in Molecular Medicine or other areas to make up the required number of didactic credit hours. Students will also be expected to present a poster or oral presentation in the annual COMLS Graduate Research Forum in the spring of each year and the Pharmacology Research Colloquium. The Pharmacology Research Colloquium is held on a rotating basis at UTHSC, Michigan State University, the University of Michigan and Wayne State University. It is an annual event in which the students of "pharmacology" departments at the respective Medical Schools have participated in since 1973. These events provide students with excellent opportunities for developing skills in organizing, presenting and discussing their work.

EDUCATIONAL PROGRAM OBJECTIVES FOR THE MOLECULAR MEDICINE TRACK

Program Student Learning Outcomes

FY1. Identify and summarize the structure and function of cells, tissues, and organs

FY2. Describe the molecular, biochemical, and cellular mechanisms that maintain the normal function, development, and plasticity of cells, tissues, and organs

FY3. Summarize basic disease causes and processes that affect the structure and function of cells, tissues, and organs

FY4. Assess and critically analyze relevant basic science and clinical literature.

FY5. Design and conduct applicable biomedical sciences experiments
FY6. Organize, interpret and summarize results of applicable biomedical sciences experiments.

FY7. Demonstrate ethical and responsible conduct in research and all other scholarly activities consistent with the University of Toledo, Health Science Campus, Standards of Conduct

K1 Knowledge of normal structure and function of the body and its major organ systems, with emphasis on the systems studied in MOME laboratories (e.g., cardiovascular, renal, digestive, endocrine and neuroendocrine systems)

K2 Knowledge of biochemical, molecular and cellular mechanisms that are important in maintaining cardiac and vascular function as well as metabolism and energy balance.

K3 Knowledge of the pathophysiology of prevalent cardiovascular and metabolic diseases, such as diabetes, obesity, fatty liver disease, hypertension, heart failure, and ischemic heart disease.

K4 Knowledge of the genetic and environmental basis of prevalent cardiovascular and metabolic diseases, such as hypertension, diabetes and obesity

K5 Knowledge of the epidemiology of prevalent cardiovascular and metabolic diseases, such as hypertension, diabetes and obesity

K6 Knowledge of basic principles of pharmacology (drug action) and pharmacology of specific drugs used in the treatment of prevalent cardiovascular and metabolic diseases

K7 Knowledge of statistical methods used in the appropriate design and interpretation of research projects

K8 Knowledge of the principles that govern ethical decision making in the design and conduct of research projects, including the publication and reporting of results.

K9 Knowledge of the various approaches used to develop research proposals and to raise funds to finance biomedical research projects.

S1 The ability to perform most basic laboratory procedures that are commonly used in the track laboratories.

S2 The ability to perform advanced/specialized procedures that are necessary for the completion of the student's thesis research project(s)

S3 The ability to design and complete independent research projects, including the introduction and optimization of unfamiliar techniques and the development of new research techniques

S4 The ability to perform productively as a member of a research team and train junior students in routine and basic laboratory techniques

S5 The ability to recognize hazardous procedures in the laboratory and follow appropriate precautions to protect the laboratory and institutional personnel

S6 The ability to communicate effectively, both verbally and in writing, with other students, post-doctoral fellows and faculty members, as well as with national and international collaborators

S7 The ability to present their results at local, national and international meetings as well as to be able to organize and chair local meetings

S8 The ability to retrieve biomedical information from electronic databases and other sources; to manage, and utilize the information, including by use of bioinformatics, in order to develop hypotheses to address scientific issues and the means to test them and to discuss the results in the context of reports in the literature.

S9 The ability to write and submit manuscripts and to communicate effectively with scientific journal editors and reviewers

S10 The ability to write a comprehensible research proposal and raise funds to support it from federal, state and other funding agencies

P1 Ethical, responsible, reliable, and dependable behavior in all aspects of their professional lives, and a commitment to the profession and society.

P2 Honesty and integrity in all interactions with faculty advisors, colleagues, faculty members, laboratory and institutional staff, research subjects, and others with whom students may interact in their professional lives

P3 Honesty and integrity in research conduct and reporting of results.

P4 Responsible behavior while using shared equipment and facilities.

P5 Responsible behavior and willingness to train and teach junior students to the best of their knowledge.

P6 Professionalism in dress and grooming in compliance with health and safety rules applicable to the research laboratories and other research sites.

P7 Compassionate treatment of patients as subjects of research, and respect for their privacy and dignity.

P8 Compassionate treatment of experimental animals, and respect for all laws and regulations applicable to the use of animals in medical research.

P9 Professionalism in following rules and regulations set by different committees of the institution, e.g. IACUC, IRB, Biohazard committee, Radiation Safety etc.

All PhD students must pass their Qualifying Exam by the end of the Fall semester (December) of the 2nd year. Before passing the Qualifying Exam, Ph.D. students should conduct research by registering for 'Research in MMI' (Satisfactory/Unsatisfactory; MMIM6890). After passing the Qualifying Exam, Ph.D. students should conduct their research by registering for Dissertation Research in MMI (MMIM9990).

The minimum number of credits required to obtain a Ph.D. is 90, with a minimum of 25 credits of didactic coursework (letter grade), and a minimum of 30 credits of dissertation research. The remainder of the credits are approved electives and research in the Medical Microbiology and Immunology track.

All Ph.D. students are required to register for Current Topics in MMIM (MMIM8030) during all fall and spring semesters while they are enrolled as a student. When a student's graduate advisory committee approves that he/she may begin writing their dissertation, that student then may be exempt from registering for Current Topics in MMIM.

Ph.D in Biomedical Science - Neuroscience & Neurological Disorders Track

Robert Mccullumsmith M.D., Ph.D., chair
David Giovannucci, Ph.D., track director

The combination of molecular biology and genetics with modern neuroanatomical techniques is transforming both our ability to examine and to understand the nervous system. Ongoing research by the faculty in the Neurosciences and Neurological Disorders graduate program is providing insights into neurotransmission, sensory system function, development and plasticity of the nervous system, regeneration and repair following neural damage, the basis of neural disease, and behavior. As one of five biomedical science degree programs in the University of Toledo, College of Medicine & Life Sciences, the Neurosciences and Neurological Disorders program is an interdisciplinary course of studies whose primary goal is to train students for independent, creative careers in biomedical research and/or teaching. The program currently

awards PhD in biomedical sciences degree and participates in the MD/PhD combined degree programs. Nationally-recognized, NIH-funded Neuroscience faculty who serve as research mentors are drawn from a number of departments including: Neurosciences, Neurology, Physiology and Pharmacology, Otolaryngology, Psychiatry and Radiation Therapy.

Modern, state-of-the-art research laboratory and core facilities are available through the program and these participating departments.

The Neurosciences and Neurological Disorders training program at the University of Toledo on the Health Science Campus offers the PhD, or MD/PhD degrees through the interdisciplinary degree programs in Biomedical Sciences. The primary goal of the doctoral program in Neurosciences and Neurological Disorders is to train students for independent, creative careers in research and/or teaching. The curriculum for the PhD degree consists of a core of concentrated course work in the first year, followed by specialized elective courses and an emphasis on laboratory research. Elective courses are offered in developmental and systems neuroscience, as well as ion channel function, sensory physiology, and neuropharmacology. During the first two semesters, each student rotates through three research laboratories, conducting short-term projects, gaining exposure to techniques and identifying potential areas for further investigation. During the second semester, each student selects a major advisor who directs the student's doctoral research. A faculty committee is also jointly chosen by the student and advisor to supervise academic progress toward completion of the PhD degree. In addition to 90 credit hours in didactic and other courses, PhD students are required to successfully pass a qualifying exam that consists of independently writing and defending a research dissertation.

*** MSBS in Neuroscience and Neurological Disorders is not currently offered**

The minimum number of credits required for PhD is 90, with a minimum of 20 credits of didactic coursework (letter grade), and a minimum of 30 credits of dissertation research. The rest of the credits are approved electives and research in the NND track.

First-Year Core Curriculum SLOs

1. Identify and summarize the structure and function of cells, tissues, and organs.
2. Describe the molecular, biochemical, and cellular mechanisms that maintain the normal function, development, and plasticity of cells, tissues, and organs.
3. Summarize basic disease causes and processes that affect the structure and function of cells, tissues, and organs.
4. Assess and critically analyze relevant basic science and clinical literature.
5. Design and conduct applicable biomedical sciences experiments.
6. Organize, interpret and summarize results of applicable biomedical sciences experiments.
7. Demonstrate ethical and responsible conduct in research and all other scholarly activities consistent with the University of Toledo, Health Science Campus, Standards of Conduct (Policy 01-027).

Part I: A NND graduate of Ph.D. will be knowledgeable

K1 Knowledge of normal structure and function of the body and its major organ systems, with emphasis on the peripheral and central nervous system.

K2 Knowledge of molecular, biochemical, and cellular mechanisms which are important in homeostatic maintenance of normal nervous system function.

K3 Knowledge of the basic neurophysiology of excitable membranes.

K4 Knowledge of neurophysiological basis of behavior in health and disease.

K5 Knowledge of classical and contemporary models of changes in nervous system function in response to changes in intrinsic or extrinsic environmental stimuli throughout the lifespan.

K6 Knowledge of nervous system structure and function in normal and disease states as studied with contemporary techniques and related translational research approaches.

K7 Knowledge of pathophysiology of prominent neurological disorders (e.g., cognitive disorders, movement disorders, neurodevelopmental disorders, seizure disorder, substance use disorders).

K8 Knowledge of basic principles of pharmacology (drug action) and pharmacology of specific drugs and toxins used in basic neuroscience research, in vivo and in vitro, and in the treatment of prominent neurological disorders.

K9 Knowledge of the use of statistical methods in the appropriate design, analysis and interpretation of research projects.

K10 Knowledge of tech principles that govern ethical and legal decision making in the design and conduct of research projects, and the accurate reporting of the results.

K11 Knowledge of the various approaches to the organization and financing of biomedical research projects.

Part II: A NND graduate Ph.D. will be skilled

S1 The ability to perform selected basic laboratory procedures that are commonly used in the laboratories of most track faculty.

S2 The ability to perform advanced/specialized procedures that are necessary for the completion of the student's assigned dissertation research projects (s).

S3 The ability to design and complete independent research projects, and the ability to perform productively as a member of a research team.

S4 The ability to communicate effectively, both orally and in writing, with colleagues, faculty, scientific journal editors/reviewers, and research granting agencies.

S5 The ability to retrieve (from electronic databases and other sources), manage, and utilize biomedical information for solving problems that are relevant to the appropriate completion of a research project, and the accurate reporting of the results.

Part III: A NND graduate Ph.D. will be professional

P1 Ethical, responsible, reliable, and dependable behavior in all aspects of their professional lives, and a commitment to the profession and to society.

P2 Honesty and integrity in all interactions with colleagues, research subjects, and others with whom students may interact in their professional lives.

P3 Professionalism in dress and grooming related to compliance with health and safety rules applicable to research laboratories, and other research sites.

P4 Compassionate treatment of patients as subjects of research, and respect for their privacy and dignity.

P5 Compassionate treatment of experimental animals, and respect for all laws and regulations applicable to the use of animals in biomedical research.

------------	-------------------------------	-----

The PhD Qualifying Exam is taken in the Fall semester of the second year. Prior to completing the exam, students should carry out their dissertation research under the course BIPG6890 Independent Study in Bioinformatics. After passing the Qualifying Exam, students conduct their research under the course Dissertation Research (CABP9990). The minimum number of credits required for PhD is 90, with a minimum of 25 credits of didactic coursework (letter grade), and a minimum of 30 credits of dissertation research. The remaining credits are approved electives and independent study in the Bioinformatics track.

Hours **1-9**

Total Hours **55-123**

Learning Outcomes

Bioinformatics Track

Biomedical Sciences Graduate Program

College of Medicine & Life Sciences, University of Toledo

Introduction

Graduate educational programs shall articulate their objectives in order to permit the alignment of course instruction, research training, and evaluation of students with the program's educational objectives (EPO). To meet this requirement, the Bioinformatics (BIPG) faculty has adopted the following objectives for the program leading to the Ph.D. degree in Biomedical Sciences in the BIPG Track.

The EPO competencies reflect scientific knowledge, skills, and professional attitudes. The student's progress will be evaluated and documented with respect to competence in each of these three areas and over the duration of years needed to complete the degree requirements.

I: A BIPG Ph.D. student will be knowledgeable

In the course of their educational program, students are provided the opportunity to gain knowledge through instruction by content experts and by supervised participation in research projects. Knowledge will be assessed by the student's ability to define, describe, and explain facts and concepts, as well as at higher levels of cognition that will be measured by the ability to apply, analyze, and integrate content.

Before graduation, a student will have demonstrated to the satisfaction of the faculty knowledge of the following by being able to:

K1 Describe molecular, biochemical, and cellular mechanisms involved in regulation of cellular processes and development.

K2 Explain fundamental systems biology technologies, such as proteomics, genomics and transcriptomics, and the bioinformatics tools central to their interpretation.

K3 Describe algorithmic and statistical methods for analysis of nucleic acid and protein sequences, such as hidden Markov models and Bayesian statistics.

K4 Explain principles and legal responsibilities that govern responsible conduct of research, and the accurate reporting of research results.

II: A BPG graduate student will be skilled

The BIPG curriculum provides a training environment in which research and teaching skills are learned in concert with the correlated knowledge. Students have the opportunity to gain these skills under the supervision of a faculty mentors with the advice and guidance of the student advisory committee, through direct contact with content and/or technical experts, and through direct participation in research projects.

Before graduation, a student will have demonstrated to the satisfaction of the faculty the ability to:

S1 Execute technical procedures necessary for the completion of the student's doctoral thesis research project(s).

S2 Design and complete an independent research project.

S3 Use least two modern computer programming languages, such as PERL and Python, and the UNIX (Linux) operating system.

S4 Appraise statistical and biological significance of bioinformatic results and patterns.

S5 Demonstrate database design, management, and/or mining.

S6 Experiment productively as an individual or member of a research team.

S7 Critique, organize, and communicate research findings effectively, both orally and in writing.

S8 Interrogate electronic databases via automated scripting.

S9 Identify biomedical information for solving problems that are relevant to the appropriate completion of a research project, and the accurate reporting of the results.

III. A BIPG graduate will be professional

The University of Toledo College of Medicine and the Biomedical Sciences Program recognize the importance of role-modeling and directly training the professional conduct and character of its students. The institution and the BIPG Track devote curricular and extracurricular time to the development of ethical standards humanistic and professional behaviors by its students.

Before graduation, students will have met the following institutional and program standards. Some of these are difficult to demonstrate positively, but the successful student shall have given the faculty no reason to doubt that the student exhibits:

P1 Ethical, responsible, and reliable behavior in all aspects of their professional lives.

P2 Honesty and integrity in all interactions with colleagues, research subjects, and others with whom students may interact in their professional lives.

P3 Professionalism in dress and grooming in compliance with health and safety rules applicable to research laboratories and to other institutional and public sites.

P4 Respect of and adherence to all laws and regulations governing the biomedical research use of animals and patient materials, and for all patient privacy issues.

P5 Respect of and adherence to all laws and regulations governing ethical use of computers and remote computational facilities.

MSBS Assistant in Pathology Student Learning Objectives

At the end of the program, the students will be able to:

Autopsy Service

- perform a complete autopsy including evisceration, dissection and examination of the various organs including brain
- describe grossly all organs from a given autopsy

Surgical Pathology

- perform gross examinations and submit sections for surgical specimens
- cut and stain frozen sections
- compile related medical history to the surgical specimens
- evaluate image findings to the surgical specimens

Clinical Pathology

- interpret clinical data and correlate to surgical procedure
- provide clinicopathologic correlations for chemistry, microbiology, immunology tests

Electives and Scholarly Activities

- analyze scientific articles
- prepare and present scientific papers at annual scientific day

1. Bachelor of science or health science from regionally accredited college or university with minimum cumulative and science 3.0 GPA (Exceptions can be made if the applicant has a terminal Ph.D., M.D., or M.B.B.C.H degree)
2. Complete on-line application form: https://apply.utoledo.edu/prod/bwskalog.p_disloginnew (https://apply.utoledo.edu/prod/bwskalog.p_disloginnew/)
3. Official transcripts
4. \$45 application fee domestic students, \$75 fee for international students
5. 3 letters of recommendation
6. Passing TOEFL or IELTS (only international students)
7. One shadowing experience in autopsy and surgical pathology
8. Prerequisites Courses with minimum GPA of 3.0 on 4.0 scale:

Prerequisites Courses:

The applicant should have successfully completed the following courses:

- general chemistry with lab,
- organic chemistry or biochemistry with lab,
- biology with lab,
- microbiology with lab,

- college level mathematics
- college level english composition.

First Term		Hours
ANAT 5000	Anatomy for Physician Assist	5
PHSL 5050	Human Physiology	3
PATH 6060	Surgical Clinical Rotation (- Didactic)	2
PATH 6080	Postmortem Clinical Rotation ((Hospital + Forensics) - Didactic)	2

Fourth Term		Hours
PATH 6780	Histology and Cell Physiology I	2
PATH 7130	Lab Management	3
INDI 6980	Scholarly Project for Medical Sciences	3
PATH 6070	Intro Clinical Lab Medicine	2
Hours		10
Fifth Term		Hours
PATH 6790	Histology and Cell Physiology II ¹	2
PATH 7130	Lab Management	3
INDI 6980	Scholarly Project for Medical Sciences	3
PATH 6040	Pathology Assistants: Medical Ethics	1
Hours		9
Total Hours		54

¹ This course is an independent study in microanatomy to reemphasize what the students learned in the fall semester to allow them to recognize on their own the microscopic feature of various tissues.

Minimum total credits for MSBS Assistant in Pathology is 54 credits

Student Learning Objectives

At the end of the program, the students will be able to:

Autopsy Service

- perform a complete autopsy including evisceration, dissection and examination of the various organs including brain
- describe grossly all organs from a given autopsy

Surgical Pathology

- perform gross examinations on surgical specimens
- cut and stain frozen sections
- compile related medical history to the surgical specimens
- evaluate image findings to the surgical specimens

Clinical Pathology

- interpret peripheral blood smears
- provide clinicopathologic correlations for chemistry, microbiology, immunology tests

Electives and Scholarly Activities

- analyze scientific articles
- prepare and present scientific papers at annual scientific day

MSBS in Bioinformatics and Proteomics-Genomics

Robert Blumenthal, Ph.D., director

The Bioinformatics and Proteomics/Genomics (BPG) Programs are designed to provide training in the rapidly-developing interface between computer science and life sciences. Graduates with such training are in high demand, (in part due to the explosion in genome sequence analysis), whether the BPG studies are for an independent degree or for one of the several dual-degree programs. In addition, students in other programs may take BPG courses as electives.

Masters, Certificate and Dual Degree Programs

The program in Bioinformatics and Proteomics/Genomics, along with the Ohio Center of Excellence for Biomarker Research and Individualized Medicine at the University of Toledo, offers a Certificate that can be earned either alone or in association with the degrees of Doctor of Philosophy (PhD) or Doctor of Medicine (MD). The Certificate program is designed to fit smoothly into the doctoral programs with minimal extra time required. BPG also offers a Master of Science in Biomedical Sciences (MSBS) degree. MSBS students follow a well-defined curriculum that includes core courses, journal club, seminars, independent research, and electives in their area of interest. Both Certificate and MSBS students are trained in the theory, methods and applications of bioinformatics, proteomics, genomics, and biomarker research.

Bioinformatics programs generally place more emphasis on either computer science or the biomedical aspects of the field. The University of Toledo's program falls into the latter category. However, there are courses in PERL, Java, and SQL programming (for example), and the Program provides biomedical researchers with a solid introduction to the computational aspects, or computer science experts with a rigorous introduction to the biomedical aspects of bioinformatics.

To be admitted to the Masters in Biomedical Sciences Program with Regular status, applicants must hold an earned baccalaureate (or equivalent) from an accredited college or university. Students with a GPA below 3.0, but at or above 2.5, may apply for provisional acceptance that would change to regular (non-probationary) status if their first term graduate coursework has a GPA of 3.0 or above. Typically, applicants will have an undergraduate major in Biology or a related discipline such as

Biochemistry or Biophysics. Students with other majors are encouraged to apply; however, their coursework should include several semesters in biology. The GRE is not required for US students with GPA above 3.0, UT or Findlay students entering the bachelors-masters pipeline program, or students with a recent MCAT score of 25 or higher. The GRE is required for all other applicants. For international applicants, the Test of English as a Foreign Language (TOEFL) is also required. Scores must be 550 or higher for paper-administered version, 213 or higher for computer-administered version, and 80 or higher for internet-administered version. For all applicants, laboratory research or computer programming experience is favored, but not required.

(CPRA = Current Problems & Research Approaches)

(BIPG = Bioinformatics & Proteomics/Genomics)

First Term		Hours
BMSP 6340	Curr Prob Res App Genes/Genom (8 weeks) ¹	2
BIPG 5200	Statistical Methods in Bioinformatics (16 weeks)	3

Sixth Term		
Hours		0
Total Hours		42

¹ CPRA = Current Problems & Research Approaches.

² Students must register for a specific 10 wk/1 cr section of BMSP 6390 Mentored Research for 2 five-week rotations. As a prerequisite, students must attend an introductory series of short research presentations "Introduction to Biomedical Research". These presentations do not require students to register, but BIPG students are expected to attend for the first 3-4 weeks of the Fall semester.

³ Students must pass Qualifying Exam before registering for BIPG 6990 Thesis research. In this and other terms, with permission of advisory committee, student may take Scholarly Project in BIPG (BIPG5900) in place of Thesis in Bioinformatics.

⁴ Journal paper review and presentation.

The minimum number of credits required for MSBS is 42, with a minimum of 20 credits of didactic coursework (letter grade), and a minimum of 10 credits of thesis research. The rest of the credits are approved electives and research in the BIPG track.

EDUCATIONAL PROGRAM OBJECTIVES FOR THE BIOINFORMATICS/PROTEOMICS/GENOMICS TRACK

Program Student Learning Outcomes

K1 Knowledge of molecular, biochemical, and cellular mechanisms involved in regulation of cellular processes and development.

K2 Knowledge of fundamental systems biology technologies, such as proteomics, genomics and transcriptomics.

K3 Knowledge of algorithmic and statistical methods for analysis of nucleic acid and protein sequences, such as hidden Markov models and Bayesian statistics.

K4 Knowledge of at least one modern computer programming language, such as PERL.

K5 Knowledge of database design and management.

K6 Knowledge of the principles and legal responsibilities that govern responsible conduct of research, and the accurate reporting of research results.

S1 The ability to perform procedures necessary for the completion of the student's thesis (M.S.) research project(s).

S2 The ability to design and complete an independent research project.

S3 The ability to assess statistical and biological significance of bioinformatic results and patterns.

S4 The ability to perform research productively as an individual or member of a research team.

S5 The ability to communicate research findings effectively, both orally and in writing.

S6 The ability to use electronic databases via automated scripting.

S7 The ability to retrieve biomedical information for solving problems that are relevant to the appropriate completion of a research project, and accurate reporting of the results.

P1 Ethical, responsible, and reliable behavior in all aspects of their professional lives.

P2 Honesty and integrity in all interactions with colleagues, research subjects, and others with whom students may interact in their professional lives.

P3 Professionalism in dress and grooming in compliance with health and safety rules applicable to research laboratories and to other institutional and public sites.

P4 Respect of and adherence to all laws and regulations governing the biomedical research use of animals and patient materials, and for all patient privacy issues.

P5 Respect of and adherence to all laws and regulations governing ethical use of computers and remote computational facilities.

MSBS Biomarkers and Diagnostics (PSM)

The Professional Science Master in Biomarkers and Diagnostics (MSBS-PBD) is designed to be a terminal degree with the graduate having strong prospects for immediate employment in industry. The MSBS-PBD degree is a "job ready" degree. This is achieved by a three-pronged approach:

- To prepare master's students with a strong foundation in the fundamentals of biomarker discovery and development through focused course work.
- To complement their science education through course work in management, orienting them to realities of the business aspects of the pharmaceutical/diagnostics industry.
- To place them as interns in a pharmaceutical- or diagnostic-oriented company for four months to enhance their practical training and employability.

The MSBS-PSMBD program is targeted to students completing a bachelor in computer science, chemistry or a biological or pharmaceutical science.

First Term		Hours
BIPG 5200	Statistical Methods in Bioinformatics	3
BMSP 6340	Curr Prob Res App Genes/Genom	2
BIPG 5100	Fund Bioinformatics Proteomics	3
INDI 6020	On Being a Scientist	1
MGMT 6150	Leading and Developing Yourself	3
or MGMT 6160	or Leading With Power and Influence	
HURM 6720	Advanced Negotiation and Conflict	3
or HURM 6700	Management	
	or Human Resource Management	
Hours		15
Second Term		Hours
BIPG 6100	Bioinformatic Computation	3
BMSP 6350	Cell Biology & Signaling	3
BRIM 6200	Biomarker Disc,Valid & Impleme	3
HURM 6730	Performance Management	3
Hours		12

Third Term

BIDI 5100	Biomarkers and Diagnostics Internship	6
BIDI 5200	Readings in Biomarkers and Diagnostics (online)	1
BIPG 6890	Independent Study in BPG	2
Hours		9
Total Hours		36

The minimum number of credit hours for completion of the MSBS, PSM in Biomarkers and Diagnostics degree is 36.5 credits.

MSBS in Cancer Biology

The MSBS Qualifying Exam is taken in the summer term of the first year. Prior to completing the exam, students should carry out their thesis research under the course Research in CABP 6730. After passing the Qualifying Exam, students conduct their research under the course Thesis Research (CABP 6990). The minimum number of credits required for MSBS is 40, with a minimum of 25 credits of didactic coursework (letter grade), and a minimum of 10 credits of thesis research. The rest of the credits are approved electives and research in the Cancer Biology track.

All Masters students are also required to present posters in the annual UTHSC Graduate Student Research Forum and oral presentations in the annual Larry Gentry Research Symposia beginning in their second year.

Advanced Courses in the Cancer Biology Track

Advanced Cancer Biology

A comprehensive examination of the cellular and molecular foundation of cancer. Topics to be covered include: neoplasia; epidemiology and etiology; the role of causative agents such as chemicals, radiation, and viruses; cell proliferation, injury, and death; oncogenes; tumor suppressor genes; cancer therapies, and overviews of several major types of cancer.

Readings in Cancer Biology

A readings and discussion course that will examine classic and current research publications from within the broad realm of cancer biology.

Independent Study in Cancer Biology

In-depth study of research areas chosen by individual faculty. Examples of such topics may be: drug therapy and resistance, hormonal carcinogenesis, and epigenetic mechanisms of oncogenesis

Code	Title	Hours
BMSP 6330	Current Problems and Research Approaches in Proteins	2
BMSP 6340	Curr Prob Res App Genes/Genom	2
BMSP 6360	Current Problems and Research Approaches in Cell Membranes	2
BMSP 6380	Methods in Biomedical Sciences	2
BMSP 6390	Mentored Research	1

(elective, if not taken in 2nd year)		
CABP 6990	Thesis Research in Cancer Biol	6-9
Hours		9-12

Eighth Term

CABP 6990	Thesis Research in Cancer Biol	9
Hours		9

Ninth Term

CABP 6990	Thesis Research in Cancer Biol	6
Hours		6

Total Hours 65-78

Prior to successfully completing the Qualifying Exam by end of 1st summer, students should conduct their thesis research under the course Research in CABP 6730. After passing the Qualifying Exam, students should conduct their research under the course Research in CABP 6990.

The minimum number of credits required for MSBS is 40 total, with a minimum of 20 didactic coursework (letter grade) and a minimum of 10 credits of thesis research. The rest of the credits are approved electives and research in the Cancer Biology track.

Masters' students are also required to present posters or oral presentations in the annual HSC Graduate Research Forum and oral presentations in the annual Larry Gentry Research Symposia beginning in their second year.

EDUCATIONAL PROGRAM OBJECTIVES FOR THE CANCER BIOLOGY TRACK**Program Student Learning Outcomes**

FY1. Identify and summarize the structure and function of cells, tissues, and organs

FY2. Describe the molecular, biochemical, and cellular mechanisms that maintain the normal function, development, and plasticity of cells, tissues, and organs

FY3. Summarize basic disease causes and processes that affect the structure and function of cells, tissues, and organs

FY4. Assess and critically analyze relevant basic science and clinical literature.

FY5. Design and conduct applicable biomedical sciences experiments
FY6. Organize, interpret and summarize results of applicable biomedical sciences experiments.

FY7. Demonstrate ethical and responsible conduct in research and all other scholarly activities consistent with the University of Toledo, Health Science Campus, Standards of Conduct

K1 Knowledge of the normal structure and function of the body and its organ systems.

K2 Knowledge of molecular, biochemical, and cellular mechanisms important in maintaining the body's homeostasis.

K3 Knowledge of the molecular mechanisms of oncogenic transformation from initiation of cells through tumor metastasis.

K4 Knowledge of the pathophysiology of prominent types of cancer.

K5 Knowledge of basic bioinformatic and statistical methods used in the design and interpretation of research projects.

K6 Knowledge of the principles and legal responsibilities that govern responsible conduct of research, the ethical care and use of animals in research, and the accurate reporting of research results.

S1 The ability to perform laboratory procedures necessary for the completion of the student's dissertation (Ph.D.) or thesis (M.S.) research project(s).

S2 The ability to design and complete an independent research project.

S3 The ability to perform research productively as an individual or member of a research team.

S4 The ability to communicate research findings effectively, both orally and in writing.

S5 The ability to retrieve (from electronic databases and other sources), manage, and utilize biomedical information for solving problems that are relevant to the appropriate completion of a research project, and accurate reporting of the results

P1 Ethical, responsible, and reliable behavior in all aspects of their professional lives.

P2 Honesty and integrity in all interactions with colleagues, research subjects, and others with whom students may interact in their professional lives.

P3 Professionalism in dress and grooming in compliance with health and safety rules applicable to research laboratories and to other institutional and public sites.

P4 Respect and adherence to all laws and regulations governing the biomedical research use of animals and patient materials, and for all patient privacy issues.

MSBS in Clinical Research

Code	Title	Hours
Core Curriculum		
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PUBH 6010	Public Health Epidemiology	3
HURM 6730	Performance Management	3
MGMT 6150	Leading and Developing Yourself	3
MLS 6100	Interdisciplinary Research Methods	3
INDI 6020	On Being a Scientist	1
SURG 6010	Leadership in Health Care	3
SURG 6020	Medical Research, Simulation, Innovation, and Education	3
Electives - select from following for total of 9 credits		
BIPG 5100	Fund Bioinformatics Proteomics	3
BIPG 5200	Statistical Methods in Bioinformatics	3
EFSB 6590	New Venture Creation	3
EFSB 6690	Strategic Management of Innovation	3
MGMT 6160	Leading With Power and Influence	3
BMSP 6250	Grant Writing Workshop	2

PUBH 6030	Advanced Epidemiology	3
PUBH 6060	Advanced Biostatistics	3
PUBH 6550	Chronic Disease Epidemiology	3
PUBH 6120	Epidemiology Infectious Diseases	3
PUBH 5410	Hazard Control	3
LAWM 5000	Law And The Legal System	2-3
LAWI 6710	Patent Law	2-3
LAWI 6720	Intellectual Property Survey	2-3

Additional electives may be approved on an individual basis, according to student career goals, at the graduate level within BIPG, EFSB, INDI, PUBH, LAWI, or other areas

Master of clinical research will provide student the knowledge needed for a career in clinical research. The Learning Outcomes in general are:

- 1) Master the essence of statistics in behavioral science needed to help analyze and describe data.
- 2) Describe how to study populations using epidemiological methods and compare populations.
- 3) Demonstrate health care in general and type of leaderships in health care.
- 4) Understand how to manage working groups and laws governing employment.
- 5) Design a research project in health care, formulate a research theory, execute a study and follow the steps from conception to publication.
- 6) Implement use of information technology in health care.
- 7) Describe leadership in general and in health care in particular.
- 8) Demonstrate concepts of leading people influencing and motivating workers to work and achieve goals.
- 9) Introduce methods of grant writing and methods of trying to obtain grants in health care.
- 10) Be effective in leading teams in research and designing research to help improve quality in health care.

MSBS in Molecular Medicine

The minimum number of credits required for MSBS is 40, with a minimum of 18 credits of didactic coursework (letter grade).

The MSBS curriculum includes advanced electives in Molecular Medicine or other areas to make up the 18 required didactic credit hours.

A minimum of 10 credits of Thesis Research is required for graduation.

MSBS in Medical Microbiology & Immunology

The Medical Microbiology and Immunology (MMIM) (formerly Infection, Immunity and Transplantation) track participates in the masters in Biomedical Sciences training program. Students are expected to complete a core curriculum similar to that of doctoral students but with some of the courses as elective offerings, to experience one or more rotations before selecting a major advisor and thesis laboratory. In addition to 40 credit hours in didactic and other courses, including a minimum of 10 credit hours of thesis research is required for degree. Students are required to successfully pass a qualifying exam and to write and defend a research thesis. Students usually complete the degree requirements in 2-3 years.

Biomedical Science: Transplantation and Donation Sciences

Julie DeSantis Program Director

The Transplantation and Donation Sciences Master Degree (MSBS-TDS, PSM) program is designed to provide entry-level professional preparation for individuals who wish to become an organ procurement transplant coordinator. Organ procurement coordinators facilitate the organ donation process from beginning to end. They are the liaisons between the donor's family, the coroner, the medical and nursing staff, the organ procurement organization and ultimately the transplant surgeon. As a result, coordinators must skillfully and diplomatically deal with a number of issues, agendas and personalities in order to achieve a successful organ transplant.

Combining science coursework with business and management coursework further enables the HDS-MSBS, PSM graduate to step into the professional world of organ and tissue donation and transplantation.

Entrance requirements/prerequisites:

- Baccalaureate degree from a school that is accredited by a nationally recognized body for accreditation of postsecondary education.
- Overall grade point average of 3.0 in undergraduate work.
- Submission of online University of Toledo Graduate School Application.
- Three letters of recommendation (using the University of Toledo forms).
- A minimum of two semesters of coursework in the biological sciences, a minimum of two semesters of coursework in chemistry, and one semester of college algebra or higher.
- Satisfactory completion of a course in medical terminology or pass a medical terminology proficiency examination. Candidates who are unable to pass the medical terminology proficiency examination will be required to participate in a self-study program and pass a re-test.
- The Graduate Record Examination (GRE) and TOEFL are only required for international students.
- Interview, if requested.
- Graduate School application fee.

Although not required, shadowing an organ procurement coordinator is highly recommended.

Persons who are currently practicing professionals in the field of donation and transplantation are also eligible to enroll in this program and complete the curriculum entirely on-line through the distance learning track. All other applicants who meet the above entrance requirements are eligible for the on-campus track.

First Term		Hours
HDSC 5010	Organ Transplant Procurement	3

MGMT 6150	Leading and Developing Yourself (fall/spring)	
LAWM 5000	Law And The Legal System (fall)	
PUBH 6510	Issues in Pandemic Preparedness and Response	
MGMT 6100	Leading Through Ethical Decision-Making	
MGMT 6190	Leading change and Organizational Improvement	
PUBH 6560	Interdisciplinary Crisis Management for Medical and Public Health Professionals	

Total Program Credit Hours (minimum) for MSBS, PSM degree in Human Donation Science is 40 credits.

Transplantation and Donation Sciences SLO's

1. Analyze a hospital's organ and tissue donor potential within the Organ Procurement Organization's (OPO) Federal Designated Service Area (DSA).
2. Identify specific need for policy updates and staff education to comply with the federal Organ Procurement Transplant Network (OPTN) and Food and Drug Administration (FDA) regulations.
3. Evaluate potential organ and tissue donors through medical and social history, current medical condition, and infectious disease testing to determine suitability for transplant.
4. Identify the appropriate family member to obtain authorization for organ and tissue donation and communicate effectively and compassionately with the family throughout the case with an understanding of their emotional and cultural needs
5. Identify and assess physiologic issues in the organ and tissue donor related to brain death and current medical condition.
6. Implement the appropriate interventions to achieve optimal organ function for transplantable organs and tissues.
7. Determine the correct allocation of recovered organs and identify the appropriate recipient according to the regulations of the OPTN.
8. Coordinate and collaborate with organ and tissue recovery teams and surgical staff to ensure optimal recovery and preservation of organs and tissues according to the OPTN and FDA regulations.
9. Assemble the written, permanent record of each donor case with all required documentation maintaining confidentiality according to the OPTN and the Health Insurance Portability and Accountability Act (HIPAA).
10. Communicate effectively with donor families, hospital staff, coroners/ medical examiners, funeral homes, and transplant centers to build, maintain, and improve relationships in order to improve donation and transplant outcomes.

11. Demonstrate professionalism through code of ethics as it relates to the donation and transplant field.

12. Demonstrate professionalism through life-long learning, self-improvement, increased work knowledge, awareness of new practice trends, and scientific advancements as it relates to the donation and transplant field.

Medical Physics Programs

Programs of study leading to the MSBS degree in Medical Physics are offered by the graduate faculty of the Department of Radiation Oncology and the Department of Radiology. In addition to the basic medical science and radiological physics coursework, a specific course of study is offered in radiation oncology physics or in diagnostic imaging. This course of study includes didactic courses, independent study, and hands-on clinical covering the selected discipline, along with specific technical research culminating in a research project or thesis. The graduate program is committed to excellence in scientific education, clinical experience, and research leading to the professional development of highly motivated and dedicated students. In addition to the capability of creative scientific research, the coursework and clinical experience is intended to provide students with the fundamental knowledge and educational requirement for eventually becoming board certified in their area of study by The American Board of Radiology, The American Board of Medical Physics, or other credentialing body.

PhD Track

The PhD in Physics with Concentration in Medical Physics: Please refer to the College of Natural Sciences Catalog (p. 305) for additional information regarding this program, and specifically, the Department of Physics and Astronomy section for admission and degree requirements. Information also may be found at <http://www.utoledo.edu/med/depts/radther/>.

Research Facilities

The Department of Radiation Oncology has access to a variety of computer systems for radiation oncology treatment planning, programming, and image analysis. A wide range of radiation measuring equipment is available, including a full range of dosimetry and quality control test equipment, Wellhoffer computerized beam scanning system, an array of ionization chambers, software and hardware packages for film dosimetry and analysis, oscilloscopes, and test phantoms. Also available are multichannel analyzer scintillation detectors, autogamma, and liquid scintillation counters, diode, thermoluminescent dosimetry systems, nanodot dosimeters, digital scanner for chromic film dosimetry system, RIT densitometry package, etc.

The Medical Physics program is housed on the Health Science Campus and the University of Toledo Medical Center (UTMC) where much of the medical physics training is accomplished at the newly built Dana Cancer Center. This state-of-the-art building houses the radiation oncology department and has a division of radiology, medical oncology, and surgical oncology. All the specialists are under one roof and the concept of a true cancer center is practiced. Besides being a leader in stereotactic radiosurgery (SRS) and stereotactic Body Radiotherapy (SBRT), the University of Toledo Medical Center provides IMRT treatment planning with IGRT capabilities, conventional 3D conformal external beam

radiotherapy, and other stereotactic neurologic radiosurgery capabilities such as AVM with inverse planning arc modulation technology. Other treatment modalities that students are exposed to are: Brachytherapy low and high dose rate, Radionuclide therapy using P-32, I-131, Sr-89, Ra-223, etc. There also exists a large Cs-137 irradiator is also available on campus for blood, small animal, or other cellular petri-dish irradiation.

Department of Radiation Oncology Equipment

- A Varian True Beam Linear Accelerator, capable of producing photon energies of 6MV, 10MV, and 18 MV, and 6X FFF, and a range of electron energies from 6 to 20 MeV in 2-3 MeV increments.
- A Varian Edge Linear Accelerator, capable of producing photon energies of 6MV, 10MV, 6X FFF, and 10X FFF. This is a specialized new Varian product designed for SRS/SBRT cases with 2.5 mm leaves.
- Both accelerators are equipped with latest state of the ART technology including onboard imaging, EPID MV imaging, Rapid ARC (VMAT), and Gating. The Edge unit is also capable of Optical Surface Monitoring System (OSMS) used for patient positioning.
- ARIA patient management system
- A Philips ADAC Pinnacle treatment planning software package for external beam radiotherapy planning,
- Varian Eclipse Treatment Planning system
- MIM software for rigid and deformable image fusion
- A remote afterloading High Dose Rate brachytherapy unit manufactured by Varian for treatment of interstitial, intracavitary and intraluminal tumors and the associated BrachyVision software package for HDR brachytherapy treatment planning
- VariSeed software package used for prostate seed implant program
- A Philips Gemini Large Bore PET/CT unit equipped with Sim package used for radiotherapy treatment simulations
- An array of low dose rate brachytherapy sources of CS-137 for intracavitary treatment
- A fully automated water scanning system manufactured by Welhoffer
- Various film scanning systems such as VIDAR scanners and HOWTEK scanner for normal diagnostics and chromic film dosimetry
- RIT dosimetry software system for dosimetric analysis using films
- BAT ultrasound system
- An array of ionization chambers and electrometers for dosimetry measurements including highly sensitive farmer, and parallel plate chambers, micro chambers, and scintillation chambers.
- Thermoluminescence dosimeter (TLD) system and oven for annealing TLD chips.
- A MicroStar II OSLD system with nanodots for in-vivo dosimetry

Department of Radiology Equipment

- Multiple fixed and mobile radiographic and fluoroscopic systems
- Image intensifier and flat panel solid state detector fluoroscopic systems
- Computed radiography and digital radiography systems
- Mammography and stereotactic mammography systems
- Multi-slice (16 and 64) computed tomography systems
- 1.5 and 3.0 Tesla MRI imaging systems

- 4 SPECT imaging systems
- A PET/CT imaging system
- Multiple ultrasound imaging systems
- Hospital-wide GE Centricity PACS system
- Terarecon Aquarius Image Processing workstations and image servers.
- Multiple Windows and Linux PC's for image processing and analysis
- Full complement of diagnostic medical physics test phantoms and dosimetry equipment.

To obtain a MSBS degree from the COMLS, students must complete a minimum of 40 credit hours of approved credit beyond the baccalaureate, with at least 25 credits in didactic course work (requiring a grade) and a minimum of 10 credits in Thesis Research (INDI699).

The MSBS degree in Medical Physics typically involves 55 credit hours over a 22 months period.

Medical physics core courses include:

Code	Title	Hours
MPHY 6310	Anatomy/Physiology	4
INDI 6020	On Being a Scientist	1
MPHY 6010	Survey of Diagnostic Medical Imaging I	3
MPHY 6120	Radiation Dosimetry I	3
MPHY 6160	Radiation Biology	3
MPHY 6300	Radiation Detection/Measuremen	3
MPHY 6200	Radiatn Protect and Regulation	3
MPHY 6110	Survey Clinical Radi Therapy	2
MPHY 6500	Medical Physics Seminar	1
INDI 6990	Thesis Research	10

Typical course curriculum in Medical Physics - Radiation Oncology track include:

Code	Title	Hours
Radiological Physics		
MPHY 6130	Radiation Dosimetry II	
MPHY 6180	Physics of Radiation Therapy	
MPHY 6190	Brachytherapy	
MPHY 6320	Practical Measurements in Rad	

Typical course curriculum in Medical Physics - Diagnostic Imaging track include:

Code	Title	Hours
MPHY 6020	Survey of Diagnostic Medical Imaging II	
MPHY 6060	Nuclear Medicine	
MPHY 6860	Independent Study in Radiology (CT and MRI)	

Non-thesis option

A non-thesis option is available for students who present advanced degrees from previous graduate work which included a scientific thesis or dissertation.

MSBS in Medical Science

Guillermo Vazquez, Ph.D., Program Director

The primary goal of this program is to educate and train graduate students who have completed all prerequisites required for medical school but wish to enhance their understanding of the biological sciences and improve their academic credentials for applying to medical school. Beginning on the 2017-2018 academic year, the program offers a complete redesign of the former MSBS-MS program with renewed emphasis on the core-teachings of pathophysiology of disease. The program has been conceived with three primary objectives:

1. Provide clinically relevant, medical and graduate-level education to students who wish to boost their academic standing, towards a long-term goal of pursuing a career in medicine.
2. Create a strong foundation for improved performance in any MD/DO-curriculum, and USMLE step 1 and step 2 exams.
3. Provide basic and clinical research opportunities to broaden student perspective and strengthen their overall portfolio.

The newly redesigned curriculum emphasizes an organ-systems based approach where clinical and graduate faculty train students in the pathophysiology of disease. This graduate-level course incorporates materials taught to medical students during their first and second years, thus providing foundational information on the MD curriculum. Since pathophysiology of disease is a significant component of the USMLE exams, its inclusion in the new MSBS-MS curriculum has the potential to increase our student scores on Step 1 and Step 2. The MSBS-MS program also provides a unique opportunity for the graduate students to achieve meaningful clinical and/or basic science research experience. UT's basic and clinical science faculty will guide students through their year-round assignment on clinical or basic research. This allows students to learn the tenants of investigational sciences, widen their scope beyond clinical practice, adding a strong component to their portfolios. Students completing the MSBS-MS program with strong academic performance will have confirmed their ability to perform in any medical school curriculum, and therefore greatly strengthen their overall admissions package. The MSBS-MS program also provides students with insights into the medical school interview process with mock interview sessions and guidance from medical school students and faculty. Students meeting all prerequisites for UT medical school and who are in good academic standing within the MSBS-MS program, have a guaranteed medical school interview at the University of Toledo College of Medicine and Life Sciences. Students who successfully complete the program will be awarded the Masters in Biomedical Sciences-Medical Sciences (MSBS-MS). Completion of this degree is a requirement, but not a guarantee of admission, for those MSBS-MS students seeking admission into UT Medical School. In additions, students who subsequently gain admission to the MD degree program will be required to complete a criminal background check prior to matriculation.

- Applicant must be a U.S. Citizen or Permanent Resident
- Baccalaureate degree from an accredited college or university
- All prerequisites required for medical school must be completed prior to admission into the MSBS-MS program
 - Official MCAT score (28/500 or higher is recommended) less than 3 years old.

- Official undergraduate transcripts confirming degree submitted directly to the College of Graduate Studies
- GPA of 3.0 or greater is recommended
- One letters of recommendation
 - Committee recommendation letters are accepted with all signatures
 - Recommendation letters must include your full name
- Personal statement
 - Personal Statements submitted from medical school admission are accepted. A new career goals personal statement is required for MSBS-MS admission.
 - Personal Statements must include your full name
- University of Toledo College of Graduate Studies online application
 - Application Fee submitted at the time of online application
 - Please note: If you have already applied to the University of Toledo Medical School you must submit written authorization to the College of Graduate Studies in order for your medical school file to be accessed. Please do not make this request until you have submitted your application and fee.

First Term		Hours
INDI 5450	Molecular Cell Biology	7
INDI 5550	Anatomy and Pathophysiology	3
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
INDI 6980	Scholarly Project for Medical Sciences	1
Hours		14
Second Term		
INDI 5350	Pathophysiology of Organ Systems	10
INDI 5650	Immunology and Medical Microbiology	4
INDI 6980	Scholarly Project for Medical Sciences	1
Hours		15
Third Term		
INDI 6020	On Being a Scientist	1
INDI 6920	Student Seminar Series	1
INDI 6980	Scholarly Project for Medical Sciences	6
Hours		8
Total Hours		37

Program total minimum of credits for MSBS degree in Medical Science is 37 credits.

Medical Sciences students learning objectives:

1. MSBS-MS students will assess and integrate concepts from a variety of sources including lecture-based, research-based and practice-generated information.
2. MSBS-MS students will be able to explain human physiology and pathophysiology through an organ systems-based approach.
3. MSBS-MS students will engage in volunteering work – community, clinical setting – to enhance their exposure to and experience in service and diversity.

4. MSBS-MS students will collaborate with M1 students -admitted to the UT MD degree program from the MSBS-MS class- to discuss medical school curriculum, identify volunteering/shadowing opportunities, and develop peer interaction and leadership skills.

MSBS in Oral Biology

The oral biology program is restricted to Pediatric Dentistry Residents who are completing their training at the University of Toledo, College of Medicine & Life Sciences and UToledo. The program's curriculum is designed specific to each Dental Resident and students should consult with their advisor to create their specific Plan of Study.

First Term		Hours
DENT 6040	Conscious Sedation I	2
DENT 6060	Principles of Behav/Comm Mgmt	2
DENT 6070	Pediatric Dentistry Literature	0.5
DENT 6050	Clinical Pediatric Dentistry	0.5
DENT 6020	Pharmacology I	0.5
DENT 6030	Dento-Alveolar Trauma I	0.5
DENT 6140	Conscious Sedation	2
Hours		8
Second Term		Hours
DENT 6010	Growth and Development	0.5
DENT 6050	Clinical Pediatric Dentistry	1
DENT 6070	Pediatric Dentistry Literature	0.5
INDI 6980	Scholarly Project for Medical Sciences ()	3
PUBH 6001	Biostatistics for Medical Sciences	3
Hours		8
Third Term		Hours
DENT 6050	Clinical Pediatric Dentistry	1
DENT 6070	Pediatric Dentistry Literature	0.5
DENT 6080	Anatomy & Embryology Head/Neck	1
DENT 6090	Concepts - Dental Microbiology	0.5
DENT 6120	Pharmacology II	0.5
DENT 6130	Dento-alveolar Trauma II	0.5
INDI 6980	Scholarly Project for Medical Sciences	3
Hours		7
Fourth Term		Hours
DENT 6100	Pediatric Medicine Lecture	2
DENT 6110	Oral Health Policies	2
INDI 6980	Scholarly Project for Medical Sciences	1
DENT 6200	Oral Pathology	1
DENT 6150	Amer Board of Pediatric Dent RE	2
Hours		8
Fifth Term		Hours
DENT 6100	Pediatric Medicine Lecture	2
DENT 6110	Oral Health Policies	2
DENT 6160	Special Care Dentistry	1
INDI 6980	Scholarly Project for Medical Sciences ()	2
Hours		7

Sixth Term

DENT 6100	Pediatric Medicine Lecture	2
INDI 6020	On Being a Scientist	1
INDI 6980	Scholarly Project for Medical Sciences ()	5
Hours		8
Total Hours		46

MSBS in Orthopedic Sciences

Track Name: Bone Biology and Orthopedic Sciences

This MSBS program is not currently admitting students.

The Department of Orthopedic Surgery offers graduate-level courses through the Master of Science in Biomedical Sciences program at the University of Toledo. This is a 2-year program consisting of classes, seminars, and research. The students work with:

- Dr. Martin Skie, Department of Orthopedic Surgery;
- Beata Lecka-Czernik, Department of Orthopedic Surgery;
- A. Champa Jayasuriya, Department of Orthopedic Surgery; and
- Dr. Vijay Goel, Department of Bioengineering.

Our unique partnership with the Department of Bioengineering allows our researchers and physicians to have access to not only lab and research facilities, but also to the expertise of scientists in the biomechanics field.

Research in Orthopedic Sciences at the University of Toledo College of Medicine & Life Sciences covers a broad spectrum of topics including:

- Biomechanics
- Biomineralization
- Bone diseases
- Bone tissue engineering and regenerative medicine
- Hand and foot disorders
- Hip and knee replacements
- Spinal injuries and disorders
- Sports medicine
- Stem cell technologies
- Trauma/fixation

Additional information may be found at http://www.utoledo.edu/med/depts/ortho/master_program/index.html (http://www.utoledo.edu/med/depts/ortho/master_program/).

Minimum number of credit hours for MSBS in Orthopedic Sciences degree completion is 69 for the 2-year program.

or INDI 6980		

¹ Students who elect to do a basic science project will register for ORTH 6990 Thesis Research. Students who elect to do a clinical science

project will register for INDI 6980 Scholarly Project. In addition to 59 credit hours in didactic and other courses, students will also take a minimum of 10 credit hours of thesis research or scholarly project. Thesis research will require the student to write and orally defend a thesis, scholarly project will require a written paper and oral presentation of the project.

² In the fourth and fifth terms (year 2) the student will choose one of the clinical electives (ORTH 6910, ORTH 6920, ORTH 6930, ORTH 6940, ORTH 6950, ORTH 6960) to take for each semester. Credit for the clinical elective courses: minimum 1 credit, maximum 3 credits.

Minimum number of credit hours for MSBS in Orthopedic Sciences degree completion is 69 for the 2-year program.

MSBS in Physician Assistant Studies

Physician Assistants (PAs) are health professionals, prepared to practice medicine with physician supervision. Within the physician/PA relationship, PAs exercise autonomy in decision-making and provide a wide range of diagnostic and therapeutic services. The role of the PA includes provision of primary and specialty care in medical and surgical practices located in rural, urban or suburban areas. Physician assistant practice is patient care centered but may include education, research and administrative duties.

The University of Toledo (UToledo) Physician Assistant (PA) Program is a graduate entry-level professional course of study enabling individuals who hold baccalaureate degrees to become PAs. The program is designed to prepare graduates for primary care practice with emphasis placed on both service to medically underserved populations and the team approach to the delivery of healthcare. The program integrates graduate level critical thinking and analysis, problem solving, scientific inquiry, self-directed learning and the effective use of modern technology for professional practice that includes elements of research, leadership, education and continued professionalization of the physician assistant occupation.

Admission Requirements

The Physician Assistant Program will admit students each Fall Semester (August of each year) only. The application cycle opens in April of the year prior to enrollment and closes September 1 of the year prior to enrollment. Please note: If you applied to the program in a previous year, you will need to create a new account when submitting a supplemental application.

Early submission of online CASPA and online UToledo Supplemental Application is encouraged. Interviews will be conducted starting in September and continue through December. We now offer rolling admissions.

To be considered for the Physician Assistant Program, candidates must comply with all of the following:

1. Completion of all admission requirements to CASPA (CASPA link (<https://portal.caspaonline.org/>)) **by September 1st. CASPA applications must have a complete date on or before the deadline date. A complete date is given when an application is e-submitted, at least two letters of reference are completed, and all transcripts and payments have been received by CASPA and attached to the application. Documents**

should be sent several weeks prior to this date to ensure items arrive on time.

CASPA applications must include:

- Completed and submitted application form
- CASPA application fee paid
- At least three letters of recommendation submitted
- Verified transcripts for all colleges/universities attended

Please note: All communication from the program will be sent to the email address listed on your CASPA application.

2. Applicants to the UToledo PA Program must be citizens of the United States or have permanent resident status (permanent residency "green" card). If applying as a permanent resident, an applicant must be a permanent resident **at the time of application** and will be required to submit a photocopy of the front and back of their permanent resident card.

- Applicants who have completed any of their previous undergraduate or graduate training internationally must fulfill the requirements of the UToledo College of Graduate Studies for international students, which are available for viewing here (<https://www.utoledo.edu/graduate/prospectivestudents/admission/guidelines.html>).
- The UToledo PA Program requires applicants to provide foreign transcript evaluation from one of the accepted credential evaluation agencies: ECE or WES. The evaluation will be at the applicant's expense.
- In addition to the requirement for regular admission, all students from non-English speaking countries must achieve satisfactory scores on the Test of English as a Foreign Language (TOEFL) (unless the international applicant has graduated from a US accredited college or university).
- All international applicants must demonstrate they have adequate financial resources for their graduate education before admission.
- The TOEFL score requirements and a copy of the financial statement form are available for viewing here (<https://www.utoledo.edu/graduate/prospectivestudents/admission/guidelines.html>).

3. Completion of the UToledo Supplemental Application (https://apply.utoledo.edu/prod/bwskalog.p_disloginnew/) **by September 1st.** When filling out the UToledo Supplemental Application, be sure to include all courses meeting the prerequisite courses. Please note: The Supplemental Application includes a fee of \$45.00. The UToledo Supplemental Application and fee must be submitted by September 1.

Applications will not be reviewed until the CASPA and UToledo Supplemental applications are completed, and the GRE and Casper scores are in.

4. Applicants must have earned at least a Bachelor level degree with a cumulative 3.40 grade point average and a 3.40 science grade point average. For those accepted into the UToledo PA program and entering in August, the Bachelor level degree must be completed by June 15th. The program uses all CASPA calculated GPAs.

5. All applicants are required to take the PA-CAT or the GRE.

- The PA-CAT (Physician Assistant College Admission Test) is a specialized test designed to measure applicant knowledge in key prerequisite science subjects typically required for PA school. For information about the PA-CAT and to schedule your exam, visit their website at www.PA-CAT.com (<https://www.pa-cat.com/>)

Step 1: Go to www.PA-CAT.com (<https://www.pa-cat.com/>) to register, pay and schedule your exam date for the PA-CAT.

- Ensure University of Toledo PA Program is selected as the institution to receive your score report in your PA-CAT Score Portal. You can access your PA-CAT Score Portal at www.pa-cat.com (<https://www.pa-cat.com/>).
- It is recommended that you take the PA-CAT exam early in the application cycle (March-June 2021) to be considered for early admission, but no later than August 31st, 2021. The PA-CAT score deadline September 10th, 2021. PA-CAT score is required prior to interviews. Interviews begin in June 2021 and will be conducted until seats are filled.

Step 2: Study for the PA-CAT with resources provided by Exam Master. Access instructions are included in your registration confirmation.

PA-CAT Study materials provided by Exam Master Include:

- Two 120 Question PA-CAT Practice Exams
- Eight 50-Question Subject Exams
- Pre-Matriculation Success Course
- Official GRE scores must be submitted electronically directly from ETS to the University; copies will not be accepted. The school code for UToledo is 1845. *Test scores cannot be older than 5 years from the first day of the term that student begins the program.*

6. Preference will be given to candidates who:

- Are underrepresented medical minorities, veterans, first generation college, and economically disadvantaged
- Receive a GRE score at 290 or above
- Attend four or fewer colleges/universities within the last eight years of admission into the program
- Successfully completed at least eight of ten program prerequisites on the first attempt
 - Receiving a grade below B- or 3.0 is considered unsuccessful completion.
- Have not repeated two or more course that meet the same prerequisite requirement
 - For example: unsuccessful completion of the same course twice

7. Altus Suite - admissions assessments of non-cognitive skills

All applicants applying to the Physician Assistant Program, at The University of Toledo are required to complete an online suite of assessments (Altus Suite), to assist with our selection process for the 2021-2022 Application Cycle.

How to Complete Altus Suite

In order to take Altus Suite, you will be responsible for securing access to a laptop or desktop computer with webcam and audio capabilities. You

will require the following for both account creation and completing Altus Suite:

Government-issued photo ID

Valid email address (the same one you will use to submit your application)

Working webcam

Working microphone

Reliable high-speed internet connection

1. Please go to <https://takealtus.com/> to sign up for Altus Suite for **Physician Assistant (CSP-10101 - U.S. Professional Health Sciences)**, under your specific country, and register using your CASPA ID and a piece of government-issued photo ID.
2. Select a Casper test date. You will be provided with a limited number of testing dates and times. Please note that these are the only testing dates available for your Casper test. There will be no additional tests scheduled. Please use an email address that you check regularly and that you have used for your application; there may be updates to the test schedule.
 - Important: To account for identity verification and payment processing timeline, ensure that you register for your test at least 3 days before your preferred test date and time. Last-minute bookings are not recommended.
3. Ensure you have **selected The University of Toledo Physician Assistant Program for distribution before the posted Distribution Deadline**. Likely, there will be no additional tests scheduled, but the most up to date information can be found by browsing the Test Dates and Times (<https://takealtus.com/dates-times/>) on TakeAltus.com (<https://takealtus.com/>).
4. You may complete Snapshot any time after you have registered for your Casper test at [www.TakeAltus.com](https://takealtus.com/) (<https://takealtus.com/>) and up to 10 days after completing your Casper test. After 10 days, you will no longer have access to Snapshot and your Altus Suite will be deemed incomplete.
5. Please direct any inquiries on Altus Suite to support@altus.as. Alternatively, you may use the chat bubble in the bottom right-hand corner of your screen on the [takeAltus.com](https://takealtus.com/) website (<https://takealtus.com/>).

Accommodations: If you require testing accommodations for Altus Suite you will need to submit the Accommodations Request Form (<https://takealtus.com/wp-content/uploads/2019/10/CASPer-Test-Accommodations-Request-Form-English.pdf>) signed by you and your qualified professional 3 weeks in advance of your desired test date. More information regarding accommodations can be found here. (<https://takealtus.com/faq/#accommodations>)

More About Altus Suite

Altus Suite consists of a two-part online assessment of non-cognitive skills, interpersonal characteristics, and personal values and priorities that we believe are important for successful students and graduates of our program. Altus Suite will complement the other tools that we use for

applicant screening. In implementing Altus Suite, we are trying to further enhance fairness and objectivity in our selection process.

Altus Suite consists of:

- **Casper:** a 60-90 minute online situational judgment test (SJT)
- **Snapshot:** a 10-minute one-way interview with standardized questions

About Casper

The Casper test comprises 12 sections of video and written scenarios. Following each scenario, you will be required to answer a set of probing questions under a time contract. The test typically takes between 75-90 minutes to complete. Each response is graded by a different rater, giving a very robust and reliable view of personal and professional characteristics important to our program. No studying is required for Casper, although you may want to familiarize yourself with the test structure at TakeAltus.com (<https://takealtus.com/>), and ensure you have a quiet environment to take the test. We strongly urge you to take advantage of the 12-section practice test, which will not only immerse you in the test environment, but will also ensure you meet the technical requirements to access and complete the test.

Casper test results are valid for one admissions cycle. Applicants who have already taken the test in previous years will therefore be expected to re-take it.

For a more detailed look at the Casper test, please see this video (<https://www.youtube.com/watch?v=wkbSXYLre8o>).

About Snapshot

Snapshot is a one-way interview tool that takes 15 minutes to complete. It is used to help programs get to know their applicants better by assessing verbal and non-verbal communication skills, as well as motivation for the profession. Snapshot includes 2 mandatory practice questions to allow applicants to get familiar with the format and to test their audio and video capabilities. After they complete the practice portion, they will move on to record responses to 3 standardized interview-style questions. Applicants have 2 minutes to record each response. They will have time to read and consider each question during a 30-second reflection period before they begin recording. All recorded responses will be submitted to the program for review.

Prerequisite Courses:

You *must* have the listed credit hours for all of the prerequisite courses. There are no exceptions to this rule and a waiver will not be offered for any of the prerequisite courses for any applicant. The prerequisite courses must have a letter grade on the transcript. Pass/fail grades will not be acceptable. Online labs will be acceptable for the 2020-2021 admission cycle due to the COVID pandemic.

The following minimum prerequisites must be completed with a grade of "B-" or better:

1. Human Anatomy and Physiology: 6 semester credit hours
 - > May be taken as Human Anatomy & Physiology I and Human Anatomy & Physiology II **or** as separate Human Anatomy and Human Physiology Courses

> If you take a 5 credit hour Human Anatomy and Physiology course, you will be required to take a combined Human Anatomy & Physiology course or a separate Human Anatomy and Human Physiology course to meet the remaining requirement

> Taking a lab or labs with these courses is strongly recommended

2. Inorganic Chemistry or General Chemistry with Lab

> Course **must** be at least 3 credit hours with an additional credit hour for the lab

3. Organic Chemistry or Biochemistry with Lab

> Course **must** be at least 3 credit hours with an additional credit hour for the lab

> May be taken as a combined Organic/Biochemistry course with a lab

4. Microbiology with Lab

> Course **must** be at least 3 credit hours with an additional credit hour for the lab

> Microbiology course **must** be taken through the Biology Department

5. Psychology: 6 semester credit hours

> Introductory Psychology and Lifespan Psychology are highly recommended

> Psychology courses **must** be taken through the Psychology Department

> We will not accept a Psychological Statistics course for this requirement

6. Genetics: 3 semester credit hours

7. College Algebra, Statistics, or any Higher Mathematics: 3 semester credit hours

8. Medical Terminology: 1 semester credit hour

> There must be a letter grade assigned to this course and listed on the transcript.

> Candidates may instead choose to take and pass a Medical Terminology test offered by the UToledo PA Program prior to matriculation. The test is taken at UToledo in the PA department. Candidates who choose to take the proficiency test and who do not pass the test, will be required to participate in a self-study program and retest or satisfactorily complete a medical terminology course at an accredited college or university on or before June 15th.

AP (Advanced Placement) or CLEP credits are **not** acceptable.

All prerequisite coursework identified above must be current within **eight (8) years** of admission to the program. For those who apply for entrance into the UToledo PA Program, all prerequisite coursework must have been completed eight years prior to enrollment in the fall of that matriculating year. For example, a student admitted for the PA class starting in Fall 2022 must have completed all prerequisites between Fall 2014 and June 15, 2022.

All prerequisites must be completed with a grade of "B-" or higher. For courses where separate grades are assigned for lecture and laboratory sections, the candidate must receive a grade of "B-" or higher for BOTH the lecture and lab.

For applicants enrolled at institutions that use a quarter system, credit hours are converted such that five (5) quarter hours = three (3) semester hours.

For applicants enrolled at institutions that use a combined letter grading scale (such as "AB" or "BC"), the only accepted grades are "A", "AB", or "B". Receiving a grade of "BC" does not meet the minimum grade requirement.

For applicants enrolled at institutions that use a point system for **course** grades, a 3.0 or higher is acceptable. Any grade lower than 3.0 is unacceptable.

Formal healthcare experience, shadowing of PAs or other healthcare providers, or patient contact hours are not required.

Prior to matriculation, candidates must present evidence that they are currently trained in basic cardiopulmonary resuscitation (CPR) according to American Heart Association standards (CPR training from other organizations will not be accepted). The Basic Life Support (BLS) training must be maintained throughout the program of study.

The University of Toledo College of Medicine and Life Sciences value added groups (current Ohio residents, graduates of The University of Toledo, non-traditional, underrepresented in medicine and veterans) are given some degree of preference.

The UToledo PA Program does not provide advanced placement or advanced standing for any students.

Admission Selection Process

Candidates for interviews will be selected from those with completed applications (both CASPA and UToledo PA Supplemental Application and Prerequisite Form) who meet the minimum entrance requirements and have completed or have a plan to complete all prerequisites by June 15 of the enrollment year. Candidates selected for interviews will be notified via email starting in September. Interviews will be conducted starting in September and will go through December. We now offer rolling admissions.

The selection process is highly competitive and merely meeting minimum entrance requirements does not guarantee an interview or admission to the program. There are many factors involved in the selection process, including but not limited to cumulative undergraduate or completed graduate grade point average, cumulative science grade point average, personal experiences, writing sample, recommendation letters, familiarity with the PA profession and the University, oral communication skills, professionalism, problem solving, and teamwork.

Based on a point scoring system with holistic consideration of each candidate, the Admissions Committee may recommend one of the following:

- **Acceptance:** Candidates with the highest scores (based on the candidate's completed CASPA application and interviews) will be recommended to the UToledo College of Graduate Studies for acceptance. The number of candidates recommended for acceptance will be determined annually by the PA Program class size. Following interviews, candidates are informed of acceptance by the end of April. An applicant may receive **conditional acceptance**, as described below.

- **Alternate/Wait List:** Individuals who interviewed but did not receive an offer of a seat in the class may be placed on an alternate list until the class is filled. Immediately following interviews, and the initial selection, candidates are placed on the alternate list and subsequently selected when a seat is declined. This will occur beginning in January and is usually completed by the end of July. Candidates not admitted from the alternate list must reapply if they wish to be considered for the following year.
- **Non-Acceptance:** Candidates not accepted will be notified via email. Candidates who are not accepted are informed at the end of the selection of candidates beginning July 1. Candidates wishing to be considered for the following year must reapply.

Admission Under "Conditional" Status

An applicant must complete the general admission requirements specified above. Circumstances which may result in a conditional admission include:

- > An applicant with a Bachelor's degree in progress (must be completed by June 15). An official transcript with the degree posted must be received prior to matriculation into the program.
- > An applicant who has any prerequisite courses to complete at the time of application may be admitted with conditional status, with a clear understanding that remaining prerequisites **must be** satisfactorily (grade of B- or higher) completed by June 15th for matriculation into the Program. Official transcripts or other appropriate documentation will be required.

Note: Government subsidized financial aid is not available for students admitted under conditional status.

Technical Standards for Admission

Our objective is to increase the opportunities for persons with disabilities, while maintaining the expectation that all students achieve the goals of the Program. The technical standards for admission establish the expectations and abilities considered essential for students admitted to the Physician Assistant Program in order to achieve the level of competency required for graduation and ultimately practice as a physician assistant. All students admitted to the PA Program are expected to be able to demonstrate the following abilities:

- must have the mental capacity to assimilate and learn a large amount of complex, technical and detailed information, to solve clinical problems, and synthesize and apply concepts and information from various disciplines in order to formulate diagnostic and therapeutic plans;
- must have the ability to maintain composure and emotional stability during periods of high stress;
- must have the ability to communicate effectively and sensitively with patients from different social and cultural backgrounds and develop effective professional rapport with patients and co-workers;
- must have the ability to record examination and diagnostic results clearly, accurately, and efficiently;
- must have adequate sensory function to fulfill minimum competency objectives for palpation, percussion, and auscultation necessary to perform a physical examination;

- must possess sufficient postural control, neuromuscular control, and eye-to-hand coordination to use standard medical/surgical instruments and possess sufficient control of the upper extremities to meet the physical requirements for training and for performing a safe physical examination;
- are expected to learn and perform common diagnostic and therapeutic procedures (e.g., blood drawing, suturing) and interpret the results;
- are expected to have the degree of coordination of motor skills necessary to respond to emergency situations quickly and appropriately.

Candidates are urged to ask questions about the program's technical standards for clarification and to determine whether they can meet the requirements with or without reasonable accommodations. Questions may be directed to the Program Director or Office of Student Disability Services. Revealing a disability is voluntary; however, such disclosure is necessary before any accommodations may be made in the learning environment or in the Program's procedures. Information about disabilities is handled in a confidential manner. Reasonable accommodations will be made to comply with the Americans with Disabilities Act. These require program and institutional approval. Requests for accommodations must be submitted in writing, allowing sufficient time prior to matriculation for action on these requests pursuant to Policy 01061, Nondiscrimination on the Basis of Disability.

Individuals selected for admission to the program must undergo a general physical examination and provide evidence of up-to-date immunization prior to the start of classes in the first year and again just prior to the beginning of clinical rotations in the second year. In addition, students are required to maintain health insurance and liability insurance coverage if planning to practice, volunteer, or shadow outside of their student role. Further information is contained in the College of Graduate Studies Handbook and will be reviewed in detail at orientation.

In order to complete the Physician Assistant Program, a student must pass each course set forth in the Program's curriculum outline including satisfactory completion and defense of the Scholarly Project, and all program requirements. In addition, a student must be in good academic standing after completing the prescribed program with a minimum grade point average of 3.0, as required by the College of Graduate Studies.

The UToledo PA Program no longer offers a deceleration plan, however, we do offer in-course intervention and end of course remediation. Students with scores on exams or assignments below the passing grade throughout the course will be provided with in-course interventions (e.g. tutorial session, additional written assignments, etc.). At the end of the semester, students with a cumulative grade no more than 10 percentage points below the passing grade will be provided the opportunity for end of course remediation per the program policy.

To remain in good academic standing in the Physician Assistant Program, a student must be able to demonstrate the possession of:

- a current cumulative grade point index of at least 3.0
- satisfactory grades, successful completion of each clinical rotation, and completion of all Program requirements

Failure to achieve each criterion listed above shall be adequate grounds for the Program Director to recommend probation or dismissal from the Program for academic deficiencies.

No D or F grades will be permitted as a final grade in any course.

In the event a student earns less than an overall GPA of 3.0 at the end of a semester, the student will be placed on academic probation. The student's progress will be reviewed each semester by the Student Progress Committee. The student may be restored to good academic standing by attaining a cumulative GPA of 3.0 or greater.

Students must pass the didactic courses with a minimum cumulative GPA of 3.0 before transitioning into the clinical portion of the program.

The Student Progress Committee shall consider recommending dismissal of a student from the Program to the Program Director on grounds of academic deficiencies if that student does one or more of the following:

- fails (earns a grade of "D or F") in a Program course
- fails to achieve a cumulative GPA of 3.0 after one semester on academic probation
- fails remediation in any course

Recommendations of the Program Director will be rendered to the Dean of the COMLS. Decisions of the Dean will be sent to the student in writing.

Students who are unable to meet Program requirements and are dismissed may reapply. Applicants must follow the stated application procedures to be considered for re-admission. Applicants for re-admission are evaluated, once annually, along with new applicants.

The revised program is pending review.

Medical Knowledge

Physician assistants are expected to understand, evaluate, and apply the following to clinical scenarios:

- evidence-based medicine
- scientific principles related to patient care
- etiologies, risk factors, underlying pathologic process, and epidemiology for medical conditions
- signs and symptoms of medical and surgical conditions
- appropriate diagnostic studies
- management of general medical and surgical conditions to include pharmacologic and other treatment modalities
- interventions for prevention of disease and health promotion/maintenance
- screening methods to detect conditions in an asymptomatic individual
- history and physical findings and diagnostic studies to formulate differential diagnoses

Interpersonal & Communications Skills

Physician assistants are expected to:

- create and sustain a therapeutic and ethically sound relationship with patients
- use effective communication skills to elicit and provide information
- adapt communication style and messages to the context of the interaction
- work effectively with physicians and other health care professionals as a member or leader of a health care team or other professional group
- demonstrate emotional resilience and stability, adaptability, flexibility, and tolerance of ambiguity and anxiety
- accurately and adequately document information regarding care for medical, legal, quality, and financial purposes

Patient Care

Physician assistants are expected to:

- work effectively with physicians and other health care professionals to provide patient centered care

- demonstrate compassionate and respectful behaviors when interacting with patients and their families
- obtain essential and accurate information about their patients
- make decisions about diagnostic and therapeutic interventions based on patient information and preferences, current scientific evidence, and informed clinical judgment
- develop and implement patient management plans
- counsel and educate patients and their families
- perform medical and surgical procedures essential to their area of practice
- provide health care services and education aimed at disease prevention and health maintenance
- use information technology to support patient care decisions and patient education

Professionalism

Physician assistants are expected to demonstrate:

- understanding of legal and regulatory requirements, as well as the appropriate role of the physician assistant
- professional relationships with physician supervisors and other health care providers
- respect, compassion, and integrity
- accountability to patients, society, and the profession
- commitment to excellence and on-going professional development
- commitment to ethical principles pertaining to provision or withholding of clinical care, confidentiality of patient information, informed consent, and business practices
- sensitivity and responsiveness to patients' culture, age, gender, and abilities
- self-reflection, critical curiosity, and initiative
- healthy behaviors and life balance
- commitment to the education of students and other health care professionals

Practice-based Learning & Improvement

Physician assistants are expected to:

- analyze practice experience and design practice-based improvement activities using a systematic methodology
- locate, appraise, and integrate evidence from scientific studies related to patient health
- apply knowledge of study designs and statistical methods to the appraisal of clinical literature and other information on diagnostic and therapeutic effectiveness
- utilize information technology to manage information, access medical information, and support their own education
- recognize and appropriately address personal biases

Systems-based Practice

Physician assistants are expected to:

- effectively interact with different types of medical practice and delivery systems
- understand the funding sources and payment systems that provide coverage for patient care and use the systems effectively
- recognize cost-effective health care and resource allocation that does not compromise quality of care
- apply quality improvement principles to promote a safe environment for patient care
- recognize system biases that contribute to health care disparities

- understand the concepts of population health and its relationship to patient care

Certificate in Bioinformatics and Biomarkers

The Biomarkers and Bioinformatics (BRIM) Certificate Program introduces students to the rapidly growing fields of bioinformatics, proteomics and genomics, and provides a core knowledge of analytical approaches used in these fields. It is particularly valuable for PhD students whose research would be strengthened by expertise in bioinformatics.

Applying to the BRIM/BPG Certificate Program

UT students who are currently in a PhD program:

1. Complete the Request to Add a Graduate Certificate form at the following link, and return to the Graduate School for processing: https://www.utoledo.edu/graduate/files/Request_to_add_a_grad_certific.pdf
2. Submit a letter of support from major advisor.

Applicants who are NOT UT graduate students:

1. Complete online application. <https://apply.utoledo.edu> (<https://apply.utoledo.edu/>)
2. Submit Official transcripts
3. Earned bachelors or graduate degree and GRE score
4. Statement of Purpose
5. Two letters of recommendation are required, three letters are optional. In the event that a student decides to pursue the BIPG MSBS degree, it will save time to have the letters of recommendation already on file.

MD/MSBS Bioinformatics Degree

This is designed for students already in our MD program, who want preparation for clinical research in gene therapy, biomarker discovery, or other aspects of cutting-edge medicine. It involves one year of coursework and research between the 2nd and 3rd years of the standard medical curriculum.

BS/MSBS "Pipeline" Program

This is an integrated program that can be completed in as little as 5.5 years, yielding both a University of Toledo bachelors of sciences in Biological Sciences and an MSBS in Bioinformatics. This reduced time is made possible in part by 9 University of Toledo credit hours being allowed to count towards both degrees. Students (University of Toledo biology majors) typically apply at the end of their second year, but can apply as incoming first-year students. For more information, go to the Pipeline Program website: <https://www.utoledo.edu/med/depts/bioinfo/pages/Pipeline.html>.

Students enrolled in the BRIM Certificate Program take four courses covering the following subject areas:

1. Introduction to the scope of bioinformatics, proteomics and genomics: "Fundamentals of BPG"
2. Training in statistical methods used in biomarker research and bioinformatics: "Statistical Methods in Bioinformatics"
3. Handling and manipulation of databases and introduction to computer programming skills needed to analyze large quantities of nucleic acid and protein sequence data: "Introduction to Bioinformatic Computation"
4. EITHER "Applications of BPG", in which faculty members using these methods will discuss and demonstrate how these techniques are utilized to solve research problems, OR "Biomarker Discovery, Validation and Implementation", in which faculty will provide an overview of biomedical discovery and validation techniques followed by application in selected aspects of individualized medicine.

Upon completion of the Program, students will be prepared to utilize biomarker research and bioinformatics techniques, and be able to interact with specialists in a range of biomedical sub-disciplines.

The curriculum consists of three, 3-credit courses, for a total of 9 credits, that can be taken over 1-4 years: BPG – (Bioinformatics and Proteomics/Genomics; BRIM-Biomarker Research and Individualized Medicine). The following shows the five available courses. The choice of which three courses to take should be made in consultation with the Program Director. Of BRIM 6200 and BIPG 6400, only one may be applied to the certificate.

Code	Title	Hours
Select three of the following:		9
BIPG 5100	Fund Bioinformatics Proteomics	
BIPG 5200	Statistical Methods in Bioinformatics	
BIPG 6100	Bioinformatic Computation	
<i>If only two of the above courses are chosen then select one of the two courses below:</i>		
BRIM 6200	Biomarker Disc,Valid & Impleme (even years)	
BIPG 6400	Applications of Bioinformatics (odd years)	

The curriculum consists of three, 3-credit courses, for a total of 9 credits (listed below) that can be taken over 1-4 years: (BPG – Bioinformatics and Proteomics/Genomics; BRIM- Biomarker Research and Individualized Medicine). Successful completion of any THREE of the following FIVE courses, except that only ONE of the two: "Applications in Bioinformatics" and "Biomarker Discovery, Validation and Implementation" may be taken due to partial overlap in their content.

BIPG 5100 Fundamentals in Bioinformatics

BIPG 5200 Statistical Methods in Bioinformatics

BIPG 6100 Bioinformatic Computation

If only two of the above courses are chosen then select:

EITHER BRIM 6200 Biomarker Discovery, Validation, and Implementation (even years)

OR BIPG 6400 Applications in Bioinformatics (odd years)

*BMSP6340 Current Problems & Research Approaches in Genes and Genomes, or equivalent course approved by the BRIM/BPG Program, is required for admission into the Bioinformatics & Biomarkers Certificate Program.

First Term		Hours
BIPG 5100	Fund Bioinformatics Proteomics	3
BIPG 5200	Statistical Methods in Bioinformatics	3
Hours		6
Second Term		
BIPG 6100	Bioinformatic Computation	3
or BIPG 6400	or Applications of Bioinformatics	
or BRIM 6200	or Biomarker Disc, Valid & Impleme	
Hours		3
Total Hours		9

BMSP 6340 Current Problems & Research Approaches or equivalent course approved by the BRIM/BPG Program, is required for admission into the Bioinformatics & Biomarkers Certificate Program.

NOTES: The above Plan of Study grid is only an example. University of Toledo PhD or MSBS students may also take individual BPG or BRIM courses as electives, with permission of the instructor. To receive a Certificate in Biomarkers and Bioinformatics, however, an online application to the program must be submitted and accepted. All applications will be reviewed by the BIPG Program Admissions Committee. The online application must be filed ONLY for those seeking a certificate, and is not required for those taking these courses as electives.

Students are able to describe and explain mammalian and nonmammalian genome structure and function.

Students are able to describe and explain processes of genome evolution.

Students are able to describe and use analytic tools associated with systems/bioinformatic approaches.

Students are able to choose and use appropriate tests for statistical analysis of macromolecular sequence information.

Students are able to develop and use basic PERL programs, and access supercomputers for bioinformatic analyses.

Students are able to apply bioinformatic methods to clinically-relevant problems, and describe and explain a) biomarker discovery and validation, and b) major human diseases such as cancer, diabetes, and autoimmunity.

Certificate in Pathology Fellowship

Pathology for Post-Second Year Medical Students Certificate
"Pre-Clinical Pathology Fellowship"

Student Learning Objectives

At the end of the fellowship, the students will be able to:

Autopsy Service

- perform a complete autopsy including evisceration, dissection and examination of the various organs including brain

- describe grossly and microscopically all organs from a given autopsy and provide a clinicopathologic correlation as to the cause of death

Surgical Pathology

- Perform gross and microscopic examinations on surgical specimens
- cut, stain and review frozen sections
- interpret frozen sections
- interpret gross and microscopic surgical pathology specimens

Clinical Pathology

- interpret peripheral blood smears
- provide clinicopathologic correlations for chemistry, microbiology and immunology tests
- perform phlebotomies on in- and out-patients

Electives and Scholarly Activities

- analyze scientific articles
- interpret EM specimens
- prepare and present scientific papers at annual scientific day

Teaching

- teach second year medical school labs

Students from LCME accredited medical schools who have completed their second year and are in good academic standing are eligible to apply for this program. While the American Board of Pathology gives up to 1 year credit toward certification for time spent as a Fellow, the Fellowship is not limited to those planning to make pathology a career.

- Successful completion of a second year medical school curriculum from an LCME accredited medical school with grades equivalent to a GPA ≥ 3.0 .
- GRE exam not required

First Term		Hours
PATH 6060	Surgical Clinical Rotation	2
PATH 6070	Intro Clinical Lab Medicine	2
PATH 6080	Postmortem Clinical Rotation	2
PATH 6890	Independent Study in Pathology	1
Hours		7
Second Term		
PATH 6060	Surgical Clinical Rotation	2
PATH 6070	Intro Clinical Lab Medicine	2
PATH 6080	Postmortem Clinical Rotation	2
PATH 6890	Independent Study in Pathology	1
Hours		7
Third Term		
PATH 6060	Surgical Clinical Rotation	2
PATH 6070	Intro Clinical Lab Medicine	2
PATH 6080	Postmortem Clinical Rotation	2
Hours		6
Total Hours		20

1. To perform a complete autopsy including gross and microscopic examination as well as clinical pathology correlation.
2. To perform gross and microscopic assessment of surgical pathology specimens including the interpretation of frozen and permanent sections.
3. To interpret clinical laboratory tests and provide correlations with patient's clinical condition.
4. Scholarly project. Develop a researchable question, use appropriate research strategies and techniques to generate a scholarly response to the question and the finds of the project will be presented at the departments annual scientific day.

College Policies (Graduate Handbook)

COLLEGE OF GRADUATE STUDIES: GRADUATE STUDENT HANDBOOK (<http://www.utoledo.edu/graduate/currentstudents/pdfs/Graduate%20Student%20Handbook%202018-2019.pdf>)

- College Policies and Procedures (p. 571)
- Academic Regulations (p. 572)
- Other Policies and Information (p. 577)

Graduate Programs

The College of Medicine & Life Sciences at the University of Toledo offers several graduate-level degree and certificate programs. PhD and MS degrees in biomedical sciences and academic certificates are offered in several basic science and clinical tracks.

Admission to Graduate Programs

Admission requirements for College of Graduate Studies are discussed in the general College of Graduate Studies (p. 571) section of the University of Toledo Catalog; other admission procedures are described under the individual graduate programs. Admission to graduate study in the College of Medicine & Life Sciences is open to graduates of accredited colleges and universities meeting the minimum admission requirements of the College of Graduate Studies as well as specific admission requirements of the department and/or program. Previously admitted students wishing to transfer to a different program must apply for admission to the new program. Admission to one graduate program does not guarantee admission to another graduate program. Please refer to the degree or program descriptions for specific information.

Administration of Programs

All graduate programs in the College of Medicine & Life Sciences are administered jointly by the College of Medicine & Life Sciences and the College of Graduate Studies of the University of Toledo. Students may contact specific departments or programs, the college's graduate advisor, or the College of Graduate Studies for further information on programs or admission requirements. Student should be aware that course names/credit hours may be revised over the course of the program per the department or program requirements. Please consult with your department or program regarding course/credit hour changes.

Advising

Students must meet with their faculty advisor for the purpose of developing a Plan of Study. It is the student's responsibility to meet all requirements for the degree as specified by the graduate program, the

department, the College of Graduate Studies and the University of Toledo. Students are encouraged to complete the Plan of Study no later than the first academic year and submit the completed, signed form to the College of Graduate Studies.

Academic Standards

In addition to the general academic standards outlined in the general section of the College of Graduate Studies Catalog, for the following programs, a maximum number of credits of C will be allowed on a candidate's Plan of Study as listed below:

- 10 credits PhD degree (biomedical sciences - all tracks)
- 8 credits MSBS research tracks (including CAB, MOME, MMIM, NND, and BIPG); and MSN degree
- 11 credits Physician Assistant Program (PA)
- 12 credits MSBS clinical track programs including MS Medical Sciences (unless stated otherwise)
- 3 credits Certificate programs

In addition, students in all graduate programs at UT must earn a cumulative GPA of 3.0 to graduate.

Departments/Divisions

Department of Cancer Biology (p. 281)

Department of Family Medicine (p. 285)

Department of Medical Microbiology & Immunology (p. 286)

Department of Neurosciences (p. 290)

Department of Orthopedic Surgery (p. 291)

Department of Pathology (p. 292)

Department of Physiology & Pharmacology (p. 294)

Department of Radiology and Department of Radiation Oncology (p. 299)

Department of Urology (p. 303)

Division of Dentistry (p. 303)

Department of Cancer Biology

Jian-Tian Zhang, Ph.D., chair

Kandace Williams, Ph.D., co-track director

Xiaohong Li, Ph.D., co-track director

The Cancer Biology track within the Biomedical Science Program at the University of Toledo fosters young scientists to become cutting-edge researchers who understand the molecular and genetic basis of cancer and the knowledge to develop improved therapies for human cancer. Students in the Cancer Biology track develop scientific thinking and laboratory skills to approach cancer research questions in ways that will best lead to success. Graduates of the Cancer Biology program move on to become successful scientists and leaders in academic, government, and industrial settings. CAB students may pursue the Doctor of Philosophy (PhD) degree or, after acceptance into the medical school,

a combined MD/PhD degree. The Masters' degree in Cancer Biology is not currently offered.

The CAB program faculty research interests and areas of expertise are:

1) Control of tumor cell growth and death, 2) Signal transduction, 3) Mechanisms of cancer cell motility and chemotaxis, 4) Invasion and metastasis, 5) Molecular genetics of cancer risk, 6) Influence of tumor microenvironment on cancer progression and metastasis, 7) Protein trafficking, 8) Epigenetic regulation of oncogenes and tumor suppressor genes, 9) Chromatin remodeling and mechanisms of DNA repair, 10) Nitric oxide signaling alterations in cancer cells and 11) Adipogenesis and pre-adipocyte/adipocyte functions; Role of adipokines in cancer.

Cancer Biology PhD students enroll in a first-year core curriculum that is designed to provide a foundation of knowledge for cutting edge research. The first-year curriculum provides students with a comprehensive overview of molecular and cellular biology, systems pathophysiology, modern research methodology, and statistical analysis. In addition, students complete laboratory rotations during the first two semesters to identify a Cancer Biology major advisor and laboratory for their dissertation research project. PhD students complete three rotations and then may join a Cancer Biology laboratory in the spring semester of their first year. Doctoral students in good academic standing may be supported financially by a tuition scholarship and stipend during their academic training. This financial assistance does not require the student to be a Teaching Assistant for undergraduates, thus enabling the student to more fully concentrate on his/her graduate program.

Degrees Offered

- Ph.D in Biomedical Science - Cancer Biology (p. 249)

CABP 6250 Scientific Communication Skills and Career Goals

[2 credit hours]

Three-fourths of the course will be focused on individual, small group, and whole class participation in communication skills. One fourth of the class will be devoted to information and assessment of individual career options. Web based assessment tools and outside expertise will be recruited for this portion of the class.

Term Offered: Spring

CABP 6270 Advanced Cancer Biology

[3 credit hours]

A comprehensive examination of the cellular and molecular foundation of cancer. Topics to be covered include: neoplasia; epidemiology and etiology; the role of causative agents such as chemicals, radiation, and viruses; cell proliferation, injury, and death; oncogenes; tumor suppressor genes; and an overview of cancer therapy.

Term Offered: Spring, Fall

CABP 6560 Readings in Cancer Biology

[1 credit hour]

A readings and discussion course that will examine classic and current research publications from within the broad realm of cancer biology.

Term Offered: Spring

CABP 6730 Research in Cancer Biology

[1-15 credit hours]

CABP 6890 Ind Study in Cancer Biology

[1-15 credit hours]

Intensive study in the field of cancer biology including theoretical and experimental work. May be repeated for credit.

Term Offered: Spring, Summer, Fall

CABP 6990 Thesis Research in Cancer Biol

[1-15 credit hours]

CABP 8250 Scientific Communication Skills and Career Goals

[2 credit hours]

Three-fourths of the course will be focused on individual, small group, and whole class participation in communication skills. One fourth of the class will be devoted to information and assessment of individual career options. Web based assessment tools and outside expertise will be recruited for this portion of the class.

Term Offered: Spring

CABP 8270 Advanced Cancer Biology

[3 credit hours]

A comprehensive examination of the cellular and molecular foundation of cancer. Topics to be covered include: neoplasia; epidemiology and etiology; the role of causative agents such as chemicals, radiation, and viruses; cell proliferation, injury, and death; oncogenes; tumor suppressor genes; and an overview of cancer therapy.

Term Offered: Spring, Fall

CABP 8560 Readings in Cancer Biology

[0.5 credit hours]

This course is designed for Ph.D students to develop professional skills in seminar comprehension, critical peer review, scientific presentation, and communication.

Term Offered: Spring, Fall

CABP 8730 Research in Cancer Biology

[1-15 credit hours]

CABP 8890 Ind Study in Cancer Biology

[1-15 credit hours]

Intensive study in the field of cancer biology including theoretical and experimental work. May be repeated for credit.

Term Offered: Spring, Summer, Fall

CABP 9990 Dissertation Research CABP

[1-15 credit hours]

Ph.D in Biomedical Science - Cancer Biology

JianTing Zhang, Ph.D., chair

Kandace Williams, Ph.D., co-track director

Xiaohong Li, Ph.D., co-track director

The Cancer Biology track within the Biomedical Science Program at the University of Toledo fosters young scientists to become cutting-edge researchers who understand the molecular and genetic basis of cancer and the knowledge to develop improved therapies for human cancer. Students in the Cancer Biology track develop scientific thinking and laboratory skills to approach cancer research questions in ways that will best lead to success. Graduates of the Cancer Biology program move on to become successful scientists and leaders in academic, government, and industrial settings. CAB students may pursue the Doctor

of Philosophy (PhD) degree or, after acceptance into the medical school, a combined MD/PhD degree. The Masters' degree in Cancer Biology is not currently offered.

The CAB program faculty research interests and areas of expertise are: 1) Control of tumor cell growth and death, 2) Signal transduction, 3) Mechanisms of cancer cell motility and chemotaxis, 4) Invasion and metastasis, 5) Molecular genetics of cancer risk, 6) Influence of tumor microenvironment on cancer progression and metastasis, 7) Protein trafficking, 8) Epigenetic regulation of oncogenes and tumor suppressor genes, 9) Chromatin remodeling and mechanisms of DNA repair, 10) Nitric oxide signaling alterations in cancer cells and 11) Adipogenesis and pre-adipocyte/adipocyte functions; Role of adipokines in cancer.

Cancer Biology PhD students enroll in a first-year core curriculum that is designed to provide a foundation of knowledge for cutting edge research. The first-year curriculum provides students with a comprehensive overview of molecular and cellular biology, systems pathophysiology, modern research methodology, and statistical analysis. In addition, students complete laboratory rotations during the first two semesters to identify a Cancer Biology major advisor and laboratory for their dissertation research project. PhD students complete three rotations and then may join a Cancer Biology laboratory in the spring semester of their first year. Doctoral students in good academic standing may be supported financially by a tuition scholarship and stipend during their academic training. This financial assistance does not require the student to be a Teaching Assistant for undergraduates, thus enabling the student to more fully concentrate on his/her graduate program.

Cancer Biology Track

All CAB students are expected to give a CAB student seminar every year, except when the student's graduate advisory committee approves that s/he may begin writing their dissertation, that student may be exempt from giving a seminar but is still required to attend all CAB seminars during this time. CAB students are also required to present posters in the annual COMLS Graduate Student Research Forums and oral presentations in the annual Larry Gentry Research Symposia beginning in their second year.

The PhD Qualifying Exam is taken in the Fall semester of the second year. Prior to completing the exam, students should carry out their dissertation research under the course Research in (CABP 6730) or in some cases, Independent Study in (CABP 6890). After passing the Qualifying Exam, students conduct their research under the course Dissertation Research (CABP 9990).

The minimum number of credits required for PhD is 90, with a minimum of 24 credits of didactic coursework (letter grade), and a minimum of 30 credits of dissertation research. The remaining credits are approved electives and research in the Cancer Biology track.

ELEVENTH TERM		

Year 5 and beyond (Total 1 credit all semesters)		
CABP 9990	Dissertation Research CABP	1

Cancer Biology Track

All CAB students are expected to give a CAB student seminar every year, except when the student's graduate advisory committee approves that s/he may begin writing their dissertation, that student may be exempt from giving a seminar but is still required to attend all CAB seminars during this time. CAB students are also required to present posters in the annual COMLS Graduate Student Research Forums and oral presentations in the annual Larry Gentry Research Symposia beginning in their second year.

The PhD Qualifying Exam is taken in the Fall semester of the second year. Prior to completing the exam, students should carry out their dissertation research under the course Research in (CABP 6730) or in some cases, Independent Study in (CABP 6890). After passing the Qualifying Exam, students conduct their research under the course Dissertation Research (CABP 9990).

The minimum number of credits required for PhD is 90, with a minimum of 24 credits of didactic coursework (letter grade), and a minimum of 30 credits of dissertation research. The remaining credits are approved electives and research in the Cancer Biology track.

EDUCATIONAL PROGRAM OBJECTIVES FOR THE CANCER BIOLOGY TRACK

First-Year Core Curriculum SLOs

Upon completion of the first-year Core Curriculum, a BMSP Ph.D. student will be able to:

FY1. Identify and summarize the structure and function of cells, tissues, and organs

FY2. Describe the molecular, biochemical, and cellular mechanisms that maintain the normal function, development, and plasticity of cells, tissues, and organs

FY3. Summarize basic disease causes and processes that affect the structure and function of cells, tissues, and organs

FY4. Assess and critically analyze relevant basic science and clinical literature.

FY5. Design and conduct applicable biomedical sciences experiments.

FY6. Organize, interpret and summarize results of applicable biomedical sciences experiments.

FY7. Demonstrate ethical and responsible conduct in research and all other scholarly activities consistent with the University of Toledo, College of Medicine and Life Sciences.

K1 Knowledge of the normal structure and function of the body and its organ systems.

K2 Knowledge of molecular, biochemical, and cellular mechanisms important in maintaining the body's homeostasis.

K3 Knowledge of the molecular mechanisms of oncogenic transformation from initiation of cells through tumor metastasis.

K4 Knowledge of the pathophysiology of prominent types of cancer.

K5 Knowledge of basic bioinformatic and statistical methods used in the design and interpretation of research projects.

K6 Knowledge of the principles and legal responsibilities that govern responsible conduct of research, the ethical care and use of animals in research, and the accurate reporting of research results.

S1 The ability to perform laboratory procedures necessary for the completion of the student's dissertation (Ph.D.) or thesis (M.S.) research project(s).

S2 The ability to design and complete an independent research project.

S3 The ability to perform research productively as an individual or member of a research team.

S4 The ability to communicate research findings effectively, both orally and in writing.

S5 The ability to retrieve (from electronic databases and other sources), manage, and utilize biomedical information for solving problems that are relevant to the appropriate completion of a research project, and accurate reporting of the results.

P1 Ethical, responsible, and reliable behavior in all aspects of their professional lives.

P2 Honesty and integrity in all interactions with colleagues, research subjects, and others with whom students may interact in their professional lives.

P3 Professionalism in dress and grooming in compliance with health and safety rules applicable to research laboratories and to other institutional and public sites.

P4 Respect and adherence to all laws and regulations governing the biomedical research use of animals and patient materials, and for all patient privacy issues.

Department of Family Medicine

Linda Speer, MD, FAAFP, Department Chair

April Gardner, MSBS, PA-C, Physician Assistant Studies Division Chief and Program Director

The Department of Family Medicine was first established in 1974 and consists of the Family Medicine Residency Program and the Physician Assistant Studies Program. Our mission statement is to improve the health of people of all ages in their family and community contexts through education, clinical practice, and the advancement of knowledge of our discipline.

Physician Assistants (PAs) are health professionals, prepared to practice medicine with physician supervision. Within the physician/PA relationship, PAs exercise autonomy in decision-making and provide a wide range of diagnostic and therapeutic services. The role of the PA includes provision of primary and specialty care in medical and surgical practices located in rural, urban or suburban areas. Physician assistant practice is patient care centered but may include education, research and administrative duties.

The University of Toledo (UToledo) Physician Assistant Program is a graduate entry-level professional course of study enabling individuals who hold baccalaureate degrees to become PAs. The program is designed to prepare graduates for primary care practice with emphasis placed on both service to medically under-served populations and the team approach to the delivery of healthcare. The program integrates graduate level critical thinking and analysis, problem solving, scientific inquiry, self-directed learning and the effective use of modern technology for professional practice that includes elements of research, leadership, education and continued professionalization of the physician assistant occupation.

- MSBS in Physician Assistant Studies (p. 272)

Department of Medical Microbiology & Immunology

Z. Kevin Pan, Ph.D., Chair

Z. Kevin Pan, Ph.D., Co-Track Director

Jason Huntley, Ph.D., Co-Track Director

The Medical Microbiology and Immunology (MMIM) (formerly Infection, Immunity and Transplantation) training program at the University of Toledo on the Health Science Campus offers the PhD, MD/PhD, and MSBS degrees through the interdisciplinary degree programs in Biomedical Sciences. The primary goal of the doctoral program in Medical Microbiology and Immunology is to train students for independent, creative careers in research and/or teaching.

MMIM PhD students enroll in a 1st year core curriculum that provides a comprehensive overview of biochemistry/protein biology, molecular and cellular biology, molecular basis of diseases, research methodology, ethics, and statistical analyses. PhD students complete three laboratory rotations during their 1st year and join a MMIM laboratory during the spring semester of their 1st year. In the 2nd year and beyond, MMIM PhD students take advanced and elective courses, including advanced immunology, advanced microbiology, current topics in MMIM (journal club and departmental seminar series), and dissertation research. Other training activities include formal research presentations at annual Medical Microbiology and Immunology Departmental retreats, Council for Biomedical Graduate Student research forums, and presentations at regional, national, and international conferences. All PhD students in good academic standing (GPA > 3.0) may be supported by a tuition scholarship and stipend during their academic training. This financial assistance does not require the student to be a Teaching Assistant for undergraduates, thus enabling the student to concentrate on his/her graduate research. Teaching experiences can be arranged if a student desires this training as well. All PhD students are required to complete a written dissertation and defend his/her research project at a final oral defense before the degree will be conferred.

MMIM students are strongly encouraged to join laboratories of MMIM primary faculty. Other faculty in the College of Medicine and Life Sciences may have joint appointments in MMIM or may serve on graduate advisory committees. After joining a laboratory, a graduate advisory committee is jointly chosen by the student and advisor to promote academic progress toward completion of the PhD degree. The MMIM Department occupies recently-renovated space and maintains state-of-the-art equipment to answer complex microbiology and immunology questions, including studies on host-pathogen interactions and immune-mediated diseases.

Degrees Offered

- MSBS in Medical Microbiology and Immunology (p. 266)
- Ph.D in Biomedical Science - Medical Microbiology and Immunology (p. 254)

BMSP 5320 Statistical Methods I

[3 credit hours]

Introduction to statistical methods with emphasis on problems in the biomedical sciences. Included are descriptive statistics, probability theory, statistical inference, experimental design and simple statistical tests.

Term Offered: Summer

BMSP 6250 Grant Writing Workshop

[2 credit hours]

This is an interdisciplinary course designed to teach students skills in developing a research plan in the form of a grant proposal.

Term Offered: Spring

BMSP 6310 Systems Pathophysiology I

[2.5 credit hours]

The course will cover the fundamentals and current research efforts in biomedical sciences, emphasizing diseases of the cardiovascular, immune, and nervous systems, as well as metabolic and infectious diseases.

Term Offered: Spring

BMSP 6320 Systems Pathophysiology II

[2.5 credit hours]

The course will cover the fundamentals and current research efforts in biomedical sciences, emphasizing diseases of the cardiovascular, immune, and nervous systems, as well as metabolic and infectious diseases.

Term Offered: Spring

BMSP 6330 Current Problems and Research Approaches in Proteins

[2 credit hours]

The course will cover principles of protein structural organization, basics of protein chemistry and structure/function relationships in proteins. Special emphasis will be given to the modern trends in protein science including research in proteomic aspects of system biology and biomedical applications of proteomics.

Term Offered: Fall

BMSP 6340 Curr Prob Res App Genes/Genom

[2 credit hours]

This course provides an introduction to major areas of current research in genetics and molecular biology. Topics include gene structure and regulation, DNA replication, recombination, repair, mutation, and quantitative genetics.

Term Offered: Fall

BMSP 6350 Cell Biology & Signaling

[3 credit hours]

The content of this course will encompass didactic lectures on current knowledge and methodological approaches in the area of fundamental cellular processes and cell communication.

Term Offered: Spring

BMSP 6360 Current Problems and Research Approaches in Cell Membranes

[2 credit hours]

This course will explore vital roles played by plasma and intracellular membranes in communication and homeostasis, and by membrane lipid/protein interactions in defining cytoarchitecture, protein sorting, excitability and synaptic transmission.

Term Offered: Fall

BMSP 6370 Recent Advances in NND Journal

[1 credit hour]

Forum for the presentation, critique, and discussion of recent primary literature important to the development of the field of biomedical science.

Term Offered: Spring

BMSP 6380 Methods in Biomedical Sciences

[2 credit hours]

This course will cover the basic principles and applications, of state-of-the-art technology in molecular biology, protein chemistry, and studies with culture cells, tissue explants and transgenic animal models.

Term Offered: Fall

BMSP 6390 Mentored Research

[1-15 credit hours]

Students will be mentored in biomedical research and will gain familiarity with research projects ongoing in graduate laboratories. May be repeated for credit.

Term Offered: Spring, Summer, Fall

BMSP 6400 BPG Intro to Mthds in Bio Sci

[1 credit hour]

Introduction to biomedical methods. Required for Bioinformatics, Proteomics and Genomics (BPG) MSBS (but not certificate) students. An abbreviated version of BMSP 638, BMSP 640 runs for first 8 weeks of Fall semester.

Term Offered: Fall

BMSP 6470 System Pathophysiology

[4 credit hours]

This course provides an understanding of fundamental processes underlying pathophysiology, which occur at the cellular and organ level and lead to impairment of physiology processes. The course is organized into 6 blocks providing knowledge on the malfunctions of physiological systems, including cardiovascular, renal, skeletal, endocrinology, immunology, neural system, and cancer, and an introduction to pharmacology and applied bioinformatics.

Term Offered: Spring

BMSP 7320 Statistical Methods I

[3 credit hours]

Introduction to statistical methods with emphasis on problems in the biomedical sciences. Included are descriptive statistics, probability theory, statistical inference, experimental design and simple statistical tests.

Term Offered: Summer

BMSP 8250 Grant Writing Workshop

[2 credit hours]

This is an interdisciplinary course designed to teach students skills in developing a research plan in the form of a grant proposal.

Term Offered: Spring

BMSP 8310 Systems Pathophysiology I

[2.5 credit hours]

The course will cover the fundamentals and current research efforts in biomedical sciences, emphasizing diseases of the cardiovascular, immune, and nervous systems, as well as metabolic and infectious diseases.

Term Offered: Spring

BMSP 8320 Systems Pathophysiology II

[2.5 credit hours]

The course will cover the fundamentals and current research efforts in biomedical sciences, emphasizing diseases of the cardiovascular, immune, and nervous systems, as well as metabolic and infectious diseases.

Term Offered: Spring

BMSP 8330 Curr Prob Res App Protein Str

[2.5 credit hours]

The course will cover principles of protein structure/function relationships in proteins, protein folding, ligand-protein interactions and mechanisms of enzyme-catalyzed reactions. Special emphasis will be given to the present-day research.

Term Offered: Fall

BMSP 8340 Curr Prob Res App Genes/Genome

[2 credit hours]

This course provides an introduction to major areas of current research in genetics and molecular biology. Topics include gene structure and regulation, DNA replication, recombination, repair, mutation, and quantitative genetics.

Term Offered: Fall

BMSP 8350 Cell Biology & Signaling

[3 credit hours]

The content of this course will encompass didactic lectures on current knowledge and methodological approaches in the area of fundamental cellular processes and cell communication.

Term Offered: Spring

BMSP 8360 Curr Prob Cell Membranes

[2.5 credit hours]

This course will explore vital roles played by plasma and intracellular membranes in communication and homeostasis, and by membrane lipid/protein interactions in defining cytoarchitecture, protein sorting, excitability and synaptic transmission.

Term Offered: Fall

BMSP 8380 Methods Biomedical Sciences

[2.5 credit hours]

This course will cover the basic principles and applications, of state-of-the-art technology in molecular biology, protein chemistry, and studies with culture cells, tissue explants and transgenic animal models.

Term Offered: Fall

BMSP 8390 Mentored Research

[1-15 credit hours]

Students will be mentored in biomedical research and will gain familiarity with research projects ongoing in graduate laboratories. May be repeated for credit.

Term Offered: Spring, Summer, Fall

BMSP 8470 System Pathophysiology

[4 credit hours]

This course provides an understanding of fundamental processes underlying pathophysiology, which occur at the cellular and organ level and lead to impairment of physiology processes. The course is organized into 6 blocks providing knowledge on the malfunctions of physiological systems, including cardiovascular, renal, skeletal, endocrinology, immunology, neural system, and cancer, and an introduction to pharmacology and applied bioinformatics.

Term Offered: Spring

MICB 5020 Medical Microbiology II

[5 credit hours]

MICB 6200 Microbiology Human Infections

[3 credit hours]

A series of lectures describing the classification, replication strategies and structural composition of the major families of animal viruses that infect humans.

MICB 6210 Advanced Virology

[3 credit hours]

An in-depth analysis of current research in virology including the reading and analysis of recently published papers on the replication and molecular biology of animal viruses, particularly viruses belonging to the Togaviridae and coronaviridae and the bacterial and plant viruses that are homologous to these two families of animal viruses.

MICB 6220 Laboratory Molecular Virology

[4 credit hours]

A laboratory course in which the students will learn to grow tissue culture cells and grow, quantify, purify, and analyze animal viruses. The student will complete a research project on a problem concerning the molecular biology of animal virus replication.

MICB 6890 Independent Study Microbiology

[0-15 credit hours]

Intensive study in field of interest, including theoretical and experimental work. May be repeated for credit

Term Offered: Spring, Summer, Fall

MICB 8200 Microbiology Human Infections

[3 credit hours]

A series of lectures describing the classification, replication strategies and structural composition of the major families of animal viruses that infect humans.

MICB 8210 Advanced Virology

[3 credit hours]

An in-depth analysis of current research in virology including the reading and analysis of recently published papers on the replication and molecular biology of animal viruses, particularly viruses belonging to the Togaviridae and coronaviridae and the bacterial and plant viruses that are homologous to these two families of animal viruses.

MICB 8220 Laboratory Molecular Virology

[4 credit hours]

A laboratory course in which the students will learn to grow tissue culture cells and grow, quantify, purify, and analyze animal viruses. The student will complete a research project on a problem concerning the molecular biology of animal virus replication.

MICB 8890 Independent Study Microbiology

[0-15 credit hours]

Intensive study in field of interest, including theoretical and experimental work. May be repeated for credit

Term Offered: Spring, Summer, Fall

MSBS in Medical Microbiology & Immunology

The Medical Microbiology and Immunology (MMIM) (formerly Infection, Immunity and Transplantation) track participates in the masters in Biomedical Sciences training program. Students are expected to

complete a core curriculum similar to that of doctoral students but with some of the courses as elective offerings, to experience one or more rotations before selecting a major advisor and thesis laboratory. In addition to 40 credit hours in didactic and other courses, including a minimum of 10 credit hours of thesis research is required for degree. Students are required to successfully pass a qualifying exam and to write and defend a research thesis. Students usually complete the degree requirements in 2-3 years.

All PhD students must pass their Qualifying Exam by the end of the Fall semester (December) of the 2nd year. Before passing the Qualifying Exam, Ph.D. students should conduct research by registering for

'Research in MMI' (Satisfactory/Unsatisfactory; MMIM6890). After passing the Qualifying Exam, Ph.D. students should conduct their research by registering for Dissertation Research in MMI (MMIM9990).

The minimum number of credits required to obtain a Ph.D. is 90, with a minimum of 25 credits of didactic coursework (letter grade), and a minimum of 30 credits of dissertation research. The remainder of the credits are approved electives and research in the Medical Microbiology and Immunology track.

All Ph.D. students are required to register for Current Topics in MMIM (MMIM8030) during all fall and spring semesters while they are enrolled as a student. When a student's graduate advisory committee approves that he/she may begin writing their dissertation, that student then may be exempt from registering for Current Topics in MMIM.

Department of Neurosciences

Robert McCullumsmith, M.D., -Ph.D., chair

David Giovannucci, Ph.D., track director

The combination of molecular biology and genetics with modern neuroanatomical techniques is transforming both our ability to examine and to understand the nervous system. Ongoing research by the faculty in the Neurosciences and Neurological Disorders graduate program is providing insights into neurotransmission, sensory system function, development and plasticity of the nervous system, regeneration and repair following neural damage, the basis of neural disease, and behavior. As one of four biomedical science degree programs in the University of Toledo, College of Medicine & Life Sciences, the Neurosciences and Neurological Disorders program is an interdisciplinary course of studies whose primary goal is to train students for independent, creative careers in biomedical research and/or teaching. The program awards both PhD and MSBS in biomedical sciences degrees and participates in the MD/PhD and MD/MSBS combined degree programs. Nationally-recognized, NIH-funded Neuroscience faculty who serve as research mentors are drawn from a number of departments including: Neurosciences, Neurology, Physiology and Pharmacology, Otolaryngology, Psychiatry and Radiation Therapy. Modern, state-of-the-art research laboratory and core facilities are available through the program and these participating departments.

The Neurosciences and Neurological Disorders training program at the University of Toledo on the Health Science Campus offers the PhD, or MD/PhD degrees through the interdisciplinary degree programs in Biomedical Sciences. The primary goal of the doctoral program in Neurosciences and Neurological Disorders is to train students for independent, creative careers in research and/or teaching. The curriculum for the PhD degree consists of a core of concentrated course work in the first year, followed by specialized elective courses and an emphasis on laboratory research. Elective courses are offered in developmental and systems neuroscience, as well as ion channel function, sensory physiology, and neuropharmacology. During the first two semesters, each student rotates through four research laboratories, conducting short-term projects, gaining exposure to techniques and identifying potential areas for further investigation. At the end of the second semester, each student selects a major advisor who directs the student's doctoral or thesis research. A faculty committee is also jointly chosen by the student and advisor to supervise academic progress toward completion of the PhD or MSBS degree. In addition to 90 credit hours in didactic and other

courses, PhD students are required to successfully pass a qualifying exam and to write and defend a research dissertation. *Masters students complete a minimum of 40 credit hours and write and defend a research thesis.

*** MSBS in Neuroscience and Neurological Disorders is not currently offered**

Degrees Offered

No results found.

NNDP 5810 Neuroscience

[5 credit hours]

A survey of medical neuroscience, taught as part of the medical school curriculum. It includes lectures, laboratories, and patient-presentation sessions.

NNDP 6010 Neurosciences Neurolog Disease

[2 credit hours]

NNDP 6500 Seminar in Neuroscience

[1 credit hour]

Training and practice in presenting seminars on neuroscience research. May be repeated for credit.

Term Offered: Spring

NNDP 6540 Jnl Paper Review Neuroscience

[2 credit hours]

A weekly report on recent advances in neurobiology taken from original papers to give the students an opportunity to find, critically assess, and report on these studies. Students will develop skills for communicating scientific ideas in a seminar format. May be repeated for credit.

Term Offered: Spring

NNDP 6560 Readings in Neuroscience

[1-4 credit hours]

Tutorial course between major advisor and student to acquaint student with important writings relevant to neuroscience concepts. May be repeated for credit.

Term Offered: Summer, Fall

NNDP 6720 Current Topics in Neuroscience

[1-4 credit hours]

Tutorial course between major advisor and student to acquaint student with the range of topics of current major interest in neuroscience research. May be repeated for credit.

Term Offered: Fall

NNDP 6730 Research in NNDP

[1-15 credit hours]

NNDP 6890 Independ Study in Neuroscience

[1-12 credit hours]

Independent library and laboratory work under the supervision of the major advisor. May be repeated for credit.

Term Offered: Summer, Fall

NNDP 6990 Thesis Research Neurosci Neuro

[1-15 credit hours]

NNDP 7810 Neuroscience

[6 credit hours]

A survey of medical neuroscience, taught as part of the medical school curriculum. It includes lectures, laboratories, and patient-presentation sessions.

Term Offered: Spring

NNDP 8010 Neurosci Neuro Diseases

[2 credit hours]

The objectives of the course are to study nervous system development, organization and structure and of nervous system-related diseases.

NNDP 8500 Seminar in Neuroscience

[1 credit hour]

Training and practice in presenting seminars on neuroscience research. May be repeated for credit.

Term Offered: Spring

NNDP 8540 Jnl Paper Review Neuroscience

[2 credit hours]

A weekly report on recent advances in neurobiology taken from original papers to give the students an opportunity to find, critically assess, and report on these studies. Students will develop skills for communicating scientific ideas in a seminar format. May be repeated for credit.

Term Offered: Spring

NNDP 8560 Readings in Neuroscience

[1-4 credit hours]

Tutorial course between major advisor and student to acquaint student with important writings relevant to neuroscience concepts. May be repeated for credit.

Term Offered: Spring, Summer, Fall

NNDP 8720 Current Topics in Neuroscience

[1-4 credit hours]

Tutorial course between major advisor and student to acquaint student with the range of topics of current major interest in neuroscience research. May be repeated for credit.

Term Offered: Spring, Summer, Fall

NNDP 8890 Independ Study in Neuroscience

[1-12 credit hours]

Independent library and laboratory work under the supervision of the major advisor. May be repeated for credit.

Term Offered: Spring, Summer, Fall

NNDP 8990 Research in Neuroscience

[1-15 credit hours]

Training in neuroscience research techniques through laboratory experience. May be repeated for credit.

Term Offered: Spring, Summer, Fall

NNDP 9990 Dissertation Research in NNDP

[1-15 credit hours]

Department of Orthopedic Surgery

Nabil Ebraheim, M.D., Chair

Martin Skie, M.D., Track Director

Track Name: Bone Biology and Orthopedic Sciences

The Department of Orthopedic Surgery offers graduate-level courses through the Master of Science in Biomedical Sciences program at the

University of Toledo. This is a 2-year program consisting of classes, seminars, and research. The students work with:

- Dr. Martin Skie, Department of Orthopedic Surgery;
- Beata Lecka-Czernik, Department of Orthopedic Surgery;
- A. Champa Jayasuriya, Department of Orthopedic Surgery; and
- Dr. Vijay Goel, Department of Bioengineering.

Our unique partnership with the Department of Bioengineering allows our researchers and physicians to have access to not only lab and research facilities, but also to the expertise of scientists in the biomechanics field.

Research in Orthopedic Sciences at the University of Toledo College of Medicine & Life Sciences covers a broad spectrum of topics including:

- Biomechanics
- Biomineralization
- Bone diseases
- Bone tissue engineering and regenerative medicine
- Hand and foot disorders
- Hip and knee replacements
- Spinal injuries and disorders
- Sports medicine
- Stem cell technologies
- Trauma/fixation

Additional information may be found at http://www.utoledo.edu/med/depts/ortho/master_program/index.html (http://www.utoledo.edu/med/depts/ortho/master_program/).

Degrees Offered

No results found.

ORTH 5700 Orthopaedic X-Ray Conference

[2 credit hours]

Weekly discussion of interesting and challenging clinical orthopaedic cases through X-ray conference discussion. Management and treatment options of each case presented also are discussed. May be repeated for credit.

Term Offered: Spring, Summer, Fall

ORTH 5800 Ortho Bone Physiology

[3 credit hours]

Lecture topics will include the physiology of bone fracture healing process, bone adaptation, molecular genetics of the musculoskeletal system, bone tumor process, etc. This course serves to provide the student with a good general knowledge of bone physiology and its function.

Term Offered: Spring, Fall

ORTH 5850 Introduction to Clinical Orthopaedics

[3 credit hours]

Introduction to Clinical Orthopaedics provides an overview of the various sub-specialties within Orthopaedic Surgery. Students are familiarized to the clinic and operating room setting. They will be taught the importance of common physical exam findings, interpretation of radiographic studies and the importance of routine laboratory tests as they relate to conditions of the musculoskeletal system.

Term Offered: Spring, Summer, Fall**ORTH 5900 Orthopaedic Biomechanics I**

[3 credit hours]

Introduction to the basic biomechanics concept in orthopaedics. Lectures will include statistics and dynamics analysis of forces as applied to the musculoskeletal system. Topics to be covered will also include biomechanics of fixation devices, modeling effects of bone, stress shielding, micro- and macroscopic analysis of bone mechanics, etc.

Term Offered: Summer, Fall**ORTH 5910 Thesis Research Neurosci Neuro**

[3 credit hours]

This course concentrates on the studies of body joint mechanics and the dynamics of joint motion. Lectures also will include artificial joint prosthesis designs, including new orthopaedic devices and implants.

Term Offered: Spring**ORTH 5920 Orthopaedic Biomechanics III**

[3 credit hours]

This course will cover principally motion analysis, gait, and rehabilitation biomechanics as they apply to the orthopaedic patient. Lectures will include 3-D motion analysis as well as a force plate quantification of gait and movement.

Term Offered: Fall**ORTH 6500 Orthopaedic Basic Science Sem**

[3 credit hours]

Weekly lectures on various orthopaedic topics ranging from bone histology to biomechanics. The lectures focus on the basic science of orthopaedics, including the physiology, biochemistry, genetics, anatomy, etc. of the musculoskeletal system. May be repeated for credit.

Term Offered: Spring, Fall**ORTH 6550 Jnl Rev Orthopaedic Science**

[1 credit hour]

Orthopaedic Grand Rounds is a conference format where nationally known authorities on orthopaedic topics present a talk, followed by discussion of challenging clinical cases presented to the speaker. Usually the topics involve the latest state-of-the-art orthopaedic treatments or breakthroughs. The Journal Club meetings are seminar discussions of the latest scientific research articles from professionally recognized journals. May be repeated for credit.

Term Offered: Spring, Summer, Fall**ORTH 6750 Biomaterials in Medicine**

[3 credit hours]

Biomaterials use in wide variety range of applications in medicine including drug delivery carriers and replacement of tissues.

Term Offered: Spring**ORTH 6910 Orthopaedic Trauma**

[1 credit hour]

Topics could include the trauma of musculoskeletal system, the pathogenesis, treatment options and clinical outcomes; may involve theoretical and/or experimental work. May be repeated for credit.

Term Offered: Summer, Fall**ORTH 6920 Orthopaedic Spine**

[1 credit hour]

Focus will be on spine mechanics, anatomy, spine fixation devices, clinical outcome of spine surgeries, etc. May involve theoretical and/or experimental work. May be repeated for credit.

Term Offered: Summer, Fall**ORTH 6940 Adult Reconstruction & Tumor**

[1-3 credit hours]

ORTH 6940 is a clinical elective in Adult Reconstruction and Orthopaedic Oncology. Students will gain familiarity with concepts in joint replacement and the problems associated with it. Students will have the opportunity to observe hip and knee replacement surgeries. There is also exposure to tumors of the musculoskeletal system and reconstructive options for their treatment. Students will spend 1 – 3 hours per week with a physician in those specialties.

Term Offered: Spring, Summer, Fall**ORTH 6960 Upper Extremity and Hand**

[3 credit hours]

Topics will include (but are not limited to) study of the biomechanics of the upper extremity and hand, brachial plexus injuries, treatment options, surgical exposures, detail anatomy, etc. May involve theoretical and/or experimental work. May be repeated for credit.

Term Offered: Spring, Fall**ORTH 6990 Thesis Research**

[3-6 credit hours]

Each student is required to work with a mentor on a research project that may include laboratory and/or clinical research on a project of interest to Orthopaedics..... Each student will be expected to have a committee consisting of no less than 3 faculty members, including the student's mentor as the chair of the committee. Regular meetings will be scheduled to review the thesis project and ensure progress towards completion of the thesis research in a timely manner. The student will be expected to write a thesis at the completion of their project and defend this to their committee and give a public presentation.

Term Offered: Spring, Summer, Fall**ORTH 8750 Biomaterials in Medicine**

[3 credit hours]

Biomaterials use in wide variety range of applications in medicine including drug delivery carriers and replacement of tissues.

Term Offered: Spring

Department of Pathology

Nicole Dominiak, Program Director

Degrees Offered

MSBS ASSISTANT IN PATHOLOGY (p. 260)

PATH 6040 Pathology Assistants: Medical Ethics

[1 credit hour]

This course is an introduction to Medical Ethics for the Pathology Assistant. Focus is on the issues faced by the pathologist and pathology assistants. The course will be seminar based and will involve presentations and case discussions.

Term Offered: Spring

PATH 6050 Clinical Neuropathology

[1 credit hour]

PATH 6060 Surgical Clinical Rotation

[0-4 credit hours]

Introduces students to surgical pathology and cytology including gross evaluation of tissues, tissue processing and microscopic evaluation of diseased human tissues to render a diagnosis, recommend treatment and evaluate prognosis. In addition, students will attend and/or present case materials at conferences.

Term Offered: Spring, Summer, Fall

PATH 6070 Intro Clinical Lab Medicine

[0-4 credit hours]

An introductory course designed to acquaint students with the laboratory tests that are available in the clinical laboratory, prioritization of test ordering, how the tests are performed and their usefulness in clinical diagnosis and clinical investigation.

Term Offered: Spring, Summer, Fall

PATH 6080 Postmortem Clinical Rotation

[0-4 credit hours]

An introductory course designed to acquaint students with the autopsy. It consists of a series of lectures, demonstrations and readings pertaining to the human autopsy. Students will be involved in the actual performance of autopsies, the selection of appropriate tissues for microscopic examination, microscopic examination of tissues, rendering a diagnosis and completing autopsy reports. The autopsies are performed at MCO and the Lucas County Coroner's Office.

Term Offered: Spring, Summer, Fall

PATH 6720 Current Topics in Pathology

[1-4 credit hours]

A lecture and/or seminar course in topics of current interest in pathology with special emphasis on the fundamentals of mammalian, especially human, life under normal, experimental, or pathological conditions. Students and department faculty will present and moderate the discussion of original research publications. May be repeated for credit.

PATH 6730 Research in Pathology

[1-4 credit hours]

Students will participate in selected ongoing research programs of the department faculty. May be repeated for credit.

PATH 6770 Embryology and Teratology

[1 credit hour]

This course provides a post-graduate level understanding of molecular, genetic, cellular and environmental mechanisms involved in: 1. Early human embryonic development i.e. primordial germ cell information, gamete formation, fertilization, blastulation, implantation and gastrulation (formation of bilaminar and trilaminar germ discs) and associated pathological malformations or diseases and 2. Normal and abnormal development of selected tissues, body organs and systems, and their pathological manifestations.

Term Offered: Spring

PATH 6780 Histology and Cell Physiology I

[2 credit hours]

The course is intended to introduce histologic techniques including tissue fixation, processing, staining, microtomy, and the special techniques of histochemistry and immunocytochemistry for light microscopy: in addition basic optics and the use of bright field, phase contrast and fluorescence microscopy will be addressed. The course will integrate microscopic anatomy. The course is intended to integrate microscopic anatomy with tissue specific physiology. The course schedule is designed to meld with the disease content of the organ systems of the medical school curriculum to provide a basis of normal microscopic anatomy (histology) and specific functions of organ specific cell types. There is a strong emphasis on independent study of cell physiology to accompany didactic presentations of microscopic anatomy including utilization of virtual tissue slides.

Prerequisites: ANAT 5000 with a minimum grade of D-

PATH 6790 Histology and Cell Physiology II

[2 credit hours]

The course is intended to integrate microscopic anatomy with tissue specific physiology. The course schedule is designed to meld with the disease content of the organ systems of the medical school curriculum to provide a basis of normal microscopic anatomy (histology) and specific functions of organ specific cell types. There is a strong emphasis on independent study of cell physiology to accompany didactic presentations of microscopic anatomy including utilization of virtual tissue slides.

Prerequisites: PATH 6780 with a minimum grade of D-

PATH 6890 Independent Study in Pathology

[0-12 credit hours]

Intensive study in field of interest, including theoretical and experimental work. May be repeated for credit.

Term Offered: Spring, Summer, Fall

PATH 7050 Clinical Neuropathology

[1 credit hour]

PATH 7130 Pathology Case Studies

[1-6 credit hours]

Present, discuss and provide clinical pathologic correlation on various disease process. Interpret lab tests related to various diseases. Utilize laboratory testing to diagnose and manage various disease. Interact professionally with peers in the discussion of the cases.

Term Offered: Spring, Summer, Fall

PATH 8050 Clinical Neuropathology

[1 credit hour]

PATH 8060 Intro Surgical Path and Cytology

[1-4 credit hours]

Introduces students to surgical pathology and cytology including gross evaluation of tissues, tissue processing and microscopic evaluation of diseased human tissues to render a diagnosis, recommend treatment and evaluate prognosis. In addition, students will attend and/or present case materials at conferences.

PATH 8070 Intro Clinical Lab Medicine

[1-4 credit hours]

An introductory course designed to acquaint students with the laboratory tests that are available in the clinical laboratory, prioritization of test ordering, how the tests are performed and their usefulness in clinical diagnosis and clinical investigation.

PATH 8080 Intro Postmortem Pathology

[1-4 credit hours]

An introductory course designed to acquaint students with the autopsy. It consists of a series of lectures, demonstrations and readings pertaining to the human autopsy. Students will be involved in the actual performance of autopsies, the selection of appropriate tissues for microscopic examination, microscopic examination of tissues, rendering a diagnosis and completing autopsy reports. The autopsies are performed at MCO and the Lucas County Coroner's Office.

PATH 8720 Current Topics in Pathology

[1-4 credit hours]

A lecture and/or seminar course in topics of current interest in pathology with special emphasis on the fundamentals of mammalian, especially human, life under normal, experimental, or pathological conditions. Students and department faculty will present and moderate the discussion of original research publications. May be repeated for credit.

PATH 8730 Research in Pathology

[1-4 credit hours]

Students will participate in selected ongoing research programs of the department faculty. May be repeated for credit.

PATH 8890 Independent Study in Pathology

[1-12 credit hours]

Intensive study in field of interest, including theoretical and experimental work. May be repeated for credit.

Department of Physiology & Pharmacology

*Bina Joe, Ph.D., chair**Ritu Chakraborti, Ph.D., track director*

The Molecular Medicine (MOME) track (formerly Cardiovascular and Metabolic Diseases) track in the Biomedical Sciences Graduate program at The University of Toledo College of Medicine & Life Sciences on the Health Science Campus nurtures students and provides them with the necessary tools to pursue an independent career in biomedical sciences. The program encompasses a unique interdisciplinary approach to train students to conduct research in the underlying molecular mechanisms of diseases that have profound impact on human health.

The program draws on faculty research strengths in signal transduction, genetics, molecular and cellular biology, gene microarrays, genomics, proteomics, gene knockout and transgenics, tissue culture, and protein and carbohydrate biochemistry. The MOME faculty members are not only drawn from its associated department, the Department of Physiology and Pharmacology, and from the Center for Diabetes and Endocrine Research (CeDER), but also from other departments including the Departments of Medicine, and, Orthopedic Surgery. Modern, well-equipped research facilities are available through the participating departments. The MOME program offers degrees of Doctor of Philosophy (PhD) and Masters in biomedical sciences (MSBS). The program also offers these graduate degrees in combination with the Medical Degree (MD) that is offered by the medical school. Students from the four programs, PhD, MSBS, MD/PhD and MD/MSBS, follow a well-defined program that includes core courses, journal clubs, seminars, laboratory rotations, independent research, and electives in the area of interest. Students select faculty advisors and begin their independent dissertation research following

the laboratory rotations in the biomedical science core curriculum. The curriculum is designed to enable students, guided by their advisors, to develop the expertise that prepares them for a successful career in research and education.

Degrees Offered

- MSBS in Molecular Medicine (p. 265)
- Ph.D in Biomedical Science - Molecular Medicine (p. 252)

BMSP 5320 Statistical Methods I

[3 credit hours]

Introduction to statistical methods with emphasis on problems in the biomedical sciences. Included are descriptive statistics, probability theory, statistical inference, experimental design and simple statistical tests.

Term Offered: Summer**BMSP 6250 Grant Writing Workshop**

[2 credit hours]

This is an interdisciplinary course designed to teach students skills in developing a research plan in the form of a grant proposal.

Term Offered: Spring**BMSP 6310 Systems Pathophysiology I**

[2.5 credit hours]

The course will cover the fundamentals and current research efforts in biomedical sciences, emphasizing diseases of the cardiovascular, immune, and nervous systems, as well as metabolic and infectious diseases.

Term Offered: Spring**BMSP 6320 Systems Pathophysiology II**

[2.5 credit hours]

The course will cover the fundamentals and current research efforts in biomedical sciences, emphasizing diseases of the cardiovascular, immune, and nervous systems, as well as metabolic and infectious diseases.

Term Offered: Spring**BMSP 6330 Current Problems and Research Approaches in Proteins**

[2 credit hours]

The course will cover principles of protein structural organization, basics of protein chemistry and structure/function relationships in proteins. Special emphasis will be given to the modern trends in protein science including research in proteomic aspects of system biology and biomedical applications of proteomics.

Term Offered: Fall**BMSP 6340 Curr Prob Res App Genes/Genom**

[2 credit hours]

This course provides an introduction to major areas of current research in genetics and molecular biology. Topics include gene structure and regulation, DNA replication, recombination, repair, mutation, and quantitative genetics.

Term Offered: Fall

BMSP 6350 Cell Biology & Signaling

[3 credit hours]

The content of this course will encompass didactic lectures on current knowledge and methodological approaches in the area of fundamental cellular processes and cell communication.

Term Offered: Spring

BMSP 6360 Current Problems and Research Approaches in Cell

Membranes

[2 credit hours]

This course will explore vital roles played by plasma and intracellular membranes in communication and homeostasis, and by membrane lipid/protein interactions in defining cytoarchitecture, protein sorting, excitability and synaptic transmission.

Term Offered: Fall

BMSP 6370 Recent Advances in NND Journal

[1 credit hour]

Forum for the presentation, critique, and discussion of recent primary literature important to the development of the field of biomedical science.

Term Offered: Spring

BMSP 6380 Methods in Biomedical Sciences

[2 credit hours]

This course will cover the basic principles and applications, of state-of-the-art technology in molecular biology, protein chemistry, and studies with culture cells, tissue explants and transgenic animal models.

Term Offered: Fall

BMSP 6390 Mentored Research

[1-15 credit hours]

Students will be mentored in biomedical research and will gain familiarity with research projects ongoing in graduate laboratories. May be repeated for credit.

Term Offered: Spring, Summer, Fall

BMSP 6400 BPG Intro to Mthds in Bio Sci

[1 credit hour]

Introduction to biomedical methods. Required for Bioinformatics, Proteomics and Genomics (BPG) MSBS (but not certificate) students. An abbreviated version of BMSP 638, BMSP 640 runs for first 8 weeks of Fall semester.

Term Offered: Fall

BMSP 6470 System Pathophysiology

[4 credit hours]

This course provides an understanding of fundamental processes underlying pathophysiology, which occur at the cellular and organ level and lead to impairment of physiology processes. The course is organized into 6 blocks providing knowledge on the malfunctions of physiological systems, including cardiovascular, renal, skeletal, endocrinology, immunology, neural system, and cancer, and an introduction to pharmacology and applied bioinformatics.

Term Offered: Spring

BMSP 7320 Statistical Methods I

[3 credit hours]

Introduction to statistical methods with emphasis on problems in the biomedical sciences. Included are descriptive statistics, probability theory, statistical inference, experimental design and simple statistical tests.

Term Offered: Summer

BMSP 8250 Grant Writing Workshop

[2 credit hours]

This is an interdisciplinary course designed to teach students skills in developing a research plan in the form of a grant proposal.

Term Offered: Spring

BMSP 8310 Systems Pathophysiology I

[2.5 credit hours]

The course will cover the fundamentals and current research efforts in biomedical sciences, emphasizing diseases of the cardiovascular, immune, and nervous systems, as well as metabolic and infectious diseases.

Term Offered: Spring

BMSP 8320 Systems Pathophysiology II

[2.5 credit hours]

The course will cover the fundamentals and current research efforts in biomedical sciences, emphasizing diseases of the cardiovascular, immune, and nervous systems, as well as metabolic and infectious diseases.

Term Offered: Spring

BMSP 8330 Curr Prob Res App Protein Str

[2.5 credit hours]

The course will cover principles of protein structure/function relationships in proteins, protein folding, ligand-protein interactions and mechanisms of enzyme-catalyzed reactions. Special emphasis will be given to the present-day research.

Term Offered: Fall

BMSP 8340 Curr Prob Res App Genes/Genome

[2 credit hours]

This course provides an introduction to major areas of current research in genetics and molecular biology. Topics include gene structure and regulation, DNA replication, recombination, repair, mutation, and quantitative genetics.

Term Offered: Fall

BMSP 8350 Cell Biology & Signaling

[3 credit hours]

The content of this course will encompass didactic lectures on current knowledge and methodological approaches in the area of fundamental cellular processes and cell communication.

Term Offered: Spring

BMSP 8360 Curr Prob Cell Membranes

[2.5 credit hours]

This course will explore vital roles played by plasma and intracellular membranes in communication and homeostasis, and by membrane lipid/protein interactions in defining cytoarchitecture, protein sorting, excitability and synaptic transmission.

Term Offered: Fall

BMSP 8380 Methods Biomedical Sciences

[2.5 credit hours]

This course will cover the basic principles and applications, of state-of-the-art technology in molecular biology, protein chemistry, and studies with culture cells, tissue explants and transgenic animal models.

Term Offered: Fall

BMSP 8390 Mentored Research

[1-15 credit hours]

Students will be mentored in biomedical research and will gain familiarity with research projects ongoing in graduate laboratories. May be repeated for credit.

Term Offered: Spring, Summer, Fall

BMSP 8470 System Pathophysiology

[4 credit hours]

This course provides an understanding of fundamental processes underlying pathophysiology, which occur at the cellular and organ level and lead to impairment of physiology processes. The course is organized into 6 blocks providing knowledge on the malfunctions of physiological systems, including cardiovascular, renal, skeletal, endocrinology, immunology, neural system, and cancer, and an introduction to pharmacology and applied bioinformatics.

Term Offered: Spring

MSBS in Molecular Medicine

The minimum number of credits required for MSBS is 40, with a minimum of 18 credits of didactic coursework (letter grade).

The MSBS curriculum includes advanced electives in Molecular Medicine or other areas to make up the 18 required didactic credit hours.

A minimum of 10 credits of Thesis Research is required for graduation.

Ph.D in Biomedical Science - Molecular Medicine

The Molecular Medicine (MOME) track (formerly Cardiovascular and Metabolic Diseases) track in the Biomedical Sciences Graduate program

at The University of Toledo College of Medicine & Life Sciences on the Health Science Campus nurtures students and provides them with the necessary tools to pursue an independent career in biomedical sciences. The program encompasses a unique interdisciplinary approach to train students to conduct research in the underlying molecular mechanisms of diseases that have profound impact on human health.

The program draws on faculty research strengths in signal transduction, genetics, molecular and cellular biology, gene microarrays, genomics, proteomics, gene knockout and transgenics, tissue culture, and protein and carbohydrate biochemistry. The MOME faculty members are not only drawn from its associated department, the Department of Physiology and Pharmacology, and from the Center for Diabetes and Endocrine Research (CeDER), but also from other departments including the Departments of Medicine and Orthopedic Surgery. Modern, well-equipped research facilities are available through the participating departments. The MOME program offers degrees of Doctor of Philosophy (PhD) and Masters in biomedical sciences (MSBS). The program also offers these graduate degrees in combination with the Medical Degree (MD) that is offered by the medical school. Students from the four programs, PhD, MSBS, MD/PhD and MD/MSBS, follow a well-defined program that includes core courses, journal clubs, seminars, laboratory rotations, independent research, and electives in the area of interest. Students select faculty advisors and begin their independent dissertation research following the laboratory rotations in the biomedical science core curriculum. The curriculum is designed to enable students, guided by their advisors, to develop the expertise that prepares them for a successful career in research and education.

To be admitted to the Ph.D. or Master of Science in Biomedical Sciences (MSBS) Program, applicants must hold an earned baccalaureate (or equivalent) from an accredited college or university and have a minimum overall GPA of 3.0 on a 4.0 scale. Typically, applicants will have an undergraduate major in Biology or a related discipline. In addition, Graduate Record Examination (GRE) scores are required in most programs of study (see individual degree programs for specific requirements). Minimum scores at the 50th percentile or above for both Verbal and Quantitative scores and 4.0 (Analytical Writing Test) are recommended to be competitive for most degree programs. For international applicants, an appropriate test of English language proficiency is required. Scores from The Test of English as a Foreign Language (TOEFL) are accepted and a minimum iBT score of 80, or pBT score of 550 is required. Scores from The International English Language Testing Service (IELTS) are also accepted and a minimum score of 6.5 is required. A prior Masters degree is not required to enter the PhD program. At this time, all students accepted without provisions into the PhD in Biomedical Science Program, and maintaining good academic standing, will receive a full tuition scholarship and a research stipend funded in whole or in part by the College of Graduate Studies and funding from a student's advisor through a grant(s). There are also a limited number of tuition scholarships and stipends available for students in the Masters in Biomedical Sciences programs.

³ Required in fall and spring of 2nd and 3rd years

⁴ Required in spring of 2nd year

Curriculum to include advanced electives in Molecular Medicine or other areas to make up the required number of didactic credit hours. Students will also be expected to present a poster or oral presentation in the annual COMLS Graduate Research Forum in the spring of each year and the Pharmacology Research Colloquium. The Pharmacology Research Colloquium is held on a rotating basis at UTHSC, Michigan State University, the University of Michigan and Wayne State University. It is an annual event in which the students of "pharmacology" departments at the respective Medical Schools have participated in since 1973. These events provide students with excellent opportunities for developing skills in organizing, presenting and discussing their work.

EDUCATIONAL PROGRAM OBJECTIVES FOR THE MOLECULAR MEDICINE TRACK

Program Student Learning Outcomes

FY1. Identify and summarize the structure and function of cells, tissues, and organs

FY2. Describe the molecular, biochemical, and cellular mechanisms that maintain the normal function, development, and plasticity of cells, tissues, and organs

FY3. Summarize basic disease causes and processes that affect the structure and function of cells, tissues, and organs

FY4. Assess and critically analyze relevant basic science and clinical literature.

FY5. Design and conduct applicable biomedical sciences experiments

FY6. Organize, interpret and summarize results of applicable biomedical sciences experiments.

FY7. Demonstrate ethical and responsible conduct in research and all other scholarly activities consistent with the University of Toledo, Health Science Campus, Standards of Conduct

K1 Knowledge of normal structure and function of the body and its major organ systems, with emphasis on the systems studied in MOME laboratories (e.g., cardiovascular, renal, digestive, endocrine and neuroendocrine systems)

K2 Knowledge of biochemical, molecular and cellular mechanisms that are important in maintaining cardiac and vascular function as well as metabolism and energy balance.

K3 Knowledge of the pathophysiology of prevalent cardiovascular and metabolic diseases, such as diabetes, obesity, fatty liver disease, hypertension, heart failure, and ischemic heart disease.

K4 Knowledge of the genetic and environmental basis of prevalent cardiovascular and metabolic diseases, such as hypertension, diabetes and obesity

K5 Knowledge of the epidemiology of prevalent cardiovascular and metabolic diseases, such as hypertension, diabetes and obesity

K6 Knowledge of basic principles of pharmacology (drug action) and pharmacology of specific drugs used in the treatment of prevalent cardiovascular and metabolic diseases

K7 Knowledge of statistical methods used in the appropriate design and interpretation of research projects

K8 Knowledge of the principles that govern ethical decision making in the design and conduct of research projects, including the publication and reporting of results.

K9 Knowledge of the various approaches used to develop research proposals and to raise funds to finance biomedical research projects.

S1 The ability to perform most basic laboratory procedures that are commonly used in the track laboratories.

S2 The ability to perform advanced/specialized procedures that are necessary for the completion of the student's thesis research project(s)

S3 The ability to design and complete independent research projects, including the introduction and optimization of unfamiliar techniques and the development of new research techniques

S4 The ability to perform productively as a member of a research team and train junior students in routine and basic laboratory techniques

S5 The ability to recognize hazardous procedures in the laboratory and follow appropriate precautions to protect the laboratory and institutional personnel

S6 The ability to communicate effectively, both verbally and in writing, with other students, post-doctoral fellows and faculty members, as well as with national and international collaborators

S7 The ability to present their results at local, national and international meetings as well as to be able to organize and chair local meetings

S8 The ability to retrieve biomedical information from electronic databases and other sources; to manage, and utilize the information, including by use of bioinformatics, in order to develop hypotheses to address scientific issues and the means to test them and to discuss the results in the context of reports in the literature.

S9 The ability to write and submit manuscripts and to communicate effectively with scientific journal editors and reviewers

S10 The ability to write a comprehensible research proposal and raise funds to support it from federal, state and other funding agencies

P1 Ethical, responsible, reliable, and dependable behavior in all aspects of their professional lives, and a commitment to the profession and society.

P2 Honesty and integrity in all interactions with faculty advisors, colleagues, faculty members, laboratory and institutional staff, research subjects, and others with whom students may interact in their professional lives

P3 Honesty and integrity in research conduct and reporting of results.

P4 Responsible behavior while using shared equipment and facilities.

P5 Responsible behavior and willingness to train and teach junior students to the best of their knowledge.

P6 Professionalism in dress and grooming in compliance with health and safety rules applicable to the research laboratories and other research sites.

P7 Compassionate treatment of patients as subjects of research, and respect for their privacy and dignity.

P8 Compassionate treatment of experimental animals, and respect for all laws and regulations applicable to the use of animals in medical research.

P9 Professionalism in following rules and regulations set by different committees of the institution, e.g. IACUC, IRB, Biohazard committee, Radiation Safety etc.

Department of Radiology and Department of Radiation Oncology Accreditations

The MSBS program in Medical Physics and the PhD in Physics and Astronomy with specialization in Medical Physics are accredited by the Commission on Accreditation of Medical Physics Educational Programs (www.campep.org (<http://www.campep.org>)).

Degrees Offered

- MSBS Medical Physics (Diagnostic Imaging Track)
- MSBS Medical Physics (Radiation Oncology Track)
- (Also PhD in Physics and Astronomy with specialization in medical physics in both tracks is offered through the College of Natural Sciences & Mathematics.)

MPHY 6010 Survey of Diagnostic Medical Imaging I

[3 credit hours]

This course provides a survey of diagnostic imaging modalities including the physical principles and instrumentation of diagnostic imaging equipment. Radiographic and fluoroscopic imaging systems, x-ray computed tomography, Ultrasound, MRI, and basics of Nuclear Medicine will be covered. The course builds upon basic reviews of atomic and nuclear properties, production of x-rays, and interaction of radiation with matter.

Term Offered: Fall**MPHY 6020 Survey of Diagnostic Medical Imaging II**

[3 credit hours]

This course builds on the materials taught in MPHY 6010/8010, and discusses advanced concepts in medical imaging including functioning MRI, SPECT, and PET imaging. Details of radioactivity and nuclear transformation, radionuclide production and radiopharmaceuticals, radiation detection and measurement and scintillation camera will be covered. Advanced discussions on CT and US will also be presented.

Term Offered: Spring**MPHY 6040 Diagnostic Radiological Physics**

[0-5 credit hours]

This course considers the physical principles and instrumentation of diagnostic image formation including radiography, fluoroscopy, computed tomography, ultrasound, nuclear medicine and magnetic resonance imaging.

Term Offered: Spring, Fall**MPHY 6060 Nuclear Medicine**

[3 credit hours]

Course covers the physical aspects of diagnostic and therapeutic applications of radionuclides. This includes radiation detectors and imaging systems, emission tomography, counting statistics, equipment testing, radiopharmaceuticals and internal radiation dosimetry.

Term Offered: Summer, Fall**MPHY 6100 Clinical Imaging Review**

[0-4 credit hours]

Review of the clinical aspect of diagnostic imaging of clinical modalities and anatomy as approved by instructor. Review typically will include reading, discussion, and clinical image review covering radiological anatomy, physiology, disease states, and considerations for diagnostic interpretation of images. May be repeated for credit.

Term Offered: Summer**MPHY 6110 Survey Clinical Radi Therapy**

[2 credit hours]

A series of lectures on various topics in radiation therapy give an overview of radiation therapy in the clinical care of patients and familiarize students with a variety of options for treatment of cancer patients.

Term Offered: Fall**MPHY 6120 Radiation Dosimetry I**

[3 credit hours]

Series of lectures covering basic concepts of radiation physics, interactions of ionizing radiation physics, interactions of ionizing radiation with matter, and fundamentals of radiation dosimetry techniques and instrumentation. An overview of principles of radiation therapy, radiation protection, nuclear medicine, and diagnostic radiology is given.

Term Offered: Fall**MPHY 6130 Radiation Dosimetry II**

[3 credit hours]

Series of lectures covering interactions of ionizing radiation with matter and radiation dosimetry physics fundamentals in-depth. Cavity theories, integrating and pulse-mode dosimeters, dosimetry and calibration of photon and electron beams, and neutron dosimetry are considered in details.

Term Offered: Spring**MPHY 6160 Radiation Biology**

[3 credit hours]

A series of introductory lectures on radiation biology with emphasis on the effects of radiation on cells and cellular components, tissues, and organisms. Dose-response relationships, dose-effect modifiers, and considerations applicable to radiation therapy treatments are among covered topics.

Term Offered: Spring**MPHY 6180 Physics of Radiation Therapy**

[3 credit hours]

Basic radiation physics and physical aspects of treatment planning, using photon and electron beams as well as brachytherapy sources will be taught.

Term Offered: Spring, Fall**MPHY 6190 Brachytherapy**

[3 credit hours]

Fundamental information about the physical characteristics of the sources used in brachytherapy, the methods used for implant planning and evaluation of plans.

Term Offered: Summer**MPHY 6200 Radiation Protection and Regulation**

[3 credit hours]

Course considers the hazards associated with radioactivity and electromagnetic radiation, including types and sources of radiation, radiation measurement and units, dosimetry, radiation protection practices required by governmental regulation and medical facility accrediting bodies.

Term Offered: Summer**MPHY 6240 Physics of Medicine and Biology**

[3 credit hours]

Overview of physics as applied to physiological and biological systems, including body mechanics, osmosis, respiratory and cardiovascular mechanisms, electric signals, speech, hearing, and sight.

Term Offered: Spring**MPHY 6260 Computer Radiation Therapy**

[2 credit hours]

Computer fundamentals and problem solving through programming. Typical problems include PDD, TAR, TMR, MU calculations, scatter summation, TMR for arc and dose distributions.

MPHY 6280 Electronics for Med Physicists

[2 credit hours]

Basics of electronics circuit design to perform specific tasks as it relates to medical physics applications.

MPHY 6300 Radiation Detection/Measuremen

[3 credit hours]

Introduces the student to the various equipment and methods used in radiation detection and measurement. Introduces advanced concepts in error analysis, energy spectra unfolding, fit results with function, etc. The lab portion of this course, PHYS6180, is taught through the University of Toledo.

Term Offered: Spring

MPHY 6310 Anatomy/Physiology

[4 credit hours]

The course will cover an overview of physiology at a cellular, and organ system levels. This will include normal function of human body and some clinical manifestations of human diseases. There will also be some introduction to basic skeletal system.

Term Offered: Fall

MPHY 6320 Practical Measurements in Rad

[2 credit hours]

Basic practical considerations in measurements of photon and electron beam parameters of the linear accelerator.

Term Offered: Summer

MPHY 6400 Intro to LINAC in Radiation Th

[3 credit hours]

The electron linear accelerator will be described in theory and operation as it relates to medical physics and cancer patients. The physics aspect of particle acceleration and x-ray and electron generation using these units as well as dose delivery to the patient is considered.

MPHY 6500 Medical Physics Seminar

[1 credit hour]

Recent developments, special topics, critical analysis of recent publications, and literature reviews in specific areas of medical physics. May be repeated for credit.

Term Offered: Spring, Fall

MPHY 6520 Radiation Safety and Measremnt

[3 credit hours]

Review of fundamentals of radiation safety and protection, instrumentation, radioactivity, radiation interaction with matter, and biological effects of radiation. Also, measurement methods, safety practices and regulations for use of radiation in research and medicine is presented.

MPHY 6610 Clin Trng Radi Oncol Physics I

[4 credit hours]

This course offers clinical training in radiation oncology physics to graduate students. This will include clinical dosimetry concepts, anatomy & physiology, clinical radiobiology, and overview of special procedures including SRS, SBRT, IORT, HDR, LDR, Rad Safety and Regulations. QA of equipment and clinical responsibilities; review of TG 142, 51, 66 and other related reports.

Term Offered: Fall

MPHY 6620 Clin Trng Radi Oncol Physcs II

[4 credit hours]

This course offers advanced clinical training in radiation oncology physics to senior level graduate students. Advanced dosimetry concepts, Brachytherapy, IMRT, IGRT, adaptive IGRT. Other special procedures are covered. Also, lectures and hands-on training are provided so that students can fine Tune their techniques in Treatment Planning, QA Issues, daily clinical responsibilities and operation as a medical physicist are taught.

Term Offered: Spring, Summer, Fall

MPHY 6630 Clin Trng Radi Oncol Physc III

[5 credit hours]

Clinical training in radiation therapy physics to graduate students who have obtained an MS or Ph.D. degree in the field of medical physics or related area. May be repeated for credit

Term Offered: Summer

MPHY 6730 Medical Physics Research

[0-4 credit hours]

Students will participate in selected ongoing research programs of members of the department faculty. May be repeated for credit.

Term Offered: Summer

MPHY 6840 Independent Study: Med Physics

[0-12 credit hours]

Combination of reading, lecture and discussion within a defined area of medical physics. Defined topics are: dosimetry, internal dosimetry, radiobiology, monte carlo analysis, image processing, topical study. May be repeated for credit.

Term Offered: Spring, Summer, Fall

MPHY 6860 Independent Study in Radiology

[0-12 credit hours]

Combination of reading, lecture and discussion within a defined area of radiology. Defined topics are: radiographic imaging, computed tomography, magnetic resonance imaging, nuclear medicine, diagnostic ultrasound, diagnostic quality control, digital imaging. May be repeated for credit.

Term Offered: Spring, Summer, Fall

MPHY 6880 Independent Study: Rad Therapy

[0-12 credit hours]

Combination of reading, lecture, and discussion within a defined area of radiation therapy. Defined topics are: 3-D conformal treatment planning, 3-D dose compensators, stereotactic radiosurgery, electron arc therapy, photon and electron algorithms, treatment planning dosimetry verification, total body irradiation, total body skin. May be repeated for credit.

MPHY 8010 Survey of Diagnostic Medical Imaging I

[3 credit hours]

This course provides a survey of diagnostic imaging modalities including the physical principles and instrumentation of diagnostic imaging equipment. Radiographic and fluoroscopic imaging systems, x-ray computed tomography, Ultrasound, MRI, and basic of Nuclear Medicine will be covered. The course builds upon basic review of atomic and nuclear properties, production of x-rays, and interaction or radiation with matter.

Term Offered: Fall

MPHY 8020 Survey of Diagnostic Medical Imaging II

[3 credit hours]

This course builds on the material taught in MPHY 6010/8010, and discusses advanced concepts in medical imaging including functional MRI, SPECT, and PET imaging. Details of radioactivity & nuclear transformation, radionuclide production & radiopharmaceuticals, radiation detection and measurement and scintillation camera will be covered. Advanced discussions on CT and US will also be presented.

Term Offered: Spring**MPHY 8040 Diag Radiological Physics**

[0-5 credit hours]

This course considers the physical principles and instrumentation of diagnostic image formation including radiography, fluoroscopy, computed tomography, ultrasound, nuclear medicine and magnetic resonance imaging.

Term Offered: Spring, Fall**MPHY 8060 Nuclear Medicine**

[3 credit hours]

Course covers the physical aspects of diagnostic and therapeutic applications of radionuclides. This includes radiation detectors and imaging systems, emission tomography, counting statistics, equipment testing, radiopharmaceuticals and internal radiation dosimetry.

Term Offered: Fall**MPHY 8110 Survey Clinical Radi Therapy**

[2 credit hours]

A series of lectures on various topics in radiation therapy give an overview of radiation therapy in the clinical care of patients and familiarize students with a variety of options for treatment of cancer patients.

Term Offered: Fall**MPHY 8120 Radiation Dosimetry I**

[3 credit hours]

Series of lectures covering basic concepts of radiation physics, interactions of ionizing radiation with matter, and fundamentals of radiation dosimetry techniques and instrumentation. An overview of principles of radiation therapy, radiation protection, nuclear medicine, and diagnostic radiology is given.

Term Offered: Fall**MPHY 8130 Radiation Dosimetry II**

[3 credit hours]

Series of lectures covering interactions of ionizing radiation with matter and radiation dosimetry physics fundamentals in-depth. Cavity theories, integrating and pulse-mode dosimeters, dosimetry and calibration of photon and electron beams, and neutron dosimetry are considered in details.

Term Offered: Spring**MPHY 8160 Radiation Biology**

[3 credit hours]

A series of introductory lectures on radiation biology with emphasis on the effects of radiation on cells and cellular components, tissues, and organisms. Dose-response relationships, dose-effect modifiers, and considerations applicable to radiation therapy treatments are among covered topics.

Term Offered: Spring**MPHY 8180 Physics of Radiation Therapy**

[3 credit hours]

Basic radiation physics and physical aspects of treatment planning, using photon and electron beams as well as brachytherapy sources will be taught.

Term Offered: Spring, Fall**MPHY 8190 Brachytherapy**

[3 credit hours]

Fundamental information about the physical characteristics of the sources used in brachytherapy, the methods used for implant planning and evaluation of plans.

Term Offered: Summer**MPHY 8200 Radiatn Protect and Regulation**

[3 credit hours]

Course considers the hazards associated with radioactivity and electromagnetic radiation, including types and sources of radiation, radiation measurement and units, dosimetry, radiation protection practices required by governmental regulation and medical facility accrediting bodies.

Term Offered: Summer**MPHY 8240 Physics of Medicine and Biol**

[3 credit hours]

Overview of physics as applied to physiological and biological systems, including body mechanics, osmosis, respiratory and cardiovascular mechanisms, electric signals, speech, hearing, and sight.

MPHY 8260 Computer in Radiation Therapy

[2 credit hours]

Computer fundamentals and problem solving through programming. Typical problems include PDD, TAR, TMR, MU calculations, scatter summation, TMR for arc and dose distributions.

MPHY 8280 Electronics for Med Physicists

[2 credit hours]

Basics of electronics circuit design to perform specific tasks as it relates to medical physics applications.

MPHY 8300 Radiation Detection/Measuremen

[3 credit hours]

Introduces the student to the various equipment and methods used in radiation detection and measurement. Introduces advanced concepts in error analysis, energy spectra unfolding, fit results with function, etc. The lab portion of this course, PHYS6180, is taught through the University of Toledo.

May be repeated for credit.

MPHY 8960 Dissertation Research

[0-15 credit hours]

Disciplinary or interdisciplinary investigation of significant problems at the doctoral level leading to the preparation of a scientific project for presentation as a dissertation.

Term Offered: Spring, Summer, Fall

Department of Urology

We believe in a rigorous academic training program with a strong didactic schedule, busy surgical caseload, and a valuable research experience. Particular emphasis is placed on teaching our residents the importance of establishing strong physician-patient relationships by the priority we place on continuity of care.

We believe that faculty must dedicate themselves to teaching and that residents must demonstrate a strong commitment to learning. We expect that the residents trained in our program will become leaders in the urology community and that they will practice urology with personal integrity, high ethical standards, and respect for the rights of patients entrusted to their care.

- Biomedical Science: Transplantation and Donation Sciences (p. 267)

Division of Dentistry

Michael Nedley, D.D.S., chair

Degrees Offered

Oral Biology (p. 271)

DENT 6010 Growth and Development

[0.5 credit hours]

Presentation and discussion of key growth and development concepts related to orthodontic/orthopedic diagnosis and treatment in pediatric dentistry including: Orthodontic Records, Growth and Development of the Face and Dental Arches, Cephalometrics and Facial Esthetics, Orthodontic Diagnosis and Treatment in the Mixed Dentition, Management of the Developing Occlusion, Case Selection.

Term Offered: Fall

DENT 6020 Pharmacology 1

[0.5 credit hours]

Advanced pharmacologic principles in decision making for dental pharmacotherapy. Emphasis is on physiological responses to drugs, expected outcomes, adverse reactions, and potential drug interactions.

Term Offered: Summer, Fall

DENT 6030 Dento-Alveolar Trauma I

[0.5 credit hours]

DENT 6040 Conscious Sedation I

[2 credit hours]

In depth discussion of the principles and objectives of conscious sedation, deep sedation and general anesthesia as behavior management techniques, including indications and contraindications for their use.

Term Offered: Summer, Fall

DENT 6050 Clinical Pediatric Dentistry

[0.5-1 credit hours]

In depth analysis of the scientific principles underlying the contemporary practice of pediatric dentistry, including the prevention of disease, dental anomalies, habits and other problems in occlusal development, and CAN.

Term Offered: Spring, Summer, Fall

DENT 6060 Principles of Behav/Comm Mgmt

[2 credit hours]

Critical analysis of historical behavior management and communication techniques and currently accepted behavior management techniques and utilization of techniques based upon patient age, cognitive development, behavior, medical history, parental concerns, and patient response to management techniques.

Term Offered: Summer, Fall

DENT 6070 Pediatric Dentistry Literature

[0.5 credit hours]

Presentation and discussion of selected articles related to the field of pediatric dentistry and other health related topics.

Term Offered: Spring, Summer, Fall

DENT 6080 Anatomy & Embryology Head/Neck

[1 credit hour]

Lecture and discussion of select topics in gross anatomy and embryology.

Term Offered: Spring

DENT 6090 Concepts - Dental Microbiology

[0.5 credit hours]

DENT 6100 Pediatric Medicine Lecture

[2 credit hours]

Advanced pharmacologic principles in decision making for dental pharmacotherapy. Emphasis is on physiological responses to drugs, expected outcomes, adverse reactions, and potential drug interactions.

Term Offered: Spring, Summer, Fall

DENT 6110 Oral Health Policies

[2 credit hours]

DENT 6120 Pharmacology II

[0.5 credit hours]

Advanced pharmacologic principles in decision making for dental pharmacotherapy. Emphasis is on physiological responses to drugs, expected outcomes, adverse reactions, and potential drug interactions.

Term Offered: Spring

DENT 6130 Dento-alveolar Trauma II

[0.5 credit hours]

DENT 6140 Conscious Sedation

[2 credit hours]

In depth discussion of the principles and objectives of conscious sedation, deep sedation and general anesthesia as behavior management techniques, including indications and contraindications for their use.

Term Offered: Spring, Summer

DENT 6150 Amer Board of Pediatric Dent RE

[2 credit hours]

DENT 6160 Special Care Dentistry

[1 credit hour]

In depth discussion of medical and handicapping conditions that require modifications in the delivery of dental services to infants, children and adolescents. Topics to be covered include, but are not limited to: bleeding disorders, cardiovascular disease, complications of chemotherapy and radiation therapy, diabetes, developmental disabilities, hemoglobinopathies, hematopoietic cell transplantation, hematologic malignancies, infectious diseases, neurologic disorders, organ transplantation, respiratory diseases, sensory impairments, solid tumors, common pediatric syndromes.

Term Offered: Fall

DENT 6170 Clinical Pediatric Dent Clinic

[1-10 credit hours]

Observation and participation in the care of patients with preventive, restorative, surgical, orthodontic and prosthetic care within the Dentistry Clinic.

Term Offered: Spring, Summer, Fall

DENT 6200 Oral Pathology

[1 credit hour]

In depth discussion of the epidemiology, pathogenesis, clinical characteristics, diagnostic methods, formulation of differential diagnoses, and management of oral and perioral lesions and anomalies with emphasis on the infant child and adolescent.

Term Offered: Spring, Summer

College of Natural Sciences and Mathematics

2021-2022 Graduate Catalog

College MISSION AND PRINCIPLES

The Faculty of the University of Toledo's College of Natural Sciences and Mathematics seek to build and disseminate foundational and applicable knowledge through excellence in teaching, research and discovery, and community engagement; foster the advancement of science, mathematics and technology locally, regionally, and globally; and serve as a transformative force within a diverse, interdisciplinary, and collaborative educational environment for improving our world through science and mathematics.

The Faculty of the College of Natural Sciences and Mathematics will adhere to the following principles:

- Contribute to a broad based education for University of Toledo students, as the basis of good citizenship, and strong participatory democracy.
- Create and disseminate knowledge by engaging the professional regional and global communities.
- Fulfill its role in shared governance.
- Protect academic freedom. This is essential to search for truth and its free exposition for both research and teaching.

Graduate Degrees/Certificates Offered

- MS in Biology (p. 305)
- MSE in Biology (p. 306)
- PhD in Biology (p. 306)
- MS in Chemistry (p. 307)
- MS Chemistry - Professional Science Master's in Green Chemistry and Engineering Concentration (p. 307)
- MSE in Chemistry (p. 308)
- PhD in Chemistry (p. 308)
- MS in Geology (p. 309)
- MSE in Geology (p. 309)
- PhD in Biology (Ecology Track) (p. 310)
- MS in Biology (Ecology Track) (p. 310)
- MA in Mathematics (p. 311)
- MAE in Mathematics (p. 311)
- MS in Mathematics (p. 311)
- MSE in Mathematics (p. 312)
- PhD in Mathematics (p. 312)
- MS in Physics (p. 313)
- MSE in Physics (p. 314)
- PhD in Physics (p. 314)
- PSM in Photovoltaics (p. 315)

MS in Biology

Cell/Molecular Biology Concentration

The master's degree in biology (cell/molecular biology concentration) is awarded to a student who has demonstrated mastery in the field of biology and a distinct ability to make substantial contributions to the field. It is not awarded merely as a result of courses taken, nor for years spent in studying or research. The quality of work and the resourcefulness of the student must be such that the faculty can expect a continuing effort toward the advancement of knowledge and significant achievement in research and related activities.

The master's degree in biology prepares students to enter research careers in industrial and entrepreneurial settings, and non-research careers in a variety of areas including public policy, science communication, intellectual property law, and science education.

30 credit hours are required to earn the the master's degree and work and typically takes two-three years of study beyond the bachelor's degree. A substantial portion of this time is spent in independent research leading to a thesis.

Cell/Molecular Biology Concentration

Option A (Thesis)

For the degree of master of science in biology (cell/ molecular biology concentration), a student must complete a minimum of 30 semester

hours of graduate course work approved by an advisory committee, including:

Code	Title	Hours
BIOL 6000	Introduction To Scientific Thought And Expression	3
BIOL 6010	Advanced Molecular Biology	4
BIOL 6090	Advanced Cell Biology	4
BIOL 6100	Research Methodology: Cell And Molecular Biology	3
BIOL 6200	Advanced Signal Transduction	3
BIOL 6930	Seminar In Biology (take twice)	1
Select additional course and research credits		12
Total Hours		30

In some cases, a written comprehensive examination may be required at the end of the first year for students with deficiencies in their coursework. The student must take a minimum of 6 hours of BIOL 6960, write an original research thesis, and pass an oral examination on the thesis.

Option B (Non-thesis)

For the degree of master of science in biology, a student must complete a minimum of 30 semester hours of graduate course work approved by an advisory committee, including:

Code	Title	Hours
BIOL 6010	Advanced Molecular Biology	4
BIOL 6090	Advanced Cell Biology	4
BIOL 6100	Research Methodology: Cell And Molecular Biology	3
BIOL 6930	Seminar In Biology (take twice)	1
Select additional course and research credits		17
Total Hours		30

A maximum of three hours in BIOL 6960, BIOL 6980 or BIOL 6990 may be included in the minimum 30 hours. The student must write an original research paper based on library research that meets the approval of the student's advisory committee and pass an oral examination defending the research hypothesis. Normally, students choosing Option B will not be encouraged to pursue graduate study beyond the M.S. degree.

Up to 10 hours of graduate credit may be transferred from another accredited institution, as recommended by the student's advisory committee.

Students will demonstrate an in-depth understanding of and the ability to communicate scientific information within an area of specialized study within the biological sciences.

A) Thesis track: Students will demonstrate an ability to conduct experiments, collect and interpret data, and disseminate those data in written and verbal modalities.

B) Non-thesis track: Students will demonstrate an ability to review and evaluate the published literature and effectively communicate their findings in verbal and written modalities.

Students will demonstrate knowledge of their ethical responsibility when conducting research in terms of proper scientific conduct and the rights of human subjects.

MSE in Biology

For the degree of master of science and education, students must meet requirements for the degree as stated in the Judith Herb College of Education (p. 441) graduate section of this catalog. In addition, no more than 8 hours may be earned in 5000-level courses. Students doing their theses in biology rather than in education must fulfill the same thesis-related requirements as other biology M.S. candidates.

PhD in Biology

Cell/Molecular Biology Concentration

The doctoral degree in biology (cell/molecular biology concentration) is awarded to a student who has demonstrated mastery in the field of biology and a distinct and superior ability to make substantial contributions to the field. It is not awarded merely as a result of courses taken, nor for years spent in studying or research. The quality of work and the resourcefulness of the student must be such that the faculty can expect a continuing effort toward the advancement of knowledge and significant achievement in research and related activities.

The doctoral degree in biology prepares students to enter research careers in academic and industrial settings, and non-research careers in a variety of areas including public policy, science communication, intellectual property law, and science education.

The doctoral degree provides a foundation in molecular and cellular biology, research methodologies and practices, rigorous hypothesis-driven scientific investigation, and the dissemination of research results and ideas.

In general, work for the Ph.D. takes five years of study beyond the bachelor's degree. A substantial portion of this time is spent in independent research leading to a dissertation. Up to 30 hours toward a master's degree may apply as part of the student's doctoral program. Normally 90 credit hours of study beyond the bachelor's degree are required for the Ph.D.

Each student must complete an individualized program of study in the area of cell/molecular biology approved by the student's advisory committee and the department. This course of study must include:

Code	Title	Hours
BIOL 8000	Introduction To Scientific Thought And Expression	3
BIOL 8010	Advanced Molecular Biology	4
BIOL 8090	Advanced Cell Biology	4
BIOL 8100	Research Methodology: Cell And Molecular Biology	3
BIOL 8200	Advanced Signal Transduction	3
BIOL 8930	Seminar In Biology (take 3 times)	1
Select additional course and research credits to attain the minimum number of semester hours		
Total Hours		90

Ph.D. candidates must pass a written and oral qualifying examination in the Spring of their second year of the program and a final written and oral dissertation defense examination. After passing the qualifying examination, the student must meet each year with their Dissertation Committee and have a first-authorship manuscript accepted by a peer-

reviewed scientific journal in order to be qualified for defense of their dissertation research.

Courses numbered at the 5000 and 6000 levels are intended primarily for students at the master's level. Courses numbered at the 7000 and 8000 levels are intended primarily for students at the post-master's (students with a master's degree, or with more than 34 graduate credit hours) and doctoral levels. Courses carrying a dual listing (numbered at both 5000/7000 or 6000/8000 levels) are available to students at both levels. In these cases, there may be substantive differences in the course requirements for students registered at the advanced level.

The department considers experience in teaching to be a vital and significant component of graduate education. Therefore, all graduate students in the Ph.D. program are required to complete at least one semester of formal teaching experience. M.S. students also are expected to acquire teaching experience as part of their graduate programs.

Students will demonstrate an in-depth understanding of and the ability to communicate scientific information within an area of specialized study within the biological sciences.

Students will demonstrate an ability to conduct experiments, collect and interpret data, and disseminate those data in written and verbal modalities.

Students will demonstrate knowledge of their ethical responsibility when conducting research in terms of proper scientific conduct and the rights of

human subjects.

MS in Chemistry

The **research-based MS program** in chemistry increases the professional competence of the chemist beyond the bachelor's degree. Course work, independent research culminating in the defense of an original thesis, and small group discussions are emphasized to achieve these goals. The MS degree can be viewed as an important professional goal or as preparation for study toward the doctoral degree. 30 credit hours are required to earn the research-based MS.

The objective of the **non-thesis MS program** is to provide an alternate pathway for students to obtain an MS degree in chemistry that does not involve an in-depth research project or a thesis. This degree option is intended for area residents whose current work responsibilities, or intellectual property issues with their employer, preclude the possibility of conducting the requisite research for the traditional research-based MS degree. School teachers, non-traditional students, and employees of local industry who want to earn an MS degree for promotions and/or to meet eligibility requirements for teaching positions at regional community colleges may wish to pursue this degree option. 30 credit hours are required to earn the non-thesis MS.

The Department of Chemistry and Biochemistry and the Department of Chemical Engineering, in conjunction with the School of Green Chemistry and Engineering, offer a **Professional Science Master's (PSM) Degree in Green Chemistry and Engineering**. The PSM Degree is designed for students who want to concentrate their studies on principles of green chemistry and green engineering and incorporate aspects of business and other professional skills components into their master's degree and future career.

The PSM Degree in Green Chemistry and Engineering is approved and affiliated with the National Professional Science Master's Association.

The PSM Degree in Green Chemistry and Engineering requires 36 credit hours to graduate.

The PSM Degree is a terminal degree that prepares students for immediate employment opportunities in industry, government, and nongovernmental organizations. It is not a research-based degree.

The PSM Degree provides a foundation in chemistry, chemical engineering, toxicology, environmental chemistry, life cycle assessment, chemical alternatives assessment, regulations and policy, and business.

More information on activities of the School of Green Chemistry and Engineering and/or the PSM Degree in Green Chemistry and Engineering, visit our website at <https://www.utoledo.edu/nsm/sqce/>

- Requirements for the thesis-based master's program (p. 307)
- Requirements for the non-thesis master's program (p. 307)
- Requirements for the professional science master's program in green chemistry and engineering (p. 308)

Requirements for the Thesis-Based Master's Program

For the degree of master of science, students must meet the following departmental requirements:

1. The courses presented must total at least 30 hours of graduate credit, including at least four hours of credit in graduate research.
2. Registration for research seminar is typically required each term the student is enrolled in graduate research.
3. Each candidate must present a thesis.
4. Registration for chemistry colloquium is typically required each term, but no more than four hours of credit may count within the required 30 hours.
5. Each candidate must demonstrate satisfactory performance on a comprehensive oral examination on his or her thesis research, in addition to the public defense of the thesis at a colloquium presentation.
6. Upon choosing a research director, an advisory committee will be appointed to supervise the research, to administer the comprehensive oral examination, and to approve the thesis. Each student, in conjunction with the director of graduate studies, the research director, and the student's advisory committee, will prepare a plan of study listing the courses and other requirements for the degree. Upon approval, the plan of study becomes the list of course requirements for the degree. Students are required to take four or more 6000-level courses covering at least three different subdisciplines of chemistry as part of the plan of study.
7. Each student must register and successfully complete CHEM 6940.

Requirements for the Non-Thesis Master's Program

For the non-thesis master of science degree, students must meet the following departmental requirements:

1. The courses presented must total at least 30 hours of graduate credit.
2. Each student, in conjunction with the director of graduate studies, will prepare a plan of study listing the courses and other requirements for the degree. Upon approval, the plan of study becomes the list of course requirements for the degree. Students are required to take five or more chemistry 6000-level courses (minimum 20 credit hours) as part of the plan of study. To establish breadth in knowledge, at least one course in each of four (out of six) subdisciplines of chemistry (analytical, biochemistry, inorganic, materials, organic, physical) must be completed. Up to 8 hours of 6000-level courses in other fields may also be applied towards the degree with permission of the director of graduate studies.
3. Registration for chemistry colloquium is required during some terms, but no more than two hours of credit may count within the required 30 hours
4. Credit for thesis research or research seminar may not be applied towards the required 30 hours.
5. Each candidate must participate in CHEM 6940 and demonstrate satisfactory performance on a departmental literature colloquium presentation.

Requirements for the Professional Science Master's Program in Green Chemistry and Engineering

For the professional science master's degree, students must meet the following departmental requirements:

1. The courses presented must total at least 36 hours of graduate credit.
2. Each student, in conjunction with the director of graduate studies and the director of the School of Green Chemistry and Engineering, will prepare a plan of study listing the courses and other requirements for the degree. Upon approval, the plan of study becomes the list of course requirements for the degree. Students are required to take:

Code	Title	Hours
CHEM 6200	Green Chemistry	3
CHEM 6210	Environmental Chemistry	3
CHEE 6010	Green Engineering Principles	3
CHEE 6110	Green Engineering Applications	3
BUAD 6600	Supply Chain Management	3
EFSB 6690 or EFSB 6590	Strategic Management of Innovation New Venture Creation	3
Select 12 credit hours of elective graduate coursework in traditional areas of chemistry or chemical engineering		12
Total Hours		30

3. Each student must also complete a graduate industrial internship (CHEM 6970/CHEE 6970). The graduate industrial internship must be completed at an industry, governmental organization, or non-governmental organization in an area relevant to green chemistry and engineering. The PSM program director will assist in identifying internship opportunities and must approve all placements. Students who are working or have worked part or full-time in a relevant job may

request internship credit for this work experience. The director will evaluate all such requests and give credit if appropriate.

4. Up to 4 credit hours of 6000-level coursework in a related discipline (e.g., environmental sciences, physics) may be applied to the minimum 12 credit hours of electives if approved by the director of the PSM program and director of graduate studies. Up to 2 credit hours of independent research (CHEM 6980) may also be applied if approved by the director of the PSM program. Research seminar (CHEM 6930) and colloquium (CHEM 6920) cannot be applied towards the 36 hour minimum for the PSM track.

Students in the Chemistry MS degree program will be able to:

- describe data and results in both written and oral formats
- solve, with the appropriate mathematical techniques, and analyze problems from chemistry in their area of concentration
- conduct a new research project via their design of experimental and/or theoretical techniques
- interpret publications in the literature from their research area

MSE in Chemistry

For the degree of master of science and education, students must meet requirements for the degree as stated in the Judith Herb College of Education (p. 441) graduate section of this catalog.

PhD in Chemistry

The doctoral program in chemistry is designed to ensure that the student has the basic foundation of knowledge and is equipped with the tools necessary to perform independent research. The emphasis on research recognizes the power of original research to arouse the scientific curiosity of the student, to develop and stimulate creativity, and to encourage further discovery through independent study.

The doctoral program is divided into three stages for the typical student:

Stage 1 - Includes correcting deficiencies as well as establishing a set of prescribed courses to serve as the foundation for further training. A research director is also chosen.

Stage 2 - The student pursues research toward the dissertation, prepares a required formal research proposal, and undertakes a qualifying examination.

Stage 3 - The student is admitted to candidacy after successful completion of the qualifying examination requirement. The student then focuses efforts on research, publishing their results, and completion of the doctoral dissertation.

90 credit hours are required to earn the PhD.

Candidates for the doctor of philosophy degree must meet the following requirements:

1. Each student, in conjunction with the director of graduate studies, the student's research director, and the student's advisory committee, will prepare a doctoral program proposal (plan of study) listing the courses and other requirements for the degree. Upon approval,

the program proposal becomes the list of courses and other requirements for the degree. Students are required to take six or more 8000-level courses covering at least four different subdisciplines of chemistry as part of the plan of study.

- Successful completion of a comprehensive qualifying examination for entry to doctoral candidacy.
- Registration for chemistry colloquium is typically required each term.
- Registration for research seminar is typically required each term the student is enrolled in graduate research.
- Each student must satisfactorily complete two semesters of supervised, half-time teaching.
- After admission to candidacy, each student is required to spend a minimum of two consecutive semesters in full-time study at The University of Toledo.
- Dissertation research must be carried out primarily in laboratories of The University of Toledo.
- Each candidate must demonstrate satisfactory performance on a comprehensive oral examination on his or her dissertation research, in addition to the public defense of the dissertation at a colloquium presentation.
- Each student must register and successfully complete CHEM 8940.

Students in the Chemistry Ph.D. degree program will be able to

- interpret publications in the literature from their research area
- solve, with the appropriate mathematical techniques, and analyze any problem from the core areas of chemistry as well as the area of their concentration
- conduct extensive new research via their design of experimental and/or theoretical techniques
- describe data and results in both written and oral formats.

MS in Geology

At least 30 credit hours of graduate course work approved by the student's advisory committee. This degree is designed to give students who have completed an undergraduate degree in Geology or closely related discipline, an opportunity for in-depth study of environmental geology with expertise in near surface geology. Graduates are employed by state geological surveys, government agencies, NGO's, consulting firms, non-profits, educational institutions, and are well positioned for pursuing a PhD.

Master of Science in Geology

Option A (Thesis): A minimum of 30 credit hours of approved graduate coursework is required for the master's degree in geology. This includes 24 hours of formal courses (excluding EEES 6960 and EEES 6990) with a minimum of 19 hours in DES that must include:

Code	Title	Hours
EEES 5200	Advanced Quaternary Geology	3
EEES 5240	Soil Science	3
EEES 5410	Hydrogeology	3
EEES 6100	Glacial Stratigraphy And Geophysics	3

EEES 6250	Graduate Launch	1
EEES 6930	Seminar (EEES 6930-009, 1 hour each semester)	1

The remaining courses selected with approval of the student's thesis committee taken at the 5000 level or above; all but EEES 6930 must be taken for a letter grade (A–F). Additional credit hours will include EEES 6960 Thesis Research and/or EEES 6990 Independent Study, a maximum of 6 hours of which may be taken for a letter grade, and may also include other DES or non-DES courses that need not be taken for a letter grade. The student must also prepare a thesis consisting of a written report on original independent research conducted by the student under the supervision of their thesis advisor (or co-advisors) and defend this thesis before their advisory committee.

Option B (Non-thesis): The non-thesis option for a master's degree in geology differs from the thesis option (above) by requiring 27 hours of formal courses and a maximum of 3 hours of EEES 6960 or EEES 6990; all but EEES 6930 (seminars) must be taken for a letter grade (A–F). The student also must write an original report based on library research and defend this report before their advisory committee.

Master of Science in Biology (Ecology Track)

Option A (Thesis): A minimum of 30 credit hours of approved graduate coursework is required for the master's degree in biology. This includes 24 hours of formal courses (excluding EEES 6960 and EEES 6990) with a minimum of 19 hours in DES that must include:

Code	Title	Hours
EEES 5160	Advanced Environmental Data Management	3
EEES 6250	Graduate Launch	1
EEES 6400	Biostatistics	4
EEES 6600	Foundations of Ecology	4
EEES 6930	Seminar (EEES 6930-009, 1 hour per semester)	1

The remaining courses selected with approval of the student's thesis committee taken at the 5000 level or above; all but EEES 6930 (seminars) must be taken for a letter grade (A–F). Additional credit hours will include EEES 6960 and/or EEES 6990, a maximum of 6 hours of which may be taken for a letter grade, and may also include other DES or non-DES courses that need not be taken for a letter grade. The student must also prepare a thesis consisting of a written report on original independent research conducted by the student under the supervision of their thesis advisor (or co-advisors) and defend this thesis before their advisory committee.

Option B (Non-thesis): The non-thesis option for a master's degree in biology differs from the thesis option (above) by requiring 27 hours of formal courses and a maximum of 3 hours of EEES 6960 or EEES 6990; all but EEES 6930 (seminars) must be taken for a letter grade (A–F). The student also must write an original report based on library research and defend this report before his or her advisory committee.

MSE Geology

The master of science and education (MSE) is a degree offered by the Judith Herb College of Education in collaboration with the College of

Natural Sciences and Mathematics. Within the degree program, area concentrations are possible in both biology and geology. Students must meet requirements for the degree as stated in the Judith Herb College of Education (p. 441) graduate section of this catalog.

PhD in Biology (Ecology Track)

A minimum of 90 credit hours of graduate course work approved by the student's advisory committee. This degree is designed to give students flexibility in a variety of research related professions through a broad understanding of the discipline and expertise within a particular field of ecology. Graduates are often employed within government agencies, consulting firms and academia.

The doctoral degree in biology (ecology track) is awarded to a student who has demonstrated mastery in the field of biology and a distinct and superior ability to make substantial contributions to the field. The quality of work and the resourcefulness of the student must be such that the faculty can expect a continuing effort toward the advancement of knowledge and significant achievement in the discipline.

In general, work for the Ph.D. requires a minimum of 90 credit hours of study beyond the bachelor's degree. A substantial portion of this time is spent performing independent research leading to an original thesis that is substantially more in depth than a MS thesis. Work performed toward a MS may apply in part to the student's doctoral program.

Each student must complete an individualized program of study in an area of ecology that is approved by the student's advisory committee. This program must include 24 hours of formal courses (excluding EEES 8960 and EEES 8990) with a minimum of 19 hours in DES that must include EEES 5160, EEES 8250, two semesters of statistics (e.g., EEES 8400 and an advanced statistics course such as EEES 8650), EEES 8600, 8930-009 Departmental Seminar (1 hr. per semester), and the remaining courses selected with approval of the student's thesis committee taken at the 7000 level or above; all but EEES 8930 (seminars) must be taken for a letter grade (A–F). Additional credit hours will include EEES 8960 and/or EEES 8990, a maximum of 6 hours of which may be taken for a letter grade, and may also include other DES or non-DES courses that need not be taken for a letter grade. Within the first two years of study students must pass a written qualifying examination and an oral comprehensive examination and a defense of their research proposal.

All graduate students in the Ph.D. program are required to complete at least one semester of formal teaching-assistant experience before graduation. In addition, each student must:

1. submit a manuscript on their research to a scholarly, peer-reviewed journal;
2. give a presentation of their research at a professional conference; and
3. make an oral presentation on their research at a scholarly forum (an oral presentation at a professional conference would satisfy both latter requirements, but a poster presentation would not).

Finally, each student must prepare a dissertation consisting of a written report on original independent research conducted by the student under

the supervision of their dissertation advisor (or co-advisors) and defend this dissertation before their advisory committee.

Students will demonstrate an in-depth understanding of and the ability to communicate scientific information within an area of specialized study within

the biological sciences.

Students will demonstrate an ability to conduct experiments, collect and interpret data, and disseminate those data in written and verbal modalities.

Students will demonstrate knowledge of their ethical responsibility when conducting research in terms of proper scientific conduct and the rights of human subjects.

Master of Science in Biology (Ecology Track)

At least 30 credit hours of graduate course work approved by the student's advisory committee. This degree is designed to give students who have completed an undergraduate degree in Biology or closely related discipline, an opportunity for in-depth study of ecology. Graduates are employed by government agencies, NGO's, consulting firms, non-profits, educational institutions, and are well positioned for pursuing a PhD.

Option A (Thesis): A minimum of 30 credit hours of approved graduate coursework is required for the master's degree in biology (average 42 hours). This includes 24 hours of formal courses (excluding EEES 6960 and EEES 6990) with a minimum of 19 hours in DES that must include:

Code	Title	Hours
EEES 5160	Advanced Environmental Data Management	3
EEES 6250	Graduate Launch	1
EEES 6400	Biostatistics	4
EEES 6600	Foundations of Ecology	4
EEES 6930	Seminar (EEES 6930-009, 1 hour per semester)	1

The remaining courses selected with approval of the student's thesis committee taken at the 5000 level or above; all but EEES 6930 (seminars) must be taken for a letter grade (A–F). Additional credit hours will include EEES 6960 and/or EEES 6990, a maximum of 6 hours of which may be taken for a letter grade, and may also include other DES or non-DES courses that need not be taken for a letter grade. The student must also prepare a thesis consisting of a written report on original independent research conducted by the student under the supervision of their thesis advisor (or co-advisors) and defend this thesis before their advisory committee.

Option B (Non-thesis): The non-thesis option for a master's degree in biology differs from the thesis option (above) by requiring 27 hours of formal courses and a maximum of 3 hours of EEES 6960 or EEES 6990; all but EEES 6930 (seminars) must be taken for a letter grade (A–F). The student also must write an original report based on library research and defend this report before his or her advisory committee.

Students will demonstrate an in-depth understanding of and the ability to communicate scientific information within an area of specialized study within the biological sciences.

A) Thesis track: Students will demonstrate an ability to conduct experiments, collect and interpret data, and disseminate those data in written and verbal modalities.

B) Non-thesis track: Students will demonstrate an ability to review and evaluate the published literature and effectively communicate their findings in verbal and written modalities.

Students will demonstrate knowledge of their ethical responsibility when conducting research in terms of proper scientific conduct and the rights of human subjects.

MA in Mathematics

The **M.A. program** is designed to provide a comprehensive introduction to the fundamental concepts of modern mathematics and is appropriate for students who wish to pursue a career teaching at the community or junior college level or for those who intend to enter a doctoral program. The degree requires 30 semester hours of course work that must include the two-semester introductory courses in algebra, topology, and real analysis and one semester of complex analysis. In addition, students are required to complete one upper level sequence in algebra, topology, differential geometry, differential equations, real or complex analysis. Electives can be chosen from other graduate level courses in mathematics.

To obtain the Master of Arts degree in mathematics, students must complete a minimum of 30 semester hours of graduate credit and meet the following requirements:

Code	Title	Hours
MATH 5330 & MATH 5340	Abstract Algebra I and Abstract Algebra II	6
MATH 5820 & MATH 5830	Introduction To Real Analysis I and Introduction To Real Analysis II	6
MATH 5450 & MATH 5460	Introduction To Topology I and Introduction To Topology II	6
MATH 5880	Complex Variables	3
Select one of the following:		6
MATH 6300 & MATH 6310	Algebra I and Algebra II	
MATH 6400 & MATH 6410	Topology I and Topology II	
MATH 6450	Differential Geometry II	
MATH 6500 & MATH 6510	Ordinary Differential Equations and Partial Differential Equations	
MATH 6800 & MATH 6810	Real Analysis I and Real Analysis II	
MATH 6840 & MATH 6850	Complex Analysis I and Complex Analysis II	
Select one of the following:		3
MATH 5540	Classical Differential Geometry I	
MATH 5800	Ordinary Differential Equations	
MATH 5810	Partial Differential Equations	
MATH 5860	Calculus Of Variations And Optimal Control Theory I	

Any course at the 6000 level listed above

The student must pass a three-part comprehensive examinations or write a master's thesis. If a thesis is elected, the student must take an oral examination on the general area of the thesis.

Total Hours

30

MAE in Mathematics

Master of Science and Education or Master of Arts and Education

For the degree of Master of Arts and education, students must meet requirements for the degree as stated in the Judith Herb College of Education (p. 441) graduate catalog. The following requirements must also be met:

1. A minimum of 36 hours of graduate credit must be completed. MATH 6930 and MATH 6940 do not count toward the 36 hours.
2. The total graduate and undergraduate program must include the following:
 - a. at least six hours of abstract algebra and/or linear algebra,
 - b. six hours in geometry, statistics, probability and/or computer programming,
 - c. three to six hours of analysis (beyond calculus),
 - d. three hours of complex analysis and
 - e. one course in logic and foundations.
3. The student must pass comprehensive examinations in three of the areas of study of mathematics. The exact areas are to be arranged with the adviser.
4. For information on the education course requirements, see the program description provided by the Judith Herb College of Education (p. 441).

MS in Mathematics

The **M.S. program in Applied Mathematics** offers students a rigorous introduction to the fundamental tools of applied mathematics, with particular emphasis on differential equations and numerical analysis. The program requires 30 semester hours of course work that includes year-long courses in real analysis, numerical analysis, and differential equations and a semester course in complex analysis. Elective courses can be chosen from graduate courses in applied areas such as linear, nonlinear and dynamic programming, convex analysis, calculus of variations, applied functional analysis, and optimal control. A recently added Industrial Mathematics track allows students to take six of their elective hours in approved courses in the departments of Physics, Chemistry, Biology, Economics, Engineering, ISOM, Business or Environmental Sciences. A major component of this track is a project report (to serve as a thesis) which contains a solution to a practical "real-life" problem drawn from a company, university department or government unit.

The **M.S. program in Statistics** gives students training in methodology of applied statistics and also provides a solid foundation in statistical theory. Students' skills in applied statistics are developed through project-oriented courses, statistical computing emphasizing S+ and SAS, and faculty supervised experience in the Department's statistical consulting service. Through the statistical consulting service students gain first-

hand experience assisting with the statistical analysis of problems that come from local institutions such as the U Toledo College of Medicine and The UToledo Center for Applied Pharmacology, and from local industries. The program requires 32 semester hours of courses. Among the required courses are applications of statistics, statistical inference, linear statistical models, multivariate analysis, statistical computing, non-parametric statistics, categorical data analysis, statistical consulting, and sample survey methods and theory.

The degree of Master of Science can be obtained in one of two options.

Option A – Applied Mathematics: To obtain the degree of Master of Science in the applied mathematics option, the student must complete a minimum of 30 semester hours of graduate credit and meet the following requirements:

Code	Title	Hours
MATH 5710 & MATH 5720	Methods Of Numerical Analysis I and Methods Of Numerical Analysis II	6
MATH 5820 & MATH 5830	Introduction To Real Analysis I and Introduction To Real Analysis II	6
MATH 6500 & MATH 6510	Ordinary Differential Equations and Partial Differential Equations	6
MATH 5880	Complex Variables	3
Select three of the following:		9
MATH 5540	Classical Differential Geometry I	
MATH 6500	Ordinary Differential Equations	
MATH 6510	Partial Differential Equations	
MATH 6520	Dynamical Systems I	
MATH 6530	Dynamical Systems II	
MATH 6720	Methods Of Mathematical Physics I	
MATH 6820	Functional Analysis I	
MATH 5880	Complex Variables	
MATH 5380	Discrete Structures And Analysis Algorithms	
MATH 5680	Introduction To Theory Of Probability	
MATH 5690	Introduction To Mathematical Statistics	
MATH 5860	Calculus Of Variations And Optimal Control Theory I	

The student must pass a two-part comprehensive examination or submit and defend a master's thesis.

Total Hours **30**

Option B – Statistics: To obtain the degree of Master of Science in the statistics option, the student must complete a minimum of 35 semester hours of graduate credit and meet the following requirements:

Code	Title	Hours
MATH 5680	Introduction To Theory Of Probability	3
MATH 5690	Introduction To Mathematical Statistics	3
MATH 5600	Advanced Statistical Methods I	3
MATH 5610	Advanced Statistical Methods II	3
MATH 5620	Linear Statistical Models	3
MATH 5630	Theory And Methods Of Sample Surveys	3
MATH 5640	Statistical Computing	3

MATH 6620	Categorical Data Analysis	3
MATH 6630	Nonparametric Statistics	3
MATH 6640	Topics In Statistics	3
MATH 6650	Statistical Inference	3
MATH 6690	Multivariate Statistics	3

Pass a two-part comprehensive examination, one part in probability and statistical theory and one part in applied statistics.

Total Hours **36**

MSE in Mathematics

Master of Science and Education or Master of Arts and Education

For the degree of Master of Arts and education, students must meet requirements for the degree as stated in the Judith Herb College of Education (p. 441) graduate catalog. The following requirements must also be met:

1. A minimum of 36 hours of graduate credit must be completed. MATH 6930 and MATH 6940 do not count toward the 36 hours.
2. The total graduate and undergraduate program must include the following:
 - a. at least six hours of abstract algebra and/or linear algebra,
 - b. six hours in geometry, statistics, probability and/or computer programming,
 - c. three to six hours of analysis (beyond calculus),
 - d. three hours of complex analysis and
 - e. one course in logic and foundations.
3. The student must pass comprehensive examinations in three of the areas of study of mathematics. The exact areas are to be arranged with the adviser.
4. For information on the education course requirements, see the program description provided by the Judith Herb College of Education (p. 441).

PhD in Mathematics

The main goal of the **Ph.D. program** is to train mathematicians and statisticians who intend to make research in these areas their life work. Since 1967 when the University of Toledo joined the Ohio university system, the Department of Mathematics and Statistics has offered a strong doctoral program and its graduates now occupy academic positions in colleges and universities around the world. The defining stage of the Ph.D. program is the writing and defense of a dissertation, demonstrating the student's ability to independently attack and solve in an original manner a significant mathematical or statistical problem. No firm timetable can be given for completion of this stage but generally, it can be expected to take two to three years. Possible areas for thesis research in the Department include group theory, non-commutative algebra and representation theory, operator theory, harmonic analysis, several complex variables, partial differential equations, dynamical systems, differential geometry, mathematical physics, mathematical biology, geometric topology, control theory and statistics.. The number of

credit hours required is a minimum of 90, 60 if entering with a master's degree in the field.

The doctorate in mathematics is offered with concentrations in either pure mathematics, applied mathematics or statistics. The broad requirements for these programs are as follows:

1. A student must pass a qualifying examination within two years of entering the program. Mathematics students must pass two topics chosen from algebra, topology, differential equations and real analysis. For statistics students, the two topics must be measure-theoretic probability-theory of statistics and real analysis.
2. A minimum of 90 hours of graduate credit must be completed; 60 hours if the student holds a master's degree upon entry. Colloquium (6930) and Proseminar (6940) are excluded. Pure Mathematics students must complete two semester sequences at the 6000 level in algebra, topology, real analysis (first year sequences) while Applied Mathematics students must complete two semester sequences at the 6000 level in differential equations, real analysis and one between topology and algebra (first year sequences). Statistics students must complete measure-theoretic probability, theory of statistics, and other 6000-level courses selected in consultation with the Statistics graduate advisor.
4. In addition to the first-year sequences, Mathematic students (Pure and Applied) must successfully complete three catalog-listed 6000/8000 year-long sequences excluding (6/8720,6/8730).
4. The student must pass an oral examination in the general area of the intended thesis research within one year of passing the qualifying examination.
5. All doctoral students are expected to spend two consecutive semesters in supervised teaching. Enrollment in the Proseminar is mandatory every semester if credit hour limitations allow it.
6. The student must write a Ph.D. doctoral dissertation under the direction of a faculty member. Before completing the dissertation, the student must report on it in an open seminar. An outside examiner must approve the completed dissertation, and the student must defend it before a faculty committee appointed for that purpose

Students will explain research papers in mathematics.

Students will formulate a research problem in mathematics.

Students will create independent research in a specific mathematical area.

Students will describe and illustrate, both written and orally, the results of their research.

MS in Physics

For a degree of M.S. a student must complete at least 30 hours of graduate credit with specific stipulations as mentioned in the catalog. The degree has two options: (i) with a thesis and (ii) without a thesis. The thesis option involves at least 6 credits of research conducted under supervision of a thesis advisor. A thesis written and defended by the student in front of a committee of faculty members is necessary for this option to be completed. In addition to the required coursework, in the non-thesis option, a student must prepare a project report based either on literature research or independent research or a combination thereof, conducted under the supervision of the student's project advisor or co-

advisors. The report should be prepared in accordance with the format specified by the advisory committee and the student should present an oral defense of the project results.

Requirements for the Master's Degree

For the master of science or master of science and education, a student must complete 30 hours of graduate credit that includes the following:

1. PHYS 6140 and an additional 15 hours of graduate course credit in physics, with six of the 15 hours numbered above 6000. Credit in PHYS 5900, PHYS 6010 and/or PHYS 6020 will not count toward either degree.
2. The student must present a satisfactory thesis based on directed research, for no more than eight credit hours.
3. The remaining hours within the 30 total may be chosen from graduate courses approved by the student's committee. In some cases students working toward the Ph.D. may earn the M.S. degree without formal presentation of the M.S. thesis if they have passed the Ph.D. qualifying examination, satisfied the course requirements for the M.S., and completed a research project under the supervision of a research adviser. Students meeting these requirements may petition the department to grant the M.S. without formal presentation of a thesis.

M.S. in Physics with Materials Science Option

A master of science degree in physics with a materials science option is available. For this degree, a student must complete 30 hours of graduate credit, including the following:

1. PHYS 6140, PHYS 6540, PHYS 6550 and an additional 12 hours of graduate course credit in physics with six of the 12 hours numbered above 6000 (no degree credit for PHYS 5900, PHYS 6010 or PHYS 6020).
2. The student must present a satisfactory thesis based on directed research, for no more than eight credit hours.
3. The remaining hours within the 30 total may be chosen from any graduate courses approved by the student's committee.
4. M.S. in Physics with Intensive Coursework Option
5. For the coursework intensive M.S. in Physics the student must complete at least 30 hours of graduate credit including the following:
6. At least 24 hours of graduate course credit in physics, with at least 12 of the 24 hours numbered above 6000 (no degree credit for PHYS5900, PHYS6010, or PHYS6020). No more than 6 hours of graduate research course credit may count towards the 24 hours.
7. In addition to the required coursework, a student must prepare a project report based either on literature or independent research or a combination thereof, conducted under the supervision of the student's project advisor or co-advisors. The report should be prepared in accordance with the format specified by the advisory committee and the student should present an oral defense of the project results.
8. The remaining hours to complete the 30 total required hours may be chosen from any courses approved for graduate credit with the approval of the student's advisory committee.

MSE in Physics

For the degree of master of science and education, students must meet requirements for the degree as stated in the Judith Herb College of Education (p. 441) graduate section of this catalog.

PhD in Physics

The doctoral degree in physics is awarded to a student who has demonstrated mastery in the field of physics and a distinct and superior ability to make substantial contributions to the field. The quality of work and the resourcefulness of the student must be such that the faculty can expect a continuing effort toward the advancement of knowledge and significant achievement in research and related activities. Publication of research in peer-reviewed journals is expected. The doctoral degree in physics prepares students to enter research careers in academic, government and industrial settings. Non-research careers in a variety of areas including public policy, science communication, intellectual property law, and science education are also possible. The degree provides a foundation in either one of the following areas of expertise: astronomy and astrophysics, photovoltaics and condensed-matter physics consisting of theory and experiment, atomic and molecular physics, medical physics, biophysics, photonics. A strong training may be expected in research methodologies and practices, rigorous hypothesis-driven scientific investigation, and the dissemination of research results and ideas through scholarly article publication, presentation at conferences, other universities and research settings. In general, work for the Ph.D. takes five years of study beyond the bachelor's degree. A substantial portion of this time is spent in independent research leading to a dissertation. Normally 90 credit hours of study beyond the bachelor's degree are required for the Ph.D. Students may opt to get a M.S. degree during their Ph.D. program.

Requirements for the Doctoral Program

For the doctor of philosophy degree, a student must complete a total of 90 hours of graduate credit including the following:

Code	Title	Hours
PHYS 7220	Classical Mechanics	3
PHYS 7250	Classical Electrodynamics I	3
PHYS 7320	Quantum Mechanics I	3
PHYS 7450	Statistical Mechanics	3
PHYS 8040	Physics and Astronomy Professional Development Seminar	1
Select at least 18 additional hours of credit in physics in courses numbered higher than 6100 approved by the student's committee		18
Dissertation research ¹		30-60
Total Hours		90

¹ 30 to 60 hours allowed for the dissertation research depending on the nature of the research and the needs of the student.

Credit in PHYS 5900, PHYS 6010/PHYS 8010, PHYS 6020/PHYS 8020, or PHYS 7910 will not count toward degree requirements.

The doctoral degree requirements include a Ph.D. qualifying examination, a comprehensive examination, and a final oral examination. Passing the

qualifying examination is a prerequisite for status as a Ph.D. candidate in physics. After passing the qualifying examination, the doctoral student must select a field of specialization. A faculty committee is formed, chaired by the research adviser, to evaluate the student's progress and to establish an appropriate program of course work. This committee administers the oral comprehensive examination, after which only the dissertation research requirement remains. The graduate program ends with the student presenting the dissertation and defending it satisfactorily in an oral examination.

Ph.D. in Physics with Concentration in Astrophysics

The Ph.D. in physics with concentration in astrophysics satisfies all the requirements for the Ph.D. in physics while preparing students for a career in astronomy and astrophysics.

To fulfill the requirement of 18 hours of credit in physics courses numbered above 6100, the concentration requires:

Code	Title	Hours
PHYS 6810/7810	Stellar Astrophysics I	3
PHYS 6820/7820	Stellar Astrophysics II	3
PHYS 6830/7830	Galactic Astronomy I	3
PHYS 6840/7840	Galactic Astronomy II	3
Select two related elective courses:		6
PHYS 6710/7710	Atomic Physics	
PHYS 6720/7720	Atomic & Molecular Spectroscopy	
PHYS 8860	General Relativity	
PHYS 8870	Cosmology	
Other appropriate courses		
Select one of the following:		3
PHYS 6980/8980	Special Topics (on an astrophysics-related topic)	

A satisfactory dissertation in astronomy or astrophysics with a supervisor who is a member of the Ritter Astrophysical Research Center.

Total Hours **21**

Ph.D. in Physics with Concentration in Materials Science

The Ph.D. in physics with concentration in materials science satisfies all the requirements for the Ph.D. in physics while preparing students for a career in materials science.

In addition, the concentration requires:

- Two core courses in the fundamentals of materials science:

Code	Title	Hours
PHYS 8540	Structure, Defects And Diffusion	4
PHYS 8550	Thermodynamics And Phase Transformations In Condensed Systems	4
Total Hours		8

- Two additional elective courses in materials science and engineering chosen from a list of courses approved by the faculty of the Center for Materials Science and Engineering; and
- A dissertation in a materials-related field with a supervisor who is a member of the Center for Materials Science and Engineering.

Ph.D. in Physics with Concentration in Medical Physics

The Ph.D. in physics with concentration in medical physics satisfies all of the requirements for a Ph.D. in physics degree while preparing students for a career in medical physics. The medical physics-related courses, which total at least 27 credit hours, are provided by the College of Medicine and Life Sciences. The student's faculty advisory committee will consist of faculty members from the department of physics and astronomy and the medical physics fields. The committee may also include other members appropriate for this degree. A dissertation research project is chosen that will have relevance to both physics and medical physics. The Ph.D. requirement of 18 additional credit hours outside the core courses will be satisfied by the specified additional graduate courses in physics and in medical physics.

PSM in Photovoltaics

This degree program is designed for students who want to work in the photovoltaics (PV) industry upon graduation. It prepares master's students with a strong foundation in the fundamentals of PV science and technology. It complements science education through management course work directly relevant to business aspects of manufacturing. It exposes students to a range of research activities on the UT campus in laboratories of world-expert faculty in PV. Placement of students as interns in PV manufacturing facilities for six months to enhance their practical training and employability is a critical part of the program. There is no thesis requirement for this degree.

The PSM-PV is designed for students with an undergraduate degree in Physics, Chemistry, an Engineering discipline (e.g. Electrical, Chemical, or Mechanical), or an otherwise related field. For the degree of Professional Science Masters in Photovoltaics, a student must complete 37 hours of graduate credit including the following.

Code	Title	Hours
PHYS 6020	Physics And Astronomy Journal Seminar (must take twice)	1
PHYS 6250	Classical Electrodynamics I	3
PHYS 6280	Photovoltaic Materials And Device Physics Laboratory	3
PHYS 6320	Quantum Mechanics I	3
PHYS 6630	Semiconductors I	3
PHYS 6940	Industrial Internship	6

PHYS 6960	M.s. Thesis Research	2
PHYS 6980	Special Topics (Fundamentals of Solar Cells)	3
PHYS 6990	Independent Study	3
BUAD 6600	Supply Chain Management	3
INFS 6560	Systems Analysis And Design	3
EFSB 6590	New Venture Creation	3
or EFSB 6690	Strategic Management of Innovation	

No thesis is required; however, students are expected to make an oral presentation based on research and independent study.

John Plenefisch, Acting Chair

Song-Tao Liu, Associate Chair

Tomer Avidor-Reiss, graduate adviser

Mission

The Department of Biological Sciences strives to improve the human condition in the region and the world through cutting-edge molecular and

cellular biology research, high quality instruction and experiential learning for undergraduates pursuing medical and scientific careers, and intensive personalized training for graduate students pursuing scientific careers in academia, industry, and beyond.

General description

The department offers M.S. and Ph.D. degrees in biology, along with B.S. and B.A. degrees in biology, and a B.S. in Medical Laboratory Science. Faculty research interests are concentrated in cellular architecture and dynamics, cancer biology, immunology, neuroscience, and plant science, united by a common interest in discovering fundamental molecular mechanisms. Coursework at both graduate and undergraduate levels emphasizes cell biology, molecular biology, genetics and related areas.

Accreditations

Our Medical Laboratory Science training program currently is fully accredited under National Accrediting Agency for Clinical Laboratory Sciences (NAACLS).

Degrees Offered

- MS in Biology (p. 305)
- MSE in Biology (p. 306)
- PhD in Biology (p. 306)

BIOL 5030 Advanced Microbiology

[3 credit hours]

Lectures on the principles of modern microbiology and virology, including metabolism, growth, cellular morphology, genetics and host parasite relationships. Bacterial and viral diseases will be illustrated.

Term Offered: Spring

BIOL 5040 Advanced Microbiology Laboratory

[1 credit hour]

Laboratories utilizing basic microbiological techniques and illustrating principles of growth, identification and genetics of microbes.

Corequisites: BIOL 5030

Term Offered: Spring

BIOL 5050 Advanced Immunology

[3 credit hours]

The development, genetics and physiology of the immune response.

Term Offered: Spring, Fall

BIOL 5060 Advanced Immunology Laboratory

[1 credit hour]

Laboratory studies of the immune response.

Corequisites: BIOL 5050

Term Offered: Fall

BIOL 5230 Advanced Comparative Animal Physiology

[3 credit hours]

Lectures on the comparative and environmental physiology of vertebrates and invertebrates including metabolism, temperature regulation, respiration, circulation excretion and osmotic regulation.

Prerequisites: BIOL 3030 with a minimum grade of D- and BIOL 3070 with a minimum grade of D-

Term Offered: Spring, Summer

BIOL 5980 Advanced Topics In The Biological Sciences For Science Educators

[1-3 credit hours]

Lecture, seminar or distance learning course on current topics or problems in the biological sciences that are relevant for science educators.

BIOL 6000 Introduction To Scientific Thought And Expression

[3 credit hours]

A writing intensive course for new graduate students that focuses on scientific hypothesis testing and reading the original literature in biology.

Term Offered: Spring, Fall

BIOL 6010 Advanced Molecular Biology

[4 credit hours]

Analysis of recent developments in prokaryotic and eukaryotic molecular biology through evaluation and discussion of current literature.

Term Offered: Fall

BIOL 6020 Advanced Molecular Biology Laboratory

[2 credit hours]

Students will gain a working knowledge of essential laboratory techniques used in molecular biology. These techniques, including polymerase chain reaction (PCR), electrophoresis, DNA cloning, microscopy and transfection, will be used in a course project to express and analyze a protein of interest in cultured mammalian cells. The concepts underlying these procedures will be studied online before the lab. This course is designed to prepare students for careers in research, biotechnology and science education.

Term Offered: Summer

BIOL 6090 Advanced Cell Biology

[4 credit hours]

An advanced course that stresses the experimental basis for current concepts of cell structure and function.

Term Offered: Spring

BIOL 6100 Research Methodology: Cell And Molecular Biology

[3 credit hours]

An in-depth discussion of techniques used in the study of cell and molecular biology. Examples include chromatography and fractionation, electrophoresis cell and molecular cloning.

Term Offered: Fall

BIOL 6200 Advanced Signal Transduction

[3 credit hours]

This course will provide an in-depth discussion of signal transduction topics important for cell/molecular biology research, emphasizing the interplay between intracellular signaling molecules needed to regulate physiological responses.

Prerequisites: BIOL 6010 with a minimum grade of D-

Term Offered: Spring

BIOL 6260 Topics in Cancer Biology

[3 credit hours]

The course will cover our current understanding of carcinogenesis and provide in-depth discussion of the important topics and latest advances in cancer research.

Prerequisites: BIOL 6010 with a minimum grade of D- and BIOL 6090 with a minimum grade of D- and CHEM 6500 with a minimum grade of D-

Term Offered: Fall

BIOL 6300 Advanced Microscopy and Imaging

[3 credit hours]

This course focuses on advanced quantitative fluorescence imaging methods used to visualize single molecules, organelles, cells and tissues in vitro and in vivo. Students will gain theoretical understanding of fluorescence-based imaging techniques such as confocal, TIRF, and super-resolution microscopy, and hands-on experience on the fundamentals of image analysis and quantification.

Prerequisites: BIOL 6090 with a minimum grade of D- and BIOL 6100 with a minimum grade of D-

Term Offered: Fall

BIOL 6830 Molecular and Cellular Biology

[4 credit hours]

Essential concepts of molecular genetics and cell biology. Major topics include gene structure and composition, transcription, translation, protein structure and function, cell cycle, cell movement, and cell signaling. Primarily intended for Master students enrolled in a non-laboratory research based degree program. Students who have received credit for either BIOL 6010 or BIOL 6090 cannot receive credit for BIOL 6830.

Term Offered: Summer

BIOL 6920 Special Projects In Biology

[2-4 credit hours]

Introduction to research on a selected problem under the direction of an individual faculty member.

Term Offered: Spring, Summer, Fall

BIOL 6930 Seminar In Biology

[1 credit hour]

Presentation on research or current literature by graduate students, faculty, or guest speakers.

Term Offered: Spring, Fall

BIOL 6960 Masters Thesis Research

[1-15 credit hours]

Research that normally contributes to the fulfillment of the M.S. thesis requirement.

Term Offered: Spring, Summer, Fall

BIOL 6980 Advanced Topics In Biology

[2-4 credit hours]

Seminar/discussion of significant current topics or problems in biology.

Term Offered: Spring

BIOL 6990 Advanced Readings In Biology

[2-4 credit hours]

Faculty directed readings or projects in a specific area of Biology.

Term Offered: Spring, Summer, Fall

BIOL 7030 Advanced Microbiology

[3 credit hours]

Lectures on the principles of modern microbiology and virology, including metabolism, growth, cellular morphology, genetics and host parasite relationships. Bacterial and viral diseases will be illustrated.

Term Offered: Spring

BIOL 7040 Advanced Microbiology Laboratory

[1 credit hour]

Laboratories utilizing basic microbiological techniques and illustrating principles of growth, identification and genetics of microbes.

Corequisites: BIOL 7030

Term Offered: Spring

BIOL 7050 Advanced Immunology

[3 credit hours]

The development, genetics and physiology of the immune response.

Term Offered: Spring, Fall

BIOL 7060 Advanced Immunology Laboratory

[1 credit hour]

Laboratory studies of the immune response.

Corequisites: BIOL 7050

Term Offered: Fall

BIOL 8000 Introduction To Scientific Thought And Expression

[3 credit hours]

A writing intensive course for new graduate students that focuses on scientific hypothesis testing and reading the original literature in biology.

Term Offered: Spring, Fall

BIOL 8010 Advanced Molecular Biology

[4 credit hours]

Analysis of recent developments in prokaryotic and eukaryotic molecular biology through evaluation and discussion of current literature.

Term Offered: Fall

BIOL 8090 Advanced Cell Biology

[4 credit hours]

An advanced course that stresses the experimental basis for current concepts of cell structure and function.

Term Offered: Spring

BIOL 8100 Research Methodology: Cell And Molecular Biology

[3 credit hours]

An in-depth discussion of techniques used in the study of cell and molecular biology. Examples include chromatography and fractionation, electrophoresis cell and molecular cloning.

Term Offered: Fall

BIOL 8200 Advanced Signal Transduction

[3 credit hours]

This course will provide an in-depth discussion of signal transduction topics important for cell/molecular biology research, emphasizing the interplay between intracellular signaling molecules needed to regulate physiological responses.

Prerequisites: BIOL 8010 with a minimum grade of D-

Term Offered: Spring

BIOL 8260 Topics in Cancer Biology

[3 credit hours]

The course will cover our current understanding of carcinogenesis and provide in-depth discussion of the important topics and latest advances in cancer research.

Prerequisites: BIOL 8010 with a minimum grade of D- and BIOL 8090 with a minimum grade of D- and CHEM 8500 with a minimum grade of D-

Term Offered: Fall

BIOL 8300 Advanced Microscopy and Imaging

[3 credit hours]

This course focuses on advanced quantitative fluorescence imaging methods used to visualize single molecules, organelles, cells and tissues in vitro and in vivo. Students will gain theoretical understanding of fluorescence-based imaging techniques such as confocal, TIRF, and super-resolution microscopy, and hands-on experience on the fundamentals of image analysis and quantification.

Prerequisites: BIOL 8090 with a minimum grade of D- and BIOL 8100 with a minimum grade of D-

Term Offered: Fall

BIOL 8920 Special Projects In Biology

[2-4 credit hours]

Introduction to research on a selected problem under the direction of an individual faculty member.

Term Offered: Spring, Summer, Fall

BIOL 8930 Seminar In Biology

[1 credit hour]

Presentation on research or current literature by graduate students, faculty, or guest speakers.

Term Offered: Spring, Fall

BIOL 8960 Doctoral Dissertation Research

[1-15 credit hours]

Research normally leading to the fulfillment of the Ph.D. dissertation requirement.

Term Offered: Spring, Summer, Fall

BIOL 8980 Advanced Topics In Biology

[2-4 credit hours]

Seminar/discussion of significant current topics or problems in biology.

Term Offered: Spring

BIOL 8990 Advanced Readings In Biology

[2-4 credit hours]

Faculty directed readings or projects in a specific area of Biology.

Term Offered: Spring, Summer, Fall

Department of Chemistry and Biochemistry

Jon R. Kirchhoff, chair

Cora Lind-Kovacs, associate chair

Jianglong Zhu, director of graduate studies

Mission

The **mission** of the Department of Chemistry and Biochemistry is (1) to present outstanding teaching and the highest quality education in chemistry to students at all levels and in all disciplines, (2) to develop and maintain leading research programs with national and international reputations, both in support of our teaching programs and to add to the scientific and technological base of the State of Ohio and the Nation, (3) to advance the development of teaching and research qualifications of the Faculty, (4) to improve our already active and high quality graduate programs with emphasis in biochemistry and materials science, and (5) to serve the University, the Community, and Society through the unique experiences and talents found in the department. Our day-to-day and our long-term activities are guided by the mission.

The Department of Chemistry and Biochemistry is a comprehensive chemistry program offering MS (both thesis and non-thesis options) and PhD degrees in chemistry.

Degrees Offered

- MS in Chemistry (p. 307)
- MS Chemistry - Professional Science Master's in Green Chemistry and Engineering Concentration (p. 307)
- MSE in Chemistry (p. 308)
- PhD in Chemistry (p. 308)

CHEM 5100 Principles of Organic and Inorganic Chemistry

[4 credit hours]

Study of coordination compounds with a focus on ligand bonding, electron counting, molecular orbital theory, reactivity, and catalysis. In addition, polymerization, structure-property relationships, and commercial materials will be explored. A review of undergraduate-level general and organic chemistry topics with discussions concerning teaching these subjects is also included.

Term Offered: Summer

CHEM 5160 Chemistry Laboratory Techniques Development

[2 credit hours]

Study of general and organic chemistry laboratory techniques, such as the characterization, structural determination and reactions of organic and inorganic compounds, with an emphasis on pedagogical aspects of the techniques. Approved chemical safety goggles meeting the American National Standard Z87.1-1968 must be worn by every student during every laboratory class meeting.

Term Offered: Summer

CHEM 5170 Chemistry Instrumentation Techniques

[2 credit hours]

The study of advanced instrumentation techniques and structural determination of organic and inorganic compounds with an emphasis on pedagogical aspects of the techniques. Approved chemical safety goggles meeting the American National Standard Z87.1-1968 must be worn by every student during every laboratory class meeting.

Prerequisites: CHEM 5160 with a minimum grade of D-

CHEM 5230 Chemistry of Sustainable Materials

[4 credit hours]

Applications of the principles of chemistry to understand the issues related to a sustainable energy future.

CHEM 5300 Principles Of Analytical Chemistry

[1-4 credit hours]

Tutorial in selected topics in analytical chemistry. S/U grading only.

Term Offered: Fall

CHEM 5400 Principles Of Organic Chemistry

[1-4 credit hours]

Tutorial in selected topics in organic chemistry. S/U grading only.

Term Offered: Summer, Fall

CHEM 5500 Principles Of Biological Chemistry

[1-4 credit hours]

Tutorial in selected topics in biological chemistry. S/U grading only.

Term Offered: Fall

CHEM 5600 Principles Of Inorganic And Organometallic Chemistry

[1-4 credit hours]

Tutorial in selected topics in inorganic and organometallic chemistry. S/U grading only.

Term Offered: Summer, Fall

CHEM 5700 Principles Of Physical Chemistry

[1-4 credit hours]

Tutorial in selected topics in physical chemistry. S/U grading only.

Term Offered: Spring, Fall

CHEM 5800 Principles Of Materials Chemistry

[1-4 credit hours]

Tutorial in selected topics in materials chemistry. S/U grading only.

Term Offered: Fall

CHEM 6200 Green Chemistry

[3 credit hours]

Advanced topics in green chemistry, including industrial applications, atom economy, safer solvent substitutions, alternatives assessment, green metrics (PMI, E-factor), basic life cycle analysis, and an introduction to chemical toxicology.

Term Offered: Fall

CHEM 6210 Environmental Chemistry

[3 credit hours]

This course will focus on the chemistry of air, water, and soil with specific emphasis on the effects of human-made chemical products and by-products on the environment. Connections with green chemistry will be highlighted.

Term Offered: Spring

CHEM 6300 Advanced Analytical Chemistry

[4 credit hours]

An overview of new techniques in analytical chemistry. Topics include sample preparation and sampling, spectroscopic, separation, electrochemical, surface characterization and thermal methods.

Prerequisite: Permission of department.

Term Offered: Fall

CHEM 6310 Separation Methods

[3 credit hours]

The theory, design and application of separation methods. Topics include extraction techniques, gas, liquid, and supercritical fluid chromatography, affinity and chiral separation, and capillary electrophoresis.

Term Offered: Spring

CHEM 6320 Electrochemistry

[4 credit hours]

A fundamental study of electrochemical concepts, methods, instrumentation and applications.

Term Offered: Spring

CHEM 6330 Spectroscopic Methods And Analysis Of Spectra

[4 credit hours]

A comprehensive study of theory and instrumentation. Applications of spectroscopic methods including spectral interpretation. Topics include a study of absorption, emission, Raman, NMR, ESR, mass spectrometry, and related subjects. Important methodology and strategy in organic synthesis including disconnection and retrosynthetic analysis.

Term Offered: Spring

CHEM 6340 Mass Spectrometry

[4 credit hours]

The principles and applications of mass spectrometry in chemistry, biochemistry, and related disciplines. Prerequisite: Admitted to the graduate program.

CHEM 6350 Separation Methods Laboratory

[1 credit hour]

Experiments covering topics discussed in CHEM 6310 lectures. Five hours of laboratory per week. Approved chemical safety goggles meeting the American National Standard 287.1-1968 must be worn by every student during every laboratory class meeting.

Corequisites: CHEM 6310

Term Offered: Spring

CHEM 6400 Advanced Organic Chemistry

[4 credit hours]

This course deals with chemical structure and reactivity correlations applied to the study of organic reaction mechanisms; stereochemical features including conformation and stereoelectronic effects; reaction dynamics, isotope effects and molecular orbital theory applied to pericyclic and photochemical reactions; and special reactive intermediates including carbenes, carbanions, and free radicals.

Term Offered: Fall

CHEM 6410 Organic Synthesis

[4 credit hours]

Important methodology and strategy in organic synthesis including disconnection and retrosynthetic analysis.

Term Offered: Spring

CHEM 6420 Topics in Modern Organic Chemistry

[4 credit hours]

This course is designed to introduce groundbreaking topics and technologies in organic chemistry over the past decades including new methods in heterocyclic chemistry and applications, photochemistry, electrocatalysis, enzymatic catalysis, and advances in transition metal catalysis.

Term Offered: Spring

CHEM 6430 Medicinal Chemistry

[4 credit hours]

Qualitative and quantitative aspects of the design of new therapeutic agents are discussed. Approaches to the design of drugs and new therapeutic modalities directed at enzymes, receptors, membrane transport proteins and nucleic acids will be examined.

Term Offered: Fall

CHEM 6440 Carbohydrate Chemistry

[4 credit hours]

Topics in carbohydrate chemistry, including chemical synthesis of complex oligosaccharides, complex glycoconjugates (glycolipids, glycopeptides, and glycoproteins).

Term Offered: Fall

CHEM 6450 Organic Reaction Mechanisms

[3 credit hours]

This course focuses on a thorough treatment of synthetic chemistry through so-called Named Reactions, as well as extensive study of the underlying mechanisms. Course is often conducted as a “flipped classroom”, and will require viewing pre-recorded lectures outside of the scheduled class time to allow in class time to focus on practical applications of course material.

Term Offered: Fall**CHEM 6500 Advanced Biological Chemistry**

[4 credit hours]

The chemistry of cellular and molecular transformations in biochemical systems. Molecular structure of proteins, nucleic acids and membranes. Metabolism and biosynthesis of carbohydrates, amino acids and lipids; gene regulation and replication.

Term Offered: Fall**CHEM 6510 Protein Chemistry**

[4 credit hours]

A detailed analysis of the structure and function of proteins. Current methodology for the analysis of structure, the basis for molecular associations and relationships between structure and biological function.

Prerequisites: CHEM 6500 with a minimum grade of D-**Term Offered:** Spring**CHEM 6520 Enzymology**

[4 credit hours]

Survey of current methods to study enzyme-catalyzed reactions, and application to examples from major enzyme groups. Current topics in enzymology include abzymes and ribozymes, artificial enzymes, and enzymes, and enzyme engineering.

Term Offered: Spring**CHEM 6530 Nucleic Acid Chemistry**

[4 credit hours]

The structural and chemical properties of nucleic acids and the resulting biological consequences. Topics include: 3D structures, conformation, protein/nucleic acid interactions, physical properties and chemical reactions, mutagenesis, damage/repair, and recombination.

Prerequisites: CHEM 6500 with a minimum grade of D-**Term Offered:** Spring**CHEM 6540 Macromolecular Crystallography**

[2 credit hours]

Fundamental theory and practical application of X-ray diffraction to macromolecular structure determination, including protein crystallization and manipulation, data collection and reduction, phase solution, electron density interpretation, structural refinement and validation.

Prerequisites: CHEM 6850 with a minimum grade of D-**Term Offered:** Spring**CHEM 6550 Practical Protein Crystallography**

[2 credit hours]

Hands-on training in protein crystallography. Laboratory projects include: protein crystallization, crystal manipulation and mounting, X-ray diffraction data collection, data reduction, structure solution, electron density interpretation, refinement and validation.

Prerequisites: CHEM 6850 with a minimum grade of D-**Term Offered:** Spring**CHEM 6570 Biophysical Chemistry**

[4 credit hours]

Principles and applications of physical chemistry as applied to biological macromolecules (i.e., proteins and nucleic acids in solution), including thermodynamics, kinetics and spectroscopy of macromolecular interactions.

Term Offered: Fall**CHEM 6580 Bioinorganic Chemistry**

[4 credit hours]

Survey of biologically important metals and metal-ligand complexes, and the role of metal ions in proteins, metal ion transport and regulation, and metals in medicine.

CHEM 6600 Physical Inorganic Chemistry

[4 credit hours]

Symmetry, bonding theories, magnetism, and spectroscopic characterization of inorganic compounds are described. Coverage of spectroscopic techniques such as NMR, EPR, UV/VIS, IR, AND Mossbauer focus on applications to inorganic systems.

Term Offered: Fall**CHEM 6610 Chemistry of Transition and Post-Transition Elements**

[4 credit hours]

The organometallic chemistry of the transition metals, lanthanides and actinides is described. Synthesis, structure, bonding, and reactivity are considered. Applications in catalysis, bioinorganic, and materials chemistry are discussed.

Term Offered: Fall**CHEM 6620 Chemistry of the Main Group Elements**

[4 credit hours]

The inorganic and organometallic chemistry of main group elements is described. Synthesis, structure, bonding, and reactivity are considered. The use of main group reagents in synthesis, catalysis, and materials chemistry are discussed.

Term Offered: Spring**CHEM 6700 Advanced Physical Chemistry**

[4 credit hours]

Chemical systems and processes in the context of classical equilibrium thermodynamics. It introduces non-equilibrium and statistical thermodynamics to elucidate chemical changes and the connection between molecular and macroscopic system properties.

Term Offered: Fall**CHEM 6710 Quantum Chemistry and Spectroscopy**

[4 credit hours]

Fundamental principles of quantum mechanics and their application to model systems, atoms and molecules; Introduction to molecular spectroscopy.

Term Offered: Spring**CHEM 6720 Modern Topics in Physical Chemistry**

[4 credit hours]

Advanced topics of current interest in physical chemistry. Examples of topics include nanomaterials science, spectroscopic techniques, or molecular modeling.

Term Offered: Spring, Fall

CHEM 6730 Molecular Modeling

[4 credit hours]

CHEM 6730 Molecular Modeling [4 credit hours]. Theory and techniques of contemporary molecular modeling, and their application to calculate physical and chemical properties of realistic molecular systems.

Term Offered: Fall**CHEM 6800 Advanced Materials Chemistry**

[4 credit hours]

Introduction to important classes of solids, including conductors, magnetic materials, ferroelectrics, glasses, microporous materials, organic solids. Traditional and novel synthetic approaches, structure/property relationships, and characterization methods specific to solids.

Term Offered: Spring**CHEM 6810 Materials Science I**

[4 credit hours]

A generic materials science approach to the study of crystalline structure and defects (point, line and planar) in crystalline materials. The mechanisms and kinetics of diffusion in the condensed state.

Term Offered: Fall**CHEM 6820 Materials Science II**

[4 credit hours]

A materials science approach to the thermodynamics of condensed state equilibria. Phase transformation kinetics.

Term Offered: Spring**CHEM 6830 Nanomaterials Science**

[4 credit hours]

This survey course is intended to serve as an introduction to nanotechnology for non-specialists. It is accessible to students in any technical major, including chemists (all divisions), physicists, and engineers. The fundamentals of nanotechnology will be covered, including the origin of nanoscale properties, synthesis and characterization of nanomaterials (e.g. colloids, nanoparticles, nanowires, nanotubes, DNA-based structures), fabrication of larger-scale structures (e.g. self assembly, lithography), and characterization techniques (e.g. microscopy, microanalysis, spectroscopy). Applications will also be discussed.

Term Offered: Spring, Fall**CHEM 6850 X-Ray Crystallography**

[4 credit hours]

Theory and practice of structure determination by X-ray diffraction. Basics of symmetry, diffraction, and reciprocal space. Hands-on introduction to single-crystal and powder methods.

Term Offered: Fall**CHEM 6920 Chemistry Colloquium**

[1-4 credit hours]

Presentations on research or current literature.

Term Offered: Spring, Summer, Fall**CHEM 6930 Chemistry Seminar**

[1-2 credit hours]

Seminars conducted by individual members of the department.

Term Offered: Spring, Fall**CHEM 6940 Scientific Communication**

[1-2 credit hours]

Instructions on different modes of scientific communication : written communication, oral presentation, and research proposal, to enable students to think and converse competently in the language of science.

Term Offered: Spring, Fall**CHEM 6960 Thesis Research**

[1-15 credit hours]

Original investigations of significant chemical problems at the master's level under the guidance of a member of the faculty.

Term Offered: Spring, Summer, Fall**CHEM 6970 Graduate Professional Internship**

[1-6 credit hours]

Academic adviser approved industrial or non profit internship to provide an experiential learning component to the MS and PhD degrees in chemistry, including the Professional Science Masters Degree in Green Chemistry and Engineering.

CHEM 6980 Special Topics In Chemistry

[1-4 credit hours]

Discussions of newly developing areas in chemistry research.

Term Offered: Spring, Fall**CHEM 7300 Principles Of Analytical Chemistry**

[1-4 credit hours]

Tutorial in selected topics in analytical chemistry. S/U grading only.

Term Offered: Fall**CHEM 7400 Principles Of Organic Chemistry**

[1-4 credit hours]

Tutorial in selected topics in organic chemistry. S/U grading only.

Term Offered: Fall**CHEM 7500 Principles Of Biological Chemistry**

[1-4 credit hours]

Tutorial in selected topics in biological chemistry. S/U grading only.

Term Offered: Spring, Fall**CHEM 7600 Principles Of Inorganic And Organometallic Chemistry**

[1-4 credit hours]

Tutorial in selected topics in inorganic and organometallic chemistry. S/U grading only.

Term Offered: Fall**CHEM 7700 Principles Of Physical Chemistry**

[1-4 credit hours]

Tutorial in selected topics in physical chemistry. S/U grading only.

Term Offered: Fall**CHEM 7800 Principles Of Materials Chemistry**

[1-4 credit hours]

Tutorial in selected topics in materials chemistry. S/U grading only.

Term Offered: Fall**CHEM 8200 Green Chemistry**

[3 credit hours]

Advanced topics in green chemistry, including industrial applications, atom economy, safer solvent substitutions, alternatives assessment, green metrics (PMI, E-factor), basic life cycle analysis, and an introduction to chemical toxicology.

Term Offered: Fall

CHEM 8210 Environmental Chemistry

[3 credit hours]

This course will focus on the chemistry of air, water, and soil with specific emphasis on the effects of human-made chemical products and by-products on the environment. Connections with green chemistry will be highlighted.

Term Offered: Spring**CHEM 8300 Advanced Analytical Chemistry**

[4 credit hours]

An overview of new techniques in analytical chemistry. Topics include sample preparation and sampling, spectroscopic, separation, electrochemical, surface characterization and thermal methods.

Term Offered: Fall**CHEM 8310 Separation Methods**

[3 credit hours]

The theory, design and application of separation methods. Topics include extraction techniques, gas, liquid, and supercritical fluid chromatography, affinity and chiral separation, and capillary electrophoresis.

Term Offered: Spring**CHEM 8320 Electrochemistry**

[4 credit hours]

A fundamental study of electrochemical concepts, methods, instrumentation and applications. Prerequisite: Permission of department.

Term Offered: Spring**CHEM 8330 Spectroscopic Methods And Analysis Of Spectra**

[4 credit hours]

A comprehensive study of theory and instrumentation. Applications of spectroscopic methods including spectral interpretation. Topics include a study of absorption, emission, Raman, NMR, ESR, mass spectrometry, and related subjects. Important methodology and strategy in organic synthesis including disconnection and retrosynthetic analysis.

Term Offered: Spring**CHEM 8340 Mass Spectrometry**

[4 credit hours]

The principles and applications of mass spectrometry in chemistry, biochemistry, and related disciplines. Prerequisite: Admitted to the graduate program.

CHEM 8350 Separation Methods Laboratory

[1 credit hour]

Experiments covering topics discussed in CHEM 8310 lectures. Five hours of laboratory per week. Approved chemical safety goggles meeting the American National Standard 287.1-1968 must be worn by every student during every laboratory class meeting.

Corequisites: CHEM 8310**Term Offered:** Spring**CHEM 8400 Advanced Organic Chemistry**

[4 credit hours]

This course deals with chemical structure and reactivity correlations applied to the study of organic reaction mechanisms; stereochemical features including conformation and stereoelectronic effects; reaction dynamics, isotope effects and molecular orbital theory applied to pericyclic and photochemical reactions; and special reactive intermediates including carbenes, carbanions, and free radicals.

Term Offered: Fall**CHEM 8410 Organic Synthesis**

[4 credit hours]

Important methodology and strategy in organic synthesis including disconnection and retrosynthetic analysis.

Term Offered: Spring**CHEM 8420 Topics in Modern Organic Chemistry**

[4 credit hours]

This course is designed to introduce groundbreaking topics and technologies in organic chemistry over the past decades including new methods in heterocyclic chemistry and applications, photochemistry, electrocatalysis, enzymatic catalysis, and advances in transition metal catalysis.

Term Offered: Spring**CHEM 8430 Medicinal Chemistry**

[4 credit hours]

Qualitative and quantitative aspects of the design of new therapeutic agents are discussed. Approaches to the design of drugs and new therapeutic modalities directed at enzymes, receptors, membrane transport proteins and nucleic acids will be examined.

Term Offered: Fall**CHEM 8440 Carbohydrate Chemistry**

[4 credit hours]

Topics in carbohydrate chemistry, including chemical synthesis of complex oligosaccharides, complex glycoconjugates (glycolipids, glycopeptides, and glycoproteins).

Term Offered: Fall**CHEM 8450 Organic Reaction Mechanisms**

[3 credit hours]

This course focuses on a thorough treatment of synthetic chemistry through so-called Named Reactions, as well as extensive study of the underlying mechanisms. Course is often conducted as a "flipped classroom", and will require viewing pre-recorded lectures outside of the scheduled class time to allow in class time to focus on practical applications of course material.

Term Offered: Fall**CHEM 8500 Advanced Biological Chemistry**

[4 credit hours]

The chemistry of cellular and molecular transformations in biochemical systems. Molecular structure of proteins, nucleic acids and membranes. Metabolism and biosynthesis of carbohydrates, amino acids and lipids; gene regulation and replication.

Term Offered: Fall**CHEM 8510 Protein Chemistry**

[4 credit hours]

A detailed analysis of the structure and function of proteins. Current methodology for the analysis of structure, the basis for molecular associations and relationships between structure and biological function.

Prerequisites: CHEM 6500 with a minimum grade of D- or CHEM 8500 with a minimum grade of D-

Term Offered: Spring

CHEM 8520 Enzymology

[4 credit hours]

Survey of current methods to study enzyme-catalyzed reactions, and application to examples from major enzyme groups. Current topics in enzymology include abzymes and ribozymes, artificial enzymes, and enzymes, and enzyme engineering.

Term Offered: Spring**CHEM 8530 Nucleic Acid Chemistry**

[4 credit hours]

The structural and chemical properties of nucleic acids and the resulting biological consequences. Topics include: 3D structures, conformation, protein/nucleic acid interactions, physical properties and chemical reactions, mutagenesis, damage/repair, and recombination.

Prerequisites: CHEM 6500 with a minimum grade of D- or CHEM 8500 with a minimum grade of D-**Term Offered:** Spring**CHEM 8540 Macromolecular Crystallography**

[2 credit hours]

Fundamental theory and practical application of X-ray diffraction to macromolecular structure determination, including protein crystallization and manipulation, data collection and reduction, phase solution, electron density interpretation, structural refinement and validation.

Prerequisites: CHEM 6850 with a minimum grade of D- or CHEM 8850 with a minimum grade of D-**Term Offered:** Spring**CHEM 8550 Practical Protein Crystallography**

[2 credit hours]

Hands-on training in protein crystallography. Laboratory projects include: protein crystallization, crystal manipulation and mounting, X-ray diffraction data collection, data reduction, structure solution, electron density interpretation, refinement and validation.

Prerequisites: CHEM 8850 with a minimum grade of D-**Term Offered:** Spring**CHEM 8570 Biophysical Chemistry**

[4 credit hours]

Principles and applications of physical chemistry as applied to biological macromolecules (i.e., proteins and nucleic acids in solution), including thermodynamics, kinetics and spectroscopy of macromolecular interactions.

Term Offered: Fall**CHEM 8580 Bioinorganic Chemistry**

[4 credit hours]

Survey of biologically important metals and metal-ligand complexes, and the role of metal ions in proteins, metal ion transport and regulation, and metals in medicine.

CHEM 8600 Advanced Inorganic And Organometallic Chemistry

[4 credit hours]

Symmetry, bonding theories, magnetism, and spectroscopic characterization of inorganic compounds are described. Coverage of spectroscopic techniques such as NMR, EPR, UV/VIS, IR, AND Mossbauer focus on applications to inorganic systems.

Term Offered: Fall**CHEM 8610 Chemistry of Transition and Post-Transition Elements**

[4 credit hours]

The organometallic chemistry of the transition metals, lanthanides and actinides is described. Synthesis, structure, bonding, and reactivity are considered. Applications in catalysis, bioinorganic, and materials chemistry are discussed.

Term Offered: Fall**CHEM 8620 Chemistry of the Main Elements**

[4 credit hours]

The inorganic and organometallic chemistry of main group elements is described. Synthesis, structure, bonding, and reactivity are considered. The use of main group reagents in synthesis, catalysis, and materials chemistry are discussed.

Term Offered: Spring**CHEM 8700 Advanced Physical Chemistry**

[4 credit hours]

Chemical systems and processes in the context of classical equilibrium thermodynamics. It introduces non-equilibrium and statistical thermodynamics to elucidate chemical changes and the connection between molecular and macroscopic system properties.

Term Offered: Fall**CHEM 8710 Quantum Chemistry and Spectroscopy**

[4 credit hours]

Fundamental principles of quantum mechanics and their application to model systems, atoms and molecules; Introduction to molecular spectroscopy.

Term Offered: Spring**CHEM 8720 Modern Topics in Physical Chemistry**

[4 credit hours]

Advanced topics of current interest in physical chemistry. Examples of topics include nanomaterials science, spectroscopic techniques, or molecular modeling.

Term Offered: Spring, Fall**CHEM 8730 Molecular Modeling**

[4 credit hours]

CHEM 8730 Molecular Modeling [4 credit hours]. Theory and techniques of contemporary molecular modeling, and their application to calculate physical and chemical properties of realistic molecular systems.

Term Offered: Fall**CHEM 8800 Advanced Materials Chemistry**

[4 credit hours]

Introduction to important classes of solids, including conductors, magnetic materials, ferroelectrics, glasses, microporous materials, organic solids. Traditional and novel synthetic approaches, structure/property relationships, and characterization methods specific to solids.

Term Offered: Spring**CHEM 8810 Materials Science I**

[4 credit hours]

A generic materials science approach to the study of crystalline structure and defects (point, line and planar) in crystalline materials. The mechanisms and kinetics of diffusion in the condensed state.

Term Offered: Fall

CHEM 8820 Materials Science II

[4 credit hours]

A materials science approach to the thermodynamics of condensed state equilibria. Phase transformation kinetics.

Term Offered: Spring

CHEM 8830 Nanomaterials Science

[4 credit hours]

This survey course is intended to serve as an introduction to nanotechnology for non-specialists. It is accessible to students in any technical major, including chemists (all divisions), physicists, and engineers. The fundamentals of nanotechnology will be covered, including the origin of nanoscale properties, synthesis and characterization of nanomaterials (e.g. colloids, nanoparticles, nanowires, nanotubes, DNA-based structures), fabrication of larger-scale structures (e.g. self assembly, lithography), and characterization techniques (e.g. microscopy, microanalysis, spectroscopy). Applications will also be discussed.

Term Offered: Spring, Fall

CHEM 8850 X-Ray Crystallography

[4 credit hours]

Theory and practice of structure determination by X-ray diffraction. Basics of symmetry, diffraction, and reciprocal space. Hand-on introduction to single-crystal and powder methods.

Term Offered: Fall

CHEM 8920 Chemistry Colloquium

[1-4 credit hours]

Presentations on research or current literature.

Term Offered: Spring, Summer, Fall

CHEM 8930 Chemistry Seminar

[1-2 credit hours]

Seminars conducted by individual members of the Department.

Term Offered: Spring, Fall

CHEM 8940 Scientific Communication

[1 credit hour]

Instructions on different modes of scientific communication: written communication, oral presentation, and research proposal to enable students to think and converse competently in the language of science.

Term Offered: Spring, Fall

CHEM 8960 Dissertation Research

[1-15 credit hours]

Original investigations of significant chemical problems at the Doctoral level under the guidance of a member of the faculty.

Term Offered: Spring, Summer, Fall

CHEM 8970 Graduate Professional Internship

[1-6 credit hours]

Academic adviser approved industrial or non profit internship to provide an experiential learning component to the M.S. and Ph.D. degrees in chemistry, including the Professional Science Masters Degree in Green Chemistry and Engineering.

CHEM 8980 Special Topics In Chemistry

[1-4 credit hours]

Discussions of newly developing areas in chemistry research.

Term Offered: Spring, Fall

Department of Environmental Sciences

Jonathan M. Bossenbroek, chair

Von Sigler, associate chair

Daryl L. Moorhead, graduate advisor

The department of environmental sciences (DES) offers graduate degrees in geology and biology at the master's level and in biology at the doctoral level. Students entering the M.S. or Ph.D. programs are expected to have an adequate background in the natural sciences and mathematics, but may be admitted on a provisional basis if they lack such a background. Complete program details are available at the department website.

Mission Statement

The Mission of the Department of Environmental Sciences is to conduct research to create today's environmental solutions, teach to train tomorrow's environmental leaders, and serve to promote global environmental awareness.

General Description

The Toledo region offers potential students an ideal natural laboratory for studies in ecology, geology, and environmental sciences because it is located where unique natural habitats and landforms occur in proximity to high human population and natural resource use. Toledo is in northwestern Ohio, on the western shore of Lake Erie at the mouth of the Maumee River. The greater metropolitan area is characterized by glacial terrains, and agricultural, urban, and natural ecosystems. Local rivers, Lake Erie's productive fisheries and wetlands, the remarkable diversity of the Oak Openings savannas and woodlands, and wetland remnants of the Great Black Swamp, make the Toledo region a dynamic location for the study of environmental sciences as well as an enjoyable place to live and work.

The Department's strengths in education and research are in the areas of: Earth surface processes; aquatic, landscape, microbial, plant, soil, systems, and vertebrate ecology; and bioremediation and phytoremediation. Research in other areas of both ecology and geology is also conducted. Much of this research occurs in the Toledo region, and often in other parts of the US and the world.

Degrees Offered

- MS in Geology (p. 309)
- MSE in Geology (p. 309)
- MSE in Biology (p. 329)
- PhD in Biology (Ecology Track) (p. 310)
- MS in Biology (Ecology Track) (p. 310)

EEES 5100 Advanced Glacial Geology

[3 credit hours]

To understand glaciers and glacial landscapes. Topics include mass balance, ice flow, hydrology, erosion, deposition, landforms, glacial lakes and development of the Ohio glacial landscape. Field trip is mandatory.

Prerequisites: EEES 3100 with a minimum grade of D-

Term Offered: Spring

EEES 5150 Organic Evolution

[3 credit hours]

The modern theory of evolution is presented within a general framework of biological and geological evidence focusing on the fossil record, early biomolecules, protein synthesis, genetics, phylogeny and vertebrate evolution.

Term Offered: Spring, Summer

EEES 5160 Advanced Environmental Data Management

[3 credit hours]

A course in data management for environmental science graduate students covering the basics of data management practices and the use of Excel and R for data preparation, evaluation, analysis, visualization, and interpretation.

Term Offered: Fall

EEES 5200 Advanced Quaternary Geology

[3 credit hours]

To provide understanding of such cyclical events as climate change, sea level fluctuations, vegetation change and ice sheet paleogeography during the Quaternary Period and to explore future changes for planet Earth.

Term Offered: Spring

EEES 5220 Environmental Geochemistry

[3 credit hours]

Chemical reactions of environmental concern. Water and soil chemistry related to contaminant fate and mobility. Computer software used.

Term Offered: Spring, Fall

EEES 5240 Soil Science

[3 credit hours]

Basic principles of soil formation of physics, chemistry and biology with emphasis on their influence on fluid and chemical migration and preservation of soil quality from geological, agricultural and environmental perspectives.

Term Offered: Spring

EEES 5250 Soil Ecology

[3 credit hours]

Underlying concepts and theory of modern soil ecology will be reviewed including the biogeochemical cycles and ecological functions of soil, and the effects of human activities. (Spring, alternate years, odd)

Prerequisites: (BIOL 3050 with a minimum grade of D- and EEES 4240 with a minimum grade of D-) or (BIOL 3050 with a minimum grade of D- and EEES 5240 with a minimum grade of D-)

Term Offered: Spring, Fall

EEES 5260 Soil Ecology Laboratory

[1 credit hour]

Laboratory exercises designed to complement the material covered in EEES 5250.

Corequisites: EEES 5250

Term Offered: Spring, Fall

EEES 5350 Ecology and Conservation of Reptiles and Amphibians

[3 credit hours]

Ecology, diversity, evolution, and conservation of amphibians and reptiles. Lectures will discuss natural history, trait diversity, evolutionary context, and ecological implications of amphibians and reptiles. Hands-on activities will include taxonomy and identification of local species, survey and field methods, and discussions of scientific literature. Throughout this course, the biology of amphibians and reptiles will be emphasized in the context of conservation.

Term Offered: Spring

EEES 5410 Hydrogeology

[3 credit hours]

Fundamentals of groundwater/earth interactions are introduced concentrating on physical aspects of groundwater flow with applications to the field of water resources and contaminant investigations.

This course is designed as the fundamental course in groundwater for students who plan to use hydrogeology in their careers, e.g., environmental geologists, civil and environmental engineers, environmental specialists and scientists, and petroleum geologists.

Prerequisites: MATH 1750 with a minimum grade of D- or MATH 1850 with a minimum grade of D- or MATH 1830 with a minimum grade of D- or MATH 1920 with a minimum grade of D-

Term Offered: Spring

EEES 5450 Hazardous Waste Management

[3 credit hours]

Environmental regulations concerning hazardous waste, characteristics of hazardous waste and disposal technologies, toxicology, characteristics of organic chemicals and heavy metals, biodegradation, soil science, groundwater contamination, risk assessment, site investigation.

Term Offered: Fall

EEES 5480 GIS Applications in ENSC

[3 credit hours]

An applications course focused on using GIS techniques and applications in environmental problems and research.

Term Offered: Spring, Fall

EEES 5490 Remote Sensing of the Environment

[4 credit hours]

Introduction to theory, methods and techniques used to gather and analyze remote sensor data. Topics range from low altitude air photo interpretation through satellite image acquisition.

Prerequisites: GEPL 3550 with a minimum grade of D- and EEES 2100 with a minimum grade of D-

Term Offered: Fall

EEES 5510 Environmental Microbiology

[3 credit hours]

Microbial diversity and activities in an applied environmental context. Topics include function of microbial ecosystems in energy and carbon flow, bioremediation, and the detection and control of pathogens.

Prerequisites: (EEES 2150 with a minimum grade of D- and CHEM 1230 with a minimum grade of D-)

Term Offered: Fall

EEES 5520 Bioremediation

[3 credit hours]

The environmental fate and transport of contaminants; their transformation and biodegradation by plants and microorganisms; bioremediation strategies, including solid phase, slurry phase and vapor-phase treatments, and natural attenuation.

EEES 5540 Advanced Microbial Ecology

[3 credit hours]

An advanced course focusing on the ecology and public health role of microbes with emphasis on the epidemiology of infectious disease outbreaks.

Term Offered: Fall**EEES 5550 Advanced Methods Of Microbial Investigation**

[3 credit hours]

Student will learn the classical and current methodologies (biochemical and molecular) used in microbial community analysis while developing an understanding of experimental design sample handling and data analysis.

Prerequisites: EEES 5540 with a minimum grade of D-**EEES 5610 Solid Earth Geophysics**

[3 credit hours]

Survey of theory, field applications, interpretation principles of solid earth and exploration geophysics. Two hours lecture, three hours methods laboratory.

Prerequisites: (PHYS 2070 with a minimum grade of D- and PHYS 2080 with a minimum grade of D- and MATH 1850 with a minimum grade of D- and MATH 1860 with a minimum grade of D-)

Term Offered: Spring, Fall**EEES 5630 Numerical Methods In Geophysics**

[3 credit hours]

Numerical filters and matrix operations used to process potential field data and waveforms, isolating anomalies and signals of interest; derivative maps, upward and downward continuation; current interpretation software. Term project.

Prerequisites: EEES 5610 with a minimum grade of D-**Term Offered:** Spring**EEES 5650 Advanced Geology Field Studies**

[1-4 credit hours]

Intensive field studies to various areas of geologic interest. Studies may involve various geologic field methods and descriptive techniques. Course may be repeated multiple times. Fall and Spring.

EEES 5730 Advanced Aquatic Ecology

[3 credit hours]

Advanced cross-disciplinary concepts in the ecology of aquatic environments emphasizing the biology of populations, communities and ecosystems. Includes a project on the application of principles and theory to help understand and solve a management problem in aquatic systems.

Prerequisites: EEES 3050 with a minimum grade of D-**Term Offered:** Fall**EEES 5740 Advanced Aquatic Ecology Laboratory**

[1 credit hour]

Laboratory exercises on the biology of aquatic populations, communities and ecosystems.

Corequisites: EEES 5730**Term Offered:** Fall**EEES 5750 Advanced Conservation Biology**

[4 credit hours]

Advanced cross-disciplinary concepts in the application of principles and theory to the study and maintenance of biological diversity in temperate, subtropical and tropical systems. Lectures, classroom discussion and readings.

Prerequisites: EEES 3050 with a minimum grade of D-**Term Offered:** Spring**EEES 5760 Advanced Landscape Ecology**

[3 credit hours]

This course is for graduate students from a variety of disciplines. Emphasis will be placed on up-to-date knowledge and methods in landscape analysis, pattern-process relationship and potential management applications at multiple spatial and temporal scales.

Prerequisites: EEES 3050 with a minimum grade of D-**Term Offered:** Spring, Fall**EEES 5790 Ecology Field Study**

[2-4 credit hours]

Field study of globally significant ecosystem(s), including analysis of structural and functional relationships within and between ecosystems. Opportunities for individual student projects.

Prerequisites: EEES 3050 with a minimum grade of D-**Term Offered:** Spring, Summer**EEES 6100 Glacial Stratigraphy And Geophysics**

[3 credit hours]

To integrate glacial sedimentology and stratigraphy, with near-surface, geophysical methodologies. Field work to collect a variety of field data to analyze in the lab is mandatory. Data to be presented as posters.

Term Offered: Fall**EEES 6160 Advanced Environmental Data Management**

[3 credit hours]

A course in data management for environmental science graduate students covering the basics of data management practices and the use of Excel and R for data preparation, evaluation, analysis, visualization, and interpretation.

EEES 6250 Graduate Launch

[1 credit hour]

This course prepares graduate students for success by preparing individual study plans, research proposals and presentations, and launching bibliographic research.

Term Offered: Spring, Fall**EEES 6400 Biostatistics**

[4 credit hours]

Application of statistical inference with environmental and ecological data, including estimation, testing of hypotheses, and statistical modeling.

Prerequisites: EEES 6400 with a minimum grade of C- and EEES 5160 with a minimum grade of C- or EEES 8400 with a minimum grade of C- and EEES 6160 with a minimum grade of C-

Term Offered: Spring**EEES 6440 Contaminant Hydrogeology**

[3 credit hours]

Groundwater contaminant sources, impacts, transport, geochemistry and remediation in relation to geological environments with attention to sampling, detection, characterization, modeling and aquifer protection.

Prerequisites: EEES 5410 with a minimum grade of D-

EEES 6450 Advanced Applied Hydrogeology

[3 credit hours]

Applications of hydrogeological monitoring, analyses and modeling using mathematics, statistics and computers. Subjects include: well field and pump test design, sampling strategies, data presentation and analysis and modeling fundamentals.

Prerequisites: EECS 5410 with a minimum grade of D-

Term Offered: Fall

EEES 6500 Multivariable Geostatistics

[3 credit hours]

Application of multivariate statistical methods to scientific data. Emphasis is on applied regression, cluster, principal components, factor, correspondence, canonical correlation and discriminant analyses.

Prerequisites: EEES 6400 with a minimum grade of D-

EEES 6600 Foundations of Ecology

[3 credit hours]

This course is a thorough review of ecological concepts for graduate students including workshops exploring classic quantitative models in ecology.

Term Offered: Spring, Fall

EEES 6650 Statistical Modeling in Environmental Sciences

[4 credit hours]

Statistical modeling techniques applied to environmental problems, with an emphasis on multilevel modeling.

Prerequisites: EEES 6400 with a minimum grade of D-

Term Offered: Spring

EEES 6810 Writing For The Environmental Sciences

[3 credit hours]

Learn to write papers that get cited and proposals that get funded. This course focuses on building the fundamental skills required for effective scientific writing. Writing exercises focus on improving the clarity and persuasiveness of student theses, manuscripts, and proposals. This course is for anyone who wants to improve their science writing, is writing theses or proposals, or who may have to write on the job.

EEES 6930 Seminar

[1 credit hour]

Individual presentation and discussion of papers in the environmental sciences.

Term Offered: Spring, Fall

EEES 6960 Thesis Research

[1-15 credit hours]

Research on a particular geologic problem leading to a written thesis which must be presented and defended before a faculty committee.

Term Offered: Spring, Summer, Fall

EEES 6980 Special Topics

[1-4 credit hours]

A graduate course covering some aspect of environmental sciences not covered in the formal graduate curriculum. Students may repeat the course for credit as topics vary.

Term Offered: Spring, Summer, Fall

EEES 6990 Independent Study

[1-4 credit hours]

Student selects an approved subject for individual study and prepares a detailed report, or gives equivalent evidence of mastering of the selected subject. Taken only as S/U.

Term Offered: Spring, Summer, Fall

EEES 7150 Organic Evolution

[3 credit hours]

The modern theory of evolution is presented within a general framework of biological and geological evidence focusing on the fossil record, early biomolecules, protein synthesis, genetics, phylogeny and vertebrate evolution.

Term Offered: Spring

EEES 7730 Advanced Aquatic Ecology

[3 credit hours]

Advanced cross-disciplinary concepts in the ecology of aquatic environments emphasizing the biology of populations, communities and ecosystems. Includes a project on the application of principles and theory to help understand and solve a management problem in aquatic systems.

Prerequisites: EEES 3050 with a minimum grade of D-

Term Offered: Fall

EEES 7740 Advanced Aquatic Ecology Laboratory

[1 credit hour]

Laboratory exercises on the biology of aquatic populations, communities and ecosystems.

Corequisites: EEES 7730

Term Offered: Fall

EEES 7750 Advanced Conservation Biology

[4 credit hours]

Advanced cross-disciplinary concepts in the application of principles and theory to the study and maintenance of biological diversity in temperate, subtropical and tropical systems. Lectures, classroom discussion and readings.

Prerequisites: EEES 3050 with a minimum grade of D-

Term Offered: Spring

EEES 7790 Ecology Field Trip

[2-4 credit hours]

Field study of globally significant ecosystem(s), including analysis of structural and functional relationships within and between ecosystems. Opportunities for individual student projects.

Prerequisites: EEES 3050 with a minimum grade of D-

Term Offered: Spring, Summer

EEES 8250 Graduate Launch

[1 credit hour]

This course prepares graduate students for success by preparing individual study plans, research proposals and presentations, and launching bibliographic research.

Term Offered: Spring, Fall

EEES 8400 Biostatistics

[4 credit hours]

Application of statistical inference with environmental and ecological data, including estimation, testing of hypotheses, and statistical modeling.

Prerequisites: EEES 6400 with a minimum grade of C- and EEES 5160 with a minimum grade of C- or EEES 8400 with a minimum grade of C- and EEES 6160 with a minimum grade of C-

Term Offered: Spring

EEES 8500 Multivariate Geostatistics

[3 credit hours]

Application of multivariate statistical methods to scientific data. Emphasis is on applied regression, cluster, principal components, factor, correspondence, canonical correlation and discriminant analyses.

Prerequisites: EEES 8400 with a minimum grade of D-

EEES 8600 Foundations of Ecology

[3 credit hours]

This course is a thorough review of ecological concepts for graduate students including workshops exploring classic quantitative models in ecology.

Term Offered: Spring, Fall

EEES 8650 Statistical Modeling in Environmental Sciences

[4 credit hours]

Statistical modeling techniques applied to environmental problems, with an emphasis on multilevel modeling.

Prerequisites: EEES 6400 with a minimum grade of D- or EEES 8400 with a minimum grade of D-

Term Offered: Spring

EEES 8810 Writing For The Environmental Sciences

[3 credit hours]

Learn to write papers that get cited and proposals that get funded. This course focuses on building the fundamental skills required for effective scientific writing. Writing exercises focus on improving the clarity and persuasiveness of student theses, manuscripts, and proposals. This course is for anyone who wants to improve their science writing, is writing theses or proposals, or who may have to write on the job.

EEES 8930 Seminar In Ecology

[1 credit hour]

Presentation on research or current literature by graduate doctoral students, faculty or guest speakers.

Term Offered: Spring, Fall

EEES 8960 Doctoral Dissertation Research

[1-15 credit hours]

Research on a particular problem leading a written dissertation that must be presented and defended before a faculty committee.

Term Offered: Spring, Summer, Fall

EEES 8980 Advanced Topics In Ecology

[2-4 credit hours]

Course covering some aspect of ecology not covered in the formal graduate curriculum. Students may repeat the course for different topics.

Term Offered: Spring, Fall

EEES 8990 Advanced Readings In Ecology

[2-4 credit hours]

Faculty-directed readings or projects in a specific area of ecology. Students may repeat the course for different topics.

Term Offered: Spring, Fall

MS in Geology

At least 30 credit hours of graduate course work approved by the student's advisory committee. #This degree is designed to give students #who have completed an undergraduate degree in Geology or closely related discipline, an opportunity for in-depth study of environmental geology with expertise in near surface geology. #Graduates are employed by state geological surveys, government agencies, NGO's. consulting firms, non-profits, educational institutions, and are well positioned for pursuing a PhD.

Master of Science in Geology

Option A (Thesis): A minimum of 30 credit hours of approved graduate coursework is required for the master's degree in geology. This includes 24 hours of formal courses (excluding EEES 6960 and EEES 6990) with a minimum of 19 hours in DES that must include:

Code	Title	Hours
EEES 5200	Advanced Quaternary Geology	3
EEES 5240	Soil Science	3
EEES 5410	Hydrogeology	3
EEES 6100	Glacial Stratigraphy And Geophysics	3
EEES 6250	Graduate Launch	1
EEES 6930	Seminar (EEES 6930-009, 1 hour each semester)	1

The remaining courses selected with approval of the student's thesis committee taken at the 5000 level or above; all but EEES 6930 must be taken for a letter grade (A–F). Additional credit hours will include EEES 6960 Thesis Research and/or EEES 6990 Independent Study, a maximum of 6 hours of which may be taken for a letter grade, and may also include other DES or non-DES courses that need not be taken for a letter grade. The student must also prepare a thesis consisting of a written report on original independent research conducted by the student under the supervision of their thesis advisor (or co-advisors) and defend this thesis before their advisory committee.

Option B (Non-thesis): The non-thesis option for a master's degree in geology differs from the thesis option (above) by requiring 27 hours of formal courses and a maximum of 3 hours of EEES 6960 or EEES 6990; all but EEES 6930 (seminars) must be taken for a letter grade (A–F). The student also must write an original report based on library research and defend this report before their advisory committee.

Master of Science in Biology (Ecology Track)

Option A (Thesis): A minimum of 30 credit hours of approved graduate coursework is required for the master's degree in biology. This includes 24 hours of formal courses (excluding EEES 6960 and EEES 6990) with a minimum of 19 hours in DES that must include:

Code	Title	Hours
EEES 5160	Advanced Environmental Data Management	3
EEES 6250	Graduate Launch	1
EEES 6400	Biostatistics	4
EEES 6600	Foundations of Ecology	4
EEES 6930	Seminar (EEES 6930-009, 1 hour per semester)	1

The remaining courses selected with approval of the student's thesis committee taken at the 5000 level or above; all but EEES 6930 (seminars) must be taken for a letter grade (A–F). Additional credit hours will include EEES 6960 and/or EEES 6990, a maximum of 6 hours of which may be taken for a letter grade, and may also include other DES or non-DES courses that need not be taken for a letter grade. The student must also prepare a thesis consisting of a written report on original independent research conducted by the student under the supervision of their thesis advisor (or co-advisors) and defend this thesis before their advisory committee.

Option B (Non-thesis): The non-thesis option for a master's degree in biology differs from the thesis option (above) by requiring 27 hours of formal courses and a maximum of 3 hours of EEES 6960 or EEES 6990; all but EEES 6930 (seminars) must be taken for a letter grade (A–F). The student also must write an original report based on library research and defend this report before his or her advisory committee.

MSE in Biology

The master of science and education (MSE) is a degree offered by the Judith Herb College of Education in collaboration with the College of Natural Sciences and Mathematics. Within the degree program, area concentrations are possible in both biology and geology. Students must meet requirements for the degree as stated in the Judith Herb College of Education (p. 441) graduate section of this catalog.

PhD in Biology (Ecology Track)

A minimum of 90 credit hours of graduate course work approved by the student's advisory committee. This degree is designed to give students flexibility in a variety of research related professions through a broad understanding of the discipline and expertise within a particular field of ecology. Graduates are often employed within government agencies, consulting firms and academia.

The doctoral degree in biology (ecology track) is awarded to a student who has demonstrated mastery in the field of biology and a distinct and superior ability to make substantial contributions to the field. The quality of work and the resourcefulness of the student must be such that the faculty can expect a continuing effort toward the advancement of knowledge and significant achievement in the discipline.

In general, work for the Ph.D. requires a minimum of 90 credit hours of study beyond the bachelor's degree. A substantial portion of this time is spent performing independent research leading to an original thesis that is substantially more in depth than a MS thesis. Work performed toward a MS may apply in part to the student's doctoral program.

Each student must complete an individualized program of study in an area of ecology that is approved by the student's advisory committee. This program must include 24 hours of formal courses (excluding

EEES 8960 and EEES 8990) with a minimum of 19 hours in DES that must include EEES 5160, EEES 8250, two semesters of statistics (e.g., EEES 8400 and an advanced statistics course such as EEES 8650), EEES 8600, 8930-009 Departmental Seminar (1 hr. per semester), and the remaining courses selected with approval of the student's thesis committee taken at the 7000 level or above; all but EEES 8930 (seminars) must be taken for a letter grade (A–F). Additional credit hours will include EEES 8960 and/or EEES 8990, a maximum of 6 hours of which may be taken for a letter grade, and may also include other DES or non-DES courses that need not be taken for a letter grade. Within the first two years of study students must pass a written qualifying examination and an oral comprehensive examination and a defense of their research proposal.

All graduate students in the Ph.D. program are required to complete at least one semester of formal teaching-assistant experience before graduation. In addition, each student must:

1. submit a manuscript on their research to a scholarly, peer-reviewed journal;
2. give a presentation of their research at a professional conference; and
3. make an oral presentation on their research at a scholarly forum (an oral presentation at a professional conference would satisfy both latter requirements, but a poster presentation would not).

Finally, each student must prepare a dissertation consisting of a written report on original independent research conducted by the student under the supervision of their dissertation advisor (or co-advisors) and defend this dissertation before their advisory committee.

Students will demonstrate an in-depth understanding of and the ability to communicate scientific information within an area of specialized study within the biological sciences.

Students will demonstrate an ability to conduct experiments, collect and interpret data, and disseminate those data in written and verbal modalities.

Students will demonstrate knowledge of their ethical responsibility when conducting research in terms of proper scientific conduct and the rights of human subjects.

Master of Science in Biology (Ecology Track)

At least 30 credit hours of graduate course work approved by the student's advisory committee. This degree is designed to give students who have completed an undergraduate degree in Biology or closely related discipline, an opportunity for in-depth study of ecology. Graduates are employed by government agencies, NGO's, consulting firms, non-profits, educational institutions, and are well positioned for pursuing a PhD.

Option A (Thesis): A minimum of 30 credit hours of approved graduate coursework is required for the master's degree in biology (average 42 hours). This includes 24 hours of formal courses (excluding EEES 6960 and EEES 6990) with a minimum of 19 hours in DES that must include:

Code	Title	Hours
EEES 5160	Advanced Environmental Data Management	3
EEES 6250	Graduate Launch	1
EEES 6400	Biostatistics	4
EEES 6600	Foundations of Ecology	4
EEES 6930	Seminar (EEES 6930-009, 1 hour per semester)	1

The remaining courses selected with approval of the student's thesis committee taken at the 5000 level or above; all but EEES 6930 (seminars) must be taken for a letter grade (A–F). Additional credit hours will include EEES 6960 and/or EEES 6990, a maximum of 6 hours of which may be taken for a letter grade, and may also include other DES or non-DES courses that need not be taken for a letter grade. The student must also prepare a thesis consisting of a written report on original independent research conducted by the student under the supervision of their thesis advisor (or co-advisors) and defend this thesis before their advisory committee.

Option B (Non-thesis): The non-thesis option for a master's degree in biology differs from the thesis option (above) by requiring 27 hours of formal courses and a maximum of 3 hours of EEES 6960 or EEES 6990; all but EEES 6930 (seminars) must be taken for a letter grade (A–F). The student also must write an original report based on library research and defend this report before his or her advisory committee.

Students will demonstrate an in-depth understanding of and the ability to communicate scientific information within an area of specialized study within the biological sciences.

A) Thesis track: Students will demonstrate an ability to conduct experiments, collect and interpret data, and disseminate those data in written and verbal modalities.

B) Non-thesis track: Students will demonstrate an ability to review and evaluate the published literature and effectively communicate their findings in verbal and written modalities.

Students will demonstrate knowledge of their ethical responsibility when conducting research in terms of proper scientific conduct and the rights of human subjects.

Department of Mathematics and Statistics

Geoffrey Martin, Interim Chair

Alessandro Arsie, Associate Chair

Geoffrey Martin, Graduate Director and Graduate Mathematics Advisor

Biao Zhang, Graduate Statistics Advisor

For Graduate Admissions, please contact the department office

A full description of programs and requirements, with syllabi for exams, is available from the department office or on its Website (<https://www.utoledo.edu/nsm/mathstats/>). The paragraphs below represent a synopsis of the essential elements.

Mission

The mission of the Department of Mathematics and Statistics is to prepare students for careers or further academic programs in mathematics, statistics, actuarial science or data science. To that end we offer academic programs in these fields at bachelor's, master's and

doctoral levels. Via these programs, students are enabled to establish careers in education, business, industry and government. Students at advanced levels graduate with ability to independently investigate mathematical and statistical problems at the forefront of our discipline.

The department is also committed to fostering success for all students across the university by offering courses in mathematics that enhance their foundations in quantitative skills for the wide range of their collegiate coursework as well as critical life skills after they graduate. Finally, the department is committed to enhancing the university's research profile and capabilities by offering assistance in statistics and mathematics to research faculty and students across the campus.

General description

The Department of Mathematics and Statistics is a comprehensive academic unit offering a full range of programs across the disciplines and at all academic levels. We have 18 tenured/tenure-track faculty and 18 teaching faculty in the position of lecturer, along with several faculty in visiting and other part-time positions. We have graduate students at all levels numbering approximately 45. In addition to pure and applied mathematics and statistics at all levels, we also offer undergraduate programs in actuarial science, mathematics with computer science, and data science. Our Statistical Consulting Service provides assistance to researchers across the campus and the community. Our department is fully engaged with the Ohio department of Higher Education and the public institutions of higher education in Ohio in the Ohio Math Initiative. In the context of that initiative and other efforts, we are fully committed to fostering student success across the campus.

Degrees Offered

- MA in Mathematics (p. 311)
- MAE in Mathematics (p. 311)
- MS in Mathematics (p. 311)
- MSE in Mathematics (p. 312)
- PhD in Mathematics (p. 312)

MATH 5010 Functions And Modeling For Middle Grade Mathematics

[3 credit hours]

Introduction to the theory of functions through modeling. Subjects include polynomial, exponential, logarithmic and rational functions, interpolation and modeling of data sets through least squares and other methods. Graduate math credit for education students only.

MATH 5040 Concepts Of Calculus For Middle Grade Mathematics

[3 credit hours]

Introduction to the basic idea of calculus. Subjects include limits, continuity, the derivative and its applications, indefinite and definite integral, Fundamental Theorem of Calculus, evaluation of integrals.

Graduate math credit for education students only.

Term Offered: Summer

MATH 5060 Number Theory Concepts For Middle Grade Mathematics

[3 credit hours]

Introduction to basic number theory. Subjects include history of number theory, prime numbers, unique factorization, Euclidean algorithm, Pythagorean relations, number systems, and transformations. Graduate math credit for education students only.

MATH 5070 Geometry Concepts For Middle School Mathematics

[3 credit hours]

Descriptive geometry in 2 and 3 dimensions, use of axioms and definitions in the proof theorems, formal Euclidean geometry, transformations. Graduate math credit for education students only.

MATH 5080 History Of Mathematics For Middle Grade Mathematics

[3 credit hours]

Study of the history of mathematics from antiquity to the 20th century concentrating on the development of arithmetic, algebra, geometry and calculus. Graduate math credit for education students only.

MATH 5110 Probability Concepts For Middle Grade Mathematics

[3 credit hours]

Introduction to the theory of probability, counting principles and combinatorics, risk, coincidence, expectation and conditional probability, probability distributions. Graduate math credit for education students only.

MATH 5120 Statistics Concepts For Middle Grade Mathematics

[3 credit hours]

Introduction to the fundamental ideas of statistics, including sampling techniques, descriptive, variance, confidence intervals, correlation and regression. Graduate math credit for education students only.

MATH 5220 Theory Of Interest

[3 credit hours]

This course covers the measurement of interest, certain annuities, yield rates, amortization and sinking funds, bonds and other securities and application of interest theory.

MATH 5260 Actuarial Mathematics I

[3 credit hours]

Survival distributions and life tables, life insurance, life annuities, benefit premiums and reserves and multiple life functions are some topics covered in this course.

Prerequisites: MATH 5680 with a minimum grade of D-

Term Offered: Fall

MATH 5300 Linear Algebra I

[3 credit hours]

Theory of vector spaces and linear transformations, including such topics as matrices, determinants, inner products, eigenvalues and eigenvectors, and rational and Jordan canonical forms.

Term Offered: Fall

MATH 5310 Linear Algebra II

[3 credit hours]

Hermitian and normal operators, multilinear forms, spectral theorem and other topics.

Prerequisites: MATH 5300 with a minimum grade of D-

MATH 5330 Abstract Algebra I

[3 credit hours]

Arithmetic of the integers, unique factorization and modular arithmetic; group theory including normal subgroups, factor groups, cyclic groups, permutations, homomorphisms, the isomorphism theorems, abelian groups and p-groups.

Prerequisites: MATH 3190 with a minimum grade of D-

Term Offered: Fall

MATH 5340 Abstract Algebra II

[3 credit hours]

Ring theory including integral domains, field of quotients, homomorphisms, ideals, Euclidean domains, polynomial rings, vector spaces, roots of polynomials and field extensions.

Prerequisites: MATH 5330 with a minimum grade of D-

Term Offered: Spring

MATH 5350 Applied Linear Algebra

[3 credit hours]

Matrices, systems of equations, vector spaces, linear transformations, determinants, eigenvalues and eigenvectors, generalized inverses, rank, numerical methods and applications to various areas of science.

Prerequisites: MATH 1890 with a minimum grade of D-

Term Offered: Spring, Summer

MATH 5380 Discrete Structures And Analysis Algorithms

[3 credit hours]

Discrete mathematical structures for applications in computer science such as graph theory, combinatorics, groups theory, asymptotics, recurrence relations and analysis of algorithms.

Prerequisites: MATH 3320 with a minimum grade of D- or MATH 5330 with a minimum grade of D-

Term Offered: Fall

MATH 5450 Introduction To Topology I

[3 credit hours]

Metric spaces, topological spaces, continuous maps, bases and sub-bases, closure and interior operators, products, subspaces, sums, quotients, separation axioms, compactness and local compactness.

Prerequisites: MATH 3190 with a minimum grade of D-

Term Offered: Fall

MATH 5460 Introduction To Topology II

[3 credit hours]

Connectedness and local connectedness, convergence, metrization, function spaces. The fundamental groups and its properties, covering spaces, classical applications, e.g. Jordan Curve Theorem, Fundamental Theorem of Algebra, Brouwer's Fixed Point Theorem.

Prerequisites: MATH 5450 with a minimum grade of D-

Term Offered: Spring

MATH 5540 Classical Differential Geometry I

[3 credit hours]

Smooth curves in Euclidean space including the Frenet formulae. Immersed surfaces with the Gauss map, principal curvatures and the fundamental forms. Special surfaces including ruled surfaces and minimal surfaces. Intrinsic Geometry including the Gauss Theorem Egregium.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-

MATH 5550 Classical Differential Geometry II

[3 credit hours]

Tensors, vector fields and the Cartan approach to surface theory, Bonnet's Theorem and the construction of surfaces via solutions of the Gauss Equation. Geodesics, parallel transport and Jacobi Fields. Theorems of a global nature such as Hilbert's Theorem or the Theorem of Hopf-Rinow.

Prerequisites: MATH 5540 with a minimum grade of D-

MATH 5600 Advanced Statistical Methods I

[3 credit hours]

Basics of descriptive statistics, study designs and statistical inference. Properties of, and assumptions required for, inference for means, variances, and proportions from one and two-sample paired and unpaired studies. Introduction to ANOVA with multiple comparisons and multiple regression. Model assessment and diagnostics. Statistical software will be employed. Opportunities to apply procedures to real data. Emphasis placed on the foundations to approaches in introductory statistics.

Term Offered: Fall**MATH 5610 Advanced Statistical Methods II**

[3 credit hours]

Statistical/biostatistical concepts and methods. Broad subject categories that may be included are study design, longitudinal data analysis, survival analysis, logistic regression, random and mixed effects models. Other topics applicable to current statistical consulting projects, or related to modern data analytics, may be introduced. Appropriate statistical software will be employed.

Prerequisites: MATH 5600 with a minimum grade of C-**Term Offered:** Spring**MATH 5620 Linear Statistical Models**

[3 credit hours]

Multiple regression, analysis of variance and covariance, general linear models and model building for linear models. Experimental designs include one-way, randomized block, Latin square, factorial and nested designs.

Prerequisites: MATH 6650 with a minimum grade of D-**Term Offered:** Spring**MATH 5630 Theory And Methods Of Sample Surveys**

[3 credit hours]

The mathematical basis to estimation in various sampling contexts, including probability proportional to size sampling, stratified sampling, two-stage cluster sampling and double sampling, is developed.

Prerequisites: MATH 5680 with a minimum grade of D-**Term Offered:** Spring, Fall**MATH 5640 Statistical Computing**

[3 credit hours]

Modern statistical computing, including programming tools, modern programming methodologies, design of data structures and algorithms, numerical computing and graphics. Additional topics selected from simulation studies, inversion of probability integral transforms, rejection sampling, importance sampling, Monte Carlo integration, bootstrapping and optimization.

Term Offered: Fall**MATH 5680 Introduction To Theory Of Probability**

[3 credit hours]

Probability spaces, random variables, probability distributions, moments and moment generating functions, limit theorems, transformations and sampling distributions.

Prerequisites: (MATH 3190 with a minimum grade of D- and MATH 5350 with a minimum grade of D-)**Term Offered:** Summer, Fall**MATH 5690 Introduction To Mathematical Statistics**

[3 credit hours]

Sampling distributions, point estimation, interval estimation, hypothesis testing, regression and analysis of variance.

Prerequisites: MATH 5680 with a minimum grade of D-**Term Offered:** Spring**MATH 5710 Methods Of Numerical Analysis I**

[3 credit hours]

Floating point arithmetic; polynomial interpolation; numerical solution of nonlinear equations; Newton's method. Likely topics include: numerical differentiation and integration; solving systems of linear equations; Gaussian elimination; LU decomposition; Gauss-Seidel method.

Term Offered: Spring, Fall**MATH 5720 Methods Of Numerical Analysis II**

[3 credit hours]

Likely topics include: Computation of eigenvalues and eigenvectors; solving systems of nonlinear equations; least squares approximations; rational approximations; cubic splines; fast Fourier transforms; numerical solutions to initial value problems; ordinary and partial differential equations.

Prerequisites: MATH 5710 with a minimum grade of D-**Term Offered:** Spring**MATH 5740 Advanced Applied Mathematics I**

[3 credit hours]

Series and numerical solutions to ordinary differential equations, special functions, orthogonal functions, Sturm-Liouville Problems, self-adjointness, vector analysis.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-**Term Offered:** Fall**MATH 5750 Advanced Applied Mathematics II**

[3 credit hours]

Continuation of vector analysis, introduction to complex analysis, partial differential equations, Fourier series and integrals.

Prerequisites: MATH 5740 with a minimum grade of D-**Term Offered:** Spring**MATH 5780 Advanced Calculus**

[3 credit hours]

Extrema for functions of one or more variables, Lagrange multipliers, indeterminate forms, inverse and implicit function theorems, uniform convergences, power series, transformations, Jacobians, multiple integrals.

Prerequisites: MATH 2850 with a minimum grade of D-**MATH 5800 Ordinary Differential Equations**

[3 credit hours]

Modern theory of differential equations; transforms and matrix methods; existence theorems and series solutions; and other selected topics.

Prerequisites: MATH 2860 with a minimum grade of D-**Term Offered:** Spring, Fall

MATH 5810 Partial Differential Equations

[3 credit hours]

First and second order equations; numerical methods; separation of variables; solutions of heat and wave equations using eigenfunction techniques; and other selected topics.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-

Term Offered: Spring

MATH 5820 Introduction To Real Analysis I

[3 credit hours]

A rigorous treatment of the Calculus in one and several variables. Topics to include: the real number system; sequences and series; elementary metric space theory including compactness, connectedness and completeness; the Riemann Integral.

Prerequisites: MATH 3190 with a minimum grade of D-

Term Offered: Fall

MATH 5830 Introduction To Real Analysis II

[3 credit hours]

Differentiable functions on \mathbb{R}^n ; the Implicit and Inverse Function Theorems; sequences and series of continuous functions; Stone-Weierstrass Theorem; Arzela-Ascoli Theorem; introduction to measure theory; Lebesgue integration; the Lebesgue Dominated Convergence Theorem.

Prerequisites: MATH 5820 with a minimum grade of D-

Term Offered: Spring

MATH 5860 Calculus Of Variations And Optimal Control Theory I

[3 credit hours]

Conditions for an extreme (Euler's equations, Erdman corner conditions, conditions of Legendre, Jacobi and Weierstrass, fields of extremals, Hilbert's invariant integral); ; Raleigh-Ritz method; isoperimetric problems; Lagrange, Mayer-Bolza problems. Recommended: MATH 5820.

Prerequisites: MATH 1890 with a minimum grade of D-

Term Offered: Fall

MATH 5870 Calculus Of Variations And Optimal Control Theory II

[3 credit hours]

Pontryagin's maximum principle; necessary and sufficient conditions for optimal control, controllability, time optimal control, existence of optimal controls, relationship to the calculus of variations.

Prerequisites: MATH 5860 with a minimum grade of D-

Term Offered: Spring

MATH 5880 Complex Variables

[3 credit hours]

Analytic functions; Cauchy's theorem; Taylor and Laurent series; residues; contour integrals; conformal mappings, analytic continuation and applications.

Prerequisites: MATH 2860 with a minimum grade of D-

Term Offered: Spring, Summer

MATH 5970 Industrial Math Practicum

[1 credit hour]

Students must submit for approval by their adviser a report on the solution of a practical problem involving mathematics. The problem must be drawn from a company, university department of government unit.

MATH 5980 Topics In Mathematics

[3 credit hours]

Special topics in mathematics.

Term Offered: Spring, Summer

MATH 6180 Linear And Nonlinear Programming

[3 credit hours]

Simplex algorithm, ellipsoidal algorithm, Karmarkar's method, interior point methods, elementary convex analysis, optimality conditions and duality for smooth problems, convex programming, algorithms and their convergence.

Prerequisites: MATH 5820 with a minimum grade of D-

MATH 6190 Infinite Dimensional Optimization

[3 credit hours]

Introduction to nonlinear analysis, abstract optimization problems on abstract spaces, applications to calculus of variations, optimal control theory and game theory.

MATH 6300 Algebra I

[3 credit hours]

Group actions, Sylow's theorems, permutation groups, nilpotent and solvable groups, abelian groups, rings, unique factorization domains, fields.

Prerequisites: MATH 5340 with a minimum grade of D-

Term Offered: Fall

MATH 6310 Algebra II

[3 credit hours]

Field extensions, Galois theory, modules, Noetherian and Artinian rings, tensor products, primitive rings, semisimple rings and modules, the Wedderburn-Artin theorem.

Prerequisites: MATH 6300 with a minimum grade of D-

Term Offered: Spring

MATH 6400 Topology I

[3 credit hours]

Topological spaces, continuous functions, compactness, product spaces, Tychonov's theorem, quotient spaces, local compactness, homotopy theory, the fundamental group, covering spaces.

Prerequisites: MATH 4450 with a minimum grade of D- or MATH 5450 with a minimum grade of D- or MATH 7450 with a minimum grade of D-

Term Offered: Fall

MATH 6410 Topology II

[3 credit hours]

Homology theory, excision, homological algebra, the Brouwer fixed point theorem, cohomology, differential manifolds, orientation, tangent bundles, Sard's theorem, degree theory.

Prerequisites: MATH 6400 with a minimum grade of D-

Term Offered: Spring

MATH 6440 Differential Geometry I

[3 credit hours]

Introduction to differential geometry. Topics include differentiable manifolds, vector fields, tensor bundles, the Frobenius theorem, Stokes' theorem, Lie groups.

Prerequisites: MATH 6410 with a minimum grade of D-

Term Offered: Fall

MATH 6450 Differential Geometry II

[3 credit hours]

Topics include connections on manifolds, Riemannian geometry, the Gauss-Bonnet theorem. Further topics may include: homogeneous and symmetric spaces, minimal surfaces, Morse theory, comparison theory, vector and principal bundles.

Prerequisites: MATH 6440 with a minimum grade of D-

Term Offered: Spring

MATH 6500 Ordinary Differential Equations

[3 credit hours]

Existence, uniqueness and dependence on initial conditions and parameter, nonlinear planar systems, linear systems, Floquet theory, second order equations, Sturm-Liouville theory.

Term Offered: Summer, Fall**MATH 6510 Partial Differential Equations**

[3 credit hours]

First order quasi-linear systems of partial differential equations, boundary value problems for the heat and wave equation, Dirichlet problem for Laplace equation, fundamental solutions for Laplace, heat and wave equations.

Term Offered: Spring, Summer**MATH 6520 Dynamical Systems I**

[3 credit hours]

Topic include the flow-box theorem, Poincare maps, attractors, w limit sets, Lyapunov stability, invariant submanifolds, Hamiltonian systems and symplectic manifolds.

Prerequisites: MATH 6500 with a minimum grade of D-**MATH 6530 Dynamical Systems II**

[3 credit hours]

Topics may include local bifurcations of vector fields, global stability, ergodic theorems, integrable systems, symbolic dynamics, chaos theory.

Prerequisites: MATH 6520 with a minimum grade of D-**MATH 6600 Statistical Consulting**

[1-5 credit hours]

Real data applications of various statistical methods, project design and analysis including statistical consulting experience. May be repeated for credit.

Term Offered: Spring, Fall**MATH 6610 Statistical Consulting II**

[3 credit hours]

Real data applications of various statistical methods, project design and analysis including statistical consulting experience.

Term Offered: Spring**MATH 6620 Categorical Data Analysis**

[3 credit hours]

Important methods and modeling techniques using generalized linear models and emphasizing loglinear and logit modeling.

Prerequisites: MATH 5680 with a minimum grade of D-**Term Offered:** Spring, Fall**MATH 6630 Nonparametric Statistics**

[3 credit hours]

Statistical methods based on counts and ranks; methods designed to be effective in the presence of contaminated data or error distribution misspecification.

Prerequisites: MATH 5680 with a minimum grade of C-**Term Offered:** Spring, Fall**MATH 6640 Topics In Statistics**

[3 credit hours]

Topics selected from an array of modern statistical methods such as survival analysis, nonlinear regression, Monte Carlo methods, etc.

Term Offered: Spring, Fall**MATH 6650 Statistical Inference**

[3 credit hours]

Estimation, hypothesis testing, prediction, sufficient statistics, theory of estimation and hypothesis testing, simultaneous inference, decision theoretic models.

Prerequisites: MATH 5680 with a minimum grade of D-**Term Offered:** Fall**MATH 6670 Measure Theoretic Probability**

[3 credit hours]

Real analysis, probability spaces and measures, random variables and distribution functions, independence, expectation, law of large numbers, central limit theorem, zero-one laws, characteristic functions, conditional expectations given a σ -algebra, martingales.

Prerequisites: MATH 5680 with a minimum grade of D-**Term Offered:** Fall**MATH 6680 Theory Of Statistics**

[3 credit hours]

Exponential families, sufficiency, completeness, optimality, equivariance, efficiency. Bayesian and minimax estimation. Unbiased and invariant tests, uniformly most powerful tests. Asymptotic properties for estimation and testing. Most accurate confidence intervals.

Prerequisites: MATH 5960 with a minimum grade of D- or (MATH 6650 with a minimum grade of D- and MATH 6670 with a minimum grade of D-)**Term Offered:** Spring**MATH 6690 Multivariate Statistics**

[3 credit hours]

Multivariate normal sampling distributions, T tests and MANOVA, tests on covariance matrices, simultaneous inference, discriminant analysis, principal components, cluster analysis and factor analysis.

Prerequisites: MATH 5690 with a minimum grade of D- or MATH 6650 with a minimum grade of D-**Term Offered:** Spring**MATH 6720 Methods Of Mathematical Physics I**

[3 credit hours]

Analytic functions, residues, method of steepest descent, complex differential equations, regular singularities, integral representation, real and complex vector spaces, matrix groups, Hilbert spaces, coordinate transformations.

Term Offered: Fall**MATH 6730 Methods Of Mathematical Physics II**

[3 credit hours]

Self-adjoint operators, special functions, orthogonal polynomials, partial differential equations and separation of variables, boundary value problems, Green's functions, integral equations, tensor analysis, metrics and curvature, calculus of variations, finite groups and group representations.

Prerequisites: MATH 6720 with a minimum grade of D-**Term Offered:** Spring, Fall

MATH 6800 Real Analysis I

[3 credit hours]

Completeness, connectedness and compactness in metric spaces, continuity and convergence, the Stone-Weierstrass Theorem, Lebesgue measure and integration on the real line, convergence theorems, Egorov's and Lusin's theorems, derivatives, functions of bounded variation.

Prerequisites: MATH 4830 with a minimum grade of D- or MATH 5830 with a minimum grade of D-

Term Offered: Fall

MATH 6810 Real Analysis II

[3 credit hours]

The Vitali covering theorem, absolutely continuous functions, Lebesgue-Stieltjes integration, the Riesz representation theorem, Banach spaces, L_p -spaces, abstract measures, the Radon-Nikodym theorem, measures on locally compact Hausdorff spaces.

Prerequisites: MATH 6800 with a minimum grade of D-

Term Offered: Spring

MATH 6820 Functional Analysis I

[3 credit hours]

Topics include Topological vector spaces, Banach spaces, convexity, the Hahn-Banach theorem, weak and strong topologies, L_p spaces and duality.

Prerequisites: MATH 6810 with a minimum grade of D-

Term Offered: Fall

MATH 6830 Functional Analysis II

[3 credit hours]

Topics include the Mackey-Ahrens Theorem, Banach algebras, spectra in Banach algebras, commutative Banach algebras, unbounded operators, the spectral theorem, topics in functional analysis.

Prerequisites: MATH 6820 with a minimum grade of D-

Term Offered: Spring, Fall

MATH 6840 Complex Analysis I

[3 credit hours]

Elementary analytic functions, complex integration, the residue theorem, infinite sequences of analytic functions, Laurent expansions, entire functions.

Prerequisites: MATH 6800 with a minimum grade of D-

Term Offered: Fall

MATH 6850 Complex Analysis II

[3 credit hours]

Meromorphic functions, conformal mapping, harmonic functions and the Dirichlet problem, the Riemann mapping theorem, monodromy, algebraic functions, Riemann surfaces, elliptic functions and the modular function.

Prerequisites: MATH 6840 with a minimum grade of D-

Term Offered: Spring

MATH 6860 Measure Theoretic Probability I

[3 credit hours]

Focus on measure theory and probability. Measures and their extensions, integration, convergence theorems, product measures. Probability spaces, random variables and distribution functions, independence, expectation, law of large numbers, central limit theorem, zero-one laws, characteristic functions.

Prerequisites: MATH 5680 with a minimum grade of D-

Corequisites: MATH 6800

MATH 6870 Nonlinear Analysis I

[3 credit hours]

The instructor will select a subset among the following topics: Finite-dimensional degree theory, some applications to nonlinear equations. Preliminaries on Operator Theory and Differential Calculus in Normed Spaces; Topological Degree in Banach Spaces (Schauder fixed point theorem and Leray-Schauder theory), non-resonance and topological degree, Lazer-Leach conditions and variations, variational techniques including Ekeland principle and its applications and Mountain Pass theorem, resonance and periodic solutions, Lusternik-Schnirelmann Theory, Poincaré-Birkhoff Theorem. Bifurcation theory: Morse lemma and its applications. Rabinowitz theorem and Krasnoselski theorem and its applications. Stability of solutions and number of global solutions to a nonlinear problem.

Prerequisites: MATH 6500 with a minimum grade of D- and MATH 6510 with a minimum grade of D-

Term Offered: Fall

MATH 6880 Nonlinear Analysis II

[3 credit hours]

The instructor will select a subset among the following topics: Geometric singular perturbation theory. Further topological methods: extensions of Leray-Schauder degree and applications to partial differential equations. Framed cobordism and stable cohomotopy theorem. Applications to existence of global solutions. Monotone operators and mini-max theorem. Generalized implicit function theorems, KAM and Conjugacy problems. Critical Points Theory and Hamiltonian Systems Topological Degree methods in Nonlinear Boundary Value Problems Normal forms, center manifold reduction and bifurcations in infinite dimensional dynamical systems.

Prerequisites: MATH 6500 with a minimum grade of D- and MATH 6510 with a minimum grade of D- and MATH 6870 with a minimum grade of D-

Term Offered: Spring

MATH 6930 Colloquium

[1 credit hour]

Lectures by visiting mathematicians and staff members on areas of current interest in mathematics.

Term Offered: Spring, Fall

MATH 6940 Proseminar

[1-5 credit hours]

Problems and techniques of teaching elementary college mathematics, supervised teaching, seminar in preparation methods.

Term Offered: Spring, Fall

MATH 6960 Master Thesis

[3-6 credit hours]

MATH 6980 Topics In Mathematical Sciences

[3 credit hours]

Special topics in Mathematics or Statistics.

Term Offered: Spring, Summer, Fall

MATH 6990 Readings In Mathematics

[1-5 credit hours]

Readings in areas of Mathematics of mutual interest to the student and the professor.

Term Offered: Spring, Summer, Fall

MATH 7300 Linear Algebra I

[3 credit hours]

Theory of vector spaces and linear transformations, including such topics as matrices, determinants, inner products, eigenvalues and eigenvectors, and rational and Jordan canonical forms.

Term Offered: Fall**MATH 7310 Linear Algebra II**

[3 credit hours]

Hermitian and normal operators, multilinear forms, spectral theorem and other topics.

Prerequisites: MATH 5300 with a minimum grade of D-**MATH 7330 Abstract Algebra I**

[3 credit hours]

Arithmetic of the integers, unique factorization and modular arithmetic; group theory including normal subgroups, factor groups, cyclic groups, permutations, homomorphisms, the isomorphism theorems, abelian groups and p-groups.

Prerequisites: MATH 3190 with a minimum grade of D-**Term Offered:** Fall**MATH 7340 Abstract Algebra II**

[3 credit hours]

Ring theory including integral domains, field of quotients, homomorphisms, ideals, Euclidean domains, polynomial rings, vector spaces, roots of polynomials and field extensions.

Prerequisites: MATH 5330 with a minimum grade of D-**Term Offered:** Spring**MATH 7350 Applied Linear Algebra**

[3 credit hours]

Matrices, systems of equations, vector spaces, linear transformations, determinants, eigenvalues and eigenvectors, generalized inverses, rank, numerical methods and applications to various areas of science.

Prerequisites: MATH 1890 with a minimum grade of D-**Term Offered:** Spring**MATH 7380 Discrete Structures And Analysis Algorithms**

[3 credit hours]

Discrete mathematical structures for applications in computer science such as graph theory, combinatorics, groups theory, asymptotics, recurrence relations and analysis of algorithms.

Prerequisites: MATH 3320 with a minimum grade of D- or MATH 5330 with a minimum grade of D-**Term Offered:** Fall**MATH 7450 Introduction To Topology I**

[3 credit hours]

Metric spaces, topological spaces, continuous maps, bases and sub-bases, closure and interior operators, products, subspaces, sums, quotients, separation axioms, compactness and local compactness.

Prerequisites: MATH 3190 with a minimum grade of D-**Term Offered:** Fall**MATH 7460 Introduction To Topology II**

[3 credit hours]

Connectedness and local connectedness, convergence, metrization, function spaces. The fundamental groups and its properties, covering spaces, classical applications, e.g. Jordan Curve Theorem, Fundamental Theorem of Algebra, Brouwer's Fixed Point Theorem.

Prerequisites: MATH 5450 with a minimum grade of D-**Term Offered:** Spring**MATH 7540 Classical Differential Geometry I**

[3 credit hours]

Smooth curves in Euclidean space including the Frenet formulae. Immersed surfaces with the Gauss map, principal curvatures and the fundamental forms. Special surfaces including ruled surfaces and minimal surfaces. Intrinsic Geometry including the Gauss Theorem Egregium.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-**MATH 7550 Classical Differential Geometry II**

[3 credit hours]

Tensors, vector fields and the Cartan approach to surface theory, Bonnet's Theorem and the construction of surfaces via solutions of the Gauss Equation. Geodesics, parallel transport and Jacobi Fields. Theorems of a global nature such as Hilbert's Theorem or the Theorem of Hopf-Rinow.

Prerequisites: MATH 5540 with a minimum grade of D-**MATH 7600 Advanced Statistical Methods I**

[3 credit hours]

Basics of descriptive statistics, study designs and statistical inference. Properties of, and assumptions required for, inference for means, variances, and proportions from one and two-sample paired and unpaired studies. Introduction to ANOVA with multiple comparisons and logistic and multiple regression. Model assessment and diagnostics. Statistical software will be employed. Opportunities to apply procedures to real data. Emphasis placed on the foundations to approaches in introductory statistics.

Term Offered: Fall**MATH 7610 Advanced Statistical Methods II**

[3 credit hours]

Statistical/biostatistical concepts and methods. Broad subject categories that may be included are study design, longitudinal data analysis, survival analysis, logistic regression, random and mixed effects models and Bayesian Statistics. Other topics applicable to current statistical consulting projects, or related to modern data analytics, may be introduced. Appropriate statistical software will be employed.

Prerequisites: MATH 5600 with a minimum grade of C-**Term Offered:** Spring**MATH 7620 Linear Statistical Models**

[3 credit hours]

Multiple regression, analysis of variance and covariance, general linear models and model building for linear models. Experimental designs include one-way, randomized block, Latin square, factorial and nested designs.

Prerequisites: MATH 6650 with a minimum grade of D-**Term Offered:** Spring**MATH 7630 Theory And Methods Of Sample Surveys**

[3 credit hours]

The mathematical basis to estimation in various sampling contexts, including probability proportional to size sampling, stratified sampling, two-stage cluster sampling and double sampling, is developed.

Prerequisites: MATH 5680 with a minimum grade of D-**Term Offered:** Spring

MATH 7640 Statistical Computing

[3 credit hours]

Modern statistical computing, including programming tools, modern programming methodologies, design of data structures and algorithms, numerical computing and graphics. Additional topics selected from simulation studies, inversion of probability integral transforms, rejection sampling, importance sampling, Monte Carlo integration, bootstrapping and optimization.

Term Offered: Fall

MATH 7680 Introduction To Theory Of Probability

[3 credit hours]

Probability spaces, random variables, probability distributions, moments and moment generating functions, limit theorems, transformations and sampling distributions.

Prerequisites: MATH 3190 with a minimum grade of D-

Term Offered: Fall

MATH 7690 Introduction To Mathematical Statistics

[3 credit hours]

Sampling distributions, point estimation, interval estimation, hypothesis testing, regression and analysis of variance.

Prerequisites: MATH 5680 with a minimum grade of D-

Term Offered: Spring

MATH 7710 Methods Of Numerical Analysis I

[3 credit hours]

Floating point arithmetic; polynomial interpolation; numerical solution of nonlinear equations; Newton's method. Likely topics include: numerical differentiation and integration; solving systems of linear equations; Gaussian elimination; LU decomposition; Gauss-Seidel method.

Term Offered: Fall

MATH 7720 Methods Of Numerical Analysis II

[3 credit hours]

Likely topics include: Computation of eigenvalues and eigenvectors; solving systems of nonlinear equations; least squares approximations; rational approximations; cubic splines; fast Fourier transforms; numerical solutions to initial value problems; ordinary and partial differential equations.

Prerequisites: MATH 5710 with a minimum grade of D-

Term Offered: Spring

MATH 7740 Advanced Applied Mathematics I

[3 credit hours]

Series and numerical solutions to ordinary differential equations, special functions, orthogonal functions, Sturm-Liouville Problems, self-adjointness, vector analysis.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-

Term Offered: Fall

MATH 7750 Advanced Applied Mathematics II

[3 credit hours]

Continuation of vector analysis, introduction to complex analysis, partial differential equations, Fourier series and integrals.

Prerequisites: MATH 5740 with a minimum grade of D-

Term Offered: Spring

MATH 7800 Ordinary Differential Equations

[3 credit hours]

Modern theory of differential equations; transforms and matrix methods; existence theorems and series solutions; and other selected topics.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-

Term Offered: Fall

MATH 7810 Partial Differential Equations

[3 credit hours]

First and second order equations; numerical methods; separation of variables; solutions of heat and wave equations using eigenfunction techniques; and other selected topics.

Prerequisites: MATH 3860 with a minimum grade of D- or MATH 2860 with a minimum grade of D-

Term Offered: Spring

MATH 7820 Introduction To Real Analysis I

[3 credit hours]

A rigorous treatment of the Calculus in one and several variables. Topics to include: the real number system; sequences and series; elementary metric space theory including compactness, connectedness and completeness; the Riemann Integral.

Prerequisites: MATH 3190 with a minimum grade of D-

Term Offered: Fall

MATH 7830 Introduction To Real Analysis II

[3 credit hours]

Differentiable functions on \mathbb{R}^n ; the Implicit and Inverse Function Theorems; sequences and series of continuous functions; Stone-Weierstrass Theorem; Arzela-Ascoli Theorem; introduction to measure theory; Lebesgue integration; the Lebesgue Dominated Convergence Theorem.

Prerequisites: MATH 5820 with a minimum grade of D-

Term Offered: Spring

MATH 7860 Calculus Of Variations And Optimal Control Theory I

[3 credit hours]

Conditions for an extreme (Euler's equations, Erdman corner conditions, conditions of Legendre, Jacobi and Weierstrass, fields of extremals, Hilbert's invariant integral); Raleigh-Ritz method; isoperimetric problems; Lagrange, Mayer-Bolza problems.

Prerequisites: MATH 5820 with a minimum grade of D-

MATH 7870 Calculus Of Variations And Optimal Control Theory II

[3 credit hours]

Pontryagin's maximum principle; necessary and sufficient conditions for optimal control, controllability, time optimal control, existence of optimal controls, relationship to the calculus of variations.

Prerequisites: MATH 5860 with a minimum grade of D-

MATH 7880 Complex Variables

[3 credit hours]

Analytic functions; Cauchy's theorem; Taylor and Laurent series; residues; contour integrals; conformal mappings, analytic continuation and applications.

Prerequisites: MATH 3860 with a minimum grade of D-

Term Offered: Spring

MATH 7980 Topics In Mathematics

[3 credit hours]

Special topics in mathematics.

MATH 8180 Linear And Nonlinear Programming

[3 credit hours]

Simplex algorithm, ellipsoidal algorithm, Karmarkar's method, interior point methods, elementary convex analysis, optimality conditions and duality for smooth problems, convex programming, algorithms and their convergence.

Prerequisites: MATH 5820 with a minimum grade of D- or MATH 7820 with a minimum grade of D-

MATH 8190 Infinite Dimensional Optimization

[3 credit hours]

Introduction to nonlinear analysis, abstract optimization problems on abstract spaces, applications to calculus of variations, optimal control theory and game theory.

Prerequisites: MATH 6150 with a minimum grade of D- or MATH 6810 with a minimum grade of D- or MATH 8150 with a minimum grade of D- or MATH 8810 with a minimum grade of D-

MATH 8300 Algebra I

[3 credit hours]

Group actions, Sylow's theorems, permutation groups, nilpotent and solvable groups, abelian groups, rings, unique factorization domains, fields.

Prerequisites: MATH 5340 with a minimum grade of D- or MATH 7340 with a minimum grade of D-

Term Offered: Fall

MATH 8310 Algebra II

[3 credit hours]

Field extensions, Galois theory, modules, Noetherian and Artinian rings, tensor products, primitive rings, semisimple rings, and modules, the Wedderburn-Artin theorem.

Prerequisites: MATH 6300 with a minimum grade of D- or MATH 8300 with a minimum grade of D-

Term Offered: Spring

MATH 8320 Ring Theory I

[3 credit hours]

Radical theory, rings of quotients, Goldie's Theorem, chain conditions, dimensions of rings, module theory, topics in commutative rings.

Prerequisites: MATH 6310 with a minimum grade of D- or MATH 8310 with a minimum grade of D-

MATH 8330 Ring Theory II

[3 credit hours]

Advanced topics in ring theory. Possible topics include group rings, enveloping algebras, almost split sequences, PI-rings, division rings, self-injective rings, and ordered rings.

Prerequisites: MATH 6310 with a minimum grade of D- or MATH 8310 with a minimum grade of D-

MATH 8340 Group Theory I

[3 credit hours]

Fundamental topics in group theory. Possible topics include free groups, presentations, free products and amalgams, permutation groups, abelian groups, nilpotent and solvable groups, subnormality, extensions, the Schur-Zassenhaus theorem, the transfer homomorphism, linear methods, local analysis.

Prerequisites: MATH 6310 with a minimum grade of D- or MATH 8310 with a minimum grade of D-

MATH 8350 Group Theory II

[3 credit hours]

Advanced topics in group theory. Possible topics include cohomology of groups, locally finite groups, character theory, modular representation theory, representation theory of symmetric and classical groups, finite simple groups, geometric group theory.

Prerequisites: MATH 6310 with a minimum grade of D- or MATH 8310 with a minimum grade of D-

MATH 8400 Topology I

[3 credit hours]

Topological spaces, continuous functions, compactness, product spaces, Tychonov's theorem, quotient spaces, local compactness, homotopy theory, the fundamental group, covering spaces.

Prerequisites: MATH 7450 with a minimum grade of D- or MATH 4450 with a minimum grade of D- or MATH 5450 with a minimum grade of D-

Term Offered: Fall

MATH 8410 Topology II

[3 credit hours]

Homology theory, excision, homological algebra, the Brouwer fixed point theorem, cohomology, differential manifolds, orientation, tangent bundles, Sard's theorem, degree theory.

Prerequisites: MATH 6400 with a minimum grade of D- or MATH 8400 with a minimum grade of D-

Term Offered: Spring

MATH 8440 Differential Geometry I

[3 credit hours]

Introduction to differential geometry. Topics include differentiable manifolds, vector fields, tensor bundles, the Frobenius theorem, Stokes' theorem, Lie groups.

Prerequisites: MATH 6410 with a minimum grade of D- or MATH 8410 with a minimum grade of D-

Term Offered: Fall

MATH 8450 Differential Geometry II

[3 credit hours]

Topics include connections on manifolds, Riemannian geometry, the Gauss-Bonnet theorem. Further topics may include: homogeneous and symmetric spaces, minimal surfaces. Morse theory, comparison theory, vector and principal bundles.

Prerequisites: MATH 6440 with a minimum grade of D- or MATH 8440 with a minimum grade of D-

Term Offered: Spring

MATH 8500 Ordinary Differential Equations

[3 credit hours]

Existence, uniqueness and dependence on initial conditions and parameter, nonlinear planar systems, linear systems, Floquet theory, second order equations, Sturm-Liouville theory.

Term Offered: Fall

MATH 8510 Partial Differential Equations

[3 credit hours]

First order quasi-linear systems of partial differential equations, boundary value problems for the heat and wave equation, Dirichlet problem for Laplace equation, fundamental solutions for Laplace, heat and wave equations.

Term Offered: Spring

MATH 8520 Dynamical Systems I

[3 credit hours]

Topic include the flow-box theorem, Poincare maps, attractors, w-limit sets, Lyapunov stability, invariant submanifolds, Hamiltonian systems and symplectic manifolds.

Prerequisites: MATH 6500 with a minimum grade of D- or MATH 8500 with a minimum grade of D-

MATH 8530 Dynamical Systems II

[3 credit hours]

Topics may include local bifurcations of vector fields, global stability, ergodic theorems, integrable systems, symbolic dynamics, chaos theory.

Prerequisites: MATH 6520 with a minimum grade of D- or MATH 8520 with a minimum grade of D-

MATH 8540 Partial Differential Equations I

[3 credit hours]

Possible topics may include: the Cauchy-Kovalevskaya Theorem, nonlinear partial differential equations of the first order, theory of Sobolev spaces, linear second order PDE's of elliptic, hyperbolic and parabolic type.

Prerequisites: MATH 6510 with a minimum grade of D- or MATH 8510 with a minimum grade of D-

Term Offered: Fall

MATH 8550 Partial Differential Equations II

[3 credit hours]

Selected topics in Partial Differential Equations of current interest emphasizing nonlinear theory. Possible topics may include: Minimal surfaces, applications of the Hopf maximum principle, free boundary value problems, harmonic maps, geometric evolution equations and the Navier-Stokes equation.

Prerequisites: MATH 6540 with a minimum grade of D- or MATH 8540 with a minimum grade of D-

Term Offered: Spring

MATH 8600 Statistical Consulting

[1-5 credit hours]

Real data applications of various statistical methods, project design and analysis including statistical consulting experience. May be repeated for credit.

Term Offered: Spring, Fall

MATH 8610 Statistical Consulting II

[2 credit hours]

Real data applications of various statistical methods, project design and analysis including statistical consulting experience.

Term Offered: Spring

MATH 8620 Categorical Data Analysis

[3 credit hours]

Important methods and modeling techniques using generalized linear models and emphasizing loglinear and logit modeling.

Prerequisites: MATH 5680 with a minimum grade of D- or MATH 7680 with a minimum grade of D-

Term Offered: Spring, Fall

MATH 8630 Nonparametric Statistics

[3 credit hours]

Statistical methods based on counts and ranks; methods designed to be effective in the presence of contaminated data or error distribution misspecification.

Prerequisites: MATH 5680 with a minimum grade of C- or MATH 7680 with a minimum grade of C-

Term Offered: Spring, Fall

MATH 8640 Topics In Statistics

[3 credit hours]

Topics selected from an array of modern statistical methods such as survival analysis, nonlinear regression, Monte Carlo methods, etc.

Term Offered: Spring, Fall

MATH 8650 Statistical Inference

[3 credit hours]

Estimation, hypothesis testing, prediction, sufficient statistics, theory of estimation and hypothesis testing, simultaneous inference, decision theoretic models.

Prerequisites: MATH 5680 with a minimum grade of D- or MATH 7680 with a minimum grade of D-

Term Offered: Fall

MATH 8670 Measure Theoretic Probability

[3 credit hours]

Real analysis, probability spaces and measures, random variables and distribution functions, independence, expectation, law of large numbers, central limit theorem, zero-one laws, characteristic functions, conditional expectations given a σ -algebra, martingales.

Prerequisites: MATH 5680 with a minimum grade of D- or MATH 7680 with a minimum grade of D-

Term Offered: Fall

MATH 8680 Theory Of Statistics

[3 credit hours]

Exponential families, sufficiency, completeness, optimality, equivariance, efficiency. Bayesian and minimax estimation. Unbiased and invariant tests, uniformly most powerful tests. Asymptotic properties for estimation and testing. Most accurate confidence intervals.

Term Offered: Spring

MATH 8690 Multivariate Statistics

[3 credit hours]

Multivariate normal sampling distributions, T tests and MANOVA, tests on covariance matrices, simultaneous inference, discriminant analysis, principal components, cluster analysis and factor analysis.

Prerequisites: MATH 5690 with a minimum grade of D- or MATH 6650 with a minimum grade of D- or MATH 8650 with a minimum grade of D-

Term Offered: Spring

MATH 8720 Methods Of Mathematical Physics I

[3 credit hours]

Analytic functions, residues, method of steepest descent, complex differential equations, regular singularities, integral representation, real and complex vector spaces, matrix groups, Hilbert spaces, coordinate transformations.

Term Offered: Fall

MATH 8730 Methods Of Mathematical Physics II

[3 credit hours]

Self-adjoint operators, special functions, orthogonal polynomials, partial differential equations and separation of variables, boundary value problems, Green's functions, integral equations, tensor analysis, metrics and curvature, calculus of variations, finite groups and group representations.

Prerequisites: MATH 6720 with a minimum grade of D- or MATH 8720 with a minimum grade of D-

MATH 8800 Real Analysis I

[3 credit hours]

Completeness, connectedness and compactness in metric spaces, continuity and convergence, Stone-Weierstrass Theorem, Lebesgue measure and integration on the real line, convergence theorems, Egorov's and Lusin's theorems, derivatives, functions of bounded variation.

Prerequisites: MATH 7830 with a minimum grade of D- or MATH 4830 with a minimum grade of D- or MATH 5830 with a minimum grade of D-

Term Offered: Fall

MATH 8810 Real Analysis II

[3 credit hours]

The Vitali covering theorem, absolutely continuous functions, Lebesgue-Stieltjes integration, the Riesz representation theorem, Banach spaces, L_p -spaces, abstract measures, the Radon-Nikodym theorem, measures on locally compact Hausdorff spaces.

Prerequisites: MATH 6800 with a minimum grade of D- or MATH 8800 with a minimum grade of D-

Term Offered: Spring

MATH 8820 Functional Analysis I

[3 credit hours]

Topics include Topological vector spaces, Banach spaces, convexity, the Hahn-Banach theorem, weak and strong topologies, L_p spaces and duality.

Prerequisites: MATH 6810 with a minimum grade of D- or MATH 8810 with a minimum grade of D-

Term Offered: Fall

MATH 8830 Functional Analysis II

[3 credit hours]

Topics include the Mackey-Ahrens Theorem, Banach algebras, spectra in Banach algebras, commutative Banach algebras, unbounded operators, the spectral theorem, topics in functional analysis.

Prerequisites: MATH 6820 with a minimum grade of D- or MATH 8820 with a minimum grade of D-

Term Offered: Spring, Fall

MATH 8840 Complex Analysis I

[3 credit hours]

Elementary analytic functions, complex integration, the residue theorem, infinite sequences of analytic functions, Laurent expansions, entire functions.

Prerequisites: MATH 6800 with a minimum grade of D- or MATH 8800 with a minimum grade of D-

Term Offered: Fall

MATH 8850 Complex Analysis II

[3 credit hours]

Meromorphic functions, conformal mapping, harmonic functions and the Dirichlet problem, the Riemann mapping theorem, monodromy, algebraic functions, Riemann surfaces, elliptic functions and the modular function.

Prerequisites: MATH 6840 with a minimum grade of D- or MATH 8840 with a minimum grade of D-

Term Offered: Spring

MATH 8860 Nonlinear Analysis I

[3 credit hours]

Topological Degree in Banach Spaces (Schuder fixed point theorem and Leray-Schauder theory), non-resonance and topological degree, Lazer-Leach conditions and variations, variational techniques including Ekeland principle and its applications and Mountain Pass theorem, resonance and periodic solutions, Lusternik-Schnirelmann Theory, Poincare'-Birkhoff Theorem. Bifurcation theory: Morse lemma and its applications. Rabinowitz theorem and Krasnoselski theorem and its applications. Stability of solutions and number of global solutions to a nonlinear problem.

Prerequisites: MATH 8500 with a minimum grade of D- and MATH 8510 with a minimum grade of D-

Term Offered: Fall

MATH 8870 Measure Theoretic Probability II

[3 credit hours]

Focus on stochastic processes. Conditional expectations, martingales, random walks, Markov chains, ergodic theorem, Brownian motion.

Prerequisites: MATH 5680 with a minimum grade of D- and MATH 6860 with a minimum grade of D- and MATH 8860 with a minimum grade of D-

Corequisites: MATH 6800

MATH 8880 Nonlinear Analysis II

[3 credit hours]

The instructor based in his/her interests and on the interests and needs of the students attending the course will select a subset among the following topics: Geometric singular perturbation theory. Further topological methods: extensions of Leray-Schauder degree and applications to partial differential equations. Framed cobordism and stable cohomotopy theorem. Applications to existence of global solutions. Monotone operators and mini-max theorem. Generalized implicit function theorems, KAM and Conjugacy problems. Critical Points Theory and Hamiltonian Systems.

Prerequisites: MATH 8500 with a minimum grade of D- and MATH 8510 with a minimum grade of D- and MATH 8870 with a minimum grade of D-

Term Offered: Spring

MATH 8890 Problems In Algebra, Topology, And Analysis

[1 credit hour]

Practicum in solving problems in graduate algebra, topology and analysis. Supplements 6300-10, 6400-10 and 6800-10 and prepares students for doctoral qualifying examination.

MATH 8930 Colloquium

[1 credit hour]

Lectures by visiting mathematicians and staff members on areas of current interest in mathematics.

Term Offered: Spring, Fall

MATH 8940 Proseminar

[1-5 credit hours]

Problems and techniques of teaching elementary college mathematics, supervised teaching, seminar in preparation methods.

Term Offered: Spring, Fall**MATH 8960 Dissertation**

[1-6 credit hours]

Student works toward their dissertation.

Term Offered: Spring, Summer, Fall**MATH 8980 Topics In Mathematical Sciences**

[3 credit hours]

Special topics in Mathematics or Statistics.

Term Offered: Spring, Summer, Fall**MATH 8990 Readings In Mathematics**

[1-5 credit hours]

Readings in areas of Mathematics of mutual interest to the student and the professor.

Term Offered: Spring, Summer, Fall

Department of Physics and Astronomy

Sanjay V. Khare, Chair

Rupali Chandar, Associate Chair

Song Cheng, Graduate Advisor

Mission: The University of Toledo graduate programs in Physics and Astronomy aim to develop exceptional personal and professional scientific skills, and engage students in cutting edge research with a world-class faculty, all within a supportive and creative learning environment.

General Description: The graduate programs offer specialization in the following areas: Astronomy and Astrophysics, Photovoltaics and condensed-matter physics consisting of theory and experiment, Atomic and molecular physics, Medical physics, Biophysics, Photonics. The coursework is tailored to a specific area of research concentration, with flexibility to acquire the skills necessary to complete an innovative, important, and original thesis research project. The PhD program consists of courses from the core curriculum during the first and second years. While students may begin research immediately (oftentimes in addition to coursework and teaching assistant duties), a student will typically join a research group starting the summer following the first year. Following the 2nd year, the focus will be primarily on thesis research with a faculty advisor. The thesis defense is scheduled once a substantial body of innovative research has been completed. A M.S. in Physics is offered which may be course work or research intensive. A professional M.S. degree in photovoltaics is offered for which an industrial internship is required.

Accreditation: The Ph.D. in Medical Physics program is accredited by CAMPEP.

Number of Credit Hours: The Ph.D. program requires 90 credit hours with a minimum of 30 research credits for a thesis.

Outcomes: The graduate programs in physics and astronomy prepares students for jobs in research and development settings. These include

private industry, government laboratories, academia and other non-profit organizations. The graduate programs develop a strong and broad foundation in fundamental physics, while simultaneously teaching mathematical and problem-solving skills necessary to advance knowledge of our physical world. The program trains students in state of the art theory, computing and laboratory skills relevant to their area of expertise.

Degrees Offered

- MS in Physics (p. 313)
- MS Physics - Coursework Intensive (p. 346)
- MSE in Physics (p. 314)
- PhD in Physics (p. 314)
- PSM in Photovoltaics (p. 315)

PHYS 5210 Theoretical Mechanics

[3 credit hours]

Kinematics and dynamics of particles and rigid bodies. Lagrangian and Hamiltonian equations of motion.

Term Offered: Fall**PHYS 5230 Classical Electricity And Magnetism I**

[3 credit hours]

Electrostatics: the equations of Laplace and Poisson-Maxwell's equations and their solutions.

Term Offered: Fall**PHYS 5240 Electricity And Magnetism II**

[3 credit hours]

Maxwell's equations and their solutions; electromagnetic radiation.

Prerequisites: PHYS 5230 with a minimum grade of D-**Term Offered:** Spring**PHYS 5310 Quantum Mechanics**

[3 credit hours]

Formalism and applications of quantum mechanics: Hilbert space, time independent and time-dependent perturbation theories, atomic and molecular structure and spectra, and scattering theory.

Term Offered: Spring**PHYS 5510 Condensed Matter Physics**

[3 credit hours]

Crystal lattices and structures, reciprocal lattice and kinematical diffraction theory. Survey of binding in crystals. Lattice dynamics and phonons. Thermodynamic, electronic, and optical properties of insulators, semiconductors, metals and alloys.

Term Offered: Spring, Fall**PHYS 5620 The Physics Of Lasers**

[3 credit hours]

Longitudinal and transverse coherence, stimulated emission, optical pumping, resonator structures, Q-switching, mode-locking and laser systems (gas, dye, diode, doped insulator and free electron lasers).

PHYS 5800 Astronomy In The Planetarium

[3 credit hours]

Theory and practice of astronomical outreach programming. Sky and calendar, mythology, constellations, astrophysics, buying and using small telescopes, operating and maintaining planetarium projectors, sky simulation software, projects and program production.

PHYS 5810 Astrophysics I

[3 credit hours]

Spherical coordinate systems, astronomical time, celestial mechanics, the solar system and planetary physics, photometry, radiative transfer, stellar spectra and classification, binary stars and stellar masses.

Term Offered: Fall**PHYS 5820 Astrophysics II**

[3 credit hours]

Stellar structure and evolution, close binaries, origin of the elements, the sun, variable stars, star clusters, the interstellar medium, the Milky Way Galaxy, stellar statistics, galaxy structure and evolution, cosmology.

Prerequisites: PHYS 5810 with a minimum grade of D-**Term Offered:** Spring**PHYS 5880 Astrophysics Laboratory**

[3 credit hours]

Astronomical, optical and electronic principles of operation of a modern astronomical observatory. Observing with the 1-meter telescope of Ritter Observatory, reduction, analysis and interpretation of astronomical spectra, Six hours laboratory per week.

Corequisites: PHYS 5810**Term Offered:** Fall**PHYS 5900 Research Techniques In Physics And Astronomy**

[1-6 credit hours]

Research work under the guidance of a member of the graduate faculty. Designed to prepare the student to propose and carry out the thesis research required for the M.S. degree.

Term Offered: Summer**PHYS 5950 Education Workshop In The Physical Sciences**

[1-4 credit hours]

For teachers in grades K-12. Introduction to modern physical science concepts suitable for classroom use; lecture and laboratory. Not acceptable for physics degree program.

PHYS 6010 Physics And Astronomy Colloquium

[2 credit hours]

Topical lectures by visiting and local professionals.

Term Offered: Spring, Fall**PHYS 6020 Physics And Astronomy Journal Seminar**

[1 credit hour]

Literature review seminar.

Term Offered: Spring, Fall**PHYS 6040 Physics and Astronomy Professional Development Seminar**

[1 credit hour]

This seminar is intended to help graduate students assess future career options and develop skills that will enhance their productivity and marketability for those careers. The class will involve strong faculty-student and peer student interaction with the goal of getting students to actively consider potential career paths and to start mapping out the steps necessary to achieve them. There will be periodic small homework assignments and grades will be assigned as pass/fail.

Term Offered: Spring, Summer, Fall**PHYS 6130 Computational Physics For Research**

[3 credit hours]

Software packages for display and analytic manipulation, numerical methods for linear and non-linear systems of differential equations, matrix algebra, and the Schrodinger equation. Vector and parallel processing.

PHYS 6140 Fundamentals Of Modern Physics

[3 credit hours]

An intensive course which reviews the fundamentals of atomic, statistical and condensed matter physics. Provides a common foundation for entering graduate students for succeeding courses in physics and astronomy.

Term Offered: Fall**PHYS 6180 Advanced Atomic And Nuclear Physics Laboratory**

[2-3 credit hours]

Experiments in nuclear, atomic, and condensed matter physics, such as gamma-ray and X-ray spectroscopies, beta and alpha particle spectroscopies, NMR, ESR, Mossbauer effect, neutron shielding, detectors and electronics, and atomic emission spectroscopy. One four-hour lab and one hour lecture per week.

Prerequisites: PHYS 6140 with a minimum grade of D-**Term Offered:** Spring**PHYS 6220 Classical Mechanics**

[3 credit hours]

Advanced classical mechanics, including the variational principles, Lagrange and Hamilton mechanics, and linear and nonlinear systems.

Term Offered: Fall**PHYS 6250 Classical Electrodynamics I**

[3 credit hours]

Solutions to Poisson's equation in Cartesian, spherical and cylindrical coordinates with Dirichlet, Neuman and mixed boundary conditions. Maxwell's equations and their solutions applied to waveguides and nonlinear materials.

Term Offered: Spring**PHYS 6260 Classical Electrodynamics II**

[3 credit hours]

Solutions to the wave equation with time dependent source terms, energy loss from high energy charged particles in dense materials, special relativity, classical field theory, invariant Lagrangians and conserved quantities.

Prerequisites: PHYS 6250 with a minimum grade of D-**Term Offered:** Fall**PHYS 6280 Photovoltaic Materials And Device Physics Laboratory**

[3 credit hours]

Fabrication and characterization of solar cell materials and devices, addressing materials science and physics of substrate preparation, absorber and window deposition processes, metal contact formation, and measurement of physical properties. One four-hour lab and one-hour lecture per week.

Prerequisites: PHYS 6140 with a minimum grade of D- and PHYS 7140 with a minimum grade of D-**Term Offered:** Fall

PHYS 6320 Quantum Mechanics I

[3 credit hours]

Quantum theory and its application to physical problems. Topics include dynamics in the Schrodinger and Heisenberg pictures, invariance principles and angular momentum theory, perturbation theory, the variational method.

Term Offered: Fall

PHYS 6330 Quantum Mechanics II

[3 credit hours]

The quantum theory of scattering, electromagnetic interactions, quantization of the electromagnetic field and introduction to the Dirac equation.

Term Offered: Spring

PHYS 6450 Statistical Mechanics

[3 credit hours]

A fundamental quantum-mechanical development of statistical thermodynamics. Non-interacting and weakly interacting many-particle systems in the classical and quantum regimes, with applications to various fields of physics.

Term Offered: Spring

PHYS 6490 Current Issues In Theoretical Physics

[3 credit hours]

Problems in theory relative to the research programs pursued at the University.

PHYS 6520 Condensed Matter Physics I

[3 credit hours]

A study of the electromagnetic, thermal and elastic properties of condensed matter through the quantum-mechanical treatment of the electrons and elementary excitations.

Prerequisites: PHYS 6330 with a minimum grade of D-

PHYS 6530 Condensed Matter Physics II

[3 credit hours]

A survey of condensed matter phenomena of interest to experimentalists, as elucidated by theory.

Prerequisites: PHYS 6330 with a minimum grade of D-

PHYS 6540 Structure, Defects And Diffusion

[4 credit hours]

A generic materials science approach to the study of crystalline structure, defects (point, line and planar) in crystalline materials, and the mechanisms and kinetics of diffusion in the condensed state.

Term Offered: Fall

PHYS 6550 Thermodynamics And Phase Transformations In Condensed Systems

[4 credit hours]

A materials science approach to the thermodynamics of condensed state equilibria and phase transformation kinetics.

Prerequisites: PHYS 6450 with a minimum grade of D-

Term Offered: Spring

PHYS 6630 Semiconductors I

[3 credit hours]

Review of modern theory of solids. Semiconducting and metallic materials. Semiconductor devices including p-n junctions and solar cells.

Prerequisites: PHYS 4510 with a minimum grade of D- and EECS 4400 with a minimum grade of D-

Term Offered: Fall

PHYS 6640 Fundamentals of Solar Cells

[3 credit hours]

Worldwide status of Photovoltaics, Semiconductors. P-n junction diodes. Ideal solar cells. Efficiency losses. Single crystals and thin films technologies. PV systems.

Prerequisites: PHYS 4510 with a minimum grade of D- and EECS 4400 with a minimum grade of D-

Term Offered: Spring

PHYS 6690 Current Issues In Optics

[3 credit hours]

Current research in optics and the optical excitation of material modes.

PHYS 6710 Atomic Physics

[3 credit hours]

A study of the fundamental properties of atoms, their theoretical description and experimental measurement. Topics include atomic structure, radiative transitions, external field interactions and atomic collisions.

Term Offered: Fall

PHYS 6720 Atomic & Molecular Spectroscopy

[3 credit hours]

Theory and experimental methods of atomic and molecular spectroscopy.

Topics include the theory of interpretation of atomic and molecular spectra and the experimental means to measure the spectra.

Prerequisites: PHYS 6710 with a minimum grade of D-

PHYS 6770 Accelerator Physics

[3 credit hours]

Basic electrodynamic functioning of charged-particle accelerators, particle dynamics of non-relativistic and relativistic accelerators, accelerator applications, static field and dynamic field accelerator designs.

PHYS 6810 Stellar Astrophysics I

[3 credit hours]

Stellar atmospheres and their emergent spectra. Physics of radiation, matter and their interaction. Radiative transfer, hydrostatic and radiative equilibrium, convection, line formation and spectral signatures of atmospheric physics.

Term Offered: Fall

PHYS 6820 Stellar Astrophysics II

[3 credit hours]

Stellar structure and evolution. Equation of state, nuclear reactions and nucleosynthesis, stellar formation, evolution and death, enrichment of the interstellar medium, formation of planetary systems, solar physics and helioseismology.

Term Offered: Spring

PHYS 6830 Galactic Astronomy I

[3 credit hours]

Stellar spectra, colors, compositions and ages; star clusters; pulsating stars; calibration of distance indicators. Interstellar dust, interstellar extinction, interstellar gas, nebulae; structure of the interstellar medium.

Term Offered: Fall

PHYS 6840 Galactic Astronomy II

[3 credit hours]

Structure and dynamics of the Galaxy, shocks and explosions, stellar kinematics, galactic rotation, and dynamical and chemical evolution.

Term Offered: Spring

PHYS 6940 Industrial Internship

[1-6 credit hours]

Experiential learning in an academic advisor-approved business, industry, or non-profit. Six credits are required for the PSM degree.

Term Offered: Spring, Summer, Fall

PHYS 6960 M.s. Thesis Research

[1-15 credit hours]

Thesis research required for the M.S. degree.

Term Offered: Spring, Summer, Fall

PHYS 6980 Special Topics

[1-4 credit hours]

Course reserved for visiting lecturers and topics not covered otherwise.

Term Offered: Spring, Summer, Fall

PHYS 6990 Independent Study

[1-4 credit hours]

PHYS 7130 Computational Physics For Research

[3 credit hours]

Software packages for display and analytic manipulation, numerical methods for linear and non-linear systems of differential equations, matrix algebra, and the Schrodinger equation. Vector and parallel processing.

PHYS 7140 Fundamentals Of Modern Physics

[3 credit hours]

An intensive course which reviews the fundamentals of atomic, statistical and condensed matter physics. Provides a common foundation for entering graduate students for succeeding courses in physics and astronomy.

Term Offered: Fall

PHYS 7180 Advanced Atomic and Nuclear Physics Laboratory

[2-3 credit hours]

Experiments in nuclear, atomic, and condensed matter physics, such as gamma-ray and X-ray spectroscopies, betas and alpha particle spectroscopies, NMR, ESR, Mossbauer effect, neutron shielding, detectors and electronics, and atomic emission spectroscopy. One four-hour lab and one hour lecture per week.

Prerequisites: PHYS 6140 with a minimum grade of D- or PHYS 7140 with a minimum grade of D-

Term Offered: Spring

PHYS 7220 Classical Mechanics

[3 credit hours]

Advanced classical mechanics, including the variational principles, Lagrange and Hamilton mechanics, and linear and nonlinear systems.

Term Offered: Fall

PHYS 7250 Classical Electrodynamics I

[3 credit hours]

Solutions to Poisson's equation in Cartesian, spherical and cylindrical coordinates with Dirichlet, Neuman and mixed boundary conditions. Maxwell's equations and their solutions applied to waveguides and nonlinear materials.

Term Offered: Spring

PHYS 7260 Classical Electrodynamics II

[3 credit hours]

Solutions to the wave equation with time dependent source terms, energy loss from high energy charged particles in dense materials, special relativity, classical field theory, invariant Lagrangians and conserved quantities.

Prerequisites: PHYS 6250 with a minimum grade of D- or PHYS 7250 with a minimum grade of D-

Term Offered: Fall

PHYS 7280 Photovoltaic Materials And Device Physics Laboratory

[3 credit hours]

Detailed fabrication and characterization of solar cell materials and devices, addressing materials science and physics of substrate preparation, absorber and window deposition processes, metal contact formation, and measurement of physical properties. One four-hour lab and one-hour lecture per week.

Prerequisites: PHYS 6140 with a minimum grade of D- and PHYS 7140 with a minimum grade of D-

Term Offered: Fall

PHYS 7320 Quantum Mechanics I

[3 credit hours]

Quantum theory and its application to physical problems. Topics include dynamics in the Schrodinger and Heisenberg pictures, invariance principles and angular momentum theory, perturbation theory, the variational method.

Term Offered: Fall

PHYS 7330 Quantum Mechanics II

[3 credit hours]

The quantum theory of scattering, electromagnetic interactions, quantization of the electromagnetic field and introduction to the Dirac equation.

Term Offered: Spring

PHYS 7450 Statistical Mechanics

[3 credit hours]

A fundamental quantum-mechanical development of statistical thermodynamics. Non-interacting and weakly interacting many-particle systems in the classical and quantum regimes, with applications to various fields of physics.

Term Offered: Spring

PHYS 7520 Condensed Matter Physics I

[3 credit hours]

A study of the electromagnetic, thermal and elastic properties of condensed matter through the quantum-mechanical treatment of the electrons and elementary excitations.

Prerequisites: PHYS 6330 with a minimum grade of D-

PHYS 7530 Condensed Matter Physics II

[3 credit hours]

A survey of condensed matter phenomena of interest to experimentalists, as elucidated by theory.

Prerequisites: PHYS 6330 with a minimum grade of D-

PHYS 7710 Atomic Physics

[3 credit hours]

A study of the fundamental properties of atoms, their theoretical description and experimental measurement. Topics include atomic structure, radiative transitions, external field interactions and atomic collisions.

Term Offered: Fall

PHYS 7720 Atomic & Molecular Spectroscopy

[3 credit hours]

Theory and experimental methods of atomic and molecular spectroscopy.

Topics include the theory of interpretation of atomic and molecular spectra and the experimental means to measure the spectra.

Prerequisites: PHYS 6710 with a minimum grade of D-

PHYS 7810 Stellar Astrophysics I

[3 credit hours]

Stellar atmospheres and their emergent spectra. Physics of radiation, matter and their interaction. Radiative transfer, hydrostatic and radiative equilibrium, convection, line formation, and spectral signatures of atmospheric physics.

Term Offered: Fall

PHYS 7820 Stellar Astrophysics II

[3 credit hours]

Stellar structure and evolution. Equation of state, nuclear reactions and nucleosynthesis, stellar formation, evolution and death, enrichment of the interstellar medium, formation of planetary systems, solar physics and helioseismology.

Term Offered: Spring

PHYS 7830 Galactic Astronomy I

[3 credit hours]

Stellar spectra, colors, compositions, and ages; star clusters; pulsating stars; calibration of distance indicators. Interstellar dust, interstellar extinction, interstellar gas, nebulae; structure of the interstellar medium.

Term Offered: Fall

PHYS 7840 Galactic Astronomy II

[3 credit hours]

Structure and dynamics of the Galaxy, shocks and explosions, stellar kinematics, galactic rotation, and dynamical and chemical evolution.

PHYS 7910 Advanced Research In Physics And Astronomy

[1-15 credit hours]

Research work under the guidance of a member of the graduate faculty. Designed to prepare the student to propose and carry out the thesis research required for the Ph.D. degree.

Term Offered: Spring, Summer, Fall

PHYS 8010 Physics And Astronomy Colloquium

[2 credit hours]

Topical lectures by visiting and local professionals.

Term Offered: Spring, Fall

PHYS 8020 Physics And Astronomy Journal Seminar

[1 credit hour]

Literature review seminar.

Term Offered: Spring, Fall

PHYS 8040 Physics and Astronomy Professional Development Seminar

[1 credit hour]

This seminar is intended to help graduate students assess future career options and develop skills that will enhance their productivity and marketability for those careers. The class will involve strong faculty-student and peer student interaction with the goal of getting students to actively consider potential career paths and to start mapping out the steps necessary to achieve them. There will be periodic small homework assignments and grades will be assigned as pass/fail.

Term Offered: Spring, Summer, Fall

PHYS 8490 Current Issues In Theoretical Physics

[3 credit hours]

Problems in theory relative to the research programs pursued at the University.

PHYS 8540 Structure, Defects And Diffusion

[4 credit hours]

A generic materials science approach to the study of crystalline structure, defects (point, line and planar) in crystalline materials, and the mechanisms and kinetics of diffusion in the condensed state.

Term Offered: Fall

PHYS 8550 Thermodynamics And Phase Transformations In Condensed Systems

[4 credit hours]

A materials science approach to the thermodynamics of condensed state equilibria and phase transformation kinetics.

Prerequisites: PHYS 6540 with a minimum grade of D- or PHYS 8540 with a minimum grade of D-

Term Offered: Spring

PHYS 8590 Current Issues In Condensed Matter And Material Science

[3 credit hours]

A survey of various areas in the physics of condensed matter and materials. Content will vary with instructor and from year to year.

PHYS 8630 Semiconductors I

[3 credit hours]

Review of modern theory of solids. Semiconducting and metallic materials. Semiconductor devices including p-n junctions and solar cells.

Prerequisites: PHYS 4510 with a minimum grade of D- and EECS 4400 with a minimum grade of D-

Term Offered: Spring, Fall

PHYS 8640 Fundamentals of Solar Cells

[3 credit hours]

Worldwide status of Photovoltaics, Semiconductors. P-n junction diodes. Ideal solar cells. Efficiency losses. Single crystals and thin films technologies. PV systems.

Prerequisites: PHYS 4510 with a minimum grade of D- and EECS 4400 with a minimum grade of D-

Term Offered: Spring

PHYS 8690 Current Issues In Optics

[3 credit hours]

Current research in optics and the optical excitation of material modes.

PHYS 8860 General Relativity

[3 credit hours]

Differential geometry, exterior calculus of tensors, the stress-energy tensor and Einstein field equation, stellar evolution and black holes, gravitational lensing, tests of the theory, and gravitational wave detection.

Prerequisites: PHYS 7260 with a minimum grade of D-

Term Offered: Fall

PHYS 8870 Cosmology

[3 credit hours]

Cosmological solutions for Einstein's field equation, the standard cosmological model, particle physics, nucleosynthesis and the cosmic background radiation. Inflation, dark matter and mass distribution, gravitational evolution, and formation of galaxies.

Prerequisites: PHYS 8860 with a minimum grade of D-

Term Offered: Spring

PHYS 8960 Ph. D. Thesis Research

[1-15 credit hours]

Thesis research required for the Ph.D. degree.

Term Offered: Spring, Summer, Fall

PHYS 8980 Special Topics

[1-4 credit hours]

Course reserved for visiting lecturers and topics not covered otherwise.

Term Offered: Spring, Summer

PHYS 8990 Independent Study

[1-4 credit hours]

committee and the student should present an oral defense of the project results.

3. The remaining hours to complete the 30 total required hours may be chosen from any courses approved for graduate credit with the approval of the student's advisory committee.

MS Physics - Coursework Intensive

For a degree of M.S. a student must complete at least 30 hours of graduate credit with specific stipulations as mentioned in the catalog. The degree has two options: (i) with a thesis and (ii) without a thesis. The thesis option involves at least 6 credits of research conducted under supervision of a thesis advisor. A thesis written and defended by the student in front of a committee of faculty members is necessary for this option to be completed. In addition to the required coursework, in the non-thesis option, a student must prepare a project report based either on literature research or independent research or a combination thereof, conducted under the supervision of the student's project advisor or co-advisors. The report should be prepared in accordance with the format specified by the advisory committee and the student should present an oral defense of the project results.

M.S. in Physics with Intensive Coursework Option

For the coursework intensive M.S. in Physics the student must complete at least 30 hours of graduate credit including the following:

1. At least 24 hours of graduate course credit in physics, with at least 12 of the 24 hours numbered above 6000 (no degree credit for PHYS5900, PHYS6010, or PHYS6020). No more than 6 hours of graduate research course credit may count towards the 24 hours.
2. In addition to the required coursework, a student must prepare a project report based either on literature research or independent research or a combination thereof, conducted under the supervision of the student's project advisor or co-advisors. The report should be prepared in accordance with the format specified by the advisory

College of Nursing

2021-2022 GRADUATE CATALOG

The College of Nursing at the University of Toledo offers several graduate-level degree and certificate programs. Doctor of Nursing Practice (DNP) and Master of Science in Nursing (MSN) degrees, as well as post-graduate certificates are offered. The Doctor of Nursing Practice Program (DNP) is designed to prepare advanced practice nurses, nurses in leadership positions, and nurses with a Bachelor of Science in Nursing to the highest level of clinical practice in order to meet the increasing complexities and challenges of the nation's health care environment.

Linda A. Lewandowski, PhD, RN, FAAN

Dean and Professor

linda.lewandowski@utoledo.edu

Martha Sexton, PhD, RN

Associate Dean of Academic Affairs

martha.sexton@utoledo.edu

Graduate Degrees/Certificates Offered

Doctor of Nursing Practice Degree

- Post-Baccalaureate to DNP Tracks (p. 347)
 - Family Nurse Practitioner (73 semester credits)
 - Pediatric Primary Care Nurse Practitioner (69 semester credits)
 - Psychiatric Mental Health Nurse Practitioner (74 semester credits)
 - Adult Gerontology Primary Care Nurse Practitioner (73 semester credits)
 - Adult Gerontology Acute Care Nurse Practitioner (74 semester credits)
 - Nurse Executive (69 semester credits)
- Post-Masters to DNP Tracks (p. 353)
 - Family Nurse Practitioner (73 semester credits)
 - Pediatric Primary Care Nurse Practitioner (69 semester credits)
 - Psychiatric Mental Health Nurse Practitioner (74 semester credits)
 - Adult Gerontology Primary Care Nurse Practitioner (73 semester credits)
 - Adult Gerontology Acute Care Nurse Practitioner (74 semester credits)
 - Nurse Executive (59 semester credits)
 - Post-Master's DNP (41 semester credits)

Master of Science in Nursing Degree

- Adult Gerontology Primary Care Nurse Practitioner (p. 359) (55 semester credits)
- Adult Gerontology Acute Care Nurse Practitioner (p. 358) (56 semester credits)
- Family Nurse Practitioner (p. 360) (55 semester credits)
- Graduate Entry (p. 362) (66 semester credits)

- Pediatric Primary Care Nurse Practitioner (p. 361) (51 semester credits)
- P (p. 361) psychiatric Mental Health Nurse Practitioner (56 semester credits)

Graduate Certificate Programs

For Current Registered Nurses with a Graduate Degree in Nursing:

- Adult Gerontology Primary Care Nurse Practitioner Graduate Certificate (p. 363) (22 semester credit hours plus prerequisites)
- Adult Gerontology Acute Care Nurse Practitioner (p. 363) (23 semester credit hours plus prerequisites)
- Family Nurse Practitioner Graduate Certificate (p. 364) (22 semester credit hours plus prerequisites)
- Pediatric Primary Care Nurse Practitioner Graduate Certificate (p. 364) (18 semester credit hours plus prerequisites)
- Psychiatric Mental Health Nurse Practitioner Graduate Certificate (<http://utoledo-public.courseleaf.com/graduate/nursing/degrees-programs/graduate-certificate-psychiatric-mental-health-nurse-practitioner/>) (23 semester credit hours plus prerequisites)

Doctor of Nursing Practice: (Post-Baccalaureate to DNP)

Adult Gerontology Acute Care Nurse Practitioner, Adult Gerontology Primary Care Nurse Practitioner, Family Nurse Practitioner, Nurse Executive, Pediatric Primary Care Nurse Practitioner, Psychiatric Mental Health Nurse Practitioner

The Doctor of Nursing Practice (DNP) program at The University of Toledo (UToledo) is designed to take BSN prepared nurses to the highest level of clinical practice in order to meet the increasing complexities and challenges of the nation's healthcare environment. As a DNP student at The University of Toledo you will learn how to:

- Translate and implement nursing research into evidence based practice to provide the best possible healthcare outcomes
- Work as an advanced practice nurse in a variety of community and hospital-based practice settings
- Develop the leadership and organizational expertise to effectively enact the policies and procedures necessary to meet the dynamic state of healthcare delivery
- Identify approaches for quality management and performance improvement within health care organizations

The DNP curriculum includes theoretical and clinical courses to prepare students to lead and develop innovative health care delivery in a variety of health care settings. In accordance with AACN specifications for 1000 academically supervised post-BSN clinical hours to earn a DNP degree, 1030 - 1170 hours of academically supervised advanced clinical practice are included in the program.

Track Requirements:

- Post-Baccalaureate to DNP- Adult Gerontology Acute Care Nurse Practitioner (p. 348)

- Post-Baccalaureate to DNP- Adult Gerontology Primary Care Nurse Practitioner (p. 348)
- Post-Baccalaureate to DNP- Family Nurse Practitioner (p. 348)
- Post-Baccalaureate to DNP- Psychiatric Mental Health Nurse Practitioner (p. 349)
- Post-Baccalaureate to DNP- Pediatric Primary Care Nurse Practitioner (p. 349)
- Post-Baccalaureate to DNP- Nurse Executive (p. 349)

Post-Baccalaureate to DNP- Adult Gerontology Acute Care Nurse Practitioner

Code	Title	Hours

• Synthesize knowledge derived from a scientific foundation in order to demonstrate expertise in advanced clinical nursing practice to improve delivery of care.

• Demonstrate continuous quality improvement in patient care situations while providing leadership in clinical decision making through use

of information systems and technology for the improvement and transformation of healthcare.

- Use clinical scholarship and analytical methods to implement safe, quality improvement in administration of patient care.
- Encourage inter-professional collaboration and teamwork to enhance and improve population health outcomes.
- Engage in influencing the development and implementation of health policy that provides an interface between practice, research, and policy development.

Doctor of Nursing Practice: (Post-Master's to DNP)

The Doctor of Nursing Practice (DNP) program at The University of Toledo (UToledo) is designed to take advanced practice registered nurses and nurse leaders to the highest level of clinical practice in order to meet the increasing complexities and challenges of the nation's healthcare environment. The online DNP curriculum includes theoretical and clinical courses to prepare students to lead and develop innovative health care delivery in a variety of health care settings. In accordance with AACN specifications for 1000 academically supervised post-BSN clinical hours to earn a DNP degree, there are 1035 to 1170 hours based on track. 540 hours of academically supervised advanced clinical practice are included in the Post-Master's DNP track for students who are APRN certified. Students are expected to have earned and documented 460 supervised clinical hours in their master's program.

By Tracks:

- Post Master's DNP- Adult Gerontology Acute Care Nurse Practitioner (p. 353)
- Post Master's DNP- Adult Gerontology Primary Care Nurse Practitioner (p. 353)
- Post Master's DNP- Family Nurse Practitioner (p. 354)
- Post Master's DNP- Psychiatric Mental Health Nurse Practitioner (p. 354)
- Post Master's DNP- Pediatric Primary Care Nurse Practitioner (p. 354)
- Post Master's DNP- Nurse Executive (p. 354)
- Post Master's DNP (p. 355)

- Synthesize theories, concepts, and research in nursing, social, and biological sciences and humanities as the basis for practice.
- Integrate advanced nursing practice knowledge and skills in managing care of selected populations.
- Engage in the research process with an emphasis on application to advanced practice.
- Engage in leadership strategies that contribute to the improvement of health care delivery and influence health care policy.
- Integrate assessment of own learning in developing a lifelong pattern of scholarly inquiry.

MS in Nursing: Adult Gerontology Primary Care Nurse Practitioner

The Adult Gerontology Primary Care Nurse Practitioner (AGPCNP) major is a two-year, full-time course of study with part-time options. The curriculum is designed to prepare professional nurses for the adult gerontology role in primary nursing care. The curriculum features theoretically based and clinically focused courses and includes 630 contact hours for clinical practice and 120 contact hours for selective laboratory experiences. AGPCNP graduates are eligible to sit for the American Nurses Credentialing Center (ANCC) certification or American Academy of Nurse Practitioner (AANP) certification corresponding to their population foci upon graduation.

Graduate Entry Master of Science in Nursing

The Graduate Entry major is a two-year, full-time course of study. The program is designed for the person who holds a bachelor's degree, who is not yet a registered nurse (RN), but who desires to become a RN. The curriculum includes theory classes prepared by the graduate faculty of the University of Toledo College of Nursing, as well as clinical experiences with patients in state-of-the-art health care facilities. The master's preparation positions graduates for immediate entry into exciting positions in hospitals or clinics, and also provides an opportunity to continue graduate study. Graduates of the program are eligible to sit for the NCLEX-RN and may decide to pursue a graduate certificate to enter an advanced practice role as a nurse practitioner, or they may opt to pursue a doctor of nursing practice (DNP) or doctor of philosophy (Ph.D.) degree.

First Term		Hours
NURS 5000	Population Focused Nursing	4

Second Term

NURS 6220	Family Nurse Practitioner Clinical II: Primary Care of Women and Children	7
Hours		7
Third Term		
NURS 6230	Family Nurse Practitioner Clinical III: Primary Care of Adults and Older Adults	8
Hours		8
Total Hours		22

Transcripts must indicate completion at the graduate level of advanced pathophysiology, advanced pharmacology and advanced health assessment with a grade of B or higher in each course.

Synthesize knowledge derived from a scientific foundation in order to demonstrate expertise in advanced clinical nursing practice to improve delivery of care.

Demonstrate continuous quality improvement in patient care situations while providing leadership in clinical decision making through use of information systems and technology for the improvement and transformation of health care

Use clinical scholarship and analytical methods to implement safe, quality improvement in administration of patient care
Encourage interprofessional collaboration and teamwork to enhance and improve population health outcomes

Engage in influencing the development and implementation of health policy that provides an interface between practice, research and policy development

This should not be a separate program assessment plan. The program is subsumed in either the MSN or DNP APRN programs.

Graduate Certificate: Pediatric Primary Care Nurse Practitioner

The Pediatric Primary Care Nurse Practitioner Graduate Certificate (PPCNP) program is offered to individuals who have completed a graduate degree in nursing and who desire to obtain specialized knowledge to seek certification as a PPCNP. All of the courses award academic credit from The University of Toledo. PPCNP graduates are eligible to sit for Pediatric Nursing Certification Board (PNCB) certification upon graduation. The curriculum includes 540 contact hours for clinical practice.

Code	Title	Hours
NURS 5810	Pediatric Nurse Practitioner Clinical I: Care of Children and Concepts of Wellness	6
NURS 5820	PNP Clin II: Acute/Chronic	6
NURS 5830	Pediatric Nurse Practitioner Clinical III: Complex, Chronic Illnesses or Disabilities	6

Curriculum

First Term		Hours
NURS 5810	Pediatric Nurse Practitioner Clinical I: Care of Children and Concepts of Wellness	6
Hours		6

Second Term

NURS 5820	PNP Clin II: Acute/Chronic	6
Hours		6

Third Term

NURS 5830	Pediatric Nurse Practitioner Clinical III: Complex, Chronic Illnesses or Disabilities	6
Hours		6
Total Hours		18

¹ Transcripts must indicate completion at the graduate level of advanced pathophysiology, advanced pharmacology and advanced health assessment with a grade of B or higher in each course.

1. Synthesize theories, concepts, and research in nursing, social, and biological sciences and humanities as the basis for practice.
2. Integrate advanced nursing practice knowledge and skills in managing care of selected populations.
3. Engage in the research process with an emphasis on application to advanced practice.
4. Engage in leadership strategies that contribute to the improvement of health care delivery and influence health care policy.
5. Integrate assessment of own learning in developing a lifelong pattern of scholarly inquiry.

- College Policies and Procedures (p. 571)
- Academic Regulations (p. 572)
- Other Policies and Information (p. 577)

Administration of Programs

All graduate programs in the College of Nursing are administered jointly by the college and the College of Graduate Studies of The University of Toledo. Students may contact specific departments admitnurse@utoledo.edu, the college's graduate advisor, or the College of Graduate Studies for further information on programs or admission requirements.

Admission Requirements

Post-Baccalaureate to DNP (Doctor of Nursing Practice)

To be eligible for admission, applicants must have:

1. Baccalaureate in Nursing (BSN) from an accredited college/university that is accredited by a nationally recognized body for nursing education accreditation.
2. Higher ed. grade point average of 3.0 in undergraduate coursework. (All courses taken at all higher ed. institutions, unadjusted for grade deletion, are used in the calculation.)
3. Official transcripts from all academic institutions attended submitted through NursingCAS.
4. Active, unrestricted, unencumbered RN license with eligibility to obtain Ohio RN licensure.
5. Personal statement which includes the following:
 - a. congruence of professional career goals with outcomes of the DNP program
 - b. rationale to pursue DNP education
 - c. description of abilities to achieve the outcomes of the program
 - d. discussion of clinical area of interest
 - e. identification of anticipated challenges in meeting the outcomes of the program and how these challenges will be met
6. Undergraduate statistics course recommended but not required.
7. Current resume or curriculum vitae (CV).
8. Three recommendations from professional sources.
9. Interview
10. Students accepting admission are required to authorize The University of Toledo to obtain criminal record checks (i.e., BCII and FBI) and are responsible for fingerprinting expenses. Students must declare and document misdemeanor and/or felony offenses that occur prior to admission to the nursing program and/or during program progression. In compliance with Ohio Revised Code 4723-7 convictions will result in denial of admission to the program or dismissal after matriculation.
11. The TOEFL¹ is required for all applicants whose native language is not English based on the requirements of the UT College of Graduate Studies. Official results are to be sent to institutional code 1845¹.

Additional admission requirements for Adult Gerontology Acute Care Nurse Practitioner Track:

1. BSN applicant: minimum one year of full-time current work experience as a licensed RN in an acute care and/or critical care setting.

¹ Minimum required test scores may be found here (<https://www.utoledo.edu/graduate/prospectivestudents/admission/guidelines.html>).

Post-Master's DNP (Doctor of Nursing Practice)

To be eligible for admission, applicants must have:

1. Master's of Science in Nursing (MSN) from an accredited college/university that is accredited by a nationally recognized body for nursing education accreditation.
2. Higher ed. grade point average of 3.0 in graduate coursework. (All graduate courses taken at all higher ed. institutions, unadjusted for grade deletion, are used in the calculation.)
3. Official transcripts from all academic institutions attended submitted through NursingCAS.
4. Leadership applicants must hold an active, unrestricted, unencumbered RN license where the student plans to conduct clinical experiences.
5. Direct Care applicants should hold appropriate APRN credentials for the state where student plans to conduct clinical experiences.
6. Personal statement which should include the following:
 - a. congruence of professional career goals with outcomes of the DNP program
 - b. rationale to pursue DNP education
 - c. description of abilities to achieve the outcomes of the program
 - d. discussion of clinical area of interest
 - e. identification of anticipated challenges in meeting the outcomes of the program; and
 - f. how these challenges will be met.
7. Current resume or curriculum vitae (CV).
8. Advanced Pathophysiology, Advanced Pharmacotherapeutics, Advanced Health Assessment (or their equivalent) are prerequisite to admission in all Post Master's tracks with the exception of the Post Master's - DNP - NP track.
9. Documentation of graduate level supervised clinical hours.
10. Three recommendations from professional sources.
11. Interview.
12. Students are required to authorize The University of Toledo to obtain criminal record checks (i.e. BCII & FBI) and are responsible for fingerprinting expenses. Students must declare and document misdemeanor and/or felony offenses that occur prior to admission to the nursing program and/or during program progression. In compliance with Ohio Revised Code 4723-7, convictions will result in denial of admission to the program or dismissal after matriculation.
4. Active, unrestricted, unencumbered, Ohio RN License.
5. Completion of an undergraduate statistics course recommended.
6. Computer competency that includes word processing skills and ability to communicate electronically.
7. Personal statement describing career goals, future plans for employment, and expectations for graduate study.
8. Current resume or curriculum vitae (CV).
9. Three recommendations completed by professional sources (Master's in Nursing preferred).
10. TOEFL¹ is required for international applicants.
11. An interview, if requested.
12. Students are required to authorize The University of Toledo to obtain criminal record checks (i.e. BCII & FBI) and are responsible for fingerprinting expenses. Students must declare and document misdemeanor and/or felony offenses that occur prior to admission to the nursing program and/or during program progression. In compliance with Ohio Revised Code 4723-7, convictions will result in denial of admission to the program or dismissal after matriculation.

Additional admission requirements for Adult Gerontology Acute Care Nurse Practitioner Track:

1. BSN applicant: minimum one year of full-time current work experience as a licensed RN in an acute care and/or critical care setting, interview required upon request.

¹ Minimum required test scores here (<https://www.utoledo.edu/graduate/prospectivestudents/admission/guidelines.html>).

Graduate Entry MASTER OF SCIENCE IN NURSING DEGREE

To be eligible for admission, applicants must have:

1. Baccalaureate from an accredited college/university.
2. Higher ed. grade point average of 3.0 in undergraduate coursework or earned Master's with a 3.0. (All courses taken at all higher ed. institutions, unadjusted for grade deletion, are used in the calculation.)
3. Official transcripts from all academic institutions attended, one of which must state the baccalaureate earned.
4. Completion of six semester credits of Human Anatomy and Physiology with a grade of "B" or higher.
5. Completion of three semester credits of psychology.
6. Completion of three semester credits of social science.
7. Personal statement describing career goals, future plans for employment, and expectations for graduate study.
8. Current resume or curriculum vitae (CV).
9. Three recommendations completed by professional sources.
10. TOEFL¹ is required for international applicants. Must be taken within the past 2 years.
11. An interview, if requested.
12. Students are required to authorize The University of Toledo to obtain criminal record checks (i.e. BCII & FBI) and are responsible for fingerprinting expenses. Students must declare and document misdemeanor and/or felony offenses that occur prior to admission

Master of Science in Nursing Degree:

ADULT GERONTOLOGY ACUTE CARE NURSE PRACTITIONER
ADULT GERONTOLOGY PRIMARY CARE NURSE PRACTITIONER
Family Nurse Practitioner
Pediatric Primary Care Nurse Practitioner
Psychiatric Mental Health Nurse Practitioner

To be eligible for admission, applicants must have:

1. Baccalaureate in nursing (BSN) from an accredited college/university that is accredited by a nationally recognized body for nursing education accreditation.
2. Higher ed. grade point average of 3.0 in undergraduate coursework. (All courses taken at all higher ed. institutions, unadjusted for grade deletion, are used in the calculation.)
3. Official transcripts from all academic institutions attended, one of which must state the baccalaureate earned.

to the nursing program and/or during program progression. In compliance with Ohio Revised Code 4723-7, convictions will result in denial of admission to the program or dismissal after matriculation.

13. Students are admitted to the master of science in nursing graduate-entry MSN track in the fall and proceed in a cohort for five consecutive semesters. This track is only offered full-time.

¹ Minimum required test scores here (<https://www.utoledo.edu/graduate/prospectivestudents/admission/guidelines.html>).

Graduate Certificate

ADULT GERONTOLOGY ACUTE CARE NURSE PRACTITIONER

Adult Gerontology Primary Care Nurse Practitioner

Family Nurse Practitioner

Pediatric Primary Care Nurse Practitioner

Psychiatric Mental Health Nurse Practitioner

To be eligible for admission, applicants must have:

1. Earned Master of Science in Nursing degree or Doctor of Nursing practice from an accredited college/university that is accredited by a nationally recognized body for nursing education accreditation.
2. Higher ed. grade point average of 3.0 in graduate coursework. (All graduate courses taken at all higher ed. institutions, unadjusted for grade deletion, are used in the calculation.)
3. Active, unrestricted, unencumbered, Ohio RN License.
4. Current resume or curriculum vitae (CV).
5. Three recommendations completed by professional sources (Graduate-level nursing preferred).
6. Official transcripts of all previous graduate coursework.
7. Transcripts must indicate completion at graduate level advanced pathophysiology, advanced pharmacology, and advanced health assessment with a grade of B or higher in each course.
8. Interview, if requested.
9. Students are required to authorize The University of Toledo to obtain criminal record checks (i.e. BCII & FBI) and are responsible for fingerprinting expenses. Students must declare and document misdemeanor and/or felony offenses that occur prior to admission to the nursing program and/or during program progression. In compliance with Ohio Revised Code 4723-7, convictions will result in denial of admission to the program or dismissal after matriculation.
10. TOEFL¹ is required for international applicants.

Additional admission requirements for Adult Gerontology Acute Care Nurse Practitioner Track:

1. Graduate-Entry (MSN) applicant: minimum one year of full-time current work experience as a licensed RN in an acute care and/or critical care setting, interview required upon request.
2. APRN applicant: minimum one year of full-time work experience in an acute care and/or critical care setting within the last five years is recommended, interview required upon request.

¹ Minimum required test scores here (<https://www.utoledo.edu/graduate/prospectivestudents/admission/guidelines.html>).

Admission to Graduate Programs

Applications are completed through Nursing CAS at <http://nursingcas.liaisoncas.com> (<http://nursingcas.liaisoncas.com/>) and by submitting a nursing supplemental application to the University of Toledo: <http://apply.utoledo.edu> (<http://apply.utoledo.edu/>).

Admission is competitive.

NursingCAS and nursing supplemental application deadlines can be found at www.utoledo.edu/nursing/howtoapply.html (<http://www.utoledo.edu/nursing/howtoapply.html>). Applications must be electronically submitted by the posted deadlines.

Computer competency includes word processing skills and the ability to communicate electronically.

Advising

Students must meet with their advisor for the purpose of developing a plan of study. It is the student's responsibility to meet all requirements for the degree as specified by the graduate program, the department, the College of Graduate Studies and the University of Toledo. Students are encouraged to complete the plan of study during the first semester of matriculation.

Please note that students matriculate into a specific track in the MSN and DNP programs, and are allowed to take the courses within their program of study. Students who desire to take courses outside of their approved track need permission of course faculty, program directors and advisor. **Permission is not guaranteed.** Graduate nursing courses are not available to non-degree seeking guest students.

State Authorization and Professional Licensure Information

The University of Toledo (UT) programs leading to licensure and/or advanced practice certification/endorsement, whether delivered online or face-to-face, satisfy the academic requirements for those credentials set forth by the State of Ohio.

Requirements for licensure and/or advanced practice certification/endorsement eligibility vary from one profession to another and from state to state. For students who wish to practice in a state other than Ohio, please contact the program director/advisor to discuss if you will need to satisfy additional requirements to practice in that state.

National Council of State Boards of Nursing (<https://www.ncsbn.org/contact-bon.htm>)

College of Pharmacy & Pharmaceutical Sciences

2021-2022 Graduate Catalog

The University of Toledo College of Pharmacy and Pharmaceutical Sciences is a nationally ranked college known for its century-long tradition of educating students to become pharmacists and pharmaceutical scientists while advancing pharmaceutical knowledge. Guiding principles are personal integrity, respect for humanity and human diversity, and professionalism.

Degrees/Certificates Offered

Doctor of Philosophy in Experimental Therapeutics (p. 368)

Doctor of Philosophy in Medicinal Chemistry (p. 370)

Master of Science in Medicinal Chemistry (p. 371)

Master of Science in Pharmaceutical Sciences (p. 375)

- Health Outcomes and Socioeconomic Sciences (p. 373)
- Industrial Pharmacy (p. 374)
- Pharmacology/Toxicology (p. 375)

Combined Degree Programs

Pharm.D./Doctor of Philosophy in Medicinal Chemistry Dual Degree (p. 376)

PharmD/Doctor of Philosophy in Experimental Therapeutics Dual Degree (p. 376)

Bachelor of Science in Pharmaceutical Sciences (Medicinal and Biological Chemistry) and Master of Science in Medicinal Chemistry (BSPS/MS) combined 5-year option (p. 372)

Bachelor of Science in Pharmaceutical Sciences (Pharmacology/ Toxicology) and Master of Science in Pharmaceutical Sciences / Pharmacology Toxicology (BSPS/MS) combined 5-year option (p. 375)

Bachelor of Science in Pharmaceutical Science/ M.S. Law with regulatory compliance combined 5-year option (p. 375)

PhD in Experimental Therapeutics

Experimental therapeutics is the integration of basic and applied sciences focused on the study and development of new treatments for human disease. Research in experimental therapeutics seeks to understand human diseases from the molecular level to the whole organism in order to develop rational approaches for new pharmacological treatments. In addition, experimental therapeutics includes the development of new therapies through systematic investigation at increasing levels of complexity ranging from individual molecules and proteins, to cellular and tissue based assays and to the whole organism. The purpose of the program is to train students at the doctoral level who can translate discoveries in the laboratory to therapies in a clinical setting.

Satisfactory completion of a bachelor's degree in chemistry, biology, pharmaceutical sciences, pharmacy or a related discipline is required.

The ability to excel in graduate studies and research must be evident based on grades from undergraduate studies, recommendations from college faculty and performance in research and independent study. The Graduate Record Exam (GRE) is not required for admission, but it is highly recommended that a score be submitted for international students.

Students with M.S. degrees in pharmacology or related fields (e.g., pharmaceutical sciences) may be also admitted to the program. However, they are expected to have a minimum of 30 credits at the Master's level prior to accruing doctoral level credits.

Ph.D. students need to complete the following required courses at the 5000 to 8000 level as partial fulfillment of the requirements for a Ph.D. degree. The course level is determined by the number of graduate credits completed at the time of registering for that particular course.

Code	Title	Hours
PHCL 5700	Pharmacology I: Principles of Pharmacology, Autonomic Pharmacology and Related Pharmacology ¹	3
PHCL 5100/7100	Experimental Therapeutics I	3
PHCL 5200/7200	Experimental Therapeutics II	3
PHCL 5770/7770	Current Topics in Toxicology I ²	1

PHCL 6650/8650	Seminar in Experimental Therapeutics (Minimum 6 hours required)	2
PHCL 5460/7460	Current Topics in Pharmacokinetics Toxicokinetics ³	1
PHCL 5440/7440	Current Topics in Interpretation of Pharmaceutical Data ⁴	1
PHCL 6300/8300	Research Experience in Experimental Therapeutics ⁵	2-6
PHCL 8960	Dissertation Research in Experimental Therapeutics ⁶	1-15
MBC 6190/8190 or PHCL 5500/7500	Advanced Medicinal Chemistry From Experimental to Applied Therapeutics	4
INDI 6020/8020	On Being a Scientist	1

- ¹ Not required if this same course, or PHCL 3700 or equivalent was taken previously. If taken by Masters' students admitted to the program with eligibility to take 7/8 level courses, the PHCL 5700 credit will not count toward those credits required for the Ph.D. degree.
- ² Requires PHCL 4730 or PHCL 5730 as pre-requisite or PHCL 5730 as co-requisite. If PHCL 5730 taken by Masters' students admitted to the program with eligibility to take 7/8 level courses, the credit for this course will not count toward those required for the Ph.D. degree.
- ³ Requires PHCL 4760 or PHCL 5760 as pre-requisite or PHCL 5760 as co-requisite. If PHCL 5760 taken by Masters' students admitted to the program with eligibility to take 7/8 level courses, the credit for this course will not count toward those required for the Ph.D. degree.
- ⁴ Requires PHCL 5140 as pre- or co-requisite. If taken by Masters' students admitted to the program with eligibility to take 7/8 level courses, the credit for this course will not count toward those required for the Ph.D. degree.
- ⁵ To fulfill the required laboratory rotations, a minimum of 4 hours must be taken in two different sections of the course (2 hours in each).
- ⁶ A minimum of 30 hours is required.

General Elective Courses

In addition to the required courses, general elective courses may be selected from the following. The course level to be taken is dependent on the number of graduate credits earned at the time of registration for that particular course:

Code	Title	Hours
PHCL 5750	Toxicology II	3
PHCL 5990	Problems In Pharmacology	1-6
PHCL 6390/8390	Problems in Experimental Therapeutics	1-6
MBC 5620/7620	Biochemical Techniques	2
MBC 5380	Medicinal And Poisonous Plants	3
MBC 6100/8100	Advanced Immunology	2
MBC 6550/8550	Biochemistry	4
CHEM 6510/8510	Protein Chemistry	4
CHEM 6520/8520	Enzymology	4
CHEM 6530/8530	Nucleic Acid Chemistry	4

BIOL 6010/8010	Advanced Molecular Biology	4
BIOL 6090/8090	Advanced Cell Biology	4
BIOL 6100/8100	Research Methodology: Cell And Molecular Biology	3

Specialized Elective Courses

Specialized elective courses are recommended for students with concentrations in different areas of the program, and may be selected from the following list:

Code	Title	Hours
BMSP 6340/8340	Curr Prob Res App Genes/Genom	2
BMSP 6330/8330	Current Problems and Research Approaches in Proteins	2.5
BMSP 6340/8340	Curr Prob Res App Genes/Genom	2.5
BMSP 6360/8360	Current Problems and Research Approaches in Cell Membranes	3
BIOE 5620	Cellular Electrophysiology	3

Other elective courses may be taken with the approval of the department graduate committee.

Additional Requirements

In addition, all students must satisfy the following:

- Minimum of 90 semester hours of graduate credit, including a minimum of 30 semesters hours at the Masters level, and a Minimum of 60 semester hours of graduate credit beyond the master's level. The required minimum 60 credits beyond the Masters level should include a minimum of 30 hours of Ph.D. dissertation research.
- Students admitted with a minimum of 30 semester hours at a Masters level should sign up for 7/8 level classes, if their Masters degree was conferred by a USA university. Students admitted with a Bachelor's degree or a foreign graduate degree should sign up for 5/6 level classes for the first 30 credit, and for 7/8 level classes thereafter.
- With the approval of the department graduate committee, certain courses taken in a foreign university may be considered as equivalent to some of the program courses or for full-filling pre-requisite requirements
- A grade of B- or higher is expected to be maintained for the required courses. A grade of B- or higher is also required for all of the pre-requisite courses.
- A cumulative graduate GPA of 3.0 or higher must be maintained.
- Satisfactory overall performance is expected on a written qualifying examination, which is administered after completion of the required graduate courses for that exam. The qualifying examination covers the following graduate courses, including their pre- and/or co-requisites:

Code	Title	Hours
PHCL 5100/7100	Experimental Therapeutics I	3
PHCL 5200/7200	Experimental Therapeutics II	3
PHCL 5770/7770	Current Topics in Toxicology I	1

PHCL 5440/7440	Current Topics in Interpretation of Pharmaceutical Data	1
----------------	---	---

- Selection of a doctoral research adviser, preparation of an acceptable written Ph.D. dissertation proposal in consultation with the adviser, and the satisfactory oral defense of the proposal before the dissertation advisory committee. The written qualifying examination and the defense of the dissertation proposal will constitute the examination requirements necessary for advancement to candidacy for the Ph.D. in Experimental Therapeutics. The chair of the doctoral dissertation advisory committee will be the student's doctoral research adviser. The dissertation advisory committee will consist of at least two additional faculty members plus one member from outside the student's department or college.
- Subsequent to admission to candidacy for the Ph.D. degree, the student is expected to spend a minimum of two semesters in full-time study at The University of Toledo.
- Preparation of a Ph.D. dissertation based on the results of an original research investigation performed by the student during his/her Ph.D. program at The University of Toledo.
- Successful oral defense of the dissertation before the dissertation advisory committee and presentation of the results of the dissertation research in a seminar before the department of pharmacology.
- Acceptance of the dissertation by the Ph.D. dissertation adviser and the dissertation advisory committee.

PhD in Medicinal Chemistry

Satisfactory completion of a bachelor's degree in chemistry, biology, pharmacy or a related discipline is required. It is assumed that the undergraduate training will include differential and integral calculus, college physics, a one-year course in general and inorganic chemistry including a laboratory, a one-year course in organic chemistry including a laboratory, and training in analytical chemistry. An undergraduate course in physical chemistry is recommended.

The ability to excel in graduate studies and research must be evident based on grades from undergraduate studies, recommendations from college faculty, results from standardized aptitude and achievement examinations (Graduate Record Examination), and performance in research and independent study.

Students with M.S. degrees in medicinal chemistry or related fields may also be admitted directly to the Ph.D. program. Students without M.S. degrees may be admitted directly to the Ph.D. program, but must take 30 credits at the master's level prior to accruing doctoral level credits.

Ph.D. students need to complete the following courses as partial fulfillment of their requirement for a Ph.D. degree. Additional graduate courses (5000 to 8000 level) may be required, as advised during the development of each student's plan of study.

Code	Title	Hours
MBC 5100/7100	Ethical Conduct Research	1
MBC 5900/7900	Medicinal Chemistry Seminar ((6-8 hours, 1 each semester)) ¹	1
MBC 6190/8190	Advanced Medicinal Chemistry	4

MBC 6200/8200	Biomedical Chemistry	4
MBC 6300/8300	Biomedical Chemistry Laboratory I	1
MBC 6310/8310	Biomedical Chemistry Laboratory II	3
MBC 6550/8550	Biochemistry	4
MBC 8960	Ph.d. Dissertation Research In Medicinal Chemistry (minimum of 30 hours) ²	1-15
Electives ³		8

¹ One hour can be taken during each semester (fall or spring, not summer). A minimum of 6 hours, taken over 6 semesters, are required, up to 8 hours count towards degree completion.

² A minimum of 30 hours are required, but more than 30 hours can be taken and count towards degree completion.

³ Other 5000- and above level courses should be taken as electives, as advised. A minimum of 8 hours are required, but more than 8 hours can be taken and will be counted towards degree completion. See list below.

The following is a list of recommended elective courses:

Code	Title	Hours
Chemistry Courses		
CHEM 6330	Spectroscopic Methods And Analysis Of Spectra	4
CHEM 6400/8400	Advanced Organic Chemistry	4
CHEM 6410/8410	Organic Synthesis	4
CHEM 6510/8510	Protein Chemistry	4
CHEM 6520/8520	Enzymology	4
CHEM 6530/8530	Nucleic Acid Chemistry	4
Biology Courses		
BIOL 6010/8010	Advanced Molecular Biology	4
BIOL 6020	Advanced Molecular Biology Laboratory	2
BIOL 6090/8090	Advanced Cell Biology	4
BIOL 6100/8100	Research Methodology: Cell And Molecular Biology	3
Medicinal and Biological Chemistry Courses		
MBC 5380	Medicinal And Poisonous Plants	3
MBC 6100/8100	Advanced Immunology	2
MBC 6450/8450	Advanced Synthetic and Medicinal Chemistry	2
Other 5000/7000 or 6000/8000 level courses as advised		

In addition, all students must satisfy the following:

- Minimum of 60 semester hours of graduate credit beyond the master's level (course numbers 7000 and above), including a minimum of 15 hours of courses, laboratories and seminars (exclusive of dissertation research) and a minimum of 30 hours of Ph.D. dissertation research.
- Satisfactory overall performance on a written qualifying examination covering graduate-level medicinal chemistry, biochemistry and either organic chemistry or advanced cell/molecular biology.
- Selection of a doctoral research adviser, preparation of an acceptable written Ph.D. dissertation proposal in consultation with the adviser, and the satisfactory oral defense of the proposal before the dissertation advisory committee. The written qualifying examination and the defense of the dissertation proposal will constitute the examination requirements necessary for advancement to candidacy

for the Ph.D. in medicinal chemistry. The chair of the doctoral dissertation advisory committee will be the student's doctoral research adviser. The dissertation advisory committee will consist of two additional Medicinal and Biological Chemistry Department faculty plus one member from outside the student's department or college.

4. Subsequent to admission to candidacy for the Ph.D. degree, the student is expected to spend a minimum of two semesters in full-time study at The University of Toledo.
5. Preparation of a Ph.D. dissertation based on the results of an original research investigation performed by the student during his/her Ph.D. program at The University of Toledo.
6. Presentation of the results of the dissertation research in a public seminar before the Department of Medicinal and Biological Chemistry and successful oral defense of the dissertation before the dissertation advisory committee.
7. Acceptance of the dissertation by the Ph.D. dissertation adviser and the dissertation advisory committee.
8. Maintenance of a cumulative graduate GPA of 3.0 or higher.
9. Three semesters of experience as a teaching assistant. The program believes experience in teaching is critical to solidifying the student's understanding of the basics of the field and improving communication skills.

Interpret and critically evaluate literature in the respective discipline and identify gaps in current knowledge.

Design, implement, and analyze the results of an independent research project in the respective discipline.

Effectively communicate and defend research findings orally and in writing

Describe and comply with standards of ethical conduct of research

Effectively work in a team of colleagues within the discipline

Demonstrate ability to independently design, plan, and execute a research program in the area of specialization.

Lead the ability to lead a research team and delegate components of a research program.

Describe new developments in the general field of pharmaceutical sciences and related fields.

Communicate and negotiate with leaders in these fields to find employment.

MS in Medicinal Chemistry

Satisfactory completion of a bachelor's degree in chemistry, biology, pharmacy or a related discipline is required. It is assumed the undergraduate training will include differential and integral calculus, college physics, a one-year course in general and inorganic chemistry including a laboratory, a one-year course in organic chemistry including a laboratory, and training in analytical chemistry. An undergraduate course in physical chemistry is recommended.

The admission requirements of the College of Graduate Studies of the University apply. The Graduate Record Exam (GRE) is not required for admission, but is highly recommended for international students.

Medicinal and Biological Chemistry (MBC) Major & Master of Science (M.S.) in Medicinal Chemistry (MC) Option

Students need to meet the requirements for entry into the Bachelor of Science of Pharmaceutical Science (BSPS) program. At the beginning of the second semester of their P1 year (spring semester, third year of study) the student applies for provisional acceptance into the graduate program and identifies an MBC faculty mentor for an in-house internship to be taken during the summer between the P1 and P2 year. Once the BSPS degree is awarded the student will be fully accepted into the graduate program. The internship mentor will become the graduate advisor of the student.

Master's students need to complete the following courses as partial fulfillment of their requirement for an M.S. degree:

Code	Title	Hours
MBC 5100	Ethical Conduct Research	1
MBC 5900	Medicinal Chemistry Seminar ¹	3-4
MBC 6190	Advanced Medicinal Chemistry	4
MBC 6960	M.s. Thesis Research In Medicinal Chemistry ²	6-16
Electives ³		5
Total Hours		19-30

¹ One hour can be taken during each semester (fall or spring, not summer). A minimum of 3 credit hours are required, up to 4 count towards degree completion.

² A minimum of 6 hours are required, up to 16 hours count toward degree completion.

³ Other 5000- to 6000-level courses should be taken as electives, as advised. A minimum of 5 hours of electives are required, but more than 5 hours can be taken and will be counted towards degree completion. Typically, students with more biological interests will take MBC 6550 and/or MBC 6200 as electives and students with more chemical interests will take CHEM 6400 and CHEM 6410.

The total number of credit hours at the graduate level (course numbers 5000 and 6000) including classroom courses, seminar and M.S. Thesis Research needs to be at least 30. This total can be achieved in different ways by varying the number of seminar, research and electives while maintaining the range limits for each category specified above.

In addition, the following items also must be completed:

1. Preparation of a written M.S. thesis based upon the results of an original research investigation performed by the student during the M.S. program at The University of Toledo.
2. Successful oral defense of the thesis before the thesis advisory committee (consisting of the thesis adviser and two other members) and presentation of the results of the thesis research in a seminar before the Department of Medicinal and Biological Chemistry.
3. Acceptance of this thesis by the M.S. thesis adviser and the thesis advisory committee.
4. Maintenance of a cumulative graduate GPA of 3.0 or higher.
5. One semester of experience as a teaching assistant. The program believes experience in teaching is critical to solidifying the

student's understanding of the basics of the field and improving communication skills.

Program Requirements for the combined BSPS/MS in Medicinal Chemistry

The pre-professional division (year 1 and 2) requirements are the same as for the BSPS program as are the requirements for entry into the professional division. When students enter the professional division of the College of Pharmacy and Pharmaceutical Sciences they are in their P1 year (3rd year of study). The requirements for the P1 and P2 years are listed below:

Medicinal and Biological Chemistry Professional Division Curriculum

First Term		Hours
MBC 3310	Medicinal Chemistry I: Drug Action And Design	2
MBC 3330	Techniques in Pharmaceutical and Medicinal Chemistry	2
MBC 3340	Techniques in Pharmaceutical and Medicinal Chemistry Laboratory	1
PHCL 3700	Pharmacology I: Principles of Pharmacology, Autonomic Pharmacology and Related Pharmacology	3
MBC 3550	Physiological Chemistry I: Structure And Function Of Biological Macromolecules	3
Major Elective ²		2
Hours		13
Second Term		
At the beginning of the second term the student identifies a MBC faculty mentor for an in-house internship and applies for provisional acceptance to the graduate school.		
MBC 3100	Practices in Pharmaceutical Research	1
MBC 3320	Medicinal Chemistry II: Drug Design and Drug Action	3
MBC 3560	Physiological Chemistry II: Chemical Regulation Of Cells And Organisms	3
PHCL 3730	BSPS Pharmacology II: Endocrine and CNS Pharmacology	3
MBC 3880	Medicinal And Biological Chemistry Laboratory (Recommend MBC Laboratory course) ¹	3
MBC 3100	Practices in Pharmaceutical Research (Recommend Major Elective) ²	1
MBC 4870	Biomedical Chemistry Laboratory (Recommend Major Elective) ²	1-4
Hours		15-18
Third Term		
MBC 4780	Internship in Medicinal Chemistry ³	6-12
Hours		6-12
Fourth Term		
MBC 4710	Targeted Drug Design ⁴	3

MBC 4850	Advanced Immunology And Tissue Culture Laboratory (Recommend Major Elective) ²	1-10
Recommended MBC4880 Laboratory or select a major elective		3

Hours	7-16
Total Hours	41-59

- ¹ The MBC major requires that 3 semester hours of laboratory instruction be taken at the 3000 level or higher in a course taught by the MBC Department. Completion of 3 semester hours of any of the following courses will satisfy this requirement: MBC 3880, MBC 4850, MBC 4870, MBC 4880, MBC 4900, MBC 4950, or MBC 4960. MBC 3850 Microbiology & Immunology Lab, 1 semester hour credit does not satisfy this requirement *unless* it is taken with an additional 2 credit hours of any of the other approved laboratories listed above.
- ² To be chosen from the MBC electives list. (See College of Pharmacy and Pharmaceutical Sciences Catalogue.)
- ³ Internship must be taken in the summer before the P2 year with an in house MBC faculty mentor who will then be the mentor for the M.S. degree.
*Once the B.S.P.S. degree is awarded the student can move from provisional to accepted in the graduate program. Requirements to be fulfilled for the MS MC degree are given directly above.
- ⁴ MBC 4720, Advances in Drug Design, when offered, will also fulfill the requirement.
*At the beginning of the second semester the student identifies a MBC faculty mentor for an in-house internship and applies for provisional acceptance to the graduate school.

Graduation should be in December giving 3.5 years for the B.S.P.S. MBC degree completion. Once the B.S.P.S. degree is awarded the student can move from provisional to accepted in the graduate program. Requirements to be fulfilled for the MS MC degree are given directly above.

The student would begin the master's portion in the spring semester following the B.S.P.S. MBC graduation at the end of the Fall term, and could complete the M.S. degree by the end of the Spring semester of the following year. Therefore the two degrees, B.S.P.S. MBC and M.S. MC, could be accomplished in 5 calendar years.

Interpret and critically evaluate the literature in the respective discipline and identify gaps in current knowledge.
Design, implement, and analyze the results of an independent research project in the respective discipline.
Effectively communicate and defend research findings orally and in writing
Describe and comply with standards of ethical conduct of research
Effectively work in a team of colleagues within the discipline
Describe new developments in the general field of pharmaceutical sciences and related fields.
Communicate and negotiate with leaders in these fields to find employment

MSPS in Health Outcomes & Socioeconomic Sciences

The Master of Science in pharmaceutical sciences degree is designed to prepare an individual for responsibilities in professional practice, the pharmaceutical industry and scientific research beyond those possible with a baccalaureate.

Although a single degree is conferred, specialization is possible in that the curriculum is organized into three distinct disciplines, referred to here as "options". Applicants must select the program of study (option) they wish to pursue. The options available to graduate students are:

- pharmacology/toxicology,
- health outcomes and socioeconomic sciences, and
- industrial pharmacy.

The requirements for the Master of Science in pharmaceutical sciences degree differ according to the option. The minimum course work for the industrial pharmacy major is 24 semester hours, for the pharmacology/toxicology major 28 semester hours and for the health outcomes and socioeconomic sciences major 27 semester hours. In addition, each major requires a minimum of 6 semester hours of thesis research.

In general, a baccalaureate in the sciences is required for admission, although applicants possessing other bachelor's degrees will be considered if the latter represent adequate preparation. Certain options and graduate courses require undergraduate preparation as prerequisites, and this preparation should be completed as soon as possible upon admission. The total time required for completion of the graduate program leading to the Master of Science in pharmaceutical sciences degree will depend upon the preparation of the student entering the program. Normally two years of study and research are required.

The admission requirements of the College of Graduate Studies of the University apply. The basic requirement is a 2.7 (on a 4.0 scale) GPA on all undergraduate work leading to the bachelor's degree. Applicants having less than a 2.7 GPA on all undergraduate work will be considered for admission if other criteria for estimation of potential success in graduate studies are positive.

Each student must submit three copies of transcripts, one of which must be official and show all post-secondary academic work and degrees granted, three letters of recommendation from college faculty members acquainted with the applicant's character and ability. The Graduate Record Exam (GRE) is not required for admission, but is highly recommended for International students.

International students are required to take an English language test (<https://www.utledo.edu/graduate/prospectivestudents/admission/guidelines.html>), which will be given in their own country by the Educational Testing Service.

Normally, acceptance will be decided by April 1 for admission during the following fall semester. The priority deadline for completed applications is January 15th. Complete applications received by this deadline will be considered for admission. Applications received after the January 15th deadline may also be considered, if positions are available in a program. International students are encouraged to submit applications

one month prior to the stated deadline to allow for delays in international correspondence.

A minimum of 27 semester hours of course work plus a minimum of 6 thesis hours are needed for the degree.

Code	Title	Hours
Core Courses		
PHPR 5260	Pharmacy and Healthcare Administration	2
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PHPR 5590	Readings in Access and Cultural Competence	2
PHPR 5610	Pharmacoeconomics and Outcomes Research I	2
PHPR 6520	Analysis Of The Pharmaceutical Environment	2
PHPR 6530	Research Methods In Pharmacy Practice	2
or PUBH 6080	Social Determinants of Health	
PHPR 6600	Seminar In Administrative Pharmacy	1
PHPR 6960	M.s. Thesis Research In Pharmacy ¹	1-6
PUBH 6060	Advanced Biostatistics	3
PHPR 5620	Pharmacoeconomics and Outcomes Research II	3

¹ A minimum of 6 credit hours of Thesis Research in Pharmacy is required.

Track Courses

This major has 2 tracks. Each student must pick a tract in their first semester. Track courses must be approved by the student's major advisor. Students may pick from the courses listed below or an equivalent/alternative course as deemed appropriate by their major advisor. Minimum of 9 credit hours of track courses required.

Program Tracks, with approved track courses are listed below:

Code	Title	Hours
Track Courses		
Select a minimum of 9 credit hours of one of the following tracks:		9
1. Pharmacoeconomics and Outcomes Research		
PUBH 6010	Public Health Epidemiology	
PUBH 6030	Advanced Epidemiology	
PUBH 6110	Categorical Data Analysis	
ECON 5750	Health Economics	
ECON 5810	Econometrics Models And Methods I	
ECON 5820	Econometrics Models And Methods II	
PUBH 6110	Categorical Data Analysis	
2. Social Behavior Sciences		
PUBH 6600	Health Behavior	
PUBH 6460	Health Promotion Programs	
RESM 6220	Measurement I	
PUBH 6090	Issues in Public Health	
PUBH 6800	Evaluation of Health Programs	

All students admitted to this option, must comply with the policies and procedures stated in the 'graduate student handbook', provided to

students during orientation. Additional requirements, for successful completion of this degree option, are stated in the graduate handbook.

Interpret and critically evaluate literature in the respective discipline and identify gaps in current knowledge.

Design, implement, and analyze the results of an independent research project in the respective discipline.

Effectively communicate and defend research findings orally and in writing.

Describe and comply with standards of ethical conduct of research.

Effectively work in a team of colleagues within the discipline.

MSPS in Industrial Pharmacy

The Master of Science in pharmaceutical sciences degree is designed to prepare an individual for responsibilities in professional practice, the pharmaceutical industry and scientific research beyond those possible with a baccalaureate.

Although a single degree is conferred, specialization is possible in that the curriculum is organized into three distinct disciplines, referred to here as "options". Applicants must select the program of study (option) they wish to pursue. The options available to graduate students are:

- pharmacology/toxicology,
- health outcomes and socioeconomic sciences, and
- industrial pharmacy.

The requirements for the Master of Science in pharmaceutical sciences degree differ according to the option. The minimum course work for the industrial pharmacy major is 24 semester hours, for the pharmacology/toxicology major 28 semester hours and for the health outcomes and socioeconomic sciences major 27 semester hours. In addition, each major requires a minimum of 6 semester hours of thesis research.

In general, a baccalaureate in the sciences is required for admission, although applicants possessing other bachelor's degrees will be considered if the latter represent adequate preparation. Certain options and graduate courses require undergraduate preparation as prerequisites, and this preparation should be completed as soon as possible upon admission. The total time required for completion of the graduate program leading to the Master of Science in pharmaceutical sciences degree will depend upon the preparation of the student entering the program. Normally two years of study and research are required.

The admission requirements of the College of Graduate Studies of the University apply. The basic requirement is a 2.7 (on a 4.0 scale) GPA on all undergraduate work leading to the bachelor's degree. Applicants having less than a 2.7 GPA on all undergraduate work will be considered for admission if other criteria for estimation of potential success in graduate studies are positive.

Each student must submit three copies of transcripts, one of which must be official and show all post-secondary academic work and degrees granted, three letters of recommendation from college faculty members acquainted with the applicant's character and ability. The Graduate Record Exam (GRE) is not required for admission, but is highly recommended for International students.

International students are required to take an English language test (<https://www.utoledo.edu/graduate/prospectivestudents/admission/>

[guidelines.html](#)), which will be given in their own country by the Educational Testing Service.

Normally, acceptance will be decided by April 1 for admission during the following fall semester. The priority deadline for completed applications is January 15th. Complete applications received by this deadline will be considered for admission. Applications received after the January 15th deadline may also be considered, if positions are available in a program. International students are encouraged to submit applications one month prior to the stated deadline to allow for delays in international correspondence.

A minimum of 24 credit hours of course work and a minimum of 6 credit hours of thesis work for a total of 30 required minimum credit hours for the degree.

Code	Title	Hours
Graduate Required Courses ¹		
PHCL 5760	Toxicokinetics	3
PHPR 5770	Advanced Drug Delivery Systems – I	3
PHPR 6950	Seminar In Industrial Pharmacy	1
PHPR 6960	M.s. Thesis Research In Pharmacy	1-6
PUBH 6000	Quantitative and Qualitative Data Analysis in Public Health	3
PHPR 6860	Advanced Drug Delivery Lab	2
PHPR 6960	M.s. Thesis Research In Pharmacy	1-6
MBC 5100	Ethical Conduct Research	1
CHEM 6300	Advanced Analytical Chemistry	4

PHPR 5710	Selected Topics In Pharmaceutical Technology	2-3
PHPR 5990	Problems In Pharmacy Practice	1-6
PHPR 6530	Research Methods In Pharmacy Practice	2
PHPR 5700	Equilibrium Phenomenon	2
PHPR 5780	Advanced Drug Delivery Systems-2	2
CHEM 6310	Separation Methods	3
CHEM 6810	Materials Science I	4

¹ Seminar course must be taken 2 times therefore 2 credit hours total to meet requirements. 6 thesis credit hours are the required minimum; more than 6 credit hours can be taken.

² Two credit hours of electives must be satisfied by taking courses within the PHPR Department.

Successful oral defense of the thesis before the thesis advisory committee (consisting of the thesis adviser and two other members) and presentation of the results of the thesis research in a seminar before the Division of Industrial Pharmacy.

Acceptance of thesis by the M.S. thesis advisor and the thesis advisory committee.

Applicants for the health outcomes and socioeconomic sciences and industrial pharmacy options who possess a B.S. in pharmacy, Pharm.D. or bachelor of science in pharmaceutical sciences degree from an ACPE-

accredited institution will be given preference for admission into those options. International applicants must have earned pharmacy degrees from their home institutions.

Interpret and critically evaluate literature in the respective discipline and identify gaps in current knowledge.

Design, implement, and analyze the results of an independent research project in the respective discipline.

Effectively communicate and defend research findings orally and in writing

Describe and comply with standards of ethical conduct of research

Effectively work in a team of colleagues within the discipline.

M.S. in Pharmacology and Toxicology

The Master of Science in pharmaceutical sciences degree is designed to prepare an individual for responsibilities in professional practice, the pharmaceutical industry and scientific research beyond those possible with a baccalaureate.

Although a single degree is conferred, specialization is possible in that the curriculum is organized into three distinct disciplines, referred to here as "options". Applicants must select the program of study (option) they wish to pursue. The options available to graduate students are:

- pharmacology/toxicology,
- health outcomes and socioeconomic sciences, and
- industrial pharmacy.

The requirements for the Master of Science in pharmaceutical sciences degree differ according to the option. The minimum course work for the industrial pharmacy major is 24 semester hours, for the pharmacology/toxicology major 28 semester hours and for the health outcomes and socioeconomic sciences major 27 semester hours. In addition, each major requires a minimum of 6 semester hours of thesis research.

In general, a baccalaureate in the sciences is required for admission, although applicants possessing other bachelor's degrees will be considered if the latter represent adequate preparation. Certain options and graduate courses require undergraduate preparation as prerequisites, and this preparation should be completed as soon as possible upon admission. The total time required for completion of the graduate program leading to the Master of Science in pharmaceutical sciences degree will depend upon the preparation of the student entering the program. Normally two years of study and research are required.

The admission requirements of the College of Graduate Studies of the University apply. The basic requirement is a 2.7 (on a 4.0 scale) GPA on all undergraduate work leading to the bachelor's degree. Applicants having less than a 2.7 GPA on all undergraduate work will be considered for admission if other criteria for estimation of potential success in graduate studies are positive.

Each student must submit three copies of transcripts, one of which must be official and show all post-secondary academic work and degrees granted, three letters of recommendation from college faculty members acquainted with the applicant's character and ability. The Graduate Record Exam (GRE) is not required for admission, but is highly recommended for International students.

International students are required to take an English language test (<https://www.utoledo.edu/graduate/prospectivestudents/admission/guidelines.html>), which will be given in their own country by the Educational Testing Service.

Normally, acceptance will be decided by April 1 for admission during the following fall semester. The priority deadline for completed applications is January 15th. Complete applications received by this deadline will be considered for admission. Applications received after the January 15th deadline may also be considered, if positions are available in a program. International students are encouraged to submit applications one month prior to the stated deadline to allow for delays in international correspondence.

A minimum of 28 semester hours of courses plus a minimum of 6 thesis credit hours are required for the degree.

Code	Title	Hours
Undergraduate Courses Required (or their equivalents)

Elective Course Work		
Select up to six credits of the following: ³		
PHCL 5750	Toxicology II	
PHCL 5990	Problems In Pharmacology ⁴	
MBC 6100	Advanced Immunology	
MBC 6550	Biochemistry	
MBC 5620	Biochemical Techniques	

¹ 1 credit hour can only be taken for BSPS/MSPS combined degree.

² 6 credit hours are the required minimum; more than 6 credit hours can be taken.

- ³ Other electives may be recommended by the department graduate committee.
- ⁴ May replace PHCL 5700, PHCL 5720, PHCL 5730, PHCL 6700, PHCL 6720, and PHCL 5760 if these were taken at UT at the undergraduate level as PHCL 3700, PHCL 3730, PHCL 4730, PHCL 4810, PHCL 4820 and PHCL 4760, respectively, and a grade of B- or above was received for the course.

BSPS-MSPS in Pharmaceutical Sciences – PTox

The combination of BSPS and MSPS degrees in PTox gives students the ability and choice to elect to get two degrees in five years. Currently, BSPS students will take 3.5-4 years to graduate and MSPS students will take 2 years. This will take up to 1 year off of the combined BS-MSPS degree.

All BSPS degree requirements remain intact. The student electing this program will need to achieve two things. First, the student taking classes that are required courses in the BSPS curriculum are also taking most of what is required in the MSPS curriculum in PTox. Classes that are required in BSPS that may be waived for the Master's curriculum with an achieved grade of B- or better will be:

Code	Title	Hours
PHCL 5700	Pharmacology I: Principles of Pharmacology, Autonomic Pharmacology and Related Pharmacology	3
PHCL 5720	Pharmacology II: Endocrine And Cns Pharmacology	3
PHCL 5730	Toxicology I	3
PHCL 6700	Pharmacology III: Cns And Cardiovascular/Renal Pharmacology	3
Total Hours		12

This will leave the internship which must then be done in the summer between P1 and P2. To fulfill both the internship and degree credit requirements, this must be 9-12 credits during this summer. The student must do the internship and the Master's degree program thesis with the same PI. This allows ideas and training done in the internship phase to be carried forward in the Master's degree program.

Master's degree program students in this combined degree curriculum will be starting in the spring after graduation in December (9 credits). The Master's program will go through the summer (4-6 credits), following fall (9 credits) and spring (9 credits), and a possible 3 credit summer where the students would defend.

BSPS –MS Law (available with BSPS in Pharmacology/Toxicology, Medicinal Chemistry, and Cosmetic Science)

This is a 4+1 combined degree program between the BSPS and the MS in Law. Students accepted into this program will carry out the requirements for their BSPS degree, take their internship in the summer between Junior and Senior years, and be eligible to take up to 9 credit hours of graduate level courses in the MS in Law program. Application is made in the

summer between Junior and Senior years, to be eligible to take graduate courses in the senior year. The rest of the masters is taken in the year following graduation with the BSPS and fulfills the requirements of the Master's in Law program (30 total credits, etc.).

1. Interpret and critically evaluate the literature in the respective discipline and identify gaps in current knowledge.
2. Design, implement, and analyze the results of an independent research project in the respective discipline.
3. Effectively communicate and defend research findings orally and in writing.
4. Describe and comply with standards of ethical conduct of research.
5. Effectively work in a team of colleagues within the discipline.

Combined Pharm.D. – Ph.D. in Medicinal Chemistry Program

Students who are admitted to both programs separately may pursue both degrees concomitantly.

Although the requirements for both programs will be met, there is some overlap and flexibility, allowing a student to complete graduate-level requirements for both degrees in four to four and a half years. In general terms, students will follow the sequence for the Pharm.D. curriculum during the first four semesters, taking one graduate-level medicinal chemistry course each semester. In the fifth semester, students will take the required Pharm.D. clerkships, plus the two-hour seminar, with at least one clerkship rotation involving a research experience. The advisor can approve 6000-level Pharm.D. courses as Ph.D. electives. The Ph.D. requirement for MBC 6550 (Biochemistry) may be waived. Beginning with sixth semester (summer following the second year), students will complete the requirements for the Ph.D. in medicinal chemistry.

Combined Pharm.D. – Ph.D. in Experimental Therapeutics Program

Although the requirements for both programs will be met, there is some overlap and flexibility, allowing a student to complete graduate-level requirements for both degrees in four to four and a half years. In general terms, students will follow the sequence for the Pharm.D. curriculum during the first four semesters, taking one graduate-level experimental therapeutics course each semester. In the fifth semester, students will take the required Pharm.D. clerkships, plus the two-hour seminar, with at least one clerkship rotation involving a research experience. The advisor can approve 6000-level and above Pharm.D. courses as Ph.D. electives. Beginning with sixth semester (summer following the second year in the program), students will start to complete the remaining requirements for the Ph.D. in Experimental Therapeutics.

The advisor can approve 6000-level and above Pharm.D. courses as Ph.D. electives. Beginning with sixth semester (summer following the second year in the program), students will start to complete the remaining requirements for the Ph.D. in Experimental Therapeutics.

Department of Medicinal and Biological Chemistry

The Department of Medicinal and Biological Chemistry consists of 11 primary and joint faculty members. In addition to basic biochemistry, our faculty members are involved in research in neuroscience, autoimmunity and basic immunology, cancer therapy and vaccines, inflammation and obesity, kidney and cardiovascular diseases, toxicology, organic synthesis, and targeted drug design and development. Our faculty members are recognized authorities in their areas of specialization, conducting research that contributes to the development of new treatments, practices, and innovations.

The department is equipped with state-of-the-art computer-assisted instrumentation, providing facilities that allow for a wide variety of research approaches. These facilities are available for use by all students involved in graduate research.

The department is associated with the Center for Drug Design and Development, a university-wide resource and a focal point for developing collaborative research efforts with the pharmaceutical industry.

Degrees Offered

Doctor of Philosophy in Medicinal Chemistry (p. 370)

Master of Science in Medicinal Chemistry (p. 371)

Combined Degree Programs

Pharm.D./Doctor of Philosophy in Medicinal Chemistry Dual Degree (p. 376)

Bachelor of Science in Pharmaceutical Sciences (Medicinal and Biological Chemistry) and Master of Science in Medicinal Chemistry (BSPS/MS) combined 5-year option (p. 372)

MBC 5100 Ethical Conduct Research

[1 credit hour]

Consideration of the scientific, ethical and legal obligations of the graduate student researcher.

Term Offered: Spring, Summer

MBC 5310 Medicinal Chemistry I: Drug Action And Design

[2 credit hours]

An introductory course presenting the basic chemical principles governing the behavior of drugs and the design of new therapeutics.

Prerequisites: MBC 3310 with a minimum grade of D-

Term Offered: Fall

MBC 5380 Medicinal And Poisonous Plants

[3 credit hours]

Lecture/field course examining medicinal and harmful properties of herbals and plants using pharmacognosy, clinical trials and local plant examples.

Term Offered: Summer**MBC 5550 Physiological Chemistry I: Structure And Function Of Biological Macromolecules**

[3 credit hours]

An examination of the levels of structure of proteins, nucleic acids, other biomolecules and biomolecular assemblies.

Term Offered: Fall**MBC 5552 Physiological Chemistry II Cellular Metabolism and Homeostasis**

[2 credit hours]

An examination of the chemistry and regulation of metabolic processes in cells, interacting cells and tissues.

Prerequisites: MBC 3550 with a minimum grade of D- or MBC 5550 with a minimum grade of D-

Term Offered: Spring**MBC 5620 Biochemical Techniques**

[2 credit hours]

A detailed study of biochemical laboratory techniques necessary for the development of novel therapeutics, including bioassays and data analysis.

Term Offered: Fall**MBC 5860 Microbiology for Pharmaceutical Professionals**

[2 credit hours]

This is a lecture and laboratory course with emphasis on microorganisms that cause disease. Special attention will be paid to structures and mechanisms present in microorganisms that can be exploited to inhibit the growth and survival of these organisms in a human host.

Prerequisites: MBC 3550 with a minimum grade of D- or MBC 5550 with a minimum grade of D-

Term Offered: Spring**MBC 5900 Medicinal Chemistry Seminar**

[1 credit hour]

Presentation and discussion of advanced research topics in medicinal chemistry, with an emphasis on evaluating and criticizing emerging data as a way of testing hypotheses.

Term Offered: Spring, Summer, Fall**MBC 6100 Advanced Immunology**

[2 credit hours]

Readings in and critical analysis of the recent literature in immunology and basic immunologic responses, especially as considered in immunotherapy.

Term Offered: Spring, Fall**MBC 6190 Advanced Medicinal Chemistry**

[4 credit hours]

Discussion of the qualitative and quantitative aspects of the design of new therapeutic agents. Approaches to the design of drugs and new therapeutic modalities directed at enzymes, receptors, membrane transport proteins and nucleic acids are examined.

Term Offered: Fall**MBC 6200 Biomedical Chemistry**

[4 credit hours]

Examination of the primary literature on approaches to the design of new therapeutic agents. Recent novel directions in the design of drugs will be examined and compared.

Prerequisites: MBC 6190 with a minimum grade of D-

Term Offered: Spring**MBC 6300 Biomedical Chemistry Laboratory I**

[1 credit hour]

Experimental research problems in biomedical chemistry.

Prerequisites: (MBC 6190 with a minimum grade of D- and MBC 6550 with a minimum grade of D-)

Term Offered: Spring, Fall**MBC 6310 Biomedical Chemistry Laboratory II**

[3 credit hours]

Additional experimental research problems in biomedical chemistry (see MBC 6300/8300).

Prerequisites: (MBC 6190 with a minimum grade of D- and MBC 6550 with a minimum grade of D-)

Term Offered: Spring, Summer, Fall**MBC 6400 Cannabis Science: Plants and Products**

[3 credit hours]

CS Plants & Products considers in-depth the growth of Cannabis sativa and its subspecies as well as the production and physical properties of both chemical and consumer products derived from them. Examining the factors, procedures, and techniques that make for optimal medicinal and recreational outcomes, the course is designed for learners with diverse backgrounds, interests, and intents

Term Offered: Spring, Fall**MBC 6420 Protein Chemistry**

[4 credit hours]

A detailed analysis of the structure and function of proteins: current methodology for the analysis of structure, the basis for molecular associations, and relationships between structure and biological function.

Prerequisites: MBC 6550 with a minimum grade of D-

MBC 6430 Nucleic Acid Chemistry

[4 credit hours]

The chemical basis for storage and transmission of genetic information.

Prerequisites: MBC 6550 with a minimum grade of D-

MBC 6440 Enzymology

[4 credit hours]

The principles of chemical catalysis applied to molecular enzymology.

MBC 6450 Advanced Synthetic and Medicinal Chemistry

[2 credit hours]

Readings in and critical analysis of recent literature in synthetic and medicinal chemistry research.

Term Offered: Spring, Fall**MBC 6550 Biochemistry**

[4 credit hours]

A consideration of the structure and function of biological macromolecules as well as the basic and regulated metabolism of cells.

Term Offered: Fall

MBC 6960 M.s. Thesis Research In Medicinal Chemistry

[1-15 credit hours]

Development and pursuit of research leading to an M.S. thesis in medicinal chemistry.

Term Offered: Spring, Summer, Fall

MBC 6980 Special Topics In Biomedical Chemistry

[1-5 credit hours]

Selected study of topics in medicinal chemistry. New chemical and biochemical strategies in drug design are examined in detail.

Term Offered: Spring, Summer, Fall

MBC 7100 Ethical Conduct of Research

[1 credit hour]

Consideration of the scientific, ethical and legal obligations of the graduate student researcher.

Term Offered: Spring, Summer

MBC 7620 Biochemical Techniques

[2 credit hours]

A detailed study of biochemical laboratory techniques necessary for the development of novel therapeutics, including bioassays and data analysis.

Term Offered: Fall

MBC 7900 Medicinal Chemistry Seminar

[1 credit hour]

Presentation and discussion of advanced research topics in medicinal chemistry, with an emphasis on evaluating and criticizing emerging data as a way of testing hypotheses.

Term Offered: Spring, Summer, Fall

MBC 8100 Advanced Immunology

[2 credit hours]

Readings in and critical analysis of the recent literature in immunology and basic immunologic responses, especially as considered in immunotherapy.

Term Offered: Spring, Fall

MBC 8190 Advanced Medicinal Chemistry

[4 credit hours]

Discussion of the qualitative and quantitative aspects of the design of new therapeutic agents. Approaches to the design of drugs and new therapeutic modalities directed at enzymes, receptors, membrane transport proteins and nucleic acids are examined.

Term Offered: Fall

MBC 8200 Biomedical Chemistry

[4 credit hours]

Examination of the primary literature on approaches to the design of new therapeutic agents. Recent novel directions in the design of drugs will be examined and compared.

Prerequisites: MBC 8190 with a minimum grade of D-

Term Offered: Spring

MBC 8300 Biomedical Chemistry Laboratory I

[1 credit hour]

Experimental research problems in biomedical chemistry.

Prerequisites: (MBC 6190 with a minimum grade of D- and MBC 8550 with a minimum grade of D-)

Term Offered: Spring, Fall

MBC 8310 Biomedical Chemistry Laboratory II

[3 credit hours]

Additional experimental research problems in biomedical chemistry (see MBC 6300/8300).

Prerequisites: (MBC 6190 with a minimum grade of D- and MBC 8550 with a minimum grade of D-)

Term Offered: Spring, Summer, Fall

MBC 8420 Protein Chemistry

[4 credit hours]

A detailed analysis of the structure and function of proteins: current methodology for the analysis of structure, the basis for molecular associations, and relationships between structure and biological function.

MBC 8430 Nucleic Acid Chemistry

[4 credit hours]

The chemical basis for storage and transmission of genetic information.

MBC 8440 Enzymology

[4 credit hours]

The principles of chemical catalysis applied to molecular enzymology.

MBC 8450 Advanced Synthetic and Medicinal Chemistry

[2 credit hours]

Readings in and critical analysis of recent literature in synthetic and medicinal chemistry research.

Term Offered: Spring, Fall

MBC 8550 Biochemistry

[4 credit hours]

A consideration of the structure and function of biological macromolecules as well as the basic and regulated metabolism of cells.

Term Offered: Fall

MBC 8960 Ph.d. Dissertation Research In Medicinal Chemistry

[1-15 credit hours]

Development and pursuit of research leading to a Ph.D. dissertation in medicinal chemistry.

Term Offered: Spring, Summer, Fall

MBC 8980 Special Topics In Biomedical Chemistry

[1-5 credit hours]

Selected study of topics in medicinal chemistry. New chemical and biochemical strategies in drug design are examined in detail.

Term Offered: Spring, Summer, Fall

Department of Pharmacology

Pharmacology is the science that deals with the origin, nature, chemistry, effects, and uses of drugs; it includes pharmacokinetics, pharmacodynamics, pharmacotherapeutics, and toxicology. Pharmacology addresses the study of drugs in all aspects: their properties and reactions with relation to therapeutic value, as well as the discovery, biological/physiological effects other than therapeutic effects (adverse reactions and side effects), and uses. This science also addresses the body's effects on drugs, including absorption, distribution, metabolism and excretion of drugs.

ABOUT THE DEPARTMENT OF PHARMACOLOGY & EXPERIMENTAL THERAPEUTICS

The Department of Pharmacology and Experimental Therapeutics seeks to integrate both basic and applied research in the pharmaceutical

sciences into the academic programs in order to provide students with the information they need to be successful in the challenging fields of pharmacy and the pharmaceutical industry.

The Department of Pharmacology and Experimental Therapeutics contributes to the training of students in the Doctor of Pharmacy and B.S. in Pharmaceutical Sciences (BSPS) programs, with extensive training offered to students in the Pharmacology/Toxicology major of the B.S. in Pharmaceutical Sciences program. The department also offers a master's in Pharmaceutical Sciences with a concentration in Pharmacology/Toxicology, a B.S./M.S dual degree in Pharmacology/Toxicology, and a Ph.D. in Experimental Therapeutics.

Departmental courses cover a broad range of disciplines, including a series of pharmacology, toxicology, and pharmacokinetics/toxicokinetics courses and many other courses in experimental therapeutics at the graduate level. The department's faculty members have research interests in neuro- and molecular pharmacology, drug metabolism, polycystic kidney disease, zebrafish as a model for drug testing, and toxicology.

Degrees Offered

Doctor of Philosophy in Experimental Therapeutics

Master of Science in Pharmaceutical Sciences

- Pharmacology/Toxicology

Combined Degree Programs

PharmD/Doctor of Philosophy in Experimental Therapeutics Dual Degree

Bachelor of Science in Pharmaceutical Sciences (Pharmacology/Toxicology) and Master of Science in Pharmaceutical Sciences / Pharmacology Toxicology (BSPS/MS) combined 5-year option

Bachelor of Science in Pharmaceutical Science/ M.S. Law combined 5-year option

PHCL 5100 Experimental Therapeutics I

[3 credit hours]

The course will cover the application of basic principles of pharmacology to the development of new therapies for human disease. A primary focus will be the translation of laboratory discoveries into clinical applications.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 (may be taken concurrently) with a minimum grade of B-

Term Offered: Fall

PHCL 5140 Interpretation Of Pharmaceutical Data

[2 credit hours]

A course designed to emphasize the presentation, analysis and interpretation of data in the pharmaceutical sciences. The concepts of statistics will be discussed. Experimental design as well as appropriateness of analytical methodology and conclusions will be emphasized.

Term Offered: Summer

PHCL 5200 Experimental Therapeutics II

[3 credit hours]

The course will expand upon material covered in Experimental Therapeutics I and focus on the drug development process. Practical applications include the design of in vitro and in vivo screens for drug activity, improvement of pharmacokinetic properties and integration of medicinal chemistry with pharmacology in a drug development paradigm.

Prerequisites: PHCL 5100 with a minimum grade of B-

Term Offered: Spring

PHCL 5440 Current Topics in Interpretation of Pharmaceutical Data

[1 credit hour]

The basic statistical techniques learned in PHCL 5140 will be further explored using research articles and real data sets to conduct statistical analyses. The use of different software programs will be used to provide students with hands-on practice in conducting statistical analyses.

Prerequisites: PHCL 5140 (may be taken concurrently) with a minimum grade of B-

Term Offered: Summer

PHCL 5460 Current Topics in Pharmacokinetics Toxicokinetics

[1 credit hour]

An advanced discussion of the theory and practice of using kinetic principles to model the time course of drugs and toxic chemicals in the body and in the environment. The student should understand the relationship between chemical time courses and outcomes and application to risk assessment. Additionally, students will gain hands-on practice using kinetic analysis methods and software.

Prerequisites: PHCL 4760 with a minimum grade of B- or PHCL 5760 (may be taken concurrently) with a minimum grade of B-

Term Offered: Spring, Fall

PHCL 5500 From Experimental to Applied Therapeutics

[4 credit hours]

The course focuses on bridging the gap between experimental and clinical applications of drugs. It will discuss groups of structurally related drugs designed to treat certain conditions, their basic molecular pharmacological action and how that is applied clinically. The course will also include discussing toxicity of some drugs and xenobiotics manufactured for certain applications, their basic molecular actions and their clinical toxicity.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 (may be taken concurrently) with a minimum grade of B-

Term Offered: Fall

PHCL 5700 Pharmacology I: Principles of Pharmacology, Autonomic Pharmacology and Related Pharmacology

[3 credit hours]

An introduction to the principles of pharmacology and the pharmacology of the autonomic nervous system."

Term Offered: Fall

PHCL 5720 Pharmacology II: Endocrine And Cns Pharmacology

[3 credit hours]

The pharmacology of drugs acting upon the endocrine and reproductive systems will be discussed, followed by a treatment of drugs used in the management of sleep disorders, anxiety, affective illness, schizophrenia and seizure disorders.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 with a minimum grade of C

Term Offered: Spring

PHCL 5730 Toxicology I

[3 credit hours]

This course reviews the basic elements of toxicology. It includes those principles most frequently involved in a full understanding of toxicologic events, such as dose-response, lethal dose-50 (LD50) and margin of safety. It also identifies toxic chemicals and their systemic sites and mechanisms of action. Finally, this course provides information about the kinds of toxic injuries produced in specific organs or systems and the toxic agents that produce these effects. Information about the possible management of some cases of intoxication or poisonings by some agents will be briefly reviewed.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 (may be taken concurrently) with a minimum grade of C

Term Offered: Fall

PHCL 5750 Toxicology II

[3 credit hours]

This course provides the students with an overview of environmental toxicology, which emphasizes both air and water pollution. It also reviews the applications of different areas of toxicology, such as food toxicology emphasizing the safety standards of food and methods of evaluation of food safety, analytic toxicology and its applications in forensic toxicology, and occupational toxicology, emphasizing the health effects of industrial chemicals on workers. General methodologies for toxicity testing are also discussed.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 with a minimum grade of C

Term Offered: Spring

PHCL 5760 Toxicokinetics

[3 credit hours]

The theory and practice of using kinetic principles to model the time course of toxic chemicals in the body and in the environment. Relation of the chemical time course to negative outcomes and application to risk assessment. Hands-on practice with kinetic analysis methods and software.

Term Offered: Summer, Fall

PHCL 5770 Current Topics in Toxicology I

[1 credit hour]

The course focuses on the most recently published studies that cover advances in the field of toxicology, including risk assessment of toxic chemicals, toxicokinetics, chemically induced mutations, cancer and developmental toxicity, toxic responses of various body systems to different chemicals and drugs, toxicity of pesticides and heavy metals.

Prerequisites: PHCL 4730 with a minimum grade of B- or PHCL 5730 (may be taken concurrently) with a minimum grade of B-

Term Offered: Fall

PHCL 5990 Problems In Pharmacology

[1-6 credit hours]

Tutorial or directed individual research in pharmacology.

Term Offered: Spring, Summer, Fall

PHCL 6160 Biopharmaceutics & Pharmacokinetics

[3 credit hours]

This course will provide the theoretical basis and clinical application of pharmacokinetics as relates to drug dosing, absorption, distribution, biotransformation, and excretion.

Term Offered: Spring

PHCL 6300 Research Experience in Experimental Therapeutics

[2-6 credit hours]

The course is intended for laboratory rotations to familiarize students with research topics in various clinical/basic science laboratories. A primary focus is to allow students to shadow, learn, experience and perform specific laboratory techniques.

Term Offered: Spring, Summer, Fall

PHCL 6320 NEUROLOGICAL AND PSYCHIATRIC PHARMACOLOGY

[1 credit hour]

A course analyzing the pharmacology of neurologically based attributes and disorders.

Corequisites: MBC 6320, PHPR 6140

Term Offered: Spring

PHCL 6390 Problems in Experimental Therapeutics

[1-6 credit hours]

The course will examine current topics and trends in the field of experimental therapeutics. The nature of the course will vary from student to student, depending on their background in the field, and the nature of their interest. For example, a new student may be assigned a literature search to identify papers that describe current approaches toward the treatment of human disease. A more advanced student might be given the task of researching and developing new laboratory techniques to initiate a research project. The overall goal will be to introduce students to current problems in experimental therapeutics, and help them identify an approach toward solving these problems.

Term Offered: Spring, Summer, Fall

PHCL 6400 Cannabis Science – Risks & Benefits

[3 credit hours]

Cannabis Science – Risks and Benefits – delves into the pharmacology, biochemistry, pharmacokinetics, and toxicology of cannabis products. The course will also cover the neuropsychopharmacology of cannabis and the effects of short term and long term uses of cannabis in the central nervous and peripheral systems.

Term Offered: Spring, Fall

PHCL 6600 Seminar In Pharmacology

[1 credit hour]

Pharmacology students will attend seminar presentations offered in the departments of , and must present at least one seminar.

Term Offered: Fall

PHCL 6650 Seminar in Experimental Therapeutics

[2 credit hours]

The course includes seminars presented by scientists from academia, industry and government who are invited by the department to speak about their research. Research subjects to be covered by the seminars are within the field of therapeutics and related areas, such as toxicology, molecular and genetic mechanisms in drug/chemical action, risk assessment, biomarkers and others.

Term Offered: Spring, Fall**PHCL 6700 Pharmacology III: Cns And Cardiovascular/Renal Pharmacology**

[3 credit hours]

The pharmacology of central nervous system active agents. Agents acting on the cardiovascular and renal systems are discussed.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 (may be taken concurrently) with a minimum grade of C

Term Offered: Fall**PHCL 6720 Pharmacology IV; Chemotherapeutics**

[3 credit hours]

The pharmacology of anti-infective chemotherapeutic agents is presented. Issues such as the mechanism of antimicrobial action, disposition, resistance and problems attending the use of antimicrobial drugs will be discussed.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 with a minimum grade of C

Term Offered: Spring**PHCL 6900 M.s. Thesis Research In Pharmacology**

[1-6 credit hours]

M.S. thesis research in pharmacology.

Term Offered: Spring, Summer, Fall**PHCL 6920 M.s. Thesis Research In Pharmacology**

[1-6 credit hours]

M.S. thesis research in pharmacology.

Term Offered: Spring, Summer, Fall**PHCL 7100 Experimental Therapeutics I**

[3 credit hours]

The course will cover the application of basic principles of pharmacology to the development of new therapies for human disease. A primary focus will be the translation of laboratory discoveries into clinical applications.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 (may be taken concurrently) with a minimum grade of B-

Term Offered: Fall**PHCL 7200 Experimental Therapeutics II**

[3 credit hours]

The course will expand upon material covered in Experimental Therapeutics I and focus on the drug development process. Practical applications include the design of in vitro and in vivo screens for drug activity, improvement of pharmacokinetic properties and integration of medicinal chemistry with pharmacology in a drug development paradigm.

Prerequisites: PHCL 5100 with a minimum grade of B- or PHCL 7100 with a minimum grade of B-

Term Offered: Spring**PHCL 7440 Current Topics in Interpretation of Pharmaceutical Data**

[1 credit hour]

The basic statistical techniques learned in PHCL 4140/5140 will be further explored using research articles and real data sets to conduct statistical analyses. The use of different software programs will be used to provide students with hands-on practice in conducting statistical analyses.

Prerequisites: PHCL 5140 (may be taken concurrently) with a minimum grade of B-

Term Offered: Summer**PHCL 7460 Current Topics in Pharmacokinetics Toxicokinetics**

[1 credit hour]

An advanced discussion of the theory and practice of using kinetic principles to model the time course of drugs and toxic chemicals in the body and in the environment. The student should understand the relationship between chemical time courses and outcomes and application to risk assessment. Additionally, students will gain hands-on practice using kinetic analysis methods and software.

Prerequisites: PHCL 4760 with a minimum grade of B- or PHCL 5760 (may be taken concurrently) with a minimum grade of B-

Term Offered: Spring, Fall**PHCL 7500 From Experimental to Applied Therapeutics**

[4 credit hours]

The course focuses on bridging the gap between experimental and clinical applications of drugs. It will discuss groups of structurally related drugs designed to treat certain conditions, their basic molecular pharmacological action and how that is applied clinically. The course will also include discussing toxicity of some drugs and xenobiotics manufactured for certain applications, their basic molecular actions and their clinical toxicity.

Prerequisites: PHCL 3700 with a minimum grade of B- or PHCL 5700 (may be taken concurrently) with a minimum grade of B-

Term Offered: Fall**PHCL 7770 Current Topics in Toxicology I**

[1 credit hour]

The course focuses on the most recently published studies that cover advances in the field of toxicology, including risk assessment of toxic chemicals, toxicokinetics, chemically induced mutations, cancer and developmental toxicity, toxic responses of various body systems to different chemicals and drugs, toxicity of pesticides and heavy metals.

Prerequisites: PHCL 4730 with a minimum grade of B- or PHCL 5730 (may be taken concurrently) with a minimum grade of B-

Term Offered: Fall**PHCL 8300 Research Experience in Experimental**

[2-6 credit hours]

The course is intended for laboratory rotations to familiarize students with research topics in various clinical/basic science laboratories. A primary focus is to allow students to shadow, learn, experience and perform specific laboratory techniques.

Term Offered: Spring, Summer, Fall

PHCL 8390 Problems in Experimental Therapeutics

[1-6 credit hours]

The course will examine current topics and trends in the field of experimental therapeutics. The nature of the course will vary from student to student, depending on their background in the field, and the nature of their interest. For example, a new student may be assigned a literature search to identify papers that describe current approaches toward the treatment of human disease. A more advanced student might be given the task of researching and developing new laboratory techniques to initiate a research project. The overall goal will be to introduce students to current problems in experimental therapeutics, and help them identify an approach toward solving these problems.

Term Offered: Spring, Summer, Fall**PHCL 8650 Seminar in Experimental Therapeutics**

[2 credit hours]

The course includes seminars presented by scientists from academia, industry and government who are invited by the department to speak about their research. Research subjects to be covered by the seminars are within the field of therapeutics and related areas, such as toxicology, molecular and genetic mechanisms in drug/chemical action, risk assessment, biomarkers and others.

Term Offered: Spring, Fall**PHCL 8960 Dissertation Research in Experimental Therapeutics**

[1-15 credit hours]

The course entails laboratory and/or clinical research focused on the development of experimental therapeutics directed toward human disease. Students engaged in PH.D. dissertation research will identify a significant research problem and develop a strategy for addressing an area of unmet need. Together with the major advisor and dissertation committee members, the student will develop a research plan that addresses major questions in the chosen field using an hypothesis driven approach.

Term Offered: Spring, Summer, Fall

Department of Pharmacy Practice

The Department of Pharmacy Practice includes the divisions of Pharmacy Practice, Pharmaceutics and Industrial Pharmacy, and Health Outcomes and Socioeconomic Sciences.

About the Department

The department has tenure/tenure-track faculty members, clinical-track faculty members, four staff people, and residents who participate in undergraduate and graduate education, post-graduate training, basic and clinical research, and the practice of pharmacy. In addition, over 300 community-based faculty members assist the department in the teaching mission by providing introductory and advanced pharmacy practice experiences and scientific internships.

Nearly all faculty members in the department are pharmacists. The faculty represents a diverse group of interests and activities that lead to the accomplishment of mission of the college and university in each of the division disciplines.

Faculty members practice at the University of Toledo Medical Center (<http://utmc.utoledo.edu/>) and Clinics, the Center for Health Services, Zepf Behavioral Health, and Kroger Pharmacy, among other practice sites.

Health Outcomes and Socioeconomic Sciences

The division of Health Outcomes and Socioeconomic Sciences (<https://www.utoledo.edu/pharmacy/depts/deptpharmpractice/hoss/>) includes faculty members with expertise in social and behavior health, pharmacoeconomics, and healthcare outcomes. The division provides the MS degree program in pharmacy administration and health outcomes.

Pharmaceutics and Industrial Pharmacy

The division of Pharmaceutics and Industrial Pharmacy prepares students to assume pharmaceutical manufacturing positions performing a variety of specialized tasks including pre-formulation evaluation, dosage form design, stability testing, pilot plant scale-up and production.

Master of Science in Pharmaceutical Sciences (p. 375)

- Health Outcomes and Socioeconomic Sciences (p. 373)
- Industrial Pharmacy (p. 374)

PHPR 5000 Residency and Postgraduate Training Preparation

[1 credit hour]

Instruction on the various aspects of obtaining a position within a pharmacy residency training program or other postgraduate training program.

Term Offered: Spring**PHPR 5010 Advanced Evidence Based Medicine**

[2 credit hours]

This course expands upon the principles and practice of evidence based medicine (EBM) in guiding clinical decision making in pharmacy practice. This course will emphasize advanced concepts in drug literature evaluation and critique of landmark clinical trials.

Term Offered: Fall

PHPR 5020 Pharmaceutics and Dosage Form Design

[5 credit hours]

The lectures and labs in Pharmaceutics and Dosage Form Design have an overarching theme of drug product knowledge. Topics for the lectures and labs include drug product design, pharmaceutical calculations, and an emphasis on contemporary pharmacy compounding.

Term Offered: Fall**PHPR 5050 Interprofessional Approach to Patient Care**

[1 credit hour]

This course has been designed to prepare all health professions students to deliberately and constructively work together with the common goal of building a safer, better patient-centered and community/population-oriented U.S. health care system. Students will be assigned to small-group interprofessional teams, and given opportunities to interact and collaborate with students from other healthcare professions.

Term Offered: Fall**PHPR 5250 Introduction to Self Care**

[1 credit hour]

The course will provide an introduction to the over-the-counter marketplace and discussion of the pharmacist's patient care process. Special emphasis will be placed on how pharmacists should help patients safely and effectively treat common medical problems.

Prerequisites: PHPR 5450 with a minimum grade of D- or PHCL 5700 with a minimum grade of D-

Corequisites: PHPR 6200**Term Offered:** Spring**PHPR 5260 Pharmacy and Healthcare Administration**

[2 credit hours]

Description and analysis of the organization, financing and delivery of healthcare in the U.S.

Term Offered: Spring, Fall**PHPR 5300 DESIGN AND APPLICATIONS OF CANCER CHEMOTHERAPY**

[1 credit hour]

In depth discussion of the principles of drug design and development within the framework of the pharmacotherapeutic management of cancer and cancer prevention.

Corequisites: MBC 5300**Term Offered:** Fall**PHPR 5310 Introduction to Pharmacy Law**

[1 credit hour]

The purpose of this course is to introduce students to laws that regulate the practice of pharmacy. Federal drug laws and specific state laws that regulate the filling and dispensing of prescriptions will be reviewed and applied.

Term Offered: Spring**PHPR 5320 Commonly Prescribed Meds and Med Term 1**

[1 credit hour]

This course introduces students to commonly prescribed medications and medical terminology.

Term Offered: Fall**PHPR 5450 Pharmacy Skills Development-1**

[2 credit hours]

This course is designed to introduce students to the Pharmacists' Patient Care Process as it is applied to the Community Pharmacy Setting in order to prepare them for their Community Pharmacy Introductory Pharmacy Practice Experiences.

Term Offered: Fall**PHPR 5460 Pharmacy Skills Development-2**

[2 credit hours]

Building on competencies from prerequisite courses, this course is designed to enhance skills in the Pharmacists' Patient Care Process (PPCP) as they are applied to the Community Pharmacy Setting.

Prerequisites: PHPR 3450 with a minimum grade of D-**Term Offered:** Spring**PHPR 5520 Pharmaceutical Marketing and Management**

[3 credit hours]

Introduction to administrative sciences (marketing/management, etc.) in the provision of pharmaceutical care. Topics include multicultural communication, operation of various pharmacy practice settings, barriers to health care access, facilitation of patient access to pharmaceutical care.

Term Offered: Spring**PHPR 5590 Readings in Access and Cultural Competence**

[2 credit hours]

Examination of the literature related to access and cultural competence in the US health care system. Various types of readings will be used to analyze the relationships that exist between access, cultural competence and positive healthcare outcomes.

Prerequisites: PHPR 4520 (may be taken concurrently) with a minimum grade of C

Term Offered: Spring, Summer**PHPR 5610 Pharmacoeconomics and Outcomes Research I**

[2 credit hours]

This course emphasizes advanced concepts, methods, and practical procedures for pharmacoeconomic analysis and outcomes research. The student will learn through readings and experience assessment of patient health status, quality of life, satisfaction and cost-effectiveness for pharmacoeconomic and health outcomes research and interpretation of economic and outcomes data.

Term Offered: Spring**PHPR 5620 Pharmacoeconomics and Outcomes Research II**

[3 credit hours]

This course emphasizes advanced concepts, methods and practical procedures for pharmacoeconomic analysis and outcomes research. The student will learn through readings and experience assessment of patient health status, quality of life, cost-effectiveness for pharmacoeconomic and health outcomes research and interpretation of economic and outcomes data.

Prerequisites: PHPR 5610 with a minimum grade of C**Term Offered:** Fall

PHPR 5680 Parenteral Manufacturing

[2 credit hours]

The theory and technology of parenteral and ophthalmic formulation design, production, sterilization, packaging and stability.

Prerequisites: (PHPR 3010 with a minimum grade of D- and PHPR 3070 with a minimum grade of D-)

Term Offered: Fall

PHPR 5690 Dosage Form Design

[3 credit hours]

The utilization of pharmaceutical principles and practices for the design and manufacture of modern commercial dosage forms such as tablets, aerosols, emulsions, suspensions and solutions emphasizing biopharmaceutically efficacious products.

Prerequisites: (PHPR 3010 with a minimum grade of D- and PHPR 3070 with a minimum grade of D-)

Term Offered: Spring, Fall

PHPR 5700 Equilibrium Phenomenon

[2 credit hours]

A theoretical and practical examination of the principles of chemical equilibrium and the techniques used in their calculation. Physical and chemical concepts focus on pharmaceutical systems as well as selected areas of chemistry.

Term Offered: Spring

PHPR 5710 Selected Topics In Pharmaceutical Technology

[2-3 credit hours]

Discussion, evaluation, experimentation and production of selected dosage forms. A forum for the discussion of new dosage form technology and advances.

Prerequisites: (PHPR 3010 with a minimum grade of D- and PHPR 3070 with a minimum grade of D-)

Term Offered: Spring, Summer, Fall

PHPR 5720 Pharmaceutical Rate Processes

[3 credit hours]

A theoretical and practical application of kinetic principles applied to pharmaceutical and cosmetic systems in liquid and solid state. A mathematical treatment and development of the equations which support each reaction mechanism.

Term Offered: Fall

PHPR 5770 Advanced Drug Delivery Systems – I

[3 credit hours]

The development of drug delivery systems relies on the broad understanding of many different physiological, chemical, and biological factors. This course is designed to introduce advanced drug delivery systems for oral, ocular, transdermal and buccal delivery. The course design is based on the premise that the student desires knowledge about the latest developments in formulation and drug delivery. Students are required to design a project proposal for presentation.

Term Offered: Spring, Fall

PHPR 5780 Advanced Drug Delivery Systems-2

[2 credit hours]

This course is designed to provide students with an understanding of the current state of the art for novel drug delivery systems with a particular focus on nanocarrier systems such as nanoparticles, polymeric micelles and solid lipid nanoparticles, for delivering small molecules. This course will introduce students to recent topics in the areas of cancer therapy and site-specific drug delivery.

Prerequisites: PHPR 3020 with a minimum grade of D- and PHPR 3030 with a minimum grade of D-

PHPR 5810 FINANCE AND PERSONAL PLANNING FOR PHARMACISTS

[2 credit hours]

Practical topics on financial, professional, and personal situation to better prepare students to make knowledgeable decisions that affect future security and success. (Prerequisites: Third Professional Year PharmD or permission of instructor.)

Term Offered: Spring, Summer

PHPR 5870 Compounding Boot Camp

[2 credit hours]

This course is a companion to the Professional Compounding Center of America Boot Camp held at the college every year. Students will complete the boot camp lab experience and work through cases and webinars and other problem solving exercises to master techniques for creating new dosage forms.

Prerequisites: PHPR 3080 with a minimum grade of D-

Term Offered: Summer, Fall

PHPR 5910 Drug-Induced Diseases

[1 credit hour]

An elective course that examines the epidemiology, public impact, contributing factors and causes for various Drug-Induced Diseases. This course will also examine Pharmacology, Medicinal and Physiological Chemistry, Pharmacokinetics and Pharmacotherapy, to study the etiology, pathophysiology, clinical presentation, diagnosis, and treatment Drug-Induced Diseases.

Term Offered: Spring

PHPR 5920 Introductory Pharmacy Practice Experience I

[1 credit hour]

First professional year course designed to enhance professional growth through an introduction to clinical skill development and direct patient care activities within institutional and community pharmacy practice settings. Prerequisite: Admission into the Pharm.D. Program.

Term Offered: Spring, Summer, Fall

PHPR 5930 Introductory Pharmacy Practice Experience 2

[1 credit hour]

First professional year course designed to enhance professional growth through an introduction to clinical skill development and direct patient care activities within institutional and community pharmacy practice settings. Prerequisite: Admission into the Pharm.D Program.

Prerequisites: PHPR 3920 with a minimum grade of C

Term Offered: Spring

PHPR 5990 Problems In Pharmacy Practice

[1-6 credit hours]

Tutorial or directed, individual research problems in administrative pharmacy, or other related fields.

Term Offered: Spring, Summer, Fall

PHPR 6000 Drug Information Seminar

[2 credit hours]

An advanced seminar course which applies evidence based medicine through literature searching, drug literature evaluation skills, and formal writing and presentation skills to complete a written literature summary and patient population based therapeutic recommendation, as well as a verbal presentations such as case presentations, disease state and pharmacotherapy reviews and other topic discussions.

PHPR 6010 Leadership and the Military Pharmacist

[2 credit hours]

This two-part online course will cover various advanced leadership discussions and topics, including continuous process improvements, management, followership, difficult conversations/leadership pearls, and the development of the team and individual. Innovation and continuous process improvement (CPI) will be explored and students will have the opportunity to design their own process and program. Additionally, students will explore military pharmacy and therapeutic topics including readiness, emergency management (chemical, biological, radiological, nuclear events), deployment therapeutics, management of personnel/ pharmacy, and clinical pharmacy program design, implementation, and evaluation.

Term Offered: Spring**PHPR 6070 PPD-5**

[3 credit hours]

Laboratory course to enhance the application of knowledge gained in the PPT courses, the development of clinical skills and critical thinking required for the provision of patient centered pharmaceutical care.

Prerequisites: PHPR 4080 with a minimum grade of D-**Corequisites:** PHPR 6130, PHPR 6340**Term Offered:** Fall**PHPR 6080 PPD-6**

[3 credit hours]

Application of knowledge gained in the PPT, drug literature evaluation, and self care courses and the development of clinical skills and critical thinking required for the provision of pharmaceutical care.

Prerequisites: PHPR 6070 with a minimum grade of C**Corequisites:** PHPR 6140, PHPR 6250**Term Offered:** Spring**PHPR 6120 PPT-5**

[3 credit hours]

Discussion of pathophysiology, clinical presentation, etiologic causes, laboratory findings, diagnosis and therapy of pulmonary and hematologic diseases.

Term Offered: Summer**PHPR 6130 PPT-6**

[4 credit hours]

Discussion of pathophysiology, clinical presentation, etiologic causes, laboratory findings, diagnosis and therapy of cardiovascular disorders and nutrition.

Prerequisites: PHPR 6120 with a minimum grade of C**Corequisites:** PHPR 6070**Term Offered:** Fall**PHPR 6140 PPT-7**

[4 credit hours]

Discussion of pathophysiology, clinical presentation, etiologic causes, laboratory findings, diagnosis and therapy of psychiatric/neurologic disorders, pediatrics, and toxicology.

Corequisites: MBC 6320, PHCL 6320**Term Offered:** Spring**PHPR 6160 Advanced Applied Pharmacokinetic**

[3 credit hours]

Detailed discussion of pharmacokinetic characteristics of drugs which are commonly included in therapeutic drug monitoring including clinical application.

Prerequisites: PHPR 4160 with a minimum grade of C**Term Offered:** Fall**PHPR 6170 Special Populations and Topics**

[3 credit hours]

This course discusses population related differences of geriatric, pediatric, and critically ill populations. The pathophysiology, pharmacokinetics, pharmacodynamics, clinical presentation, etiology, diagnostic findings, and pharmacotherapy of common diseases as well as clinical issues specific to these populations will be presented. Enteral and parenteral nutrition therapies and poison evaluation and management will also be discussed.

Corequisites: PHPR 6470**PHPR 6200 Patient Centered Care**

[2 credit hours]

This course focuses on learning various aspects of Patient Centered Care including: Medication Therapy Management (MTM) services, Motivational Interviewing, Patient Assessment, and Cultural Competence.

PHPR 6210 Introduction To Research Methods

[2 credit hours]

General overview and introduction to research process as it pertains to clinical pharmacy practice. Special emphasis given to design issues, particularly those involving human subjects.

PHPR 6220 Pharmacoeconomics and Outcomes Research

[1 credit hour]

This course allows students to gain and expand their knowledge base in areas such as application of pharmacoeconomic and effectiveness measures to the practice of health care.

PHPR 6230 Patient Care Rounds I

[3 credit hours]

The course will provide students with advanced experiences in applying and integrating biomedical, psychosocial and pharmacoeconomic principles to patient care. Students will present and discuss how they would identify, prevent and resolve the medication-related problems encountered by a diversity of patient populations.

PHPR 6240 Patient Care Rounds II

[3 credit hours]

The course will provide students with advanced experiences in applying and integrating biomedical, psychosocial and pharmacoeconomic principles to patient care. Students will present and discuss how they would identify, prevent and resolve the medication-related problems encountered by a diversity of patient populations.

Prerequisites: PHPR 6230 with a minimum grade of D-

PHPR 6250 Advanced Self Care

[3 credit hours]

The course will discuss issues surrounding the self-medication decision-making process. Special emphasis will be placed on how pharmacists should help patients safely and effectively treat common medical problems. The course will provide information about how pharmacists should educate and counsel patients about diagnostic tests that the public can purchase without a prescription.

Prerequisites: PHPR 6460 with a minimum grade of D-

Corequisites: PHPR 6470

Term Offered: Spring

PHPR 6260 PHCAD-3

[1 credit hour]

The course will offer in depth teaching and discussions on human resource management, inventory control, and organizational financial management in the respective practice settings.

Prerequisites: PHPR 4520 with a minimum grade of D-

Term Offered: Fall

PHPR 6270 Business Aspects of Pharmacy

[2 credit hours]

This course will provide students with a foundation in the business aspects of the practice of pharmacy and their important role in the provision of pharmaceutical care.

Prerequisites: PHPR 6450 with a minimum grade of C

PHPR 6280 PHCAD-4

[2 credit hours]

This course focuses on developing, implementing, and evaluating Medication Therapy Management (MTM) and Disease State Management (DSM) programs.

Prerequisites: PHPR 6260 with a minimum grade of D-

Term Offered: Spring

PHPR 6290 Medication Therapy and Disease State Management for Masters Students

[2 credit hours]

Focuses on developing, implementing, and evaluating Medication Therapy Management and Disease State Management programs.

PHPR 6300 Fluids Electrolytes and Kidney Disease

[2 credit hours]

This course discusses the pharmacology, pathophysiology, diagnosis and therapeutics related to fluids, electrolytes, acid and base disorders, diuretics and kidney disease. Selected disorders of the kidney including acute, chronic and end stage kidney disease, and renal replacement therapy.

Corequisites: PHPR 6460

PHPR 6310 Jurisprudence and Ethics

[1 credit hour]

Discussion of federal, state and local laws affecting the profession and practice of pharmacy. Ethical principles involved in patient care will be reviewed and applied.

Term Offered: Spring

PHPR 6330 Health Systems

[1.5 credit hours]

This course will provide an overview of the organization, financing and delivery of healthcare in the U.S.

Term Offered: Spring

PHPR 6340 RESEARCH DESIGN AND DRUG LITERATURE EVALUATION 2

[2 credit hours]

Concepts of research design, statistical analysis, drug literature evaluation and evidence based medicine are expanded from PHPR 4330 to depict their practical relevance to pharmacy practice.

Prerequisites: PHPR 4330 with a minimum grade of D-

Corequisites: PHPR 6070

Term Offered: Fall

PHPR 6350 Pharmacy Skills Development - 3

[2 credit hours]

Building on competencies from prerequisite courses, this course is designed to enhance skills in the Pharmacists' Patient Care Process (PPCP) as they are applied to the Community and Ambulatory Care Pharmacy settings.

Prerequisites: PHPR 5460 with a minimum grade of D-

Corequisites: PHPR 6200

Term Offered: Fall

PHPR 6360 Pharmacy Skills Development - 4

[2 credit hours]

Building on competencies from prerequisite courses, this course is designed to enhance skills in the Pharmacists' Patient Care Process (PPCP) as they are applied to the Institutional Pharmacy setting.

Prerequisites: PHPR 4350 with a minimum grade of D- and PHPR 4530 with a minimum grade of D-

Term Offered: Spring

PHPR 6370 Nutrition

[1 credit hour]

An overview of the fundamental principles of nutritional support and the pharmacist's role in providing nutritional support services.

PHPR 6380 Pathophysiology And Pharmacotherapy: Endocrinology

[2 credit hours]

Discussion of the pathophysiology, clinical presentation, etiologic causes, laboratory findings, diagnosis and therapy of endocrine disorders.

Term Offered: Spring

PHPR 6390 Commonly Prescribed Meds and Med Term II

[1 credit hour]

This course introduces students to commonly prescribed medications and medical terminology.

Prerequisites: PHPR 5320 with a minimum grade of D-

Corequisites: PHPR 6350

Term Offered: Fall

PHPR 6400 Topics in Internal Medicine

[2 credit hours]

This course is designed to focus on complex and/or controversial pharmacotherapy topics and the evaluation of primary literature and guidelines to promote effective abilities in evaluating, selecting, and recommending pharmacotherapeutic regimens, and educating patients and health care professionals utilizing the principles of evidence based decision making.

Term Offered: Spring, Summer

PHPR 6410 Leadership: Principles and Practice

[2 credit hours]

This course will facilitate student self-discovery first and foremost. Through reflection activities, and discussion students will learn about themselves, the idea of leadership, and how they relate to others. This is not a passive process. Students are expected to actively participate in the course to get the most out of it. The course is meant to help students take a critical look at their relationships with others by answering the following questions; 1) how am I a problem for others? 2) how can I be more helpful to others? 3) how can I help things go right?

Term Offered: Summer, Fall**PHPR 6460 Pharmacy Skills Development - 5**

[2 credit hours]

This advanced course will enhance confidence in application of knowledge and skills to prepare students for competent participation in the Pharmacists Patient Care Process and transitions of care in Advanced Pharmacy Practice Experiences.

PHPR 6470 Pharmacy Skills Development - 6

[2 credit hours]

This course is designed to further develop fundamental skills in the Pharmacists Patient Care Process and to enhance confidence in clinical skills necessary for roles in transitions of care.

Term Offered: Spring**PHPR 6520 Analysis Of The Pharmaceutical Environment**

[2 credit hours]

A theoretical and practical examination of the pharmaceutical environment and drug distribution system using administrative pharmacy sciences as a tool for analysis.

Prerequisites: PHPR 4520 with a minimum grade of D-**Term Offered:** Spring, Fall**PHPR 6530 Research Methods In Pharmacy Practice**

[2 credit hours]

An introduction to research methods and principles used in designing, planning, implementing, analyzing and interpreting research projects in pharmacy practice.

Term Offered: Spring, Fall**PHPR 6540 Evidence Based Medicine 1**

[3 credit hours]

This course introduces the principles and practice of evidence based medicine (EBM) in guiding clinical decision making in pharmacy practice.

Prerequisites: MATH 2640 with a minimum grade of D- or MATH 2600 with a minimum grade of D-**Term Offered:** Fall**PHPR 6550 Management Topics For Clinical Practice**

[2 credit hours]

Description of nature of management, basic management concepts and tools and environmental concerns pertinent to pharmacy practice in all of its practice settings.

PHPR 6560 Evidence Based Medicine 2

[2 credit hours]

This course expands upon the principles and practice of evidence based medicine (EBM) in guiding clinical decision making in pharmacy practice. Students will develop their formal oral presentation skills.

Prerequisites: PHPR 6540 with a minimum grade of D-**Corequisites:** PHPR 6360**Term Offered:** Spring**PHPR 6600 Seminar In Administrative Pharmacy**

[1 credit hour]

A critical analysis of current problems in pharmacy practice with individual case presentations.

Prerequisites: MBC 5310 with a minimum grade of D- and PHCL 5700 with a minimum grade of D- and PHM 5000 with a minimum grade of D-**Corequisites:** PHPR 6360**Term Offered:** Spring, Fall**PHPR 6610 Seminar I**

[1 credit hour]

Instruction on preparation and presentation of clinical and/or scientific seminars.

Term Offered: Spring, Fall**PHPR 6670 Chemical Dependency And The Pharmacist**

[3 credit hours]

Overview of chemical dependency and substance abuse, with emphasis on the neuropathophysiology of dependency and the pharmacology of drugs of abuse. Also include extensive review of the impact of chemical dependency on the healthcare professional, with as focus on their impact to pharmacists.

Term Offered: Summer, Fall**PHPR 6700 Special Topics in Diabetes Care**

[2 credit hours]

This course focuses on advanced and special poluation topics in the area of diabetes care and management through discussions, lecture-based teaching and group activities.

Term Offered: Fall**PHPR 6800 Monitoring Therapy**

[1 credit hour]

An introduction to medical terminology and procedures with reference to physical exam, patient history, common diagnostic procedures and applications to drug and disease state monitoring.

PHPR 6810 Hospital Pharmacy Administration

[3 credit hours]

An examination of the administrative and supervisory aspects of hospital pharmacy practice. Emphasis is placed on management techniques rather than functions performed.

PHPR 6820 Selected Topics In Hospital Pharmacy

[3 credit hours]

A treatment of contemporary trends which influence the practice of hospital pharmacy such as drug distribution systems. Emphasis is placed upon these concepts in light of the resources present.

PHPR 6830 Advanced Community Pharmacy Administration

[3 credit hours]

An advanced analysis of concepts, practices and issues related to retail pharmacy management.

Term Offered: Fall**PHPR 6840 Selected Topics In Community Pharmacy**

[3 credit hours]

Examination of contemporary trends influencing community pharmacy, such as home healthcare and prescription drug programs. Emphasis is placed on the impact of these trends on community pharmacy management.

Term Offered: Fall

PHPR 6850 Product Development Laboratory

[2 credit hours]

A study of various stages of development of pharmaceutical products. The student will develop formulations, using stability data and production technology for three products.

Prerequisites: PHPR 5690 with a minimum grade of D-

Term Offered: Spring

PHPR 6860 Advanced Drug Delivery Lab

[2 credit hours]

This lab course is designed to provide students hands-on experience and improve their practical knowledge in areas of industrial pharmacy and advanced pharmaceuticals. This course would introduce students to the wide range of cutting-edge techniques in the pharmaceutical industry.

Term Offered: Spring, Fall

PHPR 6890 M.s. Project In Administrative Pharmacy

[1-4 credit hours]

Development of a practical project in the pharmacy environment on a practicum basis. A written, bound report and oral presentation are required.

Term Offered: Spring, Fall

PHPR 6920 Introductory Pharmacy Practice Experience 5

[1 credit hour]

Third professional year course designed to enhance professional growth through application of skills and knowledge gained in IPPE-1 and IPPE-2 to various areas of pharmacy practice to provide the best possible patient care.

Prerequisites: PHPR 4920 with a minimum grade of D-

Term Offered: Spring, Summer, Fall

PHPR 6930 Introductory Pharmacy Practice Experience 3

[1 credit hour]

The purpose of this course is to increase students' awareness and involvement in areas related to the contemporary practice of pharmacy. Students will participate in projects that nurture their professional growth.

Prerequisites: PHPR 3930 with a minimum grade of C and PHPR 5930 with a minimum grade of C

Term Offered: Spring, Summer, Fall

PHPR 6940 Early Practice Exposure

[2 credit hours]

Supervised instruction and participation in pharmacy practice at actual practice sites such as community, hospital, managed care, long-term care and nuclear pharmacies.

PHPR 6950 Seminar In Industrial Pharmacy

[1 credit hour]

A seminar course composed of graduate student presentations on their research and special topics as well as outside speakers from both the community and pharmaceutical industry.

Term Offered: Spring, Summer, Fall

PHPR 6960 M.s. Thesis Research In Pharmacy

[1-6 credit hours]

Advanced and in-depth study of an issue pertinent to contemporary pharmacy practice. Part of degree requirement for M.S. in Pharmaceutical Sciences.

Term Offered: Spring, Summer, Fall

PHPR 6970 Introductory Pharmacy Practice Experience 4

[1 credit hour]

The purpose of this course is to increase students' awareness and involvement in areas related to the contemporary practice of pharmacy. Students will participate in projects that nurture their professional growth.

Prerequisites: PHPR 4920 with a minimum grade of C or PHPR 6930 with a minimum grade of D-

Term Offered: Spring, Summer

PHPR 6980 Special Topics

[1-5 credit hours]

Selected study of topics in Pharmacy Practice. New pharmacy and healthcare strategies are examined in detail.

Term Offered: Spring, Summer, Fall

PHPR 8260 Jurisprudence & Ethics For Pharmacy

[1 credit hour]

Discussion of federal, state and local laws affecting the profession and practice of pharmacy. Ethical principles involved in patient care will be reviewed and applied.

PHPR 8540 Patient Monitoring Principles

[3 credit hours]

Application of didactic geriatric drug therapy principles in a geriatric patient care environment. Emphasis will be placed on geriatric drug monitoring skills.

Prerequisites: PHPR 4140 with a minimum grade of D-

Corequisites: PHPR 8500

Term Offered: Summer

PHPR 8620 Seminar II

[2 credit hours]

Discussion of current topics relating to pharmacy practice.

Prerequisites: PHPR 6610 with a minimum grade of D-

PHPR 8630 Longitudinal Drug Information

[2 credit hours]

Presentation of clinical and/or scientific seminar and completion of in-depth pharmacy practice related paper.

Term Offered: Spring, Summer, Fall

PHPR 8940 Clinical Clerkship

[4 credit hours]

The APPE sequence is a fulltime onsite clinical experience designed to allow students to apply knowledge and skills gained in the didactic and IPPE curriculum. The APPE sequence consists of 9 fulltime (40 hour per week) rotations.

Term Offered: Spring, Summer, Fall

PHPR 8980 Special Topics

[1-5 credit hours]

Selected study of topics in Pharmacy Practice. New Pharmacy and healthcare strategies are examined in detail.

Term Offered: Spring, Summer, Fall

John B. and Lillian E. Neff College of Business and Innovation

2021-2022 Graduate Catalog

Established in 1930, the John B. and Lillian E. Neff College of Business and Innovation of The University of Toledo is fully accredited by the American Assembly of Collegiate Schools of Business (AACSB). Among the diverse economic activities in metropolitan Toledo are retailing, financial services, and both large and small manufacturing firms. The Port of Toledo and many other enterprises makes Toledo an ideal place for the study of business.

The business industry demands skilled professionals ready to accept the challenges of an evolving world. With the highest graduation rates at The University of Toledo, we're committed to giving you the tools and networking opportunities to thrive. Let John B. and Lillian E. Neff College of Business and Innovation be your partner in achieving your educational and career goals: High-tech education, engaged faculty experts, high job-placement rates.

Mission

The College of Business and Innovation provides innovative and relevant learning experiences and engages in high quality research and teaching to prepare students to become life-long, ethical business and academic leaders who are prepared for global challenges.

We accomplish this by:

- Preparing our students to create innovative solutions to relevant business problems
- Helping our students to understand and make ethical choices
- Connecting our students with organizations to help begin and advance their careers
- Engaging in a faculty-driven process to identify and support publishing in high-impact research outlets
- Mentoring faculty, collaboration with colleagues inside and outside of Neff COBI, and providing a formal peer feedback process to improve teaching and research
- Engaging and involving the regional and international business community in opportunities for student experiential learning, career exploration and development, consulting, and research projects
- Engaging business and alumni advisory boards and focus groups to develop and improve curricula and programs

Administration

Bashar S. Gammoh, Ph.D.

Interim Associate Dean and Academic Director: MBA/EMBA

Graduate Degrees/Certificates Offered

The John B. and Lillian E. Neff College of Business and Innovation is accredited by the Association to Advance Collegiate Schools of Business (AACSB International) for undergraduate and graduate work. The graduate division of the college affords students an excellent opportunity to earn a degree on a full-time or part-time basis. The Neff College of Business and Innovation offers the following degree programs at the graduate level:

- Master of Business Administration (M.B.A.) (p. 392)
- A dual Juris Doctor/Master of Business Administration (J.D./ M.B.A.) (p. 436)
- A dual Doctor of Medicine/Master of Business Administration (M.D./ M.B.A.) (p. 395)
- A dual Master of Public Health/Master of Business Administration (M.P.H./M.B.A.) (p. 437)
- A dual Pharmacy/Master of Business Administration (Pharm.D./ M.B.A.) (p. 437)
- A dual Bachelor of Science in Engineering/Master of Business Administration (B.S./M.B.A.) (p. 435)
- A joint plan of study Bachelor of Arts in Disability Studies/Master of Business Administration (BA/MBA) (p. 435)
- Master of Science in Accountancy (M.S.A.) (p. 395)
- Master of Science in Applied Business Analytics (MS A.B.A.) (p. 398) - STEMM (p. 399)
- Master of Applied Business Analytics (M.A.B.A.) - STEMM (p. 399)
- Doctor of Philosophy in Manufacturing and Technology Management (Ph.D.) (p. 400) - STEMM (p. 399)

Specializations within the Master of Business Administration Program

- Administration (p. 439) - Available 100% online
- Finance (p. 419)
- Public Health Management (p. 440)
- Human Resource Management (p. 431)
- Information Systems (p. 423) - STEMM (p. 399)
- International Business (p. 433)
- Leadership (p. 431)
- Marketing: Marketing Management or Professional Sales (p. 434) - available 100% online
- Operations and Supply Chain Management (p. 422)

Specializations within THE MASTER OF SCIENCE IN ACCOUNTANCY

- General Track (p. 395)
- Auditing and IT Track (p. 395)
- Financial Reporting and Finance Track (p. 395)
- Strategic Managerial (p. 395) Accounting and Operations Management Track (p. 395)

Graduate Certificates

- Leadership (p. 406)
- Marketing (p. 407) - available 100% online
- Corporate Finance (p. 404)
- Investments (p. 405)
- Financial Accounting (p. 404) - available 100% online
- Operations and Supply Chain Management (p. 407)
- Business Analytics (p. 402) - STEM (p. 399)
- Information Systems ERP/SAP (p. 405) - STEM (p. 399)
- Cannabis Management (p. 403)

GPA and Grade Requirements

Students in all graduate degree and certificate programs at the University of Toledo must complete all requirements for their program of study with at least a 3.0 (4.0 scale) cumulative GPA at the graduate level. All courses that count towards a graduate degree or certificate must be passed with a grade of C or better. There are no grade re-calculations at the graduate level; as such, repeated courses will have both grades included in the cumulative GPA calculation.

Masters of Business Administration (M.B.A.)

MASTER OF BUSINESS ADMINISTRATION (M.B.A.)

The John B. and Lillian E. Neff College of Business and Innovation's flexible Master of Business Administration (M.B.A.) program is the ideal graduate program for those that strive to challenge themselves and progress in their career.

We accept students who have a bachelor's degree in business or a degree in another field. All of our graduate students have hands-on opportunities to learn practical business applications and network with professionals from all industries and fields.

UToledo's AACSB-accredited M.B.A. program has a market-relevant curriculum and a variety of specializations. Expert faculty members give students an in-depth, well-rounded knowledge of business analysis and strategy.

UToledo M.B.A. students are eligible for generous scholarships or to apply for graduate assistantships, which come with a tuition waiver and stipend. Recognized by the Princeton Review as One of the "Best Business Schools," the University of Toledo Will Help You Reach New Career Heights and Fuel Your Tomorrows.

Flexibility

Begin the program in the Fall, Spring or Summer and progress at your own pace. Courses are offered in-class, online and a blend of the two learning modes enabling multiple options to suit your busy life and work schedule.

Affordability

One of the best values in the Midwest, the UToledo M.B.A. offers affordable tuition and opportunities for scholarships. Many students take advantage of employer-sponsored tuition assistance to subsidize their graduate education costs.

Work/Life Balance

Courses are offered in-class during the evenings, fully online, or a hybrid blend of the two learning modes. Students typically schedule classes to facilitate maximum work/life balance.

Pipeline Program

Our pipeline program permits UToledo students to take graduate degree program courses while a B.B.A. student and at the undergraduate price. These classes may "double-dip," counting towards the completion of both a B.B.A. and graduate degree.

Speed to Degree Completion

Earn your UToledo M.B.A. in as little as 12 months. The typical working professional, taking 2 courses per semester, can complete the degree in as little as six semesters.

Choice of Degree Specialization

Choose among nine areas of business specialization including administration, finance, public health management, human resources management, information systems, international business, leadership, marketing and operations and supply chain management.

Academic Reputation

The UToledo M.B.A. program is fully accredited by the Association to Advance Collegiate Schools of Business (AACSB), which represents one of the highest standards of achievement for business schools worldwide. The program is a member of the Graduate Management Admission Council (GMAC), an international association of business schools distinguished by their commitment to excellence in graduate management education.

Employer Connections

The John B. and Lillian E. Neff College of Business and Innovation consistently builds its relationships with local and national companies, forming valuable partnerships to provide our M.B.A. students with employment and career-building opportunities.

Admission to the M.B.A. program is available to those students who have completed a four-year undergraduate degree and can demonstrate high promise of success in a graduate business degree program. The college has adopted qualitative admissions standards in which applicants are considered on the basis of their merits, with weight given to the quality of prior academic achievement, the Graduate Management Admissions Test (GMAT) scores, professional experience indicating increased levels of responsibility, a writing sample (statement of purpose) and other

relevant information that the candidate may share with the admissions committee.

The typical admitted student in the M.B.A. program has at least a 2.7 undergraduate GPA and 450 on the GMAT. However, for admission to the M.B.A., GMAT scores and undergraduate GPA will not be the sole basis for admissions decisions.

The following documents are required for admission to the program:

1. Official transcripts from each post-secondary institution attended.
 2. Official GMAT scores sent directly from the Graduate Management Admissions Council (GMAC) to the College of Graduate Studies. GMAT scores must be no more than five years old.
 - a. GMAT Waivers
 - i. Who is eligible for **consideration** for a GMAT waiver?
 - Applicants who have obtained a graduate level degree or higher.
 - For students applying to the J.D./M.B.A. dual degree program, applicants who have successfully completed the LSAT within the last three years; for students applying to the PharmD/M.B.A. dual degree program, applicants who have successfully completed the PCAT; for students applying to the M.D./M.B.A., applicants who have successfully completed the MCAT; for students applying to the M.P.H./M.B.A., applicants who have successfully completed the GRE. For students whose program waived or no longer requires testing, GMAT will be waived.
 - Applicants who can demonstrate significant, relevant, and progressive work experience (deemed acceptable by Neff COBI Office of Graduate Programs and Neff COBI Dean).
 - Non-Neff COBI, yet the University of Toledo alumni applicants who graduated from undergraduate or graduate school within the last three years with a competitive GPA (deemed competitive by Neff COBI Office of Graduate Programs and Neff COBI Dean).
 - Neff COBI alumni or AACSB accredited school applicants who graduated from undergraduate or graduate school within the last three years with a competitive GPA (deemed competitive by Neff COBI Office of Graduate Programs and Neff COBI Dean). Neff COBI alumni or AACSB accredited school applicants who graduated from undergraduate or graduate school within the last three years with a competitive GPA (deemed competitive by Neff COBI Office of Graduate Programs and Neff COBI Dean).
 - ii. Inquirers must have completed the online application for enrollment in the term in which they are requesting the GMAT waiver.
 - iii. Applicants must provide an updated resume for consideration of a GMAT waiver.
 - iv. The GMAT waiver will be valid for the term of admission per the online application.
 - If the student does not enroll in the original term of admission, they may request that the Neff COBI Office of Graduate Programs re-evaluate their GMAT waiver request for the new term of admission.
 - v. The minimum requirements for a graduate assistantship can be found on the Graduate Assistantship website (<https://www.utoledo.edu/business/graduate/mba/GraduateAssistantships.html>). While GMAT can be waived for graduate assistantship awards, strong academics, progressive leadership experience either collegiately or in the community, and scoring well on the GMAT is the best way of increasing likelihood of being selected for a graduate assistantship award.
 - vi. The above waiver criteria applies to the M.B.A. program. Each graduate program will determine GMAT waiver eligibility.
3. At least one letter of recommendation from an individual who knows the applicant in a professional capacity.
 - a. All pipeline student applications will require two letters of recommendation.
 4. The statement of purpose is required on the application for admission.
 5. Applicants with below a 2.7 undergraduate cumulative GPA must submit a GMAT unless they meet one of the following criteria for a waiver.
 - a. 3-5 years of relevant, significant, and progressive work experience as determined by the Associate Dean of the Neff College of Business and Innovation.
 - b. Already has completed a graduate degree from a USA institution.
 - c. Similar passing test is substituted, such as GRE, MCAT, PCAT, or LSAT.
 - d. A Neff College of Business and Innovation Office of Graduate Programs admission committee determine eligibility for admission based on an admission interview on a case by case bases.

In the case of students whose native language is not English, a score of 80 or above on the TOEFL IBT, PTE equal to 58 or above, Duolingo equal to 105 or above, or a 6.5 or above on the International English Language Testing System (IELTS) is mandatory.

Applications for admission are considered on a rolling basis. However, students are encouraged to submit their applications by the following dates:

Domestic students:

Fall Semesters	July 15th
Spring Semesters	November 15th
Summer Semesters	April 15th

International students:

Fall Semesters	May 1st
Spring Semesters	October 1st
Summer Semesters	March 1st

Final admissions decisions will be withheld until the application for admission is complete. No materials submitted to the University will be returned to the applicant.

COMMON BODY OF KNOWLEDGE

(18 hours maximum)

These courses represent the minimum background required of students prior to taking 6000-level courses in the M.B.A. program. Students admitted to the M.B.A. program can meet the requirements by taking the 5000-level courses. If a student can demonstrate that he/she has completed equivalent course work at the undergraduate level prior to admission to the M.B.A. program and has earned a grade of C (2.0) or better in the course(s), the corresponding 5000-level course may be waived. Once admitted to the M.B.A. program, students may not take an undergraduate course and apply that course towards credit for 5000-level requirements.

Code	Title	Hours

Total Hours		18

M.B.A. CORE

(24 hours)

These courses are required of all students. They are reflective of business techniques, methodology and processes, and are designed to be cross-functional and integrative.

Code	Title	Hours
BUAD 6100	Accounting For Decision Making	3
BUAD 6200	Corporate Finance	3
BUAD 6300	Strategic Marketing And Analysis	3
BUAD 6400	Results-Based Management	3
BUAD 6500	International Business	3
BUAD 6600	Supply Chain Management	3
BUAD 6800	Information Technology And E-Business	3
BUAD 6900	Strategic Management Capstone	3
Total Hours		24

Students who complete three or more undergraduate level courses in a functional area at an AACSB-accredited business school are eligible and encouraged to replace the corresponding 6000-level business core course(s) with an M.B.A. 6000 level elective of their choice. These course substitutions may not meet major elective requirements. Students may select up to two majors and no more than one course will be allowed to count towards two majors in the M.B.A. program.

ELECTIVE COURSES

(Minimum 9 hours)

Each student may select up to two majors. An alternative is to select the administration major, which is designed for students who prefer to take a variety of electives in different areas. The substitution of any courses for a major requires the written approval of the appropriate Department Chair. No more than one independent study/research paper (three hours) may be taken in lieu of a course to fulfill a specialization requirement, and no more than one course will be allowed to count towards two majors in the M.B.A. program.

Early admission/bridge program - BBA / MBA

Undergraduate students accepted in the BBA-MBA option will be admitted to the MBA program and allowed to complete up to three **graduate level classes** (nine credit hours) during their final academic year of **undergraduate studies**. Students admitted into the pipeline program must apply for admission to the College of Graduate Studies for the semester that they intend to matriculate. They will then continue in the MBA program upon completion of the undergraduate degree requirements. The graduate coursework (up to nine hours) may be applied **to completion of both undergraduate and MBA degree requirements**. The following provisions apply for classes taken for graduate credit: 1) graduate classes taken at The University of Toledo only after the student is accepted in the MBA joint program, 2) only BUAD 6100, BUAD 6300, BUAD 6400, BUAD 6500, BUAD 6800 may be included in the approved nine semester hours of graduate credit taken as an undergraduate. Students interested in the joint BBA / MBA program must submit 1) a letter of interest, 2) a completed graduate admission application, 3) at least 2 letter(s) of recommendation from faculty members. After successful completion of the application process, students will apply to the graduate program. The decision page should indicate their presence in an approved pipeline program.

Program Learning Outcomes Professionalism – Each student can demonstrate effective oral and written communication, interpersonal collaboration, responsibility, accountability, and professional behavior Leadership – Each student can practice reflective thinking to assess personal strengths and challenges and can formulate strategies for lifetime development of leadership Ethics and Social Responsibility – Each student can analyze and resolve ethical issues in decision-making and recognize their impact on the larger community Innovation and Creativity – Each student can examine problems, opportunities, relationships, and situation from different and unique perspectives and develop creative solutions. Critical Thinking and Analysis – Each student can think critically to identify problems, research, analyze and make sound inferences from and use effective problem-solving and decision-making techniques

Business Acumen – Each student can identify, interpret, evaluate, and suggest solutions within the legal, global, financial, marketing, and operational dimensions of business

Technology – Each student can understand and utilize current and emerging technology to improve business competitiveness and personal productivity

M.D./M.B.A. Dual Degree

The M.D./M.B.A. program provides an opportunity to earn a dual degree through an integrated curriculum. Successful completion of the dual degree program leads to the awarding of two degrees. The Doctor of Medicine is awarded by the College of Medicine and Life Sciences and the M.B.A. is awarded by the John B. and Lillian E. Neff College of Business and Innovation. Students enrolled in the dual degree program will not receive the M.D. or M.B.A. degree until all work required for both degrees have been completed. The M.B.A. degree requires a minimum of 33 credit hours at the 6000-level. Up to an additional 18 credit hours may be required if a student does not have an academic background in business. The Neff College of Business and Innovation will allow up to 9 credit hours of approved M.D. coursework to be credited toward the M.B.A. degree.

Students applying for the M.D./M.B.A. program must have earned a bachelor's degree. A student must apply and be admitted to the College of Medicine and Life Sciences and the John B. and Lillian E. Neff College of Business and Innovation separately to be admitted to the M.D./M.B.A. dual degree program. The MCAT will be accepted by the College of Business and Innovation in lieu of GMAT scores.

Admission to one program does not guarantee admission to the other program. Refer to the College of Medicine (p. 248) and M.B.A. sections of this catalog for specific admission standards for each program. Applications for admission to the M.D. program are accepted for fall entry only.

It is recommended that M.D./M.B.A. students take 2 of the 3 Medical School courses below to serve as M.B.A. electives. PCOM 785 is already part of the MD curriculum will serve to fulfill two of the three elective requirements when taken over multiple semesters for the required number of credit hours when a satisfactory grade is earned.

Code	Title	Hours
Students must take:		
PCOM 785	Principles of Clinical Med	7
Select one of the following:		
SOMN 607	Administration in Medicine	0
SOMN 723	Health Policy/Bus. of Medicine	0

Another option is for M.D. /M.B.A. students to complete 1 of the 3 Medical School courses listed above, along with 1 elective from the list below. The courses below are semester long courses (subject to availability) and cannot be taken during a medical student's required clerkship or clinical elective time. The course would have to be taken during the dedicated year of M.B.A. study (typically the 3rd year of the M.D./M.B.A. program).

This option does allow M.D./M.B.A. students the opportunity to fulfill the 4 week basic science elective required for medical school. Students

should consult with their M.D. and M.B.A. Academic Advisors to determine the best approach for completing the dual degree based on their academic background and individual plan of study.

MSA Accounting

The objective of the Master of Science in Accountancy (MSA) degree program is to provide an opportunity for students to achieve greater breadth and depth in the study of Accountancy than is possible in the baccalaureate program. The MSA program gives student the advanced skills to be a successful accountant and business leader. Skills such as critical and analytical thinking, leadership, teamwork, effective communication, and the ability to deal with big data and data analytics are important skills for short and long-term career success in a dynamic environment. The MSA program is also designed to fulfill the requirements to sit for the Uniform CPA Exam in the state of Ohio and other states. Nationwide, the CPA candidates who qualify to sit for the CPA exam with an MSA degree have the highest pass rates.

All decisions regarding admissions to the M.S.A. program are made by the program director for accounting. Admission to the M.S.A. program is available for those students who demonstrate high promise of success in a graduate program. All applicants are considered on the basis of their merit with weight given to the quality of prior academic achievement, GMAT test scores (if required), professional experience, and other relevant information. The following documents are required for admission to the program:

1. Official transcripts from each post-secondary institution attended.
2. Official GMAT scores sent directly from the Graduate Management Admissions Council (GMAC) to the College of Graduate Studies. The minimum GMAT score is 500, must be no more than five years old.¹
3. The GMAT may be waived for applicant who have:
 - a. Completed GRE within the last five years; official GRE scores must be sent directly to the College of Graduate Studies, or
 - b. An undergraduate degree from the University of Toledo (minimum 3.0 GPA) within the last ten years, or M.B.A. or
 - c. A Master in Economics (minimum 3.00 GPA) within the last ten years, or
 - d. An active practicing CPA/CMA, or passed the CPA/CMA exam within the last five years
4. Most recent resume or curriculum vitae including contact information for two references (name, title, place of employment, phone number and e-mail address).

In the case of students whose native language is not English, a score of at least 550 (paper based), 213 (computer based), or 80 (internet based) on the Test of English as a Foreign Language (TOEFL) or a 6.5 on the International English Language Testing System (IELTS) is mandatory.

Applications for admission are considered on a rolling basis. However, students are encouraged to submit their applications by the following dates:

Domestic students:

Fall Semester	August 1
Spring Semester	November 15
Summer Semester	April 15

International students:

Fall Semester	May 1
Spring Semester	October 1
Summer Semester	March 1

Final admissions decisions will be withheld until the application for admission is complete. No materials submitted to the University will be returned to the applicant. The M.S.A. program admits students to the program on a rolling admissions basis.

The Master of Science in Accountancy degree is granted to students who satisfactorily complete a minimum of 30 semester hours at the 6000-level in the College of Business and Innovation.

OSCM 6690	Supply Chain Resources Management	

Total Hours **24**

- ¹ ACCT 4130 at the undergraduate level
- ² MSA 4 Core courses (12 hours) above required for all MSA students.
- ³ MSA Elective courses for the "General MSA" and the "Specialized MSA Tracks": 18 hours (6 courses) - at least 12 credit hours (4 courses) of Accounting Electives.

Other UT graduate courses are allowed as electives with pre-approval from the MSA academic advisor. If a student takes one of the courses above at the undergraduate level (specifically ACCT 4130, ACCT 4250 and ACCT 4410), these courses may not be taken at the graduate level. This does not reduce the number of credit hours or courses required to earn the MSA degree. The student will select a different option with the Accounting Department Chair and MSA Program Advisor. Other courses from the College of Business and Innovation (or, in the case of a JD/MSA student, a course from the College of Law) may also be approved for the three areas above, with good cause shown, by the Accounting Department Chair and/or MSA Program Advisor.

MSA Common Body of Knowledge

Based on the candidate's prior course work, any or all of the MSA Common Body of Knowledge may be waived (each course is three semester hours):

If a student can demonstrate that he/she has completed equivalent course work at the undergraduate level prior to admission to the M.S.A. program and has earned a grade of C (2.0) or better in the course(s), the corresponding **course below** may be waived. The undergraduate and graduate equivalents are below.

Code	Title	Hours
ACCT 5000	Financial And Managerial Accounting ¹	3

- ² ECON 1150 and ECON 1200
- ³ BUAD 3040
- ⁴ BUAD 2060 or MATH 2600

Students must have an average GPA of 3.0 or higher in the common body of knowledge courses in order to proceed into 6000 level accounting classes.

Early admission/bridge program - BBA - MSA

Undergraduate students accepted in the BBA-MSA option will be admitted to the Master of Science in Accountancy program and allowed to complete up to three **graduate level classes** (nine credit hours) during their final academic year of **undergraduate studies**. Students admitted into the pipeline program must apply for admission to the College of Graduate Studies for the semester that they intend to matriculate. They will then continue in the MSA program upon completion of the undergraduate degree requirements. The graduate coursework (up to nine hours) may be applied **to completion of both undergraduate and MSA degree requirements**. The following provisions apply for classes taken for graduate credit: 1) graduate classes taken at The University of Toledo only after the student is accepted in the MBA joint program, 2) only BUAD 6200, BUAD 6300, BUAD 6400, BUAD 6500, BUAD 6800, ACCT 6130, ACCT 6190, ACCT 6250, OSCM 6250 may be included in the approved nine semester hours of graduate credit taken as an undergraduate. Students must have at the time of application 1) a minimum of 3.0 cumulative undergraduate grade point average that will include undergraduate credits earned at other institutions and transferred to UT, 2) undergraduate advisor's approval, and 3) graduate advisor's approval. Students interested in the joint BBA / MSA program must submit 1) a letter of interest, 2) a completed graduate admission application, 3) at least 2 letter(s) of recommendation from faculty members. After successful completion of the application process, students will apply to the graduate program.

Propose a well-formulated solution, including its contingencies and future implications to a professional or enterprise

Apply advanced concepts to prepare the general purpose financial statements

Evaluate business risks, related to data collection, storage and use
Demonstrate ability to collect, clean, analyze and interpret data for decision-making

Identify ethical implications of accounting decisions on firm and capital markets

Locate areas of risk within an enterprise and suggest appropriate responses

Identify and evaluate current accounting issues

Master of Science in Applied Business Analytics

The goal of this Master of Science in Applied Business Analytics (MS ABA) program is to address the growing demand for analytical capabilities in solving business problems that are demanded by a variety of employers within the United States. Research results from public and private sectors show that there are substantially fewer experts in the field of business analytics than there are opportunities for them.

This program prepares students not only to be able to analyze and interpret data, but also to translate this into effective decision-making for complex business problems. The program is a unique combination of one functional area of business and a breadth of courses in business analytics capped by a Master's thesis. In the Master's thesis, students are expected to study a research problem in depth and solve the problem and write an academic or scholarly paper or develop a teaching instrument such as case or game based on the research.

The Master of Science in Applied Business Analytics (M.S. ABA) degree can be earned by completing a minimum of 24 semester hours of required coursework at the 6000- level and a 6 credit hour Master's thesis in the College of Business and Innovation meeting the program requirements. Additional coursework at the 5000 level, of up to 12 hours, may be required to satisfy prerequisites. This is a STEM program.

All decisions regarding admissions to the M.S. program are made through the academic director of the M.S. ABA program.

The admission decision will be based on a composite profile of the applicant including test scores, academic background, grades, work experience, letters of reference, and also the statement of purpose. The typical admitted student in the M.S. program has at least a 2.8 undergraduate GPA and 480 on the GMAT or equivalent score in the GRE (minimum of 25 in verbal and 28 in quantitative reasoning is expected). Additional requirements include proficiency in spreadsheets and a programming language and a calculus course with C or better, both of which may be met by taking courses if necessary after a provisional admission. The following documents are required for admission to the program:

1. Official transcripts from each post-secondary institution attended.
2. Official GMAT scores sent directly from the Graduate Management Admissions Council (GMAC) or GRE score sent directly by educational testing service to the College of Graduate Studies. The minimum GMAT score is 480 (equivalent score in the GRE), must be no more than five years old.
3. Exceptionally qualified applicants who meet at least one of the following criteria may apply for a GMAT waiver. The decision on waiver is made by evaluating each applicant individually based on the following criteria:
 - Very high Undergraduate or graduate GPA
 - Recent graduates or post-graduates (3 years or less) with high GPA

- Possess significant, relevant work experience (deemed acceptable to the Program Chair for the applied business analytics)

4. Most recent resume or curriculum vitae including contact information for two references (name, title, place of employment, phone number and e-mail address).

5. A 400-word essay on statement of purpose.

In the case of students whose native language is not English, a score of 80 or above on the TOEFL IBT, PTE equal to 58 or above, Duolingo equal to 105 or above, or a 6.5 or above on the International English Language Testing System (IELTS) is mandatory.

Applications for admission are considered on a rolling basis. However, students are encouraged to submit their applications by the following dates:

Domestic students:

Fall Semesters	July 15th
Spring Semesters	November 15th
Summer Semesters	April 15th

International students:

Fall Semesters	May 1st
Spring Semesters	October 1st
Summer Semesters	March 1st

Final admissions decisions will be withheld until the application for admission is complete. No materials submitted to the University will be returned to the applicant. The MS admits students to the program on a rolling admissions basis.

Required thesis

The program is capped by a required 6 credit hour Master's thesis.

Code	Title	Hours
OSCM 6960	Masters Thesis	1-6

1. Reasonable mastery of business analytics covering concepts in statistics and modeling in the analysis of data for business decision making
2. Mastery of one area of applied business area.
3. Produce new knowledge by applying the tools and techniques of predictive and prescriptive analytics in the solving a business problem as codified in a Master's thesis.

Master of Applied Business Analytics

The goal of this Master of Applied Business Analytics (MABA) program is to address the growing demand for analytical capabilities in solving business problems that are demanded by a variety of employers within the United States. Research results from public and private sectors show that there are substantially fewer experts in the field of business analytics than there are opportunities for them.

This program prepares students not only to be able to analyze and interpret data, but also to translate this into effective decision-making for complex business problems. The program is a unique combination of one functional area of business and a breadth of courses in business analytics capped by an internship at your place of work or in another organization.

The Master of Applied Business Analytics degree is granted to students who satisfactorily complete a minimum of 30 semester hours at the 6000 level in the College of Business and Innovation meeting the program requirements. In addition, most non-business students and even some business students may need up to 12 credit hours of 5000-level pre-requisites. This is a STEM program.

All decisions regarding admissions to the MABA program are made through the academic director for the MABA program.

The admission decision will be based on a composite profile of the applicant including test scores, academic background, grades, work experience, letters of reference, and also the statement of purpose. The typical admitted student in the MABA program has at least a 2.7 undergraduate GPA and 500 on the GMAT or equivalent score in the GRE. Additional requirements include proficiency in spreadsheets and a programming language and a calculus course with C or better, both of which may be met by taking courses if necessary after a provisional admission. The following documents are required for admission to the program:

1. Official transcripts from each post-secondary institution attended.
2. Official GMAT scores sent directly from the Graduate Management Admissions Council (GMAC) or GRE score sent directly by the educational testing service to the College of Graduate Studies. The minimum GMAT score is 500 (equivalent score in the GRE) and must be no more than five years old.
3. The GMAT may be waived for applicants who have earned:
 - a. An undergraduate degree or MBA from UToledo (minimum 3.0 GPA) within the last ten years
 - or
 - b. A Master in Economics, Statistics, Mathematics or Engineering (minimum 3.00 GPA) within the last ten years
4. Most recent resume or curriculum vitae including contact information for two references (name, title, place of employment, phone number and e-mail address).
5. A 400-word essay on statement of purpose.

In the case of students whose native language is not English, a score of 80 or above on the TOEFL IBT, PTE equal to 58 or above, Duolingo equal to 105 or above, or a 6.5 or above on the International English Language Testing System (IELTS) is mandatory.

Applications for admission are considered on a rolling basis. However, students are encouraged to submit their applications by the following dates:

Domestic students:

Fall Semesters	July 15th
Spring Semesters	November 15th
Summer Semesters	April 15th

International students:

Fall Semesters	May 1st
Spring Semesters	October 1st
Summer Semesters	March 1st

Final admissions decisions will be withheld until the application for admission is complete. No materials submitted to the University will be returned to the applicant. The M.A.B.A. admits students to the program on a rolling admissions basis.

The Master of Applied Business Analytics degree is granted to students who satisfactorily complete a minimum of 30 semester hours at the 6000- level in the College of Business and Innovation meeting the program requirements. In addition, most non-business students and even some business students may need up to 12 credit hours of 5000 level pre-requisites.

1. Reasonable mastery of business analytics covering concepts in statistics and modeling in the analysis of data for business decision making
2. Mastery of one area of applied business area.
3. Gain experience in applying the tools and techniques of predictive and prescriptive analytics in the chosen area of applied business for improving business decision making.

Ph.D. in Manufacturing and Technology Management

The purpose of the Ph.D. program is to train scholars to meet traditional standards of excellence in, and contribute to, the manufacturing and

technology management field through research, teaching and publication in academic and professional journals. Within this broad field, students can specialize in either (i) operations and supply chain management or (ii) information systems. The program is designed for individuals who seek to contribute to the advancement and dissemination of knowledge in manufacturing and technology management through an integrative approach with sound foundations in business, technology, and research methodology. Graduates are expected to pursue careers in academia, consulting, research or manufacturing organizations.

The basic philosophy underlying the doctoral program is that researchers in manufacturing and technology management require a careful and creative mix of functional management specialties, economics, technology, supply chain management, manufacturing, commercialization, and information technologies. Regardless of track, students must become experts in applying analytical tools such as statistics, optimization and research methodology. Therefore, the program is designed to provide students with abilities and skills to integrate and synthesize these diverse yet important related areas.

Doctor of Philosophy in Manufacturing and Technology Management (Ph.D.)

Students in all graduate degree programs at the University of Toledo must complete all requirements for their program of study with at least a 3.0 (4.0 scale) cumulative GPA at the graduate level. All courses that count towards a graduate degree must be passed with a grade of C or better. There are no grade re-calculations at the graduate level; as such, repeated courses will have both grades included in the cumulative GPA calculation.

The program requires at least 60 hours of study beyond an MBA or relevant MS degree. Full-time students with an M.B.A. or a relevant M.S. degree should be able to complete the course work in two years before entering the dissertation stage. For a full-time student with only a bachelor's degree, the course requirements before entering the dissertation stage can be completed in three years. During the first year, the students without prior appropriate undergraduate or graduate work in business or engineering will acquire the foundation knowledge in business, engineering and manufacturing technology. Course waivers are possible at the foundation stage by passing competency examinations in appropriate areas. This is a STEM program.

Application period is closed for Fall 2021.

Application review for admission will not take place for Fall 2022.

Application deadline for Fall 2023: March 1, 2023

Applicants with a master's degree in a technical field or business are preferred. Applicants with a bachelor's degree in a technical field or business may also be considered. Letters of reference from college faculty or employers acquainted with the student's character and ability, and official transcripts of all prior college work must be supplied. Applicants are expected to demonstrate preparation for, and a high promise of, success in the doctoral program.

The following will be considered in evaluating an application to the Ph.D. program on an individual basis:

- The student's undergraduate and graduate record with general academic performance, as well as the trend and comparison of grades over a period of time;
- The student's verbal, quantitative and total scores on the GMAT (in certain cases, depending on the academic background of the student, GRE scores may be substituted for GMAT scores);
- Evidence of the ability to do research (publications, presentations, etc.);
- Statement of purpose explaining why the student wants to pursue a Ph.D. in manufacturing and technology management;
- Three letters of reference;
- Appropriate experience;
- And, in the case of students whose native language is not English, a score of 80 or above on the TOEFL IBT, PTE equal to 58 or above, Duolingo equal to 105 or above, or a 6.5 or above on the International English Language Testing System (IELTS) is mandatory.

It is to be stressed that, although GMAT and GPA are important, they alone will not be the basis of admissions decisions. While students may come from many academic disciplines, those students with bachelor's degrees in fields other than business may require more than 79 semester hours in order to satisfy prerequisite (19 credit hours) and business program course (60 credit hours) requirements. A student may need additional calculus, statistics, and economic prerequisite requirements depending on the students previous academic discipline. **Students admitted to the Ph.D. program will not receive graduate credit for any undergraduate courses they take.**

A student should take the Ph.D. comprehensive examination as soon as the student and the student's advisor believes the student has mastered all the required subject areas and completed all course work. The format and other details of the examination are given in the handbook for Ph.D. students and are available on-line. Following successful completion of the comprehensive examination, the student is admitted to candidacy for the Ph.D. and undertakes dissertation research. The student is responsible for initiating the application to candidacy on a form available from the College of Graduate Studies.

When a student enters the program, the Ph.D. program director will help the student in preparing a plan of study. The Ph.D. program director will serve as the faculty advisor at the time of admission into the program. Each student will get a dissertation advisor after passing the comprehensive exam who will assist the student in choosing a dissertation topic, forming a dissertation committee and in other matters concerning the program. More information is available here (<http://www.utoledo.edu/business/PHD/>).

Prerequisites

- One year of calculus
- Statistics that include regression and analysis of variance
- One academic term of computer systems with applications
- Micro- and Macro-economics
- Some knowledge of computer programming for IS-track candidates

Prerequisites should be completed before starting the Ph.D. program.

Business Foundation Courses

(19 hours)

Code	Title	Hours
ACCT 5000	Financial And Managerial Accounting	3
ECON 5810	Econometrics Models And Methods I	4
BUAD 6400	Results-Based Management	3
BUAD 6800	Information Technology And E-Business	3
MKTG 5410	Marketing Systems	3
OSCM 5520	Analysis of Manufacturing and Service Systems	3
Total Hours		19

Ph.D. Program Curriculum

Code	Title	Hours
------	-------	-------

Quantitative and Research Methods

MFGM 8630	Management Science
MFGM 8860	Advanced Statistics
MFGM 8880	Research Methods-Theory Bldg
MFGM 8870	Seminar in Statistics/ Research Method

Plus two from the following:

RESM 6150/8150	Structural Equation Modeling
MFGM 8640	Advanced Management Science
MFGM 8650	Stochastic Modeling
MFGM 8660	Qualitative Research Methodology
MFGM 8670	Special Topics in Research Methods

Major Field: Integrative Seminars

MFGM 8480	Management of Technology
MFGM 8980	Special Topics Seminar
INFS 8990	Integrative Seminar in IT

The students can choose one of the two tracks: 1) Operations and Supply Chain Management, or 2) Information Systems. These are graduate level courses and seminars.

Operations and Supply Chain Management Track

MFGM 8490	Supply Chain and E-Business Issues in Manufacturing
MFGM 8890	Advanced Manufacturing Systems
OSCM 6680/8690	Quality Management and Six Sigma
OSCM 6690	Supply Chain Resources Management

Information Systems Track

INFS 6560	Systems Analysis And Design
INFS 6150/8150	Business Intelligence Management
INFS 6710/8710	Management of Information Systems Security
INFS 8760	IS Research Seminar I
INFS 8770	IS Research Seminar II

Dissertation

MFGM 8960	Dissertation
-----------	--------------

- ¹ The minor will be a supporting field of three courses at the master's (M.B.A.) level, and a related advanced seminar with the objective of integrating the Manufacturing and Technology Management major field with developments in the minor field of interest.

Dissertation Research

The dissertation must be based on work initiated and undertaken specifically for that purpose. It must reflect a high level of scholarship, must constitute a substantial piece of work, and must indicate and document its claim to be a significant contribution to knowledge in its subject area.

Details regarding the dissertation research, starting with the dissertation proposal and ending with the final defense, are available in the handbook for Ph.D. students, which is available on the Ph.D. website. <http://www.utoledo.edu/business/PHD/index.html> (<http://www.utoledo.edu/business/PHD/>).

Demonstrate the ability to do quality research

Demonstrate the ability to teach

Provide service to the institution and professional community

Graduate Certificate in Business Analytics - STEM

A Graduate Certificate in Business is a program of study designed to help students understand a specific area of business and applications within the field. Ideal for both graduate students who seek to explore a specific area of concentration in business as well as working professionals seeking business education credentials to potentially advance in a current career or to build a foundation for a new career. Admissions to a graduate certificate does not guarantee admissions to a Neff College of Business and Innovation master's program. In order for courses to count toward a Neff College of Business and Innovation master's degree, a grade of "C" or better is required. This is a STEM program.

ADD A GRADUATE CERTIFICATE

If you are currently enrolled in a degree seeking program and wish to earn a certificate while pursuing this degree, please complete the Request to Add a Graduate Certificate form. Click here (https://www.utoledo.edu/graduate/files/Request_to_add_a_grad_certific.pdf) for complete instructions and form.

If you are not currently enrolled in a degree seeking program but wish to earn a certificate, please complete the Graduate Online application. Click here (<http://apply.utoledo.edu/>) to apply online.

Applicants Will Submit the Following:

- Transcripts showing evidence of a Bachelor's degree with at least a 2.7 cumulative G.P.A.
- Resume
- Application and Fee (if required)

for International Students:

- International Students currently pursuing a graduate degree (masters, Ph.D., MD, JD) at The University of Toledo are eligible to apply for graduate certificates in business.

- International students not currently enrolled in a graduate degree-seeking program with The University of Toledo are not eligible to apply for a graduate certificate program.

No GMAT or GRE will be required for admission to a Neff COBI graduate certificate, however if the student later applies to a graduate program in Neff COBI, a GMAT/GRE score may be required.

Notes: Admissions to a Neff COBI graduate certificate program does not guarantee admissions to a Neff COBI master's program. For courses to count toward a Neff COBI master's degree, a grade of "C" or better is required.

Take the following four courses:

Code	Title	Hours
INFS 6150	Business Intelligence Management	3
INFS 6450	Data Mining	3
OSCM 6250	Essentials of Business Analytics	3
OSCM 6550	Business Analytics and Cases	3

Prerequisite: OSCM 5520 for Level GR with a minimum grade of D- or equivalent UG/GR course from accredited University or equivalent experience (department chair signoff required). The prerequisite to OSCM 5520 is OSCM 5510.

By successfully completing the Graduate certificate in Business Analytics, students should be able to:

1. Gain an understanding of tools and techniques widely used in business analytics.
2. Apply business analytics tools and techniques for improving business decision making.
3. Develop communication and presentation skills in reporting results of business analytics effectively.
4. Gain practical experience in applying business analytics tools and techniques in real word problems.

Graduate Certificate in Cannabis Management

The cannabis industry is a multibillion dollar, multifaceted and complex business model. There is a growing interest in cannabis science, the plant and its byproducts, as well as the structure and ethical, economic and legal issues of cannabis use and business operations. The Cannabis Certificate at the University of Toledo advances a breadth and depth of knowledge on Cannabis ranging from basic science to production to entrepreneurship.

ADD A GRADUATE CERTIFICATE

If you are currently enrolled in a degree seeking program and wish to earn a certificate while pursuing this degree, please complete the Request to Add a Graduate Certificate form. Click here (https://www.utoledo.edu/graduate/files/Request_to_add_a_grad_certific.pdf) for complete instructions and form.

If you are not currently enrolled in a degree seeking program but wish to earn a certificate, please complete the Graduate Online application. Click here (<http://apply.utoledo.edu/>) to apply online.

Applicants Will Submit the Following:

- Transcripts showing evidence of a Bachelor's degree with at least a 2.7 cumulative G.P.A.
- Resume
- Application and Fee (if required)

for International Students:

- International Students currently pursuing a graduate degree (masters, Ph.D., MD, JD) at The University of Toledo are eligible to apply for graduate certificates in business.
- International students not currently enrolled in a graduate degree-seeking program with The University of Toledo are not eligible to apply for a graduate certificate program.

No GMAT or GRE will be required for admission to a Neff COBI graduate certificate, however if the student later applies to a graduate program in Neff COBI, a GMAT/GRE score may be required.

Notes: Admissions to a Neff COBI graduate certificate program does not guarantee admissions to a Neff COBI master's program. For courses to count toward a Neff COBI master's degree, a grade of "C" or better is required.

A Graduate Certificate in Business is a program of study designed to help students understand a specific area of business and applications within the field. Code	Title	Hours
EFSB 6900	Cannabis Entrepreneurship	3
BLAW 6900	Cannabis Law	3
MBC 6400	Cannabis Science: Plants and Products	3
PHCL 6400	Cannabis Science – Risks & Benefits	3

The Cannabis Certificate at the University of Toledo advances a breadth and depth of knowledge on Cannabis ranging from basic science to production to entrepreneurship. Coursework taught by the College of Pharmacy and Pharmaceutical Sciences includes detailed explorations of Cannabis history; plant structure, genetics, and horticulture; plant chemical production, isolation, analysis, and formulation; and pharmacology, biochemistry, physiology, neurobiology, addictive properties, risks, and benefits as related to human use. Coursework in the College of Business and Innovation examines ethical and legal realities and the management of production, marketing, and distribution of Cannabis products. Students identify and argue the validity of social, legal, and ethical underpinnings of Cannabis prohibition and update on current and trending State and Federal regulations. Students gain insight into the entrepreneurial challenges in the manufacture and distribution of Cannabis products both for medical and recreational use in a public but highly regulated marketplace and develop ideas as to how to be successful given evolving parameters.

Graduate Certificate in Corporate Finance

A Graduate Certificate in Business is a program of study designed to help students understand a specific area of business and applications within the field. If you are not currently enrolled in a degree seeking program but wish to earn a certificate, please complete the Graduate Online application. Click here (<http://apply.utoledo.edu/>) to apply online.

Applicants Will Submit the Following:

- Transcripts showing evidence of a Bachelor's degree with at least a 2.7 cumulative G.P.A.
- Resume
- Application and Fee (if required)

for International Students:

- International Students currently pursuing a graduate degree (masters, Ph.D., MD, JD) at The University of Toledo are eligible to apply for graduate certificates in business.
- International students not currently enrolled in a graduate degree-seeking program with The University of Toledo are not eligible to apply for a graduate certificate program.

No GMAT or GRE will be required for admission to a Neff COBI graduate certificate, however if the student later applies to a graduate program in Neff COBI, a GMAT/GRE score may be required.

Notes: Admissions to a Neff COBI graduate certificate program does not guarantee admissions to a Neff COBI master's program. For courses to count toward a Neff COBI master's degree, a grade of "C" or better is required.

Take both of the following:

Code	Title	Hours
MKTG 6140	Customer Relationship Marketing	3
MKTG 6220	Integrated Marketing Communications	3

AND Choose one of the following:

Code	Title	Hours
MKTG 6320	Strategic Brand Management	3
MKTG 6980	Special Topics	3

Prerequisite: BUAD3010 (Principles of Marketing) for Level UG with minimum grade of C or MKTG 5410 for level GR with minimum grade of C or equivalent UG/GR course from accredited University or equivalent experience (department chair sign off required).

By successfully completing the Graduate Certificate in Marketing, students should be able to:

1. Solve business problems using their knowledge of the relationship between marketing and other business functions.
2. Determine the appropriate product, pricing, channels of distribution, and promotion strategies to meet consumer expectations and further the goals of the organization.
3. Evaluate when and why relationship marketing practices can be advantageous or detrimental to marketing and organizational performance.
4. Apply strategic planning across the functional areas of marketing communications.
5. Create an integrated marketing communication proposal that would synergistically combine pertinent tools to reach selected audiences.

Graduate Certificate in Operations and Supply Chain Management

A Graduate Certificate in Business is a program of study designed to help students understand a specific area of business and applications within the field. Ideal for both graduate students who seek to explore a specific area of concentration in business as well as working professionals seeking business education credentials to potentially advance in a current career or to build a foundation for a new career. Admissions to a graduate certificate does not guarantee admissions to a Neff College

of Business and Innovation master's program. In order for courses to count toward a Neff College of Business and Innovation master's degree, a grade of "C" or better is required.

ADD A GRADUATE CERTIFICATE

If you are currently enrolled in a degree seeking program and wish to earn a certificate while pursuing this degree, please complete the Request to Add a Graduate Certificate form. Click here (https://www.utoledo.edu/graduate/files/Request_to_add_a_grad_certific.pdf) for complete instructions and form.

If you are not currently enrolled in a degree seeking program but wish to earn a certificate, please complete the Graduate Online application. Click here (<http://apply.utoledo.edu/>) to apply online.

Applicants Will Submit the Following:

- Transcripts showing evidence of a Bachelor's degree with at least a 2.7 cumulative G.P.A.
- Resume
- Application and Fee (if required)

for International Students:

- International Students currently pursuing a graduate degree (masters, Ph.D., MD, JD) at The University of Toledo are eligible to apply for graduate certificates in business.
- International students not currently enrolled in a graduate degree-seeking program with The University of Toledo are not eligible to apply for a graduate certificate program.

No GMAT or GRE will be required for admission to a Neff COBI graduate certificate, however if the student later applies to a graduate program in Neff COBI, a GMAT/GRE score may be required.

Notes: Admissions to a Neff COBI graduate certificate program does not guarantee admissions to a Neff COBI master's program. For courses to count toward a Neff COBI master's degree, a grade of "C" or better is required.

Take the following three courses:

Code	Title	Hours
BUAD 6600	Supply Chain Management	3
OSCM 6680	Quality Management and Six Sigma	3
OSCM 6690	Supply Chain Resources Management	3

Prerequisite: OSCM 5520 for Level GR with a minimum grade of C or equivalent UG/GR course from accredited university or equivalent experience (department chair signoff required). The prerequisite to OSCM 5520 is OSCM 5510 with a minimum grade of C or equivalent UG/GR course from an accredited university.

1. Gain an understanding of the basic concepts and principles of operations and supply chain management.
2. Develop decision-making and problem-solving skills required for managing people and resources.
3. Apply current and emerging technology to improve business competitiveness and productivity.

4. Develop effective written and oral communications, critical thinking, team collaboration, and presentation skills as applied to business problems.

College Policies (Graduate Handbook)

John B. and Lillian E. Neff College of Business and Innovation Graduate Assistant handbook (<https://www.utoledo.edu/business/graduate/mba/docs/GA%20Handbook%202020-2021.pdf>)

- A (p. 571) Academic Policies and Advising Services (p. 408)
- A (p. 410) Admissions Policies (p. 410)
- D (p. 577) Degree Requirements (p. 414)

Academic Policies and Advising Services

General Requirements

Refer to the general College of Graduate Studies (p. 571) section of this catalog for general academic policies that apply to all graduate students in areas such as advising, minimum enrollment, dishonesty, grievance, and probation and dismissal.

Academic Advising

Advising for the M.B.A. program is available in the Office of Graduate Programs located in Stranahan Hall Suite 1016. Academic Advising for the MS ABA, MABA, M.S.A. and Ph.D. programs are conducted by the respective program coordinators. Students are encouraged to meet with an Academic Advisor regularly. Academic Advisors are here to assist with student concerns related to academics, policies and procedures, academic planning, and graduation. Academic Advisors, at times, may also provide referrals for services. While Academic Advisors are here to assist with students as needed, each student is ultimately responsible for correct and timely completion of degree requirements.

The College of Graduate Studies utilizes the pdf plan of study form to confirm degree program requirements. The plan of study serves to define the student's course of study, focus for degree, and constitutes an agreement that successful completion will result in the awarding of the degree. Each student working toward a degree is required to file a plan of study with the College of Graduate Studies prior to the completion of 12 credit hours. It is the student's responsibility to notify the College of Graduate Studies of any changes to an approved plan of study and to track progress toward degree.

The Degree Audit Reporting System (DARS) is an automated record that may contain all a student's graduation requirements and assist with tracking student's progress toward meeting those requirements. Degree audits are available to students online through the myUT portal Student Self-Service. Students are encouraged to keep their plan of study and to discuss their degree audits (DARS) with their Academic Advisors. Utilizing both tools will ensure consistency with meeting all degree requirements and making progress toward degree.

Students interested in changing their major or program are encouraged to meet with their Academic Advisor to discuss how the change will impact program requirements, timely completion, and career aspirations.

Financial Assistance

Over the years, a myriad of generous donors have directed their philanthropic efforts toward the John B. and Lillian E. Neff College of Business and Innovation. Many of the donations have been designated exclusively for scholarships for business students. As a result, the Neff College of Business and Innovation proudly awards approximately \$200,000 in scholarships each spring semester to currently enrolled students for the coming academic year.

Criteria for the business scholarships vary greatly. For example, some scholarships are based on the student's major area of study while others are based on GPA, financial need, and/or rank. By completing one on-line application, students are automatically considered for all scholarships for which they meet the criteria. Annually, the online scholarship is available between November 8th through February 1st from a link that is available on the Neff College of Business and Innovation scholarships webpage during that timeframe. Scholarship applications are due each year on February 1st. While this application is targeted towards undergraduate students, there are many scholarships that are available to graduate students.

Students are also welcome to complete a scholarship search through the Office of Student Financial Aid designating the Neff College of Business and Innovation and Graduate level in the search criteria.

Each year the Neff College of Business and Innovation offers Graduate Assistantships to a very small percentage of students with a history of academic excellence. Awards are based upon scholastic achievement, work experience, research experience and extracurricular activities. These awards are not based on financial need. Priority decisions for the academic year awards (starting Fall semester) are awarded to applicants who apply by the March 1st deadline date. If additional funding exist and positions are available, priority decisions for partial year awards (Spring semester) are awarded to applicants who apply by the October 1st deadline date.

Graduate Assistantships may include a tuition waiver for up to 9 credit hours for each Fall and Spring semesters. Most Graduate Assistantship awards do not cover Summer semesters. Students may submit a Graduate Assistantship application with their program application through the College of Graduate Studies or submit a Graduate Assistantship application to the Office of Graduate Programs. Graduate Assistantships are awarded to qualified Ph.D. students upon admission to the Ph.D. program.

Transfer Students

Students who have taken graduate course work at another AACSB-accredited university or from another college at The University of Toledo may, upon recommendation of the appropriate Department Chair and Associate Dean for Graduate Research, be permitted to transfer up to twelve semester hours, not to exceed one-third of the hours required for the graduate degree, of business-related course work toward master level degrees. A grade of B or higher must be achieved in order to transfer any graduate courses, and the transferred credit must not have been applied in whole or in part toward any other degree or certificate from another university. Students must hold regular admission status and be actively pursuing a graduate degree before requesting transfer credit. Transfer credits must have been earned within the period of six years immediately preceding the time the degree is awarded. If the previously

approved transfer credit is beyond the time limitation for the degree, it can no longer be used to fulfill degree requirements.

Student Academic Conduct and Academic Grievance

Issues related to charges of student academic misconduct or disputes as to final course grades and or program dismissal, and the procedures for resolving such issues are set forth by the specific language of the Neff College of Business and Innovation Code of Student Academic Conduct and the procedures for resolution of such issues in the Neff College of Business and Innovation Student Academic Grievance Procedure. Procedural guidelines are located on the college's web site.

Neff College of Business and Innovation Code of Student Academic Conduct: <http://www.utoledo.edu/business/COBI/COBIDocs/CodeOfAcademicConduct.pdf>

Neff College of Business and Innovation Student Academic Grievance Procedure:

<http://www.utoledo.edu/business/COBI/COBIDocs/GrievanceProcedure.pdf>

Student Grievance Form:

<http://www.utoledo.edu/business/COBI/COBIDocs/StudentGrievanceForm.pdf>

UT-Graduate Academic policies (<http://www.utoledo.edu/policies/academic/graduate/>)

Academic Probation and Dismissal

Graduate students whose cumulative GPA falls below 3.0 during any semester will be automatically placed on academic probation. Full-time students on academic program will have at most two semesters to meet the cumulative GPA standard. A student failing to meet the standard will be subject to dismissal. A part-time student on academic probation will be required to meet the GPA standard after 12 additional credit hours of graduate coursework. Students are required to meet with their Advisor to develop a plan of action to improve their GPA.

A grade of C (2.0) is the minimum passing grade for graduate courses. Grades of below C will continue to be counted in calculating the cumulative grade point average. Students are not permitted to exceed two courses, for a maximum of 12 credit hours, of course retakes. Both the original and the repeated grades will appear on the transcript and will be calculated into the cumulative GPA. Grade deletion is not an option at the graduate level.

Students who are subjected to Academic Dismissal must sit out for a minimum of two calendar years prior to seeking program readmission. A student may exercise the graduate academic fresh start option by submission of a petition to the Vice Provost for Graduate Affairs and Dean of the Graduate College once the student is readmitted and successfully completes 12 credit hours (not to exceed three semesters) with a grade of B (3.0) or higher in each courses. Academic Fresh start will remove the graduate cumulative grade point average for all grades earned under the student's prior enrollment at the University of Toledo. All University of Toledo grades will remain on the student's official, permanent academic record.

Readmission

The readmission process is required for graduate students who have not registered for one calendar year or more and wish to complete the program to which they were previously admitted or those who wish to return from an approved leave of absence. Students need to work with their Advisor to prepare the materials required to complete the readmission application. All required readmission materials must be completed and approved through the Neff College of Business and Innovation before the application will be reviewed by the Graduate College. Admissibility and catalog eligibility will be determined during this process. Upon review and approval, the matriculation will be reopened and notification sent to both the student and Advisor by the Graduate College. A fee of \$55 is assessed for the readmission process. This fee is applied to the student account at the time the readmission process is completed.

Students who have exceeded the original time limit for degree (6 years) at the time of completing the readmission process will have to seek either: Continuation of Matriculation for Degree (one year extension) or Request for Time Extension & Course Recertification (beyond one year). Students will work with their Academic Advisor to complete the additional request.

Graduation

When students are nearing the completion of their program, they must file an application to graduate online through myUT portal by the posted deadline dates. The College of Graduate Studies will verify that all requirements have been satisfied before notification will be sent to the Registrar's Office of degree completion. Students are encouraged to work closely with their Academic Advisor to ensure all degree requirements have been met. Students are also encouraged to review the Master or Doctoral Student's Degree Completion Requirements on the College of Graduate Studies website.

University commencement is held twice per year: Spring and Fall. Summer graduates are invited to participate in either the Fall or Spring commencement however, Summer graduates will be included in the Fall commencement program.

The Neff College of Business and Innovation convocation ceremony is a more personal ceremony reserved for Neff College of Business and Innovation students only. Convocation is held in Spring semester only. This is a ticketed event with limited guest seating. Students are expected to dress in academic regalia and will be individually recognized on stage.

Admissions Policies

Admission to Master of Business Administration (M.B.A.) Program

Admission to the M.B.A. program is available to those students who have completed a four-year undergraduate degree and can demonstrate high promise of success in a graduate business degree program. The college has adopted qualitative admissions standards in which applicants are considered on the basis of their merits, with weight given to the quality of prior academic achievement, the Graduate Management Admissions Test (GMAT) scores, professional experience indicating increased levels of responsibility, a writing sample (statement of purpose) and other

relevant information that the candidate may share with the admissions committee.

The typical admitted student in the M.B.A. program has at least a 2.7 undergraduate GPA and 450 on the GMAT. However, for admission to the M.B.A. GMAT scores and undergraduate GPA will not be the sole basis for admissions decisions.

The following documents are required for admission to the program:

1. Official transcripts from each post-secondary institution attended.
2. Official GMAT scores sent directly from the Graduate Management Admissions Council (GMAC) to the College of Graduate Studies. GMAT scores must be no more than five years old.
 - a. GMAT Waivers
 - i. Who is eligible for **consideration** for a GMAT waiver?
 1. Neff COBI alumni or AACSB accredited school applicants who graduated from undergraduate or graduate school within the last three years with a competitive GPA (deemed competitive by Neff COBI Office of Graduate Programs and Neff COBI Dean).
 2. Non-Neff COBI, yet the University of Toledo alumni applicants who graduated from undergraduate or graduate school within the last three years with a competitive GPA (deemed competitive by Neff COBI Office of Graduate Programs and Neff COBI Dean).
 3. Applicants who can demonstrate significant, relevant, and progressive work experience (deemed acceptable by Neff COBI Office of Graduate Programs and Neff COBI Dean).
 4. For students applying to the J.D./M.B.A. dual degree program, applicants who have successfully completed the LSAT within the last three years; for students applying to the PharmD/M.B.A. dual degree program, applicants who have successfully completed the PCAT; for students applying to the M.D./M.B.A., applicants who have successfully completed the MCAT; for students applying to the M.P.H./M.B.A., applicants who have successfully completed the GRE. For students whose program waived or no longer requires testing, GMAT will be waived.
 5. Applicants who have obtained a graduate level degree or higher.
 - ii. Inquirers must have completed the online application for enrollment in the term in which they are requesting the GMAT waiver.
 - iii. Applicants must provide an updated resume for consideration of a GMAT waiver.
 - iv. The GMAT waiver will be valid for the term of admission per the online application.
 1. If the student does not enroll in the original term of admission, they may request that the Neff COBI Office of Graduate Programs re-evaluate their GMAT waiver request for the new term of admission.
 - v. The minimum requirements for a graduate assistantship can be found on the Graduate Assistantship website (<https://www.utoledo.edu/business/graduate/mba/GraduateAssistantships.html>). While GMAT can be waived for graduate assistantship awards, strong academics, progressive leadership experience either collegiately or in

the community, and scoring well on the GMAT is the best way of increasing likelihood of being selected for a graduate assistantship award.

- vi. The above waiver criteria apply to the MBA program. Each graduate program will determine GMAT waiver eligibility.
3. At least one letter of recommendation from an individual who knows the applicant in a professional capacity.
 - a. All pipeline student applications will require two letters of recommendation.
4. The statement of purpose is required on the application for admission.
5. Applicants with below a 2.7 undergraduate cumulative GPA must submit a GMAT unless they meet one of the following criteria for a waiver:
 - a. 3-5 years of relevant, significant, and progressive work experience as determined by the Associate Dean of the Neff College of Business and Innovation.
 - b. Already has completed a graduate degree from a USA institution.
 - c. Similar passing test is substituted, such as GRE, MCAT, PCAT, or LSAT.
 - d. A Neff College of Business and Innovation Office of Graduate Programs admission committee determine eligibility for admission based on an admission interview on a case by case bases.

In the case of students whose native language is not English, a score of 80 or above on the TOEFL IBT, PTE equal to 58 or above, Duolingo equal to 105 or above, or a 6.5 or above on the International English Language Testing System (IELTS) is mandatory.

Applications for admission are considered on a rolling basis. However, students are encouraged to submit their applications by the following dates:

Domestic students:

Fall semester	August 1
Spring semester	November 15
Summer semester	April 15

International students:

Fall semester	May 1
Spring semester	October 1
Summer semester	March 1

Final admissions decisions will be withheld until the application for admission is complete. No materials submitted to the University will be returned to the applicant.

Admission to Joint J.D./M.B.A. Program

Students applying for the J.D./M.B.A. program must have earned a bachelor's degree. A student must apply and be admitted to the College of Law and College of Business and Innovation separately to be admitted to the J.D./M.B.A. dual degree program. The LSAT will be accepted by the College of Business and Innovation in lieu of GMAT scores.

Admission to one program does not guarantee admission to the other program. Refer to the College of Law (p. 246) and M.B.A. sections of this catalog for specific admission standards for each program. Applications for admission to the J.D. program are accepted for fall entry only.

Admission to Joint M.D./M.B.A. Program

Students applying for the M.D./M.B.A. program must have earned a bachelor's degree. A student must apply and be admitted to the College of Medicine and Life Sciences and the College of Business and Innovation separately to be admitted to the M.D./M.B.A dual degree program. The MCAT will be accepted by the College of Business and Innovation in lieu of GMAT scores.

Admission to one program does not guarantee admission to the other program. Refer to the College of Medicine (p. 248) and M.B.A. sections of this catalog for specific admission standards for each program. Applications for admission to the M.D. program are accepted for fall entry only.

Admission to Joint MPH/M.B.A. Program

Students applying for the Master of Public Health/M.B.A. dual degree program must have earned a bachelor's degree. A student must apply and be admitted to the College of Health and Human Services and the College of Business and Innovation separately to be admitted to the MPH/M.B.A dual degree program. If the applicant is required to take the GRE by the MPH Admission Committee, the College of Business and Innovation will accept GRE scores in lieu of the GMAT. If the applicant does not need to take the GRE for admission to the MPH program, the applicant will be waived GMAT for admission to the M.B.A. Program.

Admission to one program does not guarantee admission to the other program. Refer to the College of Health and Human Services (<https://catalog.utoledo.edu/graduate/health-human-services/graduate-degrees-certificates-offered/>) and M.B.A. sections of this catalog for specific admission standards for each program.

Admission to Joint PharmD./M.B.A. Program

Students applying for the PharmD./M.B.A. program must have earned a bachelor's degree. A student must apply and be admitted to the College of Pharmacy and Pharmaceutical Sciences and the College of Business and Innovation separately to be admitted to the PharmD./M.B.A dual degree program. The PCAT will be accepted by the College of Business and Innovation in lieu of GMAT scores.

Admission to one program does not guarantee admission to the other program. Refer to the College of Pharmacy and Pharmaceutical Science (p. 368) and M.B.A. sections of this catalog for specific admission standards for each program.

Admission to Joint B.S./M.B.A. Degree Program

The College of Business and Innovation in conjunction with the College of Engineering offers a program whereby qualified students can earn simultaneously both a B.S. in engineering and an M.B.A. This program provides a unique opportunity to combine business and engineering skills to prepare graduates for global competitiveness. It supports the mission of the College of Business and Innovation to prepare corporate leaders for the future. The program should be particularly attractive to students interested in starting their own companies or those who want to develop

an appreciation for how engineering and business complement each other.

This program will allow engineering students in their final two semesters of study to begin taking M.B.A. courses while completing their B.S. This arrangement should reduce the time it takes a student to receive both degrees by a year. The business undergraduate prerequisites can be satisfied as part of the undergraduate curriculum.

Students who wish to pursue the program should make this known to the senior associate dean for undergraduate studies in the College of Engineering by the end of their sophomore year. Interested students will take the GMAT at the end of their junior year and should apply for admission to the program to the College of Graduate Studies before the fall of their senior year. To be admitted to the program, students must have senior standing, score a minimum of 450 on the GMAT, and have at least a 3.0 cumulative GPA. Undergraduate requirements for the general business minor must also be completed. Upon admission to the program by the College of Graduate Studies, the College of Business and Innovation and the College of Engineering, students will be take graduate courses while simultaneously completing the requirements for the B.S. in engineering.

Students' special status must be tracked by the Office of Student Retention and Academic Success to assure AACSB compliance and to assure the B.S. degree is granted prior to graduating with the M.B.A.

admission to the Neff COBI pipeline programs

Undergraduate students accepted in the BBA-MBA or BBA-MSA option will be admitted to the graduate program and allowed to complete up to three **graduate level classes** (nine credit hours) during their final academic year of **undergraduate studies**. Students admitted into the pipeline program must apply for admission to the College of Graduate Studies for the semester that they intend to matriculate. They will then continue in the graduate program upon completion of the undergraduate degree requirements. The graduate coursework (up to nine hours) may be able to apply **to the completion of both undergraduate and graduate degree requirements**. Students would want to work with their undergraduate advisor to determine if they have room in their undergraduate degree to have these graduate courses meet undergraduate graduation requirements. Students can register for graduate classes taken at The University of Toledo only after the student is accepted into the pipeline program. Students interested in the joint pipeline program must submit 1) a letter of interest, 2) a completed graduate admission application, and 3) at least 2 letter(s) of recommendation from faculty members.

- Undergraduate students of any business major can apply to the MBA program, but only accounting majors are permitted to apply to the MSA program.
- Students must have approval from their undergraduate advisor, graduate advisor, and a minimum GPA of 3.0 (including transfer grades) to apply.
- Students may apply to take up to three (nine credit hours) 6000 level graduate classes in their senior year and only pay undergraduate tuition.
- Students should apply in their junior year so that they can be admitted in time to add graduate courses to their schedule for Fall registration.

- Students will not be permitted to delay their BBA graduation to participate in the pipeline programs.
- Students are not required to take all three classes; students may take just one or two courses.

MBA Class options: BUAD 6100, BUAD 6300, BUAD 6400, BUAD 6500, BUAD 6800.

MSA Class options: BUAD 6200, BUAD 6300, BUAD 6400, BUAD 6500, BUAD 6800, ACCT 6130, ACCT 6190, ACCT 6250, OSCM 6250.

Admission to Master of Science in Accountancy (M.S.A.) Program

All decisions regarding admissions to the M.S.A. program are made through the academic director of programs in accounting. Admission to the M.S.A. program is available for those students who demonstrate high promise of success in a graduate program. All applicants are considered on the basis of their merit with weight given to the quality of prior academic achievement, GMAT test scores, professional experience, and other relevant information. The following documents are required for admission to the program:

1. Official transcripts from each post-secondary institution attended.
2. Official GMAT scores sent directly from the Graduate Management Admissions Council (GMAC) to the College of Graduate Studies. The minimum GMAT score is 500, must be no more than five years old.¹
3. The GMAT may be waived for applicant who have:
 - a. Completed GRE within the last five years; official GRE scores must be sent directly to the College of Graduate Studies, or
 - b. An undergraduate degree from the University of Toledo (minimum 3.0 GPA) within the last ten years, or M.B.A. or
 - c. A Master in Economics (minimum 3.00 GPA) within the last ten years, or
 - d. An active practicing CPA/CMA, or passed the CPA/CMA exam within the last five years
4. Most recent resume or curriculum vitae including contact information for two references (name, title, place of employment, phone number and e-mail address).

In the case of students whose native language is not English, a score of 80 or above on the TOEFL IBT, PTE equal to 58 or above, Duolingo equal to 105 or above, or a 6.5 or above on the International English Language Testing System (IELTS) is mandatory.

- ¹ The GMAT may be waived for applicants who have earned a:
1. Completed GRE within the last five years, or
 2. BBA from the University of Toledo (minimum 3.00 GPA) within the last ten years, or
 3. M.B.A. or Master in Economics (minimum 3.00 GPA), or
 4. Active CPA/CMA. Or passed the CPA/CMA exam within the last ten years.

Applications for admission are considered on a rolling basis. However, students are encouraged to submit their applications by the following dates:

Domestic students:

Fall semester	August 1
Spring semester	November 15
Summer semester	April 15

International students:

Fall semester	May 1
Spring semester	October 1
Summer semester	March 1

Final admissions decisions will be withheld until the application for admission is complete. No materials submitted to the University will be returned to the applicant. The M.S.A. program admits students to the program on a rolling admissions basis.

admission to master of applied business analytics

All decisions regarding admissions to the M.A.B.A. program is made through the academic director for the MABA program.
